PART 1

INTRODUCTION

A. BACKGROUND. The U.S. Army Defense Ammunition Center (DAC), Validation Engineering Division (SIOAC-DEV), was tasked by DAC, Supply Engineering Division (SIOAC-DES), to conduct MIL-STD-1660 tests on a wooden pallet designed for future armor tile containers.

B. AUTHORITY. These tests were conducted IAW mission responsibilities delegated by the U.S. Army Armament, Munitions and Chemical Command (AMCCOM), Rock Island, IL.

C. OBJECTIVE. The objective of these tests was to determine whether the wooden pallet design for the future armor tile containers is capable of meeting MIL-STD-1660, Design Criteria for Ammunition Unit Loads, requirements.

D. CONCLUSION. The palletized unit load completed testing with the palletized unit load intact. The palletized unit load passed MIL-STD-1660, Design Criteria for Ammunition Unit Loads, requirements.

PART 3

TEST PROCEDURES

The test procedures outlined in this section were extracted from MIL-STD-1660, Design Criteria for Ammunition Unit Loads, 8 April 1977. This standard identifies nine steps that a unitized load must undergo if it is to be considered acceptable. The five tests that were conducted on the test pallets are summarized below.

A. STACKING TESTS. The unit load was loaded to simulate a stack of identical unit loads stacked 16 feet high, for a period of one hour. This stacking load was simulated by subjecting the unit load to a compression weight equal to an equivalent 16-foot stacking height. The compression load was calculated in the following manner. The unit load weight was divided by the unit load height in inches and multiplied by 192. The resulting number was the equivalent compressive force of a 16-foot-high load.

B. REPEETITIVE SHOCK TEST. The repetitive shock test was conducted IAW Method 5019, Federal Standard 101. The test procedure is as follows: The test specimen was placed on, but not fastened to, the platform. With the specimen in one position, the platform was vibrated at 1/2-inch amplitude (1-inch double amplitude) starting at a frequency of approximately 3 cycles per second. The frequency was steadily increased until the package left the platform. The resonant frequency was achieved when a 1/16-inch-thick feeler gage momentarily slid freely between every point on the specimen in contact with the platform at some instance during the cycle or a platform acceleration achieved 1 +/- 0.1 Gs. Midway into the testing period, the specimen was rotated 90 degrees and the test continued for the duration. Unless failure occurred, the total time of vibration was two hours if the specimen was tested in one position and three hours for more than one position.
C. **EDGEWISE ROTATIONAL DROP TEST.** This test was conducted using the procedures of Method 5008, Federal Standard 101. The procedure for the edgewise rotational drop test is as follows: The specimen was placed on its skids with one end of the pallet supported on a beam 4-1/2 inches high. The height of the beam was increased if necessary to ensure that there was no support for the skids between the ends of the pallet when dropping took place, but was not high enough to cause the pallet to slide on the supports when the dropped end was raised for the drops. The unsupported end of the pallet was then raised and allowed to fall freely to the concrete, pavement, or similar underlying surface from a prescribed height. Unless otherwise specified, the height of drop for level A protection conforms to the following tabulation:

<table>

3-2
PART 4

TEST EQUIPMENT

A. Armor Tile Containers on a Wooden Pallet
   1. Pallet Width: 29 inches
   2. Pallet Length: 55 inches
   3. Unit Load Height: 19-1/4 inches
   4. Unit Load Weight: 810 pounds
   5. Container Restraint: Intermediate Banding

B. Compression Tester
   1. Manufacturer: Ormond Manufacturing
   2. Platform: 60- by 60-inches
   3. Compression Limit: 50,000 pounds
   4. Tension Limit: 50,000 pounds

C. Transportation Simulator
   1. Manufacturer: Gaynes Laboratory
   2. Capacity: 6,000-pound pallet
   3. Displacement: 1/2-inch amplitude
   4. Speed: 50 to 400 rpm
   5. Platform: 5- by 8-foot

D. Incline Plane
   1. Manufacturer: Conbur Incline
   2. Type: Impact Tester
   3. Grade: 10 percent incline
   4. Length: 12-foot
PART 5

TEST RESULTS

A. TEST OBSERVATIONS. The test sample was loaded with armor tile containers on a wooden pallet.

B. STACKING TEST. The test sample was initially loaded to 7,600 pounds compression. The compression was released after one hour. No damage was noted during this test.

C. REPETITIVE SHOCK TEST. The duration of the test was 90 minutes for each orientation of the pallet. The transportation simulator was operated at 238 rpm while the pallet was oriented in the lateral direction. For the longitudinal orientation, the transportation simulator was operated at 264 rpm. No load movement or damage was observed.

D. EDGewise ROTATIONAL DROP TEST. One side of the pallet was placed on a beam displacing it 4-1/2 inches above the floor. The opposite end of the pallet was raised to a height of 24 inches, then dropped. No damage was observed after dropping the pallet from a height of 24 inches on all four sides.

E. INCLINE-IMPACT TEST. The inclined plane was set to allow the pallets to travel 8 feet prior to impacting a stationary wall. The pallet was rotated clockwise after each impact, until all four sides had been tested. No damage resulted from any of the four impacts.
PART 6

PHOTOGRAPH
PHOTO NO. AO317-SCN97-1516: This photo shows the future armor tile pallet after being tested to MIL-STD-1660 requirements. The unit did not sustain any damage as a result of these tests.

- HAZARD CLASSIFICATION DATA CONTAINED IN THE ABOVE CHART IS FOR GUIDANCE AND INFORMATIONAL PURPOSES ONLY. VERIFICATION OF THE SPECIFIED DATA SHOULD BE MADE BY CONSULTING THE MOST RECENT JOINT HAZARD CLASSIFICATION SYSTEM LISTING OR OTHER APPROVED LISTING(S).
**GENERAL NOTES**

A. THIS DOCUMENT HAS BEEN PREPARED AND ISSUED IN ACCORDANCE WITH AR 743-200-1 AND APPLICABLE MIL-STD-1880.

B. DIMENSIONS, CUBE AND WEIGHT OF A PALLETT UNIT WILL VARY SLIGHTLY DEPENDING UPON THE ACTUAL DIMENSIONS OF THE BOXES AND THE WEIGHT OF THE SPECIFIC ITEM BEING UNITIZED.

C. INSTALL THE HORIZONTAL STRAP TO BE LOCATED AS SHOWN. THE HORIZONTAL STRAP MUST BE TENSIONED AND SEALED AFTER THE APPLICATION OF TIEDOWN STRAPS.

D. INSTALL EACH TIEDOWN STRAP TO PASS UNDER THE DECK BOARDS OF THE PALLETT AND TO BE LOCATED AS SHOWN. TIEDOWN STRAPS MUST BE TENSIONED AND SEALED PRIOR TO APPLICATION OF HORIZONTAL STRAPS.

E. THE FOLLOWING AMC DRAWINGS ARE APPLICABLE FOR OUTLOADING AND STORAGE OF THE ITEMS COVERED IN THIS APPENDIX.

   CARLOADING - - - - - - - 19-48-4115-5PA1002  
   TRUCKLOADING - - - - - 19-48-4117-1PA1003  
   STORAGE - - - - - - - - 19-48-4125-1-2-3-4-14-22PA1002  
   END OPENING ISO CONTAINER - - - - - - - - 19-48-4153-15PA1002  
   SIDE OPENING ISO CONTAINER - - - - - - - - 19-48-4267-15PA1009

F. IF ITEMS COVERED HEREIN ARE UNITIZED PRIOR TO ISSUANCE OF THIS APPENDIX, THE BOXES NEED NOT BE UNITIZED SOLELY TO CONFORM TO THIS APPENDIX.

G. WHEN APPLYING ANY STRAP, CARE MUST BE EXERCISED TO ASSURE THAT THE END OF THE STRAP ON THE UNDERSIDE OF THE JUNCTURE EXTENDS AT LEAST 1" BEYOND THE SEAL. THIS EXTRA MINIMUM LENGTH OF STRAP IS REQUIRED TO PERMIT SUBSEQUENT TIGHTENING OF LOOSENED STRAPPING. TENSIONING CAN BE ACHIEVED WITHOUT REPLACING STRAPPING OR SLIPPING STRAPPING THROUGH THE USE OF A FEEDWHEEL TENSIONING TOOL, MANUAL OR PNEUMATIC, AND THE APPLICATION OF ONE ADDITIONAL SEAL.

H. ALL DUNNAGE SHALL BE PRESERVATIVE TREATED IN ACCORDANCE WITH THE PROCEDURES SPECIFIED IN MIL-F-2427 FOR CLEATED WOODEN BOXES. IF THE DUNNAGE CONSISTS OF MORE THAN ONE COMPONENT, IT MUST BE ASSEMBLED PRIOR TO TREATMENT. THE LETTERS PA DENTING FBS (COPPER-OXINE/ICLATE), PB DENTING M-GARD W500 (ZINC NAPHTHENATE EMLULIFILABLE) OR PC DENTING M-GARD W510 OR CINAPOL 5 (COPPER NAPHTHENATE) MUST BE APPLIED TO THE WOOD DUNNAGE IN LETTERS AT LEAST ONE INCH HIGH.

J. A PLUS OR MINUS 1/4" IS ALLOWED ON OVERALL DIMENSIONS OF ANY DUNNAGE ASSEMBLY. HOWEVER, SIMILAR PIECES IN AN ASSEMBLY MUST BE WITHIN 1/8" OF THE SAME DIRECTION.

K. IN ORDER TO OBTAIN COMPACT (SOUND) UNITS, ALL STRAPS SHALL BE LOCATED IN PROPER ALIGNMENT AND TENSIONED UNTIL THEY CUT INTO THE EDGE OF THE PALLETT DECK. AFTERTENSIONING, ALL STRAPS WILL BE SECURED USING ONE SEAL AND TWO PAIR OF NOTCHES.

L. DIMENSIONAL LUMBER SPECIFIED THROUGHOUT THIS PROCEDEL DRAWING IS OF NOMINAL SIZE UNLESS OTHERWISE SPECIFIED. FOR EXAMPLE, 1" X 4" MATERIAL IS ACTUALLY 3/4" THICK BY 3-1/2" WIDE AND 2" X 4" MATERIAL IS ACTUALLY 1-1/2" THICK BY 3-1/2" WIDE.

M. FOR DETAILS OF THE METAL SHIPPIING AND STORAGE CONTAINER SEE DRAWING 9342676.

N. THE METAL SHIPPIING AND STORAGE CONTAINER MUST BE POSITIONED WITH THE HUMIDITY INDICATORS FACING INWARD TOWARDS THE MIDDLE.
