I. REPORT NUMBER: DOD POP HMTR/AYD 94-002

II. TITLE: Performance Oriented Packaging Report for M83, M125, and M128 Electric Primers

AUTHOR: Bill Ingold

PERFORMING ACTIVITY: ARDEC

ADDRESS: Department of the Army
ARDEC, SMCAE-AEP
HQ, U.S. Army Armament, Munitions, and Chemical Command
Picatinny Arsenal, NJ 07806-5000

DATE: 10 Jan 94

Approved for public release; Distribution is unlimited
1. DATA SHEET

CONTAINER

Type: Box
UN Code: 4C1
Nomenclature: BOX, PACKING

BOX, PACKING, AMMUNITION FOR PRIMER ELECTRIC M83

Specification Number: Type I, Grade C, Class 1, Mil-B-2427
Drawing Number: 12527224 and 8847546
Material: Wood
Gross Weight: 78 pounds
Outside Dimensions: 26 5/16" x 15 5/8" x 7 7/32"
Inside Dimensions: 23 13/16" x 14 1/16" x 4 13/16"

PRODUCT

Name: M83, M125, and M128 Electric Primers
Drawing Number: N/A
United Nations Number: Various
Physical State: Solid
Amount per Container: 45 - ELECTRIC PRIMERS

2. BACKGROUND, TESTS, AND RESULTS
Reference the following document:
a. 49 CFR, October 1, 1993 Edition

A Stacking Test was conducted on three containers with a weight of 1,326 pounds per container for 24 hours. This weight exceeds the minimum requirement for a 10' stack height which is 1,248 pounds.

A Loose Cargo Test was conducted on three containers for one hour. The packages were tested at a vibration table frequency such that the bottom of the packages were raised 1/4" from the platform, which exceeds the requirement of 1/16".

A Four Foot Drop Test was conducted on one container that was subjected to Loose Cargo Test. The one container was dropped five times at four feet at the following orientations: top, bottom, long side, short side, and a top corner at the closure. This exceeds the requirement of one drop per container at four feet.

Test results indicated no leakage or spillage of the contents from the containers following any of the tests conducted, meeting the requirements of the 49 CFR.
