**Ruggedized Instrumentation Package for Marine Mammal Evoked Potential Hearing Measurements (DURIP)**

**Hawaii Institute of Marine Biology, Marine Mammal Research Program, P.O. Box 1106, Kailua, HI, 96734**

**Approved for public release; distribution unlimited**

**Security Classification of:**
- a. Report: unclassified
- b. Abstract: unclassified
- c. This Page: unclassified

**Limitation of Abstract:** Same as Report (SAR)

**Number of Pages:** 2

**Standard Form 298 (Rev. 8-98)**
Prepared by ANSI Z39-18
LONG-TERM GOALS

To examine the hearing of as many marine mammals and species as possible in order to develop an understanding of the normal hearing capabilities of marine mammals.

OBJECTIVES

To build a rugged field-ready portable battery-operated system to use to measure the hearing capabilities of marine mammals in the lab, on ships, on the beach or wherever we have the opportunity.

APPROACH

Assemble equipment into a field-ready system, test the system in the laboratory, improve it with use, deploy it to stranded animal and field situations as they become available and test the hearing of marine mammals.

WORK COMPLETED

New suction cups and other electrodes built and field tested. Icelandic field trip to test the hearing of the minke whale conducted in conjunction with a Joint Industry Program. New amplifier purchased.

RESULTS

Project has not been in existence long enough to produce significant results.

IMPACT/APPLICATIONS

Of the 85 species of whales and dolphins, we have basic hearing measurements on only 14 species. Many of our audiograms come from a single animal. This equipment will greatly assist in gathering information on what marine mammals hear. If navy operations are stopped because of the effects of noise on whales, it is imperative that we have baseline information on marine mammal hearing.
