### Abstract (Maximum 250 words)

The objectives of Task 37 are to locate, examine, and properly close wells on RMA that may be allowing, or could potentially allow, migration of contamination from upper aquifers to deep aquifers. The technical approach was structured in such a way that unused wells were closed on a prioritized basis according to potential to adversely impact deep aquifers. The study area was limited to those areas of RMA that are within or downgradient of potential sources of contamination. A total of 39 wells were closed under Task 37. Closure methods followed standard procedures in current use.

Information in this report includes:
1. Criteria for prioritization
2. Procedures for closure
3. Well location and coordinates
4. Well logs
5. Well closure logs.

### Information in this Report Includes:

- Criteria for prioritization
- Procedures for closure
- Well location and coordinates
- Well logs
- Well closure logs.
