### CULTURAL RESOURCES INVESTIGATION OF THE RESERVOIR SHORELINES: GULL LAKE, LEECH LAKE, PINE RIVER AND LAKE POKEGAMA. Volume 2.

**Author(s):** Elden Johnson, Principle investigator

**Performing Organization Name and Address:**
Archaeology Laboratory
215 Ford Hall, University of Minnesota
Mpls., MN 55455

**Controlling Office Name and Address:**
U.S. Army Corps of Engineers, St Paul District
1135 USPO & Custom House, St Paul, MN 55101-1479

**Report Date:**
June 1979

**Number of Pages:**
159 p.

**Abstract:**
See volume 1 for complete abstract. Volume 2 contains site location data.
Gull Lake Reservoir Site Data
1. Type of site (mound, village, etc.) habitation and mound

2. Map reference USGS Nisswa

3. Cultural affiliation Malmo (Middle Woodland); Blackduck

4. Location: Sec. 4 Twp. 135N R. 29W Verbal description E\(\frac{1}{2}\) NW\(\frac{1}{2}\)
north end Upper Gull; just east of bridge over Spring Creek; north of CO RD 29.

5. Owner and address Lloyd Ebert

14309 Brunsvold Rd Minnetonka, MN 55343 (938-8168)

6. Surface collection owners Ebert; Univ of MN; Hamline

7. Site description
Dense wooded and open grassy areas overlooking Upper Gull Lake to the south.
Edged by swamp on the north and stream on the west. East end of site is a
high hill rising to 20m above the lake. Mixed deciduous trees with hazel on
the marsh side. Open lawn with cabin on the north.

Material: 1 granite grinding stone
4 pieces of quartz shatter
1 chalcedony shatter

8. Sketch map of location (indicate chief topographical features, houses and roads,
section numbers, and outline location of site).

County CASS
Site number 21 CA 37
Site name Gull Lake Dam Mounds FS# 2

1. Type of site (mound, village, etc.) habitation and mounds
2. Map reference USGS Gull Lake
3. Cultural affiliation Malmo; Brainerd and St Croix ceramics
4. Location: Sec. 20 Top. 134N R. 29W Verbal description NEk NEk
   area to the north across the road from Corps of Engineers' camp ground
5. Owner and address US Army Corps of Engineers
   St Paul District, St Paul, MN
6. Surface collection owners University of Minnesota; Hamline University
7. Site description
   The area is a continuous part of 21 CA 37 with the county highway bisecting
   the site. This north portion has been bladed at least twice with at least
   one burial mound being destroyed. The area has been tested in the past.
   The material picked up in this survey was surface material; no known features
   still exist. The area is being planned for a Free Primitive Campground.
   Material: 1 net, grit body sherd 1 chalcedony blade
   2 cord, grit body sherds 1 quartz flake
   1 smooth body sherd 1 large quartz nodule
   1 dark chert flake 1 burned bone fragment
   1 chalcedony flake
8. Sketch map of location (indicate chief topographical features, houses and roads,
   section numbers, and outline location of site).

9. Arch Lab photo # 10. Arch Lab accession # H-1
11. Recorded by ie streiff 12. Date Nov 78
1. Type of site (mound, village, etc.) habituation
2. Map reference USGS Gull Lake
3. Cultural affiliation Late Prehistoric-Kathio
4. Location: Sec. 20 Twp. 134N R. 29W Verbal description Government Point on south side of Gull River as it flows out of Gull Lake.
5. Owner and address US Army Corps of Engineers St Paul, MN 55101
6. Surface collection owners University of MN: Hamline U
7. Site description
   This is an expansion of the Langer site which lies on the north side of the hill on Govt Point. This is a narrow shelf on the south side of the hill just west of the Gaging Station. Tests produced the following material:
   - 17 cwp, grit body sherds
   - 2 Sandy Lake rim sherds
   - 4 smooth, grit body sherds
   - 5 mammalian long bone fragments
   - 17 mammalian bone fragments
   - 2 quartz shatter

8. Sketch map of location (indicate chief topographical features, houses and roads, section numbers, and outline location of site).

11. Recorded by je streiff
12. Date Nov 78
1. Type of site (mound, village, etc.) mounds

2. Map reference USGS Wilson Bay

3. Cultural affiliation Woodland

4. Location: Sec. 25 Twp. 134N R. 30W Verbal description NW\(\frac{1}{4}\) SE\(\frac{1}{4}\)
on the southeast arm of the southwest part of Wilson Bay, Gull Lake

5. Owner and address Timber Ridge Roberts Agency
West Washington St Brainerd, MN 50401 (829-3513)

6. Surface collection owners

7. Site description
The site area is a low terrace along the end of the bay. An old sand road
follows the shore from the tip of the peninsula around to a new group of
houses on the sw side of the bay. Shore is small pebble/sand, with grass
bank; no elevation. The trees are mixed: poplar, small oak, planted pines.
Mound #1 is east of the road and is 4.5m x 3.5m and under 1m high. Mound
#2 is on the west side of the road 220 degrees ssr of Md 1. It is 4.5m x
3m and also under 1m high. Both mounds are in danger, as this area has been
subdivided and staked for new homes. The mounds would probably be levelled
to make accesses to the lake. To the southwest of the mounds were half a
dozen possible rice pits.

8. Sketch map of location (indicate chief topographical features, houses and roads,
section numbers, and outline location of site).

County: CASS

Site number: 21 CA 110
Site name: Field Site # 3

1. Type of site (mound, village, etc.) habitation

2. Map reference USGS Gull Lake

3. Cultural affiliation Middle or Lake Prehistoric

4. Location: Sec. 17 Twp. 134N R. 29W Verbal description SW1/4 SE1/4
   point opposite Govt Point to the north of the exit of the Gull River

5. Owner and address
   Geo R Gmeinder
   Gull Lake Resort, Brainerd MN

6. Surface collection owners Hamline

7. Site description
   The area is developed with cabins. The owner has filled around the buildings
   and in the playing field behind the cabins. He used to find many artifacts
   in the road and near the cabins. Most of the area is in lawn with basswoods,
   willows. Sand beach with no bank on the south side. West side is eroding
   with boulders used to fill bank.

   1 sherd found on beach by the boat ramp.

8. Sketch map of location (indicate chief topographical features, houses and roads,

4. Location: Sec. 8 Twp. 134N R. 29W Verbal description SW 1/4, SW 1/4 Peninsula dividing main Gull Lake and Steamboat Bay, north of CE Dam
5. Owner and address Aaron Dale
   RR 10, Brainerd, MN
6. Surface collection owners Hamline University
7. Site description
   The long east/west peninsula on the south end of Gull Lake is a sand spit with only sparse vegetation on the end. There are a couple of scrub willows, then lawn and large deciduous trees in the yard area. The end of the lawn area had recently been dozed. A wind storm had blown down trees in the yard and debris had been pushed by the dozer into a pile on the sand spit and burned. Material was found in the dozed area. Divers off the peninsula but no material found in the shallows.

4. Location: Sec. 21 Top. 135N R. 29W Verbal description NE4 SE4
southwest side of Dutchmans Bluff on the north side of Gull Lake

5. Owner and address Jane Weizenegger
RR 6, Brainerd, MN

6. Surface collection owners Hamline Univ. and local collector and ? Historical Society in Brainerd

7. Site description
A 1-5m shelf runs along the shore at the base of Dutchmans Bluff. There are deciduous trees in areas not yet developed and on the upper terrace. The beach is pebbly with grass down to the shore. The bluff rises 3-10m. "Fernmont" is an estate at the top of the bluff. It was built in 1900. In 1934, while putting in pilings for the goat house, three skeletons were uncovered. One had three copper bracelets on the arm. I found one split shell body sherd behind this years sand/ice ridge on the shore.

on east side of long narrows of Upper Gull Lake on ridge above marsh

5. Owner and address Carters, Lost Lake Lodge

6. Surface collection owners

7. Site description
The ridge is 30m above the lake, sheer bank, with no exposure. The upper terrace is flat with the mounds spread out along the edge of the terrace. The mounds run for approximately 1/8 mile from the hill above Swiss House bay to the road into Lost Lake Lodge on the north. The crew counted 20 circular mounds and 18 linear mounds. The largest linear is 20m long, 10m wide, and 1m high. The largest circular is 7 x 7m. One linear is cut in half by a road which runs from the main road to the old cabin site. Most of the mounds are intact, but some have burrows. Only two circular mounds have been potted.

5. Owner and address Rogers Anchor Real Estate, Brainerd

6. Surface collection owners

7. Site description
The first point north of Swiss House on the east side of the lake; ridge had an old railroad bed running from mainland out to island (pilings continue into lake and across to other side of lake). 1 lake on west, bay on south, marsh on north and east. The ridge rises to 15m above the lake. It is covered with oak and planted pine. Two mounds: one is on top and in the center of the ridge and is 10 x 10m x 75cm high; second mound is down the slope to the south and is 5 x 5m x 75cm high. The area is in danger as there is a real estate sign on the south side of the island indicating the ridge is for sale.

6. Surface collection owners: U of MN

7. Site description:
The shore is boulder with a boulder/sand berm and a flat terrace behind it. The terrace is 10-4m wide with horsetail covering. The trees are basswood. An upper terrace of lm rises from the lower terrace. The upper terrace is flat and basswood covered. The underbrush is medium. Exposure is very poor because the bank is covered in moss. At the highest contour on the map, before the marsh, a fresh exposure revealed historic material from a midden like protrusion of the bank. A sherd was found back from this in a burrow.

Material: 1 body sherd
1 bone
3 historic artifacts (knife blade, glass, nail)

6. Surface collection owners U of MN

7. Site description

There is a flat terrace, lower at the south end and sloping up to a 5-6m bank above the lake. The shore is sand; lower terrace 3-8m wide. There is no erosion. The berm which Wilford recorded in 1939 and 1952, which had the mounds on it, is now gone. The area has been leveled into lawns and cabins. Cultural material was found in the water from the tip of the point to 600m north along the shore, also found in gardens and any exposed areas. This is the old school site and garden and later dump in Wilford's notes. The material ends about half way between the tip and The Old Home Place.

6. Site description
   Informants had said this was near the old picnic ground. One area was once a clearing. One mound is west or lakeward from the clearing, approximately 30m. Mound is 4 x 3m and 1m high. It has a pothole in the top. Mound is approximately 200m back from the shore (and due west of it). Mound 2 is southeast of the first about 100m and approximately 50m from the clearing. Much larger than the first being 10m x 6m and 1.5m high. It is unpotted, but has an enormous animal burrow on the west end of it. Four other possible mounds are along the old road leading out of the clearing. These are all conical, less than 50cm high and about 1.5m across. The whole area is in oak with much new poplar in the cut over areas.

Site number 21 CA 72
Site name Field Site # 9

1. Type of site (mound, village, etc.) habitation

2. Map reference USGS Portage Lake

3. Cultural affiliation Middle or Late Prehistoric

4. Location: Sec. 6 Twp. 144N R. 28W Verbal description W 2 SE 1/4 SE 1/4 S6

5. Owner and address US Forest Service (Cass Lake)

6. Surface collection owners U of MN

7. Site description
   The site area runs along the east "shore" of this high piece of land, which is now 200-300m back from the actual lake. The land ends in a peninsula which points southeast into the lake. The point rises thru terraces from the lake to 6 plus m.
   The material was found on the ridge in the newly cleared, dozed and seeded area and in the undisturbed high point and terraces covered with oak and grasses.
   The site is currently used as a canoe launch to Leech. The Forest Service has badly disturbed this site with the plantings.
   Materials: 13 body sherds
   10 lithic flakes
   1 lithic tool

8. Sketch map of location (indicate chief topographical features, houses and roads, section numbers, and outline location of site).

on the east shore of Pipe Island, in bay between Rogers & Diamond Points and north of Whipholt, Leech

5. Owner and address J & F Lyon

75015 Lee Valley Circle Edina, MN 55435

6. Surface collection owners U of MN

7. Site description
The "stem" part of the pipe is a high terrace (2m), boulder shore and ice berms. There is dense brush and mature trees. The site may be several and not continuous. The material was picked up from three areas of the eroding bank. The bowl of the pipe is mostly under water with only a small island at the very end. The locals tell of picking up dozens of points from the shallows between the bowl and the stem (area is shallow and in reeds)

Materials: 9 body sherds
1 bear tooth
1 bison bone

8. Sketch map of location (indicate chief topographical features, houses and roads, section numbers, and outline location of site).

Site number: 21 CA 90
Site name: Field Site # 36

1. Type of site (mound, village, etc.) habitation; logging; fishing

2. Map reference USGS Sucker Lakes

3. Cultural affiliation Blackduck; Historic

4. Location: Sec. 26 Twp. 144 N R. 30 W Verbal description NW 1/4 SE 1/4
on last piece of high ground on NW Sucker Bay, Leech.

5. Owner and address SW Frey Box 487 Cass Lake, MN

6. Surface collection owners U of MN

7. Site description
About half way between the center of the peninsula and the north point at a small harbor, is an area called Baumgard's Landing. It has a 1-2m narrow lower terrace, a 1m bank and a flat grassy upper terrace. The harbor has a rectangular "well" of cedar posts set in the water (fish holding area or well). In 1890 a logging camp was here. It was also historically used by Indians for fishing.

Materials: 1 rim
2 body sherds
1 lithic flake

(The Frey's own a huge collection.)

8. Sketch map of location (indicate chief topographical features, houses and roads, section numbers, and outline location of site).

5. Owner and address  BF Nelson Mining and Land Company
                       c/o Trust Real Estate  7th & Marquette Ave  Minneapolis, MN 55480
6. Surface collection owners
7. Site description
   A boulder shore with a sand and cobble beach, and a berm 10-15m wide with a wet
   area behind the berm. A 1m irregular bank and a flat terrace with fall features
   but few other topographical features. Maple, basswood and elm trees are present.
   For about 100m north of the resort, the berm and lower terrace are littered with
   garbage. A few hundred meters into section 7 the beach becomes sand and the
   terrace is damp. There are scattered rice pits but the exposure is very poor.
   There is no other surface material and no sign of Pike's Lost Post, which is
   suppose to be in this area.

8. Sketch map of location (indicate chief topographical features, houses and roads,

7. Site description
   This site rests 200 meters north of the last positive test at PS-29. This area forms a point as the channel makes a meander to the west. Vegetation is basswood, oak with willow at the water's edge. The land is state owned with some houses, boat owners leasing the land. The area rises slowly from the water's edge to about 1 - 2 meters then rises sharply to the ridge top at about ten meters above the water level. Artifacts found in surface collection: 2 knives, 19 flakes, 4 bone fragments, 1 melted metal fragment. Four shovel tests in this area - 2 were positive. The area – erosional on high banks.

8. Sketch map of location (indicate chief topographical features, houses and roads, section numbers, and outline location of site).

5. Owner and address: Arne S. Ingebo - Jay Gould Lake Cohasset

6. Surface collection owners: St. Cloud Museum of Man

7. Site description

The area is located on the west side of Jay Gould Lake. Vegetation consists of oak, maple, birch and basswood trees with an occasional pine along swamp area 50 to 60 meters to the south of the Ingebo residence. Wild rice grows along shore. The underbrush consists of domestic grasses and or shrubs. There is an erosional bank extending along the shore. Five or six ricing pits are present along the Lone Pine Trail south of the Ingebo residence in a maple basswood area. Blackduck pottery found 10 - 15 meters from the shoreline by a tree near the Ingebo house. Surface collection: 8 flakes, 249 pot sherds, 109 bone fragments, 3 teeth fragments, 1 bear tooth, 1 beaver tooth. Refused permission to test.

2. Map reference **La Prairie Quad**

3. Cultural affiliation **Historic, Prehistoric (probably destroyed)**

4. Location: Sec. 24  Twp. 54N  R. 25W  Verbal description **SE4, SE1, SW1**

   Located on the north shore of the eastern end of Wendigo Arm.

5. Owner and address **C.H. Kleffman Poktega Lake (Wendigo Arm) Grand Rapids MN**

6. Surface collection owners **C.H. Kleffman and St. Cloud Museum of Man**

7. Site description

   The site is located on the north shore of the eastern end of the Wendigo Arm, in the area between Hale and Poktega Lakes. The site is in a residential area. Vegetation consists of mature birch, maple, white and red pine, poplar, domestic grass (ie sod), and poison ivy. There is an erosional bank about 4 meters high. Artifacts recovered were four flakes and three pot sherds. The saw mill probably built over the prehistoric component. The landowner reported that this was the location of the W.R. Romans Saw Mill. His house was built on the site. The old loggers trail remains as it was and the footing from the saw mill remains south of his house. In Kleffman's collection - insulator, axe, logging hook, whiskey bottle, chains, saws, boot clip. Three shovel tests placed in the area - negative.

8. Sketch map of location (indicate chief topographical features, houses and roads, section numbers, and outline location of site).

7. Site description
A small, triangular island in the Wendigo Arm of Lake Pokegama. It has been cleared and is now covered by long grass and mature basswood and birch trees along the perimeter. On the west, southwest and southeastern sides of the island there is a three meter erosional bank rising at a 90° angle from the flat shore area. The bank is actively eroding. During surface reconnaissance the following found in the shallows and eroding bank: 13 Flakes (5 quartz, 5 quartzite, 2 chert, 1 heat treated chert), 1 body sherd, 18 bone fragments. There were five shovel tests, two were positive.

8. Sketch map of location (indicate chief topographical features, houses and roads, section numbers, and outline location of site).

5. Owner and address Richard D. Peterson Camp Mishawaka Box 368 Grand Rapids, MN

6. Surface collection owners Camp Mishawaka and St. Cloud Museum of Man

7. Site description

The site is at the north end of Camp Mishawaka (Boys) at a point where the cleared area ends in a maple basswood birch thicket followed by cabins and homes. Birch dominates bank vegetation to lowland beach where willows mix in. The land form rises 60 meters from the shoreline while a flat area exists between the rise and the erosional bank. There are camp structures over part of the site area (no deep foundations are laid but it appears that surface layers have been removed before buildings were built). All cultural material from surface collection found in erosional area three meters from the shoreline. Artifacts: 1 knife (argillite), 41 flakes, 1 core, 3 bone fragments, 26 historic items. Four shovel tests - three were positive. Camp has a collection of points, scrapers, flakes, hammerstone.

8. Sketch map of location (indicate chief topographical features, houses and roads, section numbers, and outline location of site).

7. Site description
The site is located in the most northwestern corner of Lake Pokegama, less than 300 meters from the channel to Little Jay Gould. It is bounded to the north and south by areas of secondary mixed hardwood areas and on the west by a paved county road. The beach area itself has been landscaped and a tarred parking lot put in. The site area extends both north and south of the beach area. Artifacts were recovered in the shallows, beach, eroding surface, and upper ground. Artifacts - points, knives, scrapers, flakes, pottery, bear tooth amulet, bone fragments, historic items. Four shovel tests - positive.

7. Site description

The site is located on the northwest side of the channel from Big Jay Gould to Little Jay Gould Lake, on the point. A collection of copper, flakes, points, scrapers and pot sherds were imbedded in the landowners fire place mantle. These artifacts had been collected when the foundation of the house was built. During walkover nine flakes were found in the shallows. One shovel test excavated on the high ground by the house and was positive.

8. Sketch map of location (indicate chief topographical features, houses and roads, section numbers, and outline location of site).

7. Site description
Small wooded hill on Jay Gould Lake about .5 km east of the outlet of the Mississippi River. The vegetation cover is primarily mature oak and birch. Material was recovered from an erosional bank 1.5 meters high which truncates the hill on its western side, facing the lake. Materials included cord-marked body sherds, quartz and chert flakes. More pottery and flakes were recovered during shovel testing. The top of the hill is covered with circular holes about one meter in diameter of fairly recent origin, purpose unknown.

7. Site description

The site is located on the south shore of the Mississippi River at its outlet to JayCoulb Lake. The area is developed and portions of it have been bulldozed. Some sections have been left wooded. Predominant genus is Quercus. Pottery and flakematerial were recovered during survey on the upper surface and in the erosionalbank. Testing of the area yielded more pottery, bone and flake material together with a square nail and historic glassware (whiskey bottle). The site covers a continuous area over 3/10's of a mile long.

7. Site description

The site is located on the east side of the Mississippi River - Jay Gould Lake junction. Vegetation cover consists of mature oak, birch, maple and/or moderate leafy underbrush and grasses. A heavy to moderate wild rice concentration extends from shoreline lakeward. Shallow water extends lakeward for a considerable distance. Moderate bank erosion. The bank height ranges from 1 - 4 meters in height. A narrow one lane road cuts through the site area. Disturbance levels range from 1 - 30 cm. Cultural material found on erosional banks, surface, subsurface. Surface collection - 1 argillite point, 6 scrapers, 1 quartz core, 245 flakes, 1 grinding stone, 95 pot sherds, 22 bone fragments.

7. Site description
   Landform rises one meter to a flat area approximately forty meters west to a steep bank of three meters in height. The site rests on the flat area about forty meters east to west and sixty meters south to north from a small creek to the south. The area is backed by marsh vegetation, with basswood and oak. Landform rises to the south to a narrow rise running parallel to the shore. A road (dirt) exists on the site and follows the high ridge to the north and the area is used as a campsite at present. The area erosional on high banks.
   Artifacts from surface collection - 54 flakes (41 quartz, 2 quartzite, 3 jasperite, 2 argillite, 1 slate, 1 chert, 2 agate, 2 moss agate), 11 bone fragments, 1 cast iron piece with loop design. Four out of five tests were positive.

   and SW¼, NE¼, NW¼

5. Owner and address Forestry Adm. State of MN

6. Surface collection owners St. Cloud Museum of Man

7. Site description

   The site area is located on the south shore of Blackwater Lake. There is an
   eight meter river bank terrace with a two meter beach ridge covered with
   vegetation. The ridge is at an angle of approximately 70 from the horizontal.
   There is a dirt road south of the shore. Wild rice is at the shore and continues
   out to the river channel. There is a swampy area east of the site area. Artifacts
   were recovered near the dirt road and erosional bank. Surface collection
   included 2 quartz flakes, 1chert flake, 1 body sherd. Six shovel tests in
   area.

8. Sketch map of location (indicate chief topographical features, houses and roads,
   section numbers, and outline location of site).

5. Owner and address: Hanna Iron Ore Co. - National Steel Corp. Hibbing, MN 55746
6. Surface collection owners: St. Cloud Museum of Man
7. Site description:
   This area is a point between a marsh to the south and high ground to the north at the extreme east end of Turtle Bay in Little Jay Gould Lake. This area is heavily vegetated; mainly secondary growth. The low areas are covered with willow and aspen. The bank area is mainly maple but hard woods are mixed. This is not a residential area. The rising bank, which increases in elevation to the north, is erosional and a surface collection of 1 cord marked pot sherd was found here. The shallows extend 30-40 meters lakeward and there was a scatter of materials (2 flakes) recovered in the shallows. Two shovel tests - negative. It is recommended this area be retested in spring or fall because of difficulty with heavy vegetation.
8. Sketch map of location (indicate chief topographical features, houses and roads, section numbers, and outline location of site).

Scale and Comments
- - Open water
XX Willow, aspen
--- Erosion
/// Maple, basswood
--- Shallow water boundary
* Cabin/home
* Shovel test

6. Surface collection owners St. Cloud Museum of Man

7. Site description
The site is located on a low lying island of about two acres in the southern end of Big Jay Gould Lake. Vegetation consists of a heavy concentration of brush and willow trees over the entire island. A low lying marshy area exists to the south and east sides of the island. This island was excavated by the St. Cloud Museum of Man / St. Cloud State University during the summer 1978. Vast amount of artifacts.
