**Study**

**FROM Jul 80** **TO Jul 81**

**June 1981**

---

**ABSTRACT**

During late 1980, an Organizational Effectiveness team visited the Army hospital at Ft Polk. It found that a major institutional problem existed with regard to role clarification at all levels. The team noted that there was a lack of understanding as to who does what, the Commander was doing the staff's work, the weekly admin meeting was not working, physicians were difficult to deal with, laboratory and medical record services were poor, and MEDDAC civilians were not being treated as well as others employed on post. This study examines the abovementioned areas of concern and recommends an effective manner in which to deal with the existing role ambiguity and conflict.
ACKNOWLEDGEMENTS

Grateful acknowledgement is extended to the entire staff of the U.S. Army Community Hospital, Fort Polk, Louisiana, for their participation in all phases of this problem-solving project. Special acknowledgement is extended to Mrs. Owens for her moral support and thorough, competent secretarial support provided in addition to her normal duties as the Commander’s secretary.

CHAPTER I.
INTRODUCTION

Background Information

Fort Polk is a military reservation in rural west central Louisiana. Its U. S. Army Community Hospital (USACH) is a 159-bed facility accredited by the Joint Commission on Accreditation of Hospitals (JCAH). As the largest military medical treatment facility in the state of Louisiana, the catchment area geographically covers the entire state and 44,000 health care beneficiaries consisting of approximately 14,000 active duty members, 20,000 dependents of active duty personnel, 4,000 retired members, and 6,000 dependents of deceased or retired military personnel.

The immediate surrounding medical community includes three small hospitals within one-half hour's drive, containing 28 beds, 54 beds and 88 beds. The nearest medical facilities with any degree of sophistication are in Alexandria and Lake Charles, Louisiana. They are, respectively, one and one-and-a-half hour drives from Fort Polk.

The current facility is contained in over 100 buildings spread over 105 acres. It is a French-style cantonment complex, originally built within four months in 1941 as a 600-bed hospital.
The resulting structure, which was then considered temporary, has just recently celebrated its 40th year of operation. A new hospital building is currently being constructed with anticipated occupancy in 1982.

Identification Of The Problem

The impetus for this problem solving project evolved primarily from an Organizational Effectiveness (OE) operation conducted during the period 6 November 1980 through 2 December 1980.

The results of the OE assessment produced six themes/areas of concern. These areas of concern were 1) concern about understanding who does what; 2) commander does too much of his own staff work; 3) weekly administrative meeting not working well; 4) physicians difficult to deal with; 5) laboratory and medical record services are poor; and 6) concern that MEDDAC civilians are not being treated as well as others elsewhere on post. It should be noted that three of the themes possessed the common element of role uncertainty at varying levels and degrees of impact.

Upon the departure of the OE team, they restated that a major problem area uncovered by their visit was one of role clarification at all levels. Their evaluation served to
reinforce the views of the Commander and his Executive Officer that there did exist an institutional problem of role clarification. Subsequently, the administrative resident set out to develop alternatives, including the OE team's clarification program, to address the perceived need of role clarification at all levels and to determine the most feasible alternative.

**Conditions Which Prompted The Study**

Despite the rigid organizational structure, regulatory guidelines, chain of command, and rank structure in which military hospitals are imbedded, there is still much of the same misinformation, misunderstanding, and disagreement that their civilian counterparts reportedly have. In fact, besides the organizational disruptive influences attributed to complex organizations like hospitals, the dual role of military/professional health care personnel within a federally run and budgeted bureaucracy is an additional variable that, contrary to popular belief, may in fact increase the potential for role conflict and ambiguity.

Such conflict can and does impact upon the delivery of quality care to patients. Some studies have concluded that in hospitals where the staff had a greater understanding of each others work, problems, and needs, there was found higher quality
care. While conflict might foster institutional innovation and progress, the welfare of the patient may be better served with institutional stability and harmony.

There are many underlying causes for conflict within an organization. The OE intervention mentioned previously surfaced concern with respect to role ambiguity and conflict. Consequently, this project was prompted by the recognized need to develop a program to address role clarification at all levels within the U. S. Army Community Hospital, Fort Polk.

**Statement of the Problem**

The problem was to determine an effective manner in which to deal with the role ambiguity and conflict that exists within the U. S. Army Community Hospital, Fort Polk.

**Purpose of the Study**

The purpose of this study is to develop, implement and evaluate a Pilot Role Clarification Program for the U. S. Army Community Hospital, Fort Polk. As part of the evaluation, other alternatives which address role ambiguity and conflict will be discussed and a final determination will be made on the best method for implementation.
Assumptions

In the development of a Role Clarification Program it is fully understood that role clarity is just one mitigating factor in minimizing role conflict and role ambiguity. There are countless factors, formal and informal, that contribute to such organizational dysfunctions. Consequently, the various interventions as prescribed in this paper, as well as others in the field of Organizational Development and Organizational Effectiveness, will not result in a problem-free institution. Additionally, there is one basic assumption made by this paper which is that better communication equals less conflict and better patient care. It should be noted also that conflict is not always dysfunctional to the organization.

Limitations

There are several factors which place limitations on the results and implications of this problem solving project and are identified in this section. While these limitations do not nullify the findings or value of this project, the understanding of them aids in placement of this project in proper perspective. Three specific limitations are discussed which include Limitations due to 1) this particular setting, 2) the reliance on personal interviews, and 3) additional resource requirements are generally accepted as a limiting factor with a new or increased mission.
The Hospital Setting

The application of these findings is limited specifically to this hospital in which the research was accomplished. The procedures utilized in this research assessed conditions as they existed at this hospital. However, there are several factors which indicate that these results may be generalizable to other settings.

This hospital is typical of many Army hospitals in several ways. First, obviously, the hospital is a federally budgeted facility. Second, the hospital provides health care to all entitled beneficiaries. Third, its personnel turbulence is characteristic of other Army facilities. Fourth, it is associated with a medical center for tertiary care referral and consultation.

Given these similarities between this hospital and other Army military treatment facilities, the findings may be generalizable to other Army facilities. However, caution should be exercised and investigation of working conditions in other settings should be accomplished before these results are used for prescriptive recommendations.

Reliance on Personal Interviews

The primary means of data collection in this problem solving project was by personal interviews conducted by the Administrative Resident and interviews by OESOs. These
particular inquiry techniques were generally subjective in nature and consequently must be carefully analyzed to avoid misrepresentation of the situation. Such nonquantitative, solicited feedback is nevertheless very important as it is useful to gather fresh input for the resolution of the problem.

The limitations presented by use of a survey method such as an interview may be overcome by the development of more objective measures. However, even objective measures may be subject to bias and inaccuracies, due to improper design or utilization of the measurement techniques. Ultimately, multiple measures and methods should be used to develop valid instruments to assess working conditions in organizations.

**Staffing**

Additional resource requirements are generally accepted as a limiting factor toward the initiation of new programs. Any new personnel requirements must be supported from within current manpower authorizations. Should a program require additional authorizations and requirements to support a hospital-generated mission requirement, it would be expected to meet with minimal success.
Scope

The thrust of this project is directed toward the Commander and his key personnel following an OE tenant of working from the top to bottom. Key personnel are defined as those who can "stop, let, help or make" a change occur. This macro role clarification program is intended to serve as a pilot program for this institution, clarify actual roles of individuals at top levels within the hospital, and promote understanding of the value of the program. Upon its completion it will be evaluated as to whether the needs of this organization can be met by this OE intervention method or by other alternatives developed further within this project.

Factors Bearing Upon The Problem

The complexity of the hospital and its multiple power structures, as a result of essentially independent sub-systems and lateralization of power, reinforce the need for support emanating from top to bottom. In a complex organization no single individual has all the power for significant, planned long term change to be effected; all sources of power must be motivated and incorporated into the action.

Previous efforts by the OE consultants to demonstrate the need for a role clarification effort to key personnel were,
on the surface, successful. However, subsequent interviews have revealed several essential key personnel as either being generally disinterested or having an extreme disdain for behavioral interventions. The pilot role clarification program was part of the effort to gain support from key personnel.

Any role clarification program that is developed must recognize and account for the unique problems that will surface with the transition to the new hospital. The change in social density that will occur with the move to the new hospital surfaces a popular held belief that work force social density increases will have dysfunctional effects on individual behavior and attitudes. Consequently, any long-range plan should take the social density increase and its organizational impact into consideration.

Additionally, with the upcoming move to the new hospital and its concurrent tasks, the additional planning and administrative requirements necessitated by a role clarification program will have to be carefully monitored to ensure that appropriate time is being devoted to the program.

Finally, it is recognized that the ultimate success of this program is dependent upon a long range effort with continuous feedback. Any program to address role clarity
within an organization such as this hospital, which is constantly undergoing changes and personnel turbulence, must not be a one shot phenomena.

Objectives
An initial objective of this study was to develop a data base which would be useful in the development and evaluation of the alternatives. Secondly, from the recommendations of the OE consultants, literature research and personal insights gained from the administrative residency, a pilot role clarification program is to be developed, implemented and evaluated for future use. Finally, the third objective is to select and make recommendations as to the specific course of action to reduce the role ambiguity and conflict that exists within the U. S. Army Community Hospital, Fort Polk.

Literature Review
The Hospital as a Complex Organization
Many, if not most, of the problems experienced in hospitals are shaped by their uniqueness as organizations. The organizational makeup of a hospital deviates considerably from the Weberian (classical) model of bureaucracy and, as such, is often categorized as a complex organization. Complex organizations are defined as those organizations which have
1) essentially independent subsystems within them, 2) multiple simultaneous missions, 3) many permeable boundaries necessitated by the complex environments to which they must respond, 4) sophisticated technologies requiring highly skilled internal efforts, 5) low structural clarity between subsystems and 6) multiple power structures as a result of essentially independent subsystems and the lateralization of power.²

The last characteristic of multiple authority is one frequently mentioned in the literature and is attributed to position power, supported by formal sanctions and professional expertise which is enforced by collegian authority. Several studies have shown that 1) multiple authority disrupts the individual's orientation to his organization or to his profession by requiring him to choose between the two; 2) individuals oriented primarily toward their professional norms are more critical of their organization and more likely to ignore administrative details; and 3) professionals in such organizations frequently experience stress as a result of being caught in the middle.³

Thus, the literature suggests that multiple lines of authority are accompanied by role conflict and dissatisfaction for the members and loss of organizational efficiency and effectiveness. Further, it is implied that these dysfunctions
may be necessary concommitants and costs of providing professional control over the technical aspects of the organization's activities.⁴

In any event, an enumeration of important characteristics of a complex organization can only give the outline, the boundaries within which social interaction takes place. However, those organizational characteristics previously mentioned as well as others commonly referred to in the literature, such as the extreme division of labor and authoritarian nature of the hospital, do affect the role relationships that develop in a hospital.

Role Relationships

There are numerous examples within the literature which try to provide a model for studying role behavior by identifying the relevant social system and locating the recurring events which fit together in converting some input into an output. The models that develop range from the very complex to simple. One of the more simpler and easier role relationships to understand is the model presented by Ivancevich, et. al.⁵ Role relationships are divided into expected, perceived, and enacted roles. The expected role is the behavior that subordinates, superiors and peers expect an individual in a group to have and can be specified by job
descriptions, position title, or by other directions from the organization. The perceived role concerns what behavior an individual feels he/she should exhibit subject to their perceptions. The enacted role is the way an individual actually behaves.\textsuperscript{6}

To the extent that there are differences among the expected, perceived and enacted roles, the likelihood of role stress, conflict and negative conflict on group performance increases. Role ambiguity and role conflict are two terms that have developed that reflect the differences among the three activities. The following model depicts these activities and the outcome of their differences:

\[
\text{Expected Role} \rightarrow \text{Perceived Role} \rightarrow \text{Enacted Role} \rightarrow \text{Role Ambiguity} \rightarrow \text{Role Conflict}
\]

Lack of clarity with respect to duties, responsibilities, and activities associated with one's role, resulting in uncertainty, and dissatisfaction.

Multiple demands and conflicting directions from two or more individuals in performance of one's role, resulting in increased tension, stress, and anxiety.

Role Conflict and Role Ambiguity

The literature on role theory, as mentioned supra, suggests two constructs describing role perceptions: role conflict and role ambiguity. Role ambiguity describes a situation in which there is a lack of the necessary information available to a given organizational position. Essentially, it is a condition in which information is lacking or not communicated. Role conflict is a simultaneous occurrence of two more sets of pressures such that compliance with one would make compliance with the other more difficult. Role theory hypothesizes both role conflict and ambiguity to be negatively related to job satisfaction and performance.

The relationships between employee role conflict and role ambiguity and job satisfaction, propensity to leave the organization, and perceived threat and anxiety are well documented. More recent research indicates however that the employee's level in the organization may cause a deviation in previous expected negative correlation between role conflict and job satisfaction. Hammer and Tosi indicated that the nature of positions at higher levels of an organization is primarily one of solving unstructured tasks and problems, thereby making role ambiguity a more crucial source of stress and dissatisfaction than role conflict. Kahn added that the
presence of role conflict should be of less concern to higher
level employees than should role ambiguity because they have
less influence than the sources of role ambiguity.  

Research in Role Ambiguity and Role Conflict in Hospitals

A number of research efforts with respect to role
ambiguity and role conflict have been conducted in a hospital
setting. In a study conducted by Alpander on role clarity and
performance effectiveness, it was of interest to note that no
superior/subordinate pairs had a disagreement on the tasks to
be performed. What was disagreed on was the importance of
each task that had to be performed. Prioritization appeared
to be the primary difficulty. The study concluded that there
was a lot of perceptual gap between superiors and subordinates
in what constitutes the subordinate's important task. The
study also found the highest degree of role ambiguity among
administrative as opposed to professional and technical
groups.

Another study by Szilagyi and Sims postulated the
existence of a role ambiguity continuum which revealed that
role ambiguity increased as changes in occupational skill level
reflected increasing managerial responsibilities.

An additional study reinforced previous findings
concerning occupational level and the ambiguity of the job.
In this particular study the administrative group reported the highest level of role ambiguity. Several conclusions were reached: 1) recognition must be given by administration and supervisors alike that an individual's leadership style is not unidimensional, but rather a multidimensional behavioral pattern, emphasizing at least two separate styles: task orientation and employee orientation; 2) the particular leadership style utilized by a supervisor to improve the levels of employee job satisfaction may be dependent, to a large degree, on the nature and requirement of the employee's task, and 3) supervisors at all levels in the hospital must realize that the less well-defined the job, the more the employee will seek task-oriented leadership; and conversely, the more defined the job the less the subordinate will seek task-oriented leadership as adding to job satisfaction.13

Methodology

For the analysis, a data base was developed through three general analytical techniques: direct site analysis, inquiry techniques and direct research. The direct site analysis was directed towards overall work flow of the hospital and observation of interdisciplinary interface.

Additionally, an in depth review was conducted of a General Organization Questionnaire, Annual General Inspection
Reports, documented patient complaints, and departmental and committee minutes. Inquiry techniques were subjective in nature and involved non-quantitative solicited feedback from the many personnel that make up the hospital complex. Direct research was evaluated research conducted on techniques employed within the hospital setting to improve organizational efficiency.

CHAPTER II

DISCUSSION

As noted previously, the literature is replete with discussions on the complexity of hospital organization, the relationship between hospital staff and between hospital staff and physicians. Employee job satisfaction, management styles, performance effectiveness, role ambiguity and role conflict are examples of the topics surfaced. Unfortunately, however, the vast majority of these studies have occurred in a civilian setting, thereby not allowing for the addition of the unique variable of a military environment to the already complexing matrix of hospital organization.

The following discussion concerning the current situation, future environment, pilot role clarification program, and alternatives for problem resolution will reflect the impact of operating a hospital within the military environment, and reinforce the need to tailor programs in consideration of institutional unique characteristics.
The Existing Situation

Organization

The U. S. Army Community Hospital (USACH) is one element of the U. S. Army Medical Department Activity (MEDDAC), which, in comparison to other Army MEDDACs, is a large facility considering such performance indicators as medical care composite units, inpatient census, and outpatient visits. The USACH's organization (See Appendix A) is based on MEDDAC Regulation 10-1, Organization and Function Policy, and unlike its civilian counterparts, has a primary mission of the delivery of outpatient care. This ambulatory care orientation is partly responsible for the approximately 700 people that it takes to run the hospital. The staff/inpatient ratio that results is often an issue with civilian administrators until the magnitude of outpatient visits (30,000 per month) is surfaced. Operating a hospital with a dual mission of inpatient and outpatient care in a military environment makes the administration of such an organization most challenging.

Since 1977 the US Army Community Hospital has become increasingly a hospital with family practice as the primary source of ambulatory care. Relatively new to Fort Polk and further as a specialty, the increasing staff of family practice has resulted in gradual staff decreases in such specialties as obstetrics/gynecology, orthopedics and internal
medicine. Growing pains are evident within family practice and its interface with such specialties as obstetrics/gynecology and internal medicine. These difficulties are exacerbated by real imbalances of professional personnel, shortages of support personnel, and physical plant inadequacy. Appendix B presents the results of interviews with six family physicians and 15 nurses, NCOICs and receptionists. The purpose of the interview was to identify strengths and weaknesses in the organization, functions and staffing of family practice. The organizational turbulence within Family Practice and its interface with the remainder of the hospital was plainly evident.

Besides Family Practice, there are nine other separate organizational entities which provide for ambulatory care in a clinical setting. They are the Community Mental Health Activity, Division Mental Health Activity, Preventive Medicine Activity, Departments of Medicine, Surgery, Psychiatry, Primary Care and Community Medicine, Nursing and Dentistry, Ambulatory Nursing Service and Social Work Service. As separate organizational entities, the chiefs report directly to the Chief of Professional Services. This departmental rather than functional chain of command is conducive to organizational dysfunction as the following discussion will indicate.
As an example of the organizational complexity of the hospital, the noncommissioned officers in charge (NCOIC) of various clinics throughout the hospital offer a graphic example of the multiple authority channels that exist (See Fig. 2).

Fig. 2. Multiple authority channels that NCOICs of clinics face.

It is not uncommon to find a clinic NCOIC who must divide his/her loyalty between four or more organizational elements and up to 13 individuals. It doesn't take much imagination to realize by the current organizational structure it is difficult to affix responsibility. Without clear cut lines of authority and responsibility, anyone can claim credit, but no one has to accept the blame. The existence of such an organizational structure is not surprising when considering
the organization, its setting, and its departmental rather than functional chain of command. Additionally, the multiple channels of authority are particularly sensitive in a military environment that has a rank structure, chain of command and a supporting judicial system.

In addition to the existence of multiple authority, there is also a stratification system which has consequences for patient care and is particularly evident in Department of Nursing. In addition to the Chief (Colonel) and Assistant Chief (Lieutenant Colonel), there is a Chief, Ambulatory Nursing Section (Lieutenant Colonel), and two nurses (Lieutenant Colonel and Major) who have responsibility for four wards apiece. Additionally, the last three individuals have master sergeants as assistants, not including the Chief Wardmaster. The wards each have a clinical head nurse and additional military and civilian staff nurses. Such stratification of nursing organizations has been demonstrated in some hospitals to be an influential factor in contributing to less than optimum patient care through interrupting communication necessary for adequate teamwork and inhibiting the amount of psychological support given the patient. While the latter may not be applicable to this facility, the interruption of vertical and horizontal communication may have merit based on general observation and personal interviews.
Staffing

To complicate the aforementioned organizational problems are the shortages, imbalances and inexperience of the hospital staff that exist. The physician staffing irregularities are perhaps the most publicized. Two and three physician services such as orthopedics, general surgery and obstetrics/gynecology often experience staffing problems simply due to their few numbers. For example, general surgery has, on numerous occasions during the past year, had only one general surgeon to cover periods up to six weeks in duration. The physician staff also has a high degree of personnel turbulence. To date, only four of the 34 assigned physicians have been stationed at Fort Polk for more than two years. Such personnel turbulence is not conducive to smooth functioning of the hospital, and unfortunately is more the rule than the exception. Additionally, the majority of physicians who arrive at Fort Polk come directly from their residency, which is normally at a large MEDDAC or MEDCEN having accompanying ancillary services necessary for intensive training programs. Consequently, they have little knowledge of the Army, let alone experiencing direct interface with a division post. When confronted with less than optimal conditions that the individual cannot easily correct, such as inadequate ancillary support, a 40 year old cantonment hospital and finite health care resources, there results an imbalance
between demand and capacity. Should the individual view this failure to meet demands as being serious, stress occurs. Appelbaum advocates that resulting stressful events trigger the "fight or flight" syndrome - a primitive physiological response characterized by increases in metabolic, heart, and respiration rates, blood pressure, and muscle responsiveness. While this syndrome was useful in fighting or fleeing an enemy in prehistoric times, its usefulness is limited in resolving the conflicts imposed by modern organizational life, and at its extreme may pose a health hazard to the individual.

It should be mentioned that the aforementioned personnel turbulence, shortages and inexperience are evident throughout the organization. However, the degree and combination varies to a lesser degree with the other staff - Medical Service Corps, Army Medical Specialist Corps, Army Nurse Corps and enlisted members.

A Common Theme

As previously mentioned, the OE operation conducted in November and December surfaced a number of issues. Twenty-one individual interviews of personnel from the Commander to clinic NCOICs were conducted. These interviews, coupled with general observation, review of recent AGI report and patient complaints produced six themes. The six themes and supporting quotes were:
(1) Concern about understanding who does what.
"Responsibilities on wards and in clinics are unclear."
"No written guidelines for staffing procedures."
"As Chief, I have no control over my people."
"Need delineation of responsibilities."

(2) Commander does too much of his own staff work.
"Commander should not be secretary for the doctors-he should direct them to appropriate staff agency."
"Commander micro-manages. Memos should go to about five key persons."
"Commander is doing CPS's job."

(3) Weekly administrative meeting not working well.
"Meeting is non-productive with commander there."
"People don't talk freely (at meeting) with commander present."
"Everyone passes with commander there which makes it difficult for COL Barber to know what's going on."

(4) Physicians difficult to deal with.
"Some physicians flat refuse to do things. You can't put them in jail for 30 days or you'd lose a physician for 30 days."
"Quit treating doctors as prima donnas in the name of recruiting and retention."
"Physicians go right to commander instead of appropriate staff officer."

(5) Laboratory and Medical Records services are poor.
"Terrible! The wait is too long." (Ref Lab)
"Records are a problem. Family practice should keep the records of patients they serve."

(6) Concern that MEDDAC civilians are not being treated as well as others on post.
"Downgrading of slots really hurts - people move to better jobs on post."
"Nothing is happening with regard to hiring civilians."
"No money for off-post civilian training."

As can be seen, three of the themes possessed the common element of role uncertainty at varying levels and degrees of impact.

The OESO's conclusion regarding the degree and level of role uncertainty within the hospital comes as no great surprise. In fact, if anything, considering that they had very little interface with the Department of Nursing, the problem may be of greater magnitude than they envisioned. Their recommendation to conduct a role clarification program is certainly a valid one, however, their emphasis on a long range program, 18 months, would be extremely difficult to
maintain in view of the personnel turbulence that is inherent to military organizations. As the following discussion will reveal, there is little, if any, effective role clarification that occurs on a formal basis, hence reinforcing the need to address some effective means to reduce the degree and level of role uncertainty.

**Present Orientation Efforts**

There are a number of installation and hospital programs that provide individuals with an orientation to the post, hospital and respective jobs. The Commanding General of Fort Polk provides an enlightening introduction to all assigned personnel as to the mission of the Army and the soldier's role. An additional effort to orient hospital personnel to the post is the revamped program formerly known as "Operation Get Acquainted" just recently implemented to provide newly assigned doctors an appreciation of the 5th Infantry Division (Mechanized) and Fort Polk mission. (See Appendix C)

The hospital efforts with respect to orientating newly assigned personnel are prescribed in MEDDAC Regulation 40-38, **Inprocessing Military Personnel**. Sponsors are assigned to assist the new personnel (E-6 and above) with inprocessing and familiarization with hospital, post and surrounding area. A new personnel orientation is conducted once a month and represents the only formalized interdisciplinary approach to
hospital orientation. Appendix C contains the Letter of Instruction (LOI) for New Personnel Orientation. Unfortunately, the program has not generally been well received by old and new staff alike. The staff who have responsibility to partake in the briefing have, over a period of time, begun to take shortcuts to minimize their time from the office. Originally, all the briefers were at the orientation for the entire time (generally more than two hours) which, in some cases, was disproportional to the time they briefed (five minutes). Consequently, the briefers try to guess when their turn comes up. The end result is that they are either just in time, or late, or at the extreme forget to show up. The fact that there is not an established, written agenda with specific times delineated for the briefers may be partly to blame. As to the newly assigned civilian and military personnel, it would seem that civilian attendance is much greater than military. Additionally, there appears to be no mechanism to ensure that personnel attend. Comments which have been made by individuals who have attended the program are summarized as follows: 1) No handouts describing sequence of events and speakers, 2) Appears to be more a lecture than an orientation (little chance to ask questions), 3) Too long, 4) Some speakers appear to be poorly organized, or take fifteen minutes to say five minutes worth of comments, 5) Details of subject matter vary from
speaker to speaker, 6) A waste of time, 7) The intent is good, 8) Better than nothing, 9) The Commander's presence is appreciated, 10) Where are the doctors? The last comment prompted a review of the available signature sheets. Since July 1980, eleven ANCs, five MCs and five MSCs have attended. As to total numbers, it was plainly evident that many new personnel were not attending the newcomers briefing. Besides the centralized briefing, the following occurs: 1) Chief of Professional Services will be responsible for the professional orientation of all Medical Corps officers, 2) Chief, Department of Nursing, is responsible for orientation of all Army Nurse Corps officers, 3) The Executive Officer is responsible for the orientation of all Medical Service Corps, Army Medical Specialist Corps and Army Chaplain Corps officers and 4) The Command Sergeant Major will contact the senior NCOs' sponsor to assist the individuals in processing. Of all these orientations, there is only one formalized program which is conducted by Nursing Education and Training (See Appendix C). The program itself appears to be an excellent one. However it, along with the informal orientations of the other Corps, is missing an integrative approach to address the roles of others outside their work space and how to interface with them. Orientations, in summary, appear to be of singular purpose with little regard for the "health care team" perspective.
Besides the orientations that occur upon arrival at the hospital, there are intermittent opportunities to receive continuing education offered by Civilian Personnel, Nursing Education and Training and other professional staff meetings. Subject matter may range from short briefings to physicians on medical air evacuation, to a recently held role clarification workshop for head nurses. However, there is little coordination involved and little initiative taken from within the hospital to develop programs addressing such institutional needs as role clarification. However, again these efforts, with the exception of the hospital's concerned patient care class, involve only one discipline. There appears to be no guiding force to ensure an interdisciplinary approach to training.

Pilot Role Clarification Workshop

Initiation

The initial efforts that were involved with the development of a role clarification program were: 1) To determine who were the key staff members (those individuals within the organization who could stop, make or let things happen); 2) Establish the need for role clarification and obtain the key personnel understanding of the need; 3) Conduct actual role clarification workshop for key personnel which will clarify actual roles of individuals at top level within MEDDAC, provide personal insight/ experience basis for
decision making and planning, and finally promote understanding of the value of the program.

Preparation

With guidance provided by the Commander and Executive Officer, key personnel were decided upon. To assist in the conduct of the macro role clarification program, the Post OE staff was contacted. The Post OE staff had the previous year conducted a General Organization Questionnaire (GOQ) and, therefore, had some prior contact with the hospital.

The Post OE staff officers agreed to facilitate the seminar at a subsequent meeting with the Administrative Resident and Executive Officer. At this time specific guidance was provided and agreed upon as to date, location, participants, and a general outline of the seminar. It was decided the seminar would be held at a local motel to provide for a neutral setting, away from the hospital, on a Saturday to preclude work related interruptions.

The participants were officially notified by a letter from the Commander (Appendix C). As can be seen in the sample letter, it outlined the purpose of the conference, the general manner in which it would be conducted, the other participants, and the preparation which would be demanded of the participants. The letter was very carefully designed to properly prepare the participants in order to provide for a productive outcome.
Execution.

Appendix D contains a copy of the after action report of the Role Clarification Workshop conducted on 21 March 1981. The document presents a general accounting of what occurred during the workshop and provides a summary of the participants' assessment of the workshop.

Evaluation.

As previously alluded and as part of the role clarification workshop, a questionnaire was provided to the participants to obtain feedback on the workshop and on the key personnel's perception as to the value of incorporating the program as a MEDDAC program.

The participants were first asked to rate the effectiveness of the workshop on a scale of 1 - 10 with 10 being the most effective. The responses ranged from ratings of 7 to as low as 3. It was interesting to note that two of the three persons responding at the lowest level were individuals who were involved in the initiation of the project and were fully cognizant of the intended purpose of the program. The third person from the onset was opposed to unneeded behavioral exercise to promote organizational efficiency.

Examining the response to "What didn't you like about?" the personal conflict which was mentioned was the by-product
of personal difficulties between participants developed prior to the workshop. The workshop provided a medium to further surface these tensions. Unfortunately, side discussions of little bearing on the subject resulted.

Spontaneous legitimate concerns that developed during the exercise did not receive adequate attention as time began to play a role. The emphasis on MEDDAC Regulation 10-1 often was drawn upon as the panacea, thereby addressing only roles from an expected perspective and not one of enacted or perceived roles. With respect to utilization of the workshop within the participants respective areas of responsibility, the responses were mostly noncommittal. Of those that were affirmative, there was a redirection of the role clarification effort towards someone else.

Throughout the questionnaire the responses were centered around the disappointment that the goals of the conference were simply not realized. Admittedly, some of the expectations that were developed were unrealistic, given the time constraints, but nevertheless they were still problems which were not properly addressed to someone's satisfaction.

From the questionnaire and personal observation there were several conclusions reached. The conduct of the role clarification workshop was less than optimum for a number of reasons. First, the three OE facilitators failed to maintain
control and did not exercise proper supervision in the initial phases of the workshop so critical to the final outcome of the workshop. Besides the General Organization Questionnaire (GOQ) survey the previous year, the OE facilitators had no previous experience with OE interventions within medical organizations. Their lack of understanding of the medical complex was immediately evident when they addressed the participants as "doctors." Following this major faux pas, it was further evident that they, having military backgrounds of combat arms, were unaccustomed to the fiery discussions that ensued. Clearly out of their element they were unable to determine what expectations were reasonable and attainable, unable to retain control and steer the discussions in the right direction.

The Strength Development Inventory, while being interesting, was of little value in relation to the amount of time expended. The inventory went beyond the scheduled time and effectively consumed the morning. As a result, the primary purpose of role clarification was given less time to be developed.

Finally, it was apparent from the workshop that there was, in fact, a great deal of role ambiguity and role conflict in evidence among the key personnel, which was not adequately addressed. The degree of ambiguity did appear to reinforce
previous findings which suggested that it increased as individuals' managerial level increased. On the other hand, a subjective opinion is that at least in this gathering the professional group, as opposed to the administrative group, had the highest degree of role ambiguity which is counter to Alpander's findings. However, the degree of ambiguity demonstrated must be couched in terms of the participants' personalities and experience which, in turn, would place the problem of role ambiguity in proper perspective.

**Lessons Learned.**

The following are lessons learned from this particular workshop and general comments which should be considered in any future role clarification endeavors:

1. It is imperative that the participants be cognizant of the intended purpose of the workshop.

2. With that in mind, participants' expectations/goals should be established. Careful attention must be paid to this effort to preclude the establishment of milestones impossible to achieve. Some negotiation (combining, eliminating or fragmenting) may be necessary.

3. Expectations/goals should be expressed in such terms that there are some tangible means to measure their accomplishment.
4. Location of the workshop is a significant factor. A neutral setting away from telephone calls or visitors is important.

5. Keep the workshop simple and to the point.

6. The facilitators must be medically experienced. The organizational relationships (informal and formal) found within a hospital are too diverse and complex for the uninitiated.

7. To sustain the program and yield self-sufficiency, the facilitators should come from within the organization.

8. The number and mix of personnel within the workshop should be carefully selected and restricted to as few as possible.

9. Role clarification efforts are particularly important upon arrival to the unit or change in jobs. (Transition workshops)

10. With respect to role clarification efforts, it is the opinion of this author that first priority should be given to one's own role in an organization and that of his/her superiors and subordinates. Following that, an effective role clarification on an interdisciplinary level may be attempted.

11. Continual feedback is essential.
12. Such OE interventions as role clarification workshops will not result in a problem-free institution.

FUTURE ENVIRONMENT

All of the technical complexities of a large hospital of the 1980's are present, to include the added dimension of construction of a new physical facility scheduled for beneficial occupancy in the fall of 1982. With the move to the new hospital the dimensions of job characteristics, role stress, work satisfaction and functional interaction will be affected. A number of new concepts will be instituted with the move to the new hospital. Modular clinic, materiel distribution system, surgical case cart system, and new communications system are examples. These particular changes have been identified by the New Hospital Project Group and are in the process of being addressed. Besides institution of new concepts of operation, the move will result in a significant decrease in office space and distances between offices, departments and wards. The actual square footage will be reduced from that in excess of 400,000 square feet to that of 350,000 square feet. The resulting social density increase has the potential for dysfunctional effects on individual behavior and attitudes. However, as has been pointed out, the nature of the work performed by employees must be
considered in investigating social density changes. One such study suggested that, when moving from one facility to another, the nature of the work, the needed interactions for effectiveness, and the potential impact on job characteristics of social density changes should be carefully considered in planning efforts. It may be surmised from these studies that role relationships may be modified in some manner, consequently any programs to address role relationships should be cognizant of the potential for role changes with any moves, such as will be experienced by this hospital in the very near future.

Criteria

The criteria used to compare and contrast the alternatives are: 1) Role ambiguity and conflict There should be in evidence in the system (alternative) formal mechanisms to address role ambiguity and conflict as it exists between supervisors/subordinates and co-workers; 2) Employee satisfaction There should be some indication of an actual or potential impact upon employee satisfaction (job, organization) as measured by personal interviews, periodic employee questionnaires, personnel complaints, and personnel turnover and absenteeism; 3) Timeliness The system should have provisions for initial application within the first few months of an individual’s arrival so both the individual and organization
can benefit from an individual's orientation to his/her work environment and to avoid undue trauma resulting in "flight or fight" syndrome from lack of information; 4) Interdisciplinary Information exchange between professional and administrative elements of the hospital; 5) Manpower The personnel requirements and efficient utilization; and 6) Complimentary of the new hospital consideration of the upcoming move to the new hospital should be present.

Alternatives

The following are three suggested alternatives to address the role ambiguity and role conflict that exists within the U.S. Army Community Hospital, Fort Polk:

1. Maintain status quo.
2. Implement the OESO's Role Clarification Program.
3. Heuristically improve the existing system by confronting the current problems, making modifications of the system, and improving upon it until it optimizes within the limits of its components.

A simple comparison of the alternatives is presented in Figure 3. The criteria measurements use the current situation as a base. It must be emphasized that, as well as having visible support from the top of the organization for any one of the alternatives, its success is also dependent upon the support and the cooperation of the staff.

FIG. 5. Comparison of Alternatives by Criteria
Alternative one, maintaining status quo, represents acceptance of the role ambiguity and employee dissatisfaction that have been evident within the organization. The only advantages to alternative one are namely that it does provide some orientation to the hospital within two months after one's arrival (although many do not take the opportunity), the New Hospital Project Group does provide a great deal of interchange about the hospital, and attempts to foresee and resolve problem areas in the transition to the new hospital. Additionally, no additional manpower is needed. The disadvantages to accepting this position are numerous. Role ambiguity and conflict as identified within this project will not have programs addressed to reduce their negative impact. Employee satisfaction, which is in need of improvement, will not do so if there are no steps taken to resolve some of the problems. There are no formal programs exclusive of "committees" that allow for interchange between disciplines, thereby reducing the effectiveness of the "health care team," i.e., professionals do not know who to approach to resolve administrative problems, and administrators fail to understand the professionals' problems. The staff will continue to be inefficiently utilized in orientation efforts. Finally, there does not exist a firm transition plan for updating newly assigned personnel to the new hospital which will be cause for disruption in the future.
Considering the deficiencies outlined above, the first alternative is not acceptable.

Initially, alternative two would appear to be a good selection as it is a program tailored specifically to address role ambiguity and conflict as they exist within the hospital. The advantages include a formal program to reduce role ambiguity and conflict, theoretical potential to improve employee satisfaction, provides for multiple channels of exchange of information to facilitate interdiscipline understanding, and provides additional reinforcement, if necessary, for clarifying individual responsibilities with respect to transition to the new hospital. The primary disadvantage is one of timeliness. The projected 18-months required for the program provides a long-term change to the hospital, and could have a positive organizational impact in contrast to past short-term fixes with only local subsystems' impact. As previously mentioned, however, the time that is envisioned to conduct the program is too long in view of personnel turbulence, and not conducive to heading off initial perceptions created by confrontation with the system before role clarification begins. Besides the lack of timeliness, the manpower requirements would involve extensive training of personnel to be facilitators which would have to be accomplished first, representing a significant delay in instituting the
program. Finally, there is still considerable resistance to programs that give even the hint of past "sensitivity training." Despite even the most carefully structured program, the potential exists for the staff to perceive the program in light of past failures, such as equal opportunity and race relations classes, diminishing their support and cooperation so necessary for success. Considering the inherent difficulties to such a long-term program mentioned previously, initiating such a program, in reality, may cause more harm than good, should it fail. Consequently, the second alternative is not acceptable.

As with the alternative outlined above, alternative three (heuristically improve the existing system) offers a number of advantages that include formal and timely (unlike alternative two) programs to address role ambiguity and conflict; has a high potential to improve employee satisfaction; provides for interdisciplinary approach; utilizes MEDDAC personnel assets more effectively; and provides a mechanism (transition workshop) to reinforce New Hospital Project Group activities. The principle disadvantage is that certain professional staff may be required to devote a portion of their day to command consultation.

The modifications required would impact upon the organization's new personnel orientations and the current organizational human relations program. Such a tact would
represent considerable involvement by hospital staff, however, man-hours expended could be done within current authorizations. The programs recommended are essentially reduction/expansion of current efforts with a corresponding emphasis on effectiveness/efficiency. Role clarification efforts may be utilized, but on a reduced scale and time frame. Most of all, the programs would be tailored to meet specific needs in a timely fashion to help new personnel adapt to the environment of Fort Polk and its hospital. As in alternative two, the realities of the situation must be contended with. In particular, getting the cooperation of the professional staff and/or necessary motivation by the command group are prerequisites to the success of any organizational efforts. By approaching the problem of role ambiguity and conflict via a combination of established and new avenues (personnel orientations and upgrading human relations programs) there will be a greater potential to minimize staff alienation. Additionally, by not using an intensive Role Clarification Program alone, it will be much more difficult to stereotype.

**Optimal Feasible Solution**

Alternative three, heuristically improving the existing system by confronting the current specific problems, is the
optimal feasible solution. In the long run, the rejuvenation of orientation programs, and expansion of human relation efforts will prove of benefit to the hospital in general, its patients and staff. By drawing upon current mechanisms and staff feedback, programs may be developed that will provide definitive assistance to the hospital in minimizing role ambiguity and role conflict.

CHAPTER III
CONCLUSIONS

It is concluded from this problem solving project that there does, in fact, exist an unnecessary amount of role ambiguity and role conflict within the U. S. Army Community Hospital, Fort Polk, Louisiana. Additionally, there would indeed appear, as evidenced by interviews and the Pilot Role Clarification Program, an inordinate amount of role ambiguity and conflict at higher levels of the organization and with the professional staff, in particular, physicians. The need for role clarity would also appear to exist from a supervisor-subordinate perspective as well as interdisciplinary perspective. Role clarity, as referred to here, is the extent to which required information is communicated and understood by members of the organization, both vertically and horizontally. Additionally, much of the role ambiguity and role conflict experienced by physicians would appear to be related to their inexperience and turnover. It must be borne in mind that many of the physician staff of Fort Polk are in a period of transition, from a learning environment to the real world of two and three physician services in a medically isolated community, and interface with a division post and the Army. Finally, it may be concluded that there is currently no organizational program that, as is, permits a viable approach to reducing role ambiguity and role conflict.
There are numerous methods of reducing role ambiguity and role conflict which are summarized in the Fig. 3.

GOOD PRINCIPLES OF ORGANIZATION

- Clear lines of authority
- Extensive delegation of authority
- Clearly defines roles
- Clear goals and share goal setting

SUPPORTIVE LEADERSHIP PRACTICES

- Staff training and development
- Friendliness and attention
- Team building

SOURCE: Modified and adapted from Gene Milbourn, Jr. "Finding the causes of job stress and learning to control them" Health Services Manager, 13 (August 1980): 6, 11 - 12

Fig. 3. Methods of Reducing Role Ambiguity and Role Conflict

This particular study focused on the development of a Role Clarification Program as one method to reduce role ambiguity and role conflict at all levels within the hospital. It was concluded that, due primarily to the severe personnel turbulence present in this hospital, in particular that of
physicians and their corresponding absence of a cadre of physicians having in depth military experience outside of a learning environment, a long-term, organization-wide attempt of role clarification would ultimately fail. However, there is seen some benefit to continuing role clarification efforts at the upper levels of the organization where personnel have greater tenure and experience, not to mention a definitive need for such an intervention as expressed earlier. Additionally, it was felt that improvement and expansion of current supportive leadership practices would result in optimum benefits in the reduction of role ambiguity and conflict. In consideration of the preceding, there would appear to be no reason not to reiterate the analysis finding that heuristically improving the existing system would be the most effective manner to deal with the role ambiguity and conflict that exist within the U. S. Army Community Hospital, Fort Polk.
CHAPTER IV

RECOMMENDATIONS

It is recommended that the Commander accept alternative three which is to heuristically improve the existing system by confronting the problems identified within the text of this analysis. Specific recommendations are that:

1. The New Personnel Orientation should be modified taking the following into consideration:
   A. Whatever action is taken should be based on input from individuals who give and/or receive the briefing.
   B. Condense the current briefing by:
      1) Eliminating new hospital portion as it can be covered adequately in the Commander's presentation.
      2) Eliminating personnel and plans, operation and training from the briefing as new personnel must process individually through their offices anyway.
      3) Eliminating logistics from the meeting.
      4) Establishing written sequence of events for program.
   C. Reestablish firm administrative procedures.
   D. The individuals presenting should be doing so from a prepared script which has been screened by headquarters.
   E. As part of the Commander's briefing, pictures of key staff should be incorporated, for example Executive Officer leading marathon medics.
F. Determine specific areas which, by regulation or JCAH, must be included in orientation, such as infection control officer and safety officer.

G. Although perhaps not practical, it would be theoretically appealing for the Commander to personally introduce his key staff to include Executive Officer; Chief of Professional Service; Chief, Department of Nursing; Command Sergeant Major; and Medical Company Commander.

H. Identify single entity responsible for orientation.
I. Produce staff booklet for things to know.
J. Presentation should include extracurricular activities.

2. As an adjunct to the orientations provided by sponsors and hospital supervisors, a periodic seminar should be provided to those officers who are new to the service or directly from training programs. Such a program would not be an easy undertaking, but it has an excellent potential for easing the transition into the sometimes all too real world of military medicine at Fort Polk. A prototype program has been instituted at Letterman Army Medical Center and may be drawn upon for a starting point. The following recommendations are made:

A. Participants: new staff, professional staff and administrative staff.
B. Length: 2-3 days

C. Subject matter:
   1) Expectations, concerns
   2) Professional (profiles, quarters, call schedule, and medical boards)
   3) Administration (Schedule X, workload documentation)
   4) Use of NCOICs
   5) Chain of Command

D. Panel discussions on realities of Fort Polk

E. Emphasis on who to see, how to get what you need, what numbers to call

F. Seek consultation from HSC OE, CPT Troutman (471-6843/3378).

G. Example of typical briefing:
   SUBJECT: Medical Evacuation
   BRIEFER: Patient Administration Division (20-30 minutes presentation) (Supplemented by 2-3 page handout with people identified by name/position/telephone numbers - cookbook approach)
   STAFF MEMBER: Examples of real life situations

H. Above all, it must be emphasized that such an orientation briefing for physicians must receive the support of current professional staff, have respective staff members
associated with the briefing, and receive firm and visible support from the command group.

I. If such a program would be adopted, it would be a prototype for a USA MEDDAC with the potential to positively impact on patient care and physician retention.

3. The final recommendation is to develop a command consultation program which addresses human relations in patient care. Current efforts center around the Concerned Patient Care training and are in response to APC Model #6, A Study Guide for Human Relations in Ambulatory Patient Care. The primary purpose of such a program would be to improve human relations within the hospital to include staff-staff relationships as well as staff-patient, ultimately making the staff work more effectively. The expertise for such a program would come from within the hospital. The following are recommendations:

A. An ad hoc committee be established to develop this idea further.

B. BAMC currently has such a program which has been refined to a considerable degree, and has been well received (POC - LTC Blankenship, MAJ Allen, 471-4015).

C. Core group to consist of:
   Social Workers
   Chaplain
   Psychiatric Nurse Clinician
Physician
Administrative Officer

D. Areas of responsibility are assigned to core group members.

E. Formal classes are held once a month to address such topics as time management, stress and anger management, role clarification, etc.

F. Informal interface is maintained with the areas of responsibility.

G. Problem - focused approach.

H. A Role Clarification Workshop should be continued with upper levels of Command, particularly in view of the upcoming departure of the CPS and C, Primary Care and Community Medicine. Once specific individuals are in-bound it would be fruitful to conduct additional sessions with only a few in a session at a time. Taking small steps initially will help avoid past mistakes previously mentioned. The facilitators for the project should come from the care group who has skills in conducting group sessions.
APPENDIX A

ORGANIZATION CHART, US ARMY COMMUNITY HOSPITAL, FORT POLK
PHYSICIANS

I could see double amount of patients with a full-time nurse and more examination rooms.
Very inefficient, it is disheartening the few patients I see a day.
Should have third no-show kicked out of Family Practice.
Head nurse is always at meetings so she can't chaperon.
Need clinical support office. I worked three hours one afternoon to take care of paperwork to get medical evacuation.
Always waiting for examination equipment. I keep a book on days we are short of equipment, nurses, supplies (three months with no hot water).
There is not an arthroscope in the clinic working (on order since August).
All this is a waste of time. We have voiced these complaints many times.
Could use central screener and a nurse per physician.
Long wait for lab results; argue with doctors over procedures (one week for thyroid test).
No x-ray for dependents; have to supplement out to CHAMPUS.
Too many rules and policies. All I want to do is practice medicine. I had career intentions before I got here. I have trouble keeping up with regulation changes, broken promises, red tape and harassment.
Unreliable lab tests.
Colonel won't listen to doctors, hardheaded.
Patients OK, only headaches from headquarters.
Need commander to talk to doctors and ask us what we need to practice medicine.
Threats of Article 15's cause fear of courtmartial or transfer to Korea if I say anything.
Not very good clinical support--nursing, equipment, supplies.
NCOIC has been around a lot longer than I and I can't tell him what to do.
Forget consolidation.
Doctors not represented very well by boss (he is a good guy).
We are waiting for Colonel Stuart to come down and practice so he can see how it is.
Poor clinical support--need female nurses and more rooms. I had to wait 20 minutes for a nurse one morning. Ten patients a morning is a heavy load because of support problems.
RNs here very good; below that I question quality.
Doctors not represented well in headquarters.
COL Stuart doesn't communicate well; he doesn't come and ask for our input.
Nursing has more impact in headquarters.
Consolidation is garbage; no more room.
Too much red tape to get anything done; nothing will happen with this data.
Patients get trashy treatment; dirty place (roaches).
Crummy lab results--inadequate, slow, equipment breakdowns. X-ray gives poor support.
I believe clinic functions very well.
Good relations between us and other clinics.
Some doctors have good attitudes and some negative.
Could use MSC officer to help do leg work.
Need another receptionist who can type. 
A lot of the lab results don't get into records for a week and that slows us down. 
I have a full-time assistant and we work well together. 
I enjoy my work here at Fort Polk. 
I don't respect the chief of Family Practice; he is very weak for a supervisor. 
COL Stuart is out to burn a doctor; he failed his first time. We are waiting for his next move. 
A lot of inertia around here; can't get anything done without moving heaven and earth. 
Equipment, secretarial help, lab results, etc. 
Leave me alone (don't make me do administration) and let me practice medicine; but we do want to run our own show. 
We want to do total care and not have it fragmented to other clinics; this confuses the patient. 
People in headquarters and nursing trying to run Family Practice and they don't know what is going on. 
COL Stuart needs to get out and see what is happening; meeting in December was first exposure and that helped his rapport. 
Head nurse is resource manager; needs to get more into patient care. 
X-ray improving; lab is not. 
I hated it when I didn't have a permanent assigned nurse. 
Central Appointment is so far removed from patient care; not flexible. 
They could not cope with scheduling treatment room.

CLINICAL SUPPORT

Walk-ins are biggest problem; need to work on this; all walk-ins should be seen and not told "you can't be seen." 
Clinic working pretty well; needs improvement but not sure how. 
The big disadvantage to consolidation is there is no advantage. 
We tried rotating LPNs with different doctors; but didn't like it. 
Physician official chain not working. 
A lot of my time spent in coordination of clinic; no time for education. 
Need additional personnel (LPN). 
Good relations with other clinics. 
The two Family Practices really operate as separate clinics; this is no problem. 
Could have central screening for walk-ins. 
More cooperation from physicians needed; a lot of physicians did not understand why head nurse is here. They don't get along with nursing desk. 
Things are really better now than a year ago. Everybody finally got together. I can go to head nurse with problems. 
I am the last to know things. 
I should not have to give medical advice over the telephone.
Clinic operating better than it ever has. We have tried many things and
have now settled on a procedure that works; let's not rock the boat.
Problem with doctors is they don't want to play Army.
Could use form letter for OB medical statement.
People other than those working here, and who don't know what is needed
(especially nursing) are trying to change things.
Doctors are not given any credit; no pat on the back.
Get a system and stay with it.
We need an LPN for each doctor; no time to develop rapport with patients
and preventive medicine.
LPN should not order supplies and medicine; that is the role of the
head nurse and NCOIC.
Head nurse duties should be to assure smooth operation and pitch in and
help. Some think they are delegators and some administrators.
I would like to do some home follow-up calls and visits.
This clinic has one receptionist and six doctors; next door at OB they
have two receptionists for three doctors.
Good that COL Stuart is working here with us.
No rapport between Fort Polk clinics; a lot of antagonism and competative
feelings.
Good relations with Emergency Room.
Lab is 200 percent better since CPT Bolton arrived.
No consolidation.
Worst thing needed is for everyone to do the job they are supposed to do
and keep others out of our hair.
Would have a nurse for every doctor if we consolidated. Other doctors
do physical examinations, work Emergency Room, take compensatory time.
More efficient to combine clinics; would free up people to education on
family health; need support from physicians to work; right now they
are against us.
Duty description not realistic for head nurse.
Let's do something and quit waiting around; either one clinic or same.
Family Practice Clinics #1 and #2 work independently. Yes, we are
functioning OK, but not performing our mission of total patient care.
Need to send schedules to Central Appointment on time; a lot of problems
making appointments.
There are no Indians and all chiefs; no one to run for things.
Receptionist and LPN should do traffic flow.
I am dismayed at attitude of physicians; everyone does their own thing.
We need a standard minimum for doctors on duty to better schedule support.
The standard for referring or doing own surgery is up to the
physician.
No justification for absence of doctor; comes in at 0900 hours and says
checking patients in hospital.
Need two exam rooms per doctor.
Doctors do not understand role of nurse.
Need to have physicians solve their own problems.
No discipline in doctors; keep them at all costs.
NCOIC should do 50 percent patient care and administration/supply, but he doesn't.

Clinical support; scheduling of workload, utilization of personnel; I don't know who does this.

Centralized screening OK.

There are things that would save doctors' time, like someone else filling out lab requests.

Young troops' care has lowest priority; dependent care more important.

Need another nurse in TMC #1.

Like to see outpatient clinic closed; patients are not receiving proper care and poor utilization of personnel.

It is really an outpatient rather than a Family Practice Clinic.

There is conflict between physicians and administrators.

The practice of assigning doctors' units so that they will see all patients regardless of how many, is resisted by deliberate slowdowns by doctors. Should schedule doctor to see as many families as he thinks he can properly care for and cut off at that point.

Hospital commander is good for Fort Polk; we have needed one like him for a long time.

I never receive information from my supervisor.

Many doctors request non-federal stock items and expect them to be purchased for their use.

Work slow-down by doctors causes many problems.

COL Stuart should be seen in the hospital from time to time.

Why LPN ratings are GS 3-5.

Percentage of awards to civilians does not compare to the Fort Polk percentage.

The appointment section needs classes.

Hospital headquarters personnel take PT at 1530 hours during duty time (why not lead by example).

I catch myself going to meeting after meeting.

OTHER COMMENTS

The support for senior EM is much better than before.

EM must stay on the same shift and ward for long periods of time. I think we should OJT on many wards.

Too much BS; just let me do my job.

I am qualified as an LPN but they will not allow me to practice my 91C MOS. There should be some kind of education program for the staff so they are aware of the 91C duties.

SGM should meet with junior EM at least once every three months for rap sessions.

Should use chain of command coming down. Headquarters going directly to clinic and by-passing supervisor on matters that require administrative action or changes in procedures.
Good relations with clinics and wards.
Commander does not get out and see the people on a casual basis; only when problems arise.
A lot of hip shooting in decision making based on personal whims without communication with those affected, i.e., fatigues make for better relations with rest of Army.
Emphasis on other things (quarterly training, PT formation) instead of first priority on patient care.
MSC officers are not given enough recognition for keeping the hospital operating properly.
Need policy for AOD compensatory time.

OBSERVATIONS

Family Practice Clinics #1 and #2 operate as separate entities.
   Doctors sit, by clinic, on separate sides of room at meetings.
   No coordination (meetings) between clinics.
   Operate on different SOP with Central Appointments.
Physicians dismiss without analysis or suggestions from the Department of Nursing.
Physicians are very tight group with block complaints.
Anything that takes away from seeing patients (other than by own choice) is considered as an irritant.
A Schedule X (job description) does not exist.
Nobody seems to want responsibility for managing the clinics.
Visibility of hospital commander is seen as panacea (also practice in Family Practice Clinic #2).
Physicians expect instant results to their demands.
APPENDIX C

ORGANIZATION ORIENTATION EFFORTS
MEDDAC REGULATION
NUMBER 40-38
5 July 1978

MEDICAL SERVICES
INPROCESSING MILITARY PERSONNEL

The pronouns he, his, him, etc. when used in this regulation are intended
to include both the masculine and feminine gender. Any exceptions to this
will be so noted.

1. PURPOSE. To outline a procedure to assist in the proper welcoming,
inprocessing, and orientation of incoming duty personnel to the Medical
Department Activity (MEDDAC), Fort Polk, Louisiana.

2. GENERAL. To assure new personnel they are filling a definite need and
are an important part of the MEDDAC staff. To establish procedures to
promote a better understanding of the local procedures and administrative
procedures in order to avoid errors from lack of information.

3. PROCEDURES.
   a. Officers.

   (1) Letter of Welcome. As soon as an assignment instruction or order
   assigning an officer to the Medical Department Activity, Fort Polk, Louisiana,
is received, the Commanding Officer will forward a letter of welcome with
   informational brochures giving information about housing, schools, churches,
   post facilities, transportation and other items of interest. The name and
   office phone number of the sponsor will also be included.

   (2) Sponsor. A sponsor will be a commissioned officer designated to
   correspond with and welcome the newly assigned officer. The sponsor will
   write a personal letter to the new officer as soon as possible offering
   assistance in any way possible prior to arrival. A copy of the letter will
   be sent to Chief, Personnel Division to be maintained on file. When the
   new officer arrives, the sponsor will assist with inprocessing and introduce
   the new arrival and family to the other members of the MEDDAC staff.

   (3) Officer Report on Arrival. During duty hours the incoming officer
   will report to the Adjutant in Hospital Headquarters, Building 734. After duty
   hours he will report to the Administrative Officer of the Day, (AOD), Building
   736, who will obtain a copy of his orders. The AOD will also assist the new
   officer by directing him to the sign-in register, arrange for billeting and
   messing and instruct the individual to report to the Adjutant at 0730 the
   following workday morning.

   b. Senior Enlisted Personnel (E-6, E-7, E-8, and E-9).

   (1) Letter of Welcome. As soon as an assignment instruction or order
   assigning an enlisted person to the USA Medical Department Activity, Fort Polk,
   Louisiana, is received, the Command Sergeant Major will forward a letter of
   welcome with informational brochures giving information about housing, schools,
   churches, post facilities, transportation and other items of interest. The
   name and office phone number of the sponsor will also be included.

   (2) Sponsors. A sponsor will be designated by the USA MEDDAC Command
   Sergeant Major to correspond and welcome newly assigned enlisted personnel and
   assist them with inprocessing, to include familiarization with hospital, post
   and surrounding area.

   (1) Enlisted personnel will report on arrival to the Medical Company Orderly
   Room, Building 713, during duty hours and after duty hours to the Charge of
   Quarters. The Charge of Quarters will assist in arranging for billeting and
   messing and will instruct the individual to report to the first sergeant the
   morning of the next duty day.

*Supersedes MEDDAC Regulation 40-38, dated 4 October 1976
MEDDAC REG 40-38
5 July 1978

c. Enlisted Personnel (E-5 and below). Enlisted personnel (E-5 and below) arriving for duty will report to the Medical Company Headquarters, Building 713. Orientation will be accomplished by the Commanding Officer of the Medical Company in accordance with the Standard Operating Procedure developed for the purpose.

4. RESPONSIBILITIES.

a. Officers.

(1) The Adjutant will assist the new officer as follows:

(a) Assist in signing in on the register, DA Form 647, at Hospital Headquarters.

(b) Welcome the arrival to the staff and answer any questions he may have. Provide copies of any written policies/procedures required, as appropriate.

(c) Arrange for an appointment to meet the MEDDAC Commander, Executive Officer and other officers as required.

(d) Coordinate with the post regarding the Ft Polk "Operation Get Acquainted" Program for incoming Medical Corps Officers.

(e) Assist the officer as to inprocessing, if the sponsor is not with the individual. The Adjutant will call the sponsor and advise that the new officer has arrived and is at the headquarters. Direct the arrival to the Personnel Division for inprocessing.

(2) The Hospital Personnel Division will be responsible for the following:

(a) Provide the officer with the inprocessing instructions (Appendix A).

(b) Direct Officer to Installation Central In-Out Processing Activity, Building 1560.

(c) A duty appointment (DA Form 2496) will be prepared as soon as duty assignment has been determined designating primary duty assignment and any additional duties required.

(3) Orientation Briefing. The Chief, Plans, Operations and Training will provide to officers (with no prior service) a tailored orientation.

(4) Chief of Professional Services will be responsible for the professional orientation of all Medical Corps Officers.

(5) Chief, Department of Nursing will be responsible for the orientation of all Army Nurse Corps Officers.

(6) Deputy for Veterinary Activities will be responsible for the orientation of all Veterinary Officers.

(7) The Executive Officer will be responsible for the orientation of all Medical Service Corps, Army Medical Specialist Corps, Army Chaplain Corps assigned to the hospital and American Red Cross hospital personnel.

(b) The Executive Officer, Dental Activities will be responsible for the orientation of all Dental Corps Officers.

b. Senior Enlisted. The Command Sergeant Major will welcome the new NCO to the staff and will arrange an appointment for the individual to meet the USA MEDDAC Commander and Executive Officer. The Command Sergeant Major will contact the sponsor who will assist the senior NCO in processing.

c. Enlisted (E-6 and below). The First Sergeant and Company Commander will welcome the E-6 and below and assist them with any problems they may have.

5. INPROCESSING CHECK LIST.

a. Officer.
(1) An inprocessing check list is provided in Appendix A. All incoming officers or equivalent personnel will be presented a copy of Appendix A to be followed on an individual basis. The check list is designed to provide a record as well as a guide.

(2) Each officer with less than three (3) years active federal service who are sole parents or guardians of minor children, married to other service members with minor dependents (under age 18), or who are solely responsible for the care of dependents unable to care for themselves, regardless of age, will be counselled IAW procedure 4-29, Change 14, DA Pam 600-8 and AR 600-20, utilizing the checklist at Appendix B. A copy of the completed checklist will be placed in the individual's 201 file. Officers assigned to USAII and Vet Activities will be counselled by the Chief, Personnel Division/Troop Commander. Dental Officers will be counselled by the Dental Company Commander.

(3) Personnel with physically, emotionally or intellectually handicapped dependents will be identified and counselled IAW AR 614-203 and application made if desired IAW Procedure 4-28, DA Pam 600-8.

(4) A copy of the inprocessing check list will be placed in the officer's individual file maintained in the Personnel Office.

b. All Enlisted Personnel.

(1) Inprocessing check list is provided in Appendix A. All enlisted personnel will be presented a copy of Appendix A to be followed on an individual basis. The check list is designed to provide a record as well as a guide.

(2) Each enlisted service member with less than three (3) years active federal service who are sole parents or guardians of minor children, married to other service members with minor dependents unable to care for themselves, regardless of age, will be counselled IAW procedure 4-29, Change 14, DA Pam 600-8 and AR 600-20, utilizing the checklist at Appendix C. A copy of the completed checklist will be placed in the individual's 201 file. Enlisted personnel assigned to USAII and Vet Activities will be counselled by the Medical Co Cdr, or LSG. Enlisted personnel assigned to the Dental Activities will be counselled by the Dental Co Cdr or LSG.

(3) Enlisted personnel will be identified and counselled as specified in para 5a(3) above.

(4) A copy of the inprocessing check list will be placed in the individual's file maintained in the personnel office.

(0845 HOURS, 2D TUESDAY OF THE MONTH) NOTICE RECEIVED

---

**MEDDAC FL 52 (Rev)**

1 Apr 81 Ft Polk
AFZX-MEDH-PD
SUBJECT: Inprocessing Personnel

DEFENSIVE DRIVING CLASS (POST SAFETY OFFICE, BLDG 4705)
Monday & Tuesday (1200-1600 hours)
DEFENSIVE DRIVING CLASS WILL BE COMPLETED WITHIN
TWO (2) WEEKS OF ARRIVAL.

PREVENTIVE MEDICINE (Bldg 723)

ALL NEWLY ASSIGNED PERSONNEL must report back to Personnel Division not later
than two (2) weeks after initial inprocessing with this form completed.

PATIENT RECORDING CARDS: The sponsor or spouse must report in person to
Outpatient Records Section, Bldg 731, to obtain patient recording cards for
their dependents. A patient recording card must be presented by both military
and their dependents when reporting for medical treatment.
1. PURPOSE: To establish procedures and responsibilities for conduct of a newly assigned doctors orientation program.

2. GENERAL:

a. All soldiers perform better when they understand how their personal efforts help accomplish the unit's mission. The orientation program outlined below will provide newly assigned doctors an appreciation of the 5th Infantry Division (Mechanized) and Fort Polk mission. It will also allow them to participate in tactical field training and personally experience the combat power of the Army while seeing the living and working conditions of the soldiers they treat.

b. Briefings and a tour of a battalion area will be conducted during the first day; the second day will be spent in the field observing and participating in tactical training, see incl 1.

c. The program will begin June 1981 with mechanized gunnery as the major tactical event. During July - September there will be a monthly orientation and thereafter, once a quarter for remainder of year, see incl 2.

3. RESPONSIBILITIES:

a. G3/DPT

(1) Provide staff supervision of orientation program.

(2) Coordinate with Cdr, MEDDAC and DFNTAC to schedule personnel attendance.

(3) Develop itinerary based on unit training schedules and task host units.

(4) Coordinate helicopter support for transportation to and from training area.
(5) Inform the major subordinate command of the number of doctors to participate on a given day.

(6) Conduct Command Briefing.

b. DRM: Conduct Installation Missions and Functions Briefing.

c. Cdr, 5th Avn Bn: Provide helicopter transportation to and from field.

d. Cdr, MEDDAC and DENTAC:

(1) Provide G3/DPT standing list of personnel to participate in program annotated with preferred time frame.

(2) Provide doctors with the following minimum field equipment for field training: Helmet w/covers, LRE w/canteen, Poncho, First Aid Packet.

e. Cdr, Major Subordinate Command.

(1) Conduct tour of facilities and training per itinerary.

(2) Provide noon meal on day #2 of itinerary.

4. ADMINISTRATIVE: Point of contact for orientation program is Major Swift, N/DPT, 537 - 611?/4058.

Inclosure 2
SUBJECT: Letter of Instructions (LOI) for New Personnel Orientation

TO: SEE DISTRIBUTION

1. REFERENCE: MEDDAC Reg 40-3

2. PURPOSE: To prescribe the procedures and responsibilities for conducting the monthly orientation for newly assigned MEDDAC personnel.

3. GENERAL:
   a. A monthly orientation will be conducted for all newly assigned military and civilian personnel on the second Tuesday of each month. This orientation is mandatory for all personnel who have inprocessed since the previous month's orientation. Newly assigned civilians should wear name tags if they have been received from the Service Branch by the date of the orientation.
   b. The orientation will be conducted at 0900 hours, on the second Tuesday of each month at the PO&T classroom, Building 509.

4. RESPONSIBILITIES:
   a. Commander, USAMEDDAC: Present the following:
      (1) Welcoming remarks.
      (2) Presentation of MEDDAC slides.
   b. Hospital Project Office: Present slides of new hospital.
   c. Adjutant:
      (1) Arrange for remarks for other headquarters staff as may be desired.
      (2) Present information on "If I were the Commander" and other subjects as desired.
(3) Perform functions in "a" above in the absence of the Commander.

d. Chief, Department of Nursing:

(1) Present information on organization and functions of Department of Nursing.

(2) Infection Control Nurse.

e. Chief, Plans, Operations and Training:

(1) Arrange for PO&T classroom to be available 0900-1130 hours on the second Tuesday of each month with slide projector, overhead projector, and screen.

(2) Present information on the following:

   (a) SAEDA

   (b) Security

   (c) Alcohol and Drug Abuse, Prevention and Control Program

   (d) PT Tests

   (e) Educational Counseling

   (f) Quarterly mandatory training

f. Chief, Clinical Support Division: Present information on the following:

(1) Organization and function of Clinical Support Division.

(2) Duties and responsibilities of the Patient Representative Officer.

(3) Ambulatory Patient Care (Cdr will provide assistance if needed).

g. Chief, Personnel Division:

(1) Issue appointment slips for the next scheduled orientation to all military and civilian personnel during inprocessing.

(2) Present information on the following:

   (a) Military Personnel Actions
AFZX-MEDH-PD
SUBJECT: Letter of Instructions (LOI) for New Personnel Orientation

(b) Civilian Personnel Actions
(c) Personnel Status Requests
(d) Finance/Pay Inquiries
(e) Leaves/Passes/TDY/How to sign in and sign out
(f) Records and Record Audits
(g) Promotions
(h) OERs/SEERs
(i) Miscellaneous suspense actions
(j) Special Medical Pay Agreements (MC Officers)
(k) Board Certification (MC Officers)

h. Chief, Logistics Division: Present information on the following:
(1) Medical equipment maintenance
(2) Linen exchange
(3) Housekeeping
(4) Materiel - How to order supplies and equipment
(5) MEDCASE Program

i. Safety Officer: Present information on the following:
(1) Safety briefing
(2) Safety inspection
(3) Fire safety
(4) Accident/injury reports

j. Commander, Medical Company: Present information on the following:
(1) Appearance and uniform policy.
(2) Military courtesy.
SUBJECT: Letter of Instructions (LOI) for New Personnel Orientation

(3) Conduct (on and off duty).
(4) Indebtedness.
(5) DWI.
(6) Physical fitness and weight control.

(8) Open door policy.
(9) Commander's Call.
(10) Monthly Inspection Formation.
(11) Problem assistance agencies.
(12) Off limits areas.
(13) SQT Learning Center in dayroom.
(14) Soldier/NCO of the Quarter/Year Program.

5. All individuals are responsible for insuring that an alternate is available within their division/section to provide the newcomer's briefing in the event of the primary briefer's absence or unavailability on the day of the scheduled orientation.

FOR THE COMMANDER:

Larry J. Keller
MAJ, MSC
Assistant Adjutant

DISTRIBUTION:
A
ORIENTATION PROCEDURE FOR PARAPROFESSIONAL PERSONNEL

General: Paraphrase text

Purpose: Paraphrase text

Responsibilities: Paraphrase text

1. General:
   a. Each military and civilian paraprofessional person assigned to Department of Nursing will be given an orientation to the Department of Nursing and the Hospital.
   b. A suspense date for completion of the orientation period normally will not exceed thirty (30) working days following Initial assignment to the Department of Nursing.

2. Purpose:
   a. To acquaint the individual with organization, mission, etc. of the hospital.
   b. To assist paraprofessional personnel in familiarizing themselves with Department of Nursing's function, policies, and procedures.
   c. To introduce paraprofessional personnel to members of the health care team.
   d. To provide paraprofessional personnel with a knowledge of the physical plan of the hospital and a specific orientation to the working areas.

3. Responsibilities:
   a. The Chief Wardmaster, Department of Nursing, and/or an appropriate designee, will be responsible for the orientation of each newly assigned paraprofessional person to the mission, organization and functions of the Department of Nursing. He is also responsible for scheduling date and time with the NCOIC, Nursing Education and Training for hospital orientation. The Chief Wardmaster will initiate the orientation checklist.
   b. The NCOIC, Nursing Education and Training will be responsible for identifying orientation needs, organizing an orientation program and insuring its completion.
   c. The Wardmaster of the individual's assigned unit is responsible for the completion of the nursing unit level orientation of all newly assigned personnel.
   d. It is the responsibility of the individual and the direct supervisor/wardmaster to return the completed orientation checklist to the Chief, Nursing Education and Training, NLT thirty (30) days following Initial assignment.

Attachment
Orientation Checklist
DEPARTMENT OF NURSING ORIENTATION CHECKLIST
(PARAPROFESSIONAL)

General........................................................................Paragraph 1
Purpose........................................................................Paragraph 2
Responsibilities............................................................Paragraph 3

1. General:
   a. Each military and civilian person assigned to the Department of Nursing will be required to complete during the orientation period specific items, tasks, procedures, etc., contained in an orientation checklist.
   b. A suspense date for completion of the checklist will normally not exceed 30 working days following Initial assignment to the Department of Nursing.

2. Purpose:
   a. The orientation checklist will serve as a standard guide for administrators to use in the orientation process of newly assigned personnel.
   b. The checklist will assist the individual being oriented to identify areas of specific emphasis which should be included in their orientation process.
   c. The completed checklist will be filed in the individual's education and training folder. This folder is maintained in Nursing Education and Training Section.

3. Responsibilities:
   a. It is the dual responsibility of the appropriate Nursing Department administrators and the newly assigned individual to utilize and insure completion of the orientation checklist.
   b. The individual is ultimately responsible for procuring the information and appropriate individual's initials as indicated on the checklist. The individual will sign the form upon completion and return it to Nursing Education and Training according to the suspense date listed. Space is provided above the signature block for any pertinent comments.
   c. The immediate supervisor of the orienting individual will sign the checklist in the area indicated insuring all items listed have been accomplished to his/her satisfaction. Space is provided above the signature block for any pertinent comments.

8. Discuss Chain of Command.
9. Discuss community awareness.
10. Discuss recreational facilities.
11. Discuss drug abuse.
12. Arrange Instruction on nursing techniques as needed such as:
   a. Infection Control.
   b. CPR.
   c. Surgical Technique.
   d. Administration of medications.
   e. Emergency drugs.
   f. Venipuncture and IV Therapy.
   g. Other.
13. Conduct tour of hospital area.
WARDMASTER/NCOIC:

1. Introduce to ward personnel.
2. Review work schedule.
3. Discuss Leave Policy.
4. Explain procedures for duty personnel sick call and reporting absence from duty.
5. Discuss military courtesy and personal grooming.
9. Identify the location of the following equipment:
   a. Emergency drugs, Ambu-bag, Oxygen and Crash Cart.
   b. Emergency Power Outlet.
   c. Fire Extinguishers, Fire Evacuation Plan and Fire Exits.
10. Conduct a thorough orientation to the following ward administrative procedures:
    b. The 24-Hour Nursing Report.
    c. Personnel Assignment Sheet.
    d. Utilization of Patient Identification Plate, Bed Card, and Control Card.
    e. Components of Patient Charts.
    f. Utilization of Therapeutic Documentation Forms, Nursing Notes, Doctor's Orders, Nursing Care Plan, TPR Graphic and Intake and Output Records.
    g. Review contents of MEDDAC Regulation Book.
    h. Review contents of Department of Nursing Procedure Guide.
    i. Review contents of Department of Nursing Administrative Procedure Book.
11. Supervise the administration of medications/IV Therapy to include:
    (Applicable to 91Cs Long Course and LPNs only and is the responsibility of the Head Nurse or designee).
    a. Utilization of Medication Cards.
    b. Location of all ward medications.
    c. Method of ordering Bulk Drugs and Controlled Substances.
    d. Management of Automatic Stop Orders for medications according to Department of Nursing Admin. Procedure #7.
    e. Management of drug keys.
    f. Utilization of the P.D.R. and the Hospital Formulary.
    g. Use of Unit Dose.
    h. Before Individual (91C/LPN) is authorized to pass medications and administer IV Therapy, ward HN must submit a DF to get the individual certified to do above listed functions on the ward.
12. The Wardmaster/NCOIC will sign below after the individual has completed the orientation to the specific areas listed.

SIGNATURE OF WARDMASTER/NCOIC
APPENDIX D

ROLE CLARIFICATION WORKSHOP'S LETTER OF INVITATION
SUBJECT: Role Clarification Workshop

1. As a key member of my staff you are requested to attend a Role Clarification Workshop to be conducted on 21 March 1981 from 0730 hours to 1400 hours at the Ross Continental Motel on Highway 171 in Leesville.

2. The purpose of this meeting is to clarify role expectations and obligations of the top team members of MEDDAC in an effort to improve team effectiveness in activities directly related to patient care. It is designed to:
   a. Clarify the understanding that we have of each others' roles;
   b. Clarify our own individual roles within the MEDDAC; and
   c. Negotiate and readjust roles as necessary to best support the patients serviced by MEDDAC at Fort Polk.

3. The workshop will focus on how the aspects of our roles are aligned in an effort to gain clarity on each individual's job responsibilities. It is not designed to blame others for present or past difficulties, but rather to create a clear picture of what we are supposed to be doing so that we avoid difficulties between or overlap of job responsibilities in the future.

4. I have requested the Fort Polk Organizational Effectiveness Staff Office to organize the meeting. The OESO's, Major Cole, CPT (P) Frayne, and MSG Coleman, will be working for me and will render no report on our activities to anyone but me.

5. The workshop will begin after a no-host breakfast at 0730 hours in the restaurant at the Ross Continental at Leesville, LA. The Basic agenda for the workshop is:
   a. Discussion of roles.
   b. Preparation of notes on individual roles on butcher-paper charts.
AFZX-MED-00

SUBJECT: Role Clarification Workshop

6 March 1981

6. Prior to the meeting you should think through your job responsibilities and positions you wish to express during the meeting. You may want to review your portion of MEDDAC Regulation 10-1, "Organization and Functions Policy." To expedite the conduct of the meeting, you may want to make some notes for yourself on the following:

a. What I think my job is.

b. What I think the other participants responsibilities are. The participants for this Role Clarification Workshop are: Commander; Executive Officer; Chief, Professional Services; Chief, Department of Nursing; Chief, Clinical Support Division; Chief and Assistant Chief, Family Practice Department; Chief, Department of Primary Care and Community Medicine; Chief, Emergency Medical Services/Flight Surgeon; Commandant, Medical Company; Command Sergeant Major; and Chief Wardmaster.

c. What I actually do.

d. What I am willing to do to assist others.

7. Finally, you should come mentally prepared to participate in the meeting and discuss your ideas in an open and candid manner. I look forward to seeing you on the 21st of March.

RICHARD B. STUART, M.D.
COL, MC
Commanding
APPENDIX E

AFTER ACTION REPORT ON ROLE CLARIFICATION WORKSHOP
MEMORANDUM FOR RECORD

SUBJECT: After Action Report of Role Clarification Workshop Involving Key Personnel of the US Army Community Hospital, Fort Polk

1. A Role Clarification Workshop was conducted with key personnel of the US Army Community Hospital on Saturday, 21 March 1981. This document presents a general accounting of what occurred during the workshop and provides a summary of the participants' assessment of the workshop.

2. Attached as Inclosure 1 is the agenda of the Role Clarification Workshop.

3. The participants' expectations of the workshop were:
   --Individual identification of my job/your job
   --What others think my job is
   --Assigned job definition
   --Integrate the above into new hospital
   --Interpretation of HSC/MEDDAC regulations and local supplements
   --Avoid conflicts by better understanding
   --Change roles
   --Discuss Commander's role in the functional organization
   --Better day-to-day working relations
   --Guidance on prioritization
   --How to exercise command and control without operational control
      a. Streamline
      b. Responsive
   --Have fun/job satisfaction
   --Professional growth

4. Following the development of expectations, an inventory was conducted to assist individuals to understand their own behavior. A Strength Development Inventory (published by Personal Strengths Assessment Service, Inc.) was employed. The inventory is based on a Relationship Awareness Theory which holds that we act toward others as we do because we are seeking certain gratifications in our relationships with others.
SUBJECT: After Action Report of Role Clarification Workshop Involving Key Personnel of the US Army Community Hospital, Fort Polk

The theory espouses:

Observing how we act toward others tells us what gratifications we are seeking from others. And, by the same token, observing how others relate to us tells us what gratifications they are seeking from us. The key to understanding ourselves and to understanding others is to look behind the behavior for the underlying gratifications being sought. When we understand what we want from others, we can often change our behavior to more effective ways of getting what we want. When we understand what others want, as well as understanding what will appeal to them, what they will find rewarding and what they will find unrewarding or threatening, we can often change the way we relate to them so that we achieve "win-win" relationships in which we get what we want and they get what they want.

In sum, by understanding how we are motivated and how other people are motivated, they become more understandable to us and we can assess more rapidly whether or not a given relationship is likely to bring us the gratification we seek.

5. Inclosure 2 is a compendium of role perceptions of the participants as they view their own positions within the organization.

6. Inclosure 3 provides the participants perspective of the role of the Commander within the organization.

7. The workshop closed with an evaluation of what was or was not achieved with respect to the participants' expectations. The results were spread out on a continuum from not achieved to achieved. Additionally, a questionnaire was handed out in an effort to provide feedback on the effectiveness of the workshop. The results of the questionnaire are summarized in Inclosure 4.

NAME: COL William Bethea

DUTY: Post Flight Surgeon
51D Flight Surgeon
Chief EMS
Chief, Clinical Services
Consultant Occ. Health
GMO

My role is:

a. Flight Surgeon - aviation physicals, Class I, IA, II, III
   Up and down slips 4156 (F/S only)
   Waiver authority for Class III flying physicals
   Maintenance of optimum state of health of flight crews and their families
   Obtaining waivers for senior officers who are Cat B aviators and maintaining currency of waivers in coordination with AEROMED Center, Fort Rucker
   Insuring competency of Cat B aviators to be recalled to Flying Duty in as short time as possible

b. Aviation Safety - in-flight evaluations
   Classes to aviators undergoing nap of the earth flying training and night flights

c. Consult to Air Amb Dept for Med Evac (MAST Mission)

d. Consult to Division Surgeon on aviation matters, staff procedures

e. Consult to Division Aviation Officer

f. Cover for Division Surgeon when he is away

g. Consultant to MEDDAC PAD for clearances for patients being med evac'ed by AF

h. Training my Aviation P.A. - EM on loan from Division

i. EMS - Responsible for professional ER Operations
   Working in ER during periods of patient
   Coordinating ER functions with MEDDAC physicians
Determining requirements for staffing of ER (3-11)
Upgrading of physical structure of ER and replacing antiquated or worn out equipment
Coordinating functions of AMOSISTS in ER setting
Establishing ER SOPs, updating ER SOPs
Training ER Staff - patient extractions from aircraft, loading med evac patients, etc.
Putting out fires created by the ER Staff--overwork,
Providing for advanced training for EMS physicians

j. Chief, Clinical Services - Backing Ped Nurse Practitioner when Peds MDs are away
   Consulting with AMICs and AMIC physicians on handling of problems

k. Visiting the various Support Clinics to coordinate my activities with their services

l. Consultant to Preventive Medicine and Occupational Health
   Provide Occ Health physicals
   Solving problems in physical conditions of civilian workers (Congressionals)
   Providing guidance to Preventive Medicine and Occ. Health on all aspects of their mission

m. GMO
NAME: LTC Thomas E. Nugent

DUTY: C, Prim Care

My role is:

a. Total supervision of clinics (seven)
b. Coordination of activities of each unit with other units
c. Coordination of personnel within each unit
d. Increase quality of care and perception of care given
e. Ensure training of all personnel— for the sake of both the personnel and the Commander
f. Provide physician input at Primary Care level
NAME: ILT Michael P. Kennedy  
DUTY: Cdr, Med Co

My role is:

a. To establish standards and policies relating to basics of soldiering for enlisted personnel and insure they are enforced. This will involve imposing appropriate disciplinary action when necessary.

b. To insure soldiers'(enlisted) welfare is being attended to. This involves improving living conditions of barracks and maintenance of barracks. Also, morale of soldiers must be monitored and constructive programs to improve morale must be developed and implemented.

c. To insure enlisted personnel have opportunity to get necessary training for career development and give them recognition for achievements.

d. To retain good soldiers

e. Anything else a good one foot is told to do
NAME: CSM Joe Muchen

DUTY: CSM

My role is:

a. To keep the Commander informed on all those things that affect the morale and the discipline of the enlisted in the unit.

b. Responsible for the training of all the NCOs in the unit.

c. Keeping the enlisted informed of changes in regulations and policies.
NAME: COL Anna M. Butcher
DUTY: C, DON

My role is:

a. To support the Commander by maintaining a cohesive, flexible, productive nursing service and to provide expertise in all facets of nursing care.

b. To support through staffing the physicians in their care of patients

c. Provide managerial skills to most effectively utilize nursing staff as a whole and meet individual needs and goals for professional development

d. Provide administrative knowledge and expertise to insure compliance with health care regulations, professional nursing practice standards as well as military regulations and requirements.

e. Provide educational growth opportunities to increase individual short term effectiveness and long term usefulness to the Army

My role is:

a. Provide leadership and supervision to Family Practice Staff

b. Be instrumental in assuring sound working relationships among the Family Practice Staff

c. Performing those duties of the chief and delegating authority to subordinates for duties which can be assigned.

d. Provide patient care as a family physician

e. Show appreciation to Family Practice Staff by my actions and let them know that their job is vital to accomplishment of mission

f. Encourage and make it possible to have regular Family Practice Staff Social functions.

g. Support both Family Practice Staff and Commander of MEDDAC

h. Maintain harmonious working relationship with all clinics, Departments, and Services
NAME: LTC L. J. Eason       DUTY: C,CSD

My role is:

a. Provide administrative management to professional staff
b. Furnish steno and typing above capabilities of clinics
c. Administrate Central Appointment System
d. Responsible for Patient Representative Program
e. Oversee the Administrative Management of an Ambulatory Patient Care Program
f. Assist CPS in establishing a viable CME program
g. Personnel management of clinic receptionists
h. Manage budget, assist MEDCASE planning for clinics
i. Capture and report statistical data
j. Assist CPS in admin of credentialing
k. Supervise Medical Library
l. Insure compliance with JCAH and IG Standards
m. Other duties as assigned
NAME: COL Ray A. Saintromain  DUTY: CPS

My role is:

a. Manager of personnel who treat patients
   Balance staffing
   Arbitrate disagreements
   Develop (improve) individuals' management skills
   Present and support by personnel's ideas and needs
   to higher levels and vice versa
   Evaluate job performances

b. Serve as commander's assistant (deputy) in all areas
   within my capability

c. Evaluate commander's management practices, accepting or
   rejecting as I attempt to grow into a similar
   obligation (job)
NAME: COL Leroy Barber, Jr.  
DUTY: Executive Officer

My role is:

a. Act as administrative consultant to the commander

b. Function as the leader of admin activities (PO&T, PAD, LOG, Food Services, CD, CSD, etc.)

c. Provide admin service to the MEDDAC

d. Prepare admin policy guidance, directives

e. Serve as committee chairman to various committees (R.M., UR, etc.) and as a member on others

f. Provide admin support to transition to new hospital; establish and implement transition tasks

g. Perform other duties as assigned or RECOGNIZED

h. Portray positive MEDDAC image

i. Interface with higher HQ Staff
NAME: COL R. B. Stuart

DUTY: MEDDAC/Hospital Cdr

My role is:

a. Command the MEDDAC/Hospital Plan
   Organize
   Staff/resource provision
   Direct
   Control

b. Insure high quality health care is provided

c. Insure that orders from higher HQs are carried out (including ARs, HSC Regs, FP Regs and directives, etc.)

d. Act as Director of Health Services for Fort Polk—advise Fort Polk Cdr

e. Responsible for security, appearance of MEDDAC area-

f. Insure MEDDAC staff is treated fairly - EO

g. Insure patients are treated fairly—with compassion, and concern—Pro concerned care program

h. Act as central point of contact for MEDDAC—internal and external publics ceremonies, conferences, etc.

i. Provide direct patient care

j. Conduct and supervise long-range planning for the MEDDAC—stationing plan impact, construction, new hospital, mobilization
PARTICIPANTS' PERCEPTIONS

OF

COMMANDER'S ROLE
NAME:

The Hospital Commander's role is:

a. To insure that major divisions are performing their individual missions satisfactorily

b. To make the decisions necessary to insure the above and establish internal policies
NAME: COL Leroy M. Barber, Jr.

The Hospital Commander's role is:

a. Provide policy guidance
b. Establish priorities
c. Recognize capabilities and limitations
d. Assign duties
e. Define roles
f. Resolve conflict
g. Establish and enforce standards (discipline)
h. Interface with and stand up for MEDDAC at higher headquarters
NAME: COL William Bethea, Jr.

The Hospital Commander's role is:

a. Exercise command and control
b. Arbitrate disputes
c. Direct solutions to dispute problems
d. Provide command guidance and insure that it is followed
e. Know where emphasis is needed in patient care
f. Back up the Chiefs of Departments when decisions are arrived at
g. Provide liaison for MD's in MEDDAC with Surgeon General's Office
NAME: COL Ray A. Saintromain

The Hospital Commander's role is:

a. Manage all financial, physical plant, and personnel that are part of the MEDDAC.

b. Resolve problems in group to group relationships

c. Develop subordinates by instruction and example

d. Represent individual and group needs to higher authority and vice versa
NAME: LTC Clark G. Hoffman

The Hospital Commander's role is:

a. Provide sound and wise leadership which will enable the MEDDAC to accomplish its mission
b. Be aware of what is going on at the "grass roots" level
c. Ensure the efficient operation of all patient care areas and supporting services
d. Have time to listen to and counsel with hospital staff
e. Be willing to do what he asks of his staff
f. Be sincere, concerned, honest, and upright in all that he does
g. Delegate authority wisely.
h. Have sound knowledge of his job
i. Responsible for patient care
j. Responsible for operation of TMCs.
NAME: CSM Joe Muchen

The Hospital Commander's role is to insure that the hospital is operated according to HSC regulations.
Name: LTC L. J. Eason

The Hospital Commander's role is:

a. Establish policy
b. Set priorities
c. Resolve professional conflicts
d. Public relations with the community
e. Maintain discipline
f. Promote socialization with view of increasing good working relationships
g. Provide rewards for good work
h. Maintenance of quality medical service
i. Recruitment and retention, both of officers and enlisted personnel
Name: LTC Thomas E. Nugent

The Hospital Commander's role is:

a. Maintain total perspective of the hospital's function and abilities
b. Delegate authority
c. Prioritize assets and services
d. Coordinate our activities and assets with HSC and units served
e. Public relations
f. Insure progression of personnel
g. Determine standards of care.
NAME: COL Anna Butcher

The Hospital Commander's role is:

a. Overall supervision and direction of activities in the MEDDAC

b. To support all department chiefs in their assigned roles, as defined by regulations

c. Delegate responsibilities to individual activities and chiefs

d. Make policies
1. Distribution of ratings of effectiveness of the workshop on a Scale of 1 - 10

Least Effective ↔ Most Effective
2. What did you like about it?

--The commander making his role as commander quite clear to his staff

--Got people talking openly about their relationship to others

--It was informative, particularly with roles I had little knowledge of. Secondly, information about myself and others concerning their thought processes and leadership styles in times of calm and stress was provided.

--Seeing how each person perceived his/her role

--Exchange of information

--Discovering the weakness/strengths/support, etc., of members present; observing the relationship between the Hospital Commander and Chief Nurse, the Chief Nurse and C, DPCCM, C, CSD and C, DON--all against the Chief Nurse? Interesting to observe the CPS react to supervision of C, DON spelled out by Hospital Commander

--Bringing everyone together at one time.

--Permitted 1-to-1 discussion with other participants which assisted in goal and task clarification

--Clarified roles of other key personnel in the hospital to include duties I was not aware of

--No response

3. What didn't you like about it?

--Personal conflict that arose between participants and the resulting tension

--Some didn't participate much and we didn't have enough time to explore some roles in depth, such as CPS.
Specific problems/misconceptions of individuals' roles were not addressed particularly as they occur daily within the hospital concerning NCOs and officers.

Degenerated from role clarification to discussion on organizational structure; Didn't give participants other than Commander opportunity to see how others saw their role.

Initial goals were not met. Decisions were not made. Too much time was spent on one subject.

More discussion needed of others view of our own role.

Inability of the C, DON to clearly state the physician/nurse relationship in the total care of patients.

Waste of time.

Conducted on Saturday. Area seemed physically uncomfortable. Facilitators permitted Commander to take over too much.

The workshop just covered roles and I would like to have something on how effective we are at what we are doing. Really, I have no complaints about the material covered.

4. Were the proper people in attendance?

Almost; however, the chiefs of Surgery, Medicine and Pathology should have been here.

Yes (4)

Add C, PO&T

No, first time less people until key roles are clarified.
--No, at this level, the Flight Surgeon/Chief EMX should have been excluded

--No, improper mix

--Yes, but perhaps some of the chiefs of other services and departments should have been in attendance

5. Can you make money by using this workshop in your area of services?

--No (3)

--Yes (4)

--No, not as this workshop was conducted

--No response (2)

6. How can this be improved (location, time, date, etc.)?

--Change mix of participants, involve lower ranking individuals

--No improvement necessary (3)

--Allow more time

--No suggestions (2)

--Fewer people/proper mix

--Weekday, 0800-1600, try Holiday Inn

--Have the workshop annually

7. Is there anything else you would like to add about the workshop?

--Have available for all participants complete set of ARs, MEDDAC and HSC Regs
--All other activities chiefs should be included in future goals conferences

--It's a darn good excuse to have a big breakfast at the Continental

--More control required

--Would be helpful if facilitators were familiar with MEDDAC organization

--It would be interesting to add how each of us can become more effective as individuals by key positions

--No response (5)

8. The top five items of support I need from other participants--

--Mission defined: Priorities set--active duty, dependents, etc:
  Personnel allocations: Personal visits of DON to ER/AVN MED/OPC

--Courteous consideration: Courteous communication: Objective decisions: Clear chain of command, upwards and down

--Information about participants, people, activities, problems, plans (XO, C,PCCM, C, DON, C, FP, CSM, Co CDR): Technical advice (XO, C, DON & C, EMS): Management indicators from all

--C, DON, a more rounded view of others mission with less parochialism CSM, more involvement with NCO professionalism and discipline (counseling); From Family Practice Department, an appreciation for the limitation of other Divisions and a willingness to do more with less complaint

--Respect for personal integrity; knowledge, capability, and position: Latitude to perform my job without interference as per AR 40-6 and MEDDAC Reg 10-1; Nonhostile, nonaggressive communication regarding problems or needs involving DON: Discussion of conflicting priorities and understanding or acceptance of "unfavorable decisions", not "me first" or nothing else will do: Understanding that the C, DON deals with a number of priorities from different areas not just with one section, i.e., primary care, ER, Aviation Med., etc.
--No response (3)

--Internal support once a decision is made; I need to be informed in a more timely manner about matters that affect my staff;

--Personnel when the workload demands extra people; Satisfactory equipment to do the job; Adequate working conditions for all; Minimal extra duty assignments which interfere with primary mission: Effective, satisfactory laboratory and X-ray service.
APPENDIX F

OUTLINE FOR MEDDAC ROLE CLARIFICATION PLAN
OUTLINE FOR MEDDAC ROLE CLARIFICATION PLAN

STEP 1. INITIATION

- Identify key personnel
  -- People who can "stop, let, help, make" change occur
- Outline benefits resulting from Role Clarification Plan
  -- Time saved
  -- Ambiguity reduced
  -- Communications improved
  -- Commander-Staff relation clarified
- Brief key personnel on concept of operation
- Conduct actual Role Clarification Workshop for key personnel. Which will:
  -- Clarify actual roles of individuals at top levels within MEDDAC
  -- Provide personal insight/experience base for decision making-planning.
  -- Promote understanding of value of program
- Key personnel provide guidance
- Form Ad Hoc Committee/Control Group
  -- Develop detailed plan based on guidance received from key personnel
  -- Supervise preparation and execution

STEP 2. PREPARATION

- Train facilitators
  -- L&MDC, observation, practical experience
  -- Will yield MEDDAC self-sufficiency
-- Provides flexibility
-- Addresses personnel turbulence
-- Emphasizes on-going nature of Plan.

- Conduct "TYPE" Role Clarification Workshop.
  -- Involves representatives from each "TYPE" role, i.e. MCs, MSCs, ANCs, EM, etc.
  -- Uses HSC Reg 10-1 as base
  -- Develops models to minimize conflicts over responsibilities and general duties between various "TYPES."

STEP 3. EXECUTION

- Role clarification at all levels
  -- Start at top - move downward
  -- Logical sequence
  -- Command Emphasis
  -- Include on-going feedback system

STEP 4. EVALUATION

- Planned renegotiation and evaluation to lend stability and flexibility
- Outside/external reassessment

RECOMMENDATIONS (In sequence)

- Key personnel attend Role Clarification Workshop
- Commander meet with key personnel to discuss their experience in terms of its appropriateness to overall MEDDAC
- Make decision whether to continue
- If "yes", key personnel work with OESO to develop GUIDANCE.
