Notification of Test Results

13 October 1994

This notice documents the results of an Air Force CALS Test Bed (AFCTB) Quick Short Test Report (QSTR) evaluation of data submitted by:

RJO Corporation

Identified as follows:

Title: TMSS Parsing Test MIL-M-7700E Flight Manual DTD
Program: N/A
Program Office: N/A
Contract No.: N/A
QSTR No.: AFCTB-ID 94-123

Received on the following media: 3.5" Diskette

The results of the QSTR evaluation are as follows:

MIL-STD-1840A Standard: N/A
MIL-STD-1840A Media Format: N/A
MIL-D-28000A IGES: N/A
MIL-M-28001B SGML: PASS
MIL-R-28002A Raster: N/A
MIL-D-28003 CGM: N/A

Formal results with associated disclaimer are documented and available from the AFCTB.

1. Introduction

1.1 Background

The Department of Defense (DoD) Air Force Continuous Acquisition and Life-cycle Support (CALS) Test Network (AFCTN) is conducting tests of the military standard for the Automated Interchange of Technical Information, MIL-STD-1840A, and its companion suite of military specifications. The AFCTN is a DoD sponsored confederation of voluntary participants from industry and government managed by the Electronic Systems Center (ESC).

The primary objective of the AFCTN is to evaluate the effectiveness of the CALS standards for technical data interchange and to demonstrate the technical capabilities and operational suitability of those standards. Two general categories of tests are performed to evaluate the standards; formal and informal.

Formal tests are large and comprehensive, which follow a written test plan, require specific authorization from the DoD, and may take months to prepare, execute, and report.

Informal tests are quick and short, used by the AFCTN technical staff, to broaden the testing base. They include representative samples of the many systems and applications used by AFCTN participants. They also allow the AFCTN staff to gain feedback from many industry and government interpretations of the standards, to increase the base of participation in the CALS initiative, and respond to the many requests for help that come from participants. Participants take part voluntarily, benefit by receiving an evaluation of their latest implementation (interpretation) of the standards, interact with the AFCTN technical staff, gain experience using the standards, and develop increased confidence in them. The results of informal tests are reported in Quick Short Test Reports (QSTRs) that briefly summarize the standard(s) tested, the hardware and software used, the nature of the test, and the results.
1.2 Purpose

The purpose of this informal test is to analyze Air Force Document Type Definitions (DTDs) for Standard Generalized Markup Language (SGML) syntax, using several commercial and public domain SGML parsers.
2. Test Parameters

Test Plan: AFCTB 94-123

Date of Evaluation: 13 October 1994

Evaluator: George Elwood
Air Force CALS Test Bed
DET 2 HQ ESC/AV-2P
4027 Colonel Glenn Hwy
Suite 300
Dayton OH 45431-1672

Data Originator: Roger Huckaby
RJO
4027 Colonel Glenn Hwy
Suite 200
Dayton OH 45431-1672

Data Description: Technical Manual Test
3 DTDs

Data Source System:

Text/SGML

HARDWARE
Unknown

SOFTWARE
Unknown

Evaluation Tools Used:

MIL-M-28001 (SGML)
PC 486/50
Exoterica XGMLNormalizer v1.2e3.2
Exoterica Validator v2.0 ex1
Public Domain sgmls

Standards Tested: MIL-M-28001B
3. 1840A Analysis

3.1 External Packaging

The 3.5" diskette was hand delivered to the Air Force CALS Test Bed (AFCTB). It was not enclosed in any type of container.

The files received by the AFCTB were not MIL-STD-1840A. The files were not named per the standard conventions, as the stated purpose of the evaluation was the basic data structure.
4. SGML Analysis

4.1 D700EA0.ORG

The AFCTB has several parsers available for evaluating submitted DTD and text files. These tools are not used to generate a pass/fail but to report how commercially available software can handle the files. These products are used in the development of technical publications and are good indicators of usability. The use of these products is not an endorsement nor an indication of CALS capability. All operations were performed using the default settings unless specified in the report. Changes to DTD or text files required by each system are not documented in the report.

The goal was to configure the DTD under analysis as it would normally be used. However, for this analysis it was necessary to modify the DTD adding the "DOCTYPE doc [" statement to the start and the companion "]>" to the end of the DTD under evaluation, as stated in the comments of the DTD. If the parser did not support a formal file pointing to the location of the ISO character sets, this was added.

The DTD under evaluation, MIL-M-7700E, Flight Manual, was a stand alone DTD. The DTD was not changed except to insert the location of the ISO character set files in the D700EA0.ORG DTD. During the inspection of the DTD, it was noted that several options could be selected depending on the type flight manual required. These options were defined in marked section of the DTD.

The text and DTD files were evaluated using the Exoterica Validator exl parser. No errors were reported.

The text and DTD files were tested using the Exoterica XGMLNormalizer parser. No errors or warnings were reported.

The text and DTD files were evaluated using the Public Domain sgmls parser. This utility was utilized to determine the capacity statement requirements. The following warning was issued by this utility:
sgmls: Warning at \ws\94123a.dtd, line 1123 in declaration parameter 0:
   End-tag minimization should be "O" for element with CONREF attribute

<!ELEMENT gendiag    [ figure | foldout ] >
<!ATTLIST gendiag    xref IDREF #CONREF >

No errors were reported by any of the parsers used in the AFCTB.
4.2 D700EB0.ORG

The DTD under evaluation, MIL-M-7700E, Flight Manual Supplement, required the basic MIL-M-7700E DTD. The DTD was not changed except to insert the location of the basic DTD and the ISO character set files in the D700EA0.ORG DTD.

D700EB0.ORG --> D700EA0.ORG

The same comments made about the basic DTD and concrete syntax were legal for this DTD, as it called the basic DTD.

The text and DTD files were evaluated using the Exoterica Validator ex1 parser. No errors were reported. The parser reported two type warnings. The first type was a parameter entity name declared more than once.

<!-- **Warning** in "i:\94123\94123a.dtd" (entity "%m7700e-a"), line 119, used in "\xgm1\94123b.dtd", line 117:
A parameter entity name has been declared more than once.
The entity is "%idinf".
</ENTITY % idinf  "(tmidno+, pretmidno*, doctype?, prtitle, subtitle?, (m

 -->

The second type warning was for elements excluded from the content model.

<!-- **Warning** in "\xgm1\94123b.dtd", line 135:
An element is not allowed in the document instance because it does not appear in any accessible content model or it is completely excluded.
The element is "ABBRSECT".

 -->

The text and DTD files were tested using the Exoterica XGMLNormalizer parser. No errors or warnings were reported.
The text and DTD files were evaluated using the Public Domain *sgmls* parser. This utility was used to determine the capacity statement requirements. Three duplicate entries and one end tag warning were issued by this utility.

sgmls: Warning at \ws\94123a.dtd, line 1123 in declaration parameter 0:
End-tag minimization should be "O" for element with CONREF attribute.

```xml
<!ELEMENT gendiag    [ figure | foldout ]>
<!ATTLIST gendiag   xref IDREF #CONREF>
```
4.3 D700EC0.ORG

The DTD under evaluation, MIL-M-7700E, Flight Manual Check- list (D700EC0.ORG), was a stand alone DTD. The DTD was not changed except to insert the location of the ISO character set files in the D700EC0.ORG DTD. During the inspection of the DTD, it was noted that several options could be selected depending on the type flight manual required. These options were defined in marked sections of the DTD.

The text and DTD files were evaluated using the Exoterica Validator ex1 parser. Three types of warnings were issued by this utility. The first type warning was a parameter entity name declared more than once.

<!-- **Warning** in "\xml\94123c.dtd", line 107:
A parameter entity name has been declared more than once.
The entity is "bodyele".
ENTITY % bodyele "(front, suppnum, (((description & clnormproc &
-------
-->

The second type warning was for elements excluded from the content model.

<!-- **Warning** in "\xml\94123c.dtd", line 954:
An element is not allowed in the document instance because it does not appear in any accessible content model or it is completely excluded.
The element is "CHGHOSTDATE".
-->

The third type warning was for an undefined element.

<!-- **Warning** in "\xml\94123c.dtd", line 954:
An element name specified in a USEMAP declaration, ATTLIST declaration or content model is not defined by an ELEMENT declaration.
The element name is "EMEPROCNOT".
-->

9
The text and DTD files were tested using the Exoterica XGMLNormalizer parser. One warning was issued for an undefined element.

The text and DTD files were evaluated using the Public Domain sgmls parser. Two warnings were issued by this utility; an undefined element and a duplicate definition.
5. Conclusions and Recommendations

The DTD, MIL-M-7700E (D700EA0.ORG) was successfully parsed, using the utilities available within the AFCTB, without a reported error.

The DTD, MIL-M-7700E (D700EB0.ORG) was successfully parsed, using the utilities available within the AFCTB, without a reported error.

The DTD, MIL-M-7700E (D700EC0.ORG) was successfully parsed, using the utilities available within the AFCTB, without a reported error. However, all parsers reported warnings for an undefined element.
