1. Introduction

1.1 Background

The Department of Defense (DoD) Air Force Continuous Acquisition and Life-Cycle Support (CALS) Test Network (AFCTN) is conducting tests of the military standard for the Automated Interchange of Technical Information, MIL-STD-1840A, and its companion suite of military specifications. The AFCTN is a DoD sponsored confederation of voluntary participants from industry and government managed by the Electronic Systems Center (ESC).

The primary objective of the AFCTN is to evaluate the effectiveness of the CALS standards for technical data interchange and to demonstrate the technical capabilities and operational suitability of those standards. Two general categories of tests are performed to evaluate the standards; formal and informal.

Formal tests are large and comprehensive, which follow a written test plan, require specific authorization from the DoD, and may take months to prepare, execute, and report.

Informal tests are quick and short, used by the AFCTN technical staff, to broaden the testing base. They include representative samples of the many systems and applications used by AFCTN participants. They also allow the AFCTN staff to gain feedback from many industry and government interpretations of the standards, to increase the base of participation in the CALS initiative, and respond to the many requests for help that come from participants. Participants take part voluntarily, benefit by receiving an evaluation of their latest implementation (interpretation) of the standards, interact with the AFCTN technical staff, gain experience using the standards, and develop increased confidence in them. The results of informal tests are reported in Quick Short Test Reports (QSTRs) that briefly summarize the standard(s) tested, the hardware and software used, the nature of the test, and the results.
1.2 Purpose

The purpose of the informal test, reported in this QSTR, was to analyze Texas Instruments' interpretation and use of the CALS standards, in transferring technical publications data. Texas Instruments used its CALS Technical Data Interchange System to produce data, in accordance with the standards, and delivered it to the AFCTN technical staff on a 9-track magnetic tape.
2. Test Parameters

Test Plan: AFCTB 93-088

Date of Evaluation: 11 September 1993

Evaluator: George Elwood  
Air Force CALS Test Bed  
DBT 2 HQ ESC/AV-2P  
4027 Colonel Glenn Hwy  
Suite 300  
Dayton OH 45431-1672

Data Originator: Suzanne Guillory  
Texas Instruments  
M/S 8030  
2501 West University  
McKinney TX 75070

Data Description: Technical Manual Test  
1 Document Declaration file  
1 Document Type Definition (DTD)  
1 Text/Standard Generalized Markup Language (SGML) file  
1 Format Output Specification Instance (FOSI)

Data Source System:

1840

HARDWARE Unknown
SOFTWARE Unknown

Text/SGML

HARDWARE Unknown
SOFTWARE Unknown
Evaluation Tools Used:

**MIL-STD-1840A (TAPE)**
SUN 3/280
Afctn Tapetool v1.2.10 UNIX
XSoft Caps/Cals v40.4

**MIL-M-28001 (SGML)**
SUN Sparcstation 2
ArborText Adept v4.2.1
PC 486/50
Exoterica XGLNormalizer v1.2e3.2
Exoterica Validator v2.0 exl
SoftQuad Author/Editor v2.1
McAfee & McAdam Sema Mark-it v2.3
Public Domain sgmls

Standards Tested:
MIL-STD-1840A
MIL-M-28001A
3. 1840A Analysis

3.1 External Packaging

The tape arrived at the Air Force CALS Test Bed (AFCTB) enclosed in a commercial overnight mailing envelop. The exterior of the envelop was not marked with a magnetic tape warning label, as required by MIL-STD-1840A, para. 5.3.1.3.

The tape was not enclosed in a barrier bag or barrier sheet material, as required by MIL-STD-1840A, para. 5.3.1.2. Inspection of the tape reel showed a lack of the label indicating the recording density, as required by MIL-STD-1840A, para. 5.3.1. Some 9-track tape units require this BPI to be set manually. A packing list, showing all files recorded on the tape, was not enclosed in the box.

3.2 Transmission Envelope

The 9-track tape received by the AFCTB contained MIL-STD-1840A files. The files were named per the standard conventions.

3.2.1 Tape Formats

The tape was run through the AFCTN Tapetool v1.2.10 utility. No errors were encountered while evaluating the contents of the tape labels.

The tape was read using XSoft's CAPS read1840A utility without any reported errors.

The physical structure of the tape meets the CALS MIL-STD-1840A requirements.
3.2.2 Declaration and Header Fields

No errors were found in the Document Declaration file and data file headers.

This portion of the tape meets the requirements of MIL-STD-1840A.

4. IGES Analysis

The tape contained no Initial Graphics Exchange Specification (IGES) files.

5. SGML Analysis

The AFCTB has several parsers available for evaluating submitted DTD and Text files. These tools are not used to generate a pass/fail but to report how commercially available software can handle the files. These products are used in the development of technical publications and are good indicators of usability. The use of these products is not an endorsement nor an indication of CALS capability. All operations were performed using the default settings unless specified in the report. Changes to DTD or Text files required by each system are not documented in the report.

The Text and DTD files from this document were evaluated using Exoterica's Validator xml parser. No errors were reported in the DTD or Text files although some warning were issued.

The Text and DTD files from this document were tested using Exoterica's XGMLNormalizer parser with no reported errors.

The Text and DTD files from the tape were evaluated using McAfee & McAdam's Sema Mark-it parser with no reported errors.

The Text and DTD files from the tape were evaluated using the Public Domain sgmls parser with no reported errors.
The Text and DTD files from the tape were evaluated using SoftQuad's Author/Editor parser with no reported errors.

The Text file was imported into ArborText's Adept software and the DTD parsed without a reported error. Attempts to use the provided FOSI resulted in many reported errors. Efforts to use the generic FOSI provided by ArborText also generated an error.

The provided FOSI would not parse using available tools in the AFCTB. A comment provided in the FOSI indicated several areas that might not work.

The DTD and the Text files meet the CALS MIL-M-28001A specification.

6. **Raster Analysis**

The tape contained no Raster files.

7. **CGM Analysis**

The tape contained no Computer Graphics Metafile (CGM) files.
8. Conclusions and Recommendations

The physical structure and header file of the tape from Texas Instruments meets the CALS MIL-STD-1840A with no errors reported during any of the read operations.

The DTD and Text files were parsed using several different tools available in the AFCTB without a reported error. The provided FOSI would not parse and could not be used by the publishing system available within the AFCTB. The SGML file meets the CALS MIL-M-28001A specification.

The tape meets the CALS MIL-STD-1840A requirements.
