Notification of Test Results

14 September 1994

This notice documents the results of an Air Force CALS Test Bed (AFCTB) Quick Short Test Report (QSTR) evaluation of data submitted by:

Rockwell International's Rocketdyne Division

Identified as follows:

Title: Technical Raster Transfer
Program: CALS Evaluation & Integration Office
Program Office: HQ AFMC/ENCT
Contract No.: N/A
QSTR No.: AFCTB-ID 94-120

Received on the following media: Electronic Transfer

The results of the QSTR evaluation are as follows:

MIL-STD-1840A & 1840B Pass
MIL-STD-1840A & 1840B Pass
Media Format:
MIL-D-28000A IGES: N/A
MIL-M-28001B SGML: N/A
MIL-R-28002A Raster: Pass
MIL-D-28003 CGM: N/A

Formal results with associated disclaimer are documented and available from the AFCTB.

1. Introduction

1.1 Background

The Department of Defense (DoD) Air Force Continuous Acquisition and Life-cycle Support (CALS) Test Network (AFCTN) is conducting tests of the military standard for the Automated Interchange of Technical Information, MIL-STD-1840B, and its companion suite of military specifications. The AFCTN is a DoD sponsored confederation of voluntary participants from industry and government managed by the Electronic Systems Center (ESC).

The primary objective of the AFCTN is to evaluate the effectiveness of the CALS standards for technical data interchange and to demonstrate the technical capabilities and operational suitability of those standards. Two general categories of tests are performed to evaluate the standards; formal and informal.

Formal tests are large and comprehensive, which follow a written test plan, require specific authorization from the DoD, and may take months to prepare, execute, and report.

Informal tests are quick and short, used by the AFCTN technical staff, to broaden the testing base. They include representative samples of the many systems and applications used by AFCTN participants. They also allow the AFCTN staff to gain feedback from many industry and government interpretations of the standards, to increase the base of participation in the CALS initiative, and respond to the many requests for help that come from participants. Participants take part voluntarily, benefit by receiving an evaluation of their latest implementation (interpretation) of the standards, interact with the AFCTN technical staff, gain experience using the standards, and develop increased confidence in them. The results of informal tests are reported in Quick Short Test Reports (QSTRs) that briefly summarize the standard(s) tested, the hardware and software used, the nature of the test, and the results.
1.2 Purpose

The purpose of the informal test, reported in this QSTR, was to analyze Rocketdyne's (a division of Rockwell Int'l) interpretation and use of the CALS standards in transferring technical Raster data. Rocketdyne used its CALS Technical Data Interchange System to produce data, in accordance with the standards, and delivered it to the AFCTN technical staff using and electronic transfer to the internet server.

Two file sets were transmitted for this test, an 1840A and an 1840B data set.
2. Test Parameters

Test Plan: AFCTB 94-120

Date of Evaluation: 14 September 1994

Evaluator: George Elwood

Evaluation Tools Used:

**MIL-STD-1840B (TAPE)**
- PC 486/50
  - AFCTN Tapetool v1.2.10 DOS
  - AFCTN Tapetool v2.0.0 (1840B)

**MIL-R-28002 (Raster)**
- HP 735
  - AFCTN xрастb.hp
  - InterCAP X-Change v7.82
  - Carberry CADLeaf v4.0
- SGI Indigo2
  - AFCTN xрастb.sgi
  - IGES Data Analysis (IDA) CALSViev
- SUN SparcStation 2
  - IDA IGESView v3.0
- PC 486
  - AFCTN validg4
  - IDA IGESView Windows
  - Inset Systems HiJaaK Pro
  - Expert Graphics RxHighlight v1.0

Standards
Tested:
- MIL-STD-1840A
- MIL-STD-1840B
- MIL-R-28002A
3. 1840A & 1840B Analysis

3.1 External Packaging

The files arrived at the Air Force CALS Test Bed (AFCTB) via an electronic transfer to the internet server. No physical media was exchanged or evaluated.

3.2 Transmission Envelope

The electronic transfer received by the AFCTB contained MIL-STD-1840A and MIL-STD-1840B files. The files were named per the standard conventions.

3.2.1 Tape Formats

No tape was evaluated.

3.2.2 Declaration and Header Fields

No errors were found in the Document Declaration file or data file headers of either file set. This portion of the electronic transfer meets the requirements defined in CALS MIL-STD-1840A and MIL-STD-1840B.

4. IGES Analysis

No Initial Graphics Exchange Specification (IGES) files were included in this evaluation.

5. SGML Analysis

No Standard Generalized Markup Language (SGML) files were included in this evaluation.
6. Raster Analysis

Each transfer set contained two Raster files from a MIL-STD-1840A and MIL-STD-1840B data package. The Raster files were compared and found to be exact matches. The Raster evaluation was done using the MIL-STD-1840A data files.

The procedure used to create these files at Rocketdyne was as follows:

Original engineering drawing created using CATIA. These files were then scanned at 300 DPI. File D001R001 is an "E" size drawing while D001R002 is an "A" size drawing. The 1840A output was generated using the AFCTB Tapetool v1.2.10. The 1840B output was generated using the AFCTN Tapetool v2.0.0. The 1840B header contained additional fields, which are not currently supported by the AFCTB Raster test tools; xrastb and validg4. All evaluations of the Raster files were done using the MIL-STD-1840A data set.

The 1840A files were read into the AFCTN xrastb.sgi viewing utility. No problems were encountered. It was noted that the decompressed file size of D001R001 was over 15 megabytes. Files this large may cause problems in some systems with limited memory. The image quality was excellent. All text could be read. The SUN Sparc version of the software would not display the image due to lack of memory.

The AFCTB has several tools for viewing Raster files. These tools are not used to generate a pass/fail but to report how commercially available software can handle the files. Many of these products are used in the development of technical publications and are good indicators of usability. The use of these products is not an endorsement nor an indication of CALS capability. All operations were performed using the default settings.

The Raster files were read into Carberry's CADLeaf software without a reported error. In order to make the images acceptable, only a small section of the images could be displayed.

According to R. Bryan DiAntonio of Carberry, "We worked with these files and all images were displayed without a reported error."
The files were read using IDA's CALSView without a reported error.

The files were read into IDA's IGESView without a reported error. The files were printed from this utility. The files were read into Inset Systems' HiJaak for Windows. Because of the size of the files and available memory on the PC, error messages were displayed indicating a lack of memory to process the files.

No errors were reported while using InterCAP's X-Change. The images appeared correctly. The text size was very small, making it necessary to use the zoom function in order to view it.

The Raster files were imported into Expert Graphics' Rx-Highlight and displayed without any reported errors. The images were enlarged and all text was legible.

The two Raster files in these transfer sets meet the CALS MIL-R-28002A specification.

7. CGM Analysis

No Computer Graphics Metafiles (CGMs) were included in this evaluation.
8. Conclusions and Recommendations

The CALS Document Declaration file and data file headers were correct. This portion of the electronic transfers meets the CALS MIL-STD-1840A and MIL-STD-1840B requirements.

The Raster files meet the CALS MIL-R-28002A specification.

The electronic transfer sets submitted by Rocketdyne conform to the CALS MIL-STD-1840A and MIL-STD-1840B requirements.
