Liu, C.T., “Investigating Near Tip Damage and Crack Growth Behavior in a Solid Propellant”

JANNAF Joint Meeting
(Cocoa Beach, FL, 26-30 Mar 2001) (Deadline: 06 Nov 2000) (Statement A)

1. This request has been reviewed by the Foreign Disclosure Office for: a.) appropriateness of distribution statement
b.) military/national critical technology, c.) export controls or distribution restrictions,
d.) appropriateness for release to a foreign nation, and e.) technical sensitivity and/or economic sensitivity.
Comments:__________________________________________________________

Signature ___________________________ Date ________________

2. This request has been reviewed by the Public Affairs Office for: a.) appropriateness for public release
and/or b) possible higher headquarters review
Comments:________________________________________________________

Signature ___________________________ Date ________________

3. This request has been reviewed by the STINFO for: a.) changes if approved as amended,
b.) appropriateness of distribution statement, c.) military/national critical technology, d.) economic sensitivity,
e.) parallel review completed if required, and f.) format and completion of meeting clearance form if required
Comments:________________________________________________________

Signature ___________________________ Date ________________

4. This request has been reviewed by PRS for: a.) technical accuracy, b.) appropriateness for audience, c.)
appropriateness of distribution statement, d.) technical sensitivity and economic sensitivity, e.) military/
national critical technology, and f.) data rights and patentability
Comments:________________________________________________________

ABSTRACT

Title of Paper: Investigating Near Tip Damage and Crack growth Behavior in a Solid Propellant

Author(s): C. T. Liu

Is this paper an update? Yes, No. X Has it been presented elsewhere? Yes, No. X

When cracks occur, whether resulting from the manufacturing process or from service loads, the stresses near the crack tip will be redistributed according to nonlinear material behavior. Depending on the magnitude of the local stresses and the local strength, various defects, microvoids or microcracks, can develop in the crack tip region. And, depending on the severity of these defects, crack growth behavior can be significantly affected. Therefore, to obtain a fundamental understanding of crack growth behavior in particulate composite materials, the effect of the defect on local fracture behavior near the crack tip needs to be determined.

In recent years, a considerable amount of work has been done studying crack growth behavior in particulate composite materials. This work was based on linear elastic or viscoelastic fracture mechanics. The principles of classical fracture mechanics are well established for single-phase materials. However, experimental evidence indicates that linear fracture mechanics theories have been applied to particulate composite materials with varying degrees of success.

In this study, pre-cracked specimens were used to study local damage near the crack tip and crack growth behavior in a solid propellant under a constant strain rate at room temperature. The local damage state and its effect on crack growth behavior were investigated and the results were discussed.
