c. Operations:

(1) Air-Lifting the M14A1 155mm howitzer

(a) OBSERVATION: When air lifting the M14A1 howitzer with a CH-54 the air lift straps apply extreme pressure to the left and right shields of the howitzer, causing them to crack. This necessitates removing the howitzer from the firing pit to perform the required welding and maintenance.

8 May 1970

SUBJECT: Operational Report-Lessons Learned 5th Battalion 42d Artillery,
Period Ending 30 April 1970, RCS CSFOR-65 (R2)

(b) EVALUATION: Removal of the left and right shield prior to air
lifting the howitzer will prevent the shield from being cracked by the pressure
applied to shield while howitzer is being lifted.

(c) RECOMMENDATION: That units employing the (M114A1) 155mm howitzer,
remove the left and right shields prior to air lifting with a CH54 helicopter.

(2) Rapid Occupation of position with M114A1 towed 155mm Howitzer.

(a) OBSERVATION: During occupation of position with a M114A1 towed
155mm Howitzer the howitzer must be jacked up before emplacing the pedestal for
shifting trails. This procedure requires the men to jack the howitzer once prior
to being jacked. The same requirement can be met by using 3 men per trail lifting
the trails high enough to permit emplacement of the pedestal.

(b) EVALUATION: The time and effort expended can be greatly reduced
by lifting the trails to emplace the pedestal.

(c) RECOMMENDATIONS: Units employing the M114A1 towed 155mm howitzer
lift trails to emplace pedestal, rather than using the jack.

(3) Resupply of ammunition at remote fire support bases.

(c) OBSERVATION: When airlifting ammunition to a M114A1 towed 155mm
howitzer battery located at a remote fire support base, transportation of the
ammunition from the resupply pad to the howitzer section pit is difficult when
using the limited number of vehicles present. The ammunition must be loaded on
the vehicle and off-loaded at the section pit by hand. Use of (M 332) 1 1/2 ton
ammunition trailers loaded with 32 complete rounds can be airlifted by a CH47 helicopter
has proven more satisfactory. After the trailer has been air lifted to the
resupply pad a 3/4 or 2 1/2 ton truck can haul it immediately to the howitzer section.

(b) EVALUATION: The time and effort expended during ammunition re-supply
or can be reduced by using the 1 1/2 ton amm trailer (M 332).

(c) RECOMMENDATIONS: Units employing the M114A1 towed 155mm howitzer
use the (M 332) 1 1/2 ton ammunition trailer for re-supply at remote fire support
bases.

DA, HEADQUARTERS, II FIELD FORCE VIETNAM ARTILLERY, APO 96267

To: Commanding General, II Field Force Vietnam, ATTN: AVFEC-8S, APO 96267

This headquarters has reviewed the quarterly report of the 5th Battalion, 42d Artillery and concurs in operations and lessons learned as reported with the following exceptions:

a. Para 2c(2) Occupation of position with 155mm AI towed 155mm howitzer. The procedures outlined are faster than the standard procedure however, they should be used only when the terrain or firing pad is level and where air brakes are in good working order. Otherwise, loss of control of the weapon by the men raising the trails and possible injury to personnel or damage to the weapon could occur.

b. Para 2c(3) Resupply of ammunition at remote fire support bases.

(1) The observation and evaluation presented are valid; however, the limited availability of air assets precludes complete utilization of trailers.

(2) The use of trailers should be limited to initial occupation of position, and at a ratio of one trailer to two howitzer positions. This minimizes the loss of effective lift capacity and still provides the mobility needed for rapid occupation of position.
