DTIC Posts House Armed Services Committee Report on the FY19 National Defense Authorization Bill to DoD Congressional Budget Website

DTIC Public Affairs
24 May 2018

Fort Belvoir, VA – The Defense Technical Information Center (DTIC) posted the House Armed Services Committee Report on the FY19 National Defense Authorization Bill, House Report 5515, to the DoD Congressional Budget Data website:

http://www.dtic.mil/congressional_budget/ and DTIC: <https://www.dtic.mil>.

To facilitate the timely analysis of Congressional budget decisions the reformatted budget data for all DoD-related Congressional markup activities is posted to the DTIC site within days of its release on Congress.gov. The posted reports, available in PDF and Excel formats, are divided into four parts: (1) Research, Development, Test and Evaluation (RDT&E); (2) Procurement; (3) Operation and Maintenance; and (4) Personnel.

The DoD Congressional Budget Data website is just one of many DTIC resources available to the DoD RDT&E community, government agencies and DoD contractors. Additional Web-accessible budget products can be found (under Budget) on DTIC's secure site – <https://www.dtic.mil>:

- The Congressional Budget Queries website provides search and analysis of the RDT&E data by program element (PE), title or increases and decreases. You can also review summary data by fiscal year, report type and budget activity. (<https://www.dtic.mil/congressional/>)
- The DoD Investment Budget Search (R-2s and P-40s) offers a search of DoD RDT&E and procurement investment budget justification narratives from the President's Budget Request. Also available is a trend analysis of requested vs. appropriated dollars for the past eight years. (<https://www.dtic.mil/dodinvestment/>)

DTIC's mission is to "aggregate and fuse science and technology data to rapidly, accurately and reliably deliver the knowledge needed to develop the next generation of technologies to support our Warfighters and help assure national security." A DoD Field Activity, DTIC is under the leadership of the Under Secretary of Defense for Research and Engineering.
