TO: Assistant Chief of Staff for Force Development
Department of the Army
Washington, D. C. 20310

1. Forwarded is the Operational Report - Lessons Learned for the 6th Medical Center (Conv) for the period ending 30 April 1967.

2. This unit has made considerable progress during the period in improving its physical plant and facilities for recreational activities of both assigned personnel and patients.

ENRICO D. CARRASCO
COL, MC
Commanding
Section I. Significant Organizational Activities

1. The consolidation of personnel activities at the 6th Medical Center (Convalescent) for all units subordinate to the 43d Medical Group in the Can Jinn Br. area was accomplished 1 March 1967. This consolidation of personnel activities in one location has already shown evidence of a significant increase in the quality and efficiency of personnel work. It has also reduced the number of specialists normally required for proper management of personnel records and reports. The total consolidated strength of the personnel section is currently 16. The total assigned strength of this command as of 27 April 1967 was 329, of which 277 were present for duty. For a breakdown of critical and non-critical, refer to Enclosure 1. On 28 March 1967 SMP (8-590b) was submitted to 44th Medical Brigade, expanding the operational needs of the Center in keeping with the expanded mission of the Center. The increase or decrease between the original SMP and the SMPB was mainly in enlisted personnel for the laboratory, special services section, mail room, service section and nursing section. The revised organizational chart of the Center is included as Enclosure 2.

2. During this period a total of 2,677 patients were admitted to the Center while there were 2,318 dispositions. Average length of patient stay was 27 days. For a detailed breakdown during the period refer to Enclosure 3.

3. Two Chaplains, one Catholic and one Protestant, are assigned to this unit to conduct all activities expected of military Chaplains. Each Chaplain has an enlisted assistant. Average Sunday mass attendance was 123; average weekday attendance was 6. Protestant religious services held twice every Sunday, and once during the week had an average total attendance of 100. Patients account for two-thirds of these attendance figures. Improvements in April were recently made to provide adequate office space for

Chaplains. Metal folding chairs are currently being used in lieu of pews. These have no kneepads. On order through supply channels are chair-kneelers which, if sent, will solve this problem.

A. During the report period a full-time assigned training NCO prepared and supervised the training program. A file was prepared and classes were taught on training subjects. An additional duty was reenlistment NCO. Liaison visits were established with 45th Group headquarters.

B. The surgical section experienced a heavy patient load during the report period as evidenced by statistics contained in Inclosure 4. A scheduled appointee system was set up for the clinic. A scheduled surgical ward rounds is held weekly attended by both surgeons, physical therapist, surgical nurse and NCOIC of surgery. Surgical consultation service has been extended to the Ca. Kanh area. An AMC service has been added with two clinics held weekly at the 6th Medical Center.

C. Medical supplies were being received on time and in sufficient quantities during this time period. Re-Order points were established on approximately 70% of Center stocks, and Order and Shipping Time showed a rapid decline during the past 40 days. Excellent cooperation is being received from the 32nd Medical Depot on all Medical Supply matters. In the area of Non-Medical supplies, extensive Order and Shipping Times are being encountered. NCO's and requisitions are being lost at Depot level, and status information is hard to obtain. Transportation has presented quite a problem during this quarter. Present TOL allows for five (5) cargo carrying 2y ton trucks. A modified TOL has been submitted requesting five (5) more, which are presently on hand. Due to the non-availability of parts, the deadline rate fluctuates between 40 and 50%.

D. In the area of recreational activities significant advances have been observed. Scheduled stage shows, movies, opening of air-conditioned Special Services library, and utilization of the NCOIC station enhanced the program (Inclosure 5). A new enlarged store exchange facility opened late in March allowing for increased expansion in variety and amount of merchandise stocked (Inclosure 6). Store operations also experienced an increase in volume and efficiency (Inclosure 7).

E. Officers of this command began a self-help program during this period to upgrade their Officers Club. Renovation of the interior is now approximately 75% completed.

F. Installation of three (3) new diesel ovens and eight (8) new stoves has been completed. They should be tested and ready for operation within a week. This installation will affect the phasing out of the field ranges now in use.
Section II.

Part I. Lessons Learned

Item: manufacture of pharmaceutical preparations.

Discussion: During the month of February, the Pharmacy moved from its temporary location in a ward type building, to the permanent site in the Dispensary building. Modifications of the original floor plans made by the Pharmacy included adding additional shelving and modifying existing shelving. The storage space of the Pharmacy was greatly enhanced by use of the linen closet immediately adjacent to the Pharmacy. Moving to the new location almost completely eliminated the sand and dust problems which formerly plagued the Pharmacy.

Observation: The Pharmacy is now able to manufacture many preparations, i.e., cough syrups, ointments, etc., previously prohibited because of the sand and dust problem.

Item: NOS training program in the medical area.

Discussion: The majority of individuals assigned to nursing service have never had experience in actual patient care. Due to the number and type of patients, they are called upon to do more than usually expected of personnel in their NOS. This is especially true in the area of medications. Most of the training is of the bedside teaching method. This places a responsibility on the medical team to continuously instruct these of the lower NOS groups. The physician, nurse, and WAC's are daily engaged in these procedures. The lack of practical experience on the part of WAC's shows a need for the experience to be given prior to shipment to an overseas area.

Observation: The possibility that part of the original NOS training could include practical experience should be explored.

Item: Construction of sidewalks.

Discussion: The construction of sidewalks during the latter part of February has greatly facilitated the movement of patients. Prior to the construction of sidewalks each patient was required to plow through deep sand to reach any area. This caused increased fatigue in many patients already fatigued from their illnesses.

Observation: Easier movement now allows us to use the full capabilities of our facilities.
Item: Optimal care of patients.

Discussion: The medical Section physicians are responsible for the admission, care and disposition of patients admitted to the Medical Service. They as well are the physicians in charge of the dispensary sick call for permanent party and see medical consultations referred by neighboring dispensaries. Average daily medical census for the time covered in this report ranged from 483 to 647. Average weekly admissions to this service were 140. Daily sick call included 10 to 15 patients for this same time. This considerable load of acutely ill as well as convalescing patients was handled by five physicians the entire time. Our special treatment beds (20-25) were filled at all times with patients who had serious acute medical problems ranging from new malaria infections to bacillary or amebic dysentery, and fevers of undetermined origin. The situation was aggravated by the paucity of registered nurses (2-4 during the entire period in the entire hospital). Time was not available for training of corpsmen or other ancillary personnel, therefore the physician attempted to alleviate this problem by acting as his own special nurse.

Observation: It was clear in this report period that optimal care was frequently difficult with the large daily influx of patients as well as ward responsibilities for close to one hundred men per doctor.

Item: High wire electrical system.

Discussion: All buildings in the Center have recently been hooked up to the installed high wire electrical system. Removal of old wire and poles is 95% completed. The source of power for the high wire system is two 350 Kw generators and the four 100 Kw generators powering the old system have been phased out.

Observation: Installation of the new system has eliminated maintenance of old 100 Kw generators and inconvenience created by previous erratic performances.

Part II. Recommendations

None

HEADQUARTERS, 1ST LOGISTICAL COMMAND, APO 96307

TO: Deputy Commanding General, US Army Vietnam, ATTN: AVHGC-DH, APO 96307

SUBJECT: Operational Report for Quarterly Period Ending 30 April 1967 (RCS GSFOR 65)

1. The Operational Report - Lessons Learned submitted by the 6th Medical Center (Convalescent) for the quarterly period ending 30 April 1967, is forwarded.

2. Reference page 2, paragraph 6:
   a. For normal replenishment requisitions from CONUS, the order ship time for Class II and IV items is 135 days if items are on hand. If items are in short supply or procurement action must be initiated the order ship time may be extended. When known, procurement lead time is considered at the time requisitioning objectives are computed. Periodically, order ship time is adjusted based on a study of requisitions submitted. Without specific information an objective evaluation of comments submitted by 6th Medical Center is very difficult to conduct. Submission of high priority requisitions for urgent authorized requirements will reduce the order ship time considerably if items are available in the supply system.
   b. In an effort to improve the repair parts posture of this command, a supply technical assistance team consisting of 450 military and civilian personnel from CONUS are presently on temporary duty here in Vietnam to assist this command in updating and purifying all organizational Prescribed Load Lists, support unit's Authorized Stockage Lists and supply depot's Theater Authorized Stockage Lists. The result of the team's effort has improved the availability of repair parts at all levels within the command, and has significantly reduced the quantity of equipment nonoperational because of the lack of parts.

3. Reference page 4, 1st item. Records, this headquarters, show that the 6th Medical Center currently is authorized 6 officers and have 6 assigned in the MOS's listed. In reference to the enlisted MOS's, action should be taken by the Commanding Officer, 44th Medical Brigade to fill the shortages in so far as possible from resources within the Brigade.

4. The 6th Medical Center (Convalescent) engaged in combat service support for 89 days during the reporting period.

5. Concur with basic report as modified by indorsement. The report is considered adequate.

INCLUSION: 4
Each month NGO Club Shows are presented to the patients. Approximately 6 shows per month come from this source so a total of 18 performances were given during this period. The balance of our live shows are sponsored by the NGO in cooperation with Special Services. These account for about 1 show per month.

Movies are shown each night in the week with one exception. A total of 76 movies were shown during this time period.

Our new airconditioned Special Services library opened on 17 April 1967 for limited taping sessions and magazine usage only. We have approximately 1,000 books but only 5 bookshelves. However our balance of bookshelves are expected very soon.

The base radio station which we operate gets maximum usage and the reception is usually of good quality. It is hard to estimate the amount of calls per month, although a good percentage of the calls that are placed are completed.

A Red Cross Recreation Supervisor arrived in March and has organized an initial program. We received word that 3 Red Cross Craft specialists are to arrive soon and establish an Arts and Crafts program.

Our beach continues to be used at all possible times. Organized swim periods are provided for the patients during the day. Permanent party personnel utilize the beach after duty hours and on weekends. The gymnasium offers a variety of weights and apparatus to be used by the patients while working out. Combination basketball, tennis, and volleyball courts are used both day and night.
During the months of February and March 1967, the Post Exchange operated in a converted ward building measuring 20' x 102'. The retailing area of the store measured 1600 square feet and yielded an average monthly sales figure of $100,000.00. The office space and storage area of the building totaled 420 square feet. Additional storage area was provided by eleven conexes adjacent to the store.

The original plans of the 6th Medical Center included a 40' x 100' structure designed for use as the Post Exchange. This building became ready for occupancy late in March and stocking crews and painters went to work remaking the store for customers. Opening day, 3 April, produced a total sales figure of $12,800.00, the largest daily volume to date. The total retailing area of the new store measures 1900 square feet. This increase in floor space, coupled with more modern fixtures for display, allow for a great expansion in the variety and amount of items stocked. In addition, the storage area has been expanded to 1200 square feet, thus eliminating the need for outside, conex storage.

Monthly sales for the 6th Medical Center PX range from $150,000.00 to $200,000.00 varying in direct proportion to the availability of merchandise from the supporting supply depot. At the present time, the supply is frequently erratic and insufficient in some areas. In order to improve the existing system, the Cam Ranh PX exchange is in the process of incorporating a merchandise unit Control operation in each of its six annexes. The 6th Medical Center PX was chosen as the first annex in the area to begin implementation of this new system.

Complementing its regular services, the new PX houses a modern, four chair barber shop and a tailor and alterations concession. These services were formerly located in a separate temporary building. Plans for a new snack bar, the first in the Cam Ranh area, to be run by the PX system, indicate a May opening in the Special Services building. Its operation from 1200 hours to 2100 hours daily should reduce the sale of food and drink items in the PX and the attendant littering and policing problems.
POST OPERATIONS
(1 Feb 67 - 30 Jul 67)

During this period mail operations were normal except during the Easter holidays when both incoming and outgoing mail increased greatly. On an average day 1200-1400 letters are processed as outgoing mail, and approximately 1000 letters are processed as incoming mail. Over and above this figures packages, newspapers, registered and insured mail must be processed.

The biggest problem is the redirecting of mail. The patient census fluctuates between 900-950. Patients are both admitted and discharged to duty daily. This creates a very heavy load of mail that must be redirected. Frequently mail is forwarded to a patient from his unit only to find that the patient has been discharged to duty. This necessitates forwarding the mail back to the man's unit.

Postal services are provided on three days a week by the 57th A&F. This A&F is permanently located at the 22nd Replacement Battalion but sends two men to our mailroom Tuesday, Thursday and Saturday for three hours each day. During this three hours they sell stamps, money orders and accept packages for mail.

On 1 May 1967 the postal operations for the 6th Medical Center will move into new facilities. These facilities will more than triple the present available space, thus increasing the efficiency of the overall operation.
