Dear Reader:

This product was prepared by the staff of the Federal Research Division of the Library of Congress under an interagency agreement with the sponsoring United States Government agency.

The Federal Research Division is the Library of Congress’s primary fee-for-service research unit. At the request of Executive and Judicial branch agencies of the United States Government and on a cost-recovery basis, the Division prepares studies and reports, chronologies, bibliographies, foreign-language abstracts, databases, and other tailored products in hard-copy and electronic media. The subjects researched include the broad spectrum of social sciences, physical sciences, and the humanities.

For additional information on obtaining the research and analytical services of the Federal Research Division, please call 202-707-9905, fax 202-707-9920, via Internet frd@mail.loc.gov, or write to Marketing Coordinator, Federal Research Division, Library of Congress, Washington, DC 20540-4840.

Louis R. Mortimer
Chief
Federal Research Division
Library of Congress
Washington, DC 20540-4840
This survey examines the course of Chinese political, military and economic reforms as reported between 1 January and 30 June 1986. For each topic, a brief statement of ultimate goals is followed by a discussion of the policy statements and key actions of the period. A chronological list of such statements and events is appended. The study is based on a variety of open sources, including US, Chinese, and other foreign newspapers, periodicals, wire services, books, and journals.

iii
SUMMARY

During the first half of 1986 the overall goal of China's reform effort remained one of greater professionalism in all organizational sectors: government; military; and economic. Well-educated, professionally qualified administrators or officers are to follow laws and regulations in their work, deciding issues through consultation and explicit procedures. In spite of admitted difficulties, especially in reform of factory management, the leadership has called for further reform in the future. In what may be a response to internal criticism and opposition to the reform program within the party, the reformist leadership has mounted a major propaganda and ideological campaign, calling for another "Hundred Flowers" policy, for the implementation of "socialist democracy," and for an end to arbitrary harassment of reformers. Blame for the slow progress of the reforms is thus being put on "dogmatists" within the party, and on low-level bureaucrats who are said to be obstructing reform.
1. Survey of China's Reform Efforts, 1 January - 30 June 1986

a. Introduction

The reform program promoted by China's current leadership aims at a transformation of the Chinese state and society that is quite as total as those attempted in the Great Leap Forward or the Cultural Revolution. But, Deng Xiaoping and his associates have tried to avoid the damaging emphasis on speed, mass enthusiasm, and immediate and total change that characterized those movements. The Chinese leadership presents reform as a long-term effort, involving continual readjustment and redefinition, and accompanied by discussion, debate, and wide consultation. The rhetoric of reform speaks of crossing a stream from stepping stone to stepping stone rather than leaping across, going against the current or relying completely on the helmsman. Reform in China, as in other Soviet-style political and economic systems, is necessarily a relatively long-term process marked by continued modification, compromise and redefinition.1

It is, therefore, difficult to judge the success of the reform program over any short period. The difficulty is compounded by the Chinese tendency to use the term "reform" very broadly, and to describe almost any government action or any change as "reform."2 In the Chinese political context such imprecision has obvious benefits. It permits the assembly of broad coalitions; permits local leaders to describe their actions as part of a broad program; and permits national leaders to switch targets, and by redefining intermediate, short-term goals avoids identifying any program as an outright failure. Assessing the course of such a long-term process with such broadly defined goals is best done by paying close attention to concrete, key actions and to authoritative statements of policy by national leaders. In doing this, "reform" is understood to be a narrower category than "change" and to refer to purposeful alterations in overall structures or procedures or in relations between component subsystems.

b. Political Reform

During the first half of 1986 the broad policy goals for reform of China's government remained unchanged, although the April-June period saw a new stress on ideology, with much discussion of academic freedom, a new "Hundred Flowers" program, and "socialist democracy." The goals for reform of the government call for administration by educated, professionally competent officials whose actions are guided by law. This entails the replacement of elderly and ill-educated cadres by younger and better educated officials, and the development of an effective legal system. Government bodies are to be separated from economic enterprises, withdrawing to a supervisory role and enforcing and amending the laws that guide the "relatively independent" economic enterprises.

In a similar vein, the Communist Party and its many branches are to withdraw from day-to-day management of enterprises and units. The party now seeks to recruit intellectuals (which in Chinese usage refers to anyone with a senior middle school education), and to operate internally under norms (if not binding laws) stressing consultation, discussion, and rational decisionmaking, rather than "dogmatism" or arbitrary choices by leaders. The overall reform
program requires a major change in the way the Communist Party articulates with the rest of society and with the other organizations (factories, schools, government offices, the Armed Forces) to which its members belong. The role of the party and its branches after reform remains quite ill defined. Not surprisingly, given the sensitive nature of discussions of the party's power and proper role, few specific proposals have been made public. The vision projected however, for both party and government is one of greater professionalism, administrative rationality, and rule by laws rather than men.

The issue of the party's role and power did emerge in public accounts of disputes between reformist factory managers and obstructive factory party branches and party secretaries. National-level newspapers such as Renmin Ribao championed the reformers, castigating local officials and party cadres for failure to support the party's reform policies. What might earlier have been portrayed as conflicts between "Reds" and "experts" were presented as conflicts between those following the party policies and those party members who ignored or obstructed those policies.

Unconfirmed foreign press reports claimed that within the party the reform group was criticized in late 1985 for stressing economics at the expense of ideology and for instituting reforms and an open door policy that bred corruption and moral decay. Perhaps to counter such criticism, 1986 began with the announcement of a special anticorruption program, presided over by leaders associated with the reform tendency. Several party leaders, most notably Party General Secretary Hu Yaobang and rising star Hu Qili, discussed ideological questions. Their arguments stressed the necessity of updating and adapting Marxist theory, described as a science rather than a dogma. They denied any opposition between economic development and "socialist spiritual civilization," and located the primary source of corruption and abuse of power in the legacy of China's "feudal" past rather than in foreign "bourgeois influences." As a remedy for admitted ills, they called for increased "socialist democracy." "Socialist democracy," Hu Qili made clear, does not involve elections, opposition parties or majority rule, but rather connotes improved communication between leaders and the public, widespread discussion, the making of decisions on rational grounds and after consulting expert opinion, and a certain degree of tolerance for disagreement. It is contrasted with "doggmatism" and arbitrary decisions by leaders who will not listen to advice or criticism, and with the "movement" or "campaign" style in which those who disagree are labeled political enemies and punished. Current difficulties, as with urban economic reform, are defined as consequences of the legacy of feudalism and the failure to practice socialist democracy. The solution therefore lies in further reform, more opening up to the outside world, and the enforcement of laws regulating commercial and bureaucratic conduct. In political terms, these statements appear to be attempts to seize the political initiative, define the issues, interpret key concepts such as Marxism, legality and democracy in ways favorable to reformers, and to shift the ground of debate away from the success of the urban economic reforms, which many observers regard as stalled.

The calls for a new "Hundred Flowers" program--also known as the "Double Hundred" policy ("let a hundred flowers bloom, let a hundred schools of thought contend")--which began in late April and were elaborated through May and June, were clearly a centrally-directed political initiative, the
purpose of which remains obscure. In themselves, the calls for academic freedom and open debate on scientific and scholarly issues were not new. The targets of criticism were ill-defined "people" and low-level administrators who stifled discussion and were free with political criticism. Low-level administrators were being criticized at the same time for obstructing the efforts of reformist factory managers. The outpouring of repetitious articles, editorials and commentaries in all China's major media remained abstract. It may have represented an attempt to prepare public opinion for substantial changes in local government, the operation of the legal system, or inner-party procedures to be announced later in the year. A hint of this was suggested in an article which reported the opinions of factory managers who were "burning up with anger and anxiety" over the refusal of local officials to grant them the decision-making powers which State Council regulations had authorized. It concluded that "many factory directors believe the key...lies in comprehensive and corresponding reforms in other departments."3

The repetitiousness and frequency of the calls for a Double Hundred policy and academic freedom may have carried a political message. They demonstrated that the reform tendency within the party was in complete control of the media and the propaganda apparatus, unlike in late 1983 when the short-lived "Spiritual Pollution" movement was used to criticize the open door policy.

c. Military Reform

Demobilization and Resettlement

Nineteen eighty-six is a key year in reforming the Army's structure and further reducing and reorganizing the troops. People's Liberation Army (PLA) Chief of General Staff Yang Dezhi indicated that the Army has completed the first phase of streamlining and reorganization. The demobilization and resettlement is expected to continue through 1986 and perhaps into 1987.

Despite the difficulty of finding jobs for so many people, the early retirement program has been generally successful. Many local governments have set up training schools and centers to provide job training opportunities and placement services to assist demobilized military personnel to transfer to civilian work. After demobilization, the former military personnel are normally resettled in their home towns, aggravating an already serious housing problem. In Beijing, where there are a large number of demobilized soldiers, houses are in short supply, and though the rate of construction may have increased, rehousing will be completed at the earliest by the end of 1986.

The main targets of the first phase in streamlining the Armed Forces were the ground force units, such as the field army units and provincial military districts, and the combat units of the Navy and the Air Force. The main targets of the second phase, which is currently under way, are the logistics sector, military institutes, and hospitals affiliated with the PLA. All the people's armed forces departments at the city and county level are to be transferred to local authorities and the newly established district people's armed forces departments will become "independent" military organs under the dual leadership of the local governments and the military authorities.
Training and Education

With the massive manpower reductions, the present emphasis is on the improvement of training and education and the application of high technology for modern defense. The PLA is establishing an improved system under which new recruits will undergo 4 months of regular, rigorous, and systematic training conducted by a specialized infantry and artillery training regiment before they are assigned to serve in PLA units. In March, a combined tactical training center was opened in the Nanjing Military Region. When fully completed, in a few years, it will be equipped with an electronic installation to direct training and a training battlefield for combat exercises. It will simulate various enemy actions and permit PLA units to engage in joint air and ground forces exercises. All units of group armies in the entire Armed Forces will come on a rotational basis for training with combat simulators.

The Chinese Air Force is introducing electronic, laser, and computerized equipment to improve its training methods, and the command systems of many air units have been computerized in order to improve their ability to respond quickly. The Air Force has conducted tactical training exercises involving ground troops since the beginning of 1986. The Navy's first long-range exercise in the Western Pacific, in late May 1986, included several dozen coordinated combat maneuvers and covered several thousand nautical miles. This exercise was designed to meet the requirements of future naval warfare and to explore new ways of carrying out coordinated naval training. It tested the units' wartime communications, security, ship maintenance, equipment and facilities, and political work.

The three-level system of military academies will be implemented to upgrade the training of PLA officers. The junior command academies will recruit senior middle school graduates and outstanding squad leaders; the middle-level command academies will recruit officers at battalion level and will provide them with advanced professional education; and the senior command academies will recruit officers at and above the division level and provide them with comprehensive higher education.

The National Defense University (NDU) in Beijing is the PLA's highest-level military academy, developed from the merger of the former military, political, and logistics academies. Zhang Zhen, formerly Deputy Chief of General Staff, is President of the NDU, and Li Desheng, former Commander of the Shenyang Military Region, is the Political Commissar. Classes will begin on 1 September 1986. The university will train senior military, political, and logistics commanders for the PLA ground, naval, and air forces, as well as senior staff officers, military theory researchers, and government cadres. Graduates are expected to be well prepared not only in military affairs, but in economics, diplomacy, and other sciences. This represents a major reform in the training of PLA officers.

Defense Industry

Premier Zhao Ziyang has indicated that the policy for military industry is to serve both civilian and military needs, and that military industries are to establish links with civilian enterprises. In January, the Minister of the Ordnance Industry ordered all weapons factories to switch part
of their manufacturing capacity to civilian production. China plans that by 1990 the military industries will devote 80 percent of their production to civilian goods for both the domestic market and for export. The military industries were to hold their first international trade fair in April 1986 in the Shenzhen Special Economic Zone adjacent to Hong Kong. In short, the same principles guiding civilian industry—market exchange, responsibility for producing marketable goods, and "horizontal" links with other industries—are to be applied to military industries as well.

Problems

In an effort to curb corruption in the Armed Forces, the Central Military Commission released a circular requiring all spending, production, and management departments within the military to undergo a thorough inspection. A special office, headed by Hong Xuezhi, Director of the PLA General Logistics Department, has been established to carry out the inspection. On 5 March, the PLA dispatched 150 officers to units across the country to investigate army finances and to educate officers and soldiers on financial discipline. The efforts to involve the Army in national modernization and economic development have provided more opportunities for military units to make money, sometimes in extralegal ways. However, because of efforts to maintain morale by keeping scandals out of the limelight, details on corruption cases have been scarce.

d. Economic Reform

Discussion

During the first half of 1986, vigorous and wide-ranging discussion of economic questions continued. Both academic journals and the daily press published articles on such issues as different types of ownership (state, collective, private, leased, joint-stock), the best provisions of bankruptcy law, the proper role of banks, and the best ways for the central government to use "economic levers" (taxes, monetary policy, interest rates) to guide the economy. Articles often concluded with policy recommendations, offering policymakers a range of options, suggestions, and criticism of existing arrangements. Some of the suggestions probably will be implemented, if only as experiments.

Policy

No new policies for economic reform were announced, nor were the reform goals set out in 1984 and 1985 repudiated or even seriously modified. The official line is that 1986 is to be a year of consolidation. Further action on price reform, the heart of any serious economic reform, has been explicitly ruled out. Repeated statements by such national leaders as Premier Zhao Ziyang reaffirm support for the general goals set out in the October 1984 CCP Central Committee "Decision on Reform of the Economic Structure." In fact, the draft of the 7th Five-Year Plan (1986–90) calls for further reforms, envisaging more decentralization, greater decisionmaking powers for managers, a wider role for market exchange, and less direct administrative control over enterprises and the economy.
The policy calls chiefly for expansion of "horizontal" or "lateral" ties between enterprises or regions designed to combat the wasteful duplication of effort and investment produced by the economy's widespread compartmentalization and administrative barriers to exchange. This implies a greater role for market exchange and a restriction of the power of ministerial and local government officials over enterprises and their managers.

Administrative Actions and Experiments

The period saw continued efforts to translate the general goals of reform into specific administrative and legal measures. The most significant step was the adoption by the National People's Congress in April 1986 of a new Civil Code. The Code is intended to provide a clear legal framework for cooperative, contract-based and market-oriented economic activity. The other key legal document, the bankruptcy law, was widely discussed but not implemented. The bankruptcy law is intended to break the "iron rice bowl" of unconditional state support for even the most inefficient enterprises. The law reportedly has been held up by disagreements over treatment of workers whose jobs would be lost, as well as the issue of factories whose losses stem from the irrationalities of the price system rather than their own mismanagement. State Council regulations on contractual associations, double taxation of such associations, and the operation of the commercial system were also promulgated.

Several experiments in urban economic reform received wide publicity. Many of these came from Shenyang, one of three cities (along with Wuhan and Chongqing) granted special freedom to experiment with economic reforms. Most of the reforms centered on changes in factory management, including performance contracts for managers, leasing money-losing factories to managers who are to get a share of any profits, and giving managers broader powers, including those of hiring and firing. One unfortunate Shenyang factory has been cited repeatedly as the prime candidate for the first post-Liberation bankruptcy. In line with the focus on factory management and reform, little publicity went to Shenzhen and the other coastal special economic zones.

Problems and Political Solutions

A number of Government regulations and much national publicity were essentially reactive, representing responses to urgent problems rather than the logical unfolding of a long-term strategy. The most common problem was attempts by local officials or the Communist Party branches within enterprises to continue to control the enterprises or to harass or dismiss reform-minded managers. By June such official organs as Beijing Review and China Daily were publishing sharp criticisms of local administrative offices and so-called "corporations" for their refusal to grant enterprises the freedom of action they are supposedly entitled to, and for their imposition of unauthorized fees, taxes, and service charges. Such instances of local bureaucratic malefeasance or nonfeasance represent longstanding and widespread problems. The public criticism of enterprise party branches and party secretaries raises the very sensitive issue of their as yet undefined role in a reformed economic structure based on expertise and managerial professionalism. By June, China's official media were beginning to suggest that reform of the political structure was the only way to curb abuses. The link between economic reform and
political reform was thus highlighted, and the focus of the reform movement shifted back toward politics.

e. Conclusion

During the first half of 1986, China's leadership continued its calls for reform. Although there was more rhetoric than action in economic reform, some significant steps were taken and politically sensitive topics such as the proper role of Communist Party branches and their cadres in factories and other institutions were openly discussed. Some concrete steps toward economic reform were taken, most notably the adoption of the new Civil Code, and China's military continued to demobilize troops and to improve officer training. During May and June the reform program as a whole took a new turn, as strong emphasis was put on ideology and the need for changes in the way administrators and party cadres make decisions. As of June 30 this policy trend was still very much in process, and its ultimate goal remained unclear. However, it was clearly aimed at lower-level officials, on whom the blame for slow progress in reforms was being placed.

Objectives
GOVERNMENT

Subobjectives
Leadership

Indicators
China's leadership rejuvenation reached its climax in September 1985 when 131 party veterans, including 10 from the Political Bureau and 54 from the Central Committee, resigned. Deng Xiaoping described the rejuvenation process as an "organizational guarantee for the continuity of the party's (reformist) policies." The task of implementing the reforms as well as resolving the problems has been placed firmly on the shoulders of six "rising stars," promoted to Political Bureau and/or Secretariat membership in September 1985: Hu Qili, Tian Jiyun, Qiao Shi, Li Peng, Wang Zhaoguo and Hao Jianxiu. Hu Qili chaired a Party Secretariat meeting in January 1986 in which he announced the formation of a top-level anticorruption campaign, headed by Qiao Shi.

Corruption

Indicators
In Deng Xiaoping's words, China took "a brave step" on the path of reform in 1985 in many important aspects of China's urban and rural economic systems, including the sensitive price and wage systems. In 1986, reform policies continue to be the priority tasks of the party and government. It is to be a year of "consolidation, assimilation, supplementation, and improvement" on the basis of the reform policies of 1985. At the beginning of this year, the CCP Central Committee passed a resolution to fight against corruption in party and government. The reform and rectification are working hand in hand toward the common goal—the reform policies.

In the course of drawing up the guidelines of the Seventh 5-Year Plan, Deng Xiaoping was under great pressure and encountered a number of difficulties. Chen Yun and his supporters criticized Hu Yaobang for "relaxing the ideological work" and "yielding to capitalism." Hu Qiaomu argued that the special economic zones are "concessions," the open-door policy is "colonization without colonists," and the opening up has corrupted China's social values. Because of the runaway industrial growth in 1985, Chen Yun and his followers tried to put the blame on the reformists. They argued that the pace of reforms should be slowed down. Finally, the reformists and Chen Yun's faction worked out the guidelines for reforms in 1986 as "consolidating, digesting, replenishing, and improving."

Addressing social scientists in Shanghai on April 14, Political Bureau member Hu Qili discusses "spiritual civilization." He says:
POLITICAL REFORM

Continued
"We should not let people believe that we now stress spiritual civilization simply because there have been some troubles with our economic structural reform. This is not true." He argues that economic reform and spiritual civilization are mutually reinforcing, and identifies "negative tendencies" such as corruption with China's "feudal tradition" and underdeveloped forces of production. The only cure is to carry out further reforms and continue the opening up policy. Education and enforcement of laws are the way to improve the party's working style. "To prevent cadres of all ranks from abusing their powers and engaging in trade, we must further develop the commodity economy to create an environment of balanced competition and further improve our legal system."

POLITICAL REFORM

Continued

Indicators
In a 23 March speech to party members attending the National People's Congress, Political Bureau member and possible successor to Hu Yaobang as Party General Secretary, Hu Qili defines "socialist democracy." It is a process in which leaders visit grass-roots units and solicit opinions from the masses, explain policies and rely on persuasion through rational discussion. Political struggle, criticism of people on principle, and arbitrary issuing of orders are to be avoided. Differences of opinion are allowed. "Socialist democracy" is essentially a matter of open communication between leaders and the masses, and operates through rational discussion rather than political struggle and mass movements.

Democratization

Communist Party officials and scholars claim that China's reform program has created an "unprecedented political democratization."
They hold that there has been a broadening of academic freedom and say that they are calling for legislation to ensure its continuation. An article in Renmin Ribao argued that there must be detailed guarantees of civil rights, such as laws to protect the press, and to protect copyrights, inventions, visual media, academic and cultural societies, and literary creations.

Industry

Indicators
Premier Zhao Ziyang has indicated that China's current policy for military industry is to transform its facilities to serve both military and civilian needs and to establish links with civilian enterprises. The Ministry of Ordnance Industry and Heilongjiang Province are establishing their first cooperation plan this year. China has planned that by 1990 the military industries will devote 80 percent of their production to civilian goods. According to the Seventh 5-Year Plan (1986-1990), military industries are to set up a network of export-oriented production.
