Resource Reallocation Methodology for the U.S. Army Center for Health Promotion and Preventive Medicine

Executive Summary

The U.S. Army Center for Health Promotion and Preventive Medicine has 49 programs providing more than 500 identifiable products and services. It needs to reallocate resources to support new responsibilities in three new mission areas. The organization is seeking reliable and objective methods for this reallocation, ones that will integrate strategy, mission focus, communication, and marketing, and allow it to look at itself as a whole rather than as many separate program entities.

The Logistics Management Institute has developed five tools to address resource reallocation:

- ◆ Criteria that support the organizational strategy and mission focus.
- ◆ A weighting procedure to determine which criteria are the most important.
- ◆ A procedure to rank and prioritize programs by applying the weighted criteria.
- ◆ A procedure to identify products and services for reallocation, taking into account the program ranking score and the results of the program manager's ranking of his program's products and services.
- ◆ A mathematical model to be used for resource allocation and reallocation.

We recommend the following actions:

- ◆ The U.S. Army Center for Health Promotion and Preventive Medicine should use the tools for resource allocation and reallocation.
- ◆ It should also revise and standardize the products and services to highlight core and special capabilities.

Using these tools and taking these actions will provide a basis for the organization to become the leader in health promotion and preventive medicine into the 21st century.

CHAPTER 1

Introduction

BACKGROUND

The lineage of the U.S. Army Center for Health Promotion and Preventive Medicine (USACHPPM) can be traced back more than 50 years to the Army Industrial Hygiene Laboratory, established at the beginning of World War II. Its mission was to identify and eliminate health hazards at Army-operated industrial plants, arsenals, and depots.

Until recently, this organization was nationally and internationally known as the U.S. Army Environmental Hygiene Agency, or AEHA. Its mission had expanded to support the worldwide preventive medicine programs of the Army, DoD, and other federal agencies.

Today, it has been redesignated USACHPPM and given significant additional responsibility. Its mission is to provide worldwide operational support for integrating preventive medicine, public health, and health promotion and wellness services into all aspects of the Army. To accomplish these new missions, it has created three new directorates: Health Promotion and Wellness, Epidemiology and Disease Surveillance, and Field Preventive Medicine.

THE PROBLEM

The reorganization into USACHPPM came without the additional resources required to make the new mission areas fully functional. The leadership is faced with the task of reallocating existing resources to meet the new mission requirements. Its desire is to shift resources from lower-priority products and services to those with higher priority. To do so, USACHPPM needs a method to rank its products and services and identify specific ones to discontinue in favor of others.

THE STUDY OBJECTIVE

The objective of this study was twofold:

- ◆ To develop a process for ranking products and services that would enable the USACHPPM leadership to reallocate resources to higher-priority programs

- ◆ To evaluate the application of the process and identify possible sources of bias and inconsistency.

ORGANIZATIONAL PROFILE

Structure

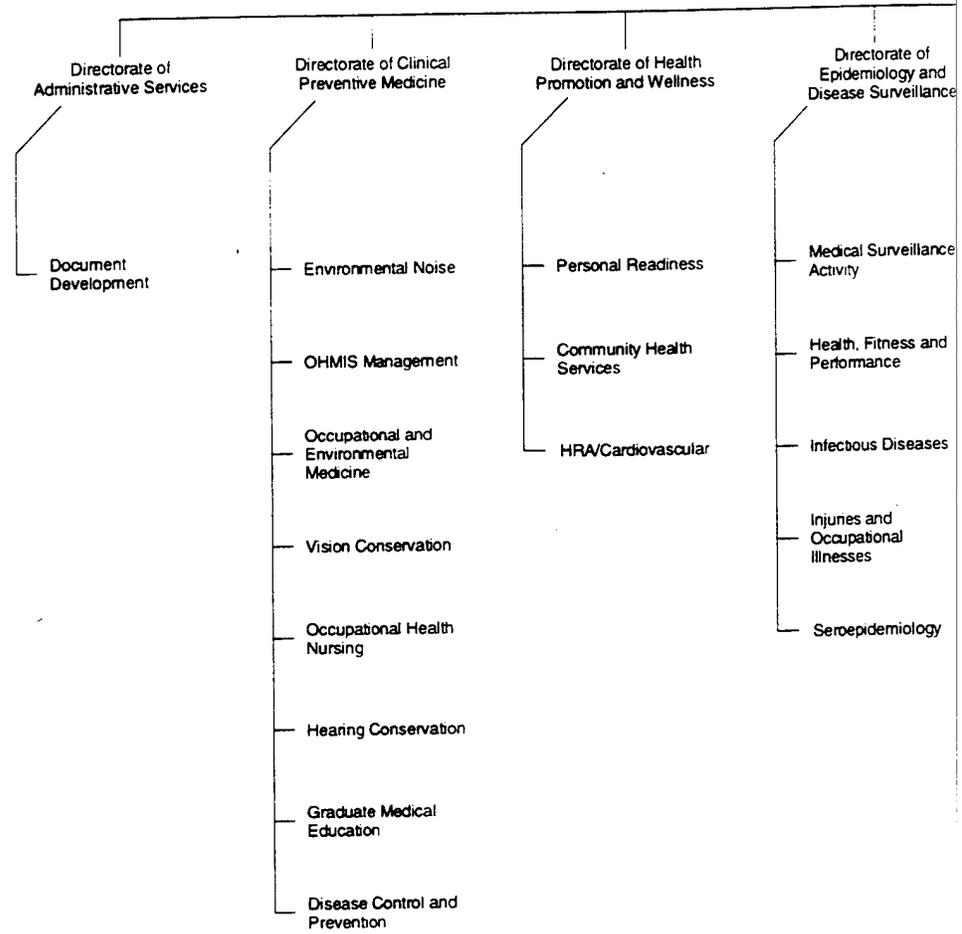

The organization is divided into seven mission technical directorates, and an administrative directorate currently controlled by the Chief of Staff. The mission directorates provide products and services to external customers, while functions under the Chief of Staff provide products and services primarily to internal customers. The major elements within these directorates are shown in Figure 1-1.

Budget

The total budget for USACHPPM has increased over the last five years due in part to increased Defense Health Program (DHP) and reimbursable funding. Reimbursable funding has increased 500 percent since FY90. Defense Health Program funding still has not kept pace with increasing mission requirements. Increased mission requirements to provide worldwide operational support for integrating preventive medicine, public health, and health promotion and wellness services have caused further strain. The initial budget for FY95 appears in Table 1-1.

Table 1-1.
FY95 Initial DHP and Reimbursable Budget (\$000)

Organization element	Defense health program	Reimbursable

Mission

The USACHPPM supports the worldwide health promotion and preventive medicine programs of the U.S. Army.

Its mission is threefold: It provides worldwide scientific expertise and services in the areas of clinical and field preventive medicine, environmental and occupational health, health promotion and wellness, epidemiology and disease surveillance, and related laboratory sciences; it provides regionally focused, split-based support to Commanders in Chief (CINCs), major Army commands, major subordinate commands, and medical treatment facilities through subordinate elements; and it provides policy development recommendations for program areas.

The organization executes this mission through the technical directorates and five satellite activities. It has three direct support activities within the continental United States and two activities overseas.

Programs

Each of 49 separate program areas is managed by a program manager, who is responsible for delivering products and services. The program managers usually work for a director, who supervises several program managers within a functional area. A listing of the program areas by directorate is presented in Appendix A.

Products and Services

The USACHPPM provides more than 500 products and services to both internal and external customers.

Internal products include briefings, management reports, publications, technical reports, document reviews, exhibits, and visual information. Internal services include financial management, information management, personnel and logistical management, security and safety programs, training and professional development, laboratory analyses, consultations, method development, and facilitation.

External products include technical reports, document reviews, health risk assessments, publications, automated occupational and environmental information management, public and community relations information, health hazard assessments, and professional technical papers. External services include laboratory analyses, consultations, field studies, training, policy review and development, analytical methods, environmental audits, occupational health evaluations, design reviews, and professional committee representations. A detailed listing of program products and services is presented in Appendix B.

STUDY FRAMEWORK

The rest of the report presents

- ◆ an overview of the process using the key strategies as a basis for establishing the resource allocation and reallocation methodology in Chapter 2,
- ◆ the selection of criteria for ranking products and services and how we established the relative weight of the criteria in Chapter 3,
- ◆ the ranking of programs using the weighted criteria in Chapter 4,
- ◆ the ranking of products and services using the weighted criteria in Chapter 5,
- ◆ the method for allocating and reallocating resources in Chapter 6, and
- ◆ the conclusions and recommendations made as a result of the study.

CHAPTER 2

Reallocation Process

OVERVIEW

Our goal was to develop a methodology to rank technical products and services that was reasonable, thorough, logical, and impartial. This would allow USACHPPM to decide on reallocating resources to higher-priority program products and services. The process is depicted in Figure 2-1. The steps in our study approach are listed in Appendix C.

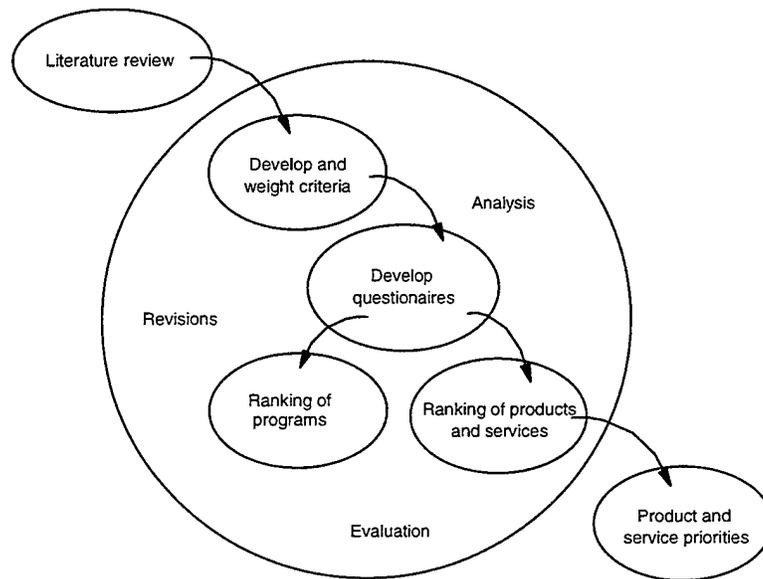

Figure 2-1.
Reallocation Process

KEY STRATEGIES AND MISSION FOCUS

The USACHPPM had established five key strategies and a short-term mission focus based on the strategy, to assist it in fully implementing its new missions in health promotion and preventive medicine. The five key strategies and the resultant mission focus are shown in Figure 2-2 and in more detail in Appendix D. The organization's strategic and historical documents and other DoD and Army documents reviewed during the study are listed in the bibliography.

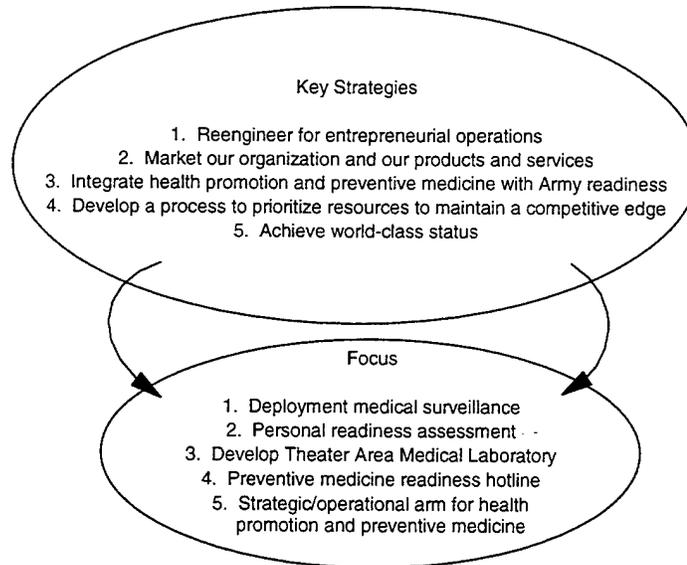

Figure 2-2.
USACHPPM Key Strategies and Mission Focus

Using the key strategies as the basis for establishing a resource allocation methodology, we determined the fundamental issues and in turn developed the criteria and measures based on these issues. The criteria were then weighted using pair-wise comparison. The weighted criteria were applied to all 49 programs within USACHPPM in order to determine their relative rank. The same criteria were then applied to all the products and services to determine their relative ranking within directorates. We then applied the reallocation method to determine the relative ranking of each product or service within USACHPPM as a whole. Both the Logistics Management Institute (LMI) and USACHPPM ranked the programs using their respective weighted criteria. We ranked the regrouped products and services using our weighted criteria. The USACHPPM will have their directors and program managers rank their original products and services using their weighted criteria sometime in the future.

We looked at several alternatives to determine the weighting of the criteria. These methods involved the use of software packages such as Best Choice, Expert Choice, and Logical Decisions. After testing the several methods, it was clear that the Best Choice method of pair-wise comparison was the best alternative and would provide the results required for this study. Our selection was based on ease of use, scientific validity based on the documentation, level of effort required to learn, level of effort required for data input, and presentation of results.

During this whole process, we used continuous review and evaluation to confirm that the results obtained made sense and were in line with the strategies and mission focus.

Knowing the number of man-years needed, the method can be used as a basic tool to determine the reallocation of resources from lower-priority program products and services to higher-priority ones.

The next chapter explains how we selected criteria for ranking products and services, and how we established the relative weight of the criteria.

CHAPTER 3

Criteria Measures and Weighting

We reviewed the USACHPPM strategic plan and historical planning documents to help us develop the criteria and the quantitative measurement system for ranking the products and services. The primary document was the *Mission Statement and Key Strategies* (strategic plan). We also used several concepts presented in the *Organizational Design Review* (prepared by a U.S. Army Medical Command task force) to develop our criteria. The criteria we developed, shown in Figure 3-1, capture the major concepts in these key documents.

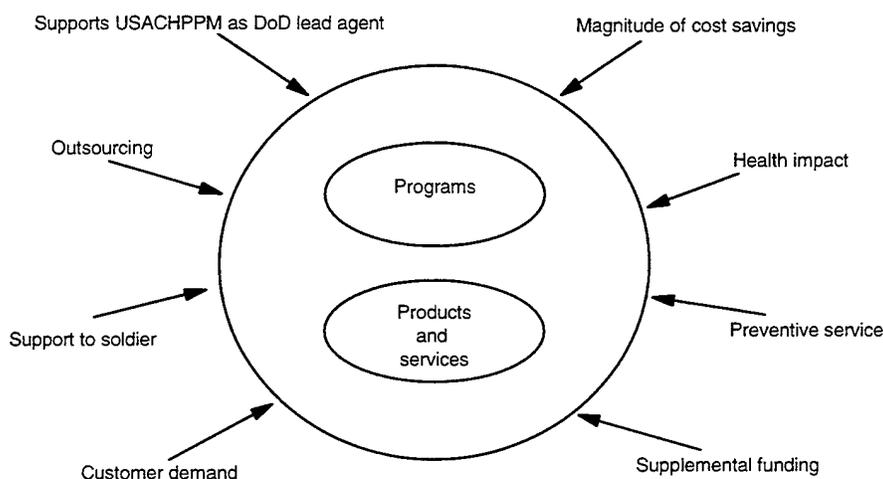

Figure 3-1.
Selected Criteria

DEFINING THE CRITERIA

The following definitions were developed to standardize the meaning of each criterion and minimize individual interpretation:

- ◆ *Health impact.* Promotes or maintains the health of individuals by mitigating health risk.
- ◆ *Support to soldier.* Supports CINCs and commanders in warfighting and other military operations.

- ◆ *Supports USACHPPM as a DoD lead agent.* Increases the visibility or influence of USACHPPM in health promotion and preventive medicine within DoD.
- ◆ *Magnitude of cost savings.* Saves dollars, avoids costs, or reduces compensation costs in an average year.
- ◆ *Outsourcing.* How critical the in-house performance of this product or service is to USACHPPM, and whether other organizations could or should perform the service or provide the product.
- ◆ *Customer demand.* The customers request the product or service.
- ◆ *Supplemental funding.* Has generated supplemental (or reimbursable) funding from external sources.
- ◆ *Preventive service.* Proaction to maintain or promote the health and wellness of personnel (the total Army family, including all active, reserve, and other beneficiaries).

CRITERIA MEASURES

We developed a measurement system for each criterion, to provide a framework for assessing programs, products, and services against each criterion uniformly and quantifiably.

The criteria measures had a range of defined descriptive quantifiers, with a value assigned, which allowed individuals to evaluate each program, product, or service against each criterion. The measurement system provided a means to assign a quantitative score based on each individual criterion. The sum of the individual scores for each program, product, or service provided a means for ranking them against each other.

As an example, the measure for health impact is "How severe is the impact on the health of the population affected if this product or service is not performed?" Descriptive quantifiers for this measure with their assigned value are as follows:

- ◆ Permanent loss from work force [military mission disease and nonbattle injury (DNBI) resulting in evacuation; in the noncombat sector, injury or illness resulting in disability] equals a value of 5.
- ◆ Chronic disease resulting in long-term medical treatment and compensation costs equals a value of 4.
- ◆ Illness or injury resulting in lost work time equals a value of 3.

- ◆ Mild illness or injury resulting in reduced job performance equals a value of 2.
- ◆ Minimal health impact equals a value of 1.

Other measures developed for the remaining criteria included:

- ◆ How large is the population affected by the performance of this product or service in an average year?
- ◆ How does the performance of this product or service help, in a proactive way, to promote health or wellness, or prevent disease or nonbattle injury?
- ◆ How does the performance of this product or service support the CINCs and commanders?
- ◆ How well does the performance of this product or service support tri-Service or DoD health promotion and preventive medicine?
- ◆ Should this product or service be outsourced?
- ◆ How great is the demand for this product or service?
- ◆ How large are the savings achieved by performing this product or service?
- ◆ How much external supplemental funding is generated by this product or service?

Detailed descriptions of the criteria and measures are contained in Appendix E.

CRITERIA WEIGHTING

The criteria are not equally important, so we established their relative importance by weighting them via computer-generated pair-wise comparisons (more detailed information is contained in Appendix F).

Pair-wise comparison determines what people believe to be the more important choice, and to what degree, between two individual criteria. We used this process to establish the criterion weights because it is a valuable tool for quantifying personal preferences. Since it increases the accuracy of comparison of items to be differentiated, it provides a method for reliably determining the relative levels of importance of criteria, as viewed subjectively.

Statistics should not be vigorously applied to this process since results are based on individual preferences and may vary based on which individuals are in the sample.

Options for Weighting the Selection Criteria

A group of people had to be chosen to weight the selection criteria. Several different groups of individuals were considered; each group is described along with the advantages and disadvantages of using each to weight the criteria.

OPTION 1

The first option would be to have the Command Group (Commander, Deputy Commander, and Chief of Staff) weight the criteria. The following would be advantages of this approach:

- ◆ It would reinforce and clarify the senior leadership's commitment to the strategy.
- ◆ It would enable senior leaders to focus products and services on strategic objectives.
- ◆ It would provide a clear message to staff on the organization's direction.

The disadvantages would be the following:

- ◆ The directors would not be involved.
- ◆ The program managers would not be involved.
- ◆ The Medical Command would have no input.
- ◆ The small decision group of only three people would lessen buy-in and ownership in the process.

OPTION 2

The second option would be to poll the full leadership (Commander, Deputy Commander, Chief of Staff, Executive Officer, Science Advisor, Directors, Direct Support Activity Commanders, Medical Command, and Office of the Surgeon General representatives).

The following would be advantages of this approach:

- ◆ It would reinforce and clarify the full leadership commitment to the strategy.
- ◆ It would enable leaders to focus products and services on strategic objectives.

- ◆ It would provide a clear message to program managers on the organization's direction.
- ◆ It would involve directors in establishing what is important.
- ◆ It would involve Medical Command input.
- ◆ The decision group would not be too large.

A disadvantage of this approach is that the program managers would not be involved.

OPTION 3

The third option would involve the full leadership plus selected program managers (Commander, Deputy Commander, Chief of Staff, Executive Officer, Science Advisor, Directors, Direct Support Activity Commanders, Medical Command, Office of the Surgeon General representatives, and two program managers from each directorate).

The advantages of this approach would be the following:

- ◆ It would involve program managers in establishing what is important.
- ◆ It would reinforce and clarify leadership and program manager commitment to the strategy.
- ◆ It would involve directors in establishing what is important.
- ◆ It would involve Medical Command input.
- ◆ The focus of products and services on the strategic objectives would be balanced.

However, this option would have the following disadvantages:

- ◆ The addition of program managers may dilute or offset the leadership's goals and objectives.
- ◆ It may not enable the organization to focus its products and services on the strategic objectives.

OPTION 4

The fourth option would be to have the program managers weight the selection criteria.

An advantage of this approach is that program managers would be charting their own destiny.

The following would be disadvantages of this approach:

- ◆ It would not reinforce and clarify leadership's commitment to the strategy.
- ◆ It may not enable the organization to focus its products and services on the strategic objectives.
- ◆ It would offer no clear message from senior leaders to the staff on the organization's direction.
- ◆ The USACHPPM Command Group would not be involved.
- ◆ The directors would not be involved.
- ◆ The Medical Command would have no input.

Preferred Option

Based on the options considered, Option 2, using the full leadership, is the best for weighting the criteria. It allows the leadership to establish the priorities of the organization based on its strategy. It clearly sends a message to the organization on where program managers are to focus and what they are to execute.

Testing the Weighting Process

We performed a pilot test to determine whether the process would work as conceived or whether modifications would be needed. The pilot test also validated the utility of the instruction sheet. We analyzed the results to establish that they made sense and aligned with the organizational strategy and mission focus. The results of our weighting of the criteria during the pilot test are in Table 3-1.

The results obtained in the pilot test aligned with the USACHPPM organizational strategy and mission focus.

Criteria Weighting by Leadership

Based on the results of the pilot test, the USACHPPM leadership weighted the criteria using the instruction sheet (Appendix F). The results are shown in Table 3-2.

Table 3-1.
Criteria Weighting — Pilot Test

Criterion	Score ^a
Health impact	100.0
Support to soldier	86.0
Magnitude of cost savings	52.0
Preventive service	48.0
Supports USACHPPM as DoD lead agent	26.0
Customer demand	21.0
Supplemental funding	21.0
Outsourcing	10.5

^a Maximum = 100 percent.

Table 3-2.
Criteria Weighting — USACHPPM

Criterion	Score ^a
Support to soldier	100.0
Health impact	88.1
Preventive service	56.0
Customer demand	36.0
Supports USACHPPM as DoD lead agent	35.3
Magnitude of cost savings	27.0
Supplemental funding	15.0
Outsourcing	12.6

^a Maximum = 100 percent.

The USACHPPM criteria weighting results made sense and aligned with the organizational strategy and mission focus. The next step, described in Chapter 4, was to rank programs using the weighted criteria.

CHAPTER 4

Ranking Programs

With the criteria and their relative weights established, the next step in the resource reallocation process was to rank the 49 programs.

OPTIONS FOR RANKING PROGRAMS

We considered the same groups for weighting the criteria as for ranking the programs. The advantages and disadvantages of using each group are the same as those enumerated in Chapter 3.

As during the selection of a group for weighting the criteria, based on the options considered and the concerns addressed in Chapter 3, the second option, involving the leadership, was the best one for ranking the programs. It allows the leaders to establish the overall program priorities of the organization based on their strategy, and it clearly sends a message to the organization on where program managers are to focus and what they are to execute.

APPLYING THE WEIGHTED CRITERIA

Not all of the programs are of equal importance, so the eight weighted criteria were applied to the programs to establish their relative importance (rank).

Each program is rated against each criterion individually. Adding the weighted criterion scores results in a ranking value for the program. For example, for Program 16, Pesticide Management, the ranking value would be the sum

$$\begin{aligned} &(\text{criterion 1 measure numerical value} \times \text{criterion 1 weighted value}) + \\ &(\text{criterion 2 measure numerical value} \times \text{criterion 2 weighted value}) + \dots \\ &(\text{criterion } n \text{ measure numerical value} \times \text{criterion } n \text{ weighted value}). \end{aligned}$$

This computation is repeated for all the other programs. When all 49 programs have been rated, the ranking scores in descending order establish a program priority list (the higher the number, the higher the program's priority for receiving resources).

Instructions and a sample questionnaire for ranking the programs are in Appendix G. They were used in conjunction with a matrix spreadsheet listing the programs down the side and the criteria measure questions across the top.

Pilot Testing the Process

As with the weighting of the criteria, we performed a pilot test to determine whether the ranking process would work as conceived or whether modifications would be needed. The test also validated the utility of the instruction sheet. We analyzed the results to establish that they made sense and aligned with the organizational strategy and mission focus. We ranked each of the 49 programs using the eight weighted criteria. An extract of the pilot test results is in Table 4-1. The maximum weighted ranking value that can be achieved is 15.5.

Table 4-1.
Top and Bottom Priority Programs — Pilot Test

Program number	Program name	Weighted ranking ^a
35	Readiness Planning	14.0
21	Personal Readiness	13.7
30	Army Medical Surveillance Activity	12.9
40	Deployment and Environmental Medicine	12.3
41	Health Promotion Program Evaluation and Assessment	12.0
69	Health Hazard Assessment	11.5
77	Analytical Chemistry	6.9
80	Pesticides and Organic Chemistry	6.8
17	Pesticide Monitoring	6.8
79	Radioisotope Analysis	6.5
72	Laboratory Operations Improvement	6.1
82	Military-Unique and Special Chemistry	5.8

^aMaximum = 15.5.

To evaluate the impact of the lower-weighted criteria on the ranking of the programs, we eliminated all scores associated with the four lowest criteria. The results indicated that the four lowest criteria were not a major factor in the program ranking. The top programs remained at the top, and the bottom programs remained at the bottom. The few discrepancies noted in the center of the program ranking were due to the fact that all the low criteria received high numerical measure values.

The results obtained in the pilot test aligned with the USACHPPM strategy and the mission focus. The complete results of our ranking of all 49 programs are provided in Appendix H.

Note: Budget allocations could be made based on the rank order of the programs. A simple method would be to allocate funds to a program based on the following share:

$$\text{program score} \div \text{sum of all program scores} \\ \times \text{total staffing of numbered programs.}$$

This would also involve other considerations further discussed in Chapter 6.

Program Ranking

The USACHPPM leadership ranked the programs using the instruction sheet (Appendix G). An extract of the results is presented in Table 4-2. The maximum weighted value that can be achieved is 17.1.

Table 4-2.
*Top and Bottom Priority Programs — USACHPPM
Leadership Ranking*

Program number	Program name	Weighted ranking ^a
51	Hearing Conservation	14.6
26	Infectious Diseases	14.3
69	Health Hazard Assessment	14.2
30	Medical Surveillance Activity	14.1
21	Personal Readiness	13.8
40	Deployment and Environmental Medicine	13.8
80	Pesticides and Organic Chemistry	8.8
77	Analytical Chemistry	8.3
66	Document Development	8.0
82	Military-Unique and Special Chemistry	7.9
73	Method Development and Analytical Sciences	7.5
72	Laboratory Operations Improvement	7.2

^aMaximum = 17.1.

The results of the program ranking by the leadership made sense and aligned with the organizational strategy and mission focus. The complete results of the leadership ranking of all 49 programs is provided in Appendix I.

We also evaluated the program ranking results to determine the impact of the lower-weighted criteria on the ranking of the programs. We eliminated the scores associated with the four lowest criteria, and repeated the procedure with the six lowest criteria. These results again indicated that the lower criteria were not a major factor in the program ranking. The top programs remained at the

top, and the bottom programs remained at the bottom. The few discrepancies noted in the center of the program rankings were due to the fact that all the low criteria had high numerical measure values.

The next step, explained in Chapter 5, will be to rank USACHPPM products and services using the weighted criteria.

CHAPTER 5

Ranking Products and Services

The USACHPPM leadership (Commander, Deputy Commander, Chief of Staff, Executive Officer, Science Advisor, Directors, Direct Support Activity Commanders, Medical Command, and Office of the Surgeon General representatives) initially wanted to rank products and services. However, ranking the more than 500 individual products and services (Appendix B) against the eight weighted criteria would be a monumental task and would be difficult for any one individual to understand, let alone accomplish. The following were our major concerns:

- ◆ It would take at least eight hours for each person in the USACHPPM leadership to rank the products and services (4,000 decisions).
- ◆ The USACHPPM leadership does not want to invest this much time in a single activity.
- ◆ Due to the diversity of the products and services, the leadership does not have the detailed knowledge required to objectively rank them.
- ◆ Clear definitions of the products and services are not readily available.

We addressed these concerns with the leaders, and they agreed that it was not practical for them to rank the products and services. However, because they had ranked the organization's programs, they had already established the direction and focus for the program managers, the operators within the organization.

Since the program managers know the most about their products and services, it makes good sense that they should rank them, in concert with their director. This allows the program managers to identify specific products and services that they should focus on and support first, within the program priorities of the organization, based on the organizational strategy. The oversight of their director would ensure that gaming would not occur and that no program would go unfunded. The approach was approved by the USACHPPM leadership.

Figure 5-1 depicts what the leadership and program managers believed to be the best overall approach. Everyone is involved in executing the strategy.

Figure 5-1.
Developing the Priorities

REGROUPING PRODUCTS AND SERVICES

The analytical burden of ranking USACHPPM products and services is magnified by their number and diversity, so we sought to simplify the task by consolidating some of them. We regrouped and renamed the products and services from 17 programs so that we could operate from a more consistent and manageable plan during the pilot testing. We grouped products and services into core categories, where possible, and left unique products and services alone. Most program areas have products that fit into the following core categories:

- ◆ Field study
- ◆ Desktop consultation
- ◆ Training classes/material
- ◆ Document development and review
- ◆ Army program data management
- ◆ Information sharing.

We believe that this regrouped list captures the majority of products and services and is certainly more easily understood than the longer one. Appendix J contains a listing of our suggested grouping of products and services for each of the 17 programs discussed. Should the USACHPPM decide to group their

products and services, the listing in Appendix J would serve as a good starting point.

We ranked the grouped products and services for the 17 program areas discussed as part of our pilot testing.

APPLYING THE WEIGHTED CRITERIA

Not all of the products and services within individual programs are of equal importance, so we applied the eight weighted criteria to each program product and service to establish its relative importance (rank).

Each product and service is rated on each criterion. The sum of the weighted scores for the item is its ranking score. For example, for Program 16, Pesticide Management, Desk-top Consultation, the ranking value would be the sum

$$\begin{aligned} &(\text{criterion 1 measure numerical value} \times \text{criterion 1 weighted value}) + \\ &(\text{criterion 2 measure numerical value} \times \text{criterion 2 weighted value}) + \dots \\ &(\text{criterion } n \text{ measure numerical value} \times \text{criterion } n \text{ weighted value}). \end{aligned}$$

The result is a ranking score for Program 16. This is repeated for all the other Program 16 products and services and all the other programs' products and services. When all of an individual program's products and services have been rated, the ranking scores in descending order establish a priority list within each of the programs.

Instructions and a questionnaire for ranking the program products and services are in Appendix K. They are used in conjunction with a matrix spreadsheet listing the program product and services down the side and the criteria measure questions across the top.

TESTING THE RANKING PROCESS

Pilot Test

We performed a pilot test (as in the weighting of the programs) to determine whether the process would work as conceived or whether modifications would be needed. It also validated the utility of the instruction sheet.

We analyzed the results of our rankings to establish that they made sense and aligned with the organizational strategy and mission focus. We ranked revised products and services from 17 of the 49 programs, as discussed earlier.

An extract of our results is presented in Table 5-1. The complete list of our ranking results is presented in Appendix L.

Table 5-1.
Top and Bottom Products and Services — Pilot Test

Program number	Program name	Revised product and service	Weighted ranking ^a
21	Personal Readiness	Deployment Field Services	12.2
35	Readiness Planning	Information Analysis/ Evaluation	12.0
31	Water Supply Management	Field Water Supply Survey	12.0
46	Health Risk Appraisal/Cardio-vascular Screening	Field Study	11.9
21	Personal Readiness	Field Study	11.8
51	Hearing Conservation	Field Study	11.8
82	Military-Unique and Special Chemistry	Sample Analysis	5.2
82	Military-Unique and Special Chemistry	Document Development/Review	5.2
16	Pest Management	Desk-top Consultation	5.1
82	Military-Unique and Special Chemistry	Desk-top Consultation	5.0
77	Analytical Chemistry	Desk-top Consultation	4.9
16	Pest Management	Pesticide Treated Papers	4.7

^a Maximum = 15.5.

The results obtained in the pilot test aligned with the USACHPPM strategy and mission focus.

Note: Budget allocations could be made based on the rank order of the programs. A simple method would be to allocate funds to a program based on the following share:

$$\begin{aligned} & (\text{sum of individual program product and service scores} \\ & \times \text{individual program score}) \div (\text{sum of all individual program product} \\ & \text{and service scores} \\ & \times \text{all program scores}) \\ & \times \text{total staffing for numbered programs.} \end{aligned}$$

This would also involve other important considerations as discussed in Chapter 6.

Product and Service Ranking

The program managers and their directors will rank their respective products and services sometime in the near future. Doing so will establish the priorities that leadership will use to reallocate resources. The next chapter describes the method for allocating and reallocating resources.

CHAPTER 6

Resource Allocation

Making final decisions on how to reallocate resources is potentially the most difficult step in the process. Great care must be exercised to keep this process logical, unbiased, and aligned with the USACHPPM strategy and mission focus. The criteria, their weighting, the ranking of the programs, and the ranking of the individual products and services must all be integrated into this reallocation process. The reallocation process must not become just another "salami slice" approach, where each program and its products and services are cut equally, regardless of their importance.

Factors that need to be considered are the desired end state (or organizational structure), trends, limitations of each number, selecting the best number for the end state, establishing a plan to narrow the gap, establishing decision rules, and developing program metrics' and then reexamining priorities periodically in the future.

The process is both dynamic and iterative, and both leadership as well as program managers can use it on a continuous basis for management. As the mission focus changes, the process can be reapplied, thereby allowing the organization to shift resources to the highest-priority products and services.

INITIAL REALLOCATION PROCESS

The initial reallocation method allows USACHPPM to determine where it can make cuts in programs. It is an objective methodology that allows the ranking of products and services to cross programs as equitably as possible. Other factors may play a part in determining which programs take cuts, but this tool can help the leadership make decisions.

Man-years are reallocated from the lowest-ranked products and services in the lowest-ranked programs, based on either of these values:

(ordinal rank of program or service \times program score) or (percentage of total program effort for the program or service \times program score).

For example, Programs 17, 72, and 80 may have five products or services each. After the program managers have ranked their products and services, they assign each product and service a percentage of total program effort. The program manager may assign the lowest-ranked product and service (P/S #5) a 10 percent level of effort (0.1 for formula use); the next higher ranked product and service (P/S #4) may also be assigned a 10 percent level of effort; the next

higher ranked product and service (P/S #3) may be assigned a 20 percent level of effort, (0.2 for formula use); and so forth.

Next, program managers calculate a weighted value for all of their products and services by multiplying the product or service's percentage of total program effort times the program ranking score. These numbers are used to determine what ranking number is assigned to a product and service. When these values are consolidated into a single list, a prioritization for cuts is made (the lower the ranking number for a product or service, the more vulnerable it is to resource cuts). The lowest-weighted value is assigned the ranking number of 1, the next higher is ranked number 2, and so forth. Table 6-1 shows hypothetical results for Programs 17, 72, and 80.

Table 6-1.
Example — Hypothetical Ranking for Cuts

Prioritized program	Prioritized product or service	Program score	Level of effort for product or service (% ÷ 100%)	Weighted value for product or service (program score × effort level)	Ranking for cuts
17	P/S #3	9.9	0.2	2.0	9
17	P/S #4	9.9	0.1	1.0	7
17	P/S #5	9.9	0.1	1.0	6
80	P/S #3	8.8	0.1	0.9	5
80	P/S #4	8.8	0.1	0.9	4
80	P/S #5	8.8	0.1	0.9	3
72	P/S #3	7.2	0.2	1.4	8
72	P/S #4	7.2	0.1	0.7	2
72	P/S #5	7.2	0.1	0.7	1

Steps in the Process

The steps involved once the program ranking has been established are the following:

- ◆ Program managers will rank the products and services within their programs using the weighted criteria.
- ◆ Program managers will provide associated man-years with each product and service.
- ◆ Program managers will apply either an ordinal ranking obtained for each product and service, or the percentage of total program effort to be applied to each product and service within each program. (This allows objective ranking of products and services across programs.)

- ◆ Products and services will then have a weighted ranking based on the program manager's ranking priority (ordinal ranking or percentage of total program effort) coupled with their program ranking score.
- ◆ Program managers will establish minimum man-years required for their program to be viable.
- ◆ Directors will exercise oversight to ensure that results pass the test of common sense and that no gaming occurs.
- ◆ Leadership bases man-year reallocation on the desired end state using strategy, mission focus, and other guidance documents.
- ◆ Man-years are reallocated to priority programs.
- ◆ Leadership monitors the progress (for example, with a midyear review).

This process eliminates indiscriminate reallocation and applies weighting that is derived from the organizational strategy.

Options for Initial Reallocation

Three options could be used for initial resource reallocation. These options consider the program rank and the product or service rank. The methods for selecting products and services to cut are listed in the following subsections.

OPTION 1

In the first option, priority depends on the quantity (program score \times product or service score).

The following are advantages of this option:

- ◆ It crosses all programs.
- ◆ It is the best choice if leadership is considering total elimination of some products or services.
- ◆ It avoids indiscriminate cuts.

Disadvantages of this approach include the following:

- ◆ It does not allow the program manager flexibility.
- ◆ It does not fit with organizational strategy.
- ◆ It does not provide an answer by itself.

- ◆ The program manager's input is essentially negated because of program ranking.
- ◆ Someone would have to rank all the product and services.

OPTION 2

In the second option, priority depends on the quantity (product or service's percentage of program effort \times program score).

Advantages of this method include the following:

- ◆ It crosses all programs.
- ◆ It avoids indiscriminate cuts.
- ◆ Program managers rank their own products and services.
- ◆ It allows the program manager some flexibility.
- ◆ It fits with the organizational strategy when considered with the other factors previously discussed.

A disadvantage of this option is that it does not provide an answer by itself.

OPTION 3

The third option reallocates according to the quantity (ordinal rank for product or service program score).

The following are advantages of this option:

- ◆ It crosses all programs.
- ◆ It avoids indiscriminate cuts.
- ◆ The product managers rank their own products and services.
- ◆ It fits with the organizational strategy when considered with the other factors previously discussed.

Disadvantages include the following:

- ◆ Ordinal ranking implies that a product or service is more important than another by the value applied (i.e., a product with an ordinal rank of 5 when compared with a product with an ordinal rank of 1 is not necessarily 5 times more important than the lower-ranked product).
- ◆ It does not provide an answer by itself.

Preferred Option

Based on the options discussed above, it is clear that Option 2, basing cuts on the quantity (product or service's percentage of program effort \times program score) is the best one for determining initial reallocations.

Essential considerations are provided by the program managers, including the man-years each product and service requires and the minimum man-years required for their programs to be viable. Other important factors that need to be considered are mentioned at the beginning of this chapter.

Pilot Testing the Initial Reallocation Process

The process was tested using the same revised products and services we used to pilot test ranking the products and services. An extract of the results is in Table 6-2 (the higher the rank order for a product or service, the greater its priority for receiving resources). More detailed information is in Appendix M.

The results obtained in the pilot test aligned with the USACHPPM organizational strategy and mission focus in a general manner. While our preferences probably differ from those of the program managers, the results provide a basis for initial reallocation when used in conjunction with the other factors and considerations discussed previously. Careful attention needs to occur so that lower-ranking programs maintain their viability.

CONTINUING RESOURCE ALLOCATION AND REALLOCATION

As stated before, the allocation and reallocation process is both dynamic and iterative, and both leadership as well as program managers can use it on a continuous basis for management. As the mission focus changes, the process can be reapplied, thereby allowing the organization to shift resources to the highest priority products and services.

Table 6-2.
Rank Order for Reallocation of Resources — Pilot Test

Program number	Program name	Revised product and service	Rank order for reallocation of resources
35	Readiness Planning	Information Analysis/ Evaluation	78
27	Hearing Conservation	HEARS	76
51	Industrial Health Physics	Field Study	77
72	Laboratory Operations Improvement	Cholinesterase Program	75
41	Health Promotion Program Evaluation and Assessment	Field Study	74
53	OHMIS	Army Program Database Management	73
37	Hazardous and Medical Waste Management	Desk-top Consultation	6
16	Pest Management	Document Production/ Review	5
16	Pest Management	Desktop Consultation	4
59	Industrial Hygiene Mgmt.	Field Study	3
59	Industrial Hygiene Management	Document Development/ Review	2
29	Injuries and Occupational Illnesses	Field Study	1

Suggested Methods for Resource Allocation

The leadership and program managers could use several methods for resource allocation on a continual basis. The two methods we suggest are based on the program scores and product and service scores.

PROGRAM SCORE METHOD

Budget allocations could be based on the program score. This method would allocate funds to a program based on the quantity.

$$\begin{aligned}
 & (\text{program score} \div \text{sum of all program scores}) \\
 & \times \text{total staffing for numbered programs.}
 \end{aligned}$$

PROGRAM SCORE AND PRODUCT AND SERVICE SCORE METHOD

Budget allocations could be based on the program score and the product and service score. This method would allocate funds to a program based on the quantity.

$$\frac{(\text{sum of the individual program product and service scores} \times \text{individual program score})}{(\text{sum of all individual program product and service scores} \times \text{all program scores})} \times \text{total staffing for numbered programs.}$$

Other Factors to Consider

The methods presented provide a management tool for decision-makers at both the leadership and program manager level.

However, as mentioned previously, these methods cannot be used by themselves. Decision-makers must also consider other factors, which include organizational strategy and mission focus, resource constraints (both fiscal and manpower), minimum viable program requirements, current and future tables of distribution and allowance (TDAs), current trends, desired end state, limitations of each number, the best number for the end state, viable program numbers, a plan to manage required shifts in resources, decision rules, program metrics, and reexamining the process periodically through review and analyses.

Table 6-3 provides a basic format for recording some of the quantifiable program requirement information that can be reviewed and analyzed to assist with decision-making.

Table 6-3.
USACHPPM Program Requirement Data — Sample Format

Prioritized program	Current DHP \$	Current reimbursable \$	Current staffing	Minimum viable staffing	Required DHP \$	Existing TDA	Future TDA

The biggest advantage in using a standardized methodology such as those presented here is that they involve both the strategic (leadership) and operational (program manager) elements. Both elements are using common guidelines, and this should avert miscommunication when they discuss the nature of the organization's business, its focus, and its products and services. This discussion is the beginning of, and provides a foundation for, the integration of strategy, focus, communication, and marketing. It will allow the organization to look at itself as a whole, rather than as many separate program entities, and provide a basis for leadership in health promotion and preventive medicine into the 21st century.

CHAPTER 7

Conclusions and Recommendations

The USACHPPM asked us to develop a process for ranking products and services that would enable it to reallocate resources to higher-priority programs, and to evaluate the application of the process, identifying possible sources of bias and inconsistency.

We developed a process to have the leadership rank USACHPPM programs and to have the program managers, in concert with their directors, rank products and services. The methods developed align with the organization strategy and mission focus. The following five tools address resource reallocation:

- ◆ Criteria that support the organizational strategy and mission focus
- ◆ A weighting procedure to determine which criteria are the most important
- ◆ A procedure to rank and prioritize programs by applying the weighted criteria
- ◆ A procedure to identify products and services for reallocation, using a method that takes into account both the leadership's program ranking score and the program manager's priorities for his program's products and services
- ◆ A mathematical model to be used for resource allocation and reallocation.

These methods must be used in conjunction with consideration of other important factors.

We identified several areas of concern that USACHPPM needs to address:

- ◆ There are too many products and services and a lack of standardized definitions.
- ◆ It has no standardized methodology to allocate resources.

We recommend the following actions:

- ◆ Use the tools we have developed for resource allocation and reallocation.
- ◆ Revise and standardize the products and services to highlight core and special capabilities.

The methods developed will allow the organization to be the leader in health promotion and preventive medicine into the 21st century.

APPENDIX B

Products and Services

This appendix lists all products and services in the U.S. Army Center for Health Promotion and Preventive Medicine numbered programs.

USACHPPM PRODUCTS AND SERVICES

Program Number	Program Name	PRODUCTS/SERVICES
11	GRADUATE MEDICAL EDUCATION (RESIDENCY)	OM PHYSICIANS
16	PEST MANAGEMENT	PESTICIDE TREATED PAPERS
16	PEST MANAGEMENT	DOCUMENTS
16	PEST MANAGEMENT	INPUT TO ECAS
16	PEST MANAGEMENT	EDUCATION MATERIALS
16	PEST MANAGEMENT	EQUIPMENT CALIBRATION
16	PEST MANAGEMENT	PROGRAM DATA REPOSITORY
16	PEST MANAGEMENT	PESTICIDE RESISTANCE EVALUATION
16	PEST MANAGEMENT	INTEGRATED CONSULTATION
16	PEST MANAGEMENT	PROGRAM REVIEW
16	PEST MANAGEMENT	QUICK RESPONSE STUDY
16	PEST MANAGEMENT	REVIEW DOCUMENTS
16	PEST MANAGEMENT	SPECIAL STUDIES
16	PEST MANAGEMENT	TICK ANALYSIS
16	PEST MANAGEMENT	VECTOR-BORNE DISEASE RISK ASSESSMENT
16	PEST MANAGEMENT	ON-SITE TRAINING OF PEST MANAGEMENT PROGRAMS
16	PEST MANAGEMENT	COCKROACH RESISTANCE TESTS
16	PEST MANAGEMENT	ASSISTANCE VISIT
16	PEST MANAGEMENT	CONSULTATION
16	PEST MANAGEMENT	ARTHROPOD IDENTIFICATION
16	PEST MANAGEMENT	PROFILE
17	PESTICIDE MONITORING	HOTLINE (DoD PEST MANAGEMENT HOTLINE)
17	PESTICIDE MONITORING	DOCUMENT REVIEW
17	PESTICIDE MONITORING	ON-SITE CONSULTATION
17	PESTICIDE MONITORING	TRAINING/EDUCATION
17	PESTICIDE MONITORING	SPECIAL PROJECTS
17	PESTICIDE MONITORING	DOCUMENT DEVELOPMENT
21	PERSONAL READINESS	RISK INTERVENTION
21	PERSONAL READINESS	WORKSHOPS
21	PERSONAL READINESS	STANDARDIZED LESSON PLANS/BRIEFINGS
21	PERSONAL READINESS	EXPORTABLE COURSES FOR USAR AND NG
21	PERSONAL READINESS	DEPLOYMENT SUPPORT

APPENDIX C

Study Approach

Study Approach

The following are the steps in developing and testing a method for reallocating resources. Note that, as of this report, steps 24 to 28 must still be completed.

1. Develop criteria and measures for ranking products and services.
2. Conduct test weighting of draft criteria.
3. Provide criteria and measures to USACHPPM.
4. Develop preliminary questionnaire for ranking programs.
5. Develop preliminary questionnaire for ranking products and services.
6. Conduct test ranking of programs.
7. Conduct test ranking of products and services.
8. Develop alternative proposals for selection panels.
9. Present briefing to USACHPPM leadership.
10. USACHPPM conducts weighting of criteria.
11. Evaluate results of criteria weighting by USACHPPM (sensitivity and consistency).
12. Present analysis of weighting to USACHPPM.
13. Develop final questionnaire from the criteria for ranking the programs.
14. Develop final questionnaire from the criteria for ranking the products and services.
15. Conduct final test ranking of programs, products, and services to validate questionnaires.
16. Present results of LMI ranking to USACHPPM.
17. USACHPPM approval of ranking questionnaires.
18. USACHPPM identifies individuals.

19. LMI presents a draft plan for conducting the ranking (one-day, all at the same time).
20. USACHPPM develops information papers on programs related to the criteria.
21. USACHPPM conducts ranking of programs.
22. Evaluate ranking of programs.
23. Present briefing on analysis of ranking to USACHPPM leadership.
24. USACHPPM develops short descriptions of products and services.
25. USACHPPM conducts ranking of products and services.
26. LMI evaluates ranking of products and services.
27. Present briefing on analysis of ranking to USACHPPM leadership.
28. Present briefing on analysis of ranking to others at USACHPPM.
29. Prepare LMI report.

APPENDIX D

USACHPPM Mission Focus and Key Strategies

USACHPPM Mission Focus and Key Strategies

The following mission focus items and key strategies are found in USACHPPM's strategic plan. These determine the criteria used for prioritizing program, products, and services for reallocation of resources.

MISSION FOCUS

- ◆ Deployment medical surveillance
- ◆ Personal readiness assessment
- ◆ Develop the Theater Area Medical Laboratory
- ◆ Preventive medicine readiness hotline
- ◆ Strategic/operational arm for health promotion and preventive medicine

KEY STRATEGIES AND ASSOCIATED ACTIONS

Strategy One: Reengineer for Entrepreneurial Operations.

- ◆ Develop a business plan.
- ◆ Operate pilot programs.
- ◆ Develop command policy.
- ◆ Developing outsourcing matrix.
- ◆ Seek reinvention of government status.

Strategy Two: Market Our Organization and Our Products and Services.

- ◆ Identify a new marketing director position for the TDA.
- ◆ Publish and distribute new printed material.
- ◆ Capitalize on all opportunities to promote the USACHPPM.

Strategy Three: Integrate Health Promotion and Preventive Medicine with Army Readiness.

- ◆ Develop a one-stop-shop for all operational preventive medicine issues.
- ◆ Define operational medical readiness for the USACHPPM.
- ◆ Integrate Theater Army Medical Laboratory and USACHPPM operations.
- ◆ Establish and staff the new directorates (Health Promotion, Wellness).

Strategy Four: Develop a Process to Prioritize Resources to Maintain a Competitive Edge.

- ◆ Establish work selection and work deselection criteria.
- ◆ Identify USACHPPM products and services.
- ◆ Evaluate criteria for prioritizing resources.
- ◆ Prioritize products and services.
- ◆ Apply management indicators.
- ◆ Establish a formal process for resource allocation.

Strategy Five: Achieve World-Class Status.

- ◆ Improve quality management and scientific performance levels.
- ◆ Publish comprehensive quality implementation plan.
- ◆ Publish comprehensive training plan for scientific areas.
- ◆ Develop customer service standards.

APPENDIX E

Technical Criteria Definitions and Measures

Technical Criteria Definitions and Measures

HEALTH IMPACT

Definition

Actions that promote or maintain the health of individuals by mitigating health risk.

Measures

How large is the population affected by the performance of this product or service in an average year?

- (5) = More than 1,000,000 people.
- (4) = More than one installation/division (100,001 – 1,000,000 people).
- (3) = Installation/brigade (1,001 – 100,000 people).
- (2) = Facility or buildings/companies or battalions (100 – 1,000 people).
- (1) = Individuals/squads or platoons (less than 100 people).

How severe is the impact on the health of the population affected if this product or service is not performed?

- (5) = Permanent loss from work force (military mission DNBI resulting in evacuation; or, in the noncombat sector, injury or illness resulting in disability).
- (4) = Chronic disease resulting in long-term medical treatment and compensation costs.
- (3) = Illness or injury resulting in lost work time.
- (2) = Mild illness or injury resulting in reduced job performance.
- (1) = Minimal health impact.

PREVENTIVE SERVICE

Definition

Proaction to maintain or promote the health and wellness of personnel (the total Army, including all active, reserve, and other beneficiaries).

Measure

How does the performance of this product or service help, in a proactive way, to promote health or wellness, or to prevent disease or nonbattle injury?

(4) = Product or service that clearly supports health promotion and wellness.

(3) = Proactive product or service that prevents problems from developing in the future.

(2) = Product or service responds to a crisis in which proactive response actions prevent further development of greater problems.

(1) = Product or service is not preventive but solves an existing problem.

SUPPORT TO SOLDIER

Definition

Supports CINCs and commanders in warfighting and other military operations.

Measure

How does the performance of this product or service support the CINCs and commanders?

(4) = Directly supports the soldier (immunizations, masks, etc.).

(3) = Indirectly supports the soldier (i.e., those actions that provide tools for soldiers to use in their warfighting mission [TAML, weapon systems, development of technical guides, and training courses]).

(1) = Supports installation facilities (i.e., water treatment and industrial hygiene surveys).

SUPPORTS USACHPPM AS THE DoD LEAD AGENT FOR HEALTH PROMOTION AND PREVENTIVE MEDICINE

Definition

Increases the visibility or influence of USACHPPM in health promotion and preventive medicine activities within DoD.

Measure

How well does the performance of this product or service support tri-Service or DoD health promotion and preventive medicine interaction and activities?

(5) = This product or service is one for which USACHPPM is already the DoD lead or executive agent (DoD-ATSDR support and OHMIS).

(3) = This product or service is one that is clearly superior or has no competition within the other services and is of sufficient scope to meet lead agent requirements (toxicity clearances and Health Hazard Assessment).

(1) = This product or service is not Army-unique, is not of sufficient scope to meet DoD lead agent requirements, but is simply an integral part of the USACHPPM scientific base.

OUTSOURCING

Definition

How critical is the in-house performance of this product or service to USACHPPM, and should other organizations provide the service or product?

Measure

Should this product or service be outsourced?

(5) = Should be performed by USACHPPM with in-house personnel to maintain the USACHPPM scientific base.

(3) = Should be performed by others with USACHPPM oversight.

(1) = Should be performed by others with no USACHPPM oversight.

CUSTOMER DEMAND

Definition

The customers request the product or service.

Measure

How great is the anticipated or known demand for providing this product or service?

(5) = The demand is greater than our current resource levels can support.

(3) = The demand can be supported by our current resource levels.

(1) = The demand is much less than our current resource levels.

MAGNITUDE OF COST SAVINGS

Definition

The results obtained save dollars, avoid costs, or reduce compensation costs in an average year.

Measure

How large are the savings achieved by providing this product or service?

(5) = Savings are greater than \$10,000,000 per year.

(3) = Savings are \$1,000,001 – \$10,000,000 per year.

(2) = Savings are \$100,000 – \$1,000,000 per year.

(1) = Savings are less than \$100,000 per year.

SUPPLEMENTAL FUNDING

Definition

The performance of this service or delivery of this product has generated supplemental funding from external sources.

Measure

How much external supplemental funding is generated by the performance of this product or service?

(5) = External supplemental funds are greater than \$1,000,000.

(3) = External supplemental funds are \$500,001 – \$1,000,000.

(2) = External supplemental funds are \$200,000 – \$500,000.

(1) = External supplemental funds are less than \$200,000.

APPENDIX F

Selection Worksheet Instructions
for Weighting the Criteria

Selection Worksheet Instructions for Weighting the Criteria

Please Follow These Instructions

This is a paired comparison exercise. The exercise is to determine which of two criteria you prefer as more important.

Criteria

The following criteria have been selected to assess USACHPPM technical programs, products and services:

- ▶ Health impact.
- ▶ Preventive service.
- ▶ Support to soldier.
- ▶ Supports USACHPPM as the DoD lead agent for Health Promotion/Preventive Medicine.
- ▶ Outsourcing.
- ▶ Customer demand.
- ▶ Magnitude of cost savings.
- ▶ Supplemental funding.

Process

The following page lists pairs of criteria. First consider whether the choice on the left is better than the one on the right, or the choice on the right better than the one on the left, or whether the choices are about equal. If one choice is better than the other, assign the better one a value between 1 and 4, depending on how much better the choice is. If the choices are equal, assign them both a value of zero. Interpretations of values are listed in Table F-1 below.

Result

The result of this exercise is a weighting of each of the eight criteria. These criteria will be used to assess each of USACHPPM's programs and also the program's products and services.

Turn to the next page and make your comparisons.

Table F-2.
Criteria Preference Comparison Form

Pair		Left	No Difference	Right	
1	Health Impact		0		Support to Soldier
2	Support to Soldier		0		Preventive Service
3	Preventive Service		0		Magnitude of Cost Savings
4	Magnitude of Cost Savings		0		Outsourcing
5	Outsourcing		0		Supplemental Funding
6	Supplemental Funding		0		Supports CHPPM as DoD Lead
7	Supports CHPPM as DoD Lead		0		Customer Demand
8	Customer Demand		0		Health Impact
9	Support to Soldier		0		Magnitude of Cost Savings
10	Magnitude of Cost Savings		0		Supplemental Funding
11	Supplemental Funding		0		Customer Demand
12	Customer Demand		0		Support to Soldier
13	Preventive Service		0		Supplemental Funding
14	Supplemental Funding		0		Health Impact
15	Magnitude of Cost Savings		0		Customer Demand
16	Health Impact		0		Preventive Service
17	Preventive Service		0		Outsourcing
18	Outsourcing		0		Supports CHPPM as DoD Lead
19	Supports CHPPM as DoD Lead		0		Health Impact
20	Support to Soldier		0		Outsourcing
21	Outsourcing		0		Customer Demand
22	Customer Demand		0		Preventive Service
23	Preventive Service		0		Supports CHPPM as DoD Lead
24	Health Impact		0		Magnitude of Cost Savings
25	Magnitude of Cost Savings		0		Supports CHPPM as DoD Lead
26	Supports CHPPM as DoD Lead		0		Support to Soldier
27	Support to Soldier		0		Supplemental Funding
28	Health Impact		0		Outsourcing

Scale: 4 3 2 1 0 1 2 3 4

APPENDIX G

Instructions for Completing the
Program-Ranking Questionnaire

Instructions for Completing the Program-Ranking Questionnaire

This work selection process involves rating programs according to eight criteria that are based on USACHPPM mission focus and key strategies. The process has been developed to help USACHPPM make decisions on which program's products and services should continue to be performed. This will then lead to the reallocation of resources to the new directorates, which were mandated as a result of the Preventive Medicine reorganization, or to other directorates that have higher-priority programs.

The program products and services being assessed are the external technical products and mission services. General and administrative products and services that are necessary because USACHPPM is a military organization will be assessed under separate business-related criteria.

This questionnaire is to be used in conjunction with the matrix spreadsheet, which lists the programs down the side and the criteria measure questions across the top.

Each program is to be rated against each criterion individually. You will need to consider, in a general manner, the nature and thrust of a program's primary products and services in order to answer the questions.

For each program's primary products and services, address the questions presented on the following pages. Put the value you feel is most appropriate for the program you are rating. The questionnaire explains the meaning of each value. (Note that the values are not always consecutive; this is by design.)

For example, question 1.a. asks you to rate each program's population impact. Program 17, Pesticide Monitoring, products and services impact primarily at the installation level (a population of approximately 30,000), and products and services may be performed approximately 10 times per year. Therefore, these products and services affect about 300,000 people each year. The number you would put in the space provided would be 4, which corresponds to the range "100,001 - 1,000,000 people."

**Please turn the page and answer the questions for each program.
Please read each question carefully.**

PROGRAM QUESTIONS

1. **Health impact.** These questions address the health impact criterion and the products or services within this program that promote or maintain the health of individuals by mitigating health risk. We have chosen to define health risk in terms of both the size of the population affected and the severity of the impact. Therefore, we pose two separate questions that will be averaged to avoid double counting this criterion in the final analysis.

a. What is the size of the population affected by this program's products or services? (First consider the population primarily affected by this program's products or services, then multiply this population by the average number of products or services provided per year. Select the answer that corresponds to the best estimate of the total population affected.)

(5) = More than 1,000,000 people.

(4) = More than one installation/division (100,001 – 1,000,000 people).

(3) = Installation/brigade (1,001 – 100,000 people).

(2) = Facility or buildings/companies or battalions (100 – 1,000 people).

(1) = Individuals/squads or platoons (less than 100 people).

b. What is the severity of the health impact if this program's products or services are not provided?

(5) = Permanent loss from work force (military mission DNBI resulting in evacuation; or, in the noncombat sector, injury or illness resulting in disability).

(4) = Chronic disease resulting in long-term medical treatment and compensation costs.

(3) = Illness or injury resulting in lost work time.

(2) = Mild illness or injury resulting in reduced job performance.

(1) = Minimal health impact.

2. **Preventive service.** This question addresses whether a program's services or products are primarily preventive in nature, such that they proactively maintain or promote the health and wellness of personnel.

Are this program's products or services primarily preventive in nature?

(4) = Products and services clearly support health promotion and wellness.

(3) = Products or services primarily prevent problems from developing in the future.

(2) = Products or services respond to a crisis in which response actions prevent development of greater problems.

(1) = Products or services are not preventive but solve an existing problem.

3. **Support to soldier.** This question addresses whether a program's services or products primarily provide support to the combat soldier.

How do this program's products and services support Commanders in Chief and other commanders in their performance of warfighting and other military operations?

(4) = They directly support the soldier (immunizations, masks, etc.).

(3) = They indirectly support the soldier [e.g., actions that provide tools for soldiers to use in their warfighting mission (TAML, weapon systems, development of technical guides, and training courses)].

(1) = They primarily support installation facilities (e.g., water treatment and industrial hygiene surveys).

4. **Lead agent.** This question addresses whether a program's services and products support USACHPPM as the DoD lead agent for health promotion and preventive medicine. DoD lead or executive agent is established for programs that apply to all services and are of sufficient scope to warrant DoD-level interest and leadership.

Does this program's products and services increase the visibility or influence of USACHPPM in health promotion and preventive medicine activities within DoD?

(4) = This program's primary products and services are ones for which USACHPPM is already the DoD lead or executive agent [HRA (DoD-ATSDR support) and OHMIS (OHMIS)].

(3) = This program's primary products and services are clearly superior or have no competition within the other services and are of sufficient scope to meet lead agent requirements [Tox Path (toxicity clearances) and HHA (HHA)].

(1) = This program's primary products and services are not Army-unique, nor of sufficient scope to meet DoD lead agent requirements or are simply an integral part of the USACHPPM scientific base.

5. **Outsourcing.** This question addresses whether a program's primary existing products and services should continue to be provided by USACHPPM. Given the current environment, USACHPPM must make decisions on which program's specific products and services will be provided with in-house personnel to ensure the appropriate scientific base is maintained. Other DoD organizations, federal agencies, or profit and nonprofit commercial firms may more appropriately provide some of the products and services currently provided using in-house personnel, thereby focusing resources on higher-priority program products and services.

Should the USACHPPM continue to perform this program's primary services or deliver this program's primary products?

(5) = The program's primary products and services should be performed by USACHPPM with in-house personnel to maintain the USACHPPM scientific base.

(3) = The program's primary products and services should be performed by others with USACHPPM oversight.

(1) = The program's primary products and services should be performed by others with no USACHPPM oversight.

6. **Customer demand.** This question addresses whether a program's services or products have a strong customer demand or support.

What is the anticipated demand for this program's new primary products and services, or the known demand for this program's existing primary products and services?

(5) = The demand is greater than our current resources can support.

(3) = The demand can be supported by our current resources.

(1) = The demand is much less than our current resources.

7. **Magnitude of savings.** This question addresses the magnitude of the real or potential cost savings achieved by providing this program's primary products or services. Consider the following in making your estimates of cost savings: the cost of performing the services (salary, benefits, travel, equipment, report processing, analysis, etc.) versus the cost of others performing the services; the savings associated with avoiding future medical treatment and worker's compensation costs; and cost savings associated with identification of less costly mitigation alternatives.

What are the estimated savings associated with this program's primary products and services?

(5) = Savings are greater than \$10,000,000 per year.

(3) = Savings are \$1,000,001 – \$10,000,000 per year.

(2) = Savings are \$100,000 – \$1,000,000 per year.

(1) = Savings are less than \$100,000 per year.

8. **Supplemental funding.** This question addresses the amount of supplemental funding obtained from sources outside USACHPPM by providing this program's primary services or products. (This refers to the program initially receiving the funding).

What are the external supplemental funds generated each year by providing this program's primary services or products?

(5) = External supplemental funds are greater than \$1,000,000.

(3) = External supplemental funds are \$500,001 – \$1,000,000.

(2) = External supplemental funds are \$200,000 – \$500,000.

(1) = External supplemental funds are less than \$200,000.

Program Ranking Form

Program Number	Program Name	Health a	Health b	Preventive	Soldier	DoD Lead	Outsource	Demand	Cost	Supplemental Funding	TOTAL
11	GRADUATE MEDICAL EDUCATION (RESIDENCY)										
16	PEST MANAGEMENT

APPENDIX H

Results of Program Ranking by Pilot Test

This appendix shows the ranking of the U.S. Army Center for Health Promotion and Preventive Medicine numbered programs resulting from our test of the ranking process. We reviewed these results to ascertain that the process produced a priority list that made sense and aligned with the organization's mission focus and key strategies.

Programs Weighted Ranking

Program Number	PROGRAM NAME	Averaged Total
35	READINESS PLANNING	14.0
21	PERSONAL READINESS	13.7
30	ARMY MEDICAL SURVEILLANCE ACTIVITY	12.9
40	DEPLOYMENT AND ENVIRONMENTAL MEDICINE	12.3
41	HEALTH PROMOTION PROGRAM EVALUATION AND ASSESSMENT	12.0
69	HEALTH HAZARD ASSESSMENT	11.5
57	FIELD ENVIRONMENTAL HEALTH	10.9
53	OHMS MANAGEMENT	10.9
46	HEALTH RISK APPRAISAL/CARDIOVASCULAR SCREENING	10.8
71	FIELD LABORATORY READINESS(TAML)	10.8
26	INFECTIOUS DISEASES	10.8
24	RADIO FREQUENCY/ULTRASOUND	10.6
25	LASER/OPTICAL RADIATION	10.6
36	DISASTER & DOMESTIC ASSISTANCE	10.5
29	INJURIES & OCCUPATIONAL ILLNESSES	10.4
42	AIR POLLUTION SOURCE MANAGEMENT	10.2
51	HEARING CONSERVATION	10.0
87	HEALTH EFFECTS RESEARCH	10.0
27	INDUSTRIAL HEALTH PHYSICS	10.0
34	DISEASE CONTROL & PREVENTION	9.9
39	HEALTH RISK ASSESSMENT AND RISK COMMUNICATION	9.9
86	TOXICOLOGICAL PATHOLOGY & LAB ANIMAL CARE	9.8
43	AMBIENT AIR QUALITY MANAGEMENT	9.7
64	OCCUPATIONAL & ENVIRONMENTAL MEDICINE	9.4
37	HAZARDOUS AND MEDICAL WASTE MANAGEMENT	9.2
55	INDUSTRIAL HYGIENE FIELD SERVICES	9.2
85	TOXICITY EVALUATION	9.2
33	SEROEPIDEMIOLOGY	9.0
11	GRADUATE MEDICAL EDUCATION (RESIDENCY)	9.0
31	WATER SUPPLY MANAGEMENT	8.7
63	VISION CONSERVATION	8.7
22	COMMUNITY HEALTH SERVICES	8.6
16	PEST MANAGEMENT	8.5
65	OCCUPATIONAL HEALTH NURSING	8.5
28	MEDICAL HEALTH PHYSICS	8.4
59	INDUSTRIAL HYGIENE MANAGEMENT	8.0
32	SURFACE WATER AND WASTEWATER	8.0
73	METHOD DEVELOPMENT AND ANALYTICAL SCIENCES	7.9
38	GROUND WATER AND SOLID WASTE	7.7
84	DOD CHOLINESTERASE PROGRAM	7.6
66	DOCUMENT DEVELOPMENT	7.6
56	HEALTHCARE HAZARDS	7.3
52	ENVIRONMENTAL NOISE	7.1
77	ANALYTICAL CHEMISTRY	6.9
80	PESTICIDES AND ORGANIC CHEMISTRY	6.8
17	PESTICIDE MONITORING	6.8
79	RADIOISOTOPE ANALYSIS	6.5
72	LABORATORY OPERATIONS IMPROVEMENT	6.1
82	MILITARY UNIQUE AND SPECIAL CHEMISTRY	5.8

APPENDIX I

Results of Program Ranking by Leadership

This appendix shows the priority ranking that resulted from the U.S. Army Center for Health Promotion and Preventive Medicine leadership rating of numbered programs. The first table lists the programs and scores for each of the eight criteria, as well as the averaged total. The programs are listed in descending order of resource priority. The second table compares the priorities that result from varying the criteria that are used.

Weighted Program Ranking

Program Number	PROGRAM NAME	Health Impact	Preventive Service	Support to Soldier	Support USACHPPM as DoD Lead	Outsource	Demand	Cost Savings	Supplemental Funding	Averaged Total
	Weight	0.881	0.562	1	0.353	0.126	0.355	0.27	0.154	Total
51	HEARING CONSERVATION	3.7	2	4	1.5	0.6	1.6	1.1	0.2	14.6
26	INFECTIOUS DISEASES	4.1	2	3.7	1.1	0.6	1.7	1	0.2	14.3
69	HEALTH HAZARD ASSESSMENT	4.1	2	3.4	1.1	0.6	1.7	1.2	0.2	14.2

APPENDIX J

Revised Products and Services

This appendix shows current original products and services, their recommended new designation, and revised product and service categories for the program.

Revised Products and Services

Program Name	PRODUCTS/SERVICES	RECOMMENDED DESIGNATION	REVISED PRODUCTS AND SERVICES
16 PEST MANAGEMENT	PESTICIDE TREATED PAPERS	Pesticide treated papers	Pesticide treated papers
16 PEST MANAGEMENT	DOCUMENTS	Document production/ review	Document production/ review
16 PEST MANAGEMENT	INPUT TO ECAS	Delete rate ECAS under AP development	Training classes and materials
16 PEST MANAGEMENT	EDUCATION MATERIALS	Delete, not and external service	Army program data management
16 PEST MANAGEMENT	EQUIPMENT CALIBRATION	Army program data management	Pesticide resistance testing
16 PEST MANAGEMENT	PROGRAM DATA REPOSITORY	Pesticide resistance testing	Field study
16 PEST MANAGEMENT	PESTICIDE RESISTANCE EVALUATION	Field study	Desk-top consultation
16 PEST MANAGEMENT	INTEGRATED CONSULTATION	Field study	Arthropod ID/ analysis
16 PEST MANAGEMENT	PROGRAM REVIEW	Field study	
16 PEST MANAGEMENT	QUICK RESPONSE STUDY	Field study	
16 PEST MANAGEMENT	REVIEW DOCUMENTS	Document production and review	
16 PEST MANAGEMENT	SPECIAL STUDIES	Field Study	
16 PEST MANAGEMENT	TICK ANALYSIS	Arthropod ID/ analysis	
16 PEST MANAGEMENT	VECTOR-BORNE DISEASE RISK ASSESSMENT	Field study	
16 PEST MANAGEMENT	ON-SITE TRAINING OF PEST MGMT PROGRAMS	development	
16 PEST MANAGEMENT	COCKROACH RESISTANCE TESTS	Pesticide resistance testing	
16 PEST MANAGEMENT	ASSISTANCE VISIT	Field study	
16 PEST MANAGEMENT	CONSULTATION	Desk-top consultations	
16 PEST MANAGEMENT	ARTHROPOD IDENTIFICATION	Arthropod ID/ analysis	
16 PEST MANAGEMENT	PROFILE	Desk-top consultation	
21 PERSONAL READINESS	RISK INTERVENTION	Field study	Field study
21 PERSONAL READINESS	WORKSHOPS	Training classes and materials	Training classes and materials
21 PERSONAL READINESS	STANDARDIZED LESSON PLANS/BRIEFINGS	Training classes and materials	Deployment field services
21 PERSONAL READINESS	EXPORTABLE COURSES FOR USAR AND NG	Training classes and materials	Information sharing
21 PERSONAL READINESS	DEPLOYMENT SUPPORT	Deployment field services	Document development and review
21 PERSONAL READINESS	HEALTH CONSULTATIONS	Deployment field services	Army program database management
21 PERSONAL READINESS	HIV CERTIFICATION COURSE	Training classes and materials	
21 PERSONAL READINESS	REPORTS/NEWSLETTERS/ARTICLES/SURVEYS/MEDIA SPOTS	Information sharing	
21 PERSONAL READINESS	PREVENTIVE SCREENING	Field Study

Instructions for Completing the Product
and Service Ranking Questionnaire

Instructions for Completing the Product and Service Ranking Questionnaire

This work selection process involves rating program products and services according to eight criteria that are based on the USACHPPM mission focus and key strategies. The process has been developed to help USACHPPM make decisions on which products and services should continue to be performed. This will then lead to the reallocation of resources to the new directorates, which were mandated as a result of the Preventive Medicine reorganization, or to other directorates that have higher-priority programs.

The products and services being assessed are the external technical products and mission services. General and administrative products and services that are necessary because USACHPPM is a military organization will be assessed under separate business-related criteria.

This questionnaire is to be used in conjunction with the matrix spreadsheet, which lists the products and services down the side and the criteria measure questions across the top.

Each product and service is to be rated against each criterion individually. For each product and service, address the questions presented on the following pages. Put the value you feel is most appropriate for the item you are rating. The questionnaire explains the meaning of each value. (Note that the values are not always consecutive; this is by design.)

For example, question 1.a. asks you to rate the population impact of a product or service. An IH survey is performed at the installation level (a population of approximately 30,000), and this survey is performed approximately 10 times per year. Therefore, this survey affects about 300,000 people each year. The number you would put in the space provided would be 4, which corresponds to the range "100,001 — 1,000,000 people."

**Please turn the page and answer the questions for each product and service.
Please read each question carefully.**

PRODUCT AND SERVICE QUESTIONS

1. **Health impact.** These questions address the health impact criterion and the products or services within this program that promote or maintain the health of individuals by mitigating health risk. We have chosen to define health risk in terms of both the size of the population affected and the severity of the impact. Therefore we pose two separate questions that will be averaged to avoid double counting this criterion in the final analysis.

a. What is the size of the population affected by this program's products or services? (First consider the population primarily affected by this program's products or services, then multiply this population by the average number of products or services provided per year. Select the answer that corresponds to the best estimate of the total population affected.)

(5) = More than 1,000,000 people.

(4) = More than one installation/division (100,001 – 1,000,000 people).

(3) = Installation/brigade (1,001 – 100,000 people).

(2) = Facility or buildings/companies or battalions (100 – 1,000 people).

(1) = Individuals/squads or platoons (less than 100 people).

b. What is the severity of the health impact if this program's products or services are not provided?

(5) = Permanent loss from work force (military mission DNBI resulting in evacuation or, in the noncombat sector, injury or illness resulting in disability).

(4) = Chronic disease resulting in long-term medical treatment and compensation costs.

(3) = Illness or injury resulting in lost work time.

(2) = Mild illness or injury resulting in reduced job performance.

(1) = Minimal health impact.

2. **Preventive service.** This question addresses whether a program's services or products are primarily preventive in nature, such that they proactively maintain or promote the health and wellness of personnel.

Are this program's products or services primarily preventive in nature?

(4) = Products and services clearly support health promotion and wellness.

(3) = Products or services primarily prevent problems from developing in the future.

(2) = Products or services respond to a crisis in which response actions prevent development of greater problems.

(1) = Products or services are not preventive but solve an existing problem.

3. **Support to soldier.** This question addresses whether a program's services or products primarily provide support to the combat soldier.

How do this program's products and services support Commanders in Chief and other Commanders in their performance of warfighting and other military operations?

(4) = They directly support the soldier (immunizations, masks, etc.).

(3) = They indirectly support the soldier [e.g., actions that provide tools for soldiers to use in their warfighting mission (TAML, weapon systems, development of technical guides, and training courses)].

(1) = They primarily support installation facilities (e.g., water treatment and industrial hygiene surveys).

4. **Lead agent.** This question addresses whether a program's services and products support USACHPPM as the DoD lead agent for health promotion and preventive medicine. DoD lead or executive agent is established for programs that apply to all services and are of sufficient scope to warrant DoD-level interest and leadership.

Do this program's products and services increase the visibility or influence of USACHPPM in health promotion and preventive medicine activities within DoD?

(4) = This program's primary products and services are ones for which USACHPPM is already the DoD lead or executive agent [HRA (DoD-ATSDR support) and OHMIS (OHMIS)].

(3) = This program's primary products and services are clearly superior or have no competition within the other services and are of sufficient scope to meet lead agent requirements [Tox Path (toxicity clearances) and HHA (HHA)].

(1) = This program's primary products and services are not Army-unique, nor of sufficient scope to meet DoD lead agent requirements, or are simply an integral part of the USACHPPM scientific base.

5. **Outsourcing.** This question addresses whether a program's primary existing products and services should continue to be provided by USACHPPM. Given the current environment, USACHPPM must make decisions on which program's specific products and services will be provided with in-house personnel to ensure the appropriate scientific base is maintained. Other DoD organizations, federal agencies, or profit and nonprofit commercial firms may more appropriately provide some of the products and services currently provided using in-house personnel, thereby focusing resources on higher-priority program products and services.

Should the USACHPPM continue to perform this program's primary services or deliver this program's primary products?

(5) = The program's primary products and services should be performed by USACHPPM with in-house personnel to maintain the USACHPPM scientific base.

(3) = The program's primary products and services should be performed by others with USACHPPM oversight.

(1) = The program's primary products and services should be performed by others with no USACHPPM oversight.

6. **Customer demand.** This question addresses whether a program's services or products have a strong customer demand or support.

What is the anticipated demand for this program's new primary products and services, or the known demand for this program's existing primary products and services?

(5) = The demand is greater than our current resources can support.

(3) = The demand can be supported by our current resources.

(1) = The demand is much less than our current resources.

7. **Magnitude of savings.** This question addresses the magnitude of the real or potential cost savings achieved by providing this program's primary products or services. Consider the following in making your estimates of cost savings: the cost of performing the services (salary, benefits, travel, equipment, report processing, analysis, etc.) versus the cost of others performing the services; the savings associated with avoiding future medical treatment and worker's compensation costs; cost savings associated with identification of less costly mitigation alternatives.

What are the estimated savings associated with this program's primary products and services?

(5) = Savings are greater than \$10,000,000 per year.

(3) = Savings are \$1,000,001 – \$10,000,000 per year.

(2) = Savings are \$100,000 – \$1,000,000 per year.

(1) = Savings are less than \$100,000 per year.

8. **Supplemental funding.** This question addresses the amount of supplemental funding obtained from sources outside USACHPPM by providing this program's primary services or products. (This refers to the program initially receiving the funding).

What are the external supplemental funds generated each year by providing this program's primary services or products?

(5) = External supplemental funds are greater than \$1,000,000.

(3) = External supplemental funds are \$500,001 – \$1,000,000.

(2) = External supplemental funds are \$200,000 – \$500,000.

(1) = External supplemental funds are less than \$200,000.

APPENDIX L

Results of Product and Service Ranking by Pilot Test

This appendix shows the ranking of selected USACHPPM products and services resulting from our test of the ranking process. We reviewed these results to ascertain that the process produced a priority list that made sense and aligned with the organization's mission focus and key strategies.

Ranking of Selected Products and Services

Program Number	Program Name	Revised Products and Services	Averaged Total
21	PERSONAL READINESS	Deployment field services	12.2
35	READINESS PLANNING	Information analysis/evaluation	12.0
31	WATER SUPPLY MANAGEMENT	Field water supply survey	12.0
46	HEALTH RISK APPRAISAL/CARDIOVASCULAR SCREENING	Field study	11.9
21	PERSONAL READINESS	Field study	11.8
51	HEARING CONSERVATION	Field study	11.8
46	HEALTH RISK APPRAISAL/CARDIOVASCULAR SCREENING	Army HRA database management	11.7
85	TOXICITY EVALUATION	Toxicological clearance	11.2

Initial Reallocation Methodology Results

This appendix shows the hypothetical ranking of selected USACHPPM products and services resulting from our test of the reallocation methodology. We reviewed these results to ascertain that the process produced a priority list that made sense and aligned with the organization's mission focus and key strategies. The results of three methods are presented. (The higher the rank order for a product or service, the greater its priority for receiving resources.) The priority lists presented are based on the percentage of total program effort for the product or service, the program and product scores, and the ordinal ranking of a product or service respectively. The results cannot be used by themselves. Factors that need to be considered include organizational strategy and mission focus, resource constraints (both fiscal and manpower), minimum viable program requirements, current and future tables of distribution and allowance (TDAs), current trends, desired end state, limitations of each number, the best number for the end state, viable program numbers, a plan to manage required shifts in resources, decision rules, program metrics; and reexamining the process periodically through review and analyses.

Hypothetical Ranking of Selected Products and Services for Reallocation

Program Number	Program Name	Program Rank Score	Revised Products and Services	Product/Service Rank Score	% Level of Effort to Prod/Serv	Weighted Value (Prog Rank x % effort)	Rank Order for Cut Consideration based on % level of effort
35	READINESS PLANNING	14.0	Information analysis/evaluation	12.0	0.8	11	78
35	READINESS PLANNING	14.0	Document development review	11.0	0.2	2.8	58

13. ABSTRACT (Maximum 200 words) This report provides the U.S. Army Center for Health Promotion and Preventive Medicine (USACHPPM) with tools that can be used to reallocate resources to support new and reprioritized missions. The USACHPPM provides health promotion and preventive medicine products and services to DoD organizations world wide. They deliver over 500 individual products and services in 49 programs areas. The USACHPPM must reallocate resources within the organization to meet the new and reprioritized mission requirements. The tools selected to accomplish the reallocation must be reliable and objective; integrate the revised strategy and mission focus principles into the process; and provide a rational and defensible reallocations process. The Logistics Management Institute has developed five tools to assist the USACHPPM is accomplishing their reallocation. They are: 1) criteria that support the organizational strategy and mission focus; 2) a weighting procedure to determine which criteria are the most important; 3) a procedure to rank and prioritize programs by applying the weighted criteria; 4) a procedure to identify products and services for reallocation, taking into account the program ranking score and the results of the program manager's ranking of his program's products and services and a mathematical model to be used for resource allocation and reallocation. We recommend: 1) the USACHPPM use the tools for resource allocation and reallocation; and 2) revise and standardize the products and services to highlight core and special capabilities.
