ATTJ: S3/MHD
APO 96250

In accordance with 173d Airborne Brigade Regulation Number 335-8, dtd 1 December 1966, the following report is submitted.

1. GENERAL: Operation BOLLING is a large scale search and destroy operation being conducted by the 173d Airborne Brigade. The operation has a two-fold mission; to seekout, destroy or capture the enemy and/or his equipment; to deny the enemy the bountiful food resources available in the TUY HOA Valley. This operation is the first combat operation in which the 3d Battalion participated.

2. NAME OF OPERATION: Operation BOLLING.

3. TYPE OF OPERATION: Search and destroy.

5. LOCATION: The operation was conducted in the TUY HOA and TUY AN Districts of PHU YEN Province with operations oriented on TUY HOA and DOONG TAU.

6. CONTACT OR COMMAND HEADQUARTERS: Command Headquarters for the period 5 November 1967 to 14 December 1967 was I Field Forces and for the period 14 December 1967 to 16 January 1968, 173d Airborne Brigade (Separate).

9. SUPPORTING FORCES:

a. United States Air Force:

(1) During the reporting period the following CAS missions were flown:

(a) Preplanned sorties: 285
(b) Immediate sorties: 27
(c) Flareship sorties: 1
(d) Total Ordnance Delivered: 339.5 tons

(2) Results and Effectiveness: Tactical Air Support was extremely effective during the operation. Bomb damage assessments reflected several secondary explosions as a result of strikes. Heavily reinforced bunkers and trench systems were effectively bombed. Air strikes were effectively employed in all instances when the battalion had troops in contact.

(3) Timeliness: Sorties arrived within a usable time frame and were effectively employed. At no time when troops were in contact were aircraft not available.
b. Army Aviation:

(1) Aviation Support: The Battalion was supported by the following Army Aviation Units during opn BOLLING:

(a) 173d Airborne Brigade Aviation Platoon.
(b) 335th Assault Helicopter Company.
(c) 192d Assault Helicopter Company.
(d) 134th Assault Helicopter Company.
(e) 1st Avn Bde (CH47).

(2) How and when employed:

(a) Combat Assault
(b) Armed Helicopter
(c) Resupply
(d) Command and Liaison
(e) Aerial Reconnaissance
(f) Psychological Operations
(g) Aerial Observer
(h) Medical Evacuation

(3) Results and Effectiveness: Army Aviation support of the 3d Battalion was effective. This support enabled the Battalion to operate over a large AO and bring its combat power to bear rapidly when contact was made.

(4) Timeliness: Army Aviation was timely and responsive. The support rendered by the 192d Assault Helicopter Company was particularly noteworthy.
SUBJECT: Combat Operations After Action Report - Operation BOLLING.

c. Artillery:

(1) Size of Force:

(a) A Battery 5-27th Artillery (6 - 105 How T) from 5 November to 9 December 1967.

(b) B Battery 5-27th Artillery (6 - 105 How T) from 9 December to 11 January 1968.

(c) C Battery 3-319th Artillery (5 - 105 How T) from 11 January to 16 January 1968.

(d) Additional General Support artillery from 41st Artillery group was utilized throughout operation.

(2) How employed:

(a) A/5-27th Artillery was in place at FSB PEAK (CQ 028471) when Battalion commenced operation.

(b) Displacements: Artillery Batteries were moved by helilift along with FSB as follows:

(3) Results and Effectiveness:

(a) Intelligence targets were engaged with one to five tubes dependent upon priority of targets.

(b) Advancing and clearing fires were used extensively.

(c) Blocking fires were utilized, when feasible, to prevent enemy withdrawals. Fires were planned daily on intelligence and interdiction targets by Battalion Artillery Liaison and Battalion S2 and S3. POW's and CHIEN HOIS reported that fires were effective.
SUBJECT: Combat Operations After Action Report - Operation BOLLING.

(d) Artillery fires were used to outpost FSB's. This reduced the requirement for troops on outposts and broke up the defensive patterns common to FSB's.

(e) Artillery preparations were effectively used prior to combat assaults.

(f) On 27 December 1967, B/5-27th Artillery fired 1423 rounds in support of the Battalion. Fire was effectively placed on the enemy and took an exacting toll.

(4) Timeliness: Artillery was responsive and timely. Particularly noteworthy was the support rendered by Btry B, 5-27th Arty.

11. INTELLIGENCE:

a. Enemy Situation Prior to Operation: Prior to commencement of Opn BOLLING the following enemy units were believed to be in the area of interest: the 4th, 5th, and 6th Battalions of the 95th NVA Regiment; 30th MF VC Bn; 377th LF Co; 85th LF Bn. Indications were that the enemy would concentrate on gathering rice and foodstuff during the rice harvest, and attempt to avoid contact except when clearly to his advantage or when trapped.

b. Order of Battle Findings and Summary of the AO:

(1) Estimated strength prior to 3-503d joining Opn BOLLING was 3 Battalions with approx 300 men per Battalion from the 95th NVA Regt, 30th LF Bn approx 350 men, the 15th LF Bn approx 300 men, and the 377th LF Co with approx 80 men.

(2) These units were located within the TAOR or in close proximity. The battalions of the 95th NVA Regt were located vic of: 4th Bn vic CQ 1061, 5th Bn vic CQ 0544, 6th Bn vic of DONG XUAN. The 30th MF Bn was operating in AO GAMDER to the South, the 85th LF Bn was operating in vic EQ 9871 and the 377th LF Co was operating around the TUY HOI area.

(3) During the 3-503d participation in Opn BOLLING there was no significant change to the order of battle within the TAOR. Two major contacts with the enemy were made. One on the 7th of Dec 1967 and another on 27th Dec 1967. Both contacts were made with NVA units of the 95th Regiment.

(4) Weather: The monsoon had brought mostly cloudy skies in the morning and rainshowers at night. Generally cloudy, weather and light rainshowers persisted until 1000H. The sky conditions were 500 scattered
SUBJECT: Combat Operations After Action Report - Operation BOLLING.

2,500' broken with visibility 6-7 miles. Winds during this period were generally from the NNE at gusts up to 18 knots. Rainshowers were numerous during the period occurring during the period from 2200H and continuing to 1000H. Fog was heavy during the early morning hours, during the period 0600H to 0900H normally. Temperatures ranged from 72° to 85°.

(5) Terrain: The relief of the TAOR is characterized by high mountains with dense undergrowth and 40-50 feet high canopy of broadleaf and dense evergreen. Cultivated fields are found throughout the area. During the rainy season streams were characterized by swift running water, and during dry periods streams were normally dry. Cover and concealment was plentiful throughout the AO due to dense undergrowth and dense forest. Critical terrain features were the high ground overlooking the TUY HOI Valley to the East. Avenues of approach were excellent in the area of interest.

c. Psychological operations were conducted in conjunction with tactical operations to aid in disaffection and desertion through the CHEIU HOI program, and to deny support to the VC/VNA by encouraging support for the government of Vietnam. Psy ops were effective in the AO. Interrogation reports received substantiated this fact. On 21 Nov 67 the 47th ARVN Regt apprehended a CHEIU HOI at coord CQ 030390, this CHEIU HOI stated the dissatisfaction of personnel within his unit. This indicated a need for more psychological OPNs within the AO. Leaflets were printed overnight with cooperation of the 245th Psy Op Company. These leaflets were special type made specifically for personnel of the 95th ARVN Regt, with photograph of the CHEIU HOI on the reverse side of the theme, emphasizing the care taken of the CHEIU HOI's. CHEIU HOI's also stated that leaflets were effective and that leaders did not allow personnel to read them. Loudspeaker broadcasts consisted of a 20 minute tape. CHEIU HOI personnel also made in flight propaganda broadcasts.

17. COMMANDER'S ANALYSIS AND LESSONS LEARNED: During Operation BOLLING the 3d Battalion (Airborne) 503d Infantry was opposed largely by NVA units. With the exception of the battle on 27 Dec 1967, these units were ill-equipped and inadequately supplied. Only when and where the enemy had strong defensive
positions and could not withdraw did he initiate contact. Normally the enemy moved in small groups, generally squad size, and avoided contact. This, coupled with the personnel strengths at which the rifle companies deployed, necessitated maneuvering rifle companies in platoon size elements. The battle on 27 Dec placed greater emphasis on the effective and timely use of Tactical Air and Artillery support both during contact and as harassing and interdictory fires. Overall, the terrain, enemy, and mission provided the "MOVING BATTALION" the opportunity to shake down and establish firm standing operating procedures for future operations. Although the Battalion experienced no new lessons learned, the following techniques were used by the Battalion.

a. Stay Behind Force at Lager Sites: A small element (normally a squad) sets up an ambush in vic of Co night lager site when the company departs the area. This has proven particularly effective when the area is relatively open and when a lager site has been under observation by VC/MVA.

b. Prep of LZs: This Battalion normally uses a two to four minute Arty prep on CA's. The last rounds fired are WP to indicate LZ is clear for aircraft. To break up the pattern of the prep of LZs and to lure the enemy out of their holes two preps are conducted. WP rounds are fired at the end of the first prep and one minute later a second prep is fired. The gunships and slicks come in behind the second prep.

Timing is a critical factor in the conduct of an airborne assault. The effect of a prep may be wasted if the ships are not on the LZ within 30-45 seconds of the last round fired. The maneuver battalion commander should be in direct communication (preferably in the same aircraft) with the commander of the assault aircraft. When the aircraft are eight minutes from touchdown the maneuver battalion commander commences a time on target countdown for last rounds on target using a stopwatch. The bn arty LNO (also in C&C aircraft) and the army aviation commander base their actions on this timing. A continuous check is made with the approaching aircrafts to insure the time schedule is proper. Should any adjustment be necessary the timing for last rounds on target is adjusted. Each firing unit reports tubes clear and WP on the way. The maneuver battalion and army aviation commanders are advised, "Tubes clear, WP will land in X number of seconds." The aircraft are cleared for final approach. The gunships commence firing when the WP hits the ground.

c. Units Move With 5 Day Supply Load: To enable units to "get lost" after a CA, companies are at times carrying 5 days supply of rations, ammo, and batteries. The company moves off the LZ and sets up an operational
base for 2 days. The distance from the LZ will depend on the terrain. Platoons drop their rucksacks at this central location and run platoon size patrols for 2 days. The company then moves out with the standard 3 days supply load. No helicopters are flown over the company AO except for emergencies.

d. Ambush of PZs: When two companies are working within close proximity of each other and one is to be extracted by chopper the other company clandestinely moves by foot to the area from which the first company is to be extracted. The second company then sets up ambush sites in the area of extraction.

e. Mortar Suppression and Counter Mortar Techniques: The area around a FSB is covered with artillery concentrations to a distance of 3,000 meters. Fire Support Base Peak was ringed with 142 such concentrations to a distance of 3,000 meters. Each tube of every firing unit within range is assigned responsibility for a specified number of concentrations. Each night specific concentrations are cancelled based on ambush patrols. When the request to fire the counter mortar program is initiated the guns automatically fire prearranged data. The area can be rapidly saturated. The targets are assigned at random based on the GT line. Random assignment assures that the area will be saturated and that no significant dead space occurs should one howitzer become nonoperational. Ammunition expenditure is minimized as each gun fires one round at each target.

f. Mortar Raids: The enemy is often aware of the maximum range of artillery at a FSB and consequently will locate just outside this range. To counter this the 4.2" mortar platoon is sometimes moved to the edge of the maximum range fan giving rifle companies an additional 5,000 meters forward of the maximum arty range to operate. The company on the FSB furnishes a platoon as security for the mortars. The mortars and security platoon return to the FSB prior to darkness and the rifle company moves back within the arty fan.

g. 105 mm Howitzers for Direct Fire Support on FSB: Due to variations in terrain it is often necessary to outpost portions of a FSB. To break up the defensive pattern, direct fire artillery is placed on the position in lieu of a manned outpost.

h. Preplanned Alternate LZs to Reinforce Hot LZs: Several alternate LZs should be selected for each primary LZ where possible. All companies in the operation, to include the reaction force, should be made aware of primary and alternate LZs.

1. Use of Conex for CP: The standard US ARMY and US AIR FORCE 6' 6" by 8' 6" conex serves as a portable CP. A complete communication system can be permanently installed for rapid establishment of the CP. This conex also serves as a storage space during movement and a bunker once sandbags have been added. A lighting system can be installed utilizing either batteries or an external generator. The entire CP can be transported by sling load on one CH 47 helicopter.
