US ARMY MEDICAL BIOENGINEERING RESEARCH AND DEVELOPMENT LABORATORY
Fort Detrick, Frederick, Maryland 21701

APPROVED FOR PUBLIC RELEASE; DISTRIBUTION UNLIMITED

The findings in this report are not to be construed as an official Department of the Army position unless so designated by other authorized documents.
MITRE has been requested by the U.S. Army Medical Bioengineering Research and Development Laboratory to identify and evaluate short-term bioassays which have demonstrated ability to evaluate and predict cardiovascular impairment resulting from toxicant exposures. This directory is a companion to Selected Short-Term Cardiovascular Toxicity Tests, DAMD 17-78-C-8068, which describes the available cardiovascular testing protocols and assesses their suitability for a program. This directory catalogues the organizations currently engaged in cardiovascular bioassay utilization or development and provides information.
20. Abstract (Con't)

concerning specific measurements performed, test systems employed, compounds
tested, requirements for anesthesia and terminal nature of the test.

In the companion report, MITRE reviewed and recommended short-term tests for
evaluating and predicting the functional and/or morphological impairment
produced by toxic substances using animal test systems. The document presents
information on the available tests for the cardiovascular system and recommends
those tests which are suitable for use in a screening program.

A variety of testing techniques have been developed to detect cardiovascular
damage; however, few of these are well developed or have demonstrated ability
to detect damage in short-term screening. Those tests that are sufficiently
developed to have potential application in a short-term screening program for
cardiotoxicity are described in the report. The information in the report
deals only with animal testing. The testing techniques used in humans are
included only if they might prove useful in animal testing.

After an assessment of the cardiovascular testing techniques was made, none
of the techniques sufficiently satisfied the criteria to be immediately useful
in a short-term screening program. Nonetheless, a battery of tests are
recommended that show the greatest potential utility in a cardiovascular
screening program.

The recommended tests include both in vivo and in vitro techniques. The
in vivo functional techniques recommended are the monitoring of left ventri-
cular pressure, arterial pressure, aortic flow, cardiac output and electro-
cardiographic activity. The morphological techniques recommended include
gross inspection, light microscopy and limited electron microscopy. The bio-
chemical analyses recommended include serum lactic dehydrogenase (LDH),
creatine phosphokinase (CPK) and tissue electrolytes (e.g., magnesium, calcium,
sodium and potassium). The in vitro techniques recommended are cultured heart
cells and perfused heart preparations. In both the cell cultures and perfused
heart preparations, various biochemical (e.g., LDH, CPK) and functional (e.g.,
beating and electrical activity) parameters may be monitored.

Some experimental procedures currently in the research and development stage
are briefly discussed for their future potential as screening tests.
EXECUTIVE SUMMARY

The MITRE Corporation, Metrek Division is currently assisting the United States Army Medical Bioengineering Research and Development Laboratory (USAMBRDL) in the development of a hierarchical short-term testing scheme to screen substances for functional or morphological impairment in animal test systems. Effects in four organ systems—pulmonary, hepatic, renal and cardiovascular—are being considered.

As part of this effort, Metrek has been asked to prepare directories of organizations and individuals presently involved in the development and/or utilization of tests applicable to toxicity screening. This directory serves as a companion document to the report, Evaluation of Short-Term Bioassays to Predict Functional Impairment: Selected Short-Term Cardiovascular Toxicity Tests.

Entries in this directory for several organizations currently involved in the organ bioassay use or development include at least one contact individual's name, which appears under the organization name and address at the top of the page. These are the people who, during the process of directory compilation, described either their activities or the activities of their group regarding organ toxicity testing, and thereby provided the information presented in the entry. The information provided includes the specific tests and observations performed; the test systems utilized (e.g., experimental animals or
tissues in vitro); the substances administered or conditions established to elicit toxic response (e.g., stress); the use of anesthesia, and the terminal nature of the tests conducted.

In order to facilitate use and the processes of amending and adding to the directory, it has been arranged in alphabetical order by organization. In order to further simplify use of the directory, three indexes have been prepared and are included as appendices. The first, Appendix A, is an alphabetical index of tests performed by each organization engaged in developing, performing or refining the tests noted. Appendix B is an alphabetical index of species utilized, and all the organizations employing each test system. These are further divided by tests performed. In this way it is possible to ascertain which organizations perform particular bioassays in a specific test system. Appendix C is an alphabetical index of the individuals mentioned in the directory, and the organization with which they were affiliated when contacted.

The objective of this directory is to provide a readily usable guide to that segment of the scientific community currently active in organ system toxicity testing in animals. Because research associate and graduate student positions are often temporary in nature, a deliberate attempt was made to exclude these individuals from the directory. Their efforts, however, are likely to be represented by activities associated with their organization, as in most cases these individuals are conducting research under the
auspices of someone more senior and more permanently allied with the organization, who was included in the directory. In addition, there are individuals who were active in toxicity testing at one time but are no longer; these have also been omitted from the directory. The efforts of many of those who are not currently active, but were involved over a period of many years and distinguished themselves in the field, are reflected in the report, *Selected Short-Term Cardiovascular Toxicity Tests*.

Some of the entries in the directory may be less detailed than others, and less specific in the detail that is presented. In addition, the information presented for an organization may not be reflective of all the ongoing efforts at that organization. This is due largely to the reluctance of some individuals contacted to communicate the information and, in small part, to an inability to contact a few individuals at the time this directory was being compiled. The information in the directory was selected to provide an immediate indication of the practices of each organization concerning some issues of importance when designing a screening program. Much of this information is discussed in greater detail in the report, *Selected Short-Term Cardiovascular Toxicity Tests*. 
FOREWORD

This Directory was compiled by MITRE staff by means of a survey of the recent literature, and by discussions with leaders in the field and other personal contacts. We are grateful to all those who responded so patiently to our questions regarding their activities. All of the "contact persons" were given an opportunity to review the information relating to their organization. We recognize there may be inadvertent omissions for which we offer our sincere apologies.

Citations of organizations and tradenames in this report do not constitute an official Department of the Army endorsement or approval of the products or services of these organizations.

DIRECTORY OF ORGANIZATIONS CURRENTLY INVOLVED IN UTILIZATION OR DEVELOPMENT OF CARDIOVASCULAR TESTS IN LABORATORY ANIMALS
ORGANIZATION:

ALLIED CHEMICAL
BOX 1021R
MORRISTOWN, NEW JERSEY
S.C. GAD (201) 455-6085

TESTS PERFORMED:

PERFUSED HEART PREPARATIONS
CULTURED MYOCARDIAL CELLS
WHOLE ANIMAL FUNCTIONAL MONITORING

TEST SYSTEMS UTILIZED:

RATS

COMPOUNDS TESTED:

ANTIOXIDANT SUBSTANCES SUCH AS BUTYLATED HYDROXYTOLUENE (BHT),
BUTYLATED HYDROXYANISOLE (BHA) AND SODIUM BISULFITE
ORGANIZATION:

ALTON OCHSNER MEDICAL FOUNDATION
1516 JEFFERSON HIGHWAY
NEW ORLEANS, LOUISIANA 70121
E.D. FROHLICH (504) 834-7070

TESTS PERFORMED:

FUNCTIONAL MONITORING -
ELECTROMAGNETIC
BLOOD FLOW DISTRIBUTION

TEST SYSTEMS UTILIZED:

RATS

COMPOUNDS TESTED:

EXPERIMENTAL HYPERTENSION

REMARKS:

CURRENTLY INVOLVED IN BLOOD FLOW MONITORING AND DEVELOPING NEW MONITORING TECHNIQUES IN LABORATORY ANIMALS AND HUMANS
ORGANIZATION:

BIODYNAMICS, INC.
METTLERS ROAD
EAST MILLSTONE, NEW JERSEY 08525
G. HOGAN (201) 873-2550

TEST PERFORMED:

FUNCTIONAL MONITORING - ELECTROCARDIOGRAPHY (ECG)
INVASIVE PRESSURE MONITORING
MORPHOLOGY, LIGHT AND ELECTRON MICROSCOPY

TEST SYSTEMS UTILIZED:

DOGS, PRIMATES

COMPOUNDS TESTED:

THIS ORGANIZATION HAS STUDIED A NUMBER OF SUBSTANCES FOR VARIOUS CLIENTS.
ORGANIZATION:

CHICAGO COLLEGE OF OSTEOPATHIC MEDICINE
NUCLEAR MAGNETIC RESONANCE LABORATORY
5200 SOUTH ELLIS AVENUE
CHICAGO, ILLINOIS 60615
S.J. KOPP (312) 947-4698

TESTS PERFORMED:

PERFUSED HEART PREPARATIONS
FUNCTIONAL MONITORING - ELECTROCARDIOGRAPHY (ECG)
CARDIAC METABOLISM
MORPHOLOGICAL ALTERATIONS
BIOCHEMICAL MEASUREMENTS - PHOSPHORUS-31 NUCLEAR MAGNETIC RESONANCE

TEST SYSTEMS UTILIZED:

RATS

COMPOUNDS TESTED:

Cd, Mg, Ca AND OTHER BIOLOGICALLY ACTIVE CATIONS

REMARKS:

CURRENTLY DEVELOPING THE USE OF PHOSPHOROUS NMR TO MONITOR DYNAMIC CHANGES IN ENERGY METABOLISM IN THE MYOCARDIUM
ORGANIZATION:

COLUMBIA UNIVERSITY COLLEGE OF PHYSICIANS AND SURGEONS
DEPARTMENTS OF PHARMACOLOGY AND ANATOMY
NEW YORK, NEW YORK 10032
A.L. WIT (212) 694-4197

TESTS PERFORMED:

FUNCTIONAL MONITORING
TISSUE EXPLANTS

TEST SYSTEMS UTILIZED:

DOGS

REMARKS:

CURRENTLY STUDYING MYOCARDIAL INFARCTION
TESTS PERFORMED:

CULTURED HEART CELLS –
ELECTRICAL PROPERTIES

TEST SYSTEMS UTILIZED:

MICE, CHICKENS

COMPOUNDS TESTED:

NEUROTOXINS

REMARKS:

CURRENT STUDIES CONCERN THE ELECTRICAL PROPERTIES OF THE MYOCARDIAL CELL
ORGANIZATION:

GENERAL MOTORS RESEARCH LABORATORIES
BIOMEDICAL SCIENCE DEPARTMENT
WARREN, MICHIGAN 48090
K.C. CHEN (313) 575-3484

TESTS PERFORMED:

PERFUSED HEART PREPARATION -
FUNCTIONAL AND BIOCHEMICAL MONITORING

TEST SYSTEMS UTILIZED:

RATS, RABBITS

COMPOUNDS TESTED:

CARBON MONOXIDE, NITROGEN
TESTS PERFORMED:

CULTURED HEART CELLS

TEST SYSTEMS UTILIZED:

RATS

COMPOUNDS TESTED:

A NUMBER OF CARDIOACTIVE SUBSTANCES
TESTS PERFORMED:

PERFUSED HEART PREPARATIONS

TEST SYSTEMS UTILIZED:

GUINEA PIGS, RATS

COMPOUNDS TESTED:

CATECHOLAMINES, HISTAMINE, NITROGLYCERIN AND THEOPHYLLINE

REMARKS:

CURRENTLY EXAMINING THE HEART FROM THE STANDPOINT OF OXYGEN UTILIZATION AND THE DEPLETION OF HIGH ENERGY PHOSPHATE STORES
TESTS PERFORMED:

FUNCTIONAL MONITORING -
   ELECTROCARDIOGRAPHY (ECG)
   MYOCARDIAL CONTRACTILE FORCE
   SPONTANEOUS ACTIVITY OF RIGHT ATRIA
   ARTERIAL BLOOD PRESSURE

TEST SYSTEMS UTILIZED:

DOGS, CATS, RATS, GUINEA PIGS, ETC.

COMPOUNDS TESTED:

1-ACETYLMETHADOL (LAAM)
ORGANIZATION:
NATIONAL HEART AND LUNG INSTITUTE
SECTION OF PATHOLOGY
NATIONAL INSTITUTES OF HEALTH
BETHESDA, MARYLAND 20205
V.J. FERRANS (301) 496-5035

TESTS PERFORMED:
HISTOPATHOLOGIC - LIGHT AND ELECTRON MICROSCOPY

TEST SYSTEMS UTILIZED:
RATS, HAMSTERS, DOGS, SWINE, RABBITS, MICE, DUCKS

COMPOUNDS TESTED:
ADRIAMYCIN, Se-DEFICIENCY, EPINEPHRINE, NOREPINEPHRINE,
CYCLOPHOSPHAMIDE, DAUNORUBICIN, Minoxidil

REMARKS:
CURRENT STUDIES CONCERN THE BLOCKING OF CARDIOTOXIC EFFECTS OF
VARIOUS CHEMICAL AGENTS
ORGANIZATION:

NEW YORK MEDICAL COLLEGE
DEPARTMENT OF PHARMACOLOGY
MUNGER PAVILLION
VALHALLA, NEW YORK 10595
D. LEHR (9:4) 347-5855

TESTS PERFORMED:

BIOCHEMICAL MEASUREMENTS -
TISSUE ELECTROLYTES
ENZYMES
ENERGY METABOLISM

TEST SYSTEMS UTILIZED:

RATS, GUINEA PIGS, RABBITS AND DOGS

COMPounds TESTED:

CATECHOLAMINES SUCH AS ISOPROTERENOL

REMARKS:

CURRENT STUDIES CONCERN BIOCHEMICAL MECHANISMS IN THE MYOCARDIUM
TESTS PERFORMED:

CULTURED HEART CELLS -
BEATING ACTIVITY
ATP TURNOVER RATE

TEST SYSTEMS UTILIZED:

RATS

COMPOUNDS TESTED:

HALOTHANE, PROPA NOL, EPINEPHRINE

REMARKS:

R.L. McCARL HAS DEVELOPED A NEW AND HIGHLY SENSITIVE INSTRUMENTATION TO MONITOR THE RATE AND INTENSITY OF BEATING HEART CELLS
