1. INTRODUCTION. This bibliography has been assembled as an aid for those who are interested in rotorcraft/heliport research, engineering, and development. It includes those within the Federal Aviation Administration (FAA), those in industry, and those in state and local governments. This report is a supplement to "FAA Helicopter/Heliport Research, Engineering, and Development - Bibliography, 1964 - 1986" (FAA/PM-86/47) published in November 1986 (NTIS accession number AD-A174697). The bibliography and indexes in this report include all of what was published in the earlier document. However, Appendix E of this report does not contain any abstracts which were included in FAA/PM-86/47. Abstracts herein are only for those reports which have been published subsequent to the earlier bibliography plus any earlier reports which were inadvertently overlooked. This report does include all the abstracts and indexes contained in an earlier supplemental bibliography, "FAA Rotorcraft Research Engineering, and Development Bibliography, 1964 - 1987" (PS-88-1-LR).

2. SCOPE. In selecting technical reports to be included in this bibliography, two limitations have been observed. First, the reports are specifically related, in whole or in part, to rotorcraft. Second, they are limited to reports in which the research, engineering, and development elements of the FAA have been involved as sponsors, participants, or authors.

3. AVAILABILITY OF DOCUMENTS. The technical reports listed in this bibliography are readily available from three sources:

a. National Technical Information Service (NTIS). Many of the technical reports listed in this bibliography are available thru NTIS. These documents can be identified via the statement in block 18 of the technical report documentation page (Form DOT F 1700.7) contained in Appendix E of this bibliography and in Appendix E of the earlier bibliography (FAA/PM-86/47). For those reports available from NTIS, the accession number is given in block 2 of the technical report documentation page (unless it was not available at the time the bibliography was published). In ordering a document from NTIS, the accession number should be used. The cost is dependent on the number of pages in the document (see table 1). Documents are available from NTIS both in microfiche and paper copy. Generally, the paper copies are printed from microfiche.

b. American Helicopter Society (AHS). Copies of virtually all of the technical reports listed in this bibliography have been given to AHS. Both AHS members and nonmembers may obtain copies of reports for a small fee.

c. Helicopter Association International (HAI). Copies of virtually all of the technical reports listed in this

bibliography have been given to HAI. HAI members may obtain copies of reports for a small fee.

4. ORDER OF THE LISTING. In the bibliographic listing (see Appendix A), technical reports are listed in order of the year in which they were published. Within the year of publication, reports are listed sequentially according to report number. Some reports do not include the year of publication as part of the document number. Such a report is listed after other reports published in the same year. (e.g., NAE-AN-26, published in 1985, is listed after the other reports published in 1985.)

Table 1.

## NTIS PRICE SCHEDULES

(Effective January 1, 1989)

### Schedule A STANDARD PRICE DOCUMENTS AND MICROFICHE

PAGE RANGE	NORTH AMERICAN PRICE	FOREIGN PRICE
Microfiche	\$6.95	\$13.90
001-010	10.95	21.90
011-050	13.95	27.90
051-100	15.95	31.90
101-200	21.95	43.90
201-300	28.95	57.90
301-400	36.95	73.90
401-500	42.95	85.90
501-600	49.95	99.90
601*		

\*Contact NTIS for price quote.

### IMPORTANT NOTICE

NTIS Shipping and Handling Charges

U.S., Canada, Mexico — ADD \$3.00 per TOTAL ORDER

All Other Countries — ADD \$4.00 per TOTAL ORDER

Exception — Does NOT apply to:

ORDERS REQUESTING NTIS RUSH HANDLING  
ORDERS FOR SUBSCRIPTION OR STANDING ORDER PRODUCTS ONLY

NOTE: Each additional delivery address on an order requires a separate shipping and handling charge.

5. NEW DOCUMENTS OF PARTICULAR INTEREST. Based on discussions with people in industry, the following new technical reports cover topics of wide spread interest.

- a. FAA/PM-87/31 Analyses of Heliport System Plans
- b. FAA/PM-87/32 Four Urban Heliport Case Studies
- c. FAA/PM-87/33 Heliport System Planning Guidelines

Commentary: Documents a, b, and c are part of an FAA effort to promote heliports. The FAA plans to use these three technical reports to develop heliport planning sections that will be added to two FAA advisory circulars: AC 150/5050-3A, Planning the State Airport System, and AC 150/5070-5, Planning the Metropolitan Airport System. The revised advisory circulars will help ensure standardization in the forecasting, data collection, and data presentation methods and procedures used in heliport planning.

- d. FAA/CT-TN87/40 Heliport Visual Approach and Departure Airspace Tests, Volume I: Summary
- e. FAA/DS-88/12 Minimum Required Heliport Airspace Under Visual Flight Rules

Commentary: Documents d and e are the first of a number of technical reports addressing the validation/revision of the minimum required heliport airspace under visual flight rules (VFR).

- f. FAA/DS-88/5 Aeronautical Decision Making for Air Ambulance Helicopter Pilots: Learning from Past Mistakes
- g. FAA/DS-88/6 Aeronautical Decision Making for Air Ambulance Helicopter Pilots: Situational Awareness Exercises

Commentary: Documents f and g are the first of a family of technical reports addressing judgment training for air ambulance helicopter pilots. These two documents supplement the material contained in FAA/PM-86/45, Aeronautical Decision Making for Helicopter Pilots.

h. FAA/DS-88/2 "Zero/Zero" Rotorcraft Certification  
Issues

Commentary: Document h is a three volume report documenting the results of a certification issues forum held in Phoenix, Arizona in August 1987. This report documents; from the viewpoints of manufacturers, operators, researchers, and the FAA; certification issues that must be addressed in order to allow rotorcraft to fly in extremely low visibility conditions.

APPENDIX A: BIBLIOGRAPHY

- 115-608-3X  
(June 1962) A Simulation Study of IFR Helicopter Operations in the New York Area (A.L. Sluka, J.R. Bradley, D.W. Yungman, D.A. Martin and Franklin Institute Laboratories)
- RD-64-4 State-of-the-Art Survey for Minimum Approach, Landing and Takeoff Intervals as Dictated by Wakes, Vortices, and Weather Phenomena (W.J. Bennett)
- RD-64-55 Analytical Determination of the Velocity Fields in the Wakes of Specified Aircraft (W.J. Bennett)
- RD-66-46 VORTAC Error Analysis for Helicopter Navigation, New York City Area (Ronald Braff)
- RD-66-68 V/STOL Approach System Steep Angle Flight Tests (Glen D. Adams)
- NA-67-1  
DS-67-23 An Analysis of the Helicopter Height Velocity Diagram Including a Practical Method for its Determination (William J. Hanley, Gilbert Devore)
- RD-67-36 Economic and Technical Feasibility Analysis of Establishing an All-Weather V/STOL Transportation System (Joseph M. Del Balzo)
- RD-67-68  
NA-68-21 VTOL and STOL Simulation Study (Robert C. Conway)
- NA-69-2  
RD-68-61 Flight Test and Evaluation of Heliport Lighting for VFR (Richard L. Sulzer, Thomas H. Paprocki)
- FAA-RD-70-10  
FAA-NA-70-7 Evaluation of LORAN-C/D Airborne Systems (George H. Quinn)
- FAA-RD-71-96  
FAA-NA-71-45 Analytical Study of the Adequacy of VOR/DME and DME/DME Guidance Signals for V/STOL Area Navigation in the Los Angeles Area (Bernhart V. Dinerman)
- FAA-RD-71-105 Heliport Beacon Design, Construction, and Testing (Fred Walter)
- FAA-NA-72-39 Index of NAFEC Technical Reports, 1967-1971
- FAA-NA-72-41 Collision Avoidance: An Annotated Bibliography, September 1968 --- April 1972 (Dorothy E. Bulford)

FAA-RD-72-133      Flight Test and Evaluation of Heliport Lighting  
 FAA-NA-72-89      for IFR (Thomas H. Paprocki)

FAA-EM-73-8        Civil Aviation Midair Collisions Analysis,  
                          January 1964 - December 1971 (T.R. Simpson,  
                          R.A. Rucker, J.P. Murray)

FAA-EM-73-8        Civil Aviation Midair Collisions Analysis,  
 Addendum 1         1972 Added to 1964-1971 Results  
                          (R.A. Rucker, T.R. Simpson)

FAA-RD-73-47      ATC Concepts for V/STOL Vehicles, Parts 1 and 2  
 FAA-NA-72-95      (Sidney B. Rossiter, John Maurer,  
                          Paul J. O'Brien)

FAA-RD-73-145     V/STOL Noise Prediction and Reduction (Wiley A.  
                          Guinn, Dennis F. Blakney, John S. Gibson)

FAA-RD-74-48      A Summary of Helicopter Vorticity and Wake  
 FAA-NA-73-68      Turbulence Publications with an Annotated  
                          Bibliography (Jack J. Shrager)

FAA-RD-75-79      A Comprehensive Review of Helicopter Noise  
                          Literature (B. Magliozzi, F.B. Metzger,  
                          W. Bausch, R.J. King)

FAA-RD-75-94      Wind and Turbulence Information for Vertical and  
                          Short Take-Off and Landing (V/STOL) Operations  
                          in Built-Up Urban Areas-Results of  
                          Meteorological Survey (J.V. Ramsdell)

FAA-RD-75-125     V/STOL Aircraft Noise Predictions (Jet  
                          Propulsors) (N.N. Reddy, D.F. Blakney,  
                          J.G. Tibbets, J.S. Gibson)

FAA-RD-75-190     Noise Certification Criteria and Implementation  
                          Considerations for V/STOL Aircraft  
                          (MAN-Acoustics and Noise, Inc.)

FAA-RD-76-1        Human Response to Sound: The Calculation of  
                          Preceived Level, PLdB (Noisiness or Loudness)  
                          Directly From Physical Measures  
                          (Thomas H. Higgins)

FAA-RD-76-49      V/STOL Rotary Propulsion Systems - Noise  
                          Prediction and Reduction (B. Magliozzi)

                         Vol-I:      Identification of Sources, Noise  
                                      Generating Mechanisms, Noise Reduction  
                                      Mechanisms, and Prediction Methodology  
                          Vol-II:     Graphical Prediction Methods  
                          Vol-III:    Computer Program User's Manual

FAA-RD-79-59      Powered-Lift Aircraft Handling Qualities in the Presence of Naturally-Occurring and Computer-Generated Atmospheric Disturbances (Wayne F. Jewell, Warren F. Clement, Thomas C. West, Dr. S.R.M. Sinclair)

FAA-RD-79-64      Workload and the Certification of Helicopters for IFR Operations (Albert G. Delucien, David L. Green, Steven W. Jordan, Joseph J. Traybar)

FAA-RD-79-99      Airborne Radar Approach System Flight Test Experiment (Larry D. King, Richard J. Adams)

FAA-RD-79-123  
 FAA-NA-79-22      Test and Evaluation of Air/Ground Communications for Helicopter Operations in the Offshore New Jersey, Baltimore Canyon Oil Exploration Area (James J. Coyle)

FAA-RD-80-17  
 FAA-NA-80-13      Northeast Corridor User Evaluation (Joseph Harrigan)

FAA-RD-80-18  
 FAA-NA-80-8      Flight Evaluation of a Radar Cursor Technique as an Aid to Airborne Radar Approaches (Joseph Perez)

FAA-RD-80-20      Helicopter Communications System Study (Michael White, Dana Swann)

FAA-RD-80-22  
 FAA-NA-79-56      Airborne Radar Approach (Cliff Mackin)

FAA-RD-80-24      Icing Characteristics of Low Altitude, Super Cooled Layer Clouds (Richard K. Jeck)

NA-80-34-LR      Survey of Heliport Lighting and Marking Systems (Thomas H. Paprocki)

FAA-RD-80-47  
 FAA-CT-80-18      Flight Test Investigation of LORAN-C for En Route Navigation in the Gulf of Mexico (Robert H. Pursel)

FAA-RD-80-58      Study of Helicopter Performance and Terminal Instrument Procedures (Albert G. DeLucien, David L. Green, H.R. Price, F.D. Smith)

FAA-RD-80-59      Helicopter Terminal Instrument Procedures (TERPS) Development Program

FAA-RD-80-60      Airborne Radar Approach Flight Test Evaluating Various Track Orientation Techniques (Larry D. King)

FAA-RD-80-64      A Piloted Simulator Investigation of State  
 NASA TM-81188      Stability and Stability/Control Augmentation  
                          Effects on Helicopter Handling Qualities for  
                          Instrument Approach (J. Victor Lebacqz,  
                          R.D. Forrest, R.M. Gerdes)

FAA-RD-80-80      Helicopter Northeast Corridor Operational Test  
                          Support (Glen A. Gilbert)

FAA-RD-80-85      Proposed ATC System for the Gulf of Mexico,  
                          Helicopter Operations Development Program  
                          (D. James Freund, Tirey K. Vickers)

FAA-RD-80-86      Recommendations for Short-Term Simulation of ATC  
                          Concepts, Helicopter Operations Development  
                          Program (D. James Freund, Tirey K. Vickers)

FAA-RD-80-87      Preliminary Test Plans for ATC Concepts for  
                          Longer Term Improvements, Helicopter Operations  
                          Development Program (D. James Freund,  
                          Tirey K. Vickers)

FAA-RD-80-88      Recommended Short-Term ATC Improvements for  
                          Helicopters (Tirey K. Vickers, D.J. Freund)

                         Vol-I:      Summary of Short Term Improvements  
                          Vol-II:     Recommended Helicopter ATC Training  
                                      Material  
                          Vol-III:    Operational Description of  
                                      Experimental LORAN-C Flight Following  
                                      (LOFF) in the Houston Area

FAA-RD-80-107     Study of Heliport Airspace and Real Estate  
                          Requirements (Albert G. DeLucien, F.D. Smith)

FAA-CT-80-175     LORAN-C Non-Precision Approaches in the  
                          Northeast Corridor (Frank Lorge)

FAA-CT-80-210     Helicopter Icing Review (A.A. Peterson,  
                          L.U. Dadone)

FAA-RD-81-7-LR     Three Cue Helicopter Flight Directors: An  
                          Annotated Bibliography (Tosh Pott,  
                          J.P. McVicker, Herbert W. Schlickemaier)

FAA-RD-81-9        Impact of Low Altitude Coverage Requirements on  
                          Air-Ground Communications (B. Magenheim)

FAA-RD-81-27       Flight Evaluation of LORAN-C as a Helicopter  
 FAA-CT-80-53       Navigation Aid in the Baltimore Canyon Oil  
                          Exploration Area (William A. Wynn)

FAA/CT-81/35	National Icing Facilities Requirements Investigation (Frank R. Taylor, Richard J. Adams)
FAA/RD-81/35	Development of a Heliport Classification Method and an Analysis of Heliport Real Estate and Airspace Requirements (F.D. Smith, Albert G. Delucien)
FAA/RD-81/40	Improved Weather Services for Helicopter Operations in the Gulf of Mexico (Arthur Hilsenrod)
FAA-CT-81-54	Index of National Aviation Facilities Experimental Center Technical Reports, 1972-1977 (Ruth J. Farrell, Nancy G. Boylan)
FAA-RD-81-55	Recommended Changes to ATC Procedures for Helicopter (Glen A. Gilbert, Tirey K. Vickers)
FAA-RD-81-59	Helicopter Area Air Traffic Control Demonstration Plan (Tirey K. Vickers, D. James Freund)
FAA/RD-81/92	Weather Deterioration Models Applied to Alternate Airport Criteria (Edwin D. McConey)
FAA-CT-81-167	Terminal Helicopter Instrument Procedures (TERPS) (Robert H. Pursel)
FAA-CT-81-180	Engineering and Development Program Plan, Helicopter Icing Certification Research
FAA/RD-82/6	Instrument Approach Aids for Helicopter (Edwin D. McConkey, Ronald E. Ace)
FAA/RD-82/7 FAA/CT-81/72	Flight Test Investigation of Area Calibrated LORAN-C for En Route Navigation in the Gulf of Mexico (John G. Morrow)
FAA/RD-82/8 FAA/CT-81/73	Initial FAA Tests on the Navigation System Using Time and Ranging Global Positioning System Z-Set Receiver (Robert J. Esposito)
FAA/RD-82/9 FAA/CT-81/75	FAA Acceptance Tests on the Navigation System Using Time and Ranging Global Positioning System Z-Set Receiver (Robert J. Esposito)
FAA/RD-82/16	3D LORAN-C Navigation Documentation (Eric H. Bolz, Larry D. King)
FAA/RD-82/24 FAA/CT-82/32	LORAN-C En Route Accuracies in the Central Appalachian Region (Frank Lorge)

FAA/RD-82/40	Application of the MLS to Helicopter Operations (Edwin D. McConkey, John B. McKinley, Ronald E. Ace)
FAA/CT-82/57	Northeast Corridor Helicopter Area Navigation Accuracy Evaluation (Jack D. Edmonds)
FAA/RD-82/63	EMC Analysis of a Prototype Civil-Use GPS Receiver on Four Aircraft Configurations (Robert L. Mullen)
FAA/RD-82/71 FAA/CT-82/64	Global Positioning System En Route/Terminal Exploratory Test (Jerome T. Connor, Robert J. Esposito, Philip Lizzi)
FAA/RD-82/78 FAA/CT-82/76	LORAN-C Nonprecision Approaches in the Northeast Corridor (Frank Lorge)
FAA/CT-82/103	Flight Test Route Structure Statistics of Helicopter GPS Navigation with the Magnavox Z-Set (Robert D. Till)
FAA/CT-82/120	All Weather Heliport (Paul H. Jones)
FAA/CT-82/143	Safety Benefits Analysis of General Aviation Cockpit Standardization (Bruce E. Beddow, Sidney Berger, Charles E. Roberts, Jr.)
FAA/CT-82/152	Review of Aircraft Crash Structural Response Research (Emmett A. Witmer, David J. Steigmann)
FAA/CT-TN83/03	Helicopter Global Positioning System Navigation with the Magnavox Z-Set (Robert D. Till)
FAA/PM-83/4	Alaska LORAN-C Flight Test Evaluation (Larry D. King, Edwin D. McConkey)
FAA/CT-83/6	General Aviation Safety Research Issues (Robert J. Ontiveros)
FAA/CT-83/7	Engineering and Development Program Plan, Aircraft Icing
FAA/CT-83/21 NRL Report 8738	A New Data Base of Supercooled Cloud Variables for Altitudes up to 10,000 Feet AGL and the Implications for Low Altitude Aircraft Icing (Richard K. Jeck)
FAA/CT-83/22	A New Characterization of Supercooled Clouds Below 10,000 Feet AGL (Charles O. Masters)
FAA/PM-83-32	Conus LORAN-C Error Budget: Flight Test (Larry D. King, Kristen J. Venezia, Edwin D. McConkey)

FAA/CT-83/40 Survey of Characteristics of Near Mid-Air Collisions Involving Helicopters (Barry R. Billmann)

FAA/CT-TN83/50 and Addendum 1 Altitude Aided GPS (George Paolacci)

FAA/CT-TN84/16 Helicopter MLS (Collocated) Flight Test Plan to Determine Optimum Course Width (James H. Enias)

FAA/CT-TN84/20 Helicopter MLS Collocated Flight Test for TERPS Data (James H. Enias, Paul Maenza, Donald P. Pate)

FAA/PM-84/22 Heliport Snow and Ice Control, Methods and Guidelines (John B. McKinley, Robert B. Newman)

FAA/PM-84/23 Structural Design Guidelines for Heliports (Charles W. Schwartz, Matthew W. Witczak, Rita B. Leahy)

FAA/PM-84/25 Evaluating Wind Flow Around Buildings on Heliport Placement (John B. McKinley)

FAA/PM-84/31 Very Short Range Statistical Forecasting of Automated Weather Observations (Robert G. Miller)

FAA/CT-TN84/34 Helicopter IFR Lighting and Marking Preliminary Test Results (Paul H. Jones)

FAA/CT-TN84/40 Heliport MLS Siting Evaluation (Scott B. Shollenberger)

FAA/CT-TN84/47 Global Positioning System Performance During FAA Helicopter Tests on Rotor Effects (Jerome T. Connor, George Paolacci)

PM-85-2-LR Heliport Design Guide, Workshop Report  
Volume 1: Executive Summary

PM-85-3-LR Volume 2: Appendixes

PM-85-4-LR Volume 3: Viewgraphs

FAA/CT-TN85/5 Gulf of Mexico Helicopter Loran C Stability Study (Roseann M. Weiss)

FAA/PM-85/6 Helicopter User Survey: TCAS (Frank R. Taylor)

FAA/CT-85/7 State-of-The-Art Review on Composite Material Fatigue/Damage Tolerance (Regional L. Amory, David S. Wang)

FAA/PM-85/7           MLS for Heliport Operators, Owners, and Users  
                           (Kristen J. Venezia, Edwin D. McConkey)

FAA/PM-85/8           VHF-AM Communications Equipment, Selection and  
                           Installation Practices for Helicopters  
                           (Eric H. Bolz, Larry D. King)

FAA/CT-85/11          Analysis of Rotorcraft Crash Dynamics for  
                           Development of Improved Crashworthiness Design  
                           Criteria (Joseph W. Coltman, Akif O. Bolukbasi,  
                           David H. Laananen)

FAA/CT-TN85/15        Course Width Determination for Collocated MLS at  
                           Heliports (James H. Enias)

FAA/CT-TN85/17        Nonprecision Approaches in the Northeast  
                           Corridor Using Second Generation Loran Receivers  
                           (Barry Billmann, John G. Morrow,  
                           Christopher Wolf)

FAA/CT-TN85/23        Test Plan for Siting, Installation, and  
                           Operational Suitability of the AWOS at Heliports  
                           (Rene' A. Matos)

FAA/CT-TN85/24        Helicopter Terminal Instrument Approach  
                           Procedures (VOR/ILS) (Christopher Wolf)

FAA/CT-85/26          Summary of Artificial and Natural Icing Tests  
                           Conducted on U.S. Army Aircraft from 1974 to  
                           1985 (Harry W. Chambers, John Y. Adams)

FAA/PM-85/29          Traffic Alert and Collision System (TCAS)  
                           Surveillance Performance in Helicopters  
                           (William H. Harman, Jerry D. Welch,  
                           M. Loren Wood)

FAA/PM-85/30          Pilot Evaluation of TCAS in the Long Ranger  
                           Helicopter (John W. Andrews)

FAA/CT-TN85/43        Helicopter MLS RNAV Development and Flight Test  
                           Project, Project Plan (James H. Remer)

FAA/CT-TN85/49        Test Plan for Rotorcraft Traffic Alert and  
                           Collision Avoidance System (TCAS)  
                           (Albert J. Rehmann)

FAA/CT-TN85/53        Validation of MLS Siting Criteria for MLS Steep  
                           Angle Approaches to a Heliport  
                           (Scott Shollenberger)

FAA/CT-TN85/55        Pilot Inflight Evaluation of MLS Procedures at  
                           Heliports (James H. Enias)

FAA/CT-TN85/58      Technical Support of the Wall Street/Battery  
Park City Heliport MLS Project (Barry R.  
Billmann, Michael M. Webb, James H. Enias)

FAA/CT-TN85/60      Rotorcraft TCAS Evaluation, Group 1 Results  
(Albert J. Rehmann)

FAA/CT-TN85/63      Computed Centerline MLS Approach Demonstration  
at Washington National Airport (James H. Remer)

FAA/CT-TN85/64      Heliport MLS Critical Area Flight Tests  
(Robert S. Jeter)

FAA/CT-TN85/83      Rotorcraft TCAS Evaluation Bench Test Report  
(Arthur W. Cushman, Albert J. Rehmann,  
John Warren)

NAE-AN-26            A Preliminary Investigation of Handling  
NRC No. 24173        Qualities Requirements for Helicopter Instrument  
Flight During Decelerating Approach Manoeuvres  
and Overshoot (Stan Kereliuk, J. Murray Morgan)  
February 1985

FAA/CT-86/8         Determination of Electrical Properties of  
Grounding, Bonding and Fastening Techniques for  
Composite Materials (William W. Cooley)

FAA/PM-86/10        Very Short Range Statistical Forecasting of  
Automated Weather Observations  
(Robert G. Miller)

FAA/CT-TN86/14      Heliport MLS Flight Inspection Project  
(Scott Shollenberger, Barry R. Billmann)

FAA/PM-86/14        Technical Requirements for Benchmark  
NASA CR-177407      Simulator-Based Terminal Instrument Procedures  
(TERPS) Evaluation  
(Anil V. Phatak, John A. Sorensen)

FAA/PM-86/15        Evaluation of the Usefulness of Various  
NASA CR-177408      Simulation Technology Options for Terminal  
Instrument Procedures (TERPS) Enhancements  
(Anil V. Phatak, John A. Sorensen)

FAA/CT-TN86/17      LORAN Offshore Flight Following Project Plan  
(Jean Evans, Frank Lorge)

FAA/CT-TN86/22      Heliport Electroluminescent (E-L) Lighting  
System, Preliminary Evaluation (Paul H. Jones)

FAA/CT-86/24        Study of General Aviation Fire Accidents (1974-  
1983) (Ludwig Benner Jr., Richard Clarke,  
Russell Lawton)

FAA/CT-TN86/24 Rotorcraft TCAS Evaluation, Group 2 Results  
 (Albert J. Rehmann)

FAA/PM-86/25 Aircraft Avionics Suitable for Advanced Approach  
 Applications (Stanley Kowalski, Thomas H.  
 Crowell) Volume I: Aircraft Fleet Equipage

FAA/PM-86/28 Investigation of Hazards of Helicopter  
 Operations and Root Cases of Helicopter  
 Accidents  
 (Franklin R. Taylor, Rich J. Adams)

FAA/CT-TN86/30 Evaluation of MLS for Helicopter Operations,  
 Optimum Course Width Tailoring Flight Test Plan  
 (Michael M. Webb)

FAA/PM-86/30 The Siting, Installation, and Operational  
 Suitability of the Automated Weather Observing  
 System (AWOS) at Heliports (Rene' A. Matos, John  
 R. Sackett, Philip Shuster, Rosanne M. Weiss)

FAA/CT-TN86/31 Evaluation of Sikorsky S-76A, 24 Missed Approach  
 Profiles Following Precision MLS Approaches to a  
 Helipad at 40 KIAS (Michael M. Webb)

FAA/CT-86/35 An Analytical Study of Icing Similitude for  
 Aircraft Engine Testing (C. Scott Bartlett)

FAA/CT-TN86/40 Signal Coverage and Characteristics of the  
 Atlantic City Heliport MLS (Barry R. Billmann,  
 Donald W. Gallager, Christopher Wolf, John  
 Morrow, Scott B. Shollenberger,  
 Paula Maccagnano)

FAA/CT-86/42 Statistics on Aircraft Gas Turbine Engine Rotor  
 Failures that Occurred in U.S. Commercial  
 Aviation During 1981 (Robert A. DeLucia,  
 James T. Salvina, Tracy Russo)

FAA/CT-TN86/42 Heliport MLS Decelerating Test Plan  
 (Scott B. Shollenberger, Barry R. Billmann)

FAA/PM-86/45 Aeronautical Decision Making for Helicopter  
 Pilots (Richard J. Adams, Jack L. Thompson)

FAA/PM-86/47 FAA Helicopter/Heliport Research, Engineering,  
 and Development Bibliography, 1964-1986  
 (Robert D. Smith)

FAA/PM-86/52 The Operational Suitability of the Automated  
 Weather Observing System (AWOS) at Heliports  
 (Rene' A. Matos, Rosanne M. Weiss)

FAA/CT-TN86/56	LORAN-C VNAV Approaches to the FAA Technical Center Heliport (Michael Magrogan)
FAA/CT-TN86/61	Heliport Visual Approach Surface Testing Test Plan (Rosanne M. Weiss, John R. Sackett)
FAA/CT-TN86/63	Helicopter Manuevering: MLS Shuttle Holding Pattern Data Report (Christopher J. Wolf, Raquel Y. Santana)
FAA/CT-TN86/64	Heliport Critical Area Flight Test Results (Barry R. Billmann, Michael M. Webb, John Morrow, Donald W. Gallager, Christopher J. Wolf)
FAA/AVN-200/25	Helicopter Microwave Landing System (MLS) Flight Test (Charles Hale, Paul Maenza) June 1986
FAA/PM-87/2	Very Short Range Statistical Forecasting of Automated Weather Observations (Robert G. Miller)
FAA/CT-TN87/4	Simulation Tests of Proposed Instrument Approach Lighting Systems for Helicopter Operations (Paul H. Jones)
FAA/CT-TN87/10	Heliport Parking, Taxiing, and Landing Area Criteria Test Plan (Rosanne M. Weiss)
FAA/CT-TN87/16	Test Plan for Helicopter GPS Applications (Michael Magrogan)
FAA/CT-87/19	Avionics System Design for High Energy Fields (Roger A. McConnell)
FAA/CT-TN87/19	Microwave Landing System Area Navigation (MLS RNAV) Transformation Algorithms and Accuracy Testing (Barry Billmann, James H. Remer, Min-Ju Chang)
FAA/CT-TN87/21	Rotorcraft TCAS Evaluation, Group 3 Results (Albert J. Rehmann)
FAA/PM-87/31 FAA/PP-88/1	Analyses of Heliport System Plans (Deborah Peisen, Jack T. Thompson)
FAA/PM-87/32 FAA/PP-88/2	Four Urban Heliport Case Studies (Deborah Peisen, Jack T. Thompson)
FAA/PM-87/33 FAA/PP-88/3	Heliport System Planning Guidelines (Deborah Peisen)

FAA/CT-TN87/40      Helicopter Visual Approach and Departure Airspace  
 Tests (Rosanne M. Weiss, Christopher J. Wolf,  
 Maureen Harris, James Triantos)  
  
                          Vol-I:    Summary

PS-88-1-LR            FAA Rotorcraft Research, Engineering, and  
 Development Bibliography, 1964-1987  
 (Robert D. Smith)

FAA/DS-88/2           "Zero/Zero" Rotorcraft Certification Issues  
 FAA/PS-88/8           (Richard J. Adams)  
 NASA CR 177483

                         Vol-I:    Executive Summary  
                          Vol-II:    Plenary Session Presentations  
                          Vol-III:   Working Group Results

FAA/PS-88/3           Very Short Range Statistical Forecasting of  
 Automated Weather Observations  
 (Robert G. Miller)

FAA/CT-TN88/5        Helicopter Visual Approach Surface High  
 Temperature and High Altitude Test Plan  
 (Marvin S. Plotka, Rosanne M. Weiss)

FAA/DS-88/5           Aeronautical Decision Making for Air Ambulance  
 Helicopter Pilots: Learning from Past Mistakes  
 (Richard J. Adams and Jack T. Thompson)

FAA/DS-88/6           Aeronautical Decision Making for Air Ambulance  
 Helicopter Pilots: Situational Awareness  
 Exercises (Richard J. Adams, Jack T. Thompson)

FAA/CT-TN88/8        LORAN-C Offshore Flight Following (LOFF) In the  
 Gulf of Mexico (Frank Lorge)

FAA/DS-88/12         Minimum Required Helicopter Airspace Under Visual  
 Flight Rules (Robert D. Smith)

FAA/CT-88/21         Experimental Guidelines for the Design of  
 Turbine Rotor Fragment Containment Rings (James  
 T. Salvino, Robert A. DeLucia, Tracy Russo)

FAA/CT-88/23         Statistics on Aircraft Gas Turbine Engine Rotor  
 Failures that Occurred in U.S. Commercial  
 Aviation During 1982  
 (Robert A. Delucia, James T. Salvino)

FAA-RD-78-101		

Note: During the late 1970's, responsibility for issues regarding helicopter noise was transferred to the FAA Office of Environment and Energy (AEE). The reports listed in this bibliography are limited to those in which the research, engineering, and development elements of the FAA (i.e., the ADM complex and its organizational ancestors) have been involved as sponsors, participants, or authors. Since AEE is outside the ADM complex, the reports they have published on helicopter noise are not listed herein.

#### APPENDIX E: ABSTRACTS

This report is a supplement to "FAA Helicopter/Heliport Research, Engineering, and Development - Bibliography, 1964 - 1986" (FAA/PM-86/47) published in November 1986 (NTIS accession number AD-A174697). The bibliography and the indexes contained in this report include all of what was published in the earlier document. However, Appendix E of this report does not contain any abstracts which were included in FAA/PM-86/47. Abstracts contained herein are only for those reports which have been published subsequent to the earlier bibliography plus any earlier reports which were inadvertently overlooked. Appendix E does include all the abstracts contained in an earlier supplemental bibliography, "FAA Rotorcraft Research Engineering, and Development Bibliography, 1964 - 1987" (PS-88-1-LR).

16. Abstract The purpose of this study was to test and evaluate air traffic control procedures, separation standards, facilities, route structures, and services which would be required for helicopter instrument operations in the environmental area of New York. The simulation study conducted was not an analysis of a problem area, but rather a series of tests designed to establish a working hypothesis from which to develop procedures for accommodating instrument flight rule helicopter operations.  The simulation program was divided into two phases. In Phase I, helicopter route structures 3 and 5 statute miles in widths were designed, based on existing navigational aids. Phase I compared two methods, common controller and discrete controller concepts of delegating control responsibility for rotary wing operations. Concurrently, different control procedures were examined by which helicopters were either integrated or segregated from conventional aircraft during instrument approach and landing operations.  Phase II studies explored a modified helicopter route structure supplemented with additional aids to navigation. All other parameters evaluated in Phase II were identical to those studied in Phase I.  Results indicated that as helicopter operations increased, system efficiency was more readily maintained using the discrete controller concept under segregated conditions.

16. Abstract  The purpose of this study was to determine the VORTAC station pairs that are most suitable for DME/DME helicopter navigation in the New York metropolitan area; to recommend the VORTAC station pairs to be used when flight testing the DME/DME system in the New York metropolitan area; and to analytically predict and compare DME/DME and DME/VOR navigation system performance, with respect to area coverage and track keeping ability, in the New York metropolitan area.  The DME/DME and DME/VOR system is analyzed in this study by the use of error models that are essentially of a geometric nature. Pertinent radio propagation anomalies are briefly discussed and included in the analysis.  Multipath phenomena, i.e., scalloping and roughness in the VOR and distorting echoes in the DME, are not considered in this study. Their effect on system performance can only be ascertained by flight testing in the low altitude New York metropolitan environment.

<p>16. Abstract</p> <p>This report describes results obtained during flight tests with an S-61N helicopter on the Vertical/Short Takeoff-Landing (V/STOL) Approach System (VAPS) developed by Adcole Corporation of Waltham, Massachusetts, under FAA Contract FA-WA-4582.</p> <p>The system consists of a solid-state microwave localizer and glide slope operating in the 15,000 Mc/s frequency region. All ground equipment is housed within a 5-foot high radome, 4 1/2 feet in diameter. The localizer bearing and the glide slope angle can be readily changed by hand cranks at the ground station.</p> <p>Fifteen hours of flight time were expended on approaches, with glide slope angle ranging from 3° to 60°.</p> <p>The conclusion is reached that the S-61N helicopter approaches at angles greater than 20° encountered VAPS equipment limitations - deficient guidance signals, and aerodynamic limitations - marginal control, roughness and excessive descent rates.</p>

16. Abstract One of the major disadvantages of today's conventional air transportation is that flights operate from airports that are typically distant from city centers, thus causing the air traveler to spend a substantial portion of his overall-trip time going to and from the airport by ground transportation. In the Washington-New York stage, for instance, ground time often exceeds air time. It has long been recognized that with aircraft having vertical flight capability, common carrier air service to the very center of congested communities would become a reality. Thus the dependence of the traveler on time consuming ground transport between the city center and its outlying airport, and between the city centers as well, would be substantially reduced. The problem to be solved by this thesis is to demonstrate that an all weather navigation capability for a V/STOL transportation system can be developed, and that such a system will result in economic benefits over and above the cost of providing the service.

16. Abstract The study analyzes all midair collisions which occurred within the 48 states over the eight year period, Jan. 64 - Dec. 71. It develops statistical, graphical, and narrative information which is used to assess the effectiveness of the ATC system in preventing midair collisions, to identify remaining problem areas amenable to systematic solutions, and to compare these findings with several proposed solutions for reducing collision risks.  The study shows that no midair collisions occurred when both aircraft were identified and under radar/beacon surveillance, under positive control, and both pilots conformed to their ATC clearances. Only one midair occurred at an airport where the local controller was equipped with a radar BRITE display of local traffic. Most fatalities resulted from midair collisions which occurred beyond 5 miles of any airport, but within 30 miles of a major hub airport and resulted from collisions between an IFR air carrier and an unknown VFR aircraft. Nearly all midair collisions at airports occurred at the very busy airports where the pilot had the prime responsibility for successful sequencing into the VFR traffic pattern. Collisions at the busier uncontrolled airports are shown to be linearly related to annual aircraft operations; while collisions at the busier controlled airports are shown to be non-linearly related to annual aircraft operations, being approximately square-law for non-radar VFR towers.

16. Abstract This study updates the cumulative results of the previous 1964-71 study to include the 25/47 collisions/fatalities which occurred during 1972. Of these, two collisions involved air carrier aircraft and accounted for 23 fatalities. The remaining 23/24 collisions/fatalities occurred between general aviation aircraft, and did not involve public air transportation. Included is an analysis of the potential effectiveness of alternative collision avoidance systems coverage in "preventing" a recurrence of the 296/603 collisions/fatalities between 1964-72. It concludes that 26% of the collisions (6% of fatalities) are systematically unpreventable. The currently existing/planned extensions to the ATC system could have prevented 18% of the collisions (51% of fatalities), including all fatal collisions which involved air carriers. An additional 44% of the collisions (35% of fatalities) occurred within existing/planned beacon surveillance coverage and might have been prevented by either Discrete Address Beacon System, Intermittent Positive Control (DABS-IPC), or by an independent Collision Avoidance System (CAS). An additional 12% of the collisions (8% of fatalities) occurred below existing/planned beacon surveillance coverage and might have been prevented by a CAS Only system without a coverage limitations. However, with the added/planned extensions of the ATC system, a CAS/CAD* system under the proposed legislation might have prevented only an additional 4% of either collisions or fatalities. This is because most collisions are between aircraft under 12,500 lbs. and both would be CAD*, not CAS equipped. These figures represent theoretical upper bounds on preventability. *Collision Avoidance Device ("Here I am" device).

16. Abstract  This report summarizes the results of a joint NASA-FAA research program directed toward development of civil airworthiness flight criteria for power-lift transports. Tentative criteria are proposed for performance and handling characteristics for powered-lift transport aircraft in commercial service. The aircraft considered are primarily wing-supported vehicles which rely upon the propulsion system for a significant portion of lift and control. VTOL aircraft are excluded. The flight criteria treat primarily the approach and landing flight phases, because it is in these flight phases that the greatest use of powered lift is made, and the greatest differences from conventional aircraft tend to appear. Consequently, the flight task tends to become most demanding. The tentative criteria are based on simulation and flight experience with a variety of powered-lift concepts. These concepts have not employed flight director, advanced displays, or advanced augmentation systems. The tentative criteria proposed were formulated by a working group comprised of representatives of the U.S., British, French, and Canadian airworthiness authorities, as well as research personnel of the NASA and other organizations. It is recognized that more work is needed to assure general applicability of the criteria.

16. Abstract  This bibliography was prepared to illustrate input-output procedures that have been proposed for the implementation of an Air Transportation Research Information Service (ATRIS). The proposed subject scope for ATRIS covers 21 areas that range from <i>aircraft</i> to <i>travel</i> and <i>tourism</i> . The subject of <i>airports</i> was selected as the area for initial input to the ATRIS data base from which this bibliography has been produced. The bibliography has 10 chapters on major aspects of airports, including access, environmental impact, planning and design, safety and security, operations, and management. The bibliography contains nearly 800 references that represent initial input to the machine-readable ATRIS data base. The implementation plan calls for extending the data base to full coverage of all subject areas and to provide both on-line and off-line services to the air transport community.  Many of the references were acquired from data bases held by National Aeronautics and Space Administration, National Technical Information Service, Engineering Index, and other information services. Other references were prepared from documents held by various libraries and transportation centers. Selections were made by staff of the Flight Transportation Laboratory at Massachusetts Institute of Technology; final input and output processing was performed by Transportation Research Board information staff.  A major purpose for the bibliography is to inform ATRIS users of the services that might be provided and through feedback from recipients of the bibliography to learn more about the needs and wants of users of air transport information.

16. Abstract The purpose of this study was to assess the societal benefits that may be gained by implementation of cockpit standardization as a countermeasure to fuel mismanagement accidents and accidents involving improper operation of the powerplant and powerplant controls. The benefits are expressed as the costs of accidents which could be prevented by standardization. Detailed analyses were performed on a sample of 200 accident cases drawn from the National Transportation Safety Board files which contain 2,011 accidents in the period 1975-1979 due to the specified causes. The flight environment, aircraft and pilot characteristics, and their interrelation were fully considered in studies of accident causes. The accident pilot-group which contained many high time pilots with advanced certificates was found less qualified with regard to recent night flying and instrument flight time. Fuel systems for all makes and model aircraft of the sample were found to contain great diversity in location of components and operating modes. Powerplant controls are not as diverse in design but still do not conform totally to recommended optimization guidelines. Preventability is determined by identification of all elemental pilot errors in an accident and overlaying these on an application of standardization guidelines applied to the controls, instruments, and arrangements. Average accident costs are determined by a severity index breakdown and then carefully extrapolated to the full accident data base. Cumulative accident cost reductions are found for a 10-year future period. A proposal for alleviating the pilot non-familiarity with specific makes and models is included. In this area, an advisory approach is found preferable to certification and rating structural changes.

16. Abstract <p>A review of aircraft crash structural response research has been carried out by studying the literature, discussions with researchers working in that area, and visits to facilities/personnel involved in conducting and/or monitoring aircraft crash structural response investigations. Aircraft structures consisting of conventional built-up metallic construction and those consisting of advanced composite materials were of interest. The latter type of materials and construction is of particular interest since their use is expanding rapidly, and crashworthiness of such structures is of increasing importance.</p> <p>Some recent theoretical and experimental studies of the behavior of composite-material structures subjected to severe static, dynamic, and/or impact conditions are noted. Such topics as crashworthiness testing of composite fuselage structures, the impact resistance of graphite and hybrid configurations, and the effects of elastic additives on the mechanical properties of epoxy resin and composite systems are reviewed.</p> <p>The principal theoretical methods for predicting the nonlinear transient structural responses of severely loaded structures are reviewed. Available lumped-mass and finite-element computer programs tailored to aircraft crash response analysis are noted.</p> <p>A review is made of some current and planned research to investigate experimentally the mechanical failure, postfailure, and energy-absorbing behavior of a sequence of composite-material structural elements and structural assemblages subjected to static loads or to simulated crash-impact loads.</p>

16. Abstract <p>A state-of-the-art review on composite material fatigue/damage tolerance was conducted to investigate the literature for fatigue life prediction methodologies including stress-based methodologies, strength degradation models, and damage growth models. A critical review was made of each methodology and its commensurate basic equations of importance. Experimental data were reviewed and the behavior of specimens was correlated with that of civil aircraft components. The report also examined the six recognized methods for the non-destructive testing of fibrous composite materials and identified the most effective methods.</p>

16. Abstract  Subsequent to the development of TCAS equipment for fixed-wing aircraft, a follow-on effort addressed the suitability of such equipment for use in helicopters. This program focused on those differences between helicopters and fixed-wing aircraft that might be expected to affect TCAS performance: the large rotor, the relatively irregular shape of the fuselage, the low speeds and high turn rates typical of helicopter flights, and the over-water and low-altitude conditions typical of helicopter operations. A Bell Long Ranger helicopter was acquired and equipped with experimental TCAS equipment with full data recording capability. Flight experiments were conducted to assess air-to-air surveillance performance under challenging conditions. Other flights involved guest pilots for subjective evaluations of the TCAS performance. It was concluded that the air-to-air surveillance techniques that were originally developed for use in large jet airliners will also perform satisfactorily in helicopters. The bearing accuracy of traffic advisories, while somewhat degraded because of the effects of the rotor and the shape of the helicopter fuselage, will nevertheless be sufficient to aid the pilot in visual acquisition of traffic. It was also concluded that, because of the flight characteristics of helicopters, the pilot display should consist of traffic advisories alone, without resolution advisories.

16. Abstract <p>This report documents the results from a limited study of Electrical Parameters of Composite Materials. These efforts provided an evaluation of grounding and bonding test methods for metal, metal honeycomb, and advanced composite materials. A review of the electrical currents in the bonding and grounding paths on aircraft concluded that the lightning environment is the most severe followed by power system faults and on-board HF radio. It is recommended that the conventional 2.5 milliohm grounding and bonding requirement may be relaxed providing that special tests are conducted on the structure and subassemblies that enter into the grounding and bonding current paths. These tests are defined and recommendations made for advanced structures. A limited analysis of published test results concluded that good agreement may be possible between predicted values and test results for complete structures, subassemblies, and components.</p>

16. Abstract <p>This report describes a study of fires and interior materials in General Aviation (GA) aircraft during 1974-1983. The purpose of the study was to learn trends in GA fires and the materials used in aircraft interiors. The study covered aircraft of less than 12,501 pounds gross weight, not in commercial or agricultural operations.</p> <p>Fires are a minor part of GA accident experience. Accident data yielded 2,351 most impact fires having 798 fatalities. These accidents were 6 percent of the total of 36,130 GA accidents. Only 153 inflight fires occurred during the period from 1974-1983. The GA fire population closely resembled the entire GA aircraft population. One difference was that fatalities and aircraft damage increased with higher approach speeds and gross weights up to 10,500 pounds. Also, the proportion of fire accidents and fatalities was greater in low than in the more common high wing aircraft. For inflight fires, the aircraft engine was the major fire origin for twin- and single-engine aircraft. Only in single-engine aircraft was the instrument panel a source of inflight fires.</p> <p>Data on the 20 most common GA aircraft disclosed conventional materials, similar to those used in the home. Polyurethane foam cushioning, wool and nylon fabrics, ABS plastic and aluminum typify the materials used in these aircraft.</p>

16. Abstract  This flight test plan describes the methodology to determine the optimum azimuth course tailoring for microwave landing system (MLS) approaches to a collocated MLS installation at a heliport. The flight tests will be conducted at the Federal Aviation Administration (FAA) Technical Center, Atlantic City Airport, New Jersey, using the Sikorsky S-76 helicopter.  This effort will examine the feasibility of using course tailoring as a means to reduce pilot workload associated with conducting MLS approaches to minimums within 2,500 feet (range) of the guidance signal source. The test development, test equipment, data collection, and data reduction and analysis of the flight data are discussed. A schedule for the completion of the associated tasks is presented.

19. ABSTRACT (Continue on reverse if necessary and identify by block number) An analytical study was conducted of the requirements for achieving similitude for icing as test conditions were varied. The application is aimed at engine icing tests conducted in ground spray rig facilities. The analysis considers the changes in the icing test conditions, including static temperature, static pressure, liquid water content, droplet size, and flow velocity, that are required to achieve similitude if any of the conditions are changed. The analysis uses a math model of icing scaling which has been validated by experimental data collected at the AEDC icing research tunnel. The requirements for similitude were analyzed for changes in both temperature and pressure. Expressions to describe the influence of test condition changes on the value of the scaling parameter were developed. The effect of icing caused by free-stream static temperature changes and temperature rise through a generic high-bypass turbofan engine was studied. The icing test points listed for compliance testing for aircraft icing certification under guidelines given in the Federal Aviation Administration Advisory Circular (AC) 20-73 were used as test points for the analyses.

16. Abstract  During the late fall of 1985 and the winter of 1986 test flights were conducted at the Federal Aviation Administration (FAA) Technical Center's Heliport at Atlantic City International Airport, N.J. The purpose of these flights was to verify signal coverage of the Microwave Landing System (MLS) collocated at the heliport. Other activities included the measurement of the signal characteristics of the Hazeltine Model 2400 MLS which was installed at the heliport. Elevation and azimuth course widths were determined and, using classical Z transform techniques, statistical estimates of control motion noise and path following error were obtained. These estimates were compared with the FAA Standard for Interoperability and Performance Requirements of MLS.  Results obtained were excellent. Tolerance limits were consistently met. The data revealed that wide beam width antenna systems when installed at heliports can meet specification tolerances contained in the FAA specification for MLS Interoperability and Performance Requirements.				13. 16. Abstract <p>This report presents statistical information relating to gas turbine engine rotor failures which occurred during 1981 in commercial aviation service use. The predominant failure involved blade fragments, 83 percent of which were contained. Three disk failures occurred and all were uncontained. Fifty-seven percent of the 136 failures occurred during the takeoff and climb stages of flight.</p> <p>This service data analysis is prepared on a calendar year basis and published yearly. The data is useful in support of flight safety analysis, proposed regulatory actions, certification standards and cost benefit analysis.</p>

16. Abstract <p>This report documents the results of Loran C vertical navigation (VNAV) approaches to the Federal Aviation Administration (FAA) Technical Center Heliport. Results of this study show that the three dimensional (3D) Loran C Navigator met the requirements of Advisory Circular (AC) 90-45A for two dimensional (2D) error components of total system crosstrack (TSCT) and flight technical error (FTE). In addition, the 3D error component of vertical flight technical error (VFTE) met the requirements of AC 90-45A.</p>

16. Abstract  This report documents the Federal Aviation Administration (FAA) Technical Center's flight test on Microwave Landing System (MLS) shuttle holding patterns. This flight test was undertaken in response to the Aviation Standards National Field Office (AVN) to provide data on the shuttle holding pattern for inclusion in chapter 11 of the Terminal Instrument Procedures (TERPS) manual.  Data were collected for MLS shuttle holding patterns using two different course width sensitivities. Data collection was performed using an Army UH-1 helicopter.  After the data were collected it was reduced and formatted and forwarded to AVN for analysis and development of TERPS criteria.

16. Abstract  The development of the microwave landing system (MLS) has resulted in the need for several different flight tests to optimize the utility of MLS. One such series of tests were designed to define criteria for siting MLS antennas at heliports. Due to the unique maneuver capabilities and the limited real estate available at heliports, flight tests were also conducted to determine the airspace and real estate surrounding the MLS antennas which must be protected when the MLS is sited at heliports. The need for this protected region is to guarantee signal coverage and quality. Based on the test flight results conducted at the Federal Aviation Administration (FAA) Technical Center, a minimum region (surrounding the MLS antennas and signal monitor poles) which must be protected is identified.

16. Abstract  A procedure is developed for providing weather forecasting guidance over the short range period of 10, 20, 30, ..., 60 minutes. It uses the automated weather observing system (AWOS) elements as predictors and predictands. The model is founded on Markov assumptions and uses multivariate linear regression as the statistical operator. Details are given on how the Generalized Exponential Markov (GEM) model compares with persistence. Tests are performed on an independent data sample. Overall, GEM succeeds in bettering current short range weather forecasting techniques (i.e., persistence) over the six projection periods of 10, 20, 30, ..., 60 minutes.

16. Abstract  <p>The purpose of this evaluation was to determine the effectiveness of proposed Instrument Flight Rules (IFR) Heliport Approach Lighting Systems under reduced visibility conditions.</p> <p>Simulation test were conducted of proposed instrument approach lighting systems for heliport operations using the NASA Langley Research Center's Visual Motion Simulator. Each approach lighting configuration was paired with its associated reduced visibility criteria as specified by the Flight Procedure Standards Branch, AFS-230.</p> <p>During the evaluation, pilots were instructed to fly 24 precision approaches to the heliport. Upon breakout, they were to proceed to the heliport visually using the approach lighting provided. Pilots were asked to rate the visual guidance provided by the approach lighting system after completion of each approach.</p> <p>In virtually all instances the pilots felt that the approach lighting systems presented were adequate under the existing visibility conditions. Pilot comments indicated that they preferred the closer spacing between the light bars and that the wingbars added "rate of closure" information to the longer systems.</p>

16. Abstract  <p>This flight test plan describes the methodology to examine and validate the current heliport surface separation and maneuvering criteria as defined in the Heliport Design Guide and determine if changes can be made to the current criteria. Operational measures will be collected at the Indianapolis Heliport, Indiana, and Wall Street Heliport, New York. Additional flight tests will be conducted at the Federal Aviation Administration (FAA) Technical Center, Atlantic City International Airport, New Jersey, using instrumented UH-1H and S-76 helicopters.</p> <p>Flight maneuvers at the Technical Center are to identify vertical variation from the recommended taxiing heights and lateral variation from a predetermined path, under various wind and lighting conditions. Wind velocity and barometric pressure data will be collected during hover operations to determine rotorwash effects at different locations around a helipad, taxiway, and parking areas. This data will be used to create a baseline to be used in characterizing heliport surface maneuver areas. The test development, test equipment, data collection, and data reduction and analysis of the flight data are discussed. A schedule for the completion of the associated tasks is presented.</p>

16. Abstract  This test plan describes a project designed to collect data via flight testing from the Global Positioning System (GPS) when receivers are mounted on helicopters. GPS issues to be investigated include antenna location, satellite shielding, and multipath influences which might occur with rotorcraft applications in urban downtown areas. Minimum masking angle issues will also be addressed.  GPS integrated with other navigation and guidance systems such as microwave landing system (MLS) and Loran C will also be investigated. Both precision (P) and coarse/acquisition (C/A) code receivers will be evaluated. In addition, studies will be carried out to determine how to install a GPS antenna on composite body aircraft. Further studies may be related to automatic dependent surveillance functions. Future work will include evaluation of a GPS P code receiver as a reference for flight inspection.

16. Abstract  Because of the significant differences in transient susceptibility, the use of digital electronics in flight critical systems, and the reduced shielding effects of composite materials, there is a definite need to define design practices which will minimize electromagnetic susceptibility, to investigate the operational environment, and to develop appropriate testing methods for flight critical systems.  A major part of this report describes design practices which will lead to reduced electromagnetic susceptibility of avionics systems in high energy fields. A second part describes the level of emission that can be anticipated from generic digital devices. It is assumed that as data processing equipment becomes an ever larger part of the avionics package, the construction methods of the data processing industry will increasingly carry out into aircraft. These portions of the report should, therefore, be of particular interest to avionics engineers and designers.  This report includes an extensive bibliography on electromagnetic compatibility and avionics issues.

16. Abstract  Microwave Landing System Area Navigation (MLS RNAV) is a technique which affords the ability to perform precision navigation in the terminal area of a heliport or airport. It utilizes the signal coverage provided by the MLS angle data transmitters and associated precision distance measuring equipment (DME/P). Navigation performed using an MLS RNAV system is not limited to approaches along a runway centerline or azimuth radial, but may assume any conceivable flightpath within MLS coverage. Examples of these types of approaches would include curves, segmented and oblique offset (parasite), as well as computed centerline (offset) approaches. The work presented herein treats MLS RNAV from a theoretical perspective. MLS RNAV transformation algorithms are developed and tested under real world and laboratory conditions. Anticipated system accuracy is computed under various anticipated operational scenarios. These scenarios include parasite and computed centerline approaches, including the effects of signal source error. The effects on total system accuracy of offsetting the conical elevation transmitter from the runway centerline are presented. The errors associated with computed centerline approaches when the azimuth is offset from the runway centerline is presented.

16. Abstract  This report documents the operational flight test of a prototype Traffic Alert and Collision Avoidance System (TCAS) installed in a Sikorsky S-76 helicopter. The prototype TCAS, programmed to encompass the functions of a TCAS I, was flown to five east coast terminal cities, and operated along defined helicopter routes therein. The test results validated the minimum proposed TCAS I configuration. Further results recommend enhancements, to be included as options to improve the usefulness of TCAS I.

16. Abstract  State and city governments generally realize that continued vitality depends on a steady expansion of industry and services as a function of planned growth. The helicopter is a proven catalyst for enhancement of those desired growth patterns. However, without the necessary support infrastructure, this positive contribution of the helicopter cannot be realized. Determining the need for such a support system can be achieved through an understanding of local helicopter activities and the metropolitan or state-wide socio-economic dynamics in which they occur. This allows for data base development, including a fleet inventory, and analysis to provide a foundation for determining current, and forecasting future, helicopter activity and support facility requirements.  The purpose of this study is to analyze the strengths and weaknesses of various existing heliport system plans. Planning concepts are identified and defined to include: 1) baseline parameters for evaluating the plans, 2) identifying data and their sources needed for planning purposes at any jurisdictional level, and 3) developing criteria for assessing the feasibility and economic viability of proposed heliport facilities.  The study covers four state heliport system plans (Michigan, New Jersey, Louisiana, and Ohio) and four metropolitan heliport plans (Pittsburgh, PA; Phoenix, AZ; Houston, TX; and Washington, D.C.).  This is the first document in a series of three intended to encourage and assist planners in heliport system plan development. The other documents are:  Four Urban Heliport Case Studies, DOT/FAA/PM-87/32, DOT/FAA/PP-88/2 Heliport System Planning Guidelines, DOT/FAA/PM-87/33, DOT/FAA/PP-88/3

16. Abstract State and city governments generally realize that continued vitality depends on a steady expansion of industry and services as a function of planned growth. The helicopter is a proven catalyst for enhancement of those desired growth patterns. However, without the necessary support infrastructure, this positive contribution of the helicopter cannot be realized. Determining the need for such a support system can be achieved through an understanding of local helicopter activities and the metropolitan or state-wide socio-economic dynamics in which they occur. This allows for data base development, including a fleet inventory, and analysis to provide a foundation for determining current, and forecasting future, helicopter activity and support facility requirements.  The purpose of this study is to develop case histories for public-use heliports built in the Central Business District (CBD) of several major metropolitan areas. Within each case history, "common denominators" are identified that are useful for planners in assessing the viability of heliport proposals in cities that exhibit similar demographic characteristics. Each case study provides a general background as a setting and an inventory of pertinent heliport data; including location, cost (when available), history, funding and revenue sources, operational characteristics, etc.; addresses social concerns such as the local industrial base, neighboring land uses and zoning; and the public and governmental attitudes toward the heliport.  The study contains histories of four heliports, specifically: the Bank-Whitmore Heliport (aka Nashua Street Heliport) in Boston, MA; the Downtown Heliport in Indianapolis, IN; the Downtown Heliport in New Orleans, LA; and the Western and Southern Heliport in Cincinnati, OH.  This is the second document in a series of three intended to encourage and assist planners in heliport system plan development. The other documents are: Analyses of Heliport Systems Plans, DOT/FAA/PM-87/31, DOT/FAA/PP-88/1 Heliport System Planning Guidelines, DOT/FAA/PM-87/33, DOT/FAA/PP-88/3

This allows for data base development, including a fleet inventory, and analysis to provide a foundation for determining current, and forecasting future, helicopter activity and support facility requirements.</p> <p>Heliport planning is a relatively new field. Previous efforts, although based on proven fixed-wing airport methods, have produced a series of uncoordinated and nonstandardized products from many various individual planners and organizations. Consequently, the data collected and the analytical processes used have not been consistent or directly comparable. This document presents fundamental planning criteria by which urban area heliport requirements may be assessed at any jurisdictional level. It offers standardization for comparability of real demand and for funding prioritization.</p> <p>This is the third document in a series of three intended to encourage and assist planners in heliport system plan development. The other documents are:</p> <p style="text-align: center;">Analyses of Heliport Systems Plans, DOT/FAA/PM-87/31, DOT/FAA/PP-88/1 Four Urban Heliport Case Studies, DOT/FAA/PM-87/32, DOT/FAA/PP-88/2</p>

16. Abstract <p>During the winter and spring of 1987 flight tests were conducted at the Federal Aviation Administration (FAA) Technical Center's Concepts Development and Demonstration Heliport at the Atlantic City International Airport, N.J. The purpose of these flights was to examine and validate the current heliport approach/departure surfaces criteria as defined in the Heliport Design Guide and to recommend modifications to these surfaces, if appropriate. The flight activities were conducted using aircraft representative of those in the civilian world. Data were collected using approach surfaces of 7.125°, 8.00°, and 10.00° for straight as well as curved path procedures. Also, departure surfaces of 7.125°, 10.00°, and 12.00° for straight and curved path procedures were used. All maneuvers were tracked by ground based tracking systems.</p> <p>This report documents the results of this activity. It describes the flight test and evaluation methodology and addresses technical as well as operational issues. It provides statistical and graphical analysis of pilot performance along with a discussion of pilot subjective opinions concerning the acceptability and perceived workload, safety, and control margins associated with the procedures flown.</p> <p>The results of this work will be considered in the future modifications of the FAA Heliport Design Advisory Circular, AC 150/5390-2.</p>

16. Abstract  This is a bibliography of FAA rotorcraft reports published in the 1964-1987 time period. This report is a supplement to an earlier bibliography "FAA Helicopter/Heliport Research, Engineering, and Development - Bibliography, 1964-1986" (FAA/PM-86/47) (AD-A174697). Both bibliographies are limited to documents in which the research, engineering, and development elements of the FAA were involved as sponsors, participants, or authors.  (Note: This document has been superseded by DOT/FAA/DS-89/03, FAA Rotorcraft Research, Engineering and Development - Bibliography, 1962-1988.)

16. Abstract A procedure is developed for providing weather forecasting guidance over the short range period of 10, 20, 30, ..., 120 minutes. It uses the Automated Weather Observing System (AWOS) elements as predictors and predictands. The model is founded on Markov assumptions and uses multivariate regression as the statistical operator. Details are given on how the Generalized Exponential Markov (GEM) model compares with persistence. Tests are performed on a test sample of almost 400,000 cases. Overall, GEM succeeds in bettering current short range weather forecasting techniques (i.e. persistence) over the twelve projection periods of 10, 20, 30..., 120 minutes. The ability of GEM to successfully predict VFR to IFR, and IFR to LOW IFR changes in both visibility and ceiling is also demonstrated.

16. Abstract  This Technical Note identifies procedures to be used during tests to be conducted at the Albuquerque International Airport (ABQ), Albuquerque, New Mexico. These tests are designed to evaluate the applicability of existing heliport approach and departure surface criteria under high temperature and high altitude conditions. A UH-1H aircraft will be used. This project is similar to the work documented in DOT/FAA/CT-TN87/40 "Heliport Approach and Departure Airspace Tests."

16. Abstract <p>The following materials are based upon actual helicopter air ambulance accidents. They focus on the importance of decision making and judgement during all phases of flight. Improving safety is a shared responsibility between hospital administrators, vendors, chief pilots, head nurses, pilots, air medics, dispatchers and physicians. It is to everyones advantage to establish and support an operational frame of reference that will ensure safety.</p> <p>These accident synopses are the first element of a multi-volume set of training materials designed to significantly reduce the helicopter air ambulance accident rate and to keep it under control thereafter. The other volumes include:</p> <p><b>Aeronautical Decision Making for Helicopter Pilots</b>  <b>Aeronautical Decision Making for Air Ambulance Helicopter Pilots: Situational Awareness Exercises</b>  <b>Risk Management for Air Ambulance Helicopter Operators</b>  <b>Aeronautical Decision Making for Air Ambulance Helicopter Program Administrators</b></p> <p>The accident summaries, risk anayses and lessons learned are taken directly from helicopter air ambulance history. They enhance the basic manual: "Aeronautical Decision Making for Helicopter Pilots" by providing an insight to the types of decision errors which contributed to accidents in the past. This manual contains introductory and tutorial material necessary for improving basic decision making skills. Some material contained in that manual and not included in this one are: rotorcraft risk assessment; the self-awareness inventory; identifying and reducing stress; and headwork. Reading and understanding the concepts of decision making will improve the pilot's ability to analyze the accident scenarios contained herein.</p>

16. Abstract <p>The following materials are based upon actual helicopter air ambulance accidents. They cover four broad accident types most recently associated with aeromedical accidents: night flying, weather, obstacle strikes, and mechanical failures. Three types of information are included for each accident type. These are: introductory/background material to provide you with the historical importance and frequency of each accident type; training knowledge that should be learned in order to avoid mistakes of the past; and decision making exercises.</p> <p>This is only one element of a multi-volume set of training materials designed to significantly reduce the helicopter air ambulance accident rate and keep it under control hereafter. The other volumes include:</p> <p>Aeronautical Decision Making for Helicopter Pilots  Aeronautical Decision Making for Air Ambulance Helicopter Pilots: Learning From Past Mistakes  Risk Management for Air Ambulance Helicopter Operators  Aeronautical Decision Making for Air Ambulance Helicopter Program Administrators</p> <p>These decision making exercises are based on accident reports with persons and places de-identified. They are meant to enhance the basic manual: "Aeronautical Decision Making for Helicopter Pilots" by providing an insight to the types of decision errors which contributed to accidents in the past. The basic manual contains introductory and tutorial material necessary for improving basic decision making skills. Some material contained in that manual and not included in this one are: rotorcraft risk assessment; the self-awareness inventory; identifying and reducing stress; and headwork. Reading and understanding the concepts of decision making will improve the pilot's ability to analyze the scenarios contained herein.</p>

16. Abstract  The Federal Aviation Administration conducted simulation and flight tests on the Loran C Offshore Flight Following (LOFF) equipment installed in the Houston Air Route Traffic Control Center (ARTCC). Overall results of the LOFF test program were favorable. The system performs in a predictable and reasonable manner. Performance of the system is comparable to that of radar, although there is a slight difference in accuracy between the two.

16. Abstract  This report analyzes the "Zero/Zero" Rotorcraft Certification Issues from the perspectives of manufacturers, operators, researchers and the FAA. The basic premise behind this analysis is that "zero/zero", or at least extremely low visibility, rotorcraft operations are feasible today from both a technological and an operational standpoint. The questions and issues that need to be resolved are: What certification requirements do we need to ensure safety? Can we develop procedures which capitalize on the performance and maneuvering capabilities unique to rotorcraft? Will extremely low visibility operations be economically feasible?  Volume I of this report provides an overview of the Certification Issues Forum held in Phoenix, Arizona in August of 1987. It presents a consensus of 48 experts from the government, manufacturer, and research communities on 50 specific Certification Issues. The topics of Operational Requirements, Procedures, Airworthiness and Engineering Capabilities are discussed.  Volume II presents the operator perspectives (system needs), applicable technology and "zero/zero" concepts developed in the first 12 months of research of this project.  Volume III provides the issue-by-issue deliberations of the experts involved in the Working Groups assigned to deal with them in the Issues Forum.

16. Abstract <p>Recently, the FAA started a flight measurement project to examine the issue of minimum required VFR airspace. Test data were collected objectively in a manner similar to what is done to define the minimum airspace for a precision approach. Heliport approach and departure flight profiles were recorded using a variety of subject pilots flying several different helicopters. Data were analyzed statistically to determine the mean, standard deviation, and 6 sigma isoprobability curves. Results of this effort are documented in FAA report FAA/CT-TN87/40, <u>Heliport Visual Approach and Departure Airspace Tests</u>. An analysis of the statistical distribution of these data is contained in FAA/CT-TN88/44, <u>Analysis of Distributions of VFR Heliport Data</u>. These test reports are not likely to be the last word on this topic but they should serve to focus the discussion on specific issues in a way that is constructive. This report is intended to focus discussion on how the data should be interpreted, some of the historical issues involved, and the direction to be taken in future work.</p>

16. Abstract Results of experimentation to determine design guidelines for turbine rotor fragment containment rings are presented in this report. The project consisted of two tasks. Task 1 was an investigation of the containment characteristics of cloth rings. Task 2 determined the engine casing thickness required for single and triple blade containment. This effort was conducted as part of the overall Rotor Fragment Protection Program.

16. Abstract  This report presents statistics relating to gas turbine engine rotor failures which occurred during 1982 in U. S. commercial aviation service use. One-hundred and sixty-one rotor failures occurred in 1982. Rotor fragments were generated in 88 of the failures and, of these, 16 were uncontained. The predominant failure involved blade fragments. Seven disk failures occurred and all were uncontained. Seventy percent of the 161 failures occurred during the takeoff and climb stages of flight.  This service data analysis is prepared on a calendar year basis and published yearly. The data support flight safety analysis, proposed regulatory actions, certification standards, and cost benefit analyses.
