Introduction v

I. Sources with abstracts listed chronologically 1

II. Geographical locations index 15

III. Alphabetical author-index 17

IV. Subject heading and classification number index 19
INTRODUCTION

Indonesia, as used in this bibliography, refers to all the islands in the general area of Latitudes 5°N-10°S and Longitudes 95°E-143°E excluding British North Borneo, Sarawak and Malaya Peninsula, although some general area maps may include them.

Only climatic maps, containing data summarized over a period were abstracted.

The scale for most of the maps were obtained by a natural scale indicator and shown by sub-brackets; i.e. 1:1 000 000. This indicator was proposed by S. W. Boggs, Chief, Division of Geography and Cartography, Department of State. In some instances no latitude lines were drawn on the maps, and therefore an estimated scale was obtained by measuring where the latitude lines would be drawn on the map and the natural scale indicator used to measure an approximate scale and that scale placed in parentheses; i.e. scale is not indicated (about 1:500 000).

Abstracts with initials D.M.C. were done by Darthula H. Carraway and M.L.W. by Marie L. Weight.

The search for sources terminated October 1961.

An Annotated Bibliography of Climatic Maps of Indonesia
U. S. Weather Bureau
AN ANNOTATED BIBLIOGRAPHY OF CLIMATIC MAPS OF INDONESIA

1900 - 1909

...Contains the following maps of 1:1 000 000 scale, based on observations at >700 stations during the period 1879/1905: rainfall station locator; and February, August and annual amount of precipitation in centimeters.

JAW

...This huge polychrome map (scale 1:7 500 000) of Asia is divided into 6 sections. It contains the islands of Sumatra, Borneo, Celebes and some of the smaller islands in the Archipelago and presents mean isohyets at 50 mm intervals (150-...300mm) and tinted areas at 25cm intervals (0, 25-...200 cm).

MLW

1910-1919

...This set of enlarged polychrome maps (scale 1:16 000 000) of Asia, Europe and part of Africa includes all of the East Indian Archipelago and contains monthly (January and July) at 10° intervals (-30° to 90°F), annual and seasonal (summer, winter and spring) means of temperature; maximum temperature in summer. No period of record is given.

MLW

An Annotated Bibliography of Climatic Maps of Indonesia
U. S. Weather Bureau
Contains the following maps for the Idjen Highlands (East Java). Monthly and annual mean rainfall (hatched, showing areas of 0-25, 25-50, 50-100, then every 100mm to 500-600mm and >600mm); absolute daily maximum rainfall of scale 1:625 000. Maps appear to be based on data from 74 stations having from 5-71 years of record.

JAW

1920-1929

...contains the following maps (scale 1:1 700 000) based on data from 357 rainfall stations (having from 4-20 years record within the period 1901-1920) in the northern part of the east coast of Sumatra: rainfall stations locations, monthly (hatched, showing areas of 50-75, 75-100, 100-150, 150-200mm and further increasing by 100mm to 800mm) and annual (hatched, showing areas of 1400-1500, then every 500mm to 4000 and then every 1000mm to 7000mm) mean rainfall, month of maximum rainfall (hatched showing areas when it occurred in either January, September, October, November, or December, month of minimum rainfall (hatched, showing areas when it occurred in either February, February/March, March, June, or July), month of secondary maximum rainfall (hatched, showing areas when it occurred in either March, April, or May), month of secondary minimum rainfall (hatched, showing areas when it occurred in either January, February, June, or July), and rainfall types (For all the rainfall stations the yearly distribution of rainfall was inserted graphically on a chart and the stations, of which the graphs showed only minor differences, were assembled in one group, and then the average monthly rainfall of the group was calculated as the mean of the average monthly rainfall figures of all stations).

JAW

An Annotated Bibliography of Climatic Maps of Indonesia
U. S. Weather Bureau

...Presents polychrome maps scale 1:1 000 000 of Java and Madura with: monthly and annual mean isohyets (also hatched areas) in mm. and location of rainfall stations. Data based on period 1879-1922.

DMC

Ibid., No. 24, 1931, is similar collection of data and maps, for other areas, for period 1879-1922; covered by No. 14, 1925, however.

JAM

...The rainfall of the Archipelago is classified according to rainfall types. Included are 2 maps (Java and Madura), scale 1:500 000 and outer provinces of Archipelago, scale 1:6 000 000 showing: area of various rainfall types (numbered); graphs of rainfall distribution, according to rainfall type, by months at 100mm intervals; wind roses (at sea) with length of wind vectors proportional to wind steadiness (50mm =100% for Madura and Java; 20mm=100% for Archipelago) and numbered 1-12 to represent each month; arrows (on map for Madura and Java) indicating the East and West monsoons. No period of record is given, but, is not less than 5 years.

MLW

An Annotated Bibliography of Climatic Maps of Indonesia
U. S. Weather Bureau
Source No. 8 Continued

...Contains numerous maps of the East Indies Archipelago in general and the islands of Java and Madoera in particular. Maps, scale 1:42 000 000, of the Archipelago present: mean monthly isobars and prevailing wind direction (arrows); mean monthly isotherms at sea level; months with maximum temperature; annual sea wind constancy in percent; months with maximum squalls; month and year of occurrence, with highest percentage, of clear and overcast skies; months with greatest amount of haze; months with greatest frequencies in percent of thunder (hatched, showing areas of <2, 2-3, 3-4, and >4 percent); and months with greatest and least rainfall (with 1:8 000 000). In addition to the above mentioned maps, the following (scale 1:800 000) for Java and Madoera contain: total consecutive months with greatest rainfall of 5, 10, and 15mm for E. Java and Madoera (scale 1:3 200 000) and 30 and 50mm for entire Java and Madoera; mean annual sunshine duration in percent and for periods January-February and July, August and September from 08-16 LT. All reliable data up to 1921 was used. No period less than 5 years.

MLW

...Contains a map, 1:6 000 000 scale, of Borneo, Java, Celebes, Minor Sunda Island and Timor, Moluccas, Zuidveste-, Zuidoost-, Kei- and Aroe Islands, and New Guinea, showing prevailing wind direction for selected stations. Length of arrow indicates degree of steadiness. Map appears to be based on data for period 1879-1911. See source numbers 10 and 11 in this bibliography.

JAW

An Annotated Bibliography of Climatic Maps of Indonesia
U. S. Weather Bureau
Source No. 10 Continued

...Contains two maps scale 1:2,000,000 of Java and Madeira with plotted prevailing wind direction for the east and west monsoon seasons for selected stations (local winds indicated by red arrows and other winds by black arrows, length of arrow indicates degree of steadiness). No period of record is given. See source numbers 9 and 11 in this bibliography.

...Contains a map (scale 1:4,000,000) covering the area including Bangka, Billiton, Discovery Oostbank and the South China Sea with prevailing wind direction by broken arrows for January and February, and solid arrows for July and September. Length of arrows denote degree of steadiness (lm=3%), during the day (D) and nighthours (N); and a map (scale 1:15, 150,000) of Banka and Billiton with arrows for differential winds (afternoon minus morning obs.) where lm=2%. No period of record given. See source numbers 9 and 10 of this bibliography.

...Contains a map, scale 1:45,000, for the area 5°N to 10°S and 95°-130°E showing distribution of precipitation (hatched, showing areas with equatorial heavy and light rainfall and monsoonal rain of up to 60 days and > than 60 days). No period of record given.

JAW

An Annotated Bibliography of Climatic Maps of Indonesia
U. S. Weather Bureau

...Contains a rainfall map, scale 1:6 000 000, for the area 5°N to 5°S and 95°E-135°E showing areas of 50-100, then every 50 cm to 450-500 and >500 centimeters. No period of record is given.

JAW

...Maps scale 1:6 000 000, showing type, dates and location of earthquakes at Java and Sumatra up to 1921.

DMC

1930-1939

...Contains a polychrome map, scale 1:2 000 000, of Java and Madoera with hatched areas showing mean no. of rainy days during the four driest months of the year (southeast monsoon). Map based on observations made at 2489 stations up to 1928.

gemiddelden jaarlijkschen en maandelijkshgen regenval op Borneo.
(Maps of the mean annual and monthly rainfall in Borneo). 1932.
Maps. DWB M82.1/91 141v, No. 24, v.

...Contains maps of Borneo (scale 1:5 000 000) of mean annual and
monthly rainfall amounts (mm) by hatched areas at 500mm intervals (50,
100-....500mm). Period of record from 1879-1922.

MLW

Ibid., No. 14, 1925, is similar collection of data and maps,
for Java and Madura, for period 1879-1922; covered by No. 24, 1932,
however.

JAW

17. Boerema, J. Regenval in Nederlandsch-Indië. (Rainfall in the Nether-
lands Indies). Batavia (K.). Magnetisch en Meteorologisch Obser-
vorium, Verhandelingen, No. 24, Vol. IV, Kaarten van den gemiddelden
jaarlijkschen en maandelijkshgen regenval op Celebes. (Maps of the
mean annual and monthly rainfall in Celebes). 1933. Maps. DWB
M82.1/91 141v. No. 24 v.4.

...Contains maps (scale 1:3 000 000) of Celebes of mean annual and
monthly rainfall amounts (mm) by hatched areas at 500mm intervals
(500, 1000-....5000mm). Inset map (scale 1:2 500 000) of Sangi and
Talaud Islands also contain similar data. Period of record from 1879-
1922.

MLW

Ibid., No. 14, 1925, is similar collection of data and maps, for
Java and Madura, for period 1879-1922; covered by No. 24, 1932,
however.

An Annotated Bibliography of Climatic Maps of Indonesia
U. S. Weather Bureau
Source No. 18 Continued

...Contains the following maps for the area 20°N-10°S. Latitude and 93°E-160°E Longitude: pressure and wind direction for January, May, July and November of 1:66 000 000 scale; monthly (every other month commencing with January) and annual precipitation (hatched, showing areas of 0-25, 25-50, 50-100, 100-200, 200-400, 400-600 and >600 mm), month with maximum and minimum rainfall, mean cloudiness for January and July, Köppen's climatic classification, all of 1:41 250 000 scale; and sea level temperature for every other month commencing with January of 1:65 000 000 scale. Also monthly (every other month commencing with January) and annual rainfall in Java of about 1:9 000 000 scale. No period of record is given.

JAW

...This large polychrome map (scale 1:10 500 000) of Asia includes the East Indian Archipelago and presents: mean annual rainfall amounts (inches) and mean monthly totals by step diagrams for Penang (inset); small inset maps contain mean January and July isotherms (°F.) and direction of ocean currents by arrows for January and July. No period of record is given.

MLW

...This map (scale 1:8 700 000) of Asia includes the East Indian Archipelago (except Dutch New Guinea) and presents: monthly rainfall amounts (inches) by block diagrams (one block = 1 inch); mean January (blue) and July (red) isotherms (°F.); coldest (January) and hottest (July) months by blue and red (respectively) hatched areas; monthly (January and July) wind direction by arrows (blue and red); ocean currents by broken arrows. No period of record is given.

MLW

An Annotated Bibliography of Climatic Maps of Indonesia
U. S. Weather Bureau
...This is an atlas of the Dutch territories including Indonesia. Included are: maps of the Archipelago (scale 1:50,000,000) with July and November isobars, wind direction (by arrows) and January and July isotherms (°C); maps of Sumatra (scale 1:12,000,000) and of Java and Madura (scale 1:3,000,000) with July and November rainfall amounts by hatched areas (mm); maps (scale 1:3,000,000) of monthly rainfall amounts (mm) by hatched areas of Borneo (for July and January) and Celebes (January and August). Period of record varies from 1928 to 1937.

MLW

1940-1949

...Contains an annual precipitation map (1:1,500,000 scale) of Java and Madura (shaded showing areas of fierce, strong, marked and weak dry seasons and areas with exclusively more or less and distinct wet months). All available data up to 1928 were used to construct this map.

JAW

...Contains the following maps: station location (scale 1:43,000 000; those containing bargraphs (data for 12 stations in area of interest), scale 1:43,000,000 for 15°N-20°S and 95°-150°E, showing mean monthly number of days with thunderstorms, cloudiness.

An Annotated Bibliography of Climatic Maps of Indonesia
U.S. Weather Bureau
for January and July and mean monthly number of rainy days; scale 1:10 000 000; month with greatest and least rainfall for 7°N-11°E and 95°-141°E; scale 1:90 000 000, mean monthly position of intertropical front for 17°K-25°S and 95°-160°E; scale 1:25 000 000, tracks of tropical disturbances for 8°N-18°S and 93°-141°E; and scale 1:94 000 000, prevailing winds at surface and streamline flow at 10,000 feet for January and July. No period of record is given.

...Contains the following maps: January, March, May, July, September, November, and annual rainfall (scale not indicated, but, about 1:24 000 000) and air pressure and wind, temperature, and cloudiness (scale not indicated, but, about 1:43 300 000). Rainfall maps constructed from data from 82 stations having a period of record of 1-40 years. No period of record given for other maps.

...Contains the following maps: January, March, May, July, September, November, and annual rainfall (scale not indicated, but, about 1:24 000 000) and air pressure and wind, temperature, and cloudiness (scale not indicated, but, about 1:43 300 000). Rainfall maps constructed from data from 82 stations having a period of record of 1-40 years. No period of record given for other maps.

An Annotated Bibliography of Climatic Maps of Indonesia U. S. Weather Bureau
Source No. 26 Continued

...This atlas consists of 7 sets of maps, one set (scale 1:10 000 000) of entire Netherlands New Guinea and nearby islands and six sets (scale 1:2 000 000) of various parts of the island. They present seasonal (W. Monsoon-January-March; spring transition-April-May; E. Monsoon-June-September; autumn transition-October-December) frequency distributions over a 3 year period of: wind speed and direction (wind roses), state of weather (symbols), horizontal visibility, height of lowest cloud base, total amount of cloudiness and direction of sea swell. Also included are mean seasonal air and sea water temperature (°C). Observations were made at sunrise (04-08LT), day (08-16LT), sunset (16-20 LT), and night (20-04LT). Diagrams of each element are included. No period of record is given.

MLW

...This paper treats some of the problems on equatorial highs or westerlies, typhoon formation, rainfall and cumulusnimbus-cloud formation as well as the rainfall in the East Indian Archipelago and Japan. The concept of converging line and converging belt is introduced. Maps (scale not given about 1:50 000 000) present mean annual streamline at 1.5 and 3.5km levels and mean monthly (January and July) isobars and convergence belt in January in the Celebes and Ambon areas; maps (scale 1:45 000 000) show annual and seasonal variations of upper currents at selected stations at 1, 2, 3 and 4km levels (numbers on ellipse denote months), semi-annual variations above the 1, 2, 3 and 4km levels, equalphase zone in semi-annual variations of upper currents (3km level); maps (scale 1:65 000 000) with distribution of rainfall showing maximum around January and July and semi-annual variation with maximum from April to May and October to November. Also included are maps showing various fronts associated with typhoons on specific dates at various levels. No period of record is given.

MLW

An Annotated Bibliography of Climatic Maps of Indonesia
U. S. Weather Bureau
...Includes map scale 1:2 000 000s of Java and Madura showing location of rainfall stations for which long periods of record are available.

29. Schmidt, F. H. and Schregardus, M.W.F. *Lets over de weerdienst in Indonesie.* (Something about the weather service in Indonesia.) Hemel en Dampkring, 49(2, 3): 23-31; 54-59, 1951. 13 figs. DNB M(09) N469h v.49.

...Contains four analyzed maps (scale not indicated, but, about 1:37 500 000) for area of longitude 90°E.-150°E. and latitude 20°N.-20°S., illustrating typical weather situations.

...Contains the following maps for Java and Madura (based on 240 stations): seasonal (December to February; March to May; June to August, and September to November distribution of sunshine in the Gedeb-Pangerango regions of scale 1:300 000; difference in duration of sunshine between East Monsoon and West Monsoon (hatched, showing areas of <0, 0-25 and >25%) of scale 1:2 000 000; difference in sunshine percentage between morning (08-09h) and after (15-16h) during East Monsoon and during West Monsoon (both hatched), scale 1:2 000 000; areas of minus 10 to minus 20, 0 to minus 10, 0-10, 10-20, 20-30, 30-40, 40-50, 50-60 and 60-70 percent) scale 1:2 000 000; annual mean of duration of sunshine (hatched, showing areas of 30-40, 40-50, 50-60, 60-70, 70-80 percent); scale 1:2 000 000 seasonal (December-February; March-May; June-August; and September-November) duration of sunshine (hatched, showing areas of 20-30, 30-60, 40-50, 50-60, 60-70, 70-80, 80-90 and 90-100 percent, scale 1:2 000 000. Data for maps seems to cover the period 1889/1935.

An Annotated Bibliography of Climatic Maps of Indonesia
U. S. Weather Bureau
1951. DWB M82.1/91 I4lv No. 42. English.

...Contains a polychrome maps scale 1:5 000 000 of Indonesia and scale 1:5 000 000 of Java, Madura, Bali and Lombok with climatic zones (based on occurrence of dry and wet months). Data 1921-40 were used. Also included is a map, scale 1:2 000 000, of Java, Madura, Bali and Lombok with climatic zones according to the Köppen system.

...Contains the following seasonal (December-February; March-May; June-August; September-November) maps for 1000, 3000, 7000, 10,000, 45,000 and 20,000 feet: mean streamlines and divergence and convergence areas and distribution of constancy for area 10°N-11°S and 95°E to 141°E, scale 1:47 000 000; and upper wind roses for area 4°N to 10°S and 95°E-141°E, scale 1:17 500 000. Data based on the 00Z observations from 30 stations for the period 1936-41 and 1947-50.

...The climate of Indonesia, the Philippines, and Borneo is compared with that of two localities in the Canal Zone: Balboa Heights, representing the drier, leeward, Pacific side of the Isthmus of Panama, and Cristobal, representing the wetter, windward, Atlantic side. Maps (scale 1:15 300 000) show the distribution of areas of analogy of the follow-pertinent climatic elements and combinations of these elements: station locations; temperature, warmest and coldest months, mean daily maximum-warmest month, mean daily minimum of coldest month, mean daily range of warmest month; precipitation, mean annual amount, mean monthly of wettest month, number of wet months; relative humidity, driest month; cloud, mean during wettest month; wind, mean during wettest month; composite of analogous areas-Balboa Heights and composite of analogous areas- Cristobal. Area covered is approximately 12°N-12°S and 95°-134°E. Maps based on 23 stations have from 7-73 years of record.
