Award Number: DAMD17-99-1-9198

TITLE: Combined M.D./Ph.D. and Ph.D. Training Program in Breast Cancer Prevention

PRINCIPAL INVESTIGATOR: Robert B. Dickson, Ph.D.

CONTRACTING ORGANIZATION: Georgetown University Medical Center
Washington, DC  20057

REPORT DATE: July 2004

TYPE OF REPORT: Annual Summary

PREPARED FOR: U.S. Army Medical Research and Materiel Command
Fort Detrick, Maryland  21702-5012

DISTRIBUTION STATEMENT: Approved for Public Release;
Distribution Unlimited

The views, opinions and/or findings contained in this report are those of the author(s) and should not be construed as an official Department of the Army position, policy or decision unless so designated by other documentation.
Combined M.D./Ph.D. and Ph.D. Training Program in Breast Cancer Prevention

The goal of this training program is to dramatically extend our existing, highly successful Interdisciplinary Doctoral Training Program in Tumor Biology with a new track which integrates genetics, molecular epidemiology, and prevention of breast cancer. This new track offers both MD/PhD and PhD training opportunities, and integrates new faculty from the Lombardi Comprehensive Cancer Center Programs in Cancer Prevention and Control, and Cancer Genetics. The program is enriched by new courses, as well as practical research experience. This new programmatic initiative make use of the existing organizational structure of the Interdisciplinary Doctoral training Program in Tumor Biology and incorporates a multi-disciplinary faculty who are devoted to research and education in breast cancer. To date, 10 students were recruited into 5 classes, and 4 new courses were created. Students in this program so far have published 9 papers, and 19 abstracts/presentations. They were also awarded 4 individual fellowship grants, and one has now been awarded her PhD, with others currently in the program continuing to make good progress toward that goal.

COMBINED M.D./Ph.D. TRAINING PROGRAM IN BREAST CANCER PREVENTION

INTRODUCTION

The goal of this program is to significantly extend our existing, highly successful Interdisciplinary Doctoral Training Program in Tumor Biology with a new track which integrates genetics, molecular epidemiology, and prevention of breast cancer. This new track offers both MD/PhD and PhD training opportunities, and integrates faculty from the Lombardi Comprehensive Cancer Center. To date, 5 MD/PhD and 5 PhD candidates were matriculated into this program. The program is enriched by new courses covering cancer genetics, molecular epidemiology, and cancer prevention, as well as practical research experience. To date, 4 new courses, including 2 electives and two core courses have been developed. This new programmatic initiative makes use of the existing organizational structure of the Interdisciplinary Doctoral Training Program in Tumor Biology and incorporates a multi-disciplinary faculty who are devoted to research and education in breast cancer. We have recently requested an extension of this grant period from 5 years to 6 years, in order to optimize our recruitment of the best qualified candidates for the available budget.

BODY

Training and Research Accomplishments

The accomplishments of this program, now finishing its fifth year, fall into two categories: the recruitment and progress of trainees, and the development of courses for the program. In the fifth year, we recruited Mr. Ogan Abaan and Ms. Maria Frech, Mr. Abaan received his BS and MS in Biology from the Middle East Technical University in Ankara, Turkey. Ms. Frech received her BS in Pharmacy from the Universidad Nacional de Rosar and has an MS in Food Technology from the Universidad Catolica Argentina; both Universities are in Rosario, Argentina. Mr Abaan will begin with a laboratory rotation with Dr. Toretsky, while Ms. Frech will initially rotate with Dr. Furth.

In the fourth year, we recruited Mrs. Youhong Wang to the program. Mrs. Wang joined the Tumor Biology program with advanced standing, as she has transferred from University of Illinois' Microbiology and Immunology PhD program and has a MS degree in Cellular and Molecular Biology from Sun Yat-sen University of Medical Sciences in China. Mrs. Wang completed her laboratory rotations, passed her Comprehensive Exams and is now in PhD research with Dr. Dickson studying Cell Survival mechanisms. Ms. Wang received a DOD predoctoral Fellowship to support her work.
Ion Cotarla, M.D. appointed during the third year of the program, has completed his comprehensive examination and is working on the regulation and function of Stat5 in normal and malignant mammary epithelial cells, in Dr. Priscilla Furth’s laboratory. Dr. Carlotta received a DOD Predoctoral Fellowship grant to support his work. Riddhis Shah, M.D., also in the third year of the program, is continuing his thesis research project, TGF beta regulator region polymorphism and its functional significance, with Dr. Carolyn Hurley. Rita Kralik, M.D., was also appointed into the third year of the grant, but elected to take an MS degree in Tumor Biology due to personal reasons.

Three trainees had been recruited for the second incoming class of the Program: one MD/PhD candidate, Ms. Carolyn Lee, and two PhD candidates, Ms. Sonia de Assis and Mr. Elijah Herbert. Ms. de Assis is in her fourth year of the program, she received a DOD predoctoral fellowship, and she is now working with her thesis mentor, Dr. Hilakivi-Clarke. Her thesis project concerns dietary factors during pregnancy and breast cancer. Ms. Lee completed her thesis research with Dr. Todd Waldman on breast cancer genetics and has just successfully defended her PhD thesis. She will re-enter Medical School this fall to complete the MD portion of her training. Unfortunately, Mr. Elijah Herbert withdrew from the program after only a few months for very acute health reasons; we were able to use his slot in the program for recruitment of Ms. Carolyn Lee (above).

Two trainees had been recruited into the first incoming class, Ms. Christine Coticchia and Ms. Stacey Kessler. Ms. Coticchia has received a DOD predoctoral fellowship, and is proceeding with thesis research with Dr. Robert Dickson, studying e-Myc mediated apoptosis in mammary carcinoma cells. Unfortunately, Ms. Kessler withdrew from the program for personal reasons, but she earned an MS degree in Tumor Biology. However, the funds made available due to her departure were productively used to recruit a student with advanced standing into the third class (Sonia deAssis, see above).

In addition to the existing core course work of our GU Interdisciplinary Doctoral Training Program in Tumor Biology, new course components have been incorporated into our Breast Cancer Prevention track since Spring, 2002. These include a course in Biostatistics, Applied Biostatistics, that has been refocused on statistical design and methodology for research rather than biostatistics theory, and a Cancer Genetics course, Genetics, Health, and Society in the 21st Century, which focuses on practical and ethical questions raised by genetic information and technology. Both courses have been very successful and continue to be offered. Applied Biostatistics has become a required course for Tumor Biology PhD and MS students. A new course in Genetics, Human and Microbial Genetics, had a successful first two years. Most recently, a Cancer Prevention and Epidemiology Course was created as a new core course.

All of these courses emphasize breast cancer, as most of the teaching faculty are extensively involved in breast cancer research. Interest in these courses has not been limited to students in the new Breast Cancer Prevention track; a number of additional students in the Interdisciplinary Doctoral Training Program in Tumor Biology and other biomedical graduate programs at Georgetown University have enrolled as well.
KEY ACCOMPLISHMENTS

- **Recruitment of New Trainees and Advancement of Existing Trainees:**

  **Class #5**
  - Ms. Maria Silvina Frech began with a laboratory rotation with Dr. Priscilla Furth, and then worked with Dr. Suzette Mueller.
  - Mr. Ogan Abaan has begun with a laboratory rotation with Dr. Toretsky.

  **Class #4**
  - Mrs. Youhong Wang has begun her PhD thesis work with Dr. Dickson.

  **Class #3**
  - Riddhish Shah, M.D. continues in his thesis research with Dr. Hurley.
  - Ion Cotarla, M.D. continues his thesis research portion of the program with Dr. Hurley.

  **Class #2**
  - Ms. Carolyn Lee completed her thesis research with Dr. Waldman, successfully defended her thesis, and will re-enter GU Medical School this fall to complete her MD/PhD training.
  - Ms. Sonia de Assis continues her thesis research with Dr. Hilakiv-Clarke.

  **Class #1**
  - Ms. Christine Coticchia is in the final year of her thesis research with Dr. Dickson. She is expected to defend her thesis early in 2005.

REPORTABLE OUTCOMES

- **Student Publications:**

  - Cavalli LR, Urban CA, Dai D, **De Assis S**, Tavares DC, Rone JD, Bleggi- Torres LF, Lima RS, Cavalli IJ, Issa J-PJ, and Haddad BR. Genetic and Epigenetic

- Student Abstracts/Presentations:

  - Frech MS, Halana Ed, Jilli MT, Chodosh LA, Flaus JA, and Furth PA, Dysregulating expression of estrogen receptor in a mammary epithelial cells results in development abnormalities and ductal hyperplasia. American Society for Investigative Pathology Meeting, Washington, DC, 2004

- **Shah R**, Polymorphisms in the extended 5’ region and signal sequence of human TGF β1 and its functional importance, *2004 GUMC Student Research Fair.*

- **Shah R**, Characterization of differential nuclear factor binding to common SNPs in transforming growth factor β1 and its functional significance, *2004 GUMC Graduate Student Research Fair.*

- **Coticchia CM.** and Dickson RB. The role of c-Myc overexpression in sensitization of mammary epithelial cells to apoptosis. *DOD ERA of Hope Meeting*, Orlando, FL, 2002.

**Postdoctoral Fellowship Awards:**

- **Christine Coticchia** received a DOD Fellowship Award in 2001 - Fas/Fas L System on c-Myc Expressing Mammary Carcinoma Cells.

- **Ion Cotarla** received a DOD Fellowship Award in 2003 - Nucleocytoplasmic Export of Stat5 in Normal and Malignant Mammary Epithelial Cells: Regulation and Implications in Breast Cancer.

- **Sonia de Assis** received a DOD Fellowship Award in 2003 – Pregnancy Leptin Levels and Breast Cancer Risk.

- **Youhong Wang** received a DOD Fellowship Award in 2004 – Transcription factor stat5 in invasion and metastasis of human breast cancer.
• Thesis Defense:

- Carolyn Lee successfully defended in 2004 her PhD thesis entitled: “Genetic Analysis of PTEN Function in Human Cancer Cells”

The goal of this training program is to dramatically extend our existing, highly successful Interdisciplinary Doctoral Training Program in Tumor Biology with a new track which integrates genetics, molecular epidemiology, and prevention of breast cancer. Additionally, new course components have been incorporated into the Breast Cancer Prevention track that focus on cancer genetics, cancer prevention, and epidemiology and cancer risk.
