NEW LEADER:
A DOCUMENTARY ON THE ORLEANS ROTC BATTALION

A Thesis
Presented to
the Faculty of the Graduate School
of the University of New Orleans

In Partial Fulfillment
of the Requirements for a Degree of
Master of Fine Arts in Drama and Communications

by
Captain J. Mark Turner
May 1991
ACKNOWLEDGMENTS

I wish to thank Barbara Coleman for chairing my Master of Fine Arts committee and also Dr. H. Wayne Schuth, Dr. May W. Jones, and Professor James A. Culton who also served on the committee. Under their guidance and support, New Leader was created and will continue to be viewed by ROTC cadets for years to come.

I wish to thank my wife, Shelly, and our two children Blythe and Caleb. They provided support and comfort in dealing with many hours of separation while shooting, editing, and writing this project. I wish to thank my father and mother, Baker and Gerry, for their immeasurable support.

Also, many thanks to LTC. Thomas E. Oettinger and the staff of the Orleans Battalion ROTC for providing the subject and content of this program. I would also like to thank Major William Darley, who provided long distance assistance ensuring that this project complimented the Army's needs.

Last, but certainly not least, thanks go to host, Toni Canino, associate producers, Sarah Robinson and Ken Bryant, and production manager, Vester Wentzell.
Their tireless efforts have resulted in the overwhelming success of the program.

ABSTRACT

New Leader: A Documentary on the Orleans ROTC Battalion, is presented as a creative project in fulfillment of the requirement for the degree of Master of Fine Arts. The purpose of this project is to provide the military with an alternative to community relations video projects. It is also a means that the military, some day, could move the production of such programs down to a lower level, justified by the conservative cost to produce this type of documentary.

The driving factor in the design of New Leader is the use of interviews of non-actors. This design builds a structure that provides direct and simple information, at the same time providing entertainment-- "infotainment". The 30:00 minute broadcast quality documentary is a method that large broadcast agencies are using-- "a creative treatment of actuality"-- as the motivation for viewer participation. The military has the resources, the technology, and the talent to actively pursue this type of programming. The present day "canned" informational military programs provide the necessary information, yet seem to lack the
structure that could capture and hold the attention of their targeted audiences. This study is not an attack on the system that produces these programs, rather an easily attainable method that could make them better.

*New Leader* will be used by the Orleans ROTC Battalion for recruiting students and briefing incoming ROTC cadets. It is also scheduled to be broadcast on the Community Access Channel in New Orleans, providing to the surrounding community a better understanding as to the mission and purpose of this agency.
CHAPTER I
LOOKING BACK

In theory, John Stuart Mill's marketplace of ideas may have existed at one moment of history. But in practice, there are too many people talking. It seems to be a competition in which the loudest shouter would dominate the public's attention with a surplus of communication. Surrounded by all this shouting, the United States Government had its own problem of being heard, as described by Richard MacCann:

Mass media and politics are inseparable. Men in public life are beginning to see the most important public messages can no longer be merely neutral or informational. They have to reach each citizen, stir his sympathy, focus his decision, encourage him to act. (3)

This chapter will look at the emergence of one government agency into the marketplace of ideas. The Department of Defense has entered this marketplace by attempting to dramatize information during wartime and to express policies that were not always popular through the use of nonfiction film.
The documentary has been defined and redefined by many film makers. John Grierson refers to the documentary film as "a creative treatment of actuality" (Barsam 2). William Van Dyke, an American film maker describes the documentary as:

The elements of a dramatic conflict that represent social or political forces rather than individual ones. Therefore, it has an epic quality. Also it cannot be a reenactment. The social documentary deals with real people and real situations—-with reality. (Engle 26)

An attempt to find the true definition of the documentary, or any art form for that matter, is not the purpose of this study. However, it is important to understand the power that the nonfiction film has had in displaying actuality instead of fiction. It is also important to look at how the military has used the documentary as a "creative treatment of actuality."

Most of Richard MacCann's studies leaned toward the belief that it is not the authenticity of the materials, rather it is the authenticity of the result, that mattered in the documentary. And for any governmental agency interested in transmitting ideas to
the public, this was always the major concern (11). Throughout our history, this transmission of ideas has been labeled as "propaganda."

Propaganda has existed throughout our history in many forms. Looking back on existing military films places an almost indistinguishable line between praising present practices and proposing future policy. MacCann gives an example:

The difference is illustrated by the public sale of General George C. Marshall's report on World War II. Zechariah Chaffee has pointed out that it contained a plea for universal military training. But this was a report to Congress by a responsible administrative official, a chief of staff noted for his meticulous understanding of political protocol. If Marshall had sent it down the line to be dramatized and advertised by the public relations staff, it would have been a campaign for public support for a future decision. (7)

This is why most films made by the government, or for
the government, has always carried the "propaganda" label.

However, the government and the military have also carried the burden of "telling its own story." There were the dangers of partisanship. There always has been suppression of facts, for whatever reason, whether for national security or for the protection of troops in hostile situations. There has also been the great fear of dullness in the presentation of the material. And as we continue into our future, we will see the reoccurrences of these problems. But the story must be told with the highest sponsorship--The President and the United States Congress (MacCann 8). It is a right guaranteed by our forefathers.

The challenge for any nonfiction film, is the responsibility of being totally objective. Richard Barsam uses the analogy of a newspaper in describing the nature of the documentary:

The difference between the documentary and the factual film, is roughly the difference between the editorial and news pages of the daily newspaper. The editorial page is labeled as such, so the reader will know that he or she is reading opinions that are based on what
otherwise might be considered as facts. The news pages, though, are a different thing. Sometimes they contain releases from the wire service, and at other times they contain the signed releases of reporters who have been at the scene about which they write. No matter how "objective" they try to be, the reports must contend with their own "subjective" responses. (584-5)

This analogy demonstrates a problem for all nonfiction films made, and places the "propaganda label" on any sponsored documentary. It also was a filmic technique that a radical film maker, Pare Lorentz, used that the military later emulated.

During the years 1930-32, The Film and Photo League concentrated on documenting times of hunger and economic failure of the Depression. However, when President Franklin D. Roosevelt took office in 1933, the League found a new perspective in the use of structure, form, and content in the nonfiction film, that extended its intrinsic values beyond what was thought to be possible. This also ushered in the brilliant career of Pare Lorentz. Lorentz realized that government film productions were viewed by
Hollywood as just short of "socialism"--he intended to change this attitude (Barnouw 114-7).

Lorentz's enthusiasm for America, for American problems, and for film, were the perfect formula that Roosevelt needed in rebuilding the aftereffects of the depression, through the use of a film medium. Lorentz took the problems of government films such as Grierson's *Night Mail*, and created such successful films as, *The Plow that Broke the Plains* and *The River*. The reason behind Lorentz's success are evident in the films themselves. . . . First, they were notable for their unity in sight, sound (music and narration), and overall sociopolitical vision. . . . Second, his films were unmistakably American. They resound natural love of the land. . . . Third, while they generally conform to the documentary problem-solution structure, these films relied on varying combinations of repetition, rhythm, and parallel structure, so that problems presented in the first part were solved in the second part, but solved through such an artistic juxtaposition of image, sound,
and motif, that their unity and coherence of development set them apart from other such documentaries. (Barsam 99-100)

The River was warmly received in London by Grierson and Flaherty, and won "Best Documentary" in 1938 at the Venice Film Festival. Additionally, The Plow broke ground for international recognition of the American documentary, and more importantly enjoyed favorable response by the public--a victory for the government (Barsam 105-6).

Even though the films carried a "propaganda label," they presented a message that was unquestionably needed by the country. It represented a call for a conservation of resources, an answer to the resettlement of people, and a positive outlook toward the future of America. Furthermore, it was difficult to attack a film as either dangerous or partisan, when given such a deafening applause for its poetry, photography, and message (MacCann 80-2).

The decline of the documentary movement within the government began with the establishment of the U.S. Film Service. As soon as Lorentz and his associates were labeled as a governmental service, they found themselves under attack, without the political strength
to offer a counterattack (MacCann 87). The emergence of the Film Service marked the beginning of the end. Ralph Steiner and Willard Van Dyke made a final attempt to save the documentary movement by establishing the American Documentary Films, Inc., which dealt with contemporary problems. However, Hollywood was so concerned with fictional films, that there was little or no concern for nonfiction films after 1938 (Barsam 106-7).

In September 1939, the German Army marched into Poland, and the result was a film genre that would dominate the film industry throughout the forties, and bring about the birth of the military documentary (Barnouw 139). War gave to the film makers a subject that involved action. It also provided wide agreement on the immediate common goals of action. World War II offered new government support to the documentary movement and to the film makers, by providing the ultimate in exciting subject matter (MacCann 118).

Documentary theorists, such as Grierson, did not directly influence the issues of nonfiction films during World War II, although, they provided social, economic, and moral content, insofar as it related to war. The functions of the wartime documentary are very broad as cited by Richard Barsam:
There are of course, certain basic types of films: training films, incentive films for industrial workers, propaganda films for domestic and foreign purposes, reconnaissance films for strategy, combat films for study and archives, and, finally, the few and very special films which transcend the immediate war and become works of art themselves.

(163)

No matter the function of the film, there were certain patterns that corresponded to the larger categories. One such pattern was a "personalization of the subject matter." This patterned emotional connection was between the viewer and the participants in the film. This binding was built through the juxtaposition of the combat soldiers before battle with the same soldiers during battle providing an "empathy for their risk and efforts." Another pattern was the inevitable return to propaganda. This pattern demonstrated common goals, that all the people were "engaged in a united effort and value of teamwork." The most common pattern came to be know as the "Why We Fight" series. "Why We Fight" reinforced the justness of the cause and the need for war. These were very
forceful films that left little or no doubt that there was a "ruthless enemy" that stood against all morals and beliefs (Barsam 163-4).

In order to maintain the common goals and directives of the war, the government had to provide public messages that would reach workers and cooperating groups on the home front. This, of course required an undeterminable amount of money and manpower. Also, as discussed earlier, the government was in the midst of the same antipathy that the U.S. Film Service had faced. This antipathy gave birth to the Motion Picture Bureau of the Office of War Information.

The government faced the need for a "simultaneous repetition in all media" for positive support for the war, which automatically called for a motion picture treatment of war messages. The motion picture did not have the speed of the newspaper. However, it could reach an estimated 80 million people each week with a direct and personal contact. The type of contact the audience needed was found in the driving force embodied in the function, style, structure, and content of the films. The government discovered, whether it was to mobilize scrap iron or recruit nurses, this was a medium that had the persuasive tendencies that could
bring public support and group sponsorship (MacCann 118-120).

The OWI started by producing films that became known as "The War Newsreels."

These biweekly or weekly "newspapers of the screen" were shown in special newsreel theatres in larger cities, or, more often on the same bill with the cartoon, travel film, and one or two feature films. (Mast and Cohen 592-3)

Prior to World War II, newsreels were produced by news agencies as a reportage of unusual events surrounding the public. Just as the Luminere films that began the industry, they satisfied the audience's curiosity. But for the first time, the government was able to provide subject matter that would saturate the public with the same curiosity, but with added concern (Barsam 118-9).

A good example of the early wartime documentaries of World War II was The Ramparts We Watch, directed by Louis de Rouchemont. This film was a daring and successful attempt to relate the struggle of World War I with political aspects of World War II. This was a measure to counter American isolationism that existed prior to the Japanese attack on Pearl Harbor. The film was accurate and convincing using both newsreel footage
and fictional reenactment. As war progressed, America was blessed with the appearance of films that were more dramatic in their use of narrative, and gave a sense of sentiment, justice, and democracy (Barsam 180-1).

The most celebrated and remembered wartime films were the "Why We Fight" series. The success of these films can undoubtedly be related to the director Frank Capra. As professionals entered the service, they were immediately commissioned as officers. For example an attorney or a clergyman was, and still is, commissioned as a First Lieutenant. A physician or surgeon is commissioned as the rank of Captain. However, director Frank Capra was given the rank of Major. This demonstrated the importance of his skill to the Armed Forces. He also was placed as an assistant to General George C. Marshall (Barnouw 155).

General Marshall simply explained to Major Capra that he needed to produce films that would relieve the problem of low morale and instill loyalty in a civilian army. The General gave Capra the "go ahead," and asked him to hurry. MacCann explains that Capra's purpose in making the "Why We Fight" films was an attempt to:

1. to destroy faith in isolation, 2. to build up a sense of strength and at the same time the stupidity of the enemy,
and 3. to emphasize the bravery and achievements of America's allies. (156)

Capra and his staff employed a convention used in television news today. They would search for pictures which were actually found, then they matched music, and simple, direct, hard hitting words with the visuals. The result was a visual and narrative package that would sink in deeply to the audience. The films provided a psychological insight that completely ignored the possibility of an American defeat. Rather, they would portray Hitler as a beast and make his victims, ordinary citizens, heroes (Barsam 191).

Capra's search for footage was actually started after watching Leni Riefenstahl's *Triumph of the Will*. As cited by Barnouw, Capra had a "blood chilling" reaction.

If American soldiers could see that, they would surely know why they were fighting. When he discovered that the Alien Property Custodian had hundreds of news reels and documentaries from Germany, Italy, and Japan, he arranged to have them transferred to his control (157).

His attempt to get material from America's war allies
temporarily halted his collection process. He found himself explaining to an Internal Security colonel the reason for his appearance in a photograph.

Capra said, "Hey that's me, Colonel, standing in front of the Soviet embassy, By golly..."

The Admission was noted by the colonel, and he responded, "By whose authorization." . . .

Mentioning that he making a film under direct orders of General Marshall, Capra continued to explain: "And damn it all, Colonel, if you insist on keeping me from carrying out the orders of the Chief of Staff, I demand a certified transcript of this nonsensical interrogation." (158)

Needless to say Major Capra continued on with his mission.

Capra used his newly found footage to show crowds yelling "Sieg Heil," "Duce," and "Banzi," throwing away their human dignity, freedom of speech and press, and their liberties. Capra pictured not only present leaders, and leaders like Lincoln who fought for freedom, but also used "old-world" leaders such as Moses, Confucius, and Jesus, as a comparison with the "remember these three faces" mode of Hitler, Mussolini, and Tojo. The movies peaked using the perils of the
destruction of culture, religion, and perversion of truth. This marked a quite effective message to a "lived through the thirties society" (MacCann 157-8).

MacCann also describes how Capra's films strengthened the opinions of those in agreement and rectified the opinions of those who wavered through "good propaganda" (159). Though labelled propaganda, the films proclaimed ideals that influenced the actuality.

This was the essence of wartime strategy, and the use of fiction excerpts probably dovetailed with it. Myth for the moment became history. Something of a sunny spirit of Mr. Deeds and Mr. Smith shown through the "Why We Fight" series. (Barnouw 161)

Probably the best group of films to come out of the war, the "Why We Fight" series, gave us the best record of reasons behind the war, and provided the most dramatic account of the battles in it. But more important, perhaps, was the eloquent tribute that the "Why We Fight" series gave to the men and women who fought and died in World War II (Barsam 191).

World War II also paved the way for another phase of the military documentary--the training film.
Training films accompanied the soldier through every aspect of his military career. Each soldier during induction, was required to see the complete "Why We Fight" series (Barnouw 160). But there were many other films with which each soldier and his superiors had to be familiar.

The soldiers were shown how to dress, how to fight, how to be technically proficient at all their military skills, and even how to act when off-duty. The more common of the training films were the "Know Your Allies, Know Your Enemy" series. Barsam cites a good example:

*Know Your Ally, Britain*, was America's attempt to understand and project British character and culture. It is a tough, simple film, stressing America's root's in England's past, similarities, rather than differences, and unity in war effort. Through the use of homely figures of speech, athletic metaphors and analogies, and an unfortunately condescending use of stereotypes, the film succeeds in creating a lively impression the British people . . . it
is a very effective and interesting film. (182)

The need for a large central source of training films established the Training Film Laboratory at Fort Monmouth, New Jersey. The military had to maintain complete control of the films containing classified information that were shown to specialized troops, thus one major reason for establishing the laboratory. To expedite this establishment, the War Department bought outright the old Paramount studios and moved the equipment and the personnel to Fort Monmouth. With the equipment and the people, came the stars and glamour of Hollywood (MacCann 154-5).

One such film viewed in this study, was *Jap Zero*, starring Ronald Reagan. The film was made to provide to American pilots the structural identification features of a prominently used Japanese aircraft. Having a Hollywood star as the protagonist gave to the film a story-line and plot. But more important, it provided to the viewer entertainment and information. The narrative thrived on repetition and made the protagonist a "goat turned into hero" through his excellence in aircraft identification. Though probably considered corny and lacking any real aesthetic value, the film was very effective in its purpose.
By 1942, highest priorities were given to films that presented instruction that directly concerned combat operations. MacCann describes a new series of training films known as the *Fighting Men*:

The films would be short, highly dramatized, and hard hitting. Presentation will in general be by a soldier speaking typical soldier language . . . the inspiration of these films came from a call from Lieutenant General Wesley McNair for "greater toughness in training and a realization that the soldier must either kill or be killed." (119)

The result of this statement was the first of the series *Kill or Be Killed*, in which a Nazi soldier gets an American to reach for some water and shoots him for his efforts. This type of film found its success through its authenticity and its brutal message (155).

During the war effort, thousands of films were produced. Some were very sophisticated lessons, others were as simple as wearing the uniform properly. However, these films provided to the troops something that the military has since been able to rediscover--these films, through imagination, turned the
complexities of wartime tasks into fun. They provided a feeling of ease and confidence to the soldiers, through the motivational aspects. And finally, they were the G.I.'s own films, and provided to the soldier entertainment that was a matter of life and death.

World War II was a common ground on which both professional and independent documentary film makers were to work. The military and governmental authorities realized the effect that film could be on a predominantly isolationist society by providing that society with information. The people were openly informed of how, where, when and why thousands of Americans were fighting in Europe (Barsam 190-1). It seemed that the government and the military had a medium that could provide political leverage for future policy making and public relations. However, with the start of the Korean War, that political leverage was lost as an abrupt end came to the brilliant films that we watched during the forties.

With the outbreak of hostilities in Korea, the government and the military found themselves in a difficult situation. Not only were they involved in an extremely unpopular war, but they soon found themselves involved in an intensification of the cold war. It seemed that the government had to decide which conflict
would benefit the most through the use of the nonfiction film. The decision was officially stated to the American Society of Newspaper Editors by President Eisenhower: "we are the ones who must make sure the truth about Communism is known everywhere" (MacCann 179).

On August 31, 1953, the U.S. Information Agency came into existence with the Reorganization Plan. Under the direction of Theodore Striebert, few documentaries were made--23 in five years. The tensions of the cold war and the worries over the spread of communism directed the efforts of the Information Agency (MacCann 176-8). Ellis describes the situation:

Now the reactionaries supported by great numbers of unthinking conservatives and some frightened liberals, led us into a period of military belligerence abroad and political oppression at home that would climax in the early fifties in the Korean War and congressional investigating committees instigated by Senator Joseph McCarthy, Republican of Wisconsin. (223)

The united effort which had solidified the work of the
government, the military and Hollywood behind the propaganda documentary in World War II was dealt a damaging blow by the reactionaries.

During the McCarthy era, the government found no help from Hollywood. The State Department found its only documentaries of the Korean Conflict were through the use of straight newsreel footage with a military news reporter. The purpose of this type of coverage was an unsuccessful approach to confirm "the truth" about the Korean War. Its failure was marked by a public suspicion of an investigative government--"truth" did not bring "trust." MacCann further describes the complications:

A hard-hitting approach, however, fits uncomfortably with the motion picture audience. While the medium itself can accommodate slanted newsreels and such open propaganda appeals as the Frank Capra pictures during World War II, the "attack film" gets tiresome after a while, especially in a neutral country, busy with its own affairs. Shown on a theater screen, just ahead of a feature the public has paid to see, it risks the
indignation and even a reverse effect. (179)
The straight newsreel footage did not, at best, reach the audience's deeper levels of thought and emotion. Only stressing the productive power and strength of the military, the State Department lost the warmth that influenced the audiences of the forties. In fact, it seemed that the audiences actually missed the "opened propaganda effects" (MacCann 175-9).

Toward the end of the Korean Conflict, Theodore Striebert of the U.S. Information Agency and George V. Allen of the House Appropriations Committee, changed the emphasis of the nonfiction film:

We are limiting film production to subjects which support our foreign policy and to those that refute Communist lies. With limited resources, we cannot afford to produce and distribute purely Americana films. . . . We cannot restrict ourselves solely to the exposition of the fallacy of Communism. Rather, we devote most of our energies to setting out what the United States is. I believe that this positive approach is more beneficial to the United States and more in accord
with the basic mission of the Agency.

(USAI press release, March 15, 1954)

This created a shift of focus that caused the military to become alienated from governmental support. Thus without the total support of a government agency, the military experienced catastrophic effects during the Vietnam Conflict.

As the last Americans were airlifted from the top of the U.S. Embassy in Saigon, these lines were written by James Reston of the New York Times:

The reports of the press and radio and television are now being blamed for the defeat of American policy and power in Indo-China, which is another way of challenging the whole idea of democracy. For in the long history of the war, the reporters have been more honest with the American people than the officials. (1)

This report can forever be debated. But what cannot be debated is the fact, that the Vietnam experience decisively changed the relationship between the press and the Department of Defense (Braestrup xviii). The military soon discovered the term "reactive."

Throughout the Vietnam crisis, the military nonfiction film as mentioned earlier, found itself without
governmental backing. Therefore, it was left up to the press and independent documentarians to "tell the story" of Vietnam.

With the 1968 Tet Offensive, came a press performance that seemed to require "critical analysis" (Braestrup 20). The government counteracted this analysis with silence and secrecy. This, in turn, produced such broadcasts as described by Kathleen J. Turner:

The CBS evening news transmitted a report that would anger the White House, shock viewers, and demonstrated both the power and the impotence of a television war: American viewers watched their Marines using cigarette lighters to set fire to a Vietnamese village. Morley Safer's commentary failed to inform the audience that this was the conclusion of an extended and vicious guerrilla battle resulting in numerous American casualties. (152)

This type of reportage set a tone for others to echo. It also provided the building blocks for newscasts that were extended into special documentaries. As the war grew, so did the protests
against American intervention. And with the speed of the broadcast media, the Department of Defense found itself in an unwarranted situation. There was little for the military to do, but to react with accusations of "irresponsible reporting" (Turner 153-5).

It wasn't until 1965, that the Department of Defense produced its first Vietnam documentary. *Why Vietnam?* attempted to follow the rhetoric of the "Why We Fight" series. However, as a very aggressive response to earlier broadcast and press reports, the film distorted history and was viewed by many as a deception measure. Barnouw cites Commager:

> Henry Steel Commager, reviewing it almost two years after its production, found it "not history . . . not even journalism . . . as scholarship it is absurd. . . . When Communists sponsor such propaganda, we call it brainwashing." (272)

The military went from one extreme of the "truth newsreel films" during the Korean War, to the other extreme of "propaganda through deception" in the Vietnam Conflict. The production of the film only provided the Department of Defense an impenetrable barrier around "prime time" television.
Possibly the largest support for the war came from fund appeals for the USO and Red Cross, stressing services for the men that were "fighting for you." The largest promoter of the war was The Bob Hope Christmas Specials. These programs provided to the audience a nourishment of hope for an end of the war. The programs' success were attributed to the lack of two ingredients—combat footage and governmental sponsorship (Barnouw 273-4).

Defeat of public support for the Vietnam War effort came with the production of the 1969 film, In the Year of the Pig. Emile de Antonio's film provided an encapsulation of forty years of Vietnamese history:

The film's method is superficially simple. Historic newsreel from both Western and Communist sources is edited alongside or together with in-depth interviews with Vietnamese experts who range from journalists and politicians to Buddhist historians and philosophers. . . . It is not, of course a fair film. . . . The material is wickedly manipulated with statements of presidents and army officers being taken out of context and then intercut with
scenes that make the officials appear total fools if not villains. (Rosenthal 205)

Fair or not, it was broadcast on PBS. And with the continuing one-sided reports of the media, it was too much to contend with for a staggering Department of Defense.

For a decade, there seemed to be a taboo placed on the Vietnam story. This war was unique in having been absent from the screen until long after the event. The only exception was the production of *Green Berets*, 1968. Starting in 1978, the fiction film industry was swamped with Vietnam stories, climaxing with *Apocalypse Now* in 1979. For the most part, these films accented a feeling of discontent over perhaps one of the unhappiest chapters of our history (Ellis 423-4).

During the Reagan Administration, we witnessed two U.S. military invasions. Rather than returning with a reactive mode to public opinion, the atmosphere of "telling the story" was extremely restrictive. This revived the dangerous tensions between the media and the military. However, on November 14, 1990, CNN broadcast live tank gunnery preparations, as part of deployment measures taken during the Gulf Crisis. This, perhaps, is an indicator of future policies in
terms of military public relations—a return to an "openness" by the Department of Defense. Just as Hitler invaded Poland in 1939, we were facing a similar scenario in the Middle East. And, now more than ever, it is time to unite together as Americans, and ensure fair and balanced information is provided to all concerned. The history of the military nonfiction film is long and indifferent. We must use this history as "lessons learned," and properly promote the agency that has provided freedom for Americans for over two hundred years—The Department of Defense.
CHAPTER TWO
PRE-PRODUCTION

As discussed in the previous chapter, the development of World War II created an embryonic form of what we consider reality every time we watch the news on television. With the birth of the war emerged a use of documentary to inform the American people of the atrocities happening to their boys in Europe. What seemed to be a stagnant film convention in America was a distinction of achievement in Britain. The British found the documentary's strongest characteristic to be a guided projection of information—a convention that presently is returning.

The military, during past wars, used the documentary for three basic reasons: 1. to inform, 2. to entertain, and 3. to motivate. What happened to the blueprints of an idea that not only could broaden the knowledge and boost the morale of present day servicemen, but also could provide their family members with information that could some day save their lives?

In the pre-production phase of this project, the first step was to draw from the research provided in the first chapter, and determine exactly how the
military can better use this medium. The military needs to take advantage of a medium that can greatly improve command information, community relations, and training. The documentary could be used today to increase the effectiveness and efficiency of our military readiness using the same basic guidelines of the nonfiction films of World War II.

Today we live in a visual society that has grown up with the visual influences of television and movies. Especially in television we have seen a dramatic increase in the use of the documentary in such programs as 20/20, Prime Time, and, 60 Minutes. Axel Madsen studied the power of 60 Minutes:

Conventional wisdom has it that the nature of television is such that it makes audiences lazy, that we are not used to thinking while watching the tube. Glutted on a diet of game shows, sitcoms, and shoot-em-ups that require little more than our distracted attention, we are not supposed to be interested in sober and even accusatory nonfiction programming demanding a degree of concentration. Yet, the latest industry surveys find that it is
in news and news coverage that the majority of people think television is improving. . . . It is about content and credibility and what they mean to all of us. (xiii)

This thought, along with the power that actuality has on its viewers, is the equation to success of such programs.

The military has the technology to provide this type of programming. It is a matter of establishing an inexpensive system that would produce (military or contract) and distribute various documentaries to the installations. This type of programming could provide to the military family such information as cultures and language of particular areas, concerns of the command (i.e. drugs, terrorism, etc.), financial tips to military families (income tax returns), or any other information necessary in caring for the welfare of military family members.

One of the main objectives of public affairs is to foster the understanding and acceptance of the military mission. The national media makes this a difficult task placing the military in a reactive role with their use of broadcast journalism of actuality. The military can place itself back into a pro-active mode by
producing documentaries that simply give the community a better understanding of their mission and purpose for their existence in that community—somewhat different than what Dan Rather would present.

This project in the pre-production phase originated from the idea of producing a military documentary, that would provide the community with a better idea of the mission and purpose of the ROTC organization. The community for this particular project is the faculty, staff, and students of seven surrounding universities in the New Orleans area. The outcome of this idea is the birth of New Leader: A Documentary on the Orleans ROTC Battalion.

New Leader's survivability and success depend on two major factors: 1. the program must incorporate the qualities of production to ensure that it can be broadcast on commercial television; 2. the program must also be structured so that it can be entertaining and credible. The military presently produces such non-fiction films for incoming soldiers to new units. Part of the problem with these programs is that they are usually a "canned" script that is uninteresting, and the visuals are simply matched to the audio. The audio is usually a carefully prepared message that provides
to the viewer the information that could be easily gathered from a welcome pamphlet.

The capstone decision in blue-printing this project, was to break the familiar mold of the recent military information films. This would be done by, first, allowing some one from the targeted community, a student, to be the narrator of the program. This is designed to increase the credibility of the program. In other words, the information will be delivered by a fellow student, not some one directly involved with the ROTC program. This decision is an attempt to make the program more entertaining and more believable. The major decision, however, was to have this student move freely throughout the organization and simply ask questions. This type of format is workable except for the fact that the program's success relies completely on the use of the non-actor.

Without a complete understanding of the use of the non-actor, this project could not continue. The approach is for the student narrator to pull information from the various non-actors in the ROTC department, including both the instructors and the cadets. The information would then be put together in a manner that would be actual and believable to the audience--not a narrative read by a military
spokesperson. The use of the non-actor is far from original, and it seems to be a filmic convention that today is common in prime time television.

The essence of the pre-production phase of this project relies on a study of the past uses of non-actors, the various film movements that captured the use, and the true auteurs of the non-fiction film that used the non-actor creating the "strawman" of the basic idea for this project.

In traditional theater, the actor always functions within a matrix of time, place, and character. A brief definition of acting as we have known it might be the creation of and operation within an artificial, interlocking structure. When the actor steps on stage, he brings with him an intentionally created and consciously possessed world. The actor's goal is to tie together the incongruities between manufactured reality and the spectator's reality. However, what if these people on stage are not actors inside characters, but rather characters without actors (Kirby 648)? This ideology of acting was born with the first documentation of moving pictures by the forefathers of cinema.

In 1895, the Lumiere brothers made their first films, which dealt with trivial subjects such as
workers leaving a factory, or a train arriving at a station. Unknowingly, they devised a film style that later, John Grierson called the documentary (Issari and Paul 3). They also initiated an acting style paving the way for the emergence of such film styles as Dziga Vertov's Cine-Eye, Robert Flaherty's Non-Preconception, Italian Neo-Realism, French Nouvelle Vague, England's free cinema, and electronic news gathering for television. This acting style, known as the use of the non-actor, was created through the efforts of film makers attempting to make their films more real and believable to their audiences.

A relatively large number of performances take place by the non-actor everyday. In the classroom, at a sporting event, at private or public gatherings and presentations, there are always "performer-audience" relationships. These are all non-actors functioning in front of an audience without creating an artificial context of personality. Even for professional acting, the Soviet director, Konstantin Stanislavsky, felt that the performer should be unseen within his character (Kirby 650). For the actor this could be a difficult task. However, for the film maker, he can capture action "unaware," accomplishing this task for the "actor." This approach to film making started with
Dziga Vertov and his concept of Kin-Eye in 1919. It wasn't until World War II that this style took on momentum (Issari and Paul 23).

In the Soviet Union, after the Revolution of 1917 Lenin declared cinema the most important medium for the education and instruction of the masses (Ellis 106). One of the new Soviet film makers who saw cinema as an effective weapon in the social struggle was Vertov. He called for a new film style of cinematographic reportage based on documenting real life. He organized Kino-Pravda, which was a filmic substitute for the official Russian State newspaper, Pravda (Ellis 108). Vertov's feelings of his theory are captured in the following quote:

It is photographing people without make-up from angles that take them unaware, and getting them with the camera-eye at a moment when they are not acting and letting the camera strip their thoughts bare. (Vertov 20)

One of the documentaries that Vertov made was the chronicle of the life and day in a large city, from sunrise to sunset. Using the concept of "catching people unaware," he made the invisible visible, the obscure clear, the hidden obvious, the disguised
exposed, and the acting not acting (Issari and Paul 25). Vertov points out that the camera must peer behind a mask that people assume for others. It must perceive their true thoughts:

The hypocrite, the flatterer, bureaucrat, the spy, the bigot, the blackmailer, the contriver, etc., who hide their thoughts while playing one role or another, take their masks off only when no one can see them or hear them. To show them without their masks on--what a difficult task that is, but how rewarding. (Vertov 57)

This task was seemingly impossible in Vertov's time. In the early twenties, films were still silent, the cameras were heavy and cumbersome, and the technology of film making was still in its early stages. However, the Russian futurist could imagine the possibilities of future technological development that could exploit the use of this non-acting style that he envisioned.

Vertov summed up his theory of Cine-Eye at a lecture he delivered in Paris in 1929 stating:

The history of the Kino-Eye has been a relentless struggle to modify the course
of world cinema, to place in cinematic production a new emphasis of the "unplayed" film over the played film, to substitute the document for the mise-en-scene, to break out of the proscenium of the theater and to enter the arena of life itself. (Vertov 58)

However, there were conflicts in Soviet life which were far beyond Vertov's camera-eye vision. What he captured in his documents were emotions much simpler than reality, but expressing things that were deeply felt in the lives of the people. His theories were the core ideas of cinema-verite and the use of the non-actor, and greatly influenced the approach to documentary film making.

Robert Flaherty, a contemporary of Dziga Vertov, was the first American to explore the use of the non-actor. As a professional explorer working for mining concerns in North America, Flaherty was looking for a means of making notes on his explorations. He took a motion picture camera on an exploration of the Hudson Bay area in 1916. Flaherty's interest in this medium was thereby aroused (Issari and Paul 34).

Flaherty's Nanook of the North was perhaps his first use of the non-actor by an American film maker.
Flaherty created the extravaganza without use of actors, studio, story, or stars. He decided the best approach to this film was to use everyday people doing everyday things, being themselves. The film was a great success, and is still viewed and admired today (Ellis 265).

One of the main reasons for the film's success was its truthfulness by showing real life through real people. Flaherty's wife attributed the success of the film to the following reasons:

A film in which audiences were able to identify—not with film stars, but with life itself, with universal life on which we and these people are a part. When Nanook and Nyla and little Allego smile out at us from the screen, so simple, so genuine, true. They are themselves: we in turn become ourselves. (Flaherty 17-18)

Further commenting on her husband's approach she wrote:

Let one false gesture, one least unnatural movement, the slightest hint of artificiality appear, and the separateness comes back. The secret of Nanook lies, I believe, in those two
words, "Being Themselves." Not Acting, but Being. (Flaherty 17-18)

In all of Flaherty's films, thereafter, he used actual people in their natural locations. If the non-actor in his natural surroundings does not have to function in an imaginary time and place created in his own mind, if he does not have to respond to imaginary stimuli and artificial personality, and if he does not have to project the unconscious elements in the character he is playing, what is required of him? He is required to execute simple tasks that would be expected of his character (Kirby 650). This is the essence of Flaherty's art.

However, as with direct cinema, most of the action was thought out prior to its execution. While shooting a film, Flaherty would extensively screen his footage. If he felt he did not capture the "moment of truth," he would re-shoot the sequence or scene. This is a step in contradiction of Vertov's vision.

James Blue refers to Flaherty's principle of filming based on "preconception," and adds "Flaherty, however, once his notions were formed, went on to the stage or provoke whatever might satisfy the needs of the film, according to his own sensitivity" (23). Flaherty was criticized for this method, because once
Flaherty had established his conception of "truth," he would stage the event to capture that conception. Although, for the non-actor, this pre-conception method extended possibilities for this employment in other movements. One of those being the Italian Neo-Realist Movement.

The Neo-Realist Movement erupted after the removal of a Fascist power that existed in Italy for nearly a quarter century. The movement was stimulated by the release of bottled up feelings of frustration that were generated by Italy's constant shifting position in World War II. With the production of _Open City_ in 1945, came character roles that were created not so much for what the persons were like as for what they did. Roberto Rossellini, father of this movement, was mainly interested in fusing together a character with a problem (Ellis 243-4).

The Neo-Realist film makers, therefore, diverted from the conventional style to a cinematic presentation that showed audiences as true a portrait of themselves and their surroundings as possible. This placed the audience in line with Flaherty's concept, to identify with the characters on the screen (Issari and Paul 42). What better way could the film makers of these fiction (semi-documentary) films portray the social problems
existing in Italy than the using of a non-actor in their natural surroundings? Roger Manvell says:

Films were delivered in well-shaped paragraphs or sequences, while actors only too often capered through their dialogue like well-drilled, highly professional dummies. (75)

Although considered professional dummies, they could bring their actual experience under Nazi rule onto the screen.

What if this non-existing gap between life and what is on the screen created by the non-actor was through an accident? These films were created during a time of a badly disorganized economy. During this period studios and professional actors were not available to the film makers. Even under these conditions, the film makers were still able to take what was available, and create a statement beyond reproach. This, I think, makes these artists true "auteurs," placing that certain signature on all their creations.

The practice and the theory of Neo-Realism did not cease to exist, however, the non-professional actors used in the films did not find fame and fortune. For example, the non-actor that played the unemployed
laborer in The Bicycle Thief, never got the call from Hollywood that he expected. The non-actors performances were enhanced through the use of a rapid cutting pace. This technique is used when film makers (as in documentary) are working with people (non-actors) who cannot sustain performances. Perhaps Hollywood recognized this, and stuck with their stars. However, this technique led to the notion of "type casting" still used in Hollywood today (Ellis 245-7).

The Neo-Realist movement in Italy forced film making toward a more realistic treatment of subject matter. French nouvelle vague was born in the mid-fifties with a number of young cinema enthusiasts who were either film critics or came from documentary. The philosophy of Italian Neo-Realism was to move toward a realistic treatment of the film content while remaining faithful to the principal grammar of conventional cinema. The nouvelle vague movement, however, rebelled against both film content and the conventional techniques utilized in traditional cinema.

One of the more common film conventions was the use of the professional actor in a dictated

1Dr. H. Wayne Schuth, Professor at the University of New Orleans, describes the remaining career of the lead actor in The Bicycle Thief.
environment. For the new wave actors, although somewhat professional, their performances were mainly improvisational. The actors would improvise their dialogue during filming, giving the audience a feeling of eavesdropping on a conversation. This technique was used to "flush out reality." These directors attempted to "catch on the wing expressions and attitudes which, better than dialogue, can reveal a person's psychology and the dramatic significance of the situation" (Issari and Paul 49).

Even though, professional actors were used, the intent was the same as using the non-actor. Manvell describes this intent:

The nouvelle vague method was aimed at the break-up of the old-fashioned, artificial "well-made" film about artificial "well-made" characters, and the emergence of a style of direction operating in a free association with real-life characters, many of whom seemed to have been met casually in the street. (78)

Meanwhile, in England, another movement was developing. This movement was known as Free Cinema. Free Cinema developed at the National Film Theater of
London, when a program of short films was shown there in 1956. These films displayed images of London as it was, showing its streets, its dance halls and entertainment places, its playgrounds, and warehouses. Actors were real people, going about their day-to-day business. There were no glamorized actors, and no stars. One could see a certain freshness in these films because they depicted the real environment of the people of London.

The movement grew out of a social-realist impulse that the British keep rediscovering from time to time. Free cinema was free from serving the sponsor's purpose, as in documentary, and free from serving the demands of a box office, as in fiction. It was a movement allowing film makers to be entirely personal (Ellis 363-6). Many of the techniques used extended from the documentaries of the thirties, forties, and the postwar years. As with their predecessors such as Humphrey Jennings, these film makers found that they could arouse the emotion of their audiences by using the non-actor. Going to life itself as material for their subjects influenced many film makers to experiment more freely with non-actors, including one of the most influential mediums--television.
From the time television was commercially established in the late 1940's, it found its greatest talents could not be challenged by other mediums. These talents were the immediacy and intimacy in which it could record contemporary events. With the development of new technology and portable equipment, television started breaking away from certain cinematic techniques and started experimenting with new styles. One of these styles being the use of the non-actor, evolving from the preceding film movements discussed. ABC started producing a series of documentaries using real people in their real environments to qualify their statements. This paved the way for many uses of the non-actor in television (Issari and Paul 58-9).

The emotional power that television had on its audiences was recognized by big business. They discovered that the testimony of ordinary people could effectively market a product. This led to television's main source of income--the commercial. In the fifties commercials mainly dealt with the housewife in the kitchen bragging about a certain product. This has evolved to the use of children to arouse emotion--the same technique that Jennings used in A Diary for Timothy.
The development of the camcorder brings us to an infinitive use of the non-actor. One of ABC's biggest hits this fall was America's Funniest Videos. Steve Paskay, producer of the show, predicts "As long as people are interested in other people's lives, the show will be a hit." This is perhaps an evolution of film revisiting the idea of truth by Vertov. T.V. guide credits the success of the show by stating:

People are laughing out loud at people placed in unwarranted situations captured on videos. A decent percentage of the show is gut funny. (5)

What makes this succeed over some of the television's situation comedies? The audience is closer to reality, and can relate to situations faced by non-actors. Unlike Candid Camera, a successful show in the fifties and sixties, this show goes one step further. It not only captures the events of non-actors, but non-photographers are capturing the event. This is a movement that even Vertov probably could not have envisioned.

Television, aesthetically, is responsible for introducing a "direct style" which reveals the charm of the present. This, in a sense, makes it a pacesetter in the trend towards reality. However, throughout all
the movements we have discussed, they all have one thing in common. They all use the non-actor to make their films more real and believable to their audience—a trend that will continue to grow, and a trend that will earmark the success of New Leader.

In using the non-actor as a major tool, it was important to ensure that New Leader would not be confused with a news documentary. Charles Hammond, Jr. clearly defines the difference between a news documentary, and a theme documentary:

A television news documentary is a mixture of art and reportage. The producer must make the following choice. Either the program recites facts that are hinged to some kind of news lead or facts are expressed directly through the reproductive power of film to recreate "whatever happened" without much help from the reporter. Still the reporter's presence in a news documentary is strongly predominate since he introduces, interconnects and signs off the several actualities being successively shown. (24)
This was a major concern about using the student as a reporter to introduce the actualities of the ROTC program. The student was there to lend credibility to the content of the program. However, there may be a tendency in this approach where the "news-type" structure would interrupt the flow of the program. The linkage of each story was later built during the production phase of this project. A major consideration taken during the pre-production phase was to stay away from the dreamlike qualities of the verite approach. An analysis of each proposed event of the ROTC program was devised, and a structure was developed prior to shooting the first frame of video tape (see Appendix C). Hammond can best describe this approach.

Where the television news documentary tends to control the artistic treatment by sticking closely to an analysis of a particular news event, the television theme documentary tries to control the "life." TV theme documentary sets up artistic credos for its subjects, then proceeds to explain them subjectively, even personally. Such programs take no attempt to be objective, as do news shows. (25)
New Leader at this stage was built around a theme—a point of view—not a lead. This was the determining factor in creating the type of documentary needed. It also followed the basic structure of its forefathers.

Coupled with a different look using the non-actor, along with the building of a basic structure and theme, pushed New Leader into the next phase of this project, production.
CHAPTER THREE
PRODUCTION

The production phase begins "when you load the camera," and continues until you "finish the last shot." For New Leader, this was the case. However, the concept of the program continued to grow throughout the developmental stage of this phase. Therefore, there was an overlapping of two phases of this project. And without this overlapping process, there would be no more to this program except the fact that it is thirty minutes long. As the shooting process began it was decided to not only have the student reporter investigate the ROTC program, but also to add even more credibility--the student would actually get involved in the events as they were reported.

Transmitting the experience of what it is like to be a member of an ROTC unit would be enhanced by having the investigating reporter-student become involved in the experience. The decision to follow that approach was supported by William Bluem's studies of television

\footnote{Steve Hank--Class Notes.}
documentary as he describes the importance of understanding the audience.

It's postulate (the program) is an audience no less intelligent than we, but necessarily (because professionally) less well informed. Its methods are the methods of television journalism. The highest power of television journalism is not in the transmission of information but in the transmission of the experience. (268)

For the viewer to "experience" completely the ROTC program, the reporter should demonstrate the experience while performing the investigation. The student, after the first shoot experienced the events with the cadets as they actually happened.

The reporter selected for this project is a female student. The criteria used in the selection of the student-reporter was based on her appearance on camera, her voice, and most importantly her willingness to experience the events of an ROTC cadet. The selection of a female rather than a male for the part is an attempt to add flare to the program, and to extinguish the public's misconception that the Army is for men only.
This experience is to gain trust of the information delivered to the audience as further described by Bluem.

The second power of television journalism is delicate and can easily be destroyed because it is essentially the result of a trust. The television journalist is received trustingly. . . . The power to transmit experience, is intrinsic in the physical existence of television and cannot be damaged so long as there is television. (269)

The dimensions of the information transmitted in New Leader is that experience--an experience which cannot be contained in words alone.

The next step in the production is to bear the responsibility, as producer and director, toward the perceivers of the program and toward the institution (The Orleans ROTC Battalion). The production approach taken for New Leader, as in most productions, focuses on the viewers need, and ultimately on what he or she experiences during the program. Content of the program is crucial, however, more important is the need to maintain the viewers interest long enough to deliver the message. Therefore the production approach used
for this project is the effect-to-cause approach as opposed to the content approach.

Even though the content approach was not used, as discussed in the previous chapter, content was to be effectively delivered through the use of the non-actor. Herbert Zettl discusses some major flaws to the content approach, and these flaws were critical in the decision-making process of this project. The content of the program is selected by someone who has little knowledge of the television programming process. The material is simply based on what should be communicated, not by how it may appear, or the experience that must be received by the viewers as previously discussed. Therefore, the program's "worthwhileness" is stipulated by the content, and not by the medium. This will in turn cause a separation of the content expert and the medium expert that will only "foster the development of mutual mistrust." The effect of the program, therefore, is "presupposed because of the content alone, not by how and how much the television viewer is affected" (469-71).

In using the effect-to-cause approach, New Leader is given direction as to participant involvement. These directions were translated into goals that needed
to be attained in the production process. The goals given to New Leader are as follows:

1. The message should help the participant learn what the ROTC program is all about through a structure of steps taken from entry level toward completing the program. This message is not intended to inspire the viewer to go out and join ROTC, but rather to help the viewer to understand and accept the program.

2. The message should make the participant experience the beauty as well as the physical and mental challenges inherent to ROTC. For instance, the ROTC physical training program is very demanding, however, it takes place in one of the most beautiful public parks in the United States. Mixing this physical challenge with the beauty of four-hundred-year-old oak trees provides an aesthetic value to the program.
3. Lastly, the message should entertain the viewer as well as inform him. The information process can be broken up with comic relief that may not have been expected.

Given these goals of production it is time to think in terms of production requirements.

The cost of this project was purposely contained in order to prove that lower level military organizations can produce these types of documentaries at little cost. Funding for this project was twofold. First, the project was partially funded by a The New Orleans Municipal Endowment Grant. The Endowment Grants are awarded to local producers in order to support video production in New Orleans and to provide community access programming for the viewers. Second, UNO Video, the student broadcast journalism organization at the University of New Orleans, provided talent, associate producers, and some camera equipment (see Appendix B).

The above-the-line production is defined as medium requirements that deal with nontechnical elements. These requirements were primarily provided by UNO Video. The below-the-line production, defined as
technical aspects, consumed the majority of the program's budget.

The given goals of New Leader and the budgetary requirements inspired the producer to decide which events would be shot by the student organization and which events needed to be professionally photographed. The events that had potential to provide the show with aesthetic qualities were to be shot professionally. The problem with the shooting process was that the ROTC organization dictated the event, not the producer. Therefore, the shooting schedule had to be closely coordinated with the operational officer of the ROTC Battalion.

The shooting scheme worked out well, and evolved with each shoot. After arriving on site, the crew scanned the area, focused on the story, and acted by interviewing the person in charge and shooting cover footage to compliment that interview. Most of the actual shooting for this project was shot by the producer. This was an invaluable experience that expanded the technical knowledge of the producer. As with being an officer in the military, leadership is gained through the understanding and development of the capabilities of the people that one leads. Jay McMullen, documentarian and former Army correspondent,
further describes the importance of a producer working with the below-the-line aspects of the production phase:

He has to know quite a bit about how the cameras work and what lenses to use and what he can and cannot do. He has to know a lot about editing. The producer has to know the tricks of the trade in editing. . . . Next, he's got to draw up a budget, and he's got to make a guess in the beginning of how much it's going to cost. . . . So it helps to have that economic sense of how much the broadcast is going to cost and why it is going to cost that amount. (153)

After the first shoot, the producer got some sense as to what Mr. McMullen was describing. The budget was redefined numerous times in an effort to achieve the goals set for this production. Some savings were gained in the post-production process that will later be addressed.

Probably the most valuable experience gained in this project was during the shooting phase. The main focus in shooting each segment was the interview, then
the focus was to compliment that interview with appropriate cover footage.

It is possible for the photographer to shoot everything that moves and still not have a story. Photographers who have learned to think as reporters produce not just a succession of pretty pictures but pictures that tell a story.

(Shook 76)

Mastering the "pictures that tell a story" approach was a slow process of trial and error for this director-producer, and is perceived by him to be the major flaw in the production phase of New Leader. During production three-hundred-and-sixty minutes of raw footage was shot. This ten to one ratio is very liberal for a video production--the optimum shooting ratio is three to one. The high ratio was mainly attributed to the inexperience of the producer. However, in gaining the experience of production, it is better to have too much footage than not enough. The amount of footage shot was the major consumption of the budget as mentioned earlier.

When the professional photographers were used to shoot a particular sequence in this project, the producer took note of various production techniques
that created a more professional finished product. The use of many of these techniques also would help to lower the shooting ratio.

Many professional photographers exercise imagination every time they shoot. This will ensure that the photography will communicate to the viewer not only what was experienced, but also what casual observers may have missed. Frederick Shook provides guidelines for the photographer:

Show the event, but also give the viewers a reason to want to watch the story, and look for ways to help viewers feel as if they have participated in it. . . . A proven way to heighten the viewer's involvement is to shoot matched action sequences. (77)

As a result of the exorbitant amount of footage shot, *New Leader*, field footage did have matched action shots. This was very helpful due to the fact that the non-actors told their stories in sequence.

Another reason for the excessive amount of footage shot was the corrections made while the camera was rolling, or trying to capture a shot that was unattainable. NBC editor, Butch Townley says, "If you don't want it to be aired don't shoot it." This was
also a lesson learned in shooting *New Leader*. To reduce the amount of footage, the shots should be focused, practiced, and steady prior to rolling the tape.

*New Leader* is a documentary that focuses more on the people within the institution rather than the institution itself. Frederick Shook sums up the responsibility of the camera in that effort.

Equally important is the need to focus more on people rather than institutions during the reporting process. The photographer must learn to work comfortably with people in order to portray them naturally and with spontaneity, and work safely and prudently whatever the environment. Ultimately, success depends on the mastery of creative and technical principles through unflagging attention to detail. (94)

The backbone of this project or any project during the production phase is the director. The director must fully understand the producer's intent, and is placed as the lonely audience member. His preferences or prejudices will be directly involved in the final
outcome of a particular scene or sequence of the program. For this project, the director and the producer were the same, thus providing for good continuity within this particular relationship. The director must not only understand the intent of the producer, but also he must have complete understanding of what appeals to the society that the program will reach. Alan A. Armer describes this complicated task:

When staging a scene, directors necessarily become its most critical audience. In relying on personal taste, they must hope that their dramatic judgements and directorial styles reflect today's audiences. When directors find that they are no longer in the mainstream of today's world they must update their taste—or get out of the business. (3-4)

Desert Shield and Desert Storm provided an automatic appeal from society. As the Crisis in the Gulf developed, so did the chemical makeup of New Leader. In directing this project, the sequences began to shape towards an institution that prepares college students to face the perils of such international crises. The direction also focused on as much action
as possible within that training to compliment the action that millions of Americans witnessed on CNN.

Contrary to belief, the authority figure of the director did not appear until the nineteenth century. When the director did finally appear toward the end of the nineteenth century, he filled so pressingly a need that he quickly pre-empted the hegemony that rested for centuries with playwrights and actors. . . . The appearance of the director ushered in a new and original theatrical epoch. His experiments, his failures, and his triumphs set and sustained the stage.

(Cole and Chinoy 3)

The emergence and evolution of the director, from Melies simply placing the proscenium arch on film to Griffith moving the camera with the action, provided for future directors building blocks for what did and did not work. This established an art that constantly could be built upon and improved through experimentation of future directors.

*New Leader* did not attempt to establish any new convention to directing, rather it provided a style that the military could focus on. Using stand-ups,
interviews, and unsuspected scenes as tools to grasp the attention of the audience. The audience focuses on the involvement of the performers in the story. They do not focus on the dissolves, computer generated cuts or wipes used by the director to push the story forward. Therefore, the involvement of the performers in the story-line became the major consideration in directing this project.

In light of directing such a project as New Leader, it may be suitable for the director to have three pairs of eyes, several voices, and a few pair of hands. This of course is unrealistic. This production, to compensate for inexperience, followed the "Ten Commandments of TV," cited from Edward Stasheff. Whether it be film-style directing or studio directing, these simple rules provide for a checklist of direction, and may be helpful to future student directors.

1. Thou shalt show the viewer what he wants to see when he wants to see it.

2. Thou shalt not show a person speaking about an object which is out of the camera's frame or is not complemented by cover footage.
3. Thou shalt have the right person on the screen at the right time; the speaker when he speaketh, the reactor when he reacteth.

4. Thou shalt not cross thy cables, but thou shalt cross thy cameras, shooting across each other's angle, or shooting the reactions and questions of the interviewer.

5. Thou shalt not reverse thy screen direction by showing the person moving L to R in one shot, and R to L in the next.

6. Thou shalt not leave the photographer guessing as to what shot is needed and when.

7. Thou shalt not forget that the television screen is a small screen, and the close-up is the all-important shot.

8. Thou shalt not neglect the establishing shot, showing thy viewers the relations between this, that, and the other.
9. Thou shalt not cut from shot to shot for no good reason, or without motivation or just to lend variety to thy shots.

10. Thou shalt not stay too long in black, lest thy viewer kick his set reproachfully, thinking it hath conked out.

This is not an attempt to be neither blasphemous nor funny, rather--except for the last commandment--these were guidelines that easily were referred to when engineering the many functions that the director faced during the production phase of this project.

The experience gained during the production phase of New Leader was immeasurable. Mistakes were made, lessons were learned, and the script began to take shape. It was time to start the process of logging the 20 minutes of tape, and to move into the most powerful phase of production--post-production.
CHAPTER FOUR
POST-PRODUCTION

The third and final stage of production, post-production, presents to the viewer not only the structure of the given information, but also the style in which the information is to be transmitted. The editor has infinite determining factors facing him that will also provide a means to manipulate the audience to be moved emotionally, or to call them to take action.

The editing process is similar to writing a piece of music. The editor takes the randomness of raw video footage and molds it into a certain communication pattern. Leonard B. Meyer explains this process as it pertains to music.

The more "purely" random music is, the higher its information content, but the lower its utility as communications. For if communication is to take place, the symbols used must have the same significance (the same implications) for both the sender (editor) and the receiver (the viewer)—that is, they must evoke similar expectations. . . .
Randomness (the less-or unpredictable) must, if it is to play a part in human communication, arise within those finite and ordered systems of probability relationship that we call "style." (53)

Therefore, the editor will take this randomness (information), and assemble a package that will reduce the amount of information provided during the production phase, and increase the amount of communication through a story-line. This is a very powerful process that all key players within the production process should take part in to ensure that the intended message is sent using the intended style.

An analogy for the process in which this system will work, is through the random display of playing cards. In a deck containing fifty-two cards, as each one is turned up, a pattern (whether it be a suit or the number) will appear. As more cards are turned up the pattern becomes evident to the viewer. The viewer's expectation of the next card will start to decrease. The appearance of the unexpected card will surprise the viewer and stir his curiosity as to whether this is the start of a new pattern, or merely a "red herring." Nevertheless, the interest of the viewer is maintained by mixing randomness with a
relaxing patterned structure. This was the intent in editing *New Leader*.

Editing provides for a duplication in the manner or style in which the mind sees. Frederick Shook states his philosophy of the editing process:

> We all "edit" reality with our eyes and our minds. The composite understanding of the imagery we store in our mind's-eye becomes our reality and contributes to our definitions of experience. The art of editing lies therefore in creating both illusion and new realities, new relationships, and in stimulating and sometimes controlling emotional responses. (164)

The editing process therefore will capture that moment of a certain experience. Only through this process can one reveal, pace, structure, guide, select, juxtapose, and enhance the visual story (165).

Some may think that the editing process will deteriorate the actuality of the documentary. This in part is true. By providing a story-line and allowing the editor to dictate meaning within the story, invokes a feeling of fiction within the non-fiction film.
Early Soviet film makers such as Eisenstien and Vertov experimented with this notion.

These film makers taking meaning A and juxtaposing it with meaning B, could obtain a third and separate meaning C. Simply looking at the raw footage would only portray to the audience one meaning. Film makers stressed the editors role:

But it is not enough to show bits of truth on the screen, separate frames of truth. These frames must be thematically organized so that the whole is also a truth. (Barnouw 58)

This editing process is therefore an editorial role, taking the actuality of the camera shot and giving it meaning. The order in which the shots appear is a form of editorial arrangement. Shot selection and shot length is a form of the editorial process. The way that the shots are selected and timed, provide a structure to control dramatic tension through quick cutting or a more relaxed mood that allows the eye to wander across the screen capturing the entire moment of actuality. The shot selection may also be used to create symbolism.
Film makers used this process to provide a deep meaning of belief discussed in Film-Truth Issue No. 24 (1924).

On the first anniversary of the death of Lenin, we see streams of people filing past the dead leader in his coffin. In the midst of this, the living Lenin appears in the corner of the screen as though still speaking to them. It was a highly emotional moment for its audiences. (Barnouw 59)

One may call it trickery, yet this thematic approach yielded what many today would label as good editing.

Posting New Leader required the same film editing techniques provided by early film makers. These film editing techniques were coupled with a valued understanding of videotape assembly in order to produce the finished product. Because New Leader used the concept of the non-actor as interviewer, the various interviews had to be strung together, then "B roll" or cover footage had to be matched with the appropriate statements.

New Leader was assembled in the insert mode of editing. The word "assemble," used in the profession to describe the overall editing function also refers to
a particular type of editing process: assembly mode editing. Two basic edit modes, assemble and insert mode, are frequently used in the editing of video tape. The editor of New Leader chose to edit the program in the insert mode in order to gain certain technical advantages described by Herbert Zettl in his Television Production Handbook, 4th ed.:

1. All edits are equally roll-free and tear-free. In the insert mode, the control tracks of the individual source segments are not transferred to the record VTR, but replaced by prelaid continuous track on the master tape. This control track constitutes a "continuous" guide for the edit points and, therefore, makes the edits more stable than by adding various control tracks. . . .

2. You already have black on the tape, so you do not have to worry about recording black for the tape leaders, or whenever you want to leave some space for a commercial insert.

3. You can replace any scene in the tape with a new one of equal length and
"insert" it without affecting the preceding or following edits. (311-13)

The editor's use of the insert mode editing allowed him the flexibility he needed to edit this project.

Prior to making the first edit, the three-hundred-and-twenty minutes of the project had to be logged. This was a process in which the shots of the raw footage were reviewed and placed on a log sheet. The exact location of various sound bites and/or shots were determined by in-cues and out-cues. Organizing the exact location of shots, sound bites and ambient noise reduced the amount of money and time spent in posting.

Prior to entering the editing booth, the producer/director also built the show through paper and pencil editing. Taking the log sheet and transcripts of the interviews, an off-line print was actually produced on paper. The timing of scenes was then matched during the next phase--the off-line editing phase.

During this phase of the process, the first edits occurred five minutes into the program in the establishing interview with the commander of the Orleans ROTC Battalion. Because the editor was dealing with an extensive amount of interview material, he felt it was important to refine the interviewer's answers to
questions down to "bottom line" statements. The assembly of an estimated two-hundred-and-thirty minutes of interviews was a very lengthy and difficult process. This also may attest to the reason why most industrial and governmental documentaries are a voice-over written script complemented with video. Production speed may motivate a producer to simply match a given script with appropriate video. It, however, is worth the time and trouble to increase the credibility of the program with voices from the source.

Also involved in this type of editing, is the decision making process in the cleanliness of the audio. When speaking in terms of audio cleanliness, one is referring to editing out mistakes that the person may make when being interviewed. A balance of editing the voice to be understandable is maintained with an insurance of actuality. At times when editing this project, words were even spliced together to provide a clearer meaning. At other times, if the meaning was evident, mistakes were left in place. This, again, returns to the argument of fiction within non-fiction. Film makers and other former documentarians have faced this problem over the years. Vertov's documentary ideas collided with this procedure: how could a documentarian predict, or
guarantee, what truths he would find and record in the arena of life? He at first said he could not write scenarios. . . . To continue his work, he eventually compromised, and submitted documents which he preferred to call analyses--analyzing his intentions without specifying shots or sequences (Barnouw 61).

This could have been a technique in editing New Leader, although, 'the intention in providing for a structure for the interviews was toward content rather than form. Therefore, at the risk of being labeled as a "fictional nonfiction propaganda documentary," New Leader structured the non-actors' statements as pertinent information from "subject-matter-experts." In retrospect, truth of content was the goal, rather than the perfection of speech by these established experts.

In building the "subject-matter-experts" statements, this project referred to the basic concept and phase of video post-production, off-line and on-line editing. On-line editing produces a final master copy, usually third generation, that is used on the air. Off-line editing develops a "workprint" which is a preliminary tape that has all the shots simply cut together. Dissolves, graphics, and other techniques are then added during the on-line phase. Using the A-B
rolling concept, first generation raw footage is back-timed and added to the "workprint." In television, the A roll is usually the interview, while the B roll is the footage taken "to cover" the interview statements. During the on-line process, the B roll can be inserted at a determined time prior to the initial cut, thus providing for the dissolve illusion (Zettel 310-21).

*New Leader* was constructed in this manner, however, to leverage budgetary requirements consumed during the A-B roll on-line phase, both the off-line and on-line phase were performed on the same editing system. Using the technology of a digital multiple effects generator (Sony DME 450), the A-B rolling effect was executed using only one source machine. The DME simply freezes the prior frame of and edit point, and allows the source tape to run. This gives the illusion of the dissolve. Caution must be exercised using a DME in determining edit points. Dissolving from one high action shot to another will freeze the action and roll into another action. Rather than producing the dissolve illusion, the edit point will look more like a jump cut. Various digital effects also may be performed on this system. This technology is rapidly improving, and could possibly provide the
military with another option and means of producing documentaries at a lower cost level.

*New Leader* was broken up into nine sequences or scenes. The A roll (interviews) was built, under the guidance mentioned earlier, then the B roll was laid down in appropriate places. One may think that there are as many edit point decisions as there are editors. This is not entirely true. One must consider what basically makes sense in determining these edit points. Frederick Shook provides an example:

Suppose that we have two shots: 1. of a college student approaching a mailbox and depositing a letter, and 2. a close-up shot of the mailbox in which the student's hand enters frame and we see the letter being stuffed into the slot addressed to "Navy Recruiter." . . . Consider cutting from scene one at that point where the audience would most likely want to see a closer shot. You could cut out of shot one just as the student approaches the mailbox and her body language indicates she is about to post the letter (letting her arm motion determine the edit point), then cut to
the close shot in which we see the
action that has already begun in scene
one continue smoothly and conclude in
scene two. (169)

The editor, like the director, must adhere to the
audience's expectations. "In effect, the editor would
be saying, 'Here's a shot of a student about to mail a
letter. Now let's cut to a shot of the mail box and
wait for her to catch up with us'" (Shook 169).

The editor must match these variations, and
fortunately in video editing there is a preview button.
This allows the editor, producer, or director to
determine if the edit point is appropriate and if the
scene flows smoothly without actually placing the edit
on tape. After fifty-three hours of editing, the edit
button was pushed enough times to describe actions that
took place over twelve weeks in a thirty minute show--
this is the essence of video production.

To keep the post-production phase in perspective
it can be described as a selective focus process. The
program should focus on what an observer would see if
he were actually experiencing the event.

It might appear that editors are
manipulating the audience for dramatic
effect. While this is true to some
degree, they are also paralleling the direction of spectator interest. If they were physically present to watch the two actors (or non-actors) play the scene, their eyes would flick back and forth from face to face as their interest changed. Editing merely reproduces those changes in spectator attention. (Armer 179)
CHAPTER FIVE

CONCLUSION

*New Leader* established new insights to ways that the military can provide mission oriented information to surrounding communities. The program also provides other alternatives to such military video productions. The present inbriefing programs produced by the military are not bad, however, *New Leader* exemplifies tools that can possibly make them better. Also, this project may provide a systems approach to other uses of video non-fiction productions.

The military needs to take advantage of a medium that can greatly improve command information, community relations, and training. The documentary could be used today to increase the effectiveness and efficiency of our military readiness using the same basic guidelines of the non-fiction films described in the first chapter.

While producing this project, it became evident that non-fiction video productions can be used to enhance the effectiveness and efficiency of training, increase the availability of public information, and enhance community relations. For instance, with the
technology available today, the documentary can be used for the "knowledge" portion of basic military tasks. This would decrease the number of instructors needed, only providing a need for supervisors overseeing the "practice" portion of what was gained during the knowledge portion. This would be possible through the use of a video tape that could provide this knowledge portion of the training. Also possible is a command information system that would use the documentary in place of computer generated messages on a cable network. Inexpensive and entertaining information packages could be produced that would ensure both entertainment and pertinent command information would reach the military families. And lastly, programs could be produced to foster better relations with the community by providing a complete understanding of the purpose of an institution that exists and lives within the community.

The main objective of public affairs is to foster the understanding and acceptance of the military mission. This project was originated from this idea of producing a military documentary that would provide the community with a better idea of the mission and purpose of the ROTC organization. The community for this particular project is the faculty, staff, and students
of seven surrounding universities in the New Orleans area. The outcome of this idea was the birth of *New Leader: A Documentary on the Orleans ROTC Battalion*.

General Vuono once stated, "We must leverage technology, and use it to our advantage." *New Leader* with the use of video technology provides the building blocks of an information system. This system is a production technique that holds the viewer's attention with the credibility of non-actors, entertains the viewer with the unexpected, and educates the viewer with a sense of respect.

needed. (O/C) Hello I am UNO Video's Toni Canino and I am at the Orleans Battalion Reserve Officer's Training Corps headquarters. This is where I began my search as I followed a cadet corps from seven surrounding schools for a semester. I thought I would start by going straight to the top and talk to the person in charge of the Orleans

13. LS CANINO WALKING UP STAIRS TO ROTC HEADQUARTERS (STAIRS READ "LEADERSHIP/ EXCELLENCE, STARTS HERE").
Can you tell me what is ROTC or tell me a little bit about it?
OETTINGER (O/C): Sure. ROTC--the letters themselves stand for Reserve Officer Training Corps--Corps. A . . . that means that we are training the future officer leadership of the United States Army. Now that encompasses both the active component, the reserve component--which consists of the reserves as well as the National Guard. It's a program where students who are attending college can join as part of their elective program. Ah . . . the Army ROTC a . . . to take an elective course and then develop themselves as the future
leadership by taking these a . . . one course each semester, attending a leadership lab, going to the field and doing some of the a . . . the various activities that we have helps them to develop their leadership skills and then go out
and be lieutenants in the army once they graduate. The Army has needs for all majors across the spectrum. For instance, I'm an infantryman and yet within the infantry there are business majors, there are a . . . economics majors, there are history majors, math, spanish, a . . . engineering majors. So in every branch of the army there's a very broad spectrum of--of academic majors. They can apply for scholarships in a specific major and then they have to stay in that discipline and in that academic major to graduation or if they are
a non-scholarship cadet, they can of course a . . . be in any major whatsoever and they have a little bit more flexibility even in changing their majors.

17. CU OF CANINO CANINO (O/C): What would motivate an individual to join the ROTC?
OETTINGER (O/C): Well there are a number of--of different incentives and--and we in a way analyze a . . . when the students come to us just why they--they join. And I'd say that--that one of them right up there at the top is patriotism and wanting to serve their country. Many young men and women feel that a . . . they haven't a . . . done enough to maybe pay back their country and by--at the same time as developing leadership skills they can then go out and be an officer in the army later on. There are, of course, the monetary benefits of
scholarships. The Army scholarship program is one of the largest and best scholarship programs.
VIDEO
19. CU OF CANINO
REACTING

in the country. A . . .
it will pay for a
student's tuition--in
some cases their full
tuition--up to $7,000.00
in fact or 80% of tuition
whichever is greater. In
addition to that it gives
them $100.00 per month
subsistence allowance, so
that's another $1,000.00
during the year. And it
pays them $400.00 for
their books each year.
So that is a very
lucrative a . . .
incentive to bring
somebody into ROTC. It's
also a very viable
alternative to someone
who has had a lifelong
dream of being in the
military. And let's say
that they've applied to West Point or Annapolis or any of the--the military academies and they don't get accepted. ROTC produces actually more officers--70% as a matter of fact--of all of the officers throughout the--the country. And so it's a viable alternative if they don't get into one of the academies that they can go on, still pursue a--a baccalaureate degree and become an officer and go out and then compete with those
We're divided into what we call the basic course the first two years and then the advanced course which is the final two years. The--the basic course for a non-scholarship student is totally nonobligatory. They don't incur any obligation whatsoever. And so they can come into the--to the course, try it out for one, two, three, or even up to four semesters. And a . . . decide well I like this and then continue on into the advanced course where they will actually contract and sign as if
you're signing up into the Army, but you're signing into the--a contract in the ROTC program. And then they will continue on to graduation and commissioning. Those that don't decide that they like it or they've just been in the course to let's say get P.E. credit, which is also a possibility at some of our universities, then they can in fact dropout at anytime. They will still get academic credit for that course and still hopefully have taken away from us some of those leadership skills that
we're trying to develop in them. We've also had very great success in having college roommates--one who was in ROTC and one who was not--the one who was not come into ROTC simply because he's had--he or she has had time to room and find out something about the military from their roommate. And we've--as I said--had a number of students who've come into the program just that way.

(BACKGROUND MUSIC)

CANINO (VO): Thank you Colonel Oettinger. As
23. (FULL GRAPHIC) "THE CLASSROOM KNOWLEDGE IS THE FIRST PART OF THE EQUATION TO ABILITY."

Colonel Oettinger mentioned, ROTC is a regularly scheduled elective class. In fact, it is listed as military science. The best place to start would be where ROTC places its main emphasis--academics. I attended Master Sergeant Auhoon's class. This was a freshman and sophomore class that familiarized me with the activities and organizations of the Army. After class, Sergeant Auhoon discussed with me the goals of ROTC classroom instruction.
AUHOON (O/C): This class is making them to . . . a

. . . to train them as soldiers first before they can become leaders.

In a . . . I believe this is one of the best thing that they will actually get . . . a . . . through the experience. Just reading some of the letters a . . . that some of our cadets had sent back to us that leadership starts here.

In . . . they will learn how to progress this by basic type drill and training right here before they get where there going--become leaders. What we try to
teach them here is to--to
take that--that

(SOT) leadership and--and
mold it in one and become
that individual that can
actually be responsible
for his own actions and
who's he . . . and a . .
. for those who he's
responsible for. All I want them to do is to get that leadership that they can during this time . . period, taking the program—which is the ROTC program, and upon commission get assigned to his first unit is to listen to his platoon sergeant. And my famous work is that—and I will say this time and time again—good officers will not get good soldiers hurt. And I have always believed this. And what I make out of this kids—and this cadets here—hope they will remember this throughout their whole entire a . . . career—throughout the
military if they decide to have the military in their choice. Good officers. And this is what I'm here for. To make sure that what is passed down to them, that they will listen and be worthwhile in their future.

(BACKGROUND MUSIC)

31. (FULL GRAPHIC) CANINO (VO): Lab "LAB HANDS ON TRAINING ALLOW CADETS TO PRACTICE THE LEARNED SKILLS AND RETAIN ABILITY."

instruction is usually included with any science course. It is no different for military science. The lab I attended was the compass and radio lab. I learned
that the lab is designed to provide for the practice of the various military skills. It gives the cadets the hands-on experience of the classroom instruction. I talked with Captain Hope about the purpose of the lab and I also learned how to use a compass.

HOPE (O/C): They are instruct them in the--the lab, which is a follow along to the classroom instructions that they have received previous this week.

SHANAHAN (SOT):

Basically physical conditioning so that they can be in shape to do whatever job that they wind up doing in the military. (O/C) They're evaluated once month on physical training. They do pushups, situps and a

59. MS OF SHANAHAN

60. MS OF CADET DOING

PUSH-UPS (PAN LEFT) TO OTHER CADETS DOING PUSH-UPS.

... 2-mile run. And they get graded on that based on their age and a

... some do well and others don't.

61. MS OF CADET DOING

SIT-UP.

CANINO (SOT): And what is your job as far as the instructor?
SHANAHAN (SOT): I supervise that the exercises are done properly. Make sure that we get, you know, the right people here that need to be here in order to do the exercises. Cadets lead the exercise and the a . . . leader rotates each day--we do two sessions on Monday,
Wednesday and Friday—so they—they rotate through each day.

CANINO: So you learn everything . . .

SHANAHAN(O/C): Everybody does—everything the Army wishes you to know about physical fitness.

(BACKGROUND MUSIC)

CANINO: After the cadet, attend ten classes, labs and P.T., they have the option to demonstrate their skills through intercollegiate competition. When you think of intercollegiate
competition, you usually think of football or basketball. However, this sport involves throwing hand grenades, shooting the M-16 rifle and building bridges. Captain Dwyer, the coach of the Orleans Battalion Ranger Challenge Team, walked me through each event. Ranger Challenge is Army ROTC's cadet command, which is our overall command—it's called cadet command, it's their version of intercollegiate athletics. Our

AUDIO
it. They're scored by time as well as form and technique. If an
individual does not let's say use proper cover, and cover is a . . . being preventive from hitting--being hit by enemy fire. If the person doesn't use the logs or the . . . a . . . bale of hay or the--whatever--whatever system of cover there is--if he stands out and exposes himself to enemy fire then he is a . . . docked points.

CANINO (SOT): Okay.

Dwyer (SOT): And then also in the proper format--there's a proper technique in throwing the hand grenade. If he does not use that technique, he or she is also a . . .
81. **VIDEO**
   
   **MS OF CADET IN PRONE POSITION FIRING M-16. ZOOM IN TO TARGET.**
   
   **AUDIO**
   
   docked points for that. This is a team exercise again, so the object is to-(SOT) to hit as many targets with the least amount of bullets that is, you know, that you can use. Each person gets twenty rounds. The team captain decides what to do with the extra ten rounds. Because there's nine men on the team with twenty rounds each and the team captain can either use those rounds himself or dish them out to the cadets that he thinks are better shots.
Or if he chooses to not use them at all, because you can not use up to fifty rounds, turn fifty rounds back in and get credit for it. So the object is to—to hit as many targets with the least amount of bullets that is, you know, that you can use.

CANINO (SOT): And to also hit it like--

(SPLIT SCREEN TRANSITION)

Dwyer (SOT): In the bull's eye. In the bull's eye.

Canino (SOT): Okay.

Dwyer (SOT): The one-row bridge is designed to get
VIDEO  
86. LS OF CADETS PULLING ROPE AROUND TREE, THEN RUNNING UP TO TIGHTEN ROPE.

AUDIO  
a small unit across an obstacle or a creek or a river in a very quick time. In--in reality what would happen is the individual would swim across a river or tiptoe through a mine field, get on the other side and tie the rope to an object--most probably a tree,

87. MS OF CADETS TYING ROPE AROUND TREE ZOOM INTO HANDS TIGHTENING UP ROPE.

telephone post, light post, whatever--what--whatever happens to be there--maybe even a building a . . . pile or something--and once he has it secure on the far

DWYER: They have what's
called a swiss repelling
seat around through their
groin and around their
waist. And on the--on
the swiss repelling seat
is a D-ring, it's a . . .
a . . . it's a slip ring,
it's almost like it's
shaped like an oval. And
it will hook into the
rope and once it hooks
in--it can only go down
one way, the ring itself,
the D-10 button can only
go down one way--so once
the rope is inside of it,
there's no way the rope
can get ou--get ou--get
out. Unless the ring
itself breaks and I don't
think that will happen.
The last person will undo
91. CU OF LAST CADET
BEING HELPED OFF OF
ROPE BRIDGE.

the knot to the pulley system, then he'll tie that into his D-ring that's on his waist, and then he has to swim across the river or negotiate through the obstacle also. So the

(SPLIT SCREEN TRANSITION) first and last man may have the toughest job in--in--in actuality. In

92. ELS OF CADET MOVING THROUGH WOODS
LOOKING AT COMPASS.

orienting what they-- you're given a map with several points on the map. You start off with
93. MS OF CADET LOOKING AT COMPASS ZOOM OUT TO CADET MOVING INTO WOODS, THEN TURNING AROUND AND WALKING TOWARD CAMERA.

94. LS OF CADETS MARCHING IN FORMATION.

VIDEO

a known point and you have to go found these points on the map and the team that finds the most points in the least amount of time is the--is the winner. So you need to know how to read maps and you need to know how to do terrain navigation or land navigation. The last event you'll see today is called the 10 kilometer road march. That's the culmination of all of the events. What we do is, there's nine people that participate in each event. In each
event we take the highest "eight" scores and drop the lowest. Therefore, when--when you--you--were computing the scores we take the top eight and whatever team--let's say the Grenade Assault Course, whatever team has the overall highest points--the number of grenades that actually hit the targets, in the least amount of time, they're going to be first place.

(BACKGROUND MUSIC)

CANINO (VO): Another way that leaders pursue excellence, is by involving their unit in a

</table>
patients. Now this year we started a new project. We had already started planning the blood drive in September--the beginning of September or the end of August--and then Operation Desert Shield came about. So the students were trying to think of a way that they could have some a . . . community action and link it in with the blood drive. So we decided that the Blood Center would provide envelopes and stationery and some stamps and we would invite people to write to service people overseas in Desert Shield. But also people are stopping
by--we have some banners in the window--and people are stopping by to write even though they're not giving blood.

CANINO (SOT): Who is giving blood?

MCCORMICK: Well anyone and everyone is giving blood. And you're welcome to give blood to.

(BACKGROUND MUSIC)

CANINO (VO): I took Peggy up on her invitation and nearly passed out. But for my heroics I was invited to the annual dining in which is a dinner normally closed to the

AUDIO
how well, well it enables "us," to watch how an individual can lead others and instruct others in doing a . . . almost very difficult tasks.

CANINO (SOT): What kind of training do they have in order to participate in--in some of these leadership skills?
MINCH (O/C): During their classes, they are given various classes on leadership—leadership traits: how to deal with people, how to talk with people. A . . . they're given, of course, the basics on how to do the various tasks were given—given to them: how to do a raid, how to do an ambush, how to a . . . move through the a . . . move under combat conditions. And then it's—what we do is we evaluate them as to whether or not they can get other people to do what it is that they've been taught.

CANINO (SOT): So when
you evaluate them, do you see who would be best in leadership positions?

(STAR SPLIT TRANSITION)

137. LS OF CADET LEADING SQUAD THROUGH WOOD.

MINCH: Well that is one thing, but what we're looking at and am trying to evaluate basing them on is what a . . . we think that a brand new

138. CU OF BERRIES

second lieutenant right in the Army, straight out of whatever commissioning source it is, what they would be able and capable of doing--have the knowledge of doing.
CANINO (SOT): So this is a very safe situation, but just in case there's someone around who can work things out if they need to be done.

MINCH (O/C): Exactly.

We put a lot of emphasis on safety and then we--not a . . . if at all possible--we stop the cadets from doing anything that's going to be unsafe before they have a chance to hurt themselves.

(BACKGROUND MUSIC)
VIDEO

141. LS OF CADETS IN FORMATION PREPARING FOR MOVEMENT TECHNIQUES.

AUDIO
also places them in a position where they must think, react, and successfully lead their group through very difficult situations.

Cadet McGrath explains the importance of this exercise as it pertains to leadership.

MCGRATH (SOT): Basically taking charge of a squad.
It's very difficult among your peers in (O/C) a stressful situation to stand up and get them to do what you want. Particularly in the way you want. Frequently your peers will talk out some suggestions and try to take charge of the group because of our own innate ability to work as a group rather than have one person stand out. In a military environment that frequently doesn't work. You want one person to be in charge at all time. There's attempts to give the individual an opportunity to practice such a skill—standing out and taking
charge.

163. LS OF CADET STANDING ON BOARD WITH ROPE.

CANINO (SOT): Two questions. I would like to know if there's a time element involved and also what is the object of not touching the red?
164. MS OF CADETS MOVING THROUGH RED PART OF OBSTACLE. PAN UP TO INSTRUCTOR OBSERVING. PAN DOWN TO CADETS MOVING THROUGH OBSTACLE.

MCGRATH (SOT): Okay, not touching the red is rather simple it's just to make the situation more difficult. If you just walk to the other side, it wouldn't be difficult. A . . . on the other hand, there is a time limit and then again that's a stressing situation--having someone constantly tell you've ten minutes, you have five minutes--tends to rattle some people--not as much as indirect artillery fire, but still
it could put a more stressful situation on it. Once again we're trying to get people a chance to rise to a leader position in a very difficult environment.

(BACKGROUND MUSIC)

CANINO (VO): The cadets were very impressive during the Field Training Exercise. They all had to lead other cadets.

They performed their learned skills in a field environment. And the
168. CADETS CONTINUING TO NEGOTIATE COURSE. seniors were even placed as instructors of certain stations. But most important the cadets seemed to have a lot of fun. It's not over

169. MS OF INSTRUCTORS EVALUATING CADETS, though. Colonel Oettinger's instructors will return to the headquarters and review the FTX, looking for ways to improve this exercise. They will also analyze the cadets performance

Special thanks to Ltc. Thomas Oettinger and the Orleans ROTC Battalion, Cpt. John Dwyer, Cpt. Kent Troy, Maj. William Darley, Shelly Turner, Baker Turner, Gerry Turner, Vester Wentzell, and the faculty and friends at the University of New Orleans. Without their assistance, this program would not have been possible.
This program is partially supported by the City of New Orleans through a Municipal Endowment Grant for cable television by the Office of Telecommunications and the Community Access Corporation of New Orleans.

MEMORANDUM FOR Commander 2-41 Public Affairs Detachment, Louisiana National Guard, Jackson Barracks

THRU Chief of Staff, Louisiana National Guard, Jackson Barracks Commander, Troop Command, Louisiana National Guard, Jackson Barracks

1. The purpose of this memorandum is to request the use of a PAD broadcasting team in support of a documentary on the ROTC program in the New Orleans area.

2. I am an active duty fully funded graduate student at the University of New Orleans. As my thesis project, I am producing a community relations documentary on the mission of the Orleans Battalion ROTC program. I would like to use the broadcast team for some shoots that are either in the field or require logistical needs that civilian broadcast camera agencies cannot provide.

3. Being a former S3 of a tank battalion and talking with the PAD Commander, I see this as an opportunity that could provide effective training for both the broadcast team and myself. The documentary will include information on the Louisiana National Guard, having the benefits for students who are seeking financial assistance in the educational experience.

4. Enclosed is a schedule of shoots required to complete this project. The shoots requested by the PAD broadcasting team are highlighted. If approved, further coordination would be pursued through the appropriate agencies.
5. For more information please contact me at 504/282/2048 or 601/467-9571. Thank you for your time and assistance.

J. Mark Turner  
CPT., ARMOR  
Student, USSD
Chief of Staff

Mr. John M. Turner
6575 Elysian Field Avenue
New Orleans, Louisiana 70122

Dear Mr. Turner:

We regret that we are unable to assist you in your endeavor at this time. Our broadcasters are currently involved in several projects during the periods cited that preclude their being committed to another engagement.

With the world situation such as it is, and the need to document events that are occurring with a minimum of advance notice, we are not able, at this time, to lend out our limited video equipment as it could be needed at a moment's notice.

Again, please accept our regrets. If we can be of assistance to you some time in the future please contact us again.

James K. Corley
Colonel, La. National Guard
Chief of Staff

(note: Orienteering is not being tested due to the nonavailability of suitable local terrain)

4. Special Instructions:

   a. Nine (9) man team, from each school, must be designated in advance and PT cards (DA Form 705) should be brought with each competitor’s NAME and SCHOOL FILLED OUT.

   b. Schools should bring no more than 12 students to the competition. Competitors, not in the top nine, will be allowed to participate in events, as time allows.
c. Coaches may be asked to help grade during the PT test only. SLU will provide all other supporting requirements so coaches may rotate with their teams. SLU will provide 22 Cal. as required.

d. PT test will be conducted in fatigue pants, T-shirt, and tennis shoes.

e. Teams should bring at least one (1) MRE for the lunch meal which will be eaten during the rotation. There is no lunch break.

5. Individual schools should bring Rope bridge kits, and Rubber M 16’s. All other requirements will be provided by SLU.

6. The event OIC is MAJ J. Strickland and the POC/Project Officer is CPT David Messer, (504) 549-2260/61.

7. Telephonic confirmation of this LOI is requested to CPT Messer or SFC Frankie Williams (504) 549-2260/2261

Camera Operator, Paul Combel with Producer Mark Turner

Plate 1
Host Toni Canino Interviews
CPT. Kent Troy

Plate 2
Producer Mark Turner Documents Canino's Interview with CPT. Hope

Plate 3
UNO Video Assists in the Production of New Leader

Plate 4
Mark Turner Discusses the Proposed Shooting Schedule

Plate 5
What To Do Next?

Plate 6
CPT. J. Mark Turner was born in Rome, Georgia in 1959. He graduated from Lakeview Academy in 1977. He attended Washington and Lee University where he graduated with a Bachelor of Arts degree in Drama and Communications in 1981 and was commissioned in the Army that same year. He was selected to attend the Army's Fully Funded Graduate Program where he is scheduled to graduate from the University of New Orleans in May 1991.
