1/12° Pacific HYCOM: The End Of A Long Simulation

E. Joseph Metzger, Harley E. Hurlburt and Alan J. Wallcraft
Naval Research Laboratory, Stennis Space Center, MS

HYCOM NOPP GODAE Meeting
27-29 October 2004
RSMAS, Miami, FL
Public reporting burden for the collection of information is estimated to average 1 hour per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. Send comments regarding this burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden, to Washington Headquarters Services, Directorate for Information Operations and Reports, 1215 Jefferson Davis Highway, Suite 1204, Arlington VA 22202-4302. Respondents should be aware that notwithstanding any other provision of law, no person shall be subject to a penalty for failing to comply with a collection of information if it does not display a currently valid OMB control number.

Standard Form 298 (Rev. 8-98) 
Prepared by ANSI Std Z39-18
1/12° Pacific HYCOM Modeling at NRL

- Initial 1/12° Pacific modeling began in Dec 2001 on the IBM SP at the Maui High Performance Computing Center

- Part of the FY02-FY04 DoD HPC Challenge grant: “Basin-scale prediction with the HYbrid Coordinate Ocean”

- Original proposal called for 46 years of both climatological and interannual forced simulations

- Completed 60 years of integration under Challenge: 17 climatological + 43 interannual
Major 1/12° Pacific HYCOM Experiments

- Climatological forced:
  - HR winds/ECMWF fluxes: 14 years
  - ECMWF winds/ECMWF fluxes: 20 years

- Interannual forced: 3 or 6 hourly
  - ECMWF winds + fluxes: 1979 – 2003
    - Highest horizontal/vertical resolution basin-scale simulation run for this long with interannual forcing
  - Integrated on ARL IBM SP3
    - ~1.45E6 Sus (4900 hrs x 297 processors)
  - Took 11 calendar months to complete
  - Generated 17.3 Tb of output

  - Initial state from this experiment will be used in a simulation with data assimilation
Basin-wide Mean Circulation
HYCOM Mean SSH

1/12° Pacific HYCOM – ECMWF climatological forcing
Niiler et al. (2003, GRL) – 40 cm bias removed
Tropical Current Systems
Zonal velocity across the equator

Observations from Johnson et al. (2002, Prog. Oceanogr.)
HYCOM with ECMWF or HR climatological forcing
Tropical Current Systems
Zonal velocity across the equator

Tropical Currents at 180°

Observations
ECMWF Forcing
HR Forcing

Observations from Johnson et al. (2002, Prog. Oceanogr.)
HYCOM with ECMWF or HR climatological forcing
Tropical Current Systems
Zonal velocity across the equator

Tropical Currents at 155°W

Observations from Johnson et al. (2002, Prog. Oceanogr.)
HYCOM with ECMWF or HR climatological forcing
Tropical Current Systems
Zonal velocity across the equator

Observations from Johnson et al. (2002, Prog. Oceanogr.)
HYCOM with ECMWF or HR climatological forcing
Equatorial Currents
Zonal velocity along the equator

Observations from Johnson et al. (2002, Prog. Oceanogr.)
HYCOM with ECMWF or HR climatological forcing
Equatorial Temperature

Temperature Along the Equator

Observations from Johnson et al. (2002, Prog. Oceanogr.)
HYCOM with ECMWF or HR climatological forcing
Equatorial Salinity

Observations from Johnson et al. (2002, Prog. Oceanogr.)
HyCOM with ECMWF or HR climatological forcing
Disappearance of the Equatorial Undercurrent During the 1982-83 El Niño

Zonal velocity on the Equator at 159°W

Adapted from Firing et al. (1983)

1/12° Pacific HYCOM

Yellow/red = eastward flow, blue = westward flow

HYCOM forced with interannual ECMWF winds and heat fluxes

No oceanic data assimilation
Currents in the Western Equatorial Pacific

WEPOCS III observations vs. HYCOM

July-August-September upper ocean currents

WEPOCS from Lukas et al. (1991, JGR)
## Vector Correlation

**WEPOCS III observations vs. HYCOM**

**WEPOCS III JAS 1988 mean vs. HYCOM**

**JAS means for individual years**

Kuroshio Extension Surface Currents

Vectors color-coded by speed

Uchida and Imawaki (2003, GRL)

Oct 1992 – Dec 2000 mean based on a combination of surface drifter and satellite altimeter data

Jan 1993 – Dec 2000 model mean

1/12° Pacific HYCOM
Interdecadal Variability in the Kuroshio Extension

SST anomalies (140°E-180°, 32°-38°N)

Observations from Reynolds and Smith (1994, J. Climate)
Anomaly relative to 1982-2001 monthly climatology
Collaboration with B. Qiu and S. Chen (U. Hawaii)
MODAS SST vs. 1/12° Pacific HYCOM
2003 Mean error

NOGAPS wind/thermal forcing; radiative fluxes corrected to SOC mean
White area ± 0.5°C
Scientific Interest in Pacific HYCOM Output

- Z. Yu (U. Hawaii)
  - project to study equatorial subsurface countercurrents, namely the Tsuchiya Jets

- E. Firing and F. Ascani (U. Hawaii)
  - project to study sub-thermocline extra-equatorial jets
  - symmetric currents extending from about 400 – 1500 m with eastward (westward) flow ~1.5° (~3°) on either side of the equator

- J. Kool (RSMAS)
  - Developing an agent-based model of intraspecific genetic diversity; using HYCOM output for development and testing
Scientific Interest in Pacific HYCOM Output

- L. Rothstein and Y. Luo (U. Rhode Island)
  - Looking at the Mixed Water Region in the Kuroshio Extension region
  - Analyzing the Kuroshio’s impact on the subtropical/subpolar exchange processes

- P. Niiler and C. Ohlmann (UCSD)
  - ONR funded project to compare HYCOM output with 1990-1999 drifting buoy data in the California Current region

- W. Cheng (U. Washington)
  - Comparing model pycnocline transport across 9°S/9°N with observations
Scientific Interest in Pacific HYCOM Output

- **Y. Jia (U. Hawaii - IPRC)**
  - Developing nested Hawaiian Islands HYCOM
  - Using BC’s from 1/12° Pacific HYCOM
  - Plans call for a high resolution model with data assimilation to predict near-shore sea states, and to provide information for local fisheries, search and rescue operations and hazard management

- **L. Thompson (U. Washington) and K. Kelly (APL)**
  - ONR funded project to evaluate 1/12° Pacific HYCOM using satellite and in situ observations
  - Long term goal is to improve high resolution ocean models through evaluation and analysis of model subsurface and thermal structure
Future Plans for Pacific HYCOM

- Begin a simulation with data assimilation
  - NCODA system developed by Jim Cummings
  - FNMOC NOGAPS forcing
  - Start in 2001 and integrate to near real-time

- Transition a near real-time, data-assimilative, semi-operational Pacific HYCOM nowcast/forecast system to NAVOCEANO by the end of FY05
  - Will probably run once per week
  - 1/12° is the target resolution for the global nowcast/forecast system set for transition to NAVOCEANO in FY07
