TOPICAL HAZARD EVALUATION PROGRAM
OF CANDIDATE INSECT REPELLENT AI3-70763
3[N-n-BUTYL-N-ACETYL] AMINOPROPIONIC ACID-ETHYL ESTER
STUDY NO. 51-0014-77
DECEMBER 1976 - APRIL 1977
Approved for public release; distribution unlimited.

US ARMY
ENVIRONMENTAL HYGIENE AGENCY
ABERDEEN PROVING GROUND, MD  21010
ABSTRACT

A hazard evaluation of AI3-70763 was conducted using New Zealand White rabbits for skin and eye studies; Hartley guinea pigs for a skin sensitization study and Sprague-Dawley, Wistar derived rats for determination of acute oral toxicity. It is recommended that AI3-70763, 3-[N-n-butyl-N-acetyl] aminopropionic acid-ethyl ester, be approved for further testing as a candidate insect repellent.

STUDY NO. 51-0014-77
DECEMBER 1976 - APRIL 1977

1. AUTHORITY.

b. Memorandum of Understanding between the US Army Environmental Hygiene Agency; the US Army Health Services Command; the US Department of the Army, Office of The Surgeon General; the Armed Forces Pest Control Board; and the US Department of Agriculture, effective December 1970 with Amendment No. 1, effective August 1974.

3. PURPOSE. The purpose of this program is to provide guidance for further entomological testing of the candidate insect repellent AI3-70763.

4. SUMMARY OF FINDINGS. A hazard evaluation of the candidate repellent AI3-70763, 3-[N-n-butyl-N-acetyl] aminopropionic acid-ethyl ester, was conducted by this Agency using New Zealand White rabbits for skin and eye studies, Hartley guinea pigs for a skin sensitization study and Sprague-Dawley, Wistar-derived rats for determination of oral toxicity. A tabular presentation of animal toxicity data developed in this Agency follows:*†

† The experiments reported herein were performed in animal facilities, fully accredited by the American Association for Accreditation of Laboratory Animal Care.
SKIN IRRITATION STUDIES

Rabbits

Single 24-hour application to intact and abraded skin of New Zealand White rabbits. 0.5 ml technical grade compound applied to each of six rabbits.

Compound AI3-70763 produced no primary irritation of the intact skin or the skin surrounding an abrasion.

USAHA Category I (ref Appendix).

EYE IRRITATION STUDIES

Rabbits

Single 24-hour application of 0.1 ml technical grade compound to one eye of each of six New Zealand White rabbits.

Compound AI3-70763 produced mild injury to the cornea and in addition, some injury to the conjunctiva in six out of six rabbits at 24 hours after application and in three out of six rabbits 7 days after application.

USAHA Category C. The compound should be used with caution around the eyes and mucosa (ref Appendix).

APPROXIMATE LETHAL DOSE (ALD)

Oral

Rats (male) - no diluent

ALD>4900 mg/kg

Presents little lethal hazard from acute accidental ingestion.
### SENSITIZATION STUDIES

**Guinea Pigs (Male)**

Intradermal injections of 0.1 ml of a 0.1 percent suspension (w/v) of AI3-70763 or of dinitrochlorobenzene (DNCB)* in a mixture containing 1 volume of propylene glycol and 29 volumes of saline.

</tr>
<tr>
<td>Following UV exposure of the rabbits 0.05 ml of test compound, positive control and diluent were applied to additional skin areas to serve as unirradiated control sites. Application areas were checked for skin irritation reactions at 24, 48 and 72 hours.</td>
<td>Test compound, positive control and diluent caused no primary irritant effects in unirradiated skin areas.</td>
<td></td>
</tr>
</tbody>
</table>
5. CONCLUSION. The candidate insect repellent 3-[N-n-butyl-N-acetyl]aminopropionic acid-ethyl ester, caused mild eye irritation but no skin or photochemical irritation in rabbits, no sensitization reactions in guinea pigs and did not demonstrate acute ingestion hazard.

6. RECOMMENDATION. Under the provisions of the Memorandum of Understanding (reference para 1b), it is recommended that A13-70763, 3-[N-n-butyl-N-acetyl]aminopropionic acid-ethyl ester, be approved for further testing as a candidate insect repellent. The compound should be used with caution around the eyes and mucosa.

TOPICAL HAZARD EVALUATION PROGRAM
DEFINITIONS OF CATEGORIES OF COMPOUNDS BEING CONSIDERED FOR ACUTE SKIN APPLICATION

CATEGORY I — Compounds producing no primary irritation of the intact skin or no greater than mild primary irritation of the skin surrounding an abrasion. (INTERPRETATION: No restriction for acute application to the human skin.)

CATEGORY II — Compounds producing mild primary irritation of the intact skin and the skin surrounding an abrasion. (INTERPRETATION: Should be used only on human skin found by examination to have no abrasions or may be used as a clothing impregnant.)

CATEGORY III — Compounds producing moderate primary irritation of the intact skin and the skin surrounding an abrasion. (INTERPRETATION: Should not be used directly on the skin without a prophetic patch test having been conducted on humans to determine irritation potential to human skin. May be used without patch testing, with extreme caution, as clothing impregnants. Compound should be resubmitted in the form and at the intended use concentration so that its irritation potential can be reexamined using other test techniques on animals.

CATEGORY IV — Compounds producing moderate to severe primary irritation of the intact skin and of the skin surrounding an abrasion and, in addition, producing necrosis, vesiculation and/or eschars. (INTERPRETATION: Should be resubmitted for testing in the form and at the intended use concentration. Upon resubmission, its irritation potential will be reexamined using other test techniques on animals, prior to possible prophetic patch testing in humans, at concentrations which have been shown not to produce primary irritation in animals.)

CATEGORY V — Compounds impossible to classify because of staining of the skin or other masking effects owing to physical properties of the compound. (INTERPRETATION: Not suitable for use on humans.)

EYE CATEGORIES:

A. Compounds noninjurious to the eye. INTERPRETATION: Irritation of human eyes is not expected if the compound should accidentally get into the eyes, provided it is washed out as soon as possible.

B. Compounds producing mild injury to the cornea. INTERPRETATION: Should be used with caution around the eyes.

C. Compounds producing mild injury to the cornea, and in addition some injury to the conjunctiva. INTERPRETATION: Should be used with caution around the eyes and mucosa.

D. Compounds producing moderate injury to the cornea. INTERPRETATION: Should be used with extreme caution around the eyes.
E. Compounds producing moderate injury to the cornea, and in addition producing some injury to the conjunctiva. **INTERPRETATION:** Should be used with extreme caution around the eyes and mucosa.

F. Compounds producing severe injury to the cornea and to the conjunctiva. **INTERPRETATION:** Should be used with extreme caution. It is recommended that use be restricted to areas other than the face.
