THE TEXAS MEDICAL RANGERS AND THOUSANDS OF PATIENTS

Sergeant First Class Brenda Benner, TXARNG

In 2006, medical professionals from the Texas Army National Guard, the Texas State Guard and numerous local and state agencies offered thousands of low-income Rio Grande Valley residents an opportunity to see a doctor, dentist or nurse during the seven year old annual summertime humanitarian mission known as Operation Lone Star.

For those who lack access to affordable health care, Operation Lone Star provides basic dental care, medical exams, blood pressure and diabetes screenings, and also timely immunizations for children preparing for school. Temporary on-site pharmacies offered limited prescription medications at no charge to patients that could not otherwise afford them.

The Texas State Guard provided many of the personnel needed to keep up with the flow of thousands of patients divided among several makeshift clinics, most of which were set up at local elementary schools.

The Medical Reserve Corps (MRC), an organization within the Texas State Guard, was first activated in February 2003. The first unit was based at the University of Texas Health Science Center-San Antonio. Since then, regional groups have been established in Houston, Dallas-Fort Worth, Tyler and San Antonio among others. Recruitment is approaching 400 members.

A component of the Texas Military Forces, the MRC serves under the Adjutant General of the State of Texas and at the discretion of Texas Governor Rick Perry. It consists of medical professionals who volunteer their valuable skills to support public health agencies in times of state-wide emergencies. Known informally as Texas Medical Rangers, they train for a variety of public health emergencies ranging from natural disasters to outbreaks of contagious diseases, to the effects of chemical or radiological attacks. The volunteers augmented medical service to people who evacuated to Texas last year from Hurricanes Katrina and Rita evacuees. The Texas Medical Rangers also provide medical support during large-scale public events such as the annual multiple sclerosis 150-mile bike ride from Houston to Austin.

During the 2006 Operation Lone Star mission, Medical Rangers worked side-by-side with other nurses, doctors, therapists, public health officials and even students from several medical specialty training colleges. They helped patients with their in-processing paperwork, recorded their medical histories, took their blood pressure readings and temperatures, performed blood sugar screening, filled prescriptions, administered immunizations and provided medical exams.

“It’s nice having all of the military people here helping us,” said Rosie Bryan, a public health specialist from the Hidalgo County Health Department. “They helped us process hundreds of patients at this site in one day.”

## Abstract

The humanitarian mission gains momentum every year as more Rio Grande Valley residents utilize the clinics and more volunteers offer their medical expertise. This year, during a nine-day treatment period, more than 7,000 patients sought and obtained assistance. Nearly 4,000 immunizations were administered while approximately 4,500 diabetes screenings were performed. Approximately 2,000 patients received free prescription medications.

“Our success is due to teamwork,” said Texas Medical Ranger 2LT Sharon Bayer, a licensed vocational nurse from Boerne, near San Antonio. “We get a lot of support from the various county and city organizations, like the school districts that let us use their buildings.”

Medical Ranger MAJ Deborah Brooks, a chief nurse with the Tyler-based unit, said the integration among the Texas Army National Guard, the Texas State Guard and the medical personnel from the civilian health agencies was going well.

“I can tell there’s mutual respect among everyone I’ve encountered,” Brooks said. “I haven’t seen any ‘turf wars’; we’re all one big family.”

The commanding general of the Texas State Guard MRC, BG Marshall H. Scantlin, expressed his satisfaction during a visit to the make-shift clinic at Chapa Elementary School in La Joya.

“The teamwork between the units of the joint medical task force is obvious,” he said.

Medical professionals don’t join the Texas Medical Rangers for the money, but rather for the opportunity to help others while they increase their overall public health knowledge while working outside their normal job positions.

SGT Olivia Anderson, an emergency room paramedic at the Medical Center of Lewisville, meticulously poked and squeezed patients’ fingers for the tiny bead of blood she needed for their glucose readings. Sergeant Anderson, who is used to more drama and more blood than she encountered at her screening station, said that even performing a simple task is worthwhile.

“I joined the Rangers so that I could have part-time ties with the military and still have my civilian life to complete all of my medical training,” Sergeant Anderson said. “I love this; it’s rewarding. I’m able to give of myself, to use my medical skills to help others.”

With reliable support from the Texas Medical Rangers, Operation Lone Star’s annual success will undoubtedly continue in the tradition of “Texans serving Texans.”
