AWARD NUMBER: W81XWH-14-1-0368

TITLE: Addressing the Health Concerns of VA Women with Sexual Trauma

PRINCIPAL INVESTIGATOR: Caron Zlotnick, PhD

CONTRACTING ORGANIZATION: WOMEN & INFANTS HOSPITAL OF RHODE ISLAND PROVIDENCE, RI 02905-2401

REPORT DATE: October 2016

TYPE OF REPORT: Annual

PREPARED FOR: U.S. Army Medical Research and Materiel Command Fort Detrick, Maryland 21702-5012

DISTRIBUTION STATEMENT: Approved for Public Release; Distribution Unlimited

The views, opinions and/or findings contained in this report are those of the author(s) and should not be construed as an official Department of the Army position, policy or decision unless so designated by other documentation.
Addressing the Health Concerns of VA Women With Sexual Trauma

**Abstract**

Lifetime ST disproportionately affects women veterans and can threaten their health and wellbeing. PTSD, IPV, and alcohol use are closely interrelated and significant concerns for women veterans with lifetime ST. Providing effective and low-cost interventions to address ST-related risks among women veterans with lifetime ST would advance clinical care for these women in an important area.

1. **INTRODUCTION:**

Our proposed research will develop and assess a computer-delivered intervention (Safety and Health Experiences Program; SHE) that will provide a screening and brief behavior intervention for women veterans with any lifetime ST. More specifically, the intervention, SHE, will address interrelated health concerns for women veterans with ST (i.e., alcohol misuse, IPV, and PTSD). We plan to develop our proposed computer-based intervention with input from our team of investigators as well as information gained in focus groups and informant interviews with women veterans with ST. We will conduct a small trial of SHE with 20 women veterans with lifetime ST to examine if the intervention is acceptable to our population. Finally, we will recruit a sample of 150 women veterans who screen positive for any lifetime ST and have at least one risk factor (i.e., IPV, PTSD, or heavy drinking) and randomize them to the SHE intervention or to a screen and referral (SR) condition. We will examine whether SHE compared to SR will result in decreases in the number of risks and increase resource and treatment utilization at the 2- and 4-month follow-up.

2. **KEYWORDS:**

Safety and Health Experiences Program; SHE  
Sexual Trauma (ST)  
Intimate Partner Violence (IPV)  
Posttraumatic Stress Disorder (PTSD)  
Screen and referral (SR)  
Data Safety Monitory Board (DSMB)

3. **ACCOMPLISHMENTS:**

1. Staff has been hired and trained.  
2. Study materials have been purchased and study databases and tracking files have been prepared.  
3. All regulatory approvals have been obtained.  
4. Tables for the Data Safety Monitory Board (DSMB) report have been prepared, a medical monitor (MM) for the study has been appointed, the DSMB has met and approved the report tables, study consents, study safety procedures, and study recruitment procedures.  
5. A preliminary outline of the computer-based intervention modules (3) has been developed.  

In the next reporting period we plan to recruit for and conduct informant interviews to inform and refine the intervention.  
“Nothing to report” on training and professional development opportunities and the dissemination of results to communities of interest.

4. **IMPACT:**

Nothing to Report.
5. CHANGE/PROBLEMS:
The following amendments have been submitted and approved by the IRBs of Central Texas Veterans Health Care System and by Woman and Infants Hospital

  o  The screening measure for PTSD (PCL-M and PCL-C) was replaced with PCL-5. The PLC-5 will be used because it is the measure of PTSD symptoms that is currently being used in Veteran Administration settings and other research on PTSD with Veterans.
  o  Removed the intervention feedback measures of Drinker Inventory of Consequences and Brief Drinker Profile for intervention participants. We will use other forms of participant feedback for the alcohol intervention module.
  o  Included the option to do assessments over the phone if participants are unable to meet in person. This will allow the collection of follow-up data from women who cannot come to the VA hospital
  o  Focus groups were changed to individual informant interviews. We changed focus groups to individual informant interviews. It will be difficult to coordinate a group of women for the focus group because the women's competing demands for time and their infrequent visits to the VA primary care center.
  o  We changed the Breathalyzer procedure to be administered only if the potential participant shows signs of intoxication

Since the VA mandates that women provide consent to be breathalyzed and be seen at an emergency room if intoxicated, we wish to reduce this burden and reduce the barriers and stigma to women who may benefit from participating in our study.

Actual or anticipated problems or delays and actions or plans to resolve them:

The award was received in March 2016. The subcontract was executed to Central Texas VA Healthcare System at Temple in May 2016. Advertising, interviewing, and hiring of a research assistant with a start date of 3rd of August 3 was completed in two months.

6. PRODUCTS:

Nothing to Report.

7. PARTICIPANTS & OTHER COLLABORATING ORGNIZATIONS:

The following individuals have worked on the project.
