PREFACE

The XVI International Workshop on Condensed Matter Theories (CMT) was held in San Juan, Puerto Rico between June 1 and 5, 1992. It was attended by about 80 scientists from all over the world.

The Workshop was started in 1977 by V.C. Aguilera-Navarro, in Sao Paulo, Brazil, as the Panamerican Workshop on Condensed Matter Theories, to promote the exchange of ideas and techniques of groups that normally do not interact, such as people working in the areas of Nuclear Physics and Solid State Physics, Many Body theory, or Quantum Fluids, and Classical Statistical Mechanics, and so on. It had also the purpose of bringing together people from different regions of the Globe. The next CMT Workshop was held in 1978 in Trieste Italy, outside of America. But the next four met in the American continent: Buenos Aires, Argentina (1979), Caracas, Venezuela (1980), Mexico City, Mexico (1981), and St. Louis, Missouri (1982). At this time the scope and the participation had increased, and the name was changed to the 'International' Workshop in CMT. The 1983 edition took place in Altenberg Germany. The following CMT workshops took place in Granada, Spain (1984), San Francisco, California (1985), Argonne, Illinois (1986), Oulu, Finland (1987), Taxco, Mexico (1988), Campos do Jordao, Brazil (1989), Elba Island Italy (1990), and Mar del Plata, Argentina (1991).

There were 48 invited talks in this Workshop. In spite of the temptations of the beautiful beaches, the attendance was always large, and the discussions lively up to the last minute. We heard a number of outstanding lectures on solid state physics, density functional theory, diffusion limited aggregation, cellular automata, superconductivity, quantum fluids (Bose and Fermi liquids), theory of inhomogeneous classical fluids, nonequilibrium and equilibrium fluids, phase transitions, nuclear structure, lattices, as well as a number of excellent posters. We thank all the participants for their contributions.

The enthusiasm and support of the committee members has made this Workshop possible: We should mention in particular, A. Plastino, M. de Llano and B. Malik, who provided the necessary leadership. Locally, invaluable support was provided by the Centro de Recursos para la Ciencia e Ingenieria. We sincerely thank Dr. Manuel Gomez, its director for all the support, both financial and in logistics. Mrs. A.R. Catarich of the Centro did an excellent job in the organization. Mr. Osvaldo Rosario helped enormously

with the financial organization. Mr. Marc Legault, my graduate student was an invaluable help in the organization of the program, the meeting and the proceedings. We thank them all, very sincerely.

Financial support came from US Army Research Office, The Office of Naval Research, the EPSCoR program funded by the National Science Foundation, The National Science Foundation, University of Puerto Rico Río Piedras Campus and Baxter Laboratories.

INDEX

1 Solid State Physics, Superconductivity

1. Electronic Structure of Highly Correlated Systems
L.M. Falicov and J.K. Freericks

2. Some Recent Developments in Density Functional Theory
Walther Kohn

3. Short Range Structure and Dynamics of Metal Films
T.L. Ainsworth, E. Krotscheck and W.M. Saslow

4. Dynamic Mechanisms of Disorderly Growth
H.E. Stanley, S. Havlin, J. Lee and S. Schwarzer

5. Pairing and BCS Theory in an Exactly Solvable Many Fermion Model
C. Eсеbbag, M. de Llano and R. Carter

6. Correlations in Coupled Electron Layers
D. Neilson, L.S. Wierkowski and L. Szymanski

7. Mean Field Predictions of the Dilute tJ Model for High Temperature Superconductivity
J. W. Halley, S. Davis and X. F. Wong

8. Coulomb Coupling and Virtual Phonon Exchange in Spatially Separated 2D Electron Systems
P. Vasilopoulos and H.C. Tso

9. Exchange Energy: A Non-Local-Selfconsistent Quantal and Semiclassical Approach
A. Puente, M. Casas and H. Krivine

10. Bogolons in a Multicomponent Many Fermion System and the Energy Gap
M. Moreno, G. Carmona, R.M. Mendez Moreno, S. Orozco, M.A. Ortiz and M. de Llano

11. First Principles Electrostatic Potential of Impurities in Quantum Wells
F.R. Zypman

12. Crystalline Structures in the Deformable Jellium
S. Orozco, M.A. Ortiz and R.M. Mendez Moreno

13. Anisotropic Charge Density Waves in the Electron Gas
A. Calles, A. Cabrera, F Ramos-Gomez, M.L. Marquina, E. Yopez and J.J. Castro

2 Quantum Fluids

1. Recent Progress in the Variational Statistical Mechanics of Bose Fluids
C. Campbell
2. Density-Quasiparticle Interpretation of Excitations in Liquid ${}^4\text{He}$
H. R. Glyde
3. Trapping of Vortices by Impurities in ${}^4\text{He}$
M. J. Saarela and F. Kusmartsev
4. Unusual One-Electron States on the Surface of Liquid Helium
E. Bashkin
5. Excitations of the Surface of Liquid ${}^4\text{He}$
K.A Gernoth, J.W. Clark, G. Senger and M. L. Ristig
6. Magnetic Pairing Properties of Liquid ${}^3\text{He}$: A Density Functional Approach.
E. S. Hernández, M. Barranco and A. Polls
7. Quantum Thermodynamic Perturbation Theory for Fermions
M.A. Solís, R. Guardiola and M. De Llano

3 Nuclear Physics

1. Nucleonic Superfluid
John W. Clark, R.D. Davé and J.M. C. Chen
2. Energy Density Functional Formalism and Nuclear Fission
I. Reichstein and F. Bary Malik
3. Fine Approach to Finite Nuclei
Adelchi Fabrocini
4. Ab Initio Treatments of Spin Lattice Models and/or Lattice Gauge Field Theories: New Laboratories for Microscopic Quantum Many-Body Theory
Raymond F. Bishop
5. Physical Region of an Equation of State
George A. Baker Jr. and J.D. Johnson
6. Cluster Expansions and Variational Monte Carlo in Medium Light Nuclei
E. Buendía and Rafael Guardiola
7. Quantum Statistical Inference
Richard Silver
8. Information Theory Based Variational Approach to Correlated Fermion Lattices
L. Arraechea, N. Canosa, A. Plastino and R. Rossignoli

9. **Maximum Entropy Variational Approach to Collective States**
N. Canosa, R. Rossignoli and A. Plastino

10. **Time-dependent N-Level Systems**
J. Aliaga, J.L. Gruver and A. N. Proto

4 Atoms and Molecules

1. Atoms in Molecules
N. Georgopoulos and J. K. Percus
2. Density-functional Theory of Large Systems: A Divide-and-Conquer Approach
Weitao Yang
3. The Exchange-only Self-consistent Field Procedure in the Local Scaling Version of Density Functional Theory: Some Theoretical and Practical Considerations
E.S. Kryachko, E. V. Ludeña, A.R. Lopez Boada and J. Maldonado.
4. Fock-Space Coupled Cluster Method
Uzi Kaldor

5 Classical Fluids, Polymers, Plasmas

1. Liquids State Theory for Some Non-Equilibrium Processes
J. A. Given and G. Stell
2. New Free Energy Models for Non-Uniform Fluids
Y. Rosenfeld
3. Statistical Mechanics of Inhomogeneous Fluids
D. J. Henderson
4. Fluids of Hard Convex Molecules
M.S. Wertheim
5. Statistical Mechanics of Fluids at High Dimensions
H. L. Frisch
6. Molecular Simulation of Vapor-Liquid Equilibrium in Mixed Solvent
Electrolyte Solutions
P. T. Cummings
7. Strongly Coupled Coulomb Systems
G. J. Kalman (Missing MS!!!)
8. Solvation Dynamics in a Stockmayer Fluid
L. Perera and M. Berkowitz
9. Polar/Non-Polar Fluid Mixtures
S.W. De Leeuw

10. Topological Field Theory of Polymer Entanglement
A. Kholodenko
11. Elasticity of a Self-Avoiding Polymer
K.A. Dawson and D. Bratko
12. Defect Diffusion With Drift and the Kinetics of Reactions
C. A. Condat and E. Ulloa
13. Flexibility of Polysaccharides Using Molecular Dynamics
J. R. Grigera, C. Donnataria and E.I. Howard
14. Simple Models of the Intermolecular Potential for the Condensed Phases
of C_{60}
Z. Gamba and M.L. Klein
15. A Modified BGY Equation for Classical Fluids
J.A. Hernando and Z. Gamba
16. A Modified Poisson Boltzmann Treatment of an Isolated Cylindrical
Electric Double Layer
L.B. Bhuiyan and C.W. Outhwaite
17. Theoretical Calculation of the Optical Absorption of Fractal Colloidal
Aggregates Using a Multiple Scattering Formalism
L. Fonseca, L.Cruz, W. Vargas and M. Gómez
18. Recent Theoretical Developments in the Analysis of the Viscoelastic
Behavior of Materials
F. Povoio and E.B. Hernida

6 Lattice Theories, Phase Transitions

1. Line-tension at Wetting and Pre-Wetting Transitions
Benjamin Widom
2. Interfacial Phase Transitions Underlying Amphiphile Micellar Self-Assembly
A. Robledo and C. Varea
3. Hot-solid Properties From Liquid Structure Within Density Functional Theory
M.P. Tosi
4. Highly Asymmetric Electrolyte Suspensions in the Primitive Model
G. Senatore and G. Pastore
5. Computational Lattice-Gas Modeling of Oxygen Ordering and Structural Phase Transitions in $YBa_2Cu_3O_{6+x}$
P.A. Rikvold and M.A. Novotny
6. Phase Transitions at the Fluid-Solid Interface in a Model for the Adsorption of Hard Spheres
D.A. Huckaby and L. Blum
7. Ferromagnetic-Paramagnetic Phase Transition in a Random Bond Potts Model
M.A. Bautista, R.E. Rangel and P. Taylor

7 Cellular Automata

1. Cellular Automata and Spread of Damage: General Considerations and a Recent Illustration
C. Tsallis

8 Fundamental Quantum Mechanics

1. Hannay Angle in Classical Mechanics and its Gauge Invariant Generalization
D. Kobe
