Task Assignment Plan
on
Combat Ammunition System Support

Introduction

The Air Force designed the Combat Ammunition System (CAS) to provide accurate munitions information to different warfighting commodities in a timely manner. The CAS applications provide automated improvements to the previously manual munitions reporting mechanisms, automate a wide range of munitions support functions, and maintain a central munitions database. CAS is a multiechelon minicomputer logistics system with installations at bases, MAJCOMs, and HQ USAF. In addition, CAS includes a personal computer application to support deployed units.

To maintain a viable logistics capability assessment architecture, the CAS system program office (SPO) requires analytical and technical support to sustain and improve CAS worldwide operations.

Goals and Objectives

The goal of this project is to provide the CAS SPO with the analytical and technical support necessary to enhance or correct problems with existing CAS documentation and software components, evaluate CAS requirements documentation, and participate in CAS technical meetings. These activities are designed to enhance the CAS applications to more effectively support the Air Force munitions functional area.

Technical Approach

The work breakdown structure for this task can be divided into four high-level work areas.

The first work area is CAS documentation analysis and update. The CAS SPO will present recommendations for changes and corrections of CAS documentation to Synergy. Synergy will analyze the recommendations and make the appropriate modifications.

The second work area is requirements analysis. Synergy will provide analysis of CAS requirements documentation. At the conclusion of the analysis, Synergy will provide recommendations for changes and improvements, including cost and schedule estimates to implement the recommendations.

The third work area is program analysis, modifications, and testing. The CAS SPO will present Synergy with recommendations for changes, corrections, or improvements of CAS software components to Synergy. Synergy will analyze the recommendations. Upon conclusion of the analysis, Synergy will make the necessary modifications and test the new software to ensure the updated programs satisfy the SPO recommendations and successfully integrate with existing CAS software components.

The fourth work area is technical meetings. Synergy will participate in technical meetings as directed by the CAS SPO. Synergy will generate supporting documentation as required.
Inputs

Synergy will require access to CAS documentation as part of its documentation analysis and update, CAS requirements documentation as part of its requirements analysis, and CAS software components and all associated hardware and software as part of its program analysis, modifications, and testing.

Project Schedule and Milestones

Table 1 provides a project timeline for this task order.

Deliverables

The following documents will be delivered as part of this project.

Technical Report/Study Services, Software Unit Specification (SUS) Update (CDRL A001A) — This document provides a design for each CAS-C software unit. Updates to the SUS will be issued four times throughout the contract.

Technical Report/Study Services (CDRL A001C) — The Technical Report will document the project activities and analysis results.

Contractor’s Progress Status and Management Report (CDRL A004) — This report will be delivered monthly to inform the SIDAC COTR of the progress of this project.

Task Assignment Plan (CDRL A009) — The Task Assignment Plan establishes the goals and technical approach to be used in this project.
The following deliverables may be delivered on an as-required basis.

Conference Minutes (CDRL A003) — Conference Minutes will document decisions and agreements reached during formal joint contractor/Government conferences.

Software Programmers Manual (SPM) (CDRL A005) — The SPM will provide the information necessary to interpret, troubleshoot, or modify existing software.

Software Users Manual (CDRL A006) — The Software Users Manual will describe procedures for using the software system.

Presentation Materials (CDRL A007) — Presentation Materials will be developed as required to support conferences and briefings.

Computer Program End Item Documentation (CDRL A012) — Source and object program listings will be provided as appropriate.

**Project Staffing and Experience**

The key personnel for this task are Ms. Jennifer Googins, Mr. Phil Nelson, and Mr. Gary Sharpe.

Ms. Googins has more than 10 years experience as an analyst in the information systems industry, and more than 3 years experience as a deputy program manager and analyst on CAS development efforts.

Mr. Nelson has more than 9 years experience programming Air Force applications, and more than 4 years experience as a technical manager and programmer on CAS development efforts. He has a B.S. in Management Information Systems from Utah State University.

Mr. Sharpe spent more than 20 years in the Air Force working in different capacities in the munitions functional area. He spent 4 years as a logistician defining and documenting CAS system and functional requirements, and has spent more than 2 years as an analyst and technical writer on CAS development efforts.
