Performance Oriented Packaging Testing of Polystyrene Foam Container for Various Submarine Location Markers

Kerry J. Libbert

Commander
Crane Division
Naval Surface Warfare Center
Code 4045
Crane, IN 47522-5040

A polystyrene foam container used for shipping and storage of five Submarine Location Markers was tested to Performance Oriented Packaging criteria established by the Code of Federal Regulations Title 49 CFR. The box was tested with a gross weight of 10 kilograms (22 pounds) and met all the requirements.
GENERAL INSTRUCTIONS FOR COMPLETING SF 298

The Report Documentation Page (RDP) is used in announcing and cataloging reports. It is important that this information be consistent with the rest of the report, particularly the cover and title page. Instructions for filling in each block of the form follow. It is important to stay within the lines to meet optical scanning requirements.

Block 1. Agency Use Only (Leave blank)

Block 2. Report Date. Full publication date including day, month, and year, if available (e.g., Jan 88). Must cite at least the year.

Block 3. Type of Report and Dates Covered. State whether report is interim, final, etc. If applicable, enter inclusive report dates (e.g., 10 Jun 87 - 30 Jun 88).

Block 4. Title and Subtitle. A title is taken from the part of the report that provides the most meaningful and complete information. When a report is prepared in more than one volume, repeat the primary title, add volume number, and include subtitle for the specific volume. On classified documents enter the title classification in parentheses.

Block 5. Funding Numbers. To include contract and grant numbers, may include program element number(s), project number(s), task number(s), and work unit number(s). Use the following labels:

- C - Contract
- G - Grant
- PE - Program
- TA - Task
- WU - Work Unit
- Element
- Accession No.

Block 6. Author(s). Name(s) of person(s) responsible for writing the report, performing the research, or credited with the content of the report. If editor or compiler, this should follow the name(s).

Block 7. Performing Organization Name(s) and Address(es). Self-explanatory.

Block 8. Performing Organization Report Number. Enter the unique alphanumeric report number(s) assigned by the organization performing the report.

Block 9. Sponsoring/Monitoring Agency Name(s) and Address(es). Self-explanatory.

Block 10. Sponsoring/Monitoring Agency Report Number (If known).

Block 11. Supplementary Notes. Enter information not included elsewhere such as:

Prepared in cooperation with... Trans. of... To be published in... When a report is revised, include a statement whether the new report supersedes or supplements the older report.

Block 12a. Distribution/Availability Statement. Denotes public availability or limitations. Cite any availability to the public. Enter additional limitations or special markings in all capitals (e.g., NOFORN, REL, ITAR).

DOD - See DoDD 5230.24, "Distribution Statements on Technical Documents."

DOE - See authorities.

NTIS - Leave blank.

Block 12b. Distribution Code.

DOD - Leave blank.

DOE - Enter DOE distribution categories from the Standard Distribution for Unclassified Scientific and Technical Reports.

NASA - Leave blank.

NTIS - Leave blank.

Block 13. Abstract. Include a brief (Maximum 200 words) factual summary of the most significant information contained in the report.

Block 14. Subject Terms. Keywords or phrases identifying major subjects in the report.

Block 15. Number of Pages. Enter the total number of pages.

Block 16. Price Code. Enter appropriate price code (NTIS only).

Block 20. Limitation of Abstract. This block must be completed to assign a limitation to the abstract. Enter either UL (unlimited) or SAR (same as report). An entry in this block is necessary if the abstract is to be limited. If blank, the abstract is assumed to be unlimited.
INTRODUCTION

This Performance Oriented Packaging (POP) test was performed to ascertain whether the polystyrene foam shipping and storage container for five Submarine Location Markers meets the Packing Group II requirements specified by the Code of Federal Regulations, Title 49 CFR, Parts 107 through 178, dated 31 December 1991. The objectives were to evaluate the adequacy of the container in protecting the hazardous materials.

The container consists of two identical halves held together by glass filament tape. The open container, with inert markers in place is shown in Figure 1. Figure 2 shows the container closed for shipment, as it was tested.

TESTS PERFORMED

1. Drop Test

This test was performed in accordance with Title 49 CFR, Part 178, Subpart M, Sec. 178.603. One container was used for each drop orientation. The drop height was 1.2 meters and the drop sequence was as follows:

   a. Flat on Bottom
   b. Flat on Top
   c. Flat on Long Side
   d. Flat on Short Side
   e. One Corner

The test was performed at ambient temperature (70°F ± 20°F). The contents of the container should be retained within its packaging and exhibit no damage liable to affect safety during transport.

2. Stacking Test

This test was performed in accordance with Title 49 CFR, Part 178, Subpart M, Sec. 178.606. Three different containers were used, each with a stack weight of 815 pounds. This represents the weight imposed on the bottom container of a sixteen-foot stack of like containers weighing 22 pounds. The test was performed for 24 hours. After the allowed time, the weight was removed and the container examined. Any leakage, deterioration, or distortion which could adversely affect transport or reduce its strength or cause instability in stacks of packages is cause for rejection.

3. Base Level Vibration Test

This test was performed in accordance with Title 49 CFR, Part 178, Subpart M, Sec. 178.608. Three sample containers were loaded with inert signals and closed as for shipment. Each container was placed on a vibrating platform that had a vertical double-amplitude (peak-to-peak displacement) of one inch. The

Figure 2. Polystyrene foam container shown closed for shipment, as tested.
packages were constrained horizontally to prevent them from falling off the platform, but were free to move vertically, bounce and rotate. The test was performed for one hour at a frequency that caused each point of the container bottom to be raised from the platform 1.6 mm. A 1.6 mm thick metal strip was passed between the bottom of the container and the platform.

PASS/FAIL

1. Drop Test

The criteria for passing the drop test is outlined in Title 49 CFR, Part 178, Subpart M, Sec. 178.603(f): A package is considered to successfully pass the drop test if for each sample tested, no rupture occurs which would permit spillage of loose explosive substances or articles from the outer packaging.

2. Stacking Test

The criteria for passing the stacking test is outlined in Title 49 CFR, Part 178, Subpart M, Sec. 178.606: No test sample may show any deterioration which could adversely affect transportation safety or any distortion likely to reduce its strength, cause instability in stacks of packages, or cause damage to inner packagings likely to reduce safety in transportation.

3. Base Level Vibration Test

The criteria for passing the Base Level Vibration Test is outlined Title 49 CFR, Part 178, Subpart M, Sec. 178.608: Immediately following the period of vibration, each package must be removed from the platform, turned on its side and observed for any evidence of leakage. A packaging passes the vibration test if there is no rupture or leakage from any of the packages. No test sample should show any deterioration which could adversely affect transportation safety or any distortion liable to reduce packaging strength.

TEST RESULTS

1. Drop Test

Satisfactory.

2. Stacking Test

Satisfactory.

3. Base Level Vibration Test

Satisfactory.
DISCUSSION

1. Drop Test

   After each drop the container was inspected for any damage which would be cause for rejection. The corner drop flattened the impact corner of the container, but there was no spillage of contents.

2. Stacking Test

   Three containers were individually tested. Each container was visibly inspected after the 24-hour period was over. There was no leakage, distortion, or deterioration to the container as a result of this test.

3. Base Level Vibration Test

   Immediately following the vibration test, each container was removed from the platform, turned on its side and observed for any evidence of leakage. All containers remained securely closed and there was no evidence of leakage of contents.

DATA SHEET

CONTAINER: Polystyrene Foam Container for Five Submarine Location Markers

Type: 4H1
UN Code: 1.3G

Specification Number: MIL-P-19644
Material: Polystyrene Foam

Gross Weight: 10 kg (22.0 pounds)
Dimensions: .55m L x .47m W x .13m H (21.62" L x 18.62" W x 5.00" H)

Closure (Method/type): Glass Filament Tape
Tare Weight: .8 kg (1.8 pounds)

Additional Description: Container consists of two identical halves in accordance with Drawing 10001-1332211.

PACKAGED COMMODITY: Submarine Location Marker
MK 21 Mod 0, L213, 1370-00-715-2412
MK 22 Mod 0, L212, 1370-00-715-2409
MK 23 Mod 0, L211, 1370-00-715-2411
MK 24 Mod 0, L210, 1370-00-715-2410

Proper Shipping Name: Signals, Distress
United Nations Number: 0195
United Nations Packing Group: II
Physical State: Solid
Amount Per Container: 5
Net Weight: 7.7 kg (17.0 pounds)

PACKAGED COMMODITY USED FOR TEST:
Name: Inert Signals
Physical State: Solid
Size: .47m L x .08m Dia (18.61"L x 3.36"Dia)
Quantity: 5
Net Weight: 9.2 kg (20.2 pounds)
