OFFICE OF NAVAL RESEARCH

DoD Science and Engineering Apprenticeship Program for
High School Students

1994–'95 Activities
Contract No. N00014-91-J-1825

Principal Manager: Dr. Richard L. Pfeffer
Geophysical Fluid Dynamics Institute
The Florida State University
Tallahassee, FL 32306-3017
(904)-644-5594

June 1995
The Florida State University
Tallahassee, Florida
In the spring of 1994, the guidance counselors of five local high schools were asked to recommend outstanding college-bound students who they thought would benefit most from our program. Nine students were selected to participate starting in the summer 1994 and four during the school year, two of whom were from the summer program. Our student group consisted of two seniors, five juniors and four exceptional sophomores. The departure from our past concentration on seniors was motivated by our desire to expose students to science and scientific methodology at an earlier age. This report contains background information concerning the students who were selected.

Students spent a total of 30 hours per week with the program for 10 weeks in summer and 10-20 hours per week during the school year. They participated in the research program via data handling and data processing with the aid of computer operated equipment, and in enrichment activities during the summer; including lectures, laboratory demonstrations, scientific films, a formal course and a weekly discussion session on the history of science using the book COMING OF AGE IN THE MILKY WAY by Timothy Ferris.
1. INTRODUCTION

The year 1994–'95 represented our thirteenth successful DoD Science and Engineering Apprenticeship Program for High School Students, sponsored by the Office of Naval Research at Florida State University. The program this year was again administered by the Geophysical Fluid Dynamics Institute (GFDI) under the direction of Dr. Richard L. Pfeffer. Student activities were centered at GFDI and included work experience in GFDI.

In the spring of 1994 the guidance counselors of five local high schools were asked to recommend outstanding college-bound students who they thought would benefit most from our program. Nine students were selected to participate starting in the summer of 1994 and four during the school year, two of whom were from the summer program. Our student group consisted of two seniors, five juniors and four exceptional sophomores. The departure from our past concentration on seniors was motivated by our desire to expose students to science and scientific methodology at an earlier age. Some background information concerning the students who were selected appears in the following section. Further information pertaining to each apprentice is attached at the end of the report.

Students spent a total of 30 hours per week with the program for 10 weeks in summer and 10–20 hours per week during the school year. They participated in the research program via data handling and data processing with the aid of computer operated equipment, and in enrichment activities during the summer; including lectures, laboratory demonstrations, scientific films, a formal course and a weekly discussion session on the history of science using the book *Coming of Age in the Milky Way* by Timothy Ferris. A summary of their activities and projects is included in section 3.
2. STUDENTS' VITAS

NAME: Elboni Austin
RACE: Black
SEX: Female
HIGH SCHOOL: Godby High School
ANTICIPATED COLLEGE: Still in High School (11th grade)
AWARDS/SCHOLARSHIPS: NHS, Honor Roll each marking period, Spanish Award, Who’s Who Among American High School Students, A representative in Leon County Association of Science Teaching, Cheerleading ('89–'94), working at Legends, Church Choir

ACTIVITIES/HOBBIES:

NAME: Jennifer Chen
RACE: Asian
SEX: Female
HIGH SCHOOL: Lincoln High School
ANTICIPATED COLLEGE: Cornell University
ANTICIPATED MAJOR: Mechanical Engineering
AWARDS/SCHOLARSHIPS: Awarded scholarships from Bracknell, Cornell, University of Florida, University of Virginia; JETS (Engineering) Team Competition Award; Magna Cum Laude; Pride Awards in Science and Mathematics; Academic Fitness Award; National Merit Scholar Nominee; Member National Honor Society; Silver Medal on National Latin Exam; 6th Place in Capital City Mu Alpha Theta; Supervisor of the Piano Guild

ACTIVITIES/HOBBIES: Mu Alpha Theta, Latin Club, Piano

NAME: Brian Draper
RACE: White
SEX: Male
HIGH SCHOOL: Godby High School
ANTICIPATED COLLEGE: Florida State University
ANTICIPATED MAJOR: Achievement Awards in Art, Science; American Legion Award for School; Service Medallion (ROTC); Good Cougar Award; Departmental Award in Computer Science

NAME: Andrea Hsia
RACE: Asian
SEX: Female
HIGH SCHOOL: Leon High School
ANTICIPATED COLLEGE: Still in High School (12th grade)
ANTICIPATED MAJOR: Medicine
AWARDS/SCHOLARSHIPS: Latin District Competition, Honorable Mention in Piano Concerto Competition, Magna Cum Laude on National Latin Exam, Superior in District Piano Festival.
ACTIVITIES/HOBBIES: Latin Club, Mu Alpha Theta, Choral Clubs, Pierian National Honor Society, Anchor Service Club, Cosmos Science Club, MOSAIC, Piano, Swimming

NAME: April Ivery
RACE: Black
SEX: Female
HIGH SCHOOL: Godby High School
ANTICIPATED COLLEGE: Florida State University
ANTICIPATED MAJOR: Medical
ACTIVITIES/HOBBIES: Gospel Choir, Church Choir, Unity Club, Anchor Club, FBLA, VOE, Spanish Club

NAME: Avesh Jain
RACE: Asian
SEX: Male
HIGH SCHOOL: Lincoln High School
ANTICIPATED COLLEGE: Still in High School (11th grade)
ANTICIPATED MAJOR: Medicine
AWARDS/SCHOLARSHIPS: Math Competition top 10, Numerous Tennis Awards
ACTIVITIES/HOBBIES: Computer, Tennis, Music

NAME: Craig Morris
RACE: Hispanic
SEX: Male
HIGH SCHOOL: Lincoln High School
ANTICIPATED COLLEGE: Florida State University
ANTICIPATED MAJOR: Biology
AWARDS/SCHOLARSHIPS: Honor Roll, Exceptional Student Award (freshman), State Convention awards for sports writing
ACTIVITIES/HOBBIES: Using Computers, Watching TV, Going out with friends
NAME: Matthew Nemethy
RACE: White
SEX: Male
HIGH SCHOOL: Godby High School
ANTICIPATED COLLEGE: Florida State University
ANTICIPATED MAJOR: Environmental Engineering
ACTIVITIES/HOBBIES: NME Participant, Second Place Team Chemathon, First Place Oratory Impromptu Speech Competition and Young Engineer of Florida

NAME: Smitha R. Pabbathi
RACE: Asian
SEX: Female
HIGH SCHOOL: Leon High School
ANTICIPATED COLLEGE: Florida State University
ANTICIPATED MAJOR: Engineering
AWARDS/SCHOLARSHIPS: National Honor Society
ACTIVITIES/HOBBIES: Anchor, Latin Club, MA©, National Honor Society, Drawing, Reading

NAME: Jason Patterson
RACE: White
SEX: Male
HIGH SCHOOL: Lincoln High School
ANTICIPATED COLLEGE: Florida State University
ANTICIPATED MAJOR: Math/Computer Science
AWARDS/SCHOLARSHIPS: Rock Little Math Award, PRIDE Nominee, Presidential Academic Fitness Award, Florida Undergraduate Scholar Nominee, Magna Cum Laude, In top 4 in Regional Mu Alpha Theta Individual Contests
ACTIVITIES/HOBBIES: Music, Computers, Math, Science
NAME: Marion Smith
RACE: White
SEX: Male
HIGH SCHOOL: Lincoln High School
ANTICIPATED COLLEGE: Carnegie Mellon
ANTICIPATED MAJOR: Engineering
AWARDS/SCHOLARSHIPS: Valedictorian; President, Latin Club; Vice President, Science Club; Captain, First Place Lincoln Academic Team; Top Scorer, First Place (In the State) Science Bowl Team; Andrew Carnegie Scholarship; National Merit Finalist; 6th Nationally in Roman Life Test at Junior Classical League Convention; Member of First Place Varsity JETS Team; Member of First Place Florida Chem-a-thon Team; Second Place in Individual Contests, Florida Chem-a-thon; Mu Alpha Theta for Computers, Calculus, Integral Calculus, and Precalculus; 1994 Georgia Tech Distinguished Math Scholar; Captain of First Place Brain Bowl Academic Team; 3 Consecutive Medals in National Latin Exam

ACTIVITIES/HOBBIES: Computer Programming, Charter Member and Vice President of Lincoln High School Science Club, President of the Junior Classical League, Writer’s Exchange
3. STUDENT WORK PROJECTS AND INSTRUCTION

Seven of the students participated in digitizing velocity vector data from photographs of flow fields obtained in laboratory experiments that simulate the influence of mountains on the atmospheric jet stream, and three assisted in data analysis using computer programs on PCs and the VAX. One student worked with Dr. Long on a special project to develop a method of objective analysis of digitized fluid flow data and will give a seminar about his results to next year’s high school student group in July. These activities were part of a larger project on studies of the interaction of bottom topography with overlying baroclinic waves investigated by Drs. R. L. Pfeffer and R. Kung. The students’ work was supervised by Mr. Eugene Arbogast and assisted by Messrs. Mike Ivey and Lester Joe Dennis.

The major project in which the students participated during the summer was the analysis of photographic velocity data from laboratory experiments on the interaction of topography with baroclinic waves, and flows with azimuthally varying lower thermal boundary conditions. The experiments were conducted in a thermally driven rotating annulus of fluid.

Craig Morris digitizes flow velocity data.
The data from the experiments were obtained by means of a camera, mounted at the top of a rotating annulus of fluid, which recorded the movements of laser-illuminated particles suspended in the fluid. The camera produced a sequence of still photographs; in each photograph the movement of every particle appeared as a string of dots. By digitizing the positions of these dots and calculating the distance between dots and the orientation of each string of dots, one can determine the velocity field as a function of time. Fourier analyses and energetics calculations of such data provide valuable information about the behavior of baroclinic waves in the presence of bottom topography.

The students had the opportunity to gain experience in the use of digitizing equipment, personal computers, and video monitors which display the work graphically as it is being digitized. They were also able to see and discuss the results of a first-level analysis of the digitized data performed on the GFDI DEC VAX computer cluster. During the course of the summer, the students worked with the photographs from several different experiments, which allowed them to see effects of variations in experimental parameters such as the difference in temperature between the inner and outer walls of the bath, the speed of rotation, and the presence or absence of topography.

The instruction and training given to the high school students concerning their work as apprentices went well beyond that needed to do the job. Efforts were made by the faculty and staff to make their work experience a learning process and an introduction to scientific methodology. Our goal was to ensure the students' understanding of the relationships between theoretical models and observable phenomena, such as the jet stream and ocean currents, such as the Gulf Stream and Kuroshio Current, which affect the transfer of heat from the tropics to the arctic. This was accomplished by explaining in detail the goals of the program, the scientific methodology, the implications of the experimental and related theoretical results and the contributions of the students' work to the overall project.
4. ENRICHMENT ACTIVITIES

Aside from the students' activities as apprentices, they participated in a variety of other educational activities. These included a series of talks on research topics covering a broad spectrum of scientific disciplines. Talks were given by Drs. Blumsack, Elliott, Elsner, Furbish, Gruender, Howard, Kloesel, Ruby Krishnamurti, Kung, Long, Meacham, Nicholson and Pfeffer on topics ranging from the modeling of the Black Sea to Immunology and the HIV virus. In addition, the students participated in discussions with Dr. Long on the *Coming of Age in the Milky Way*, an exciting book on the history and methodology of physical science by Timothy Ferris. A series of scientific films was also selected and shown by Dr. Kung. These covered topics such as astronomy, the strange new science of deterministic chaos, space exploration, the oceans and others. Drs. Kung and Ruby Krishnamurti also engaged the students in a series of scientific experiments in which different natural phenomena were simulated in the laboratory. A list of these activities is given in Table 1.

The students also took advantage of another opportunity offered by the program — namely, a course of their choice, with tuition and books paid for by the program. They took a Meteorology course for college credit given by Ms. Nancy Dignon.

5. CONCLUSION

Questionnaires completed at the end of the summer program of enrichment activities revealed that the students felt that, aside from the monetary rewards, they had benefited a great deal from both the hands on work experience and the enrichment program. This was especially true of the younger students. They were grateful for the opportunity to work in a scientific environment and acquire new skills and experience. Faculty and staff mentors reported that the students were bright, attentive, well motivated and willing to work. Their contribution to the various projects was also significant. The digitizing work was done carefully and accurately and hence contributed substantially to a much needed data base for further analysis and study.
Dr. Ruby Krishnamurti demonstrates thermal oscillators.

The students visit the Mechanical Engineering Lab.

In general, the students felt financially rewarded and scientifically enriched by their experience in the program. We feel that the students acquired a certain maturity and confidence which should be a great asset to them during their final years in high school, college and their chosen careers.
Dr. Howard discusses the properties of regular polyhedrons with the students.

Dr. Buzyna lectures on supersonic flow after a visit to the Mechanical Engineering Fluids Lab.

Dr. Pfeffer interprets the results of the students' data analysis at an end of summer party. From left to right: Jennifer Chen, Trey Smith, Elboni Austin, April Ivery, Matthew Nemethy.
