TOPICAL HAZARD EVALUATION PROGRAM
OF CANDIDATE INSECT REPELLENT A13-36747a
US DEPARTMENT OF AGRICULTURE PROPRIETARY COMPOUND
STUDY NO. 75-51-0013-80
OCTOBER 1976-APRIL 1980

Approved for public release; distribution unlimited.
A preliminary hazard evaluation of A13-36747a was performed by means of laboratory animal studies using rats, rabbits, and guinea pigs. The technical grade compound proved to be a moderate sensitizer in guinea pigs, and caused mild primary skin and eye irritation in rabbits. It was recommended that A13-36747a, USDA proprietary compound, not be approved for further testing as a candidate insect repellent.
SUBJECT: Topical Hazard Evaluation Program of Candidate Insect Repellent
A13-36747a, US Department of Agriculture Proprietary Compound,
Study No. 75-51-0013-80, October 1976 to April 1980

A summary of the pertinent findings and recommendations of the inclosed report follows:

A preliminary hazard evaluation of A13-36747a was performed by means of laboratory animal studies using rats, rabbits, and guinea pigs. The technical grade compound proved to be a moderate sensitizer in guinea pigs, and caused mild primary skin and eye irritation in rabbits. It was recommended that A13-36747a, USDA proprietary compound, not be approved for further testing as a candidate insect repellent.

1. AUTHORITY.
   b. Memorandum of Understanding between the US Army Environmental Hygiene Agency; the US Army Health Services Command; the Department of the Army Office of The Surgeon General; the Armed Forces Pest Control Board; and the US Department of Agriculture, Agricultural Research, Science and Education Administration; titled, Coordination of Biological and Toxicological Testing of Pesticides, effective 23 January 1979.

3. PURPOSE. The purpose of this program is to provide guidance for further entomological testing of the candidate insect repellent, AI3-36747a.

4. SUMMARY OF FINDINGS. A hazard evaluation of the candidate repellent AI3-36747a, US Department of Agriculture (USDA) Proprietary Compound, was conducted by this Agency using New Zealand White rabbits for skin and eye studies, Hartley guinea pigs for a skin sensitization study and Sprague-Dawley rats for determination of oral toxicity. A tabular presentation of animal toxicity data developed in this Agency follow:*

* In conducting the studies described in this report, the investigators adhered to the "Guide for the Care and Use of Laboratory Animals," US Department of Health, Education and Welfare Publication No. (NIH) 74-23, revised 1978.
† The experiments reported herein were performed in animal facilities fully accredited by the American Association for the Accreditation of Laboratory Animal Care.

Approved for public release; distribution unlimited.

### SENSITIZATION STUDIES

**Guinea Pigs (Male)**

Intradermal injections of 0.1 mL of a 0.1 percent solution (w/v) of A13-36747a or of dinitrochlorobenzene (DNCB)* in a mixture containing 1 volume of propylene glycol and 29 volumes of saline.

Ten test guinea pigs were given 10 sensitizing doses over a 3-week period. After 2 weeks rest, they were challenged with 10 injections of test compound. Challenge dose of A13-36747a produced mild sensitization reactions in 6 of 10 guinea pigs.

Ten positive control guinea pigs were sensitized over 3 weeks with DNCB. After 2 weeks rest, they were challenged with 10 injections of DNCB. Challenge dose of DNCB in positive control guinea pigs produced a marked sensitization reaction in 10 out of 10 guinea pigs.

* A known skin sensitizer

</tbody>
</table>
5. CONCLUSION. Technical grade compound AI3-36747a caused a moderate sensitization reaction in 6 of 10 guinea pigs, and mild skin and eye irritation in rabbits. Potential for human sensitization and/or irritation prevents classifying this repellent as nonhazardous.

6. RECOMMENDATION. Under the provisions of the Memorandum of Understanding (paragraph 1b), it is recommended that AI3-36747a, USDA Proprietary Compound, not be approved for further testing as a candidate insect repellent.

APPENDIX

TOPICAL HAZARD EVALUATION PROGRAM
DEFINITIONS OF CATEGORIES OF COMPOUNDS BEING
CONSIDERED FOR ACUTE SKIN APPLICATION

CATEGORY I - Compounds producing no primary irritation of the intact skin or
no greater than mild primary irritation of the skin surrounding an abrasion.
(INTERPRETATION: No restriction for acute application to the human skin.)

CATEGORY II - Compounds producing mild primary irritation of the intact skin
and the skin surrounding an abrasion. (INTERPRETATION: Should be used only
on human skin found by examination to have no abrasions or may be used as a
clothing impregnant.)

CATEGORY III - Compounds producing moderate primary irritation of the intact
skin and the skin surrounding an abrasion. (INTERPRETATION: Should not be
used directly on the skin without a prophetic patch test having been
conducted on humans to determine irritation potential to human skin. May be
used without patch testing, with extreme caution, as clothing impregnants.
Compound should be resubmitted in the form and at the intended use
concentration so that its irritation potential can be reexamined using other
test techniques on animals.)

CATEGORY IV - Compounds producing moderate to severe primary irritation of
the intact skin and of the skin surrounding an abrasion and, in addition,
producing necrosis, vesiculation, and/or eschars. (INTERPRETATION: Should
be resubmitted for testing in the form and at the intended use concentration.
Upon resubmission, its irritation potential will be reexamined using other
test techniques on animals, prior to possible prophetic patch testing in
humans, at concentrations which have been shown not to produce primary
irritation in animals.)

CATEGORY V - Compounds impossible to classify because of staining of the skin
or other masking effects owing to physical properties of the compound.
(INTERPRETATION: Not suitable for use on humans.)

EYE CATEGORIES:

A. Compounds noninjurious to the eye. INTERPRETATION: Irritation of
human eyes is not expected if the compound should accidentally get into the
eyes, provided it is washed out as soon as possible.

B. Compounds producing mild injury to the cornea. INTERPRETATION:
Should be used with caution around the eyes.

C. Compounds producing mild injury to the cornea, and in addition some
injury to the conjunctiva. INTERPRETATION: Should be used with caution
around the eyes and mucosa.

D. Compounds producing moderate injury to the cornea. INTERPRETATION:
Should be used with extreme caution around the eyes.

E. Compounds producing moderate injury to the cornea, and in addition
producing some injury to the conjunctiva. INTERPRETATION: Should be used
with extreme caution around the eyes and mucosa.

F. Compounds producing severe injury to the cornea and to the
conjunctiva. INTERPRETATION: Should be used with extreme caution. It is
recommended that use be restricted to areas other than the face.
