Introduction to the Naval Research Laboratory

MISSION

To conduct a broadly based multidisciplinary program of scientific research and advanced technological development directed toward maritime applications of new and improved materials, techniques, equipment, systems, and ocean, atmospheric, and space sciences and related technologies.

The Naval Research Laboratory provides

- Primary in-house research for the physical, engineering, space, and environmental sciences
- Broadly based exploratory and advanced development programs in response to identified and anticipated Navy needs
- Broad multidisciplinary support to the Naval Warfare Centers
- Space and space systems technology development and support
The Naval Research Laboratory in the Department of the Navy

The Naval Research Laboratory is the Department of the Navy's corporate laboratory; it is under the command of the Chief of Naval Research (CNR). As the corporate laboratory of the Navy, NRL is an important component in the Office of Naval Research's effort to meet its science and technology responsibilities.

For its basic research effort, the Laboratory receives guidance from the CNR that establishes the level of effort and trend direction. The Laboratory then develops a comprehensive research proposal package that is submitted to the CNR for consideration for Navy basic research support. The total Navy basic research program ultimately is evaluated by Congress.

In addition to internal critical review and the evaluation by the CNR and others, the research at NRL is published in refereed journals and/or reported at national and international scientific conferences. There is an aggressive policy of scientific interaction whereby scientists from around the world visit NRL and are visited by NRL scientists. In this way, NRL research is subject not only to management review but also to peer evaluation.

NRL has had a long and fruitful relationship with industry as a collaborator, contractor, and most recently in Cooperative Research and Development Agreements (CRADA). NRL values this linkage and intends for it to continue to develop.

NRL is an important link in the Navy R&D chain. Through NRL, the Navy has direct ties with sources of fundamental ideas in industry and the academic community throughout the world and provides an effective coupling point to the R&D chain for the Office of Naval Research (ONR).
Current Research

The following areas represent broad fields of NRL research. Under each, more specific topics that are being investigated for the benefit of the Navy and other sponsoring organizations are listed. Some details of this work are given in the NRL Review, published annually. More specific details are published in reports on individual projects provided to sponsors and/or presented as papers for professional societies or their journals.

Advanced Radio, Optical, and IR Sensors
- Advanced optical sensors
- EO/MET sensors
- Satellite meteorology
- Precise space tracking
- Radio/Infrared astronomy
- Infrared sensors and phenomenology
- Middle atmosphere research
- Image processing
- VLBI/Astrometry
- Atmospheric effects on low frequency EM communications
- Optical interferometry
- Imaging spectrometry
- Laser propagation
- High-power microwave sources
- Charged-particle devices
- Pulse power
- DE effects

Electronic Warfare
- EW/C2W/IW systems and technology
- COMINT/SIGINT technology
- EW decision aids, and planning/control systems
- Intercept receivers, signal processing, and identification systems
- Passive direction finders
- Decoys and offboard CM (RF and IR)
- Expendable autonomous vehicles
- Repeaters/jammers and EO/IR active countermeasures and techniques
- Platform signature measurement and management
- Threat and EW systems computer modeling and simulations
- Visualization and virtual reality
- Hardware-in-the-loop and flyable simulators
- RF environment simulators

Enhanced Maintainability, Reliability, and Survivability Technology
- Coatings
- Lubricants and greases
- Water additives and cleaners
- Fire safety
- Laser hardening
- Satellite survivability

Environmental Effects on Naval Systems
- Meteorological effects on electro-optical system performance
- Air quality in confined spaces
- Electromagnetic background in space
- Solar and geomagnetic activity
- Magnetospheric and space plasma effects
- Nonlinear science
- Ionospheric behavior
- Oceanographic effects on weapons, sensors, and platforms

Imaging Research/Systems
- Remotely sensed signatures analysis
Real-time signal and image processing algorithms/systems
Image data compression methodology
Image fusion
Automatic target recognition
Scene/Sensor noise characterization
Image enhancement/noise reduction
Scene classification techniques
Radar and laser imaging systems studies
Coherent/Incoherent imaging sensor exploitation
Remote sensing simulation

Information Technology
Antijam communication links
Network architectures
Battle management information systems
Arctic communication links
Information security (INFOSEC)
Voice processing

Materials
Superconductivity
Bio/Molecular engineering
Materials processing
Advanced alloy systems
Rapid solidification technology
High-temperature materials
Laser fabrication and processing
Ceramics and composite materials
Thin films and coatings
Metamorphic materials/Smart structures
Transduction materials
Computational material science

Space Systems and Technology
Advanced space systems
Space sensing technology and applications
Satellite communications
Spacecraft design, engineering, and integration
Satellite ground station design
Navigation and time technology
Remote sensing, calibration, and research
Satellite survivability
Spacecraft power systems technology
Spacecraft materials
Radiation effects on spacecraft

Surveillance and Sensor Technology
Point defense technology
Imaging radars
Target classification/identification
Airborne geophysical studies
Fiber-optic sensor technology
Undersea target detection/classification
Sonar transducers
Electromagnetic sensors—gamma ray to rf wavelengths
SQUID for magnetic field detection
Low observables technology
Ultra-wideband technology
VHSIC/MIMIC applications
Interferometric imagery

Undersea Technology
Autonomous vehicles
Bathymetric technology
Anechoic coatings
Oceanographic instrumentation

Oceanography
Open ocean, regional, and littoral oceanographic forecasting
Shallow water tactical oceanography
Arctic environmental quality
In-situ oceanographic sensors and data fusion
Bio-optical and fine-scale physical processes
Bio-corrosion
Environmental simulation
Coastal scene generation
Waves, tides, and surf prediction
Couple model development
Coastal/ocean bubble-optical characterization

Marine Geosciences
Geoaoustic modeling to support acoustic performance prediction
Marine seismology, including propagation and noise
Geomagnetic modeling to support nonacoustic system performance
Geotechniques/sediment dynamics affecting mine warfare and mine countermeasures
Mapping and charting, including advanced seafloor mapping and imaging systems

Meteorology
Air/Sea interaction effects on operations
Data assimilation techniques
Global/Regional forecasting
Tactical system development and application
Weather effects on targets
Meteorological tactical decision aids

Ocean Acoustics
Underwater acoustics, including propagation, noise, and reverberation
Fiber-optic acoustic sensors
Shallow water environmental acoustics and sensor systems
Undersea warfare system performance modeling,
unifying the environment, acoustics, and signal
processing
Anechoic coatings
Target reflection, diffraction, and scattering
Simulations
Tactical decision aids
Sonar transducers
Metrology
Major Research Capabilities and Facilities
(Listed alphabetically by organizational unit)

Acoustics Division (Code 7100)
Large tank instrumented for investigating acoustic echo and radiation characteristics of targets
Tank 30 ft in diameter by 22 ft in depth, automated with computer control and analysis for detailed studies of acoustic fields, transducers, and other underwater devices
Multichannel programmable digital data processing system: a system of DEC computers, high-speed array processors, and peripherals for up to 256 channels; designed for acoustic surveillance array processing
Containerized data processing for acoustic array processing at remote sites and aboard ship
Large acoustic pool facility, incorporating near-field conformal scanners and acoustic arrays for structural acoustics studies of underwater targets
High-powered sound source array
Vertical array with satellite telemetry
Multiple towed acoustic arrays with up to 144 acoustic channels for measuring directional noise
Twin underwater towers supporting sources and hydrophone arrays to measure high-frequency propagation, volume, and boundary scattering in shallow water
High-speed maneuverable towed body with MK-50 and synthetic aperture sonars to measure high-frequency boundary scattering and coherence
Tactical oceanography simulation laboratory

DNA synthesizer; DNA sequencer
HPLC
Patch clamp microelectrodes
Potentiometer for electrochemistry

General facilities
Class 100 clean room
Cold room for storage and preparation
Controlled shelf temperature lyophilizer
Silicon graphics IRIS workstation
Freeze-fracture apparatus
High speed ultracentrifuges
Inert atmosphere dry box
Langmuir-Blodgett film balance

Chemistry Division (Code 6100)
Synthesis/processing facilities
Paint formulation and coating
Functional polymers/elastomers
Langmuir-Blodgett film
Surface cleaning
Thin film deposition/etching with in-situ control
High temperature chemistry
Characterization facilities
General purpose chemical analysis
Surface diagnostics
Nanometer scale composition/structure/properties
Magnetic resonance NDI
Tribology
Polymer structure/function
Special purpose capability
Environmental monitoring
Synchrotron interfacial spectroscopy/structure
Combustion and fire research
Alternate and petroleum-derived fuels
Simulation/modeling

Center for Bio/Molecular Science and Engineering (Code 6900)
Optical equipment
Confocal fluorescent microscope
CW fluorimeter and microscope
Excimer laser projection exposure system
Dektak surface profilometer
Optical and fluorescence microscopes
Photon correlation spectrometer
Picosecond dye laser system
Raman spectrometers
Scanning and transmission electron microscope
SLM fluorimeter (visible through near IR)
Time resolved fluorimeter (nanosecond)
UV-visible absorption spectrophotometers

Analytical instruments
Atomic force/scanning tunnelling microscope
Capillary electrophoresis unit
Contact angle goniometer
Differential scanning calorimeter

Condensed Matter and Radiation Sciences Division (Code 6600)
Hypervelocity gun ranges
3-MeV tandem Van de Graaff accelerator
200-keV ion-implantation facility
Synchrotron radiation beam lines (at NSLS, Brookhaven, NY)
Microwave test facility
Excimer laser film deposition facility
Bomen infrared spectrometer facility
Diffuse light scattering facility
Electronics Science and Technology Division (Code 6800)
- Nano- and micro-electronics processing facility
- Electron-beam nanowriter
- High-resolution transmission electron microscope
- Scanning tunneling microscopy and electro-optical analysis
- Crystal-growing facilities including bulk growth, molecular beam epitaxy, and organo-metallic chemical vapor deposition
- Optical and electrical characterization of materials
- Electronic testing and analysis facilities
- Vacuum electronics engineering facility

Information Technology Division (Code 5500)
- Extensive computer facilities
- Connection machine
- HF modem and channel simulation
- Brandywine antenna range
- Pomona test range
- Signal analysis laboratory
- Artificial intelligence computer network
- Distributed simulation and prototyping test bed
- HCI laboratory
- Certification and INFOSEC engineering laboratory
- Virtual reality laboratory
- DOD high performance computing (HPC) distributed resources center
- Thinking machines CM-5E (256 processor nodes, 32 Gbytes memory)
- Thinking machines CM200 (16,000 processor nodes, 2 Gbytes memory)
- Lab-wide network, NICEnet, providing lab-wide computer communication, video services, and gateways to networks and computer systems worldwide
- Satellite dishes for video and data reception
- Microwave antennas receiving ITV from local universities
- File server/archiver system for central file storage of lab-wide data
- Cray Y-MP EL 2/512
- Visualization laboratory
- Lab-wide ADP training facility

Laboratory for Structure of Matter (Code 6030)
- Two area detector systems
- Two X-ray diffractometers
- Zymark robotics
- Four silicon graphics IRIS workstations
- Protein and peptide chromatography

Marine Geosciences Division (Code 7400)
- Airborne gravimetry, magnetics, and topographic measurement suite coupled with differential GPS yielding position accuracies of <1.0 meter
- Data acquisition and analysis system using Navy's fixed underwater surveillance system (SOSUS) to study earthquakes and whale migration patterns
- Deep-towed acoustic geophysical system operating at 250-650 Hz characterizes subsea floor structure including gas clathrate accumulations
- Acoustic seafloor classification system operating at 15-50 kHz provides underway, real-time prediction of sediment type and consistency
- Seafloor probes for measuring sediment pore water pressures and acoustic compressional and shear wave velocities and attenuations
- Transmission electron microscope with environmental cell for study of sediment fabric, especially impact of pollutant adsorption
- Map data formatting facility compresses map information onto compact disk-read only memory media for masters for use in aircraft digital moving map systems
- Magnetic observatory conducts measurements of ambient field and other magnetic phenomena
- Comprehensive geotechnical and geoaoustics laboratory capability
- Airborne ElectroMagnetic (AEM) bathymetry system
- Ocean bottom magnetometer system
- 3-D, multi-spectral, subbottom swath imaging system
- Ocean Bottom Seismographs (OBS)
In-Situ Sediment Acoustic Measurement System (ISSAMS)
Hydrothermal plume imaging data acquisition and analysis system
Integrated digital databases analysis and display system for bathymetric, meteorological, oceanographic, geoaoustic, and acoustic data

Marine Meteorology Division (Code 7500)
Tactical Environmental Support System (TESS(3)) prototype–concurrent 6605 computer
SMQ-11 shipboard antenna system for retrieving orbiting imagery
Naval Environmental Operational Nowcasting System (NEONS)—implemented on two HP9000/835 computers
Numerous PC's and SUN workstation computers
Real-time/archived global atmosphere/ocean databases

Materials Science and Technology Division (Code 6300)
Ultrasonic gas atomizer
Hot isostatic press
Cold isostatic press
Consumable arc electrode melter for reactive metals
High-energy, dispersive X-ray analytical system
Electron microprobe SEM and STEM systems
Quantitative metallography
Computer-controlled multiaxial loading and SCC measurement systems
Computer-interactive, nonlinear, multimode fracture measurement system
Computer-aided, experimental stress analysis
Crystallite Orientation Distribution Function (CODF)
Elevated temperature and structural characterization laboratory
Impression creep and mechanical property evaluation
Automated physical constant measurement systems
Nondestructive evaluation laboratory
Closed-loop, low- and high-cycle fatigue systems
Metallic film deposition systems
Magnetometry
Mossbauer spectroscopy
Cryogenic facilities
High-field magnets
Marine corrosion facility
High-resolution analytical electron microscope
Isothermal heat treating facility
Vacuum arc melting facility
Vacuum induction melting facility

Oceanography Division (Code 7300)
TOWED sensor and advanced microstructure profiler systems for studying upper ocean fine and micro-structure
Integrated absorption cavity and optical profiler systems for studying ocean optical characteristics
Environmental scanning electron microscope and confocal laser scanning microscope for detailed studies of bio-corrosion in naval materials
Self-contained bottom mounted upward-looking acoustic profilers for measuring ocean variability
Acoustic doppler profiler for determining ocean currents while under way
Fiber optic connection to the Navy's Class 7 large scale computer
Remotely operated underwater vehicle (ROV)
Unmanned underwater vehicle with optical sensors

Optical Sciences Division (Code 5600)
Electron-beam, electron-beam sustained, x-ray, and UV preionized laser devices with spectroscopic and other diagnostic equipment
Short-pulse excitation apparatus for kinetic mechanisms investigations
Optical warfare laboratory
IR laser facility for optical characterization of semiconductors
Mobile, high-precision optical tracker
Facilities for synthesis and characterization of optical glass compositions and for the fabrication of optical fibers
Hybrid optical/digital image processing facilities
Silica and fluoride fiber-optic fabrication facilities
Facilities for fabricating and testing integrated optical devices
Optical probes laboratory to study viscoelastic, structural, and transport properties of molecular systems
Computer IR/EO technology/systems simulation center
High-energy pulsed chemical laser laboratory
100-J UV laser research facility
Laser diode pumped 10 watt 2mm solid state lasers
Field-qualified EO/IR measurements devices
Focal plane array evaluation facility

Plasma Physics Division (Code 6700)
PAWN, 1-MJ compact inductive storage facility
Gamble II high-voltage pulsed power generators
PHAROS III, three-beam neodymium-glass laser and target facility
1000-J NRL CO2 laser
Table-Top Terawatt (T3) laser system
NIKE krypton fluoride laser facility
Dense Z-pinch facility
High-power relativistic klystron and gyrotron facilities
Large volume space chamber
Electric mass launchers facility
Charged particle beam (CPB) propagation range
Super IBEX 5 MV, 100 kA, 40 ns CPB generator
Maxibeam 3 MV, 60 kA, 300 ns CPB generator

**Radar Division (Code 5300)**

Airborne research radar facility, including advanced profile high resolution imaging radar
Ship radar-cross-section computer prediction facility
Electromagnetic numerical computation facility
Shipboard radar research and development test beds:
1. Senrad wideband air surveillance radar facility
2. Volume surveillance radar test bed
3. Ship self-defense surveillance and engagement demonstration systems
Cooperative aircraft identification (IFF) ground station facility
Shipboard radar display facility
Compact range antenna measurement laboratory
Experimental mode-stirred chamber for electromagnetic compatibility qualification
CBD fleet radar systems facility
Space-time adaptive processing laboratory
Electronic computer-aided design facility
Clutter research radar

**Remote Sensing Division (Code 7200)**

Stratified tow channel
Millimeter-wave Atmospheric Sounder (MAS)
MAS data facility
MAS Spacelab instrument
Polar ozone and aerosol monitor space sensor
Ground-based stratospheric water-vapor monitoring system
Digital Image Processing Laboratory (DIPL)
SCI processing facility
SEALAB
NASE LAB
MWO optical interferometer site
Navy prototype optical interferometer
General purpose image processing
Maryland Point Observatory
Green Bank interferometer
Washington VLBI correlator
WVMS NDSC instrument
Image working system

IRIS system and processor
IR test facility
SSM/I processing facility
STEMS-II boat
STEMS system
Ocean tower/platform/ship radar
L,S,C,X,K, and W band
Ocean tower/lab/platform/ship radiometers
6,10,14,19,22,35,37,85,90,140,220 GHz
Lidar field system
Aerosol and field measurement facility
Aerostat and blimp instrument system
Visualization Center
NRL RP-3A aircraft sensors
Airborne Lidar
MMW imagers (35,90,140,220 GHz)
DMSP SSM/I simulator
LFMR SST simulator
PRT-5 IR radiometer
Imaging real-aperture radar (RAR)
X,C bands
Precision altimeters
X-band, 95 GHz Lidar
Rotating scatterometer
Tri-frequency-agile radar (TRIFAR)
X-band interferometer
Millimeter-wave (95 GHz) radar
AXBT
Flight-level meteorological sensors
Navigation systems
INS, GPS
PHILL’s
Shipboard sensor systems
Surface met/ocean obs Lidar
CTD
Thermistor chains
STAR (Surface Towed Array)
Acoustic doppler velocity profilers

**Research and Development Services Division (Code 3500)**

Military construction
Scientific program
ONR facilities support
Research support engineering
Full range of facility contracting, including construction, architect/engineering services, facilities support, and base operating services
Transportation
Environmental Planning
Maintenance and repair of buildings, grounds, and communications and alarm systems
Shops for machining, sheet metal, welding, castings, and plating
Radar experimental test site, which includes a variety of radars; ancillary equipment for test and evaluation of equipment, concepts, and techniques; and overwater ranges
Tactical electronic warfare test site
Communications facilities for transmission to and from land, sea, and air
Hydromechanical gun for ballistics research
Ship-motion simulator with 12-ton payload capacity
Boat services

Spacecraft Engineering Department (Code 8200)
Thermal-vacuum chambers
Acoustic reverberation chamber
Shock and vibration test facility
Clean-room facilities
Spacecraft-fabrication and assembly facility
Fuels test facility
CAD/CAM facility
Automatic welding facility
Static loads test facility
Spacecraft spin balance facility
Modal analysis facility

Space Science Division (Code 7600)
E.O. Hulbert Center for Space Research
Development and test facilities for spaceborne instruments to perform astrophysical, solar, high-atmospheric, and space-environment sensing
Clean-room facilities
Extensive computer-assisted data manipulation and interpretive capability for space-data imaging and modeling
Backgrounds Data Center (BDC) for analysis and archival storage of BMD-relevant natural backgrounds
Low-temperature laboratory
Gamma Ray Observatory (OSSE) operations and data analysis center
Solar instrument test facility
Solar Ultraviolet Spectral Irradiance Monitor (SUSIM) operations and data analysis center

Space Systems Development Department (Code 8100)
Electronic component computer aided design (CAD) facility
Payload test facility and processor development laboratory
Spacecraft high reliability electronic and electrical production facility

Spacecraft electronic systems integration and test high bay building
Spacecraft electrical power systems and battery laboratories
Electro-magnetic interference/electro-magnetic compatibility (EMI/EMC) screen room test facility
Precision oscillator (clock) test facility
Radio frequency (RF) system development facility
RF microcircuit fabrication cleanroom facility
Large tapered horn RF anechoic chamber facility
RF payload development laboratory with anechoic chamber
Precision high frequency RF compact range anechoic chamber facility
Satellite telemetry, tracking and control facilities
Pomazoom field site/large antenna, space communications and research facility
Midway Research Center/space communications and research facility

Tactical Electronic Warfare Division (Code 5700)
Mobile infrared signature measurement and simulation facility
Mobile ESM laboratory
Hybrid RF/IR missile-seeker simulation facility
Central target simulation facility for developing, testing, and evaluating EW systems and techniques, using real-time, hardware-in-the-loop models
RF simulation laboratory and signal simulators
Radar cross-section measurement facility (at CBD)
Search radar ECM simulator
Advanced tactical EW environment simulator
Electronic warfare coordination test bed
Scale-model analysis facility
Wind tunnel for performance measurements of low Reynolds number vehicles
Optical integration laboratory
Tempest signal-processing laboratory
Simulated ship-mast facility
Secure supercomputer facility
Vehicle development laboratory
Visualization laboratory

Technical Information Division (Code 5200)
Imaging center
Electronic publishing
Research library (1,100 current subscriptions, 170,000 monographs and bound journals, 1,800 rolls of microfilmed journals, 1,170,000)
technical reports (225,000 hard copy, 800,000 microfiche, and 110,000 stored as digital page images), and 1,000 microcomputer software packages

STILAS (Scientific and Technical Information Library Automation System) on-line library catalog

InfoNet campus-wide information system for desktop access to CD-ROM and other locally mounted databases and Internet resources

Microcomputer Software Support Center

Photographic laboratories

Writing, editing, and publications consultation

Graphic design services

Video recording and productions

Video editing suite

Scientific and technical photographers

Ms. H.J. Halper | Legal Counsel | 3008
Ms. P. Schaefer | Deputy for Small Business | 3204

*Acting
The Commanding Officer and the Director of Research share executive responsibility for the management of the Naval Research Laboratory. In accordance with Navy requirements, the Commanding Officer is responsible for the overall management of the Laboratory and exercises the usual functions of command including compliance with legal and regulatory requirements, liaison with other military activities, as well as the general supervision of the quality, timeliness, and effectiveness of the technical work and of the support services.

The Commanding Officer delegates line authority and assigns responsibility to the Director of Research for the technical program, its planning, conduct, and staffing; evaluation of the technical competence of personnel; liaison with the scientific community; selection of subordinate technical personnel; exchange of technical information; and the effective execution of the NRL mission.

Within the limits of Navy regulations, the Commanding Officer and the Director of Research share authority and responsibility for the internal management of the Laboratory. The Commanding Officer retains all authority and responsibility specifically assigned to him by higher authority.

The mission of the Laboratory is carried out by four science and technology directorates and the Naval Center for Space Technology, supported by the Business Operations Directorate and the Executive Directorate. In addition, the Laboratory's operating staffs provide assistance in their special fields to the Commanding Officer and to the Director of Research. The operating staffs are listed on the following pages of this publication.
Commanding Officer (Code 1000)

CAPT Richard M. Cassidy, USN, became the 31st Naval officer to head the Naval Research Laboratory on April 28, 1994. Before coming to NRL, CAPT Cassidy was the Technical Director and Associate Program Manager in the AEGIS Program Office.

Prior to assuming his major program manager duties, CAPT Cassidy served in an extensive number of combat systems engineering assignments in the AEGIS Program. He served as the AEGIS Combat System Engineering Manager where he was responsible for the design, development, and lifetime support to Ticonderoga class cruiser and Arleigh Burke class destroyer combat systems. Prior to that he served as the AEGIS Combat Systems Operations Manager and established the AEGIS FMS case with Japan as well as several battle group and advanced AAW programs. Other ashore assignments included: Director of AAW Special Programs in the Naval Sea Systems Command; DDG 51 Combat System Manager, where he was part of the original project team that designed the Arleigh Burke class; instructor at the Engineering Duty Officer School; and System Engineer at the Joint Tactical Communications Office (TRI-TAC).

CAPT Cassidy’s shipboard assignments included the USS Stickell (DD-888) and USS Conyngham (DDG-17). He became an Engineering Duty Officer in 1974.

He is a 1970 graduate of the University of North Carolina where he received a B.A. in Economics. He also holds a Master of Science in Electrical Engineering from the Naval Post Graduate School and a Masters in Business Administration from Farleigh Dickinson University. CAPT Cassidy was selected as the Navy’s 1990 representative at the MIT Sloan School Program for Senior Executives.

CAPT Cassidy has been awarded the Legion of Merit, the Defense Meritorious Service Medal, the Meritorious Service Medal (two awards), and the Navy Commendation Medal.

CAPT Cassidy is married to the former Lois Bergman of Annandale, Virginia. The Cassidys reside in Annandale.

Director of Research (Code 1001)

Dr. Timothy Coffey was born in Washington, DC, on June 27, 1941. He graduated from the Massachusetts Institute of Technology in 1962 with a B.S. degree in electrical engineering, and obtained his M.S. (1963) and Ph.D. (1967), both in physics, from the University of Michigan.

During his graduate career, Dr. Coffey worked as a research assistant at the University of California (1963-64), a research physicist at the Air Force Cambridge Research Laboratories (1964-65), and a teaching fellow and research assistant in physics at the University of Michigan (1965-66). As a scientific consultant for EG&G, Inc. (1966-71), he was involved in investigations in theoretical and mathematical physics.

Dr. Coffey came to the Naval Research Laboratory in 1971 as Head of the Plasma Dynamics Branch, Plasma Physics Division. In this position, he directed research in the simulation of plasma instabilities, the development of multidimensional fluid and magnetohydrodynamic codes, and the development of computer codes for treating chemically reactive flows. In 1975, he was named Superintendent, Plasma Physics Division; he was appointed Associate Director of Research for General Science and Technology on January 1, 1980. On November 28, 1982, he was named Director of Research.

Dr. Coffey is recognized as an authority on the theory of nonlinear oscillations and has played a major role in the national program on high-altitude nuclear effects. The author or co-author of over 70 publications and reports, he has made several fundamental contributions to the theory of electron beam/plasma interaction and to the understanding of plasma processes in the Earth’s ionosphere.

Dr. Coffey is a fellow of the American Physical Society and a fellow of the Washington Academy of Sciences. In 1981, he was awarded the Presidential Rank of Meritorious Executive, in 1987 he received the Distinguished Presidential Rank award, in 1991 was awarded the Delmer S. Farnen Medal, Franklin Institute, in October 1991 was awarded the DoD Distinguished Civilian Service Award, and in 1994 was awarded the Distinguished Presidential Rank Award.
The Executive Council consists of executive, management, and administrative personnel. Executive Council meetings are held to provide the Commanding Officer a personal means to relay new policy or changes to current policy that affects all divisions. These meetings also allow the other members of the Council to advise the Commanding Officer and Director of Research on matters relating to the administration of the Laboratory. The council also provides an opportunity for information exchange among its members. The Executive Council members include:

Commanding Officer, Chairperson
Director of Research
Associate Directors of Research
Chief Staff Officer
Director, Naval Center for Space Technology
Heads of Divisions
Head, Laboratory for Structure of Matter
Head, Laboratory for Computational Physics and Fluid Dynamics
Head, Center for Bio/Molecular Science and Engineering
Head, Human Resources Office
Public Affairs Officer
Deputy Equal Employment Opportunity Officer
Head, Office of Management and Administration
Head, Safety Branch
Head, Management Information Systems Staff
NRL Counsel
The Research Advisory Committee advises the Commanding Officer and the Director of Research on scientific programs and the administration of the Laboratory. The committee assists in planning the long-range scientific program, coordinating the scientific work, reviewing the budget, accepting or modifying problems, considering personnel actions, and initiating such studies as may be necessary or desirable. The membership consists of:

- Director of Research, Chairperson
- Commanding Officer
- Associate Directors of Research
- Chief Staff Officer (Observer)
Chief Staff Officer/Inspector General
Code 1002

The Chief Staff Officer serves as the Deputy to the Commanding Officer and acts for the Commanding Officer in his absence. The Chief Staff Officer is the Laboratory’s Inspector General, and when directed, he investigates, inspects, and/or inquires into matters that affect the operation and efficiency of NRL. These matters include but are not limited to: effectiveness, efficiency, and economy; safety and occupational health; personnel discipline, morale, and welfare; management practices, command relationships, and organizational structure; and fraud and waste. He serves as principal advisor to the Commanding Officer on all inspection matters and audits and is the principal point of contact and liaison with all agencies outside NRL.

Public Affairs Officer
Code 1230

The Public Affairs Officer (PAO) advises the Commanding Officer and Director of Research on public affairs matters, including external and internal relations, community outreach, and serves as the Commanding Officer’s principal assistant in the area of public affairs. To do this, the PAO plans and directs a program of public information dissemination on official NRL activities. The PAO coordinates responses to requests from the news media and the public for unclassified information or materials dealing with the Laboratory, coordinates participation in community relations activities, and directs the NRL history and internal information programs. The PAO is also responsible for coordinating all actions within the Laboratory that respond to requirements of the Freedom of Information Act (FOIA).

Safety Officer
Code 1240

The Safety Officer is the program manager for Occupational Safety and Health, Explosives Safety, Industrial Hygiene, Hazardous Material Control and Management, Radiological Safety, and Non-Ionizing Radiation Safety. The Safety Officer must ensure that each program complies with the appropriate federal, state, Navy, and NRL regulations. Specific functions include the development, implementation, and maintenance of comprehensive safety programs in support of the Laboratory’s unique areas of research and development.
Deputy Equal Employment Opportunity Officer
Code 1803

The Deputy Equal Employment Opportunity Officer (DEEOO) is the EEO program manager and the advisor to the Commanding Officer on all EEO matters. The DEEOO manages the discrimination complaint process and directs the Laboratory’s affirmative action plans and special emphasis programs (Federal Women’s, Hispanic Employment, African American Employment, Asian-Pacific Islanders, American Indian Employment, Individuals with Disabilities, including Disabled Veterans). The DEEOO recruits quality candidates for those areas when underrepresentation exists. Duties also include reviewing, coordinating, and monitoring implementation of EEO policies and developing local guidance, directives, and implementation procedures for the EEO programs.

Legal Counsel
Code 3008

The Office of Counsel is primarily responsible for providing legal services to NRL’s management in all areas of general and administrative law, as well as intellectual property law. The Office reviews all procurement-related actions; reviews NRL scientific papers prior to publication; prepares patent applications and prosecutes the applications through the Patent and Trademark Office; defends against contract protests, other contract litigation, and personnel cases; and advises on other legal matters relating to technology transfer, personnel, fiscal, and environmental law. NRL Counsel also serves as legal advisor to the Commanding Officer and Director of Research.
Basic Responsibilities

The Office of Management and Administration provides managerial, technical, and administrative support to the Director of Research in the planning and direction of research and development programs in a variety of scientific and engineering disciplines. Specific functions include: performing special studies involving major NRL programs and resource issues; providing administrative support in the areas of personnel, budget, facilities, equipment, and security; reviewing and managing the Director of Research's correspondence; providing management information and analyses for various aspects of the research program effort; coordinating VIP and foreign visits to NRL; managing NRL facilities; providing Laboratory-wide administrative services, including mail handling and messenger service; managing the NRL Directives System; coordinating unsolicited proposals, congressional correspondence, and other external inquiries; maintaining the NRL R&D achievements file; reviewing and interpreting external Navy and DoD directives addressed to NRL; coordinating the IR&D Program; developing guidance for and monitoring the NRL S&T Program; providing LAN systems administration and central word processing services to the Directorate; coordinating the NRL-NRC and other Postdoctoral Resident Research Associateship Programs, NRL-U.S. Naval Academy Faculty Co-op Program, Navy ASEE Program, and other special Navy programs; interacting with ONR Headquarters and the Warfare Centers; and assisting in the development of NRL's five-year Plan.

Basic Responsibilities

The Command Support Division, under the direction of the Chief Staff Officer, provides military and civilian staff to the Commanding Officer and to the Director of Research for direct research support and assistance in the military aspects of the management of the Laboratory.

The military staff is the liaison with DoD, Navy commands and activities, and the operating forces of the Navy and arranges for air, surface, and subsurface services as required by research and development operations. Coordination of support to the research divisions through the Naval Reserve Units in the Technology Mobilization Program is also coordinated through Code 1200. In addition, direct research support is provided by the Flight Support Detachment, located at NAS Patuxent River, Maryland, which operates and maintains four specially configured P-3 Orion aircraft.

The Division is also responsible for the Laboratory’s physical, personnel, information, industrial and ADP security programs, and its communications service, as well as fire protection, occupational health and industrial hygiene, and the public affairs program. It provides intelligence support and support for international cooperative agreements in technology. The Division also coordinates the Laboratory’s Management Control Program and provides liaison and coordination for all audit and inspection teams.

Basic Responsibilities

The Human Resources Office (HRO) provides civilian personnel and Equal Employment Opportunity (EEO) services to the Office of Naval Research (ONR), the Commander, Naval Meteorology and Oceanography Command (CNMOC), the Naval Oceanographic Office (NAVOCEANO), and the Naval Research Laboratory (NRL). The Human Resources Program provides the full range of operating civilian personnel management in the staffing and placement, position classification, employee relations, labor relations, employee development, and EEO functional areas. At NRL, the Manpower Management and Morale, Welfare, and Recreation Programs are also included. At ONR, the Manpower and Position Management Program is included.

Personnel services are furnished for a civilian complement of approximately 5,200 employees. The Hub Office at NRL-Main Site in Washington, DC, services approximately 3,300 employees as well as provides a centralized capability to perform various managerial, service, and advisory functions in support of satellite office operations and serviced organizations’ needs. These include such items as issuance of policy and procedural directives; development, design, and maintenance of automated systems; and monitoring and evaluating product effectiveness to develop and maintain efficient, cost-effective, service-oriented methods.

The Satellite HRO at Stennis Space Center (SSC), Bay St. Louis, Mississippi, services about 1,000 employees of CNMOC and NAVOCEANO and approximately 400 NRL-SSC/Monterey (California) employees. The Satellite HRO at Arlington, Virginia, services about 600 employees of the ONR. Approximately 30 percent of the employees serviced are professional scientists and engineers at senior grade levels up to and including Scientific Technical and Senior Executive Service (SES).

The Business Operations Directorate provides executive management, policy development, and program administration for business programs needed to support the activities of the scientific directorates. This support is in the areas of legal counsel, manpower management, financial management, supply management, contracting, public works, and management information systems support.
Mr. R.E. Doak was born in Washington, DC, on January 5, 1941. He graduated from Benjamin Franklin University with a bachelor's degree in accounting in 1964 and a master's degree in business administration in 1966. Mr. Doak is a Certified Public Accountant licensed by the State of Maryland.

Mr. Doak has twenty-six years of diversified experience with the Federal Government performing in various line management positions. He has extensive experience in program management, financial management, contract policy and administration; personnel policy and administration; ADP systems development and operations; and the full spectrum of management disciplines associated with the development, production, and operational support of major weapon systems.

From 1967 to 1980, Mr. Doak served in several positions with the Navy’s Strategic Systems Projects Office. In these positions, he was responsible for the business management operations for the Navy’s Fleet Ballistic Missile programs. In 1980, he entered the Senior Executive Service and served as Director of Financial Management with the Bureau of Indian Affairs. From 1981 to 1985, he served as Deputy Director, Plans and Programs, with the Strategic Systems Programs Office. From 1985 to 1989, he served as Deputy Commander with the Space and Naval Warfare Systems Command. In March 1989, Mr. Doak was appointed Associate Director of Research for Business Operations at the Naval Research Laboratory.

Mr. Doak has a consistent record of outstanding performance since entering the Senior Executive Service in 1980. In 1984, he was awarded the Navy Superior Service Award. In 1985 and 1988, he received Navy Rank Awards. In 1986, Mr. Doak received the Presidential Meritorious Executive Rank Award, and in 1988, he received the Presidential Distinguished Executive Rank Award.

The Budget Section provides guidance and instructions for budget preparation and funds administration, and prepares progress reports and special statistical data as required.

The Travel Services Unit processes travel orders and examines travel claims for payment.
Basic Responsibilities

The Comptroller is the financial adviser to the Commanding Officer, the Director of Research, and other officials of the Laboratory, and he administers the financial program of the Laboratory.

The Financial Management Division provides services to the Laboratory in budget formulation, funds administration, program and budget analysis, cost accounting, travel administration and reporting. In addition, the Division provides essential information and guidance concerning equipment management.

This includes: military construction, engineering, construction, facility support services, planning, environmental, maintenance/repair/operation of all infrastructure systems, transportation, and vertical transport equipment.

The Division provides engineering and technical assistance to the research divisions in the installation and operation of critical research equipment in support of the research mission.

The Division is responsible for compliance with all environmental regulations and approval authorities required by the command. The Division also supports the Office of Naval Research for all facilities operations and acquisition.

GENERAL SCIENCE AND TECHNOLOGY DIRECTORATE

Code 4000

The General Science and Technology Directorate coordinates and/or manages specific NRL programs that may be multi-disciplinary in nature, may span both divisions and directorates, and may also require special security procedures. It is the Laboratory's focal point within the Navy and DoD for Low Observables Materials and Structures programs. The Directorate conducts or coordinates studies, reviews, and technical assessments in various topical areas. Areas of strong emphasis currently include all aspects of signature control and counter-signature technology, strategic and tactical missile defense, synoptic structure, and quality assurance for both corporate exploratory development programs and joint Space System Technology Programs. The NRL Signature Technology Office and the Critical Technology Assessment Office are contained within the Directorate. Program management activities related to the Navy 6.2 (exploratory development) effort and studies and analyses relating to the Ballistic Missile Defense Organization (BMDO) and other programs are carried out within the Directorate.
Dr. R.A. LeFande was born on Staten Island, New York on February 8, 1941. He attended the Brooklyn Technical High School and obtained his undergraduate degree in physics from the University of Rhode Island in 1962. After a brief tour as a telephone equipment engineer with Western Electric Company in New York City, he returned to academic pursuits, earning a Master’s degree in physics from the Rutgers University in 1965.

In July of 1965, Dr. LeFande joined the Naval Research Laboratory as a research physicist in the Satellite Communications Branch. He worked on a variety of projects related to the design of waveforms for Naval applications, calibration of antennas and path losses by methods borrowed from radio astronomy, and on the design and acquisition of satellite communication terminals for shipboard and submarine use. By drawing on this work for a thesis topic, he obtained his Ph.D. from the University of Maryland in 1973 in the areas of astronomy and astrophysics.

In 1976, Dr. LeFande became Head of the Special Communications Branch where he nurtured and encouraged a NRL team of scientists and engineers in the development of satellite communications terminals that are now being deployed in the Fleet, and in establishing the scientific understanding and practical design principles that contributed to the selection of waveforms for MILSTAR and other systems.

From 1979 to 1981, Dr. LeFande was Technical Director and System Engineer of the Special Communication Project of the Naval Electronic Systems Command. He oversaw several research and acquisition programs related to submarine communications, which covered the spectrum from extremely low frequencies through optics and included the maintenance and operation of a world-wide network of radio transmitter facilities. After termination of the project and a brief tour as Deputy Director, Research and Technology Group, Dr. LeFande returned to NRL as Superintendent of the Aerospace Systems Division. Here he guided a diverse program of basic applied research in Wide Area Surveillance Systems, Space Warfare, and in related areas of physical science, materials, and device technology. From 1983 to 1990, Dr. LeFande served as Associate Deputy Assistant Secretary of the Navy (C4I and Space), providing technical and philosophical advice to eight assistant and deputy assistant secretaries. In this capacity, he took a keen interest in the issues of acquisition management reform and of the appropriate roles and missions of the Laboratory and the other centers in the acquisition process. During this tour, Dr. LeFande was selected as a Legis Fellow and served on the staff of Representative Byron for six months in 1989, working on a variety of issues and legislation related to Armed Services, Science and Technology, Foreign Affairs, and other matters.

Dr. LeFande returned to the Laboratory in October 1990 where he served on the staff of the Director of Research. He was designated Acting Associate Director of Research in February 1991 and Associate Director of Research in February 1992.

Consultant for Critical Technology Assessment Office  
Code 4003

The Critical Technology Assessment Office is tasked by the Assistant Secretary of the Navy (RE&S) via the Navy International Program Office to perform a broad spectrum of interrelated Navy mission-oriented efforts pertaining to international militarily critical technology transfer policy and intelligence assessment issues, involving both control and acquisition aspects. These tasks require the identification and participation of highly qualified individuals throughout the Navy scientific and technical community.

Technology Base/Ballistic Missile Defense  
Organization (BMDO) Office  
Code 4040

The Technology Base Manager carries out program management activities pertaining to the Navy 6.2 (exploratory development), BMD, SBIR, 6.3 A ATD, DMSO, and other technology efforts. Mission activities include assurance of technical quality and program relevance, orientation of the program to priority needs and transition opportunities, and overall coordination of NRL efforts. The Technology Base Manager is the Laboratory point of contact with the Program Offices for this work.

Signature Technology Office  
Code 4050

The NRL Signature Technology Office (STO) manages/coordinates an integrated, comprehensive research and development program at NRL addressing all aspects of signature control and countersignature control as they apply to Navy weapons systems. The STO monitors and evaluates signature control technology development efforts within government and industry and facilitates the incorporation of advanced signature control technologies into present and future Navy systems. It provides a central point of contact for outside agencies on matters concerning the STO program.
Warfare Systems and Sensors Research Directorate
WARFARE SYSTEMS AND SENSORS
RESEARCH DIRECTORATE

Code 5000

The Warfare Systems and Sensors Research Directorate performs basic research and development for major generic Navy systems. The emphasis is on radar, electronic warfare, optical sensors and materials, and the integration of these primary sensors by communications and battle management systems. The Directorate conducts an extensive experimental program in the field to support the above activities. Programs in systems simulation, human computer interfaces, artificial intelligence, acoustic transducers, and calibration and standards for underwater acoustic devices are pursued in support of research and development for Navy systems. In addition, the Directorate has responsibility for providing specialized computing and computer networking on a Laboratory-wide basis, and the provision of administrative and technical services to support the Laboratory's mission through the operation of the Technical Information Division.
Dr. R.A. LeFande was born on Staten Island, New York on February 8, 1941. He attended the Brooklyn Technical High School and obtained his undergraduate degree in physics from the University of Rhode Island in 1962. After a brief tour as a telephone equipment engineer with Western Electric Company in New York City, he returned to academic pursuits, earning a Master’s degree in physics from the Rutgers University in 1965.

In July of 1965, Dr. LeFande joined the Naval Research Laboratory as a research physicist in the Satellite Communications Branch. He worked on a variety of projects related to the design of waveforms for Naval applications, calibration of antennas and path losses by methods borrowed from radio astronomy, and on the design and acquisition of satellite communication terminals for shipboard and submarine use. By drawing on this work for a thesis topic, he obtained his Ph.D. from the University of Maryland in 1973 in the areas of astronomy and astrophysics.

In 1976, Dr. LeFande became Head of the Special Communications Branch where he nurtured and encouraged a NRL team of scientists and engineers in the development of satellite communications terminals that are now being deployed in the Fleet, and in establishing the scientific understanding and practical design principles that contributed to the selection of waveforms for MILSTAR and other systems.

From 1979 to 1981, Dr. LeFande was Technical Director and System Engineer of the Special Communication Project of the Naval Electronic Systems Command. He oversaw several research and acquisition programs related to submarine communications, which covered the spectrum from extremely low frequencies through optics and included the maintenance and operation of a world-wide network of radio transmitter facilities. After termination of the project and a brief tour as Deputy Director, Research and Technology Group, Dr. LeFande returned to NRL as Superintendent of the Aerospace Systems Division. Here he guided a diverse program of basic applied research in Wide Area Surveillance Systems, Space Warfare, and in related areas of physical science, materials, and device technology. The Imaginotor SI workstation provides a high front-end facility for scanning in and manipulating color photographs for conversion to digital format.

Editors work directly with authors to provide clear, readable documentation.

A computer technician scans reports into the Library's Optical Disk System.

Operators in the Electronic Imaging Center print images from the computer network.
Basic Responsibilities

The Technical Information Division (TID) provides centralized support to the Laboratory, and sometimes the Office of Naval Research, by collecting, retaining, processing, publishing, presenting, and distributing information in various forms to many audiences.

TID supports the Laboratory by editing and publishing reports and publications; by providing a full range of Library services, including the Microcomputer Software Support Center; by performing specialized scientific and general photographic services, illustration and visual aid services, imaging support, scientific composition, special projects graphics and publishing; and by providing photographic and video data-gathering and editing services.

Radar test site at Building 75, Chesapeake Bay Detachment (Chesapeake Beach, MD) showing radar antennas used in experimental development by the Radar Division. On the roof, from left to right: experimental 3D elevation phase scanned antenna for SENRAD, an experimental L-Band system; a directed mirror antenna (DMAR); and antennas for the SPS-49, SPS-10, IFF, SPS-40, and the fixed array surveillance radar (FASR). On the ground from left to right are antennas for: SPQ-9(I) advanced development model (in radome); a high resolution X-band clutter radar; and the high range resolution monopulse (HRRM) system.
Basic Responsibilities

The Radar Division conducts research on basic physical phenomena of importance to radar and related sensors, investigates new engineering techniques applicable to radar, demonstrates the feasibility of new radar concepts and systems, performs related systems analyses and evaluation of radar, and provides special consultative services. The emphasis is on new and advanced concepts and technology in radar and related sensors that are applicable to enhancing the Navy's ability to fulfill its mission.

- High-power laser diode amplifier
The Optical Sciences Division carries out a variety of research, development, and application-oriented activities in the generation, propagation, detection, and use of radiation in the wavelength region between near-ultraviolet and far-infrared wavelengths. The research, both theoretical and experimental, is concerned with discovering and understanding the basic physical principles and mechanisms involved in optical devices, materials, and phenomena. The development effort is aimed at extending this understanding in the direction of device engineering and advanced operational techniques. The applications activities include systems analysis, prototype system development, and exploitation of R&D results for the solution of optically related military problems. In addition to its internal program activities, the Division serves the Laboratory specifically and the Navy generally as a consulting body of experts in optical sciences. The work in the Division includes studies in quantum optics, laser physics, optical waveguide technologies, laser-matter interactions, atmospheric propagation, optical technology, holography, optical warfare, optical data processing, fiber-optic sensor systems, optical systems, optical materials, radiation damage studies, IR surveillance and missile seeker technologies, IR signature measurements, optical recording materials, and optical diagnostic techniques. A significant portion of the effort is devoted to developing, analyzing, and using special optical materials. Various field measurement programs on optical problems of specific interest are also conducted.

The Materials Science and Component Technology Directorate carries out a multidisciplinary research program whose objectives are the discovery and exploitation of new improved materials, the generation of new concepts associated with materials behavior, and the development of advanced components based on these new and improved materials and concepts. Theoretical and experimental research is carried out to determine the scientific origins of materials behavior and to develop procedures for modifying these materials to meet important naval needs for advanced platforms, electronics, sensors, and photonics. The program includes investigations of a broad spectrum of materials including insulators, semiconductors, superconductors, metals and alloys, optical materials, polymers, plastics, and artificially structured bio/molecular materials and composites, which are used in important naval devices, components, and systems. New techniques are developed for producing, processing, and fabricating these materials for crucial naval applications.

The synthesis, processing, properties, and limits of performance of these materials in natural or radiation environments, components under deleterious conditions such as those associated with the marine environment, neutron or directed energy beam irradiation, or extreme temperatures and pressures, are established. Additionally, major thrusts are directed in advanced space sensing, reactive flow physics, computational physics, and plasma sciences. Areas of particular emphasis include fluid mechanics and hydrodynamics, nuclear weapon effects simulations, high-energy density storage devices, interactions of various types of radiation with matter, survivability of materials and components, and directed energy devices.
Dr. B.B. Rath was born in Banki, India, on October 28, 1934. He received a B.S. degree in physics and mathematics from Utkal University, an M.S. in metallurgical engineering from Michigan Technological University, and a Ph.D. from the Illinois Institute of Technology.

Dr. Rath was Assistant Professor of Metallurgy and Materials Science at Washington State University from 1961 to 1965. From 1965 to 1972, he was with the staff of the Edgar C. Bain Laboratory for fundamental research of the U.S. Steel Corporation. From 1972 to 1976, he headed the Metal Physics Research Group of the McDonnell Douglas Research Laboratories in St. Louis, Missouri, until he came to NRL as Head of the Physical Metallurgy Branch. During this period, he was adjunct Professor at the Carnegie-Mellon University, the University of Maryland, and the Colorado School of Mines. Dr. Rath served as Superintendent of the Materials Science and Technology Division from 1982 to 1986, when he was appointed to his present position.

Dr. Rath is recognized in the fields of solid-state transformations, grain boundary migrations, and structure-property relationships in metallic systems. He has published over 140 papers in these fields and edited several books and conference proceedings.

Dr. Rath serves on several planning, review, and advisory boards for both the Navy and the Department of Defense, as well as for the National Materials Advisory Board of the National Academy of Sciences, Carnegie-Mellon University, University of Virginia, Colorado School of Mines, University of Pittsburgh, University of Connecticut, and Florida Atlantic University. He serves as the Navy representative and is elected as Executive chair to the Materials Subgroup of The Technical Cooperation Program (TTCP) countries and the Indo-U.S. Joint Commission on Science and Technology.

Dr. Rath is a fellow of the Minerals, Metals, and Materials Society (TMS), American Society for Materials-International (ASM), Washington Academy of Sciences, and Materials Research Society of India. He has received the 1991 George Kimball Burgess Memorial Award and the Charles S. Barrett Medal for his contributions to Materials Research. He has served as chairperson of several technical committees of TMS, ASM, and AAES, and serves in the editorial boards of three international materials research journals. He is a member of the Board of Trustees of ASM-International and the American Association of Engineering Societies, and Board of Directors of The Materials Society (TMS).

Dr. Jerome Karle's research has been concerned with diffraction theory and its application to the determination of atomic arrangements in various states of aggregation, gases, liquids, amorphous solids, fibers, and macromolecules. This research has resulted in new techniques for structure determination and a broad variety of applications. His work in crystal structure analysis was recognized by the 1985 Nobel Prize in Chemistry.

Dr. Karle is a Fellow of the American Physical Society, a member of the National Academy of Sciences, and the American Philosophical Society. He has served as president of the International Union of Crystallography, and is a member of a number of other professional societies. He has been chairman of the Chemistry Section of the National Academy of Sciences. Some time ago, he was a Professorial Lecturer in the University College of the University of Maryland and a Visiting Professor at the University of Kiel in Germany. He has also lectured at many international schools and symposia and has served on a number of international scientific organizations.
Basic Responsibilities

The Laboratory for Structure of Matter carries out experimental and theoretical investigations of the atomic, molecular, glassy, and crystalline structures of materials. The methods of X-ray, electron, and neutron diffraction are used in a broad program of structural studies that can form the basis for understanding and interpreting the results of research investigations in a wide variety of scientific disciplines. Structural investigations relate structure to function, facilitate industrial syntheses and the creation of new materials with improved properties, and provide foundation information for numerous associated disciplines and studies. Applications are made, for example, to propellants, explosives, dense energetic materials, absorptive carbons, metallic glasses, device materials, ion carriers, antibiotics, analgesics, reversible oxygen carriers, and synthetic reaction intermediates and final products.

Navy combatant ships are now receiving Naval Firefighters Thermal Imagers (NFTIs) as a result of a 4-year evaluation and testing program conducted by NRL scientists. NFTI, which has already been used in one fire aboard an aircraft carrier, allows firefighters to immediately locate and extinguish a fire.

Phthalonitrile-based resins under development in the Chemistry Division show outstanding flame resistance. Flame resistant, phthalonitrile-based composite (held by the bottom prongs, glowing in flame) relative to an epoxy composite (held by the top prongs, burning in the flame).

A scanning tunneling microscope designed and built in the Chemistry Division for the study of the atomic structure of surfaces in air.
Basic Responsibilities

The Chemistry Division conducts basic research, applied research, and development studies in the broad fields of chemical diagnostics, reaction rate control, materials chemistry, surface and interface chemistry, environment, and ship safety and survivability. Specialized programs within these fields include chemical vapor precursors, coatings, functional polymers/elastomers, clusters, controlled release of energy, chemical sensors, physical and chemical characterization of surfaces, properties of nanometer structures, tribology, chemical vapor deposition/etching, atmosphere analysis and control, environmental protection/reclamation, prevention/control of fires, mobility fuels, and solution chemistry.

To enhance protection of Navy personnel and platforms from damage and injury in peace and wartime, the Navy Technology Center for Safety and Survivability performs RDT&E on fire and personnel protection, fuels, chemical defense, submarine atmospheres, and damage control aspects of ship and aircraft survivability; supports Navy and Marine Corps requirements in these areas; and acts as a focus for technology transfer in safety and survivability.

The computer-interactive automated system provides acoustic images of bodies fabricated from metals or composites in real time, with visual indicators of defects that may be present.
Basic Responsibilities

The Materials Science and Technology Division conducts basic and applied research and engages in exploratory and advanced development of materials having substantive value to the Navy. R&D programs encompass the intrinsic behavior of metals, alloys, ceramics, glasses, and composites and their performance and reliability in naval structures and devices. Program objectives include achieving fundamental understanding of the mechanical, physical, electrical, magnetic, superconducting, and electrochemical properties of materials; identifying composition, processing, and microstructural parameters to produce improved materials; and developing guidelines for the selection, design, and certification of materials for life-cycle management of naval structures and systems. This diversity of programs is carried out by interdisciplinary teams of material scientists, metallurgists, ceramists, physicists, chemists, and engineers, using the most advanced testing facilities and diagnostic techniques.

The unsteady velocity and temperature field over a Burke (DDG-51) class destroyer interacting with the downwash created by the main rotor blades of a hovering helicopter. Simulations performed on an Intel iPSC/860 and Intel Paragon. Velocity vectors show magnitude and direction of the flow field. Temperature isocontours show regions of hot exhaust gases and cooler gases.

When a shock propagates down a tube, it creates a boundary layer at the wall. When this shock reflects from the end wall, back into the boundary layer, a complex lambda shock structure may develop. This figure shows pressure contours for a computation on the CM-5 of a reflected shock (moving from the right, to the left) propagating into a boundary layer. The light area on the left side is the once-shocked material, in which there is a small boundary layer near the wall. The complex structure that results contains many shocks and shear layers. Near the end wall, the material has a high temperature and essentially zero velocity.
Basic Responsibilities

The Laboratory for Computational Physics and Fluid Dynamics is responsible for the research leading to and the application of advanced analytical and numerical capabilities that are relevant to Navy, DoD, and other programs of national interest. This research is pursued in the fields of compressible and incompressible fluid dynamics, reactive flows, fluid/structure interaction including submarine and aerospace applications, atmospheric and solar geophysics, magnetoplasma dynamics for laboratory and space applications, application of parallel processing to large-scale problems such as unstructured grid generation for complex flows and target tracking and correlation for battle management, and in other disciplines of continuum and quantum computational physics as required to further the overall mission of the Naval Research Laboratory. The specific objectives of the Laboratory for Computational Physics and Fluid Dynamics are: to develop and maintain state-of-the-art analytical and computational capabilities in fluid dynamics and related fields of physics; to establish in-house expertise in parallel processing for large-scale scientific computing; to perform analyses and computational experiments on specific relevant problems using these capabilities; and to transfer this technology to new and ongoing projects through cooperative programs with the research divisions at NRL and elsewhere.

Basic Responsibilities

The Condensed Matter and Radiation Sciences Division conducts broad programs of basic and applied research on the fundamental properties of materials and on the interactions of various types of radiation with matter. Physical properties of condensed matter are investigated theoretically and experimentally. Radiation damage produced in materials, components, subsystems, and systems by radiation, ranging from microwave and laser beams through charged and neutral particle beams in the megavolt region, is studied. Techniques for the use of radiation for beneficial modification and characterization of materials are also developed. Radiations of military significance are studied and simulated in the laboratory by various radiation facilities maintained and operated by the Division primarily for DoD users.

The NIKE Krypton Fluoride (KrF) Laser is under development to study the physics issues of Direct Drive Inertial Confinement Fusion (ICF) for defense and energy applications. Direct Drive with a KrF laser is a very attractive approach to ICF owing to its simplicity, inherent high efficiency, and very high beam uniformity. The NIKE laser will illuminate a flat target with intensities of up to $2 \times 10^{11}$ W/cm² and beam nonuniformities of less than 0.25%. This photograph shows the largest amplifier in the laser. Light enters and exits the amplifier cell through the square aperture near the center of the photo. Amplification is achieved by exciting the krypton/fluorine mixture gas in the cell with two large area electron beams. One of the electron beam emitters (cathode) is in an exposed position to the left of the cell. The amplifier will produce a 248 nm laser beam with total energy exceeding 5 kJ.

A 1.8-m diameter, 5-m long stainless steel space chamber capable of being pumped to ~5 x 10⁻⁷ torr is used for simulating space conditions in the laboratory. Multi-turn coils allow up to 100 gauss DC magnetic fields (500 gauss pulsed) to be imposed along the tank axis. Some of the experiments performed on this chamber include testing of spacecraft diagnostics, plasma production from several plasma guns, high voltage spacecraft charging/discharging effects, and simulation of non-linear ion dynamics in the earth's magnetotail.
Basic Responsibilities

The Plasma Physics Division conducts a broad theoretical and experimental program of basic and applied research in plasma physics, laboratory and space plasmas, intense electron and ion beams, atomic physics, pulsed power sources, and laser physics. The effort of the Division is concentrated on a few closely coordinated theoretical and experimental programs. Considerable emphasis is placed on large-scale numerical simulations related to plasma dynamics; ionospheric, magnetospheric, and atmospheric dynamics; nuclear weapons effects; thermonuclear plasma confinement; atomic physics; plasma processing; nonlinear dynamics and chaos; and relativistic electron beam propagation. Areas of experimental interest include: relativistic electron beams, laser-matter interaction, thermonuclear fusion, electromagnetic wave generation, the generation of intense ion beams, electric mass launchers, microwave reflection from a sheet plasma (agile mirror), high frequency microwave processing of ceramic materials, advanced accelerator development, inductive energy storage, the interaction of charged particle beams with the atmosphere, and in-situ space plasma measurements.

Tubule-based field emission. (A) Schematic of design for tubule-based field emitting cathode. (B) Electron micrograph of a tubule-based cathode. The total area of the emitting surface is ~0.75 cm². (C) Photograph of the emission from tubule-based cathode. A phosphor plate intercepts the beam current and produces the image where emission nonuniformities are readily noted. For the conditions shown in the photograph, the phosphor response is nonlinear.

Liposomes containing hemoglobin (LEH) are small in comparison to human red cells. LEH is now manufactured in large scale and has been proven to carry oxygen effectively.

Self-assembled microstructures and novel controlled release techniques are being incorporated into antifouling paints for improved environmental quality.

Biotechnology and advanced fiber optics have been married to create an ultra-sensitive chemical detection system. The fiber optic biosensor has proven to be usable for detection of pollutants, biological warfare agents, and diagnosis of infectious disease.
Basic Responsibilities

The Center for Bio/Molecular Science and Engineering is using the tools of modern biology, physics, chemistry, and engineering to develop advanced materials and sensors. The long-term research goal is to gain a fundamental understanding of the relationship between molecular architecture and the function of materials. The key theme is the study of complex bio/molecular systems with the aim of understanding how "nature" has approached the solution of difficult structural and sensing problems. Technological areas currently being studied include molecular and microstructure design, molecular biology, self-assembly, controlled release and encapsulation, and surface patterning and modification. Much of the research deals with the self-assembly of lipids, proteins, and liquid crystals into complex microstructures for use in advanced material applications, and the harnessing of the recognition functions of proteins and cells for the development of advanced sensors. A highly multidisciplinary staff is required in order to pursue these research and development programs. The Center provides a stimulating environment for cross disciplinary programs in the areas of immunology, biochemistry, electrochemistry, inorganic and polymer chemistry, microbiology, microlithography, photochemistry, biophysics, spectroscopy, advanced diagnostics, organic synthesis, and electrooptical engineering.

Ocean and Atmospheric Science and Technology Directorate
The Ocean and Atmospheric Science and Technology Directorate performs research in the fields of acoustics, remote sensing, oceanography, marine geosciences, marine meteorology, and space science. Areas of emphasis in acoustics include advanced acoustic concepts and computation, environmental acoustics, acoustic signal processing, physical acoustics, acoustic systems, ocean acoustics, and acoustic simulation and tactics. Areas of emphasis in remote sensing include radio, infrared, and optical sensors, remote sensing physics, imaging systems and research, and remote sensing applications. Areas of emphasis in oceanography include ocean dynamics and prediction, ocean sciences, small scale phenomenology, and ocean technology. Areas of emphasis in marine geosciences include marine physics, seafloor sciences, and mapping, charting, and geodesy. Areas of emphasis in marine meteorology include prediction systems and forecast support. Areas of emphasis in space science include ultraviolet measurements, X-ray astronomy, upper atmospheric physics, gamma and cosmic rays, solar physics, and solar terrestrial relationships. Senior naval officers are assigned as military deputies to help maintain the directorate focus on operational Navy and other DoD requirements in these areas of emphasis. The directorate is responsible for administrative and technical support to major activities in Washington, DC, Stennis Space Center, Mississippi, and Monterey, California.
Dr. E.O. Hartwig was born in Cincinnati, Ohio on November 22, 1946. He obtained his B.S. degree in biological sciences from the University of Texas at El Paso in 1968, and his Ph.D. from Scripps Institution of Oceanography in 1974. After completing his graduate studies, Dr. Hartwig accepted a position as a researcher at the Scottish Marine Biological Association (SMBA) in Oban, Scotland, where he established a sea-going experimental marine microbiological effort.

In 1975, Dr. Hartwig returned to the U.S., accepting a position at the Chesapeake Bay Institute of Johns Hopkins University. His shallow water research concentrated on the Chesapeake Bay and its outflow region, in active collaboration with many institutions and scientists. The efforts sought to understand the biological dynamics associated with the Bay’s flow regimes, and studied the underlying water column and benthic biological processes resulting in the onset of the seasonal summer anoxia of the bay.

In 1978, Dr. Hartwig accepted a position at Marine Ecological Consultants (MEC), where his research centered on understanding the “before operations” environment at a nuclear generating station. In 1980, Dr. Hartwig accepted a position at the Lawrence Berkeley Laboratory (LBL) at the University of California at Berkeley to head up the biological component of a research team studying the concept of a proposed Ocean Thermal Energy Conversion (OTEC) plant. His work involved extensive interactions with engineers on the operating characteristics of the plant and physical oceanographers modeling flow regimes around the plant and to be generated by the plant.

Following his research at LBL, Dr. Hartwig joined the Office of Naval Research in 1982 as a scientific officer in the Oceanic Chemistry/Biology Program. When the program was split into an Oceanic Chemistry and Oceanic Biology Program, Dr. Hartwig became Program Manager of the Oceanic Biology Program. Here, Dr. Hartwig developed several major interdisciplinary research initiatives for the Navy.

In 1987, Dr. Hartwig was selected as Director of Ocean Sciences at ONR. He enhanced both university interactions with Ocean Sciences and the stature of ONR Ocean Science scientific officers and program managers in the Federal Government.

Dr. Hartwig joined NRL in October 1992 as Associate Director of Research for Ocean and Atmospheric Science and Technology.

Basic Responsibilities

The Office of Research Support Services is responsible for the operational and management support necessary for the day-to-day operations at NRL Stennis Space Center, Mississippi (NRL SSC). The Head of NRL SSC acts for the Commanding Officer in dealing with local naval, federal, and civil activities and personnel on matters relating to NRL SSC support activities and facilities, community, and multi-command issues, and safety and disaster control measures.

Support functions include security, public affairs, safety, information systems, and support services to include management and administration, facilities, technical information, and special programs (NSAP, STILO, Technology Transfer, etc.)

Environmental assessments
Very-low frequency acoustics
Tactical decision aids

Deployment of high frequency acoustics tower

Structural acoustics studies in the instrumented NRL pool facility
Basic Responsibilities

The Acoustics Division conducts basic and applied research in undersea physics. The basic research areas are signal processing; ocean acoustics and the associated description of the ocean environment as it impacts advanced systems; and physical acoustics. The applied spectrum includes developing and proving system concepts; signal processing for active and passive detection, tracking and classification of underwater targets; echo strength; structural acoustics; large area assessment techniques; and development of processing systems and techniques. Also included are basic and applied research in simulations and tactics as influenced by the environment. The Division program is interactive with the ONR Contract Research Program and other research laboratories, both U.S. and foreign.

No single sensor characterizes the environmental problem.
Responsive Airborne Sensor Testbed for Environmental Research – Joint Program (RASTER-J) is a program to demonstrate the utility of fusing data from a multi-sensor airborne platform. Such a platform could provide rapid response in evaluating and solving environmental emergencies. Potential applications are global climate change, pollution prevention, compliance, conservation, installation restoration, and technology transfer.

Optical Head Assembly (OHA) of the Polar Ozone and Aerosol Measurement (POAM-II) experiment payload
Basic Responsibilities

The Remote Sensing Division conducts a program of basic research, science, and applications aimed at the development of new concepts for sensors and imaging systems for objects and targets on the Earth and in the near-Earth environment, as well as in deep space. The research, both theoretical and experimental, deals with discovering and understanding the basic physical principles and mechanisms that give rise to the background environmental emission and targets of interest and to absorption and emission mechanisms of the intervening medium. The accomplishment of this research requires the development of sensor systems technology. The development effort includes active and passive sensor systems to be used for the study and analysis of the physical characteristics of phenomena that give rise to naturally occurring background radiation, such as that caused by the Earth's atmosphere and oceans, as well as man-made or induced phenomena such as ship/submarine hydrodynamic effects. The research includes theory, laboratory, and field experiments leading to ground-based, airborne or space systems for use in such areas as remote sensing, astrometry, astrophysics, surveillance, nonacoustic ASW, and improved meteorological support systems for the operational Navy. Special emphasis is given to developing space-based platforms and exploiting existing space systems.

The Ocean Sciences Branch optical sensor and water sampling bottles being deployed
Basic Responsibilities

The Oceanography Division conducts basic and applied research in biological, chemical, dynamical, and physical processes of the ocean and marine boundary layer, and ocean engineering efforts in deployable environmental data acquisition and processing systems. The oceanographic research is both theoretical and experimental in nature and is focused on understanding ocean hydro/thermodynamics, ocean circulation, ice dynamics, air-sea exchanges, ocean optics, small- and micro-scale turbulence, bioluminescence, and microbially induced corrosion. The Division programs are designed to be responsive to, and to anticipate, naval needs. Key to this is extensive interaction with the Warfare Centers, CNO, and the Fleet and substantial participation in Navy R&D planning groups. Transition of Division products to system developers and the operational Navy is a primary goal. The Division program is coordinated and interactive with other NRL programs and activities, ONR's Research Program Department, and other government agencies involved in oceanographic activities. The Division collaborates and cooperates with scientists from the academic community and other U.S. and foreign laboratories.

Remotely sensed shoal detection and remote bathymetry
Basic Responsibilities

The Marine Geosciences Division has responsibility for planning and executing a broad spectrum research, development, technology and engineering program in marine geology, geophysics, geoacoustics, geotechniques, and mapping, charting, and geodesy (MC&G). The program is designed to provide necessary digital databases, geoacoustic and geophysical models, and simulations to support training, system design, performance prediction, and operational needs of the Navy.

The applied portion of the program is directed toward (1) quantitatively predicting the effects of the seafloor and associated geophysical, geomorphological, and geoacoustic variability on performance of present and emerging naval systems, operations, and plans, and (2) developing technology and techniques to rapidly acquire, process, and analyze MC&G (gravity, magnetics, and bathymetry) and other types of geological, geophysical, and geoacoustic information to meet existing digital database requirements of the Chief of Naval Operations (CNO), Defense Mapping Agency (DMA), and system commands.

The Division serves as the focal point in the Navy and Marine Corps for assessing and identifying MC&G requirements, including prototype digital MC&G products and product coordination. The program is keyed to and responsive to priorities identified by NRL, Office of Naval Research, CNO, the System Commands, and DMA. Close coordination and interaction with the Warfare Centers is essential to the success of this program with transition of Division products to system developers and the operational Navy a primary goal. The Division program is coordinated and interactive with other NRL programs and activities, ONR’s Research Program Department, NOAA, USGS, NSF, and other government agencies involved in seafloor activities. The Division collaborates and cooperates with scientists from the academic community, other U.S. and foreign laboratories, and industry.

Computer simulation of near-surface temperature changes under a mature convective cloud; arrows represent wind direction and speed, and show expansion of cold pool of air. (Original color output displays 21 color gradations in blue-green-yellow-red.)
Basic Responsibilities

The Marine Meteorology Division conducts basic and applied research in meteorology. Basic research includes work in air-sea interaction process studies, ocean-atmosphere teleconnections, and arctic studies. Applied research spans the gamut from development of both central-site and shipboard forecast models and aids, to the development of tactical aids for operations or weapons systems. NRL-Monterey (NRL-MRY) is co-located with the Fleet Numerical Meteorology and Oceanography Center (FNMOC) and has developed and transitioned to FNMOC the global and regional forecast models that form the backbone of the Navy’s world-wide weather forecasting capability. In addition, NRL-MRY is lead laboratory for the third phase of the Tactical Environmental Support System, a shipboard-based environmental diagnosis/forecast system. Specialties of the Division include numerical weather prediction, data assimilation and quality control, environmental decision aids, data base management, and satellite imagery interpretation.

Space Weather and Atmospheric Physics
- Remote sensing of the ionosphere and thermosphere
- Middle atmospheric investigations
- Global modeling
- Upper atmospheric physics
- Space astronomy
- X-ray observation, analysis, and theory of space astronomical sources
- Ultraviolet astronomy
- Gamma-ray astrophysics, solar-flare gamma rays, and space cosmic ray particle environment

NRL engineer works with Belgian colleagues on the Extreme Ultraviolet Imaging Telescope (EIT). EIT will picture the sun’s inner corona from the ESA/NASA Solar and Heliospheric Observatory (SOHO).

Solar Physics
- Solar ultraviolet and visible light spectroscopy and photometry from rockets, satellites, and the Space Shuttle

Solar-Terrestrial Relationships
- Solar X-ray/EUV plasma diagnostics; coronal effects on Earth

Three Space Science Division experiments will fly on the Air Force STP ARGOS satellite in 1996. HIRAAS contains three ultraviolet spectroscopic instruments to study the earth’s thermosphere and ionosphere. GIMI consists of two electronic imaging cameras tuned to different EUV/FUV wavelength bands to obtain global data on the upper atmosphere as well as stars. USA is an X-ray timing and navigation experiment that will investigate the use of exotic astrophysical objects for autonomous time and position measurements.

French and English colleagues assist NRL scientists preparing the LASCO wide-field coronagraph for flight on SOHO

The Middle Atmosphere High Resolution Spectrograph Investigation (MAHRSI) is an ultraviolet spectroscopy experiment developed in the Space Science Division as a Space Shuttle deployed payload. On Shuttle flight STS-66 in November 1994, MAHRSI provided the first global maps of hydroxyl (OH) and measured the gases in the middle atmosphere (35-120 kilometers) that control the global distribution of ozone.
The Space Science Division conducts research in the fields of astronomy and astrophysics, solar-terrestrial physics, and atmospheric science. Satellites, rockets, and ground-based facilities are used to obtain information on radiation from the Sun and celestial sources, and to study the behavior of the ionosphere and high atmosphere. Research results are of importance to radio communications, to use of the space environment, to weather prediction, and to the fundamental understanding of natural radiation and geophysical phenomena. The Superintendent also acts as Chief Scientist of the E.O. Hulburt Center for Space Research, created to provide research opportunities in space science to appointees from universities.

*Additional duty
In its role to preserve and enhance a strong space technology base and provide expert assistance in the development and acquisition of space systems that support naval missions, the Naval Center for Space Technology activities extend from basic and applied research through advanced development in all areas of interest to the Navy space program. These activities include developing spacecraft, systems using these spacecraft, and ground command and control stations. Principal functions of the Center include understanding and clarifying requirements, recognizing and prosecuting promising research and development, analyzing and testing systems to quantify their capabilities, developing operational concepts that exploit new technical capabilities, system engineering to allocate design requirements to subsystems, and engineering development and initial operation to test and evaluate selected spacecraft subsystems and systems. The Center is a focal point and integrator for those divisions at NRL whose technologies are used in space systems. The Center also provides systems engineering and technical direction assistance to system acquisition managers of major space systems. In this role, technology transfer is a major goal and motivates a continuous search for new technologies and capabilities and the development of prototypes that demonstrate the integration of such technologies.
Mr. P.G. Wilhelm was born in New York City on July 26, 1935. He attended Purdue University, where he received a B.S.E.E. degree in 1957. By 1961, he had completed all the course work for an M.S.E. degree from George Washington University.

From 1957 to 1959, Mr. Wilhelm served as an electrical engineer with Stewart Warner Electronics where he was assigned to a project to redesign the UPM-70, a Navy radar test set. In March 1959, he joined the Naval Research Laboratory as an electrical scientist in the Electronics Division. In December 1959, he joined the Satellite Techniques Branch. In 1961, he became Head of the Satellite Instrument Section; in 1965, he became Head of the Satellite Techniques Branch; and in 1974, Head of the Spacecraft Technology Center. In these positions, he performed satellite system design, equipment development, environmental testing, launch operations, and orbital data handling. In 1981, he was named the Superintendent of the Space Systems and Technology Division, the Navy’s principal organization, or lead Laboratory, for space. He is credited with contributions in the design, development, and operation of 82 scientific and Fleet-support satellites. He has been awarded five patents. In October 1986, he was appointed Director of the newly established Naval Center for Space Technology. The Center’s mission is to “preserve and enhance a strong space technology base and provide expert assistance in the development and acquisition of space systems which support naval missions.”

Mr. Wilhelm has been recognized with numerous awards including the Navy’s Meritorious Civilian Service Award, the Distinguished Civilian Service Award, the Presidential Meritorious Executive Award, NRL’s Space Systems Program Achievement Award, the Institute of Electrical and Electronics Engineers Aerospace and Electronic Systems Group Man of the Year Award, the NRL E.O. Hulburt Annual Science and Engineering Award, the Dexter Conrad Award, and the Rotary National Stellar Award. He also has been elected a Fellow of the Washington Academy of Sciences and a Fellow of the American Institute of Aeronautics and Astronautics.

Advanced Space Systems Technologies
Space systems architectures and requirements
Advanced payloads and optical systems
Controllers, processors, and signal processing
Data management systems and equipment
Embedded algorithms and software

Astrodynamics
Mathematical modeling, algorithms, and simulations
Astrodynamics and attitude dynamics

Command, Control, Communications, Computers, and Intelligence
Communications theory and systems
Tracking, telemetry, and control systems
Spacecraft test systems and satellite simulators
Antenna systems
High-speed fixed and mobile ground data collection, processing, and dissemination systems
Tactical communication systems

Space Electronic Systems Development
Detailed electrical/electronic design
Space systems fabrication, test, and integration
Launch and on-orbit support
Test equipment and ground support equipment

Space Electronic Warfare
Design criteria for counter-surveillance and counter-targeting
Data search, analysis, and synthesis of information related to special sensor performance

Space Mission Development
Mission development and requirements definition
Systems engineering and analysis
Concepts of operations and mission simulations
Mission evaluation and performance assessments

Space Surveillance, Navigation and Time
Advanced navigation satellite technology
Precise Time and Time Interval (PTTI) technology
Atomic time/frequency standards/instrumentation
Passive and active ranging techniques
Detection and precision tracking of orbiting objects from space and ground

Ballistic Missile Defense
Flight experiments, satellites, and ground stations for space-based defense initiatives

A mosaic covering the Moon’s south polar region with 200 meter resolution was assembled by the U.S. Geological Survey from over 1500 Clementine images. These images provide better resolution than previously available for the Moon’s higher latitude regions and for most of its far side. Similar mosaics for the entire lunar surface can be assembled. The Clementine images provide the first opportunity not only to determine precise relative locations for all resolvable features on the lunar surface, but also to define an accurate, absolute reference grid for the entire lunar surface. The Clementine Program was sponsored by the Ballistic Missile Defense Organization and managed by the Naval Center for Space Technology. The spacecraft was designed, built, and operated by NCST.
Basic Responsibilities

The Space Systems Development Department (SSDD) is the space and ground support systems research and development organization of the Naval Center for Space Technology. The primary objective of the SSDD is to develop space systems to respond to Navy, DoD, and national mission requirements with improved performance, capacity, reliability, efficiency, and/or life cycle cost. The Department must derive system requirements from the mission, develop architectures in response to these requirements, and design and develop systems, subsystems, equipment, and implementation technologies to achieve the optimized, integrated operational space and ground system. These development responsibilities extend across the entire space/ground spectrum of hardware, software, and advanced technologies, including digital processing and control, analog systems, power, communications, command and telemetry, radio frequency, optical, payload, and electromechanical systems, as well as systems engineering.

Design, Test, and Processing
- Launch vehicle integration
- Spacecraft manufacturing
- Spacecraft design
- Spacecraft test and production planning
- Spacecraft assembly and processing
- Spacecraft environmental testing
- Spacecraft mechanical functional testing

Systems Analysis
- Spacecraft structural design
- Spacecraft environmental testing
- Structural and thermal analysis
- Materials research
- Flexible space structures research

Control Systems
- Attitude control systems
- Reaction control systems
- Propulsion systems
- Flight operations support
- Orbit dynamics
- Expert systems
- Spaceborne applications of robotics
Basic Responsibilities

The Spacecraft Engineering Department (SED) is the focal point for the Navy’s in-house spacecraft bus capability. Activities of the SED range from concept and feasibility planning, through the on-orbit IOC for the Navy Space Systems. Design, assembly and test activities are performed in teamwork with the Space Systems Development Department. The SED provides analysis, design, and hardware expertise in structures and mechanisms, attitude control systems, propulsion and reaction control systems, thermal control systems, satellite design integration, launch vehicle integration, and satellite-to-boost-stage integration.

The SED functions as Program Manager for Navy Programs. In this role, system engineering and technical directions are provided to Navy Space Programs while maintaining an active in-house satellite development capability. The SED performs as a prototype laboratory in this role and pursues the program to ensure that designs are transferable to industry for additional satellite hardware builds. Following an NRL build, the SED supports the Navy Program Office by providing experienced expert technical consultation.

Technical Output, Fiscal, and Personnel Information
Technical Output

Publications, Presentations, and Patents

The Navy continues to be a pioneer in initiating new developments and a leader in applying these advancements to military requirements. The primary means of informing the scientific and engineering community of the advances made at NRL is through the Laboratory's technical output—reports, articles in scientific journals, contributions to books, papers presented to scientific societies and topical conferences, patents, and inventions.

The figures for Calendar Years 1993 and 1994 presented below represent the output of NRL facilities in Washington, DC; Orlando, Florida; Bay St. Louis, Mississippi; and Monterey, California.

In addition to the output listed, NRL scientists made more than 1,300 oral presentations during 1993 and 1,467 oral presentations during 1994.

A complete listing of the publications by NRL authors appears in the Bibliography of NRL Publications, a separate annual publication.

In 1986, Congress enacted the Federal Technology Transfer Act in an effort to encourage the commercial use of technology developed in Federal laboratories. The Act allows Government inventors and the laboratories where they work to share the royalties generated by commercial licensing of their inventions. Also, the Act encourages the establishment of cooperative research and development agreements between laboratories such as NRL and nonfederal entities such as state and local governments, universities, and business corporations. Such cooperative R&D agreements can include the allocation in advance of patent rights on any inventions made under the joint research effort.

The 1986 Act has given additional impetus to the Laboratory's efforts to patent important inventions arising out of its various research programs.

*As of 25 July 1995; figures include NRL at all sites.
Professional Development

NRL has established many programs for the professional and personal development of its employees so they may better serve the needs of the Navy. These programs develop and retain talented people and keep them abreast of advanced technology and management skills. Graduate assistantships, fellowships, sabbatical study programs, cooperative education programs, individual college courses, and short courses for personal improvement contribute to professional development.

Programs also exist for non-NRL employees. These programs enhance research efforts by providing means for non-NRL professionals to work at the Laboratory, thereby improving the interchange of ideas, meeting critical short-term technical requirements, and providing sources for new scientists and engineers. The programs include two-year graduate fellowships, faculty and professional interchanges, undergraduate work, and introducing gifted and talented high school students to the world of technology.

Programs for NRL Employees

During 1994, under the auspices of the Employee Development Branch, NRL employees participated in about 5,500 individual training events. Many of these were presented as either videotaped or on-site instructed courses on diverse technical subjects, management techniques, and enhancement of such personal skills as efficient use of time, speed reading, memory improvement, and interpersonal communications. Courses are also available by means of computer-based training (CBT) and live television courses that are viewed nationwide.

One common study procedure is for employees to work full time at the Laboratory while taking job-related scientific courses at universities and schools in the Washington area. The training ranges from a single course to full graduate and postgraduate programs. Tuition for training is paid by NRL. The formal programs offered by NRL are described below.

Graduate Programs

- The Advanced Graduate Research Program (formerly the Sabbatical Study Program, which began in 1964) enables selected professional employees to devote full time to research or pursue work in their own or a related field for one year at an institution or research facility of their choice without the loss of regular salary, leave, or fringe benefits. NRL pays all educational costs, travel, and moving expenses for the employee and dependents. Criteria for eligibility include professional stature consistent with the applicant's opportunities and experience, a satisfactory program of study, and acceptance by the facility selected by the applicant. The program is open to paraprofessional (and above) employees who have completed six years of Federal service, four years of which are required at NRL.

- The Edison Memorial Graduate Training Program enables employees to pursue advanced studies in their fields at local universities. Participants in this program work 24 hours each workweek and pursue their studies during the other 16 hours. The criteria for eligibility include a minimum of one year of service at NRL, a bachelor's or master's degree in an appropriate field, and professional standing in keeping with the candidate's opportunities and experience.

- To be eligible for the Select Graduate Training Program, employees must have a college degree in an appropriate field and must have demonstrated ability and aptitude for advanced training. Students accepted in this program devote a full academic year to graduate study. While attending school, they receive one half of their salary; and NRL pays for tuition, books, and laboratory expenses.

- The Naval Postgraduate School (NPS), located in Monterey, California, provides graduate programs to enhance the technical preparation of Naval officers and civilian employees who serve the Navy in the fields of science, engineering, operations analysis, and management. It awards a master of arts degree in national security affairs and a
master of science degree in many technical disciplines. In addition, a doctor of philosophy degree may be earned in select fields of science and engineering.

NRL employees desiring to pursue graduate studies at NPS may apply for a maximum of six quarters away from NRL, with thesis work accomplished at NRL. Specific programs are described in the NPS catalog. Participants will continue to receive full pay and benefits during the period of study.

- Research conducted at NRL may be used as thesis material for an advanced degree.

This original research is supervised by a qualified employee of NRL who is approved by the graduate school. The candidate should have completed the required course work and should have satisfied the language, residence, and other requirements of the graduate school from which the degree is sought. NRL provides space, research facilities, and supervision but leaves decisions on academic policy to the cooperating schools.

**Professional Development**

NRL has programs, professional society chapters, and informal clubs that enhance the professional growth of employees. Some of these are listed below.

- The Congressional Fellowship Program, sponsored by the American Political Science Association, provides an opportunity for some of the most promising young, technically oriented Federal executives to participate in a variety of assignments designed to develop their knowledge and understanding of Congressional operations. These Fellows share activities with other members of the Congressional Fellowship Program who come mainly from journalism, law, and college teaching.

- The LEGIS Fellows Program provides assignments for personnel whose current or prospective positions may require working knowledge of the operations of the Congress. The Fellows receive instruction and hands-on experience in a Congressional office through training/developmental activities such as seminars, intensive briefings, and assignments on the staff of a member, committee, or support agency of the Congress in Washington, DC.

- The Counseling Referral Service (C/RS) helps employees to achieve optimal job performance through counseling and resolution of problems such as family, stress and anxiety, behavioral, emotional, and alcohol- or drug-related problems that may adversely impact job performance. C/RS provides confidential assessments and short-term counseling, as well as training workshops and referrals to additional resources in the community. (Contact Robert Power at (202) 767-6857.)

- A chartered chapter of **Women in Science and Engineering** (WISE) was established at NRL in 1983. Informal monthly luncheons and seminars are scheduled to inform scientists and engineers of women's research at NRL and to provide an informal environment for members to practice their presentations. WISE also sponsors a colloquium series to feature outstanding women scientists. (Contact Dr. Wendy Fuller-Mora at (202) 767-2793, Dr. Debra Rolison at (202) 767-3617, or Dr. Cha-Mei Tang at (202) 767-4148.)

- **Sigma Xi**, the Scientific Research Society, encourages and acknowledges original investigation in pure and applied science. As an honor society for research scientists, individuals who have demonstrated the ability to perform original research are elected to membership in local chapters. The NRL-Edison Chapter, comprised of approximately 600 members, recognizes original research by presenting awards annually in pure and applied science to outstanding NRL staff members. The chapter also sponsors lectures at NRL on a wide range of scientific topics for the entire NRL community. These lectures are delivered by scientists from all over the nation and the world. The highlight of the Sigma Xi lecture series is the Edison Memorial Lecture, traditionally featuring a Nobel laureate. (Contact Dr. Robert Pellenbarg at (202) 767-2479 or 2002.)

- The **NRL Mentor Program** was established to provide an innovative approach to professional and career training and an environment for personal and professional growth. It is open to all permanent NRL employees in all job series and at all sites. Mentorees are matched with successful, experienced colleagues with more technical and/or managerial experience, who can provide them with the knowledge and skills needed to maximize their contribution to the success of their immediate organization, to NRL, to the Navy, and to their chosen career fields. The ultimate goal of the program is to increase job productivity, creativity, and satisfaction through better communication, understanding, and training. NRL Instruction 12400.1 established the NRL Mentor Program, and it provides the policy
The Charlotte Moore-Sitterly Chapter of 
Employed Women, Inc. (FEW) was 
ered at NRL in 1993. FEW is an international 
zation of federally employed women and 
whose purpose is to eliminate sex discrimina-
and sexual harassment and enhance career 
opportunities for women in government. FEW 
ks closely with other Federal agencies and 
izations, including the Office of Personnel 
gagement, Equal Employment Opportunity 
mission, and Federal Women’s Program 
mittees. (Contact Chris Thorowgood at 
2) 767-3121.)

- Employees interested in developing effective 
l-expression, listening, thinking, and leadership 
tentual are invited to join either of two NRL 
ters of Toastmasters International. Members  these clubs, who possess diverse career back-
rounds and talents, meet three times a month in an 
ort to learn to communicate by not by rules but by 
actice in an atmosphere of understanding and 
elpful fellowship. NRL’s Commanding Officer and 
de Director of Research endorse Toastmasters, and 
employee Development Branch pays for 
embership and educational materials for those 
ployees whose supervisors see a need for their 	ive training in public speaking or communication 
ills. (Contact Kathleen Parrish at (202) 767-
782.)

Continuing Education

NRL employees take government sponsored 
college courses (undergraduate and graduate) in 
order to improve their skills and keep abreast of 
current developments in their fields.

- The Employee Development Branch at NRL 
ofers an online students short courses in certain 
rogram areas that are not available at local 
schools; Laboratory employees may attend these 
courses at nongovernment facilities as well. Inter-
agency courses in management, personnel, finance, 
 supervisory development, clerical skills, and other 
areas are also available.

Other Programs

- The Brookings Institution offers a variety of 
 seminars and conferences devoted to research,
guidance to management on EEO policy, and the following special emphasis programs:

- The **Federal Women's Program** (FWP) supports and enhances employment and advancement opportunities for women and addresses issues that affect women in the workplace. It sponsors a chapter of Women in Science and Engineering (WISE) to recognize outstanding female scientists and engineers. Distinguished women scientists are guest lecturers at quarterly presentations.

- The **Hispanic Employment Program** (HEP) focuses on working with supervisors, managers, and subcommittees to recruit and place qualified Hispanics. The program is involved with Hispanic community organizations and local schools and provides activities specifically designed to offer information on employment and advanced education opportunities to Hispanics.

- The **African-American Employment Program** (AAEP) concentrates on recruiting, developing, and advancing African-American employees throughout NRL. It also encourages employees to achieve their maximum potential. The AAEP sponsors awareness programs with distinguished persons as guest lecturers.

- The **Individuals with Disabilities Program** (IWD) assists management to improve employment and advancement opportunities for qualified disabled employees. It also advises on accommodations necessary for disabled persons. The IWD recruits disabled students from colleges and universities for summer, co-op, and permanent positions in engineering and science.

- The **Asian-American/Pacific Islander Program** (API) identifies areas of concern regarding the recruitment, selection, advancement, retention, and utilization of API employees throughout NRL. The program interacts with API professional/community organizations to address employment concerns.

- The **Federal Employment Opportunity Recruitment Program** (FEORP) is designed to establish, maintain, and update targeted recruitment programs to reduce the conspicuous absence or manifest imbalance categories of NRL employment through innovative internal and external recruitment. In addition, it fosters relationships with minority and women's institutions and organizations.

  Special programs are held during the year to promote an awareness of the contributions and capabilities of women and minorities. (Contact the EEO office at (202) 767-2486 for all EEO programs.)

**Other Activities**

- **The Community Outreach Program** traditionally has used its extensive resources to foster programs that provide benefits to students and other community citizens. Volunteer employees assist with and judge science fairs, give lectures, tutor, mentor, coach, and serve as classroom resource teachers. The program also sponsors Black History Month art and essay contests for local schools, student tours of NRL, a student Toastmasters Youth Leadership Program, an annual Christmas party for neighborhood children, an annual collection for Children's Hospital, a surplus equipment transfer program, and an annual book drive to support school libraries. Through this program NRL has active partnerships with four District of Columbia public schools. (Contact the Public Affairs Office at (202) 767-2541.)

- Other programs that enhance the development of NRL employees include four computer user groups (IBM PC, Mac, NeXT, and Sun), the Microcomputer Software Support Center, and the Amateur Radio Club. The Recreation Club accommodates the varied interests of NRL's employees with its numerous facilities, such as a refurbished 25-yard, 6-lane indoor swimming pool; basketball and volleyball courts; a weight room and exercise area; table tennis; meeting room; softball and basketball leagues; jacuzzi whirlpool; saunas; classes in five different types of martial arts; aerobics exercise; swimming and water walking; and specialized sports clubs (running, skiing, biking, and golfing). The Showboaters, a nonprofit drama group that presents live theater for the enjoyment of NRL and the community, performs two major productions each year in addition to occasional performances at Laboratory functions and benefits for local charities. Though based at NRL, membership in Showboaters is not limited to NRL employees.
Programs for Non-NRL Employees

Several programs have been established for non-NRL employees. These programs encourage and support the participation of visiting scientists and engineers in research of interest to the Laboratory. Some of the programs may serve as stepping-stones to federal careers in science and technology. Their objective is to enhance the quality of the Laboratory’s research activities through working associations and interchanges with highly capable scientists and engineers and to provide opportunities for outside scientists and engineers to work in the Navy laboratory environment. Along with enhancing the Laboratory’s research, these programs acquaint participants with Navy capabilities and concerns.

Recent Ph.D., Faculty Member, and College Graduate Programs

• The National Research Council (NRC)/NRL Cooperative Research Associateship Program selects associates who conduct research at NRL in their chosen fields in collaboration with NRL scientists and engineers. The tenure period is two years. The Office of Naval Research offers the associate post-tenure research grants tenable at an academic institution.

• The American Society for Engineering Education (ASEE) Postdoctoral Fellowship Program aims to increase the involvement of highly trained scientists and engineers in disciplines necessary to meet the evolving needs of naval technology. Appointments are for one year (renewable for a second and sometimes a third year). These competitive appointments are made by ASEE.

• The most recent addition to NRL’s postdoctoral program family is the Joint Oceanographic Institutions (JOI) Postdoctoral Fellowship Program. Administered in much the same way as the other two, this program selects associates to conduct research in ocean and atmospheric sciences only. The aim is to recruit more scientists and engineers in these specialized areas.

• The American Society for Engineering Education also administers the Navy/ASEE Summer Faculty Research Program for university faculty members to work for ten weeks with professional peers in participating Navy laboratories on research of mutual interest.

• The NRL/United States Naval Academy (USNA) Cooperative Program for Scientific Interchange allows faculty members of the U.S. Naval Academy to participate in NRL research. This collaboration benefits the Academy by providing the opportunity for USNA faculty members to work on research of a more practical or applied nature. In turn, NRL’s research program is strengthened by the available scientific and engineering expertise of the USNA faculty.

• The Office of Naval Research Graduate Fellowship Program helps U.S. citizens obtain advanced training in disciplines of science and engineering critical to the U.S. Navy. The three-year program awards fellowships to recent outstanding graduates to support their study and research leading to doctoral degrees in specified disciplines such as electrical engineering, computer sciences, material sciences, applied physics, and ocean engineering. Award recipients are encouraged to continue their study and research in a Navy laboratory during the summer.

For further information about these five programs, please contact Mrs. Jessica Hileman at (202) 767-3865.

• The Professional Development Program for Ensigns assigns newly commissioned Ensigns who are awaiting future training to NRL, working in areas of their own choosing commensurate with their academic qualifications. These young officers provide a fruitful summer of research assistance, while gaining valuable experience in the Navy’s R&D program.

For more information, contact the Military Administrative Office at (202) 767-2103.

Professional Appointments

• Faculty Member Appointments use the special skills and abilities of faculty members for short periods to fill positions of a scientific, engineering, professional, or analytical nature.
• Consultants and experts are employed because they are outstanding in their fields of specialization, or because they possess ability of a rare nature and could not normally be employed as regular civil servants.

• Intergovernmental Personnel Act Appointments temporarily assign personnel from the state or local government or educational institution to the federal government (or vice versa) to improve public services rendered by all levels of government.

High School/Undergraduate/Graduate College Student Programs

Several programs are tailored to the undergraduate and graduate that provide employment and work experience in naval research. These are designed to attract applicants for student and full professional employment in the Laboratory’s shortage category positions, such as engineers, physicists, mathematicians, and computer scientists. The student employment programs build an understanding of NRL job opportunities among students and educational personnel, so that educators can provide students who will meet NRL’s occupational needs. The employment programs for high school and college students include the following:

• The Cooperative Education Program alternates periods of work and study for students pursuing bachelor degrees in engineering, computer science, or the physical sciences. Several universities participate in this program.

• The Clerical Cooperative Education Program employs students interested in pursuing careers in the clerical occupation. Students work part-time during the school year and full-time during school breaks.

• The Federal Junior Fellowship Program hires needy students entering college to be assistants to scientific, professional, or technical employees.

• The Summer Employment Program employs students for the summer in paraprofessional and technician positions in engineering, physical sciences, and computer sciences.

• The Student Volunteer Program helps students gain valuable experience by allowing them to voluntarily perform educationally related work at NRL.

• The 1040-Hour Appointment employs students on a half-time basis to assist in scientific work related to their academic program.

For additional information, contact Cindy Stiles at (202) 767-3030.

High School Programs

• The DoD Science & Engineering Apprentice Program (SEAP) employs high school juniors and seniors to serve for eight weeks as junior research associates. Under the direction of a mentor, students gain a better understanding of research, its challenges, and its opportunities through participation in scientific programs. Criteria for eligibility are based on science and mathematics courses completed and grades achieved; scientific motivation, curiosity, and capacity for sustained hard work; a desire for a technical career; teacher recommendations; and achievement test scores. The NRL program is the lead program and the largest in DoD.

For additional information on these programs, please contact the Employee Development Branch (Code 1840) at (202) 767-2956.
Naval Research Laboratory
(Washington, DC)

DIRECTIONS TO NRL FROM NATIONAL AIRPORT

1. Follow Route 1 south for approximately 3 miles to the Beltway I-95/495.

2. Exit right to the Beltway. This exit curves to the right and then divides. Take the left fork to I-95 (Baltimore).

3. Stay in the right lane on the Woodrow Wilson Bridge. After crossing the Woodrow Wilson Bridge, take the first exit (I-295). This exit divides. Take the left fork to I-295 North.

4. NRL is the first exit off I-295 (approximately 2 miles) after crossing the Woodrow Wilson Bridge. Make a right at the traffic light in front of the main gate (Overlook Avenue). Then make an immediate left into the parking lot. The Visitor Control Center (Building 72) is located on the corner in the brick building next to the main gate.
