TOPICAL BIBLIOGRAPHY OF PUBLISHED WORKS REGARDING THE HEALTH OF VETERANS OF THE PERSIAN GULF WAR

We have constructed a topical bibliography for the benefit of researchers conducting studies among Persian Gulf War veterans. The document was framed around a bibliography of the Persian Gulf War and associated topics that was prepared by Jacqueline Van de Kamp, M.L.S., Specialized Information Services, National Library of Medicine, and John H. Ferguson, M.D., Office of Medical Applications of Research, National Institutes of Health. Their document was generated in April of 1994 and contained 594 citations. Our document contains 1,751 references, organized alphabetically by first authors' last name, into the following categories: Anthrax, Cancer, Chemical Warfare, Chronic Fatigue Syndrome, Fibromyalgia, Gastrointestinal Disease, Insecticides, Leishmaniasis, Multiple Chemical Sensitivity, Other Infectious Disease, Other Psychiatric Disease, Other Toxins and their Treatment, Posttraumatic Stress Disorder, Pyridostigmine, Q Fever, Reproductive Disease, Respiratory Disease, Smoke Effects, and War and Disease.
14. SUBJECT TERMS (continued)

Infectious Disease, Psychiatric Disease, Toxins and Their Treatment, Posttraumatic Stress Disorder, Pyridostigmine, Q Fever, Reproductive Disease, Respiratory Disease, Smoke Effects, War and Disease.
Topical Bibliography of Published Works Regarding the Health of Veterans of the Persian Gulf War

Technical Document No. 95-3C was supported by the Department of Defense/Health Affairs and funded under the Naval Medical Research and Development Command work unit number 63706N P4464.001-6423. The views presented are those of the authors and do not reflect the official policy of the Department of the Navy, Department of Defense, nor the U.S. Government. Approval for public release; distribution unlimited.
SUMMARY

Problem.

Recently, Persian Gulf War veteran research has been a major focus of federal and public attention. Due to the increasing interest and the need to continue to compile relevant references for the Gulf War investigators, we felt it was necessary to maintain a master bibliography for Persian Gulf War epidemiological research.

Objective.

The primary objective was to compile a master bibliography of the Persian Gulf War and related topics of research for federal investigators.

Approach.

This document was framed around a bibliography of the Persian Gulf War and associated topics, prepared by Jacqueline Van de Kamp, M.L.S., Specialized Information Services, National Library of Medicine, and John H. Ferguson, M.D., Office of Medical Applications of Research, National Institutes of Health. Their task was undertaken largely in preparation for the NIH Assessment Workshop on "The Persian Gulf Experience and Health," held in Bethesda, MD, April 27-29, 1994. Containing 594 citations, their bibliography became part of the National Library of Medicine's Current Bibliographies in Medicine (94-3).

We downloaded the Van de Kamp-Ferguson bibliography from the NIH's World Wide Webb site, and added to their work, revising the reference categories to reflect the changing trends in Persian Gulf research. While continuing to monitor for new references, we reviewed select references from the Van de Kamp-Ferguson bibliography, and additional references supplied by our colleagues. These manuscripts and their bibliographies led us to additional pertinent references, which we continue to add.

Results. We currently have 1,751 references, and we plan to continue expanding it, as more literature regarding the Persian Gulf War is published.
Conclusions. In addition to publication as a Navy Technical Document, copies of this work may be obtained from the Defense Technical Information Center's Gulflink on the World Wide Webb: http://www.dtic.dla.mil/gulflink. We will continue to update this bibliography on the Gulflink.

We appreciate suggestions for further additions, corrections, or improvements to this bibliography.
