1. Introduction

1.1 Background

The Department of Defense (DoD) Air Force Continuous Acquisition and Life-Cycle Support (CALS) Test Network (AFCTN) is conducting tests of the military standard for the Automated Interchange of Technical Information, MIL-STD-1840A, and its companion suite of military specifications. The AFCTN is a DoD sponsored confederation of voluntary participants from industry and government managed by the Electronic Systems Center (ESC).

The primary objective of the AFCTN is to evaluate the effectiveness of the CALS standards for technical data interchange and to demonstrate the technical capabilities and operational suitability of those standards. Two general categories of tests are performed to evaluate the standards; formal and informal.

Formal tests are large and comprehensive which follow a written test plan, require specific authorization from the DoD, and may take months to prepare, execute, and report.

Informal tests are quick and short, used by the AFCTN technical staff, to broaden the testing base. They include representative samples of the many systems and applications used by AFCTN participants. They also allow the AFCTN staff to gain feedback from many industry and government interpretations of the standards, to increase the base of participation in the CALS initiative, and respond to the many requests for help that come from participants. Participants take part voluntarily, benefit by receiving an evaluation of their latest implementation (interpretation) of the standards, interact with the AFCTN technical staff, gain experience using the standards, and develop increased confidence in them. The results of informal tests are reported in Quick Short Test Reports (QSTRs) that briefly summarize the standard(s) tested, the hardware and software used, the nature of the test, and the results.
1.2 Purpose

The purpose of the informal test, reported in this QSTR, was to analyze Cubic Defense System's interpretation and use of the CALS standards in transferring technical publication data. Cubic Defense used its CALS Technical Data Interchange System to produce data, in accordance with the standards, and delivered it to the AFCTN technical staff on a 9-track magnetic tape.
2. Test Parameters

Test Plan: AFCTB 93-028

Date of Evaluation:
30 March 1993

Evaluators:
George Elwood
Air Force CALS Test Bed
DET 2 HQ ESC/ENCP
4207 Colonel Glenn Hwy
Suite 300
Dayton OH 45431-1672

Data Originator:
Cathy Kothawala
Cubic Defense Systems Inc
9233 Balboa Avenue
San Diego CA 92123
(619) 277-6780

Data Description:
Technical Manual Test
1 Document Declaration file
1 Document Type Definitions (DTD)
1 Text file
15 Computer Graphics Metafile (CGM) files

Data Source System:
Text/Standard Generalized Markup Language (SGML)

Evaluation Tools Used:

**MIL-STD-1840A (TAPE)**

SUN 3/280
- AFCTN Tapetool v1.2.8 UNIX
- XSoft CAPS/CALS v40.4
- Texas Instruments (TI) Tapetool v1.0.1

**MIL-M-28001 (SGML)**

- Cheetah Gold 486
  - Datalogics ParserStation v3.36
  - Exoterica XGMLNormalizer v1.2e3.2
  - Exoterica Validator v2.0 EXL
  - Public Domain sgmls
  - McAfee & McAdam Sema Mark-it v2.3

**MIL-D-28003 (CGM)**

SUN SparcStation 2
- ArborText cgm2draw
- AFCTN validcgm
- Island Graphics IslandDraw 3.0

- Cheetah Gold 486
  - Software Publishing Corporation (SPC) Harvard Graphics 3.05
  - Inset Systems HiJaak V1.0 Windows
  - Micrografx Designer 3.1
  - Corel Ventura Publisher

**Standards Tested:**

- MIL-STD-1840A
- MIL-M-28001A
- MIL-D-28003
3. 1840A Analysis

3.1 External Packaging

The tape arrived at the Air Force CALS Test Bed (AFCTB) enclosed in a commercial overnight shipping bag. The exterior of the bag was marked with the magnetic tape warning label, as required by MIL-STD-1840A, para. 5.3.1.3.

The tape was enclosed in an anti-static barrier bag as required by MIL-STD-1840A, para. 5.3.1.2. Inspection of the tape reel showed the label indicating the recording density, as required by MIL-STD-1840A, para. 5.3.1. Enclosed in the box was a packing list showing all files recorded on the tape.

3.2 Transmission Envelope

The 9-track tape received by the AFCTB contained MIL-STD-1840A files. The files were named per the standard conventions.

3.2.1 Tape Formats

The tape was run through the AFCTN Tapetool v1.2.8 utility. No errors were encountered while evaluating the contents of the tape labels.

The tape was read using TI's version of Tapetool without a reported error.

The tape was read without error using XSoft's CAPS read1840A utility.

The basic tape construction meets the CALS MIL-STD-1840A requirements.
3.2.2 Declaration and Header Fields

No errors were found in the Document Declaration file or data file headers.

4. IGES Analysis

No Initial Graphics Exchange Specification (IGES) files were included on this tape.

5. SGML Analysis

This tape contained one DTD and one Text file.

The AFCTB has several parsers available for evaluating submitted DTD and Text files. These tools are not used to generate a pass/fail but to report how commercially available software can handle the files. These products are used in the development of technical publications and are good indicators of usability. The use of these products is not an endorsement nor an indication of CALS capability. All operations were performed using the default settings unless specified in the report. Changes to DTD or Text files required by each system are not documented in the report.

The Text and DTD files from this document were tested using Exoterica's XGMLNormalizer parser. The DTD on the tape included capacities and features files. For the first pass through the parser this file set was used. It generated two error references undefined or misdefined values. The next pass through the DTD used the general capacity set in the CALS MIL-M-28001A specification. No errors were generated during this pass. Using the resulting compiled file, the Text file was parsed. The first pass generated one error per graphic call. The graphics had been identified correctly by the CGMCHAR but external reference was not made in the DTD. When this was added the Text file parsed without a reported error. Shown below are the error messages, the DTD reference followed by the Text reference.

C:\XGML\XGMLNORM.EXE --
Error on line 104 in file 9328.sgm:
An ENTITY declaration referred to an undeclared notation.
For entity 'fig7-9', notation 'CGMCHAR'.

<!ENTITY fig7-9 SYSTEM "D001C021.CGM" NDATA CGMCHAR>
<GRAPHIC BOARDNO="fig7-9" GRAPHSTY="cgmchar" HPLACE="CENTER" VPLACE="MIDDLE">

The Text and DTD files from the tape were evaluated using
Datalogics' ParseStation. The corrected DTD from the first
operation was parsed without a reported error. The Text
file also parsed without a reported error. The original DTD
was parsed and it did parse without errors but the Text file
generated an error per graphic reference.

The Text and DTD files from this document were evaluated
using Exoterica's Validator parser. Similar errors were
reported.

The Text and DTD files from the tape were evaluated using
McAfee & McAdam's Sema Mark-it parser. With the corrected
DTD Sema Mark-it gave two additional errors. See the Ap-
pendix for the log.

The Text and DTD files from the tape were evaluated using
the Public Domain sgmls parser. No additional errors were
reported.

The DTD and Text files do not meet the CALS MIL-M-28001A
specification.

6. Raster Analysis

No Raster files were included on this tape.

7. CGM Analysis

The tape contained 15 CGM files. The files were evaluated
using a software available within the AFCTB with CALS op-
tions. This utility reported that files C001-C004 and C008
were valid files. The remaining files were listed as having
basic CGM errors which kept them from being valid CALS
files.
All 15 CGM files had a warning issued about foreground color and no background color.

Bulletin 20027: Element Class/ID: 4/1 Offset: 652 octets Element No. 60
Warning; a foreground color has been defined and referenced by a primitive, while the background color has not been defined.

The files which were reported as not meeting basic CGM standards had many errors reported, referencing an invalid character orientation base vector.

Error 6102: Element Class/ID: 5/16 Offset: 13816 octets Element No. 1085
The Character Orientation Base Vector is invalid; it must have non-zero length.

File C013 also had an invalid string error. The error indicated the use of illegal characters.

Error 6044: Element Class/ID: 4/4 Offset: 17356 octets Element No. 1476
The Text string is invalid; it contains illegal character codes.

The AFCTN beta validcgm utility reported no major errors in any of the files.

The AFCTB has several tools for viewing CGM files. These tools are not used to generate a pass/fail but to report how commercially available software can handle the files. Many of these products are used in the development of technical publications and are good indicators of usability. The use of these products is not an endorsement nor indication of CALS capability. All operations were performed using the default settings.

For the detailed analysis, four files were selected. Files C001, C005, C013, and C015 will be used for the discussions on how commercial software handle the files. All of the files converted and displayed at a minimum. Most of the files were printed.
Because of the black background very little displayed on the screen. All files had reported errors when the software program was terminated. Shown below is the error message generated for the first file.

c1/id: 4/4, offs: 850, esgn: 82
Error detected in file i:\9328\C001.CGM

The files were read into another software available within the AFCTB with no reported errors. When initially displayed, the text overlapped and was not placed correctly. When the image was enlarged, the text was correct for the most part. Note the text overflow on file C015. It was also noted that the output through the HP LaserJet did not reproduce the vertical lines nor show any text, even when enlarged. The Postscript output was acceptable. The output on several files, including C013, placed black shapes on the screen and paper covering the text that was in these shapes.

Inset Systems' HiJaak for Windows imported all files without a reported error. The displays appeared to be correct. Some minor text misplacement was noted.

The files were imported into the Micrografx Designer without a reported error. The displays appeared to be correct. The hard copies showed some minor text misplacement.

According to Michael Harrison of Micrografx, "The version of Micrografx Designer used with this report has been replaced with Designer version 4.0 which reads and prints these files successfully."

The files were imported into SPC's Harvard Graphics 3.05 with some reported errors. File C013 reported some unknown symbols while C015 reported clipped objects and adjusted points. Hard copies of the file showed black filled shapes where shape outlines and text appeared in the screen. On file C005 a large number of misplaced text is noted. Some of this text appears to have been rotated 90 degrees. File C013 shows the black shapes.

The files were directly imported into Island Graphics' IslandDraw. Files C005 and C013 reported unknown symbols.
File C005 displayed overlaying text on the left side. The remainder of the text appears to be correctly placed on the image.

The files were imported using Carberry's CADLeaf software with no reported errors. The images appear to be correct. The files not included in the Appendix (C011 and C012) displayed overlapping text. These files were very detailed circuit layouts and there was overlapping of component names and values.

The files were converted using ArborText's cgm2draw utility with no reported errors. The resulting files were read into Island Graphics' IslandDraw. During this procedure file C013 reported unknown symbols and unencoded characters. The images displayed on the screen were enlarged to show detail. It was noted that text font changed in areas along with the size of the letters causing an overflow condition. On file C013, the circuit component shapes were noted as being very ragged and misshaped.

The files were imported into Corel's Ventura Publisher without a reported error. On file C001 five of six circles around the screws were missing. The text size was very small making overflow conditions hard to find. On file C014 the text appears to be shifted to the left slightly.

The CGM files do not meet the CALS MIL-D-28003 specification due to reported basic CGM errors.
8. Conclusions and Recommendations

In summary, the tape from Cubic Defense Systems was correct. The tape could be read properly using the AFCTN Tapetool software with no reported errors. The basic tape construction and CALS headers were correct and meet the CALS MIL-STD-1840A requirements.

The DTD file was missing an external reference (CGMCHAR). The included capacity file had three incorrect references. The SGML file does not meet the CALS MIL-M-28001A specification.

The CGM files had basic CGM errors which caused them not to meet the CALS MIL-D-28003 specification.

The tape from Cubic Defense Systems does not meet the CALS MIL-STD-1804A requirements.

10.1 Datalogics Parser Log

10.1.1 DTD Log

SGML Document Type Definition Parser
Version 3.36
An SGML System Conforming to
International Standard ISO 8879
Standard Generalized Markup Language

Log file: '9328.LOG'
SDO File: 'ctndecl.sdo'
Namecase General is yes.
Namecase Entity is no.
Parsing DTD file: '9328.dtd'

DTD0096: The generic ID SHORTTITLE has not been used in any content model, inclusion, or as a doctype element.
This DTD conforms to the ISO 8879 standard

DTO file '9328.DTO' created

closing statistics:
Capacity points: 60520
Bytes of DTO file string space: 12023
SGML descriptor blocks: 6253

Document Type Definition is compliant and parsed normally.

Program status code: 0.
