8. Intelligence:

a. Enemy Situation Before Operation: The operational area was believed to contain elements of one VC Provincial Mobilize Battalion, the 860th Local Force Battalion. The 274th Regiment was believed to be located approximately 15 km (kilometers) to the northwest of the AO and the 275th Regiment approximately 35 kilometers to the northeast. The controlling headquarters of the two regiments (5th Division) was also believed to be
SUBJECT: Combat Operations After Action Report

within Phuoc Tuy Province. The VC provincial headquarters was thought to be located to the east of the AO, and the area was believed to contain caches, base camps, and several tunnel complexes.

b. Enemy Situation During Operation: Seventy-six contacts were made with VC forces during this operation, forty-seven of which were VC initiated. VC forces encountered were platoon-size or smaller and believed to be local force elements. The clearing operations conducted in Long Hai Peninsula produced no major intelligence items. However, this operation provided the only current information on base camps, defensive positions, and tunnel and cave locations in the AO. The lack of major installations or defensive works is significant in that the area appears to be used only by small local force elements under the most austere conditions. No unit identifications were ascertained. Aircraft in support of Bde operations received small arms or automatic weapons fire on 6 separate occasions with 1 aircraft sustaining a hit.

c. AO (Area of Operations):

(1) Weather Conditions: The climate in the AO was typical of tropic zones affected by monsoons. Winds were gentle to moderate, generally from a southwesterly direction. Rainfall was normal, occurring during late afternoon and early evening hours. Visibility was generally good, with ceilings of approximately 10,000 feet lowering to approximately 1000 feet during showers.

(2) Terrain: The AO was dominated by the following four hill masses: Nui Da Dung (YS 451564), elevation 173 meters; Nui Dien Ba (YS 462530), elevation 312 meters; Mui Chau Yien (YS 477514), elevation

323 meters; and Nui Hon Thung (YS 465342), elevation 214 meters. The remainder of the area is flat to gently rolling with an elevation of less than 50 meters. The jungle areas are generally dense with trees up to 100 feet and secondary growth up to 20 feet, providing excellent concealment and some cover from direct fire weapons. East of the hill masses were rice paddies and swamp land.

9. Mission: The 173d Abn Bde (Sep) conducted air and ground assaults to clear the Long Hai Peninsula and secure a construction site, vicinity YS 438520, NLT 142400 June 1966.

10. Concept of Operation: The 173d Abn Bde (Sep) conducted this operation in four phases. Initial deployment emphasized cover of darkness, speed of achievement, and maximum surprise.

   Phase I - All Bde elements displace from Objective INDIAN to Position PACIFIC.

   Phase II - Movement south along Route Tan to arrive at Position's LYNX and PANTHER.

   Phase III - Commences clearing, search and destroy operations.

   Phase IV - Continue clearing, search and destroy operations to the west and SW of AO H.

11. Execution:

Commander's Analysis: This operation met only small guerrilla ele-
ments who apparently were intimately familiar with the terrain. In this
type operation the advantage is decidedly with the enemy. Consideration
should be given to scaling off such area and keeping friendly forces in
the area long enough for them to gain familiarity with the area. Addi-
tionally, friendly forces remaining in the area will force VC elements
into movement for food and water. Once he is forced into movement,
friendly forces would enjoy equal or better advantages.

The operation was not particularly suited for utilization of tactic-
al air for interdiction of close air support due to the fact that there
were very few VC contacts.

The Long Hai Peninsula area should not be considered a major VC
stronghold but rather a lightly defended, difficult area, from a terrain
standpoint, from which small VC elements can conduct harassment and inter-
diction missions as well as gather intelligence on coastal shipping. It
is unlikely that the VC elements in the area constitute a single force of
greater than company strength. The forces in the area appear to operate
primarily as small scattered elements, usually as squad or team size.
