Public reporting burden for this collection of information is estimated to average 1 hour per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. Send comments regarding this burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden, to Washington Headquarters Services, Directorate for Information Operations and Reports, 1215 Jefferson Davis Highway, Suite 1204, Arlington, VA 22202-4302, and to the Office of Management and Budget, Paperwork Reduction Project (0704-0188), Washington, DC 20503.
This is a pivotal time for the Army and the Training and Doctrine Command. Momentous changes in the strategic landscape, changes in our nation, and changes to our force structure present challenges and opportunities for all of us to accomplish the missions required of the U.S. Army. The business of TRADOC is to meet these challenges by identifying, developing, and fielding capabilities which are the right combinations of Doctrine, Training, Leader Development, Organizations, and Materiel to support our Soldiers. Following are some of the Army/TRADOC initiatives that will impact on the Army, our soldiers, and organizations in the not too distant future.

GENERAL WILLIAM W. HARTZOG
COMMANDER
U.S. ARMY TRAINING AND DOCTRINE COMMAND
DOCTRINE

The Army’s doctrine lies at the heart of its professional competence. It is the authoritative guide to how Army forces fight wars and conduct operations other than war. Never static, always dynamic, the Army’s doctrine is firmly rooted in the realities of current capabilities. At the same time, it reaches out with a measure of confidence to the future. Doctrine captures the lessons of past wars, reflects the nature of war and conflict in its own time, and anticipates the intellectual and technological developments that will bring victory now and in the future.

ARMY DOCTRINE

FM 100-5, Operations: The latest version of 100-5 was published on the Army’s 218th birthday, June 14, 1993. As the Army’s keystone manual, it focuses on warfighting, yet it addresses the full range of conditions within which the Army will operate. TRADOC has developed and fielded an education package containing teaching points on new concepts as they pertain to illustrated historical examples used in FM 100-5. The education package contains a CD-ROM disk, 35mm slide presentation, and video tape. TRADOC has distributed the education package down to division level with sufficient copies for each brigade-size unit. Contact or write Joint Visual Information Activity, Warehouse 3, Bay 3, Tobyhanna Army Depot, Tobyhanna, PA 18466-5102, DSN: 795-7937, COMM: (717) 894-7937, FAX DSN: 795-6106 for a copy of the education package.

FM 100-7, Decisive Force: The Army in Theater Operations: The Army’s capstone manual for conducting operational level activities linking tactical level actions to theater objectives. This manual describes the requirement for the Army Service Component Commander (ASCC) to conduct the three strategic and operational level roles: establish joint, combined, inter-agency, nongovernmental agencies, and private voluntary organization linkages; conduct support operations; and conduct operations. (To be published 3rd QTR FY95.)

FM 100-8, The Army in Multinational Operations: Will be the Army’s capstone manual for conducting multinational operations. This manual addresses multinational command and leadership considerations. Discusses factors effecting planning, describes possible coalition/alliance command structures, and describes functional considerations for the commander at the operational and tactical level. (To be published 4th QTR FY95.)

FM 100-10, Logistics Operations: Depicts the Army logistics organizations and describes how they support commanders at all echelons by integrating supply, transportation, maintenance, health services, personnel support, and field services. Provides the basis for subordinate logistics doctrine, materiel, training, and organizational development. (To be published 3rd QTR FY95.)

FM 100-12, Army Theater Missile Defense Operations: This manual will describe roles, responsibilities, requirements and functions for each of the operational elements of TMD. The manual will be developed to comply with approved joint doctrine and will address the threat, active and passive defense, attack operations and C4I. Emphasis will also be given to integration of Army TMD efforts throughout the theater of war. (To be published 4th QTR FY96.)
**FM 100-13, Battlefield Coordination Element:**
This capstone manual will provide a current single source document addressing doctrine, organization, training, material, leadership, and soldier support for the Battlefield Coordination Element. (To be published 3rd QTR FY 96.)

**FM 100-15, Corps Operations:** The new FM 100-15 will bring corps doctrine in line with current Army doctrine. The central focus of the manual will be warfighting. The manual also will address force projection operations in war and operations other than war and the structure of the battlefield and battle command of the corps. Finally, it will delineate battlefield responsibilities in the joint environment, to include operations as a JTF/ARFOR headquarters. (To be published 4th QTR FY 95 or 1st QTR FY 96.)

**FM 100-16, Army Operational Support:** This manual addresses operational level logistics and support functions - CONUS through theater level. It specifically addresses the operational commander's vision of support; keys to operational support; theater organization and structure, operational level CSS functions; operational level support functions and force protection and rear operations. FM 100-16 also reflects the current Army focus on contingency operations and force projection. (To be published 3rd QTR FY 95.)

**FM 100-17, Mobilization, Deployment, Redeployment, and Demobilization:** The manual is a guide for Army commanders and planners. It provides doctrine across the range of military operations for the development of Army policy for planning and executing mobilization, deployment, redeployment, and demobilization (MDRD) operations. The manual describes the process used to mobilize, deploy, redeploy, and demobilize Army elements. Through the use of the required assets (force/units, manpower/individuals, facilities, and logistics), this definitive process implements effectively and efficiently operational plans in support of the national military strategy. (To be published 4th QTR FY 95.)

**FM 100-17-1, Army Pre-positioned Afloat:**
This manual describes Army War Reserve-3 (PREPO AFLOAT) operations to include missions, capabilities, command relationships, communications, and security. It discusses the organization, responsibilities, and command relationships ranging from the National Command Authorities, Joint Chiefs of Staff, Combatant Commander (CINC), to the Brigade Commander performing the PREPO AFLOAT mission. (To be published 3rd QTR FY95.)

**FM 100-18, Space Support To Army Operations:** Will be the Army's capstone manual on how to use space system capabilities to enhance mission accomplishment across the full range of military operations to include operations other than war. It emphasizes enhancements offered by space system in communications; reconnaissance, intelligence, surveillance, and target acquisition (RISTA); weather, terrain, and environmental monitoring, position and navigation; and missile warning. This manual provides a foundation for leader development, training, and space-related modernization initiatives that support the Force XXI Army's missions and provides soldiers with a decisive advantage worldwide. It is relevant from the highest levels of command to the soldier in the foxhole. (To be published 3rd QTR FY 95.)

**FM 100-19, Domestic Support Operations:**
Describes the concept, interface, and process of providing Army assistance to U.S. civil authorities. It serves as a reference for service and professional military education and includes mandated and legislated requirements. It includes considerations and principles for command and staff planning and execution. FM 100-19 incorporates lessons learned from numerous operations and recognizes the requirements dictated by the National Military Strategy. Coordination with DA staff, TRADOC, MACOMs, CINCs, joint staff, and federal, state, and local governmental agencies is being conducted to ensure harmonized actions. Finally, this manual emphasizes the linkages of interagency operations and missions. (Published 4th QTR FY 93.)

**FM 100-23, Peace Operations:** Provides guidance to commanders for conducting the full range of missions in support of international peacekeeping and peace enforcement efforts. This manual addresses the special requirements of these operations, to include planning, force tailoring, command, control, coordination, liaison, logistics and intelligence. It also reviews the
unique operational environment of peace operations, including United Nations and non-
United Nations' operations, as well as the requirements for operations in the interagency
arena and with multinational forces and non-
governmental organizations. It applies the
principles of operations other than war and
tenets of Army operations to peace operations
and examines the variables of consent, use of
force, and impartiality. (Published 1st QTR FY
95.)

**FM 71-100. Division Operations:** This manual
dresses tactical operations of the division in
war and operations other than war. Focus is on
division deployments and war fighting. It will
apply new concepts addresses in FM 100-5 to
division operations. The new FM 71-100 will be
integrated both vertically and horizontally with
recently written field manuals such as FM 101-5,
Staff Organization and Operations; and TTP
manuals FM 71-100-1, Armor and Mechanized
Division Operations, FM 71-100-2, Infantry
Division Operations, FM 71-3, The Armored
and Mechanized Brigade and FM 7-30, The Infantry
Brigade. (To be published 4th QTR FY 95 or 1st
QTR FY 96.)

**FM 71-3. Armored and Mechanized Infantry
Brigade:** The U.S. Army Armor Center is
proponent for this manual. They are writing it in
concert with the U.S. Army Infantry Center and
School. The latest version of FM 71-3 incorpo-
rates new Army doctrine reflected in the 1993
edition of FM 100-5. The manual will include
documents, and tactics techniques and procedures
for armored and mechanized brigades in
conducting operations across the entire range of
military operations. (To be published 4th QTR
FY 95.)

**FM 71-2. Tank and Mechanized Infantry
Battalion Task Force:** The U.S. Army Infantry
School is lead for this manual; co-proponent is
U.S. Army Armor Center. The revised FM 71-2
will incorporate new Army doctrine reflected in
the 1993 version of FM 100-5. The focus of this
manual will be warfighting with considerations for
operations other than war. It will provide TTP for
employment of force as it exists and will provide
appendices for digitization of the tank and
mechanized infantry battalion task force. (To be
published 4th QTR FY 96.)

**FM 71-1. Tank and Mechanized Company
Team:** The U.S. Army Armor Center is lead for
this manual; co-proponent is the U.S. Army
Infantry School. Revised FM 71-1 will provide
tactics, techniques and procedures for the M1A2
and Bradley company/team. It will refine mission
profiles and provide TTP for heavy/light link-up
and operations with task force scout platoons.
Data collection is ongoing; manual revision is
programmed to begin upon publication of FMs
71-2 and 71-3. (POC Army Doctrine: COL
Baldwin, DSN 680-3080/PROFS: BALDWINR)

**JOINT DOCTRINE IMPLEMENTATION**

**JP 3-0. Doctrine for Joint Operations:**
TRADOC has written 12 joint publications that
the joint staff has approved and published. The
most significant of those is JP 3-0. It is the joint
keystone operations equivalent of FM 100-5 and
affects most other important pubs in the joint
system. (Published 4QTR FY93.)

**JP 3-07. Joint Doctrine for Military Opera-
tions Other Than War:** Expands the discuss-
sions in JP 3-0 of the principles and consider-
ations associated with joint operations below the
level of large scale, sustained combat operations
(To be published 3Qtr FY 95.)

**JP 3-07.3 JTTP for Peace Operations:**
Expands work done in the previously approved
JP 3-07.3, to include Peace Enforcement and
Support to Diplomacy. Publication of the
Program Directive (PD) from J7, Joint Chiefs of
Staff tasking the US Army as lead agent is
expected by May 1995. (Approval of publication
expected to be established as FY 96.)

**JP 3-07.6 JTTP for Foreign Humanitarian
Assistance:** Provides procedures to be used by
joint forces in conducting humanitarian
assistance in foreign areas overseas. Describes
interfaces between the joint task force with non-
governmental organizations (NGOs) and private
voluntary organizations (PVOs) likely to be
operating in such areas. (To be published 3rd
Qtr FY 97.)

**JP 3-07.7 JTTP for Domestic Support
Operations:** Provides procedures to be used by
joint forces in conducting support within the
continental US, Alaska and Hawaii, and
territories and possessions. Applies to major
categories of Support to Civil Authorities and Support to Law Enforcement. (To be published 2nd Qtr FY 97.)

JP 3-09. Doctrine for Joint Fire Support: Clarifies relationships and responsibilities for those fires that assist land and amphibious forces to maneuver and control territory, populations, and key waters. Included are discussions on issues such as FSCL, Joint Targeting Coordination Board (JTCB), and relationships between air, land, and sea components. JP 3-09 will support a series of pubs such as JP 3-09.1, Joint Laser Designation Procedures, JP 3-09.2, JTTP for Radar Beacon Operations and JP 3-09.3, JTTP for Joint CAS. (To be published 4QTR FY95).

JP 3-18. Joint Doctrine for Forcible Entry Operations: Provides guidance concerning joint forcible entry operations. This publication addresses forcible entry principles concerning C2, planning, execution, and support, as well as the interface between airborne, special operations forces, and naval expeditionary forces (amphibious forces). (To be published 4QTR FY 95.)

JP 3-18.1. Joint Airborne and Air Assault Operations: Provides guidance on employment of airborne and air assault forces. This publication integrates existing Service doctrine into a single source publication that addresses principles of C2, planning, execution, and support requirements involving airborne and air assault operations. (To be published 4QTR FY95.)

JP 3-56. Command and Control Doctrine for Joint Operations: This pub sets forth principles, doctrine, and military guidance for establishing command and control in joint operations. Included are discussions on the joint chain of command, command relationships, organizing the joint force, and service component contributions to the joint force. (Proposed final pub to be submitted 3QTR95.)

the National Security, National Military Strategy, Principles of War, Combat Power Model, and Battle Dynamics and a further analysis of the implications of these concepts and ideas. Information gathered during exercises, symposiums, conferences, and critiques will lead to a possible revision of TRADOC Pam 525-5 as early as the first quarter of FY 96. (POC COL Starry, DSN: 680-4126/PROFS-STARRYM.)

INTELLIGENCE

TRADOC Pam 350-12 thru 17, Heavy/Light Opposing Force (OPFOR) Handbooks: are undergoing conversion for publication as the FM 100-60 series. The TRADOC Pamphlets 350 series is fielded for interim implementation until publication of the FM3s. The FM3s are:

FM 100-60, Heavy Opposing Force Organization Guide: This manual breaks from past traditions of focusing on one country and provides a flexible capabilities-based heavy opposing force model that represents various countries. It is not a fixed order of battle, but it provides the building blocks to derive a heavy force order of battle. It is fully adaptive to the training needs of the force projection Army. (To be published 4QTR FY95.)

FM 100-61, Heavy Opposing Force Operational Art: This manual provides the Army with an operational overview of the heavy capabilities-based opposing force. It contains military thought, strategic operations, offensive and defensive operations, troop control, reconnaissance, artillery, NBC and Smoke, air defense, engineer, logistics, airborne and special purpose forces. (To be published 2QTR FY96.)

FM 100-62, Heavy Opposing Force Tactics: This manual provides the Army with a tactical overview of the heavy capabilities-based opposing force. It contains combat formations, troop control, march, reconnaissance, offensive and defensive tactics, fire support (artillery, antitank, air and air defense) NBC and Smoke, engineer, logistics, and radioelectronic combat. (To be published 1QTR FY96.)

FM 100-63, Light Opposing Force Organization Guide: This manual breaks from past traditions of focusing on one country and provides a flexible capabilities-based light opposing force that represents various countries. It is not a fixed order of battle, but it provides the building blocks to derive a light forces order of battle. It is fully adaptive to the training needs of the force projection Army. (To be published 4QTR FY95.)

FM 100-64, Light Opposing Force Operations and Tactics: This manual provides the Army with an operational overview and the tactics of the light capabilities-based opposing force. It contains military thought, organization for combat, combat operations, airborne and air assault operations, naval operations and amphibious landings, partisan operations, logistics, engineer, and rear area operations. (To be published 3QTR FY96.)

FM 100-65, Opposing Force Equipment Guide: This manual provides a description and the capabilities of various types of military and related equipment available on the world arms market. (To be published 2QTR FY96.)

FM 100-66, Operations Other Than War Opposing Forces: This manual provides a broad range of conventional and unconventional military threats the Army may face in an operation other than war (OOTW) environment. It will allow the user to select a specific level of OOTW opposing force or tactical environment to meet the training needs of the force (e.g., it will not address disaster relief operations where no opposing force is present.) The manual will describe non-mechanized small unit operations (battalions and below) and continue to the lowest level of the military spectrum: guerrilla forces. (To be published 4QTR FY96.) POC - CTC Support Branch, LTC Jeff Dunham, DSN 680-5419, PROFS DUNHAMJ

INTERNATIONAL ARMY PROGRAMS

In support of the National Military Strategy and to enhance the U.S. capability for multinational operations, TRADOC remains extensively involved in international activities with allied and friendly armies. Involvement includes bilateral staff talks and conferences with 11 armies, participation in approximately 40 multinational working parties, and several Subject Matter Exchanges (SMEE) with the armies of Japan, Latin America, and European nations. A total of five SMEES are scheduled during the second
quarter, FY95. During this period, TRADOC will also conduct steering committee meetings with the United Kingdom, Canada, Italy, and host several visits of foreign military dignitaries. Additionally, this headquarters will provide doctrinal support to USAREUR and FORSCOM as they prepare for peacekeeping exercises with the Ukrainians and Russians, respectively, late this year. (POC: IAPD COL Whittenberg, DSN 680-2741, PROFS WHITTENS)

TRAINING

Our challenge is to maintain the essence of our education and training system, the Army University, not the pieces. This means a quality school system, but not necessarily at the current locations. Our training strategy must utilize the best combination of live, virtual and constructive simulations and simulators. This strategy must unite the many ongoing efforts into a clear, coherent vision to produce trained and ready units in the environment of the next century. Some of our efforts in that direction follow.

The Total Army School System Coordinating Activity (TASSCA) is responsible within TRADOC for the implementation of TASS. In August 1992, TRADOC closed out the data gathering phase of its campaign with a briefing to the CSA. The CSA’s guidance: “TRADOC will lead, with the support of FORSCOM, NGB, and OCAR, the effort to establish a first-rate, cohesive and efficient Total Army School System of fully accredited and integrated AC, ARNG, and USAR schools capable of providing standardized individual training and education for the Total Army.” TRADOC briefed the CSA again in December 1992. The CSA expressed his view that FAST was on the right path to a Total Army School System and approved the following recommendations: An immediate moratorium on creation of new training institutions and courses. Effective January 1993, TRADOC is the sole accrediting authority for institutions conducting training for which TRADOC is proponent.

Beginning in January 1993, TASSCA established and began testing a prototype Total Army School System model in TASS Region C, which included North Carolina, South Carolina, Georgia, Florida, Puerto Rico, and the U.S. Virgin Islands. In a message dated December 1993, Subject: Total Army School System GOSC, the CSA said, "My expectation is that, ultimately, the component of the school and/or instructor will be transparent to the student. Additionally, I believe that we are making leader development more accessible and less expensive, and that we are making important strides in the integration of America's Army." On 31 October 1994, the CSA advised the CG, TRADOC, "You must pursue the work of TASS ... I want to see more active duty soldiers attend 'reserve' schools." A series of five General Officer Steering Committee (GOSC) meetings, chaired by the DCG, TRADOC, have been held.
during the past year. A Rump GOSC was conducted 28 October 1994 to solidify staff recommendations for the final shape of TASS. The Rump GOSC recommendation (seven TASS regions) was staffed to the CG, TRADOC. CG, TRADOC provided those recommendations to the CSA. GOSC V was conducted 22 February 1995.

A provisional TRADOC Coordinating Element (TCE) is standing up at Fort Monroe, VA. The TCE will become operational 1 October 1995. An overarching Total Army TCE will become operational 1 October 1995. An overarching Total Army School System (TASS) Operations Plan has been developed and distributed to implement the system nationwide. A provisional TRADOC Regional Coordinating Element (RCE) is operational at Leesburg Training Site, Fort Jackson, South Carolina. The RCE's job is to ensure functional alignment of the Reserve Component Training Institutions (RCTIs), maintain standards by ensuring adherence to policies, and effect coordination to resolve issues at the regional level. They will assist the RCTIs in their transition to school brigades and school battalions thus creating a direct linkage to TRADOC. Seven RCEs are in process of standing up for operation 1 October 1995. The RCEs are to be located at Fort(s) Jackson, Knox, Sill, Lewis, McCoy, Devens, and Lee. Each RCE will have ten full-time personnel (AC/USAR/ARG). Full TASS implementation begins in FY96. (POC - LTC Armstrong, DSN 680-5579/PROFS MON1 (ARMSTROJ))

Gender Integrated Training (GIT): In October 1994 Forts Jackson and Leonard Wood began executing gender integrated Basic Combat Training (BCT) or GIT, as it has become known. Under GIT, female soldiers no longer attend BCT in all-female companies. Female soldiers are now intermixed with males in gender integrated companies (optimum mix 75% male/25% female). The BCT Program of Instruction (POI) and standards have not changed. TRADOC has formed a Steering Committee headed by CG, Ft Jackson, consisting of representatives from Forts Jackson and Leonard Wood, Ft Benning (BCT Proponent), Army Research Institute (ARI), HQ, TRADOC, and HQDA, ODCSOPS to monitor GIT implementation during this first year and develop recommended policy adjustments needed for successful long term implementation.

In support of Steering Committee objectives, ARI will conduct a spring study at Ft Leonard Wood and a summer study at Ft Jackson. The committees' final report to HQ TRADOC will be submitted in Dec 95 with any policy adjustments taking place in FY 96. (POC - CPT Taylor, DSN 680-5626/PROFS MON1(TAYLORR1))

Military Training Structure Review (MTSR): In January 1993 the Services Interservice Training Review Organization (ITRO) initiated a three-year, Joint Chiefs of Staff supported, review of all initial skills training to eliminate training duplication and create savings. During calendar year 1993, Services consolidated Calibration, Helicopter Maintenance and Water Survival training. Services are now implementing the following consolidations/collocations approved in 1994: Welding - Army and Marine Corps at Aberdeen Proving Ground (APG), MD; Food Service - Army and Marine Corps at Fort Lee, VA; Civil/Construction Engineer - six sites/all services. Army sites are: Fort Leonard Wood, MO and APG, MD. In addition:

- Navy has moved Corrections Training from Fort McClellan, AL to Lackland AFB, TX
- Army, Air Force, and Marine Corps are continuing plans to consolidate/collocate Motor Vehicle Operator Training at Fort Leonard Wood, MO in late FY 96.
- Army/Marine Corps are implementing cost effective changes to the consolidated Petroleum courses at Fort Lee, Va (POC - Mr. Shepherd, DSN 680-5645/PROFS MON1(SHEPHERE))

Warfighter XXI (formerly Army Training XXI): Today's Army is facing new challenges - information age warfare on the digital battlefield, expanding roles and missions for a power projection Army, and operational TEMPO. Simultaneously, the Army is drawing down and restructuring the force. All of these actions contribute to dangerous levels of turbulence and indicate a need for a new Army training strategy. Warfighter XXI (WF XXI) is TRADOC's strategy for individual, thorough Joint Task Force level training, utilizing the best combination of live, virtual, and constructive environments to train the Army of the 21st century. While individual level is included in the strategy, the primary focus is unit collective training.
The five components of the WF XXI campaign plan are: the Standard Army Training System (SATS); Training Support Packages (TSP); Training Aids Devices, Simulations, and Simulators (TADSS); the Standard Army After Action Review System (STAARS); and the Army Training Digital Library (ATDL). SATS (under development by the Army Training Support Center) provides an automated training management system designed to enhance the planning, resourcing, execution and assessment of battle-focused training for the unit and institutional commander. TSPs (brigade and battalion TSPs are under development by the Force XXI Training Program) provide an automated, structured situational training template that generates training events for unit and institutional commanders. TADSS (under development by the Army Training Support Center) provides integrated, effective tools for the unit and institutional commander to efficiently conduct training. The STAARS provides a standardized, automated storage and distribution system giving the unit and institutional commander a training assessment and resource tool and the Army a doctrinal based information collection system. The ATDL (under development by the Army Training Support Center) stores the data and provides unit and institutional commanders access to data from many information sources necessary to plan, resource, execute, and assess training.

The first semi-annual WF XXI conference, held 27 February through 3 March 1995, was a great success. The second conference will be held in late July or early August to work issues developed at the first conference. Expect WF XXI Campaign Plan (version 3) will be distributed in June 1995. (POC - COL Marlin, DSN 552-4498/3919/PROFS LEA1(MARLIND))

**Operations Group Delta - JTF Training:** Battle Command Training Program (BCTP), Operations Group D is tasked with the mission to prepare Army organizations for joint command and control roles. They work closely with Army service component commanders and Warfighting CINCs to bring the rigor of BCTP to joint exercises, in which an Army organization is acting as a JTF or ARFOR HQs. The primary training audience is the corps in a joint role, but divisions and ad hoc joint organizations have been supported. The team is capable of providing home station seminars, support to exercises, and support to operational missions. (POC - LTC Weith, DSN 680-5747/PROFS MON1(WETHG))

**Distance Learning:** The application of Multiple Means and emerging technologies to deliver standardized training (Individual, Collective, and Self Development) at the right place and the right time. It is being applied to a full range of Terminal Learning Objectives, for both leadership as well as technical skills. Multimedia applications include Video Teletraining, Computer Based Instruction, Asynchronous Computer Teleconferencing, Video Tape, and Paper Based Training Products. Initial applications of this new technology can be found in the Region C - FAST Pilot Program (FY94-95), CMF Training for the RC at Ft Knox, 13 CMF Training for the RC at Ft. Sill, NCOES Enhancement for the RC at Ft Bliss, and Language Sustainment Training at DLI. (POC - Mr. McCarthy, DSN 680-5536/PROFS MON1(MCCARTHP))

**Classroom 21:** Classroom 21 will be a modernized classroom electronically networked and capable of assessing digitized training materials, archived materials, and information from unlimited sources. It will possess the ability to bring the battlefield into the classroom through video teletraining, computers, simulations and simulators. Students will be able to participate in horizontally and vertically integrated training scenarios and courses with soldiers from other Army schools, CTCs, units, as well as units with OOTW missions and eventually other services. Military training in the Sinai is an example of this application where three TRADOC schools are broadcasting resident training to our peacekeeping soldiers in the Sinai. (POC - Ms. Moore, DSN 680-5542/PROFS MON1(MOOREM))

**Training Aids, Devices, Simulations, and Simulators (TADSS):** Current efforts continue to focus on the integration of system and nonsystem TADSS requirements to achieve a balanced investment strategy across the Battlefield Operating Systems in support of Force XXI training needs. Warfighter XXI forms the baseline for defining the synthetic training environment end state to be used in re-validation and prioritization of current and future TADSS
requirements. During the transition period (now through FY00), training will be conducted primarily through the use of linked Distributed Interactive Simulation compliant/compatible TADSS. However, developing embedded training capabilities TADSS. However, developing embedded training capabilities in future weapon and command and control systems which enables seamless interoperability between live, virtual, and constructive simulations is key to attaining the required end state of a true synthetic training environment. (POC - Mr. Ronnenberg DSN 927-2446/PROFS EUS1 (RONNEBED))

LEADER DEVELOPMENT

"Today's Army is growing into the future precisely because we have invested the time, money, human ingenuity, and hard work in leader development over nearly two decades. As we grow we must retain the essence of our leader development process - its warfighting focus. The basics must come first: troop leading procedures; the command estimate process; and intelligence preparation of the battlefield, to name a few." These thoughts from GEN Sullivan will focus our efforts in the future. We will strive to maintain the finest leader development system in the world in all areas. Some key initiatives are:

**Common Core:** Common core, common military, and directed/mandated training are being incorporated into a single task list for each leader development course. This common core revision project consist of four phases; Phase I is the development of vertically aligned common core task lists. Phase II is the horizontal alignment of tasks across officer, warrant officer, and noncommissioned officer courses and the approval of common core task lists. Phase III is the revision/development of task summaries and training support packages/products (TSP) and training implementation. Phase IV is the conversion of TSP and task summaries to CD-ROM. Training will be developed and implemented by levels. First priority is entry/platoon level - PLDC, BNCOC, ANCOC, WOCS, WOBC, and OBC. Second priority is company level - FSC, WOAC, and OAC. Third is battalion level - BSNCO, WOSC, CAS3, and CGSOC. The goal is to implement training 1 Oct 96. (POC - Mr. Ligon, DSN 680-5661/PROFS MON1 (LIGONJ))

**Nine Month Sergeants Major Course:** This expanded course begins in Aug 95 and increases emphasis on warfighting and logistics (battelstaf skills), fitness in units, reserve components, joint operations, team building, national military strategy, and force projection (MDRD). This class marks full maturity for NCOES: these noncommissioned officers are the first to complete all levels of the NCOES program, from PLDC through the Sergeants Major Course. Students will train in a state-of-the-art facility and will graduate ready to serve as Sergeants Majors and Command Sergeants Majors in the force projection Army. (POC - Mr. Jones, DSN 680-5673/PROFS MON1 (JONESR))
ORGANIZATIONS

We have observed through constructive and virtual simulation that significant increases in lethality, survivability, and tempo are possible in existing organizations using current doctrine when digital communications are integrated horizontally and vertically across combined arms teams.

**Top Down Force Design and Organization Modularity:** Based on the recently approved Modularity Concept, TRADOC will continue development of more modular, functionally-based force that can better support CINC requirements. These initiatives are aligned with Force XXI development initiatives (examples of modular organizations are provided below). The Top Down Force Design concept focuses on development of organizational designs that eliminate redundant “Cold War” Headquarters and streamline other force C2 structure and organizations. Near term Top Down Force Design/Modularity efforts are designed, evaluated and approved through the semi-annual Force Design Update (FDU) process and executed in the Total Army Analysis (TAA) process. Far-term Top Down Force Design/Modularity efforts will be integrated into Force XXI development initiatives. Goal is to field an “adaptable” force with the capability for improved force tailoring, adaptive force packaging and enhanced deployability beginning year 2000. (POC - CPT Healy, DSN 552-8686/PROFS LEA1(HEALYS))

**Force Provider (Modular):** Force Provider is a concept for, and design of, a Force Provider Company that will provide quality of life support functions for units in undeveloped theaters. The company will be composed of six modular platoons that can be combined to provide support for up to a brigade-size force. It can provide a rest and relaxation facility during staging, movement, and reconstitution (includes meals, showers, laundry, environmental tents, and a variety of morale, welfare and recreational facilities). One company has been activated and is located at Ft Bragg, NC. A company is to be activated at Ft Hood, TX, in FY95, and four other units planned in the USAR in FY 96. Two equipment sets are being placed on pre-positioned ships. (POC - Mrs. Peterson, DSN 552-8626/PROFS LEA1(PETERSS1))

**Postal Operations Platoons and Companies (Modular):** TRADOC has redesigned postal organizations to improve unit capabilities and fix DS/ODS postal operations deficiencies. New organizations are modular in structure and include GS postal operations platoons and up to six DS platoons. Company capabilities can be tailored based on the force deployed and will be especially equipped to operate in undeveloped theaters. Some of the key capabilities and new functions include improved bulk and unit mail breakdown and distribution, dispatch of outgoing mail, postal finance, directory, casualty mail, intra-theater mail, and international mail services. (POC - Mrs. Peterson, DSN 552-8626/PROFS LEA1(PETERSS1))

**Aviation Restructure Initiative (ARI):** Standardizes the Army aviation structure. The initiative standardizes assault and attack companies, provides a separate Aviation Support Battalion, creates homogeneous organizations, fixes aviation sustainment weaknesses, and retires old aircraft. This initiative is currently being implemented. The division aviation support battalion is being designed with modules to support typical aviation task forces. (POC - MAJ Engbrethson, DSN 552-8677/PROFS LEA1(ENGBRES))

**MI RC Restructure Initiative:** This is a follow-on to the MI AC redesign which leveraged national and theater assets and created a seamless downward/focused capability. It improves responsiveness to commanders (near-real-time)
and balances intelligence functions. As a result of this initiative, structures are more tailorable and better support split-base operations. The result of this effort will improve the ability of the RC portion of the MI force structure to efficiently support its wartime mission with maximum compatibility with the AC force. (POC - Miss Rose, DSN 552-8672/PROFS LEA1(ROSEB))

**Corps Materiel Management Center (CMMC) Split-Based Operations (Modular):** This CMMC is modular in design with the capability to provide minimal on-site required materiel management support in a force projection environment. It will be attached to the Corps Support Command and will be organized to support divisional, separate brigade, and armored cavalry regimental materiel management centers as well as other corps units. The CMMC rear will remain in a fixed-based location while support modules deploy to the area of operations. (POC - Mrs. Peterson, DSN 552-8626/PROFS LEA1(PETERSS1))

**EOD Reorganization (Modular):** The EOD Reorganization changes the organization and designation of the Explosives Ordnance Detachment Control Team (EODCT) to Ordnance Battalion. It also changes the organization and designation of the Ordnance Detachment to Ordnance Company. This reorganization strengthens the battalion command and control functions, changes team composition and improves the EOD battlefield capability and mobility by increasing the number of EOD response teams and by eliminating unessential/burdensome team equipment. (POC - MAJ Ellison, DSN 552-8634/PROFS LEA1(ELLISONK))

**Mortuary Affairs Support Designs (Modular):** This concept/design provides peace-time and wartime support to search, recover, identify, evacuate, and when required, temporarily inter, disinter, and re-inter deceased personnel. Implementation of this program will eliminate the six current nonstandard unit designs and replace them with two MA Collection Company designs that provide modular support to a force projection Army tailored to theater requirements. (POC - Mrs. Peterson, DSN 552-8626/PROFS LEA1(PETERSS1))

**Enhanced Brigades:** This initiative identified standard heavy and light division designs for application to the ARNG enhanced brigades. It also incorporated other standard brigade level organization design such as Engineer, MI, and ADA. Changes include: The Air Assault Infantry Battalions are included in the light Infantry Brigades; a divisional Engineer Battalion will replace the Brigade Engineer Company in the heavy division; an ADA Battery will replace the ADA Platoon; a modernized MI platoon has been included; and a mechanized smoke capability has been provided for the Heavy Enhanced Brigade Chemical Section. (POC - CPT Faulkner, DSN 552-8658/PROFS LEA1(FAULKNER))

**Shower, Laundry and Clothing Repair (SLCR):** Provides a modular design that will be forward in the brigade area. The SLCR will provide troops with one shower a week. It will also provide 7.5 lbs of laundry per soldier, per week, delivered in 12 hours or 15 lbs of laundry per soldier per week will be delivered in 24 hours. There will no longer be clothing exchange. (POC - Mrs. Peterson, DSN 552-8626/PROFS LEA1(PETERSS1))

**MATERIEL**

Continued budget cutbacks and downsizing of our force have made it imperative that the Army analyze future warfighting capabilities of the force by evaluating, identifying, and prioritizing "Critical" battlefield systems that best support the Army's "Vision of the Future Battlefield." TRADOC, as the architect of the future Army, has the responsibility to provide an organized, trained, and well equipped modern force capable of maintaining the battlefield edge and to achieve Land Force Dominance as the Army transitions into the 21st century. A means of achieving this goal is the leveraging of technology and modernization of our future organizations, so necessary if we are to maintain the combat superiority we now enjoy. In the next few years, you will see a multitude of system upgrades and fieldings. Some of the materiel improvements are:
Medium 7.62mm Machine Gun Upgrade: The Army is conducting a test and evaluation to select a more reliable weapon to replace M60 machine guns in Active Component infantry units. Primary candidates are the M60E4 from SACO Defense or the M240E4 from FNMI. Both of these models are modified versions of an existing weapon. Providing production funding is secured, first unit equipped for the upgraded 7.62mm MG is scheduled for 1QFY97. (POC - Herr Schmidt, DSN 680-2415/PROFS SCHMIDTH)

Global Positioning System (GPS): Space-based POS/NAV system provides accurate 3-dimensional position, velocity and time information. Fielding of precision location GPS receivers (PLGR) is ongoing. FUE was FY94. (POC - Mr. Gassaway, DSN 680-5858/PROFS GASSAWAW)

Enhanced Position Location Reporting System (EPLRS): A low to medium speed data transmission device with a position navigation capability. EPLRS supports the Army Tactical Command and Control System concept by providing the data communications connectivity between battlefield functional area automated systems. EPLRS fielding starts 2QFY95 to 1st CAV DIV and will be fielded to 1st CAV, 24th ID, and TFXXI NLT 4QFY96. (POC - Mr. Gassaway, DSN 680-5858/PROFS GASSAWAW)

M113A3 (Upgrades): These improvements will allow the M113 mobility matching the rest of the maneuver forces. Upgrades to the M113 consist of external fuel tanks, A3 Reliability Improvement of Selected Equipment (RISE) Power (engine and cross drive transmission upgrades), enhanced armor protection, ramp and belly armor, and improved driver controls. FUE FY94; completion FY02. (POC - SFC Bridier, DSN 680-4078/PROFS BRIDIERJ)

Bradley Modernization: The A2 ODS and the Bradley A3 will evolve from the A2. ODS (FUE FY96) addresses required fixes identified during Operation Desert Storm. Those fixes include a combat identification system, GPS/POSNAV, driver's thermal viewer and missile countermeasure device. The Bradley A3 (FUE FY00) is the objective system. Planned A3 improvements are
core electronic architecture, 2d generation FLIR acquisition, command and control software, commander's independent viewer and ballistic fire control. POC MAJ George Conrad, DSN 680-4083/PROFS CONRSDG)

**Bradley Stinger Fighting Vehicle - Enhanced (BSFV-E):** Enhanced BSFV is a series of modifications to upgrade the current BSFV to an automated air defense system. The enhancement means that the BSFV will no longer be an armored taxi for manportable Stinger gunners (MANPADS) but an actual fire unit akin to the Avenger. The BSFV-E will have a four missile Standard Vehicle Missile Launcher (SVML) to replace the TOW launcher. Other modifications will include a Stinger reticle in the Integrated Sight Unit (ISU) and various other improvements that will permit launching of Stinger missiles against cued aerial targets without the need for the gunner to dismount. FUE FY97. (POC - Mr. Ebner, DSN 680-2948/PROFS EBNERJ)

**Thermal Weapon Sight (TWS):** A replacement for the AN/PVS-4, AN/TVS-5, and AN/PAS-7, this sight uses thermal technology which performs well in severe darkness, adverse weather and obscurant. It has one main body and three interchangeable front optics which change field of view, power, and range. FUE FY96. (POC - SFC Bridier, DSN 680-4078/PROFS-BRIDIERJ)

**Improved Mortar Ballistic Computer (MBC):** Replaces current M23 MBC. The IMBC will use state-of-the-art technology to provide digital message capability and mortar firing data communications. Funding for FP1 only; FUE FY97. (POC - CPT Siegmund, DSN 680-2980/PROFS SIEGMUNJ)

**Commercial Space Package (CSP):** The concept behind the CSP is to field a limited, but affordable, near-term space support capability in each of our fielded corps and divisions today. CSP is one of several initiatives in TRADOC intended to transition the Army into the 21st century. CSP consists of commercial satellites and ground terminals networked to provide JTF/Army commanders with robust communications, weather, and multi-spectral imaging capability. FUE FY95. (POC - MAJ Congo, DSN 680-2843/PROFS CONGOK)

"Hunter" Joint Tactical Unmanned Aerial Vehicle (JT-UAV): The first of 24 Army-bound Hunter UAV RISTA systems (Corps, Division, and ACR - except Light Infantry) rolled out at Ft Huachuca, AZ, in May 1994. Hunter capabilities consist of: near all weather operations, 250km+ range, 8hr+ mission time, and FLIR/TV real time imagery system. FUE will be HQ, III Corps, in Jun 95. Future additional payloads include comms/data relay, moving target indicator (MTI) Radar, and minefield detection. Hunter is the first of a family of UAV which will include "Endurance" UAV at EAC and close range "Maneuver" UAV at maneuver brigade and light infantry division. (POC - Mr. Undercoffer, DSN 680-3274/PROFS UNDERCOJ)

**Air Volcano:** UH-60 mounted mine launcher, can dispense 960 mines in less than 30 seconds. FUE FY95. (POC - LTC Volz, DSN 680-2286/PROFS VOLZ)

**KIOWA WARRIOR:** Advanced Armed Reconnaissance Helicopter capable of flying in day or night. Weapon systems consist of Hellfire Missiles, 2.75" rockets and .50 Cal MG. Congress has approved the buy of 383 Kiowa Warrior's to be fielded in cavalry units and Light Division Attack Helicopter Battalions. Currently, 48% of the units are fielded to include much of the XVIII Airborne Corps. The next unit scheduled for fielding is 2/25th Attack, Ft Drum, NY. Fielding should be complete by FY 98 (POC - CPT Lowery, DSN 680-3992/PROFS LOWERYJ)

**Guardrail Common Sensor (GRCS):** A corps/echelon above corps airborne signal intelligence (SIGINT) system capable of detecting, acquiring, identifying and accurately locating high payoff C3I targets and weapons systems to ranges exceeding 350 kms from the airborne platform. Location accuracies are within specifications for ATACAMS/MLRS. This precision radio frequency emitter locating system providing direct sensor to shooter linkage is to be fielded to aviation, artillery, and air defense in FY95. (POC - Mr. Helderman, DSN 680-3441/PROFS HELDERMC)

**Combat Identification:** This horizontal technology initiative is a multi-phased program to field combat identification devices to complement improvements in DTLOMS. Combat Identification
program is being worked with other services and Allied/Coalition partners. Program combines situational awareness and improved target identification to reduce fratricide risk. Quick-fix devices employing currently available technology (NVG and thermal) will be followed by battlefield combat identification system (BCIS). BCIS is a millimeter wave question-and-answer friendly identification device. Integration of BCIS and mid/far-term program with digitized battlefield being worked. BCIS currently in EMD testing with fielding decision to follow Task Force XXI. (POC - Mr. Hammond, DSN 680-5864/PROFS HAMMONDB)

**Integrated Meteorological System (IMETS):** IMETS is a mobile tactical automated weather data receiver, processing, and dissemination system designed to provide timely weather and environmental effects forecasts, observations, and decision aid information to multiple command elements at echelons where USAF Weather Teams provide weather support to the Army. IMETS is an Army-furnished system (standard shelter/vehicle, common hardware/software, and communications) that will be operated by USAF personnel and maintained within planned Army support for system components. Two systems will be fielded to Korea NLT 31 Mar 95. (POC - Mrs. Hanks, DSN 680-4077/PROFS HANKSJ)

**Longbow Apache:** The Longbow Apache is a multi-mission helicopter. The Longbow system consists of a Multi-Millimeter Wave Fire Control Radar, a Radio Frequency Interferometer and Longbow Hellfire missile. System provides a true fire-and-forget adverse weather capability. FUE is FY97. (POC - Mr. Parker, DSN 680-4246/PROFS PARKERJ)

**M109A4 SP 155mm Howitzer:** A product improved M109A2/A3. Intermediate step required before or simultaneously applied during conversion to M109A5. Materiel Change improves NBC and RAM. Conversion ongoing. (POC - Mr. Ringler, DSN 680-3216/PROFS RINGLERR)

**M109A5 SP 155mm Howitzer:** A product improved M109A2/A3/A4. Materiel Change adds a modified armament system–same tube as Paladin (M109A6) allowing M109A5 to fire M203 charge and obtain same range as Paladin–30km. Conversion ongoing. (POC - Mr. Ringler, DSN 680-3216/PROFS RINGLERR)

**M109A6 SP 155mm Howitzer (Paladin):** A product improved M109A2/A3. Incorporates all A4 and A5 improvements plus providing self-locating, self-laying, with on-board automated fire control, increased responsiveness, reliability, and crew survivability. Complete fielding FY99. (POC - Mr. Ringler, DSN 680-3216/PROFS RINGLERR)

**M119A1 Light Towed 105mm Howitzer:** Air transportable and air dropable with increased range (19km) and responsiveness. Fires all 105mm ammunition plus new M913 HERA and XM 915 DPICM. Complete fielding 4QFY95. (POC - Mr. Ringler, DSN 680-3216/PROFS RINGLERR)

**Joint Tactical Ground Station (JTAGS):** A transportable, in theater element of the Tactical Event System (TES). Provides theater commander with capability to process and disseminate near real time warning of tactical ballistic missile (TBM) launches. FUE FY96. (POC - MAJ Booker, DSN 680-2969/PROFS BOOKERW)

**XM915/916 Dual Purpose Improved Conventional Munition (DPICM), 105mm Cartridge:** DPICM projectile has a submunition payload of 42 dual purpose XM80 submunitions with improved lethality and self-destruct fuse. XM915 is compatible with M119A1 howitzers and the XM916 is compatible with all 105mm howitzers.
FUE: N/A IOF: 4QFY97. (POC - CPT Burke, DSN 680-2820/PROFS BURKEG)

**120mm Battalion Mortar System:** Will replace 4.2 inch mortar. Max range 7200 meters/min range 200 meters. System procured in two configurations, towed version (M120) and carrier version (M121) mounted in M1064. FUE (M120) 4QFY93; FUE (M121) 3QFY95. (POC - CPT Siegmund, DSN 680-2980/PROFS SIEGMUNJ)

**Javelin:** A man-portable anti-tank system for the U.S. Army and U.S. Marine Corps. The system provides high lethality against conventional and reactive armor and will replace the Dragon. The Javelin is comprised of two major components: a reusable command and launch unit (CLU) and a missile sealed in a disposable launcher container. The CLU incorporates an integrated day/night sight and provides target engagement capability in adverse weather. The CLU may be used in stand-alone mode for battlefield surveillance and target detection. FUE FY96. (POC - Mr. Strieter, DSN 680-4280/PROFS STRIETEW)

**Firefinder (FF) AN/TPQ-36 Block II:** The Block II Program consists of two versions:

**HMMWV Version (V7):** Fielding was completed Jul 94. It consists of the Q36 ATG on a modified M116A2 trailer pulled by an M1097 HMMWV with a MEP-112A generator. The S-250 shelter will be mounted on another M1097 which will pull a M116A2E1 general cargo trailer. An additional MEP-112A Generator will be mounted on another trailer which will be pulled by a M998 HMMWV supply/recon vehicle. A MAPS mounted on the ATG will enhance the survey requirements for the radar. Computer memory keep-alive voltage will be integrated into the system. **Electronic Upgrade (V8):** Eliminate the S-250 shelter and provides a flat panel display/control unit in a Lightweight Multi-Purpose Shelter (LMS). LMS provides environmental control, on board backup power, room for system growth and commonality with the Army's future family of shelters. A hard disc and compact disc drive will be provided. Also, software changes extend probability of location and help minimize unwanted target problems will be included. (POC - SFC Phillips, DSN 680-2178/PROFS PHILLIP3)

**Enhanced Tactical Radar Correlator (ETRAC):** A tactical mobile ground processor (normally at corps) for advanced synthetic aperture radar system (ASARS) data received from U2R aircraft via a direct data downlink. ETRAC major function is to provide ASARS imagery to Modernized Imagery Exploitation System for exploitation and target development. XVIII Abn Corps scheduled to receive 1st ETRAC in May 95. ETRAC is C-130 self-deployable. Second ETRAC is slated for 513th MI Bde supporting 3rd Army in FY97. (POC - John Waller, DSN 680-3441/PROFS WALLERJ)

**Modernized Demolition Initiators (MDI):** MDI represents the military application of commercial shock tube technology to detonate explosives. MDI will be the primary system used to prime and detonate military explosives. It offers increased safety and simplicity compared with current systems. Conventional blasting caps and detonating cord will be retained for special applications not suited for MDI. Will begin procurement and fielding in FY95. (POC - LTC Volz, DSN 680-2286/PROFS VOLZR)

**Wide Area Munition (WAM):** WAM is a ground emplaced munition which detects and then attacks vehicles from the top at ranges of up to 100 meters. The hand emplaced version (HEWAM) will be fielded in FY97. (POC - LTC Volz, DSN 680-2286/PROFS VOLZR)

**Selectable Lightweight Attack Munition (SLAM):** A lightweight, multipurpose munition which can be used as a magnetically fused mine, a trip line activated off-route mine, a timed demolition charge or as a command detonated device. When used as a mine, it has a self destruct function. Will be procured in limited quantities for light forces in FY96. (POC - LTC Volz, DSN 680-2286/PROFS VOLZR)

**Digital Topographic Support System/Quick Response Multi-Color Printer (DTSS/QRMP):**

The DTSS/QRMP program combines two separate systems into one downsized system. DTSS/QRMP will be capable of receiving, (re)formatting, creating, storing, retrieving, updating, merging, manipulating digital topographic data and hardcopy reproduction of topographic products. The system will provide the theater commander and his staff automated
and integrated terrain products to enhance and compress the decision-making process across the operational continuum. Fielding schedule for the DTSS/QRMP is unclear with the Program Manager investigating getting prototypes to the field within the next two years if at all possible. (POC - Mrs. Hanks, DSN 680-4077/PROFS HANKSJ)

**All Source Analysis System (ASAS):** A mobile, automated intelligence processing, fusion and dissemination system designed to provide timely, accurate and relevant all source intelligence and targeting support to Battle Commanders (Bn through EAC). Block I provides hardware and software to support the Tactical Operations Center Support Element (TSE) and Technical Control and Analysis Element (TCAE) and to Collateral Enclave (CE). Block I fielding to be completed in FY95. Block I - EXTENDED provides standard ASAS functionality on commercial hardware to active, reserve forces, and select National Guard Brigades not receiving Block I. Block I - EXTENDED fielding efforts are still ongoing. Block II combines functions of TSE and TCAE into the Analysis and Control Element (ACE), incorporates CE functions into the G2-TOC system and provides for jump operations. FUE is FY00. (POC - CPT Harris, DSN 680-3274/PROFS HARRISB)

**TROJAN Special Purpose Integrated Remote Intelligence Terminal (SPIRIT) II:** A HMMWV mounted intelligence dissemination satellite communications system which provides access to national and other level intelligence data bases. SPIRIT provides all-source dissemination capabilities including secure voice, data and fax. SPIRIT will receive, display, and transmit digital imagery, weather and terrain products, templates, graphics and text between CONUS/OCONUS bases and deployed forces. It supports force projection and split-based operations. Will be fielded in FY96. USMC has several systems fielded. (POC - Mr. Jerry Hurst, DSN 680-4347/PROFS HURSTJ1)

**TROJAN Transportable Mini Switch (TTMS):** TTMS is a preplanned product improvement of the TROJAN SPIRIT II system. It provides a materiel solution to eliminate a single source of failure at the Fort Belvoir Switching Center. TTMS will further eliminate dual satellite hops and provide TROJAN SPIRIT II connectivity for intra- and intertheater digital voice switching capability. TTMS is employed at theater level and handles up to 12 TROJAN SPIRIT IIIs. FUE is 2/3QFY95. (POC - Mr. Jerry Hurst, DSN 680-4347/PROFS HURSTJ1)

**Joint Surveillance Target Attack Radar System (Joint STARS):** An Army-Air Force wide area surveillance system to provide battle management and targeting information. Supports situation development and targeting of mobile and fixed ground targets. Joint STARS consists of an Air Force E8C aircraft and Army Ground Station Modules (GSM). The E8C collects moving target indicator (MTI) and synthetic aperture radar (SAR) data using a multi-mode radar. The GSM receives/analyzes processed radar imagery from the E8C. It supports intelligence and targeting functions with near real time interactive displays and can be remoted to additional locations. The multi-service operational test and evaluation (MOT&E) is scheduled to begin in Nov 95. The first production aircraft is scheduled to be delivered 2QFY96 with initial operational capability (IOC) 2QFY97 locations. FUE is FY97. (POC - LTC Mosser, DSN 680-3442/PROFS MOSSERM)

**Ground Based Common Sensor-Light/Heavy (GBCS-L/H):** A next generation divisional system to intercept, locate and process raw signal data in support of intelligence collection, targeting and electronic attack. The GBCS provides target detection, identification and location reports in near real time to brigade and division commanders. GBCS can also jam enemy tactical communications emitters. GBCS can pass targeting data to TACFIRE for quickfire to shooter. GBCS-L supports light divisions/brigades; GBCS-H supports heavy divisions/brigades. The range capabilities of the GBCS-L/H can be extended by use of the aerial system known as Advanced QUICKFIX (AQF). AQF, in conjunction with GBCS, provides highly accurate locational data via its precision location subsystem. All the components on these three systems are the same with the exception of the vehicle and antennas. FUE FY96. (POC - Mr. Floyd, DSN 680-3667/PROFS FLOYDW)

**Patriot Advanced Capability - 3 (PAC-3):** Patriot is a high/medium advanced surface-to-air guided missile air defense system.
PAC-3 is a major upgrade to the Patriot system consisting of integrated, complementary improvements that will be implemented by a series of phased, incrementally fielded materiel changes beginning in FY96. PAC-3 will increase battlespace and lethality by enhancing current detection and engagement capabilities. The PAC-3 missile (ERINT) is a key component of the overall improvements to the Patriot system. It will provide essential increases in battlespace, accuracy, and kill potential against TBMIs. Total PAC-3 capability projected to be completed by end of FY98. (POC - Mr. Woolever, DSN 680-2932/PROFS WOOLEV2)

**M1A2:** Deliveries of the M1A2 upgrade tank system for the U.S. Army began in the fall of 94 and are scheduled to continue through the turn of the century with a production of 1079 tanks. FUE is scheduled for 1CD 1QFY96. By year 2005, the technology used to develop and build the M1A2 will be nearly 20 years old. The armor community is developing a campaign plan for modernizing the tank force for the foreseeable future. This plan includes a mid-term (2005/2005) tank system currently known as Tank 1080. (POC - MAJ Gillis, DSN 680-4389/PROFS GILLISJ)

**Up-Armored HMMWV:** This HMMWV Vehicle (M1109) will be produced in a Scout, MP, and an Air Force variant. System possesses increased ballistic protection against small arms fire, artillery airburst, small anti-personnel mines, light anti-armor mines, and unexploded artillery submunitions for the crew compartment. User testing will be conducted in March at FT Knox. Twelve XM1109 variant versions were deployed with the 16th MP BDE, XVIII Corps to Haiti. Thirty XM1109 Variants will be deployed to Haiti with 3rd Squadron, 2ACR(L) in 1QTR FY95. FUE 4QTR FY95 to 2ACR(L). (POC - MAJ Stevens, DSN 680-3124/PROFS STEVENS1)

**Long Range Advance Scout Surveillance Systems (LRASS3):** This system will provide the Maneuver Commander timely, accurate battlefield information. LRASS3 is a Scout mounted target acquisition system, man portable, day/night, all weather system that will allow Scouts to identify/acquire enemy outside the enemies engagement ranges. FY9601 POM funded for 350 systems. FUE FY01. (POC - MAJ Stevens, DSN 680-3124/PROFS STEVENS1)

**Improved Target Acquisition System (ITAS):** ITAS is an upgrade to current ground TOW and HMMWV TOW target acquisition and fire control systems. ITAS improves target detection and acquisition range. Pathfinder for second generation FLIR technology and ITAS will allow for growth for follow-on to TOW Missile. First prototype delivery date in JAN 95. FUE 4QFY97. (POC - MAJ Stevens, DSN 680-3124/PROFS STEVENS1)

**Army PREPO Afloat (Pre-positioning of supplies and equipment):** A component of the Army Strategic Mobility Program that includes sustainment supplies and equipment for a contingency corps, a humanitarian effort, a heavy brigade, and a port opening capability. Supplies include all classes needed to sustain deployed contingency corps units up to C+30. Humanitarian support and port opening ships provide watercraft, trucks, forklifts, cranes, container handlers, food, and shelter items. Heavy brigade ships have equipment and 15 days of sustainment supplies for two mechanized and two armor battalions. Heavy brigade have completed uploading and ships recently arrived on station. (POC - Mr. Sova, DSN 680-3005, PROFS - SOVAJ)

**Improved Fox -- NBC Reconnaissance System (NBCRS):** NBCRS is an armored reconnaissance vehicle equipped to detect, sample, identify, mark, and report the presence of NBC hazards. NBCRS will rapidly and accurately determine extent and nature of NBC contamination hazard over a specified area with expeditious transmission of information to supported units. Planned improvements will allow for digital communication to disseminate critical information to supported units via the Maneuver Control System (MCS). First Unit Equipped is 4QFY97 to Force Package 1 units. (POC - MAJ Welcer, DSN 680-4412, PROFS - WELCERS)

**UH-60Q MEDEVAC Helicopter:** The UH-60Q will provide significantly improved medical, navigation and communication capabilities over the currently employed MEDEVAC (UH-1/UH-60A) aircraft. Enhanced medical capabilities are needed to provide wounded or injured soldiers
with state-of-the-art medical care to increase their survival chances on the extended future battlefield. The mission of the UH-60Q is to: evacuate casualties from forward locations; conduct combat search and rescue; transport emergency medical teams and supplies; and perform ship-to-shore medical evacuation. UH-60Q aircraft will be fielded to Force Package 1 “first-to-fight” divisions starting in FY98 if funding is approved. (POC - CPT Courmoyer, DSN 680-3158, PROFS - COURNOYR)

**Aircraft Nondestructive Test Equipment (NDTE):** NDTE will provide Army Aviation Maintenance with state-of-the-art commercial equipment capable of inspecting aircraft components and structures for material defects/damage without aircraft disassembly. NDTE will greatly simplify inspection procedures, reduce time required to perform inspections and also be capable of inspecting composite materials found on modern Army aircraft. The NDTE program includes Eddy current, Ultrasonic, Harmonic Bond, and X-Ray test equipment. NDTE will be procured through a multi-service procurement contract. Resident training will be conducted by the U.S. Air Force at their training facilities. First unit equipped is to Force Package 1 divisional and non-divisional AVIM units. (POC - Mr. Holm, DSN 680-2184, PROFS - HOLMS)

**Biological Integrated Detector System (BIDS):** BIDS will quickly and reliably detect and identify the presence of biological warfare agents. The BIDS is a detector suite contained in a shelter mounted on a heavy HMMWV and included a trailer mounted generator. BIDS will incorporate existing long-range secure voice communications and data transmission systems to rapidly report vital information to mitigate large-area BW effects. System improvements are planned for the FY99/FY03 timeframe which will make the BIDS even more effective. The system is UH-60, CH-47D, and C-130 deployable. There will be one active BIDS platoon fielded with seven systems by 3Q FY96. (POC - MAJ Welcer, DSN 680-4412, PROFS - WELCERS)

**XM56 and XM58 Smoke Generation Systems:** The XM56 and XM58 are large area, mobile smoke generator systems which produce visual or infrared smoke. Future improvements will include millimeter wave (MMW) obscurant capability. The smoke generator is modular in construction and includes a power module, visual module, IR module, and future MMW module. The power module uses a gas turbine to disseminate obscurants. The XM56 is HMMWV mounted and the XM58 is mounted in a M113 tracked vehicle. The system requires only two fuels, Vehicle/turbine fuel and fog oil. These systems will be fielded to Force Package One units beginning in May 97. (POC - Mr. Dixon, DSN 680-4413, PROFS - DIXONW)

**Remote Sensing Chemical Agent Alarm (RSCAAL):** RSCAAL is a remote sensing chemical agent alarm that detects nerve and blister agent clouds at distances up to 5 KM. This system is a passive infrared sensor with an onboard microprocessor. It uses line-of-sight and scans along a 60 degree arc from the detector. RSCAAL components consist of detector, retractable tripod, transit case, vehicle mount, and standard military power source. The basis of issue is one per NBC Reconnaissance Team. The system will be fielded beginning in April 95. (POC - MAJ Welcer, DSN 680-4412, PROFS - WELCERS)

**SOLDIER**

The Army’s most valuable resource is the Soldier. Regardless of how superior our leadership, weapons, and technologies might be, it is the soldier who is the backbone of the Army. We are providing a comprehensive program to modernize the soldier as a battlefield system and to maximize warfighting capabilities by enhancing lethality, command and control.
SOLDIER ENHANCEMENT PROGRAM
FORCE PROVIDER

Enhanced Land Warrior (ELW): The total Army program for modernizing the soldier as a system. It includes all soldiers, and provides for acquisition of all items worn, carried or consumed by soldiers for individual use in a tactical environment. The ultimate result of ELW will be greatly enhanced combat capabilities, as well as full integration of the soldier into the digitized battlefield. ELW will produce three major variants of an integrated fighting system: Land Warrior for dismounted soldiers, Air Warrior for air crewmen, and Mounted Warrior for armored vehicle crewmen. The dismounted system includes a modular weapon with thermal sight, improved ballistic protection, a soldier computer radio, combat ID and other capabilities. Initial fielding of the dismounted Land Warrior System is programmed to begin in FY 00. (POC - Mr Stefanow, DSN 680-3117, PROFS - STEFANII).

Soldier Enhancement Program (SEP): A quick reaction program initiated by Congress in 1990 to expedite modernization of infantry soldier equipment. The program has since been expanded to include all soldiers, and to address quality of life issues in the field. The focus is on nondevelopmental solutions which can be ready for procurement in 36 months or less. By the end of 1994, 148 projects were initiated, and 41 completed. Eight new starts are programmed for FY96, including the XM2 Selectable Light Weight Attack Munition and the 40MM Grenade, Less than Lethal. The program includes small arms, optics, munitions, clothing and individual equipment, and individual combat rations. (POC - CPT Germain, DSN 680-2633, PROFS - GERMAINJ).

Force Provider (FP): Transportable complex of kitchens, showers, laundries, billets, latrines and morale support items. Designed to improve a soldier's quality of life in the field, FP also supports OOTW. One module can support approximately 550 soldiers/personnel, while six modules configured together can support a brigade sized element. One module is currently providing support at Guantanamo Bay; two interim support packages (ISP), each capable of supporting a brigade-sized element, also exist. One is prepositioned afloat in the Pacific and the other is located at Sierra Army Depot. (POC - CPT Hamilton, DSN 680-3039, PROFS - HAMILTOA.)

BATTLE LABS

Maximizing our soldiers' battlefield advantage by breaking paradigms

Battle Labs are means to experiment with ideas, concepts and technology.
...horizontally integrated across the entire force.
...to maximize our battlefield advantage in lethality, survivability and tempo of operations.

Battle Labs are a United States Army TRADOC innovation to experiment with changing methods of warfare beginning with battlefield dynamics and with soldiers and leaders as the center of focus.

The program was publicly announced in April 1992 and began in May 1992. The name is meant to convey the image of soldiers experimenting with warfighting concepts in order to generate battlefield insights.

Battle Labs conduct holistic appraisals of critical operational capability requirements needed to meet the changing nature of warfighting across all of the TRADOC domains—doctrine, training, leader development, organization design, materiel, and soldier systems. The appraisals are holistic in that they examine the needs of the entire combined arms and services team in a wide variety of relevant current and future scenarios. This, in turn, facilitates horizontally integrated requirements definition conducted concurrently with concept development which dramatically streamlines the entire process of fielding new capabilities.

Warfighting concepts generated from TRADOC Pamphlet 525-5, Future Full-Dimensional Operations, drive Battle Lab experiments. The experiments, labeled Advanced Warfighting Experiments (AWE), are progressive and iterative mixes of constructive, virtual and live simulations conducted with field soldiers and units in tactically competitive environments.
There are six battle labs: Early Entry Lethality and Survivability Battle Lab, Fort Monroe, Virginia; Mounted Battle Space Battle Lab, Fort Knox, Kentucky; Dismounted Battle Space Battle Lab, Fort Benning, Georgia; Depth and Simultaneous Attack Battle Lab, Fort Sill, Oklahoma; Battle Command Battle Lab, with elements at Fort Leavenworth, Kansas, Fort Gordon, Georgia, and Fort Huachuca, Arizona; and the Combat Service Support Battle Lab, Fort Lee, Virginia.

A Memorandum of Agreement between FORSCOM and TRADOC aligns designated units to each battle lab to facilitate experiments. A Memorandum of Understanding between TRADOC and the Marine Corps Combat Development Command (MCCDC) ensures full participation by the USMC in appropriate battle lab experiments. Battle Labs have also established close ties with the Air Combat Command, Air Mobility Command, Military Sealift Command, Naval Doctrine Command, and several allied armies. (POC - BATTLE LABS LTC EWING, DSN 680-5895/PROFS EWINGJ.)

**FORCE XXI  
JOINT VENTURE**

*"FORCE XXI WILL ENABLE US TO MAINTAIN OUR CURRENT CAPABILITIES TO BE MORE USEFUL ACROSS THE CONTINUUM, TO FOCUS AND GROW IN THE MEANINGFUL SENSE."*  
-GENERAL SULLIVAN

Force XXI Joint Venture uses TRADOC Pamphlet 525-5, Force XXI Operations, as its conceptual underpinning for the design of the 21st century Army. To meet the 21st century doctrinal, structural, and materiel needs without losing focus on today's strategic security requirements, the Army, through Force XXI, will examine organizational and technological alternatives and explore new ideas to ensure success on future battlefields. Key ingredients to implement this change are quality soldiers and leaders.

Joint Venture is one of the three axes in the Force XXI Campaign Plan; it will focus on the redesign of the operational Army. Joint Venture is the main effort in the Force XXI campaign plan and the CG TRADOC is CINC, Joint Venture. The TDA/Institutional Army axis and Assimilation/Acquisition axis are supporting efforts that are tasked with redesign of Title 10 supporting institutional and sustaining base Army and acquisition and assimilation of the technology to enable the concepts and designs from the Joint Venture axis. Joint Venture's mission is to develop and execute an Army-wide joint venture to attain Force XXI fielding decisions by FY00. Joint Venture will design and validate Force XXI operating force elements by continuing robust advanced warfighting experiments (AWE).

Joint Venture will serve as the focal point for integration efforts directed towards developing the basic organization and operational concept for Force XXI and will inform the Army of the implications of full-dimensional operations. Joint Venture will do this on two axes of advance, a Conceptual axis and an Experimental axis. **Conceptual Axis.** The Conceptual Axis is rooted in concepts outlined in TRADOC Pamphlet 525-5. This pamphlet, "Force XXI Operations," will be the conceptual underpinning for all Force XXI experiments. The centerpiece of TRADOC Pamphlet 525-5 is a 21st century Army, based on quality soldiers and leaders, in versatile mission-tailored units, enhanced by the power of information, superior technology, and effective battle command. As Force XXI is designed, considerable attention must be focused on a force that is modular in design and tailored to meet contingencies from OOTW to conventional war. These concepts will result in development of Force XXI operating forces, starting initially with the division redesign and working up and down to examine and redesign all echelons, as necessary. Other key elements in the concept axis include the Army Battle Command System (ABCS) and a reengineering of the Land Warfare University. **Experimental Axis.** The Experimental Axis initially follows the conceptual axis and each will inform the other through the course of Force XXI. Based on the results of Battle Labs experiments to date and the emerging Force XXI Division Organization and Operation Plan, Advanced Warfighting Experiments (AWE) will be conducted to validate organizational designs. Participation by Battle Labs, the Experimental Force (ExFor), and other units/experimental agencies, beginning in FY95, will be critical. These hands-on experiments will address the full range of operations to include
joint and combined operations. The results of LAM GHQx excursions, Advanced Concept Technology Demonstrations (ACTD), Advanced Technology Demonstrations (ATD), and Operational Tests also will influence organizational redesign and technological fielding decisions.

Conducting holistic appraisals of critical warfighting capabilities, the Battle Labs are changing the way the Army prepares for and wages war. Battle Labs experiment using constructive, virtual and live simulations to examine warfighting concepts across doctrine, training, leader development, organizational design, materiel and soldier systems (DTLOMS). The Battle Lab holistic review encompasses the entire combined arms and services team. This facilitates vertical and horizontal integration concurrently with concept development, thereby streamlining the acquisition process. To date, this process has developed the Commercial Space Package, Total Asset Visibility, 2d Generation FLIR and digitized communications and other systems which are already in the Army’s Program Objective Memorandum (POM) and will greatly enhance the warfighting capabilities of the 21st century force projection Army.

The Battle Lab Integration, Technology and Concepts Directorate is responsible for Force XXI and Joint Venture actions at HQ TRADOC.

**Brigade 96 AWE**: Brigade 96 will form the design of the operating forces for Force XXI through experimentation with a fully digitized brigade. The brigade will provide digital information-age capabilities and connectivity to all battlefield operating systems within a brigade task force and connectivity to all external elements normally associated with a brigade in combat operations. It will also use new organization concepts and develop, refine and analyze new information-age TTPs. The AWE will conduct constructive, virtual and live simulations against OPFOR in tactically competitive environments. The Brigade 96 will consist of four major phases. The first phase will consist of experimentation in FY95 to develop TTP for brigade task force full-dimensional operations; refine information-age battle command processes; determine required organizational changes; identify training and leader development voids/implications; and provide feedback on digital technology needs. Phase two will use the FY95 experimentation results to field a brigade-size force (BDE 96) from the EXFOR that is fully digitized with appliqué and embedded systems. Phase three is the execution of an NTC rotation in late 1996 or early 1997 to answer the Brigade 96 hypothesis. Phase four consists of feeding the results back into the Force XXI process leading to Force XXI design and fielding decisions and division full-dimensional operations.

**Mobile Strike Force (MSF) 95**: MSF 95 will inform the design of operating forces for Force XXI. It is an experimental unit with a staff of officers from the Command and General Staff College that fights a simulated 21st century division during the PRAIRIE WARRIOR Battle Command Training Program’s exercise at Fort Leavenworth. CG TRADOC, intent for MSF is to assist in building a land combat force from Battle Lab input. MSF will use organizational, materiel, and operational concepts derived from TRADOC Pam 525-5 that may not exist today in order to significantly increase lethality, survivability, and tempo of land combat in the 21st century. MSF 95 capitalizes on leaders who will be senior leaders and commanders of 21st century Army units. It will derive insights using an iterative process and constructive simulation to experiment with the output of Battle Labs across DTLOMS. Insights will inform Senior Army leadership on future investment decisions and focus an industrial base for the future. Additionally, it will assist in the streamlining of staff functions and provide insights to new operational relationships for Force XXI.

**Warrior Focus 96-02**: One of the major initiatives leading to BDE 96 and Force XXI, WARRIOR FOCUS 96-02 will establish a baseline for the digitization of the dismounted soldier in a light-heavy-SOF Task Force organized with a light infantry battalion as its central element. The AWE will look across all Battle Field Operating Systems and concentrate on warfighting benefits to support Force XXI doctrine, equipment and tactics. It will capitalize on major initiatives and lessons learned from NTC rotation 94-07. The AWE will be conducted at the JRTC, FT. Polk, LA in Nov 95.
Atlantic Resolve/Synthetic Theater of War Experiment (STOW-E): Atlantic Resolve/STOW-E is a EUCOM/USAREUR experiment that will integrate information-age technology into an operational corps headquarters to improve the commander's ability to see the battle, communicate his intent, and synchronize the battle. STOW-E will simultaneously exercise a Battalion Task Force in a live environment (Hohenfels maneuver box), a Battalion Task Force in a constructive environment (BBS), and a Battalion Task Force in a virtual environment (SIMNET). The BCBL(L) will assist USAREUR to explore ways to develop, integrate, and assess new command post initiatives. The experiment will focus on distributed decision-making using several projects. The major subordinate projects are: the tactical multi-media interface prototype (TMIP) which provides remote site video-teleconferencing, and the rear area conference network (RACN) which provides video-teleconferencing and automation for the COSCOM.

Focused Dispatch: Advanced Warfighting Experiment (AWE) Focused Dispatch represents a continuation of AWE 94-07. This experiment will evaluate processes and functions of digital connectivity between Fire Support, Intelligence, Combat Service Support and Battle Command in a battalion task force which will provide TTP insights for BDE 96. AWE NTC 94-07 provided many valuable insights and lessons learned that Focused Dispatch will use to further develop the mounted battle dynamic and its interaction with other combat arms and services. Coordination with other participating Battle Labs and functional area proponents is ongoing, ensuring functional digital connectivity across all BOS and new technologies that demonstrate increased warfighting capabilities. Focused Dispatch will use constructive, virtual and live simulations in its experimentation. Pre/Post Janus and SIMNET exercises will be used to develop and refine TTP associated with digitized, information-age warfare. Focused Dispatch, with the Mounted Battlespace Battle Lab as the lead, has begun experimentation work designed to follow-up emerging digital technologies and insights and will provide the Army an insightful look at full-dimensional digitized operations.

Theater Missile Defense: Theater Missile Defense (TMD) is a holistic review that will integrate National, Joint and Army capabilities into a cohesive tactical missile defense force able to counter the enemy across multiple phases of operations (pre-attack, attack and post-attack). TMD combines attack operations, active defense and passive defense operations into a robust C4I system. The synergy attained provides strategic effects, allowing no sanctuary for conventional and unconventional tactical and ballistic missile threat operations. TMD provides insights to other AWEs and BDE 96 which will further enhance the survivability of Force XXI operating forces. It is being conducted by the Depth and Simultaneous Attack Battle Lab with participation from other battle labs and over 30 agencies. Its culminating event will occur during exercise Roving Sands at FT Bliss, TX, in May 95.

THE EXPERIMENTAL FORCE

Background: The rapidly changing world is influencing our transition to the Army of the 21st Century. Our potential military competition is accelerating its modernization at a pace unthinkable during the Cold War. New warfighting concepts are required to maximize the potential of digitization and new technologies. Within Force XXI, the Joint Venture has the responsibility for the design of the Army's operating forces for the 21st century. Joint Venture will use the Battle Lab experimental process to examine concepts, TTP and materiel across DTLOMS to inform the design of Force XXI operating forces. To ensure institutionalization of the Force XXI experimental processes, the Army leadership has designated the 2nd Armored Division at Fort Hood, TX, as the Experimental Force (EXFOR). The CG TRADOC is the Experiment Director. The EXFOR will be under the operational control (OPCON) of TRADOC for experimental purposes starting 15 Mar 95 to completion of the Joint Venture mission. The EXFOR will be the principal organization experimenting with concepts described in TRADOC Pamphlet 525-5 to gain insights for America's Army of the 21st century.

Intent: The intent of the EXFOR is to field a force guiding our Army to Force XXI—the Army of the 21st Century. Force XXI will be organized,
equipped, and trained to execute full-dimensional operations. The EXFOR will be one of the primary means for force design, selection and integration of technology, and development of TTP/doctrine for full-dimensional operations. It will be an ongoing experiment, where results of one experiment lead experiments and requirements for the future. The EXFOR will experiment with future war and OOTW feeding insights back into the DTLOMS process. The EXFOR will be the primary means to experiment with divisional redesign issues leading to objective force design for Force XXI. While the primary purpose for the EXFOR is experimentation, the force will be capable of deploying and executing war or OOTW operations in support of major regional contingencies (MRC) or other operations. Force XXI organizations will promote flexibility with an increased capability to tailor the Force based on METT-T.

Experimentation and Testing: The EXFOR will conduct experiments and operational tests in support of TRADOC and OPTEC. It is a division-sized experiment in full-dimensional operations. Experiments, primarily in application of high technology and modernizing across DTLOMS, remain the primary effort of the EXFOR. Experiments will be conducted examining Battle Lab initiatives, equipment, force design and TTP, providing input to future doctrine, organizations, TTP and acquisitions. Analytic support from various agencies (OPTEC, TRAC, etc.) will provide quantitative and qualitative insights and conclusions from Force XXI experiments. (POCs - FORCE XXI JOINT VENTURE, LTC Greer/MAJ McFadden DSN 680-4472/5749/PROFS MON1(GREERJ)MON1(MCFADDEW,))

LOUISIANA MANEUVERS

GEN Sullivan looked at the situation facing the Army of the 1990's and realized there was a parallel with the situation that faced GEN Marshall in 1941. The reality GEN Marshall faced then--
- Imminent entry into WWII.
- Large, untested Army.
- Growing resources.
- Difficulties with Congress, the Executive branch, and popular support.

Today’s reality that GEN Sullivan faces, while differing in detail, is just as wrenching--
- World’s preeminent Army.
- New National Military Strategy
- Force Projection Army.
- Drawdown, declining resources.
- Ambiguous threat.

The tough challenge facing today’s Army is meeting those realities while maintaining a strong and ready force. The Louisiana Maneuvers (LAM) of the 1990’s provides the catalyst and focus for the difficult changes the Army is undergoing. The Chief of Staff is the Director of LAM and the TRADOC Commander is the Deputy Director. The Army’s senior leadership provides direct input into the new LAM through their membership in the Board of Directors (BoD), the governing body chaired by the CSA. By this mechanism the major concerns of the senior leadership receive the
necessary attention and action. Charged with managing the process, the LAM Task Force is the linchpin for the process, coordinating and synchronizing the efforts of the agencies investigating LAM issues. LAM is a process; a means to an end. Issues are approved by the BoD and proponents are assigned from MACOMs. Each proponent studies the assigned issue using available simulations:

- Live (CTCs, FTXs).
- Constructive (computer models).
- Virtual (SIMNET is prime example).

The LAM process also incorporates lessons learned from real world operations. Basing their findings and recommendations on solid empirical evidence, the proponents assemble decision packages for their issues for the BoD, to whom they present courses of action. The BoD recommends a decision for each issue to the Chief of Staff for his approval and order for implementation. With the advent of Force XXI, the CSA revised the scope for both the LAM process and the Task Force. Force XXI is geared toward the redesign of the operational force, the reengineering of the Title 10/TDA Army, and the programatics of horizontal technical integration of the digitization of the Army. The LAM process is now primarily dedicated to the Force XXI vision, focusing the efforts on issues that will materially aid the move to Force XXI. The Task Force is the CSA's executive agent for Force XXI and is charged with managing the Departmental Force XXI synchronization and the BOD process to actually bring change into reality as the move is made to fully embrace information-age technology. (POC - Louisiana Maneuvers Task Force Initiatives Group, LTC Thomson, DSN 680-5327/PROFS THOMSON.)
