Award Number: W81XWH-10-1-1021

TITLE: Post-traumatic Headache and Psychological Health: Mindfulness Training for Mild Traumatic Brain Injury

PRINCIPAL INVESTIGATOR: Sutapa Ford, PhD

CONTRACTING ORGANIZATION: University of North Carolina at Chapel Hill
Chapel Hill NC 27599-1350

REPORT DATE: October 2014

TYPE OF REPORT: Annual

PREPARED FOR: U.S. Army Medical Research and Materiel Command
Fort Detrick, Maryland 21702-5012

DISTRIBUTION STATEMENT:

☑ Approved for public release; distribution unlimited

The views, opinions and/or findings contained in this report are those of the author(s) and should not be construed as an official Department of the Army position, policy or decision unless so designated by other documentation.
Traumatic brain injury has been coined the signature injury of OIF/OEF, with posttraumatic headache being a cardinal symptom found to be as high as 36% of soldiers with MTBI. Combat-related headaches are undertreated, associated with high sick calls, missed days, negative psychological/mood states, and impair overall quality of life. Comorbid anxiety, depression, PTSD and other psychological, psychosocial, and health stressors portend poorer TBI/headache outcomes, supporting the need for integrative health care. Development, evaluation, and integration of a specialized posttraumatic headache treatment program into a comprehensive TBI rehabilitation effort is critical to restoration of function, health, and quality of life of our soldiers. This project addresses multiple FY09 TBI/PH topic areas by validating an evidence-based, mind-body approach for prevention and treatment of post-TBI headache, stress, and associated psychological health issues in order to restore function, enhance well being, prevent post-TBI headache chronification, develop psychological resilience, and promote long-standing health benefits. The focus of this project is on evaluation of mindfulness based stress reduction as one, potentially critical component of a comprehensive rehabilitative effort for this group of MTBI patients.

Introduction

Traumatic brain injury has been coined the signature injury of OIF/OEF, with posttraumatic headache being a cardinal symptom found to be as high as 36% of soldiers with MTBI. Combat-related headaches are undertreated, associated with high sick calls, missed days, negative psychological/mood states, and impair overall quality of life. Comorbid anxiety, depression, PTSD and other psychological, psychosocial, and health stressors portend poorer TBI/headache outcomes, supporting the need for integrative health care. Development, evaluation, and integration of a specialized posttraumatic headache treatment program into a comprehensive TBI rehabilitation effort is critical to restoration of function, health, and quality of life of our soldiers. This project addresses multiple FY09 TBI/PH topic areas by validating an evidence-based, mind-body approach for prevention and treatment of post-TBI headache, stress, and associated psychological health issues in order to restore function, enhance well being, prevent post-TBI headache chronification, develop psychological resilience, and promote long-standing health benefits. The focus of this project is on evaluation of mindfulness based stress reduction as one, potentially critical component of a comprehensive rehabilitative effort for this group of MTBI patients.

Body

This project marks the collaboration between the University of North Carolina at Chapel Hill (UNC), Womack Army Medical Center (WAMC), and the Carolina Headache Institute (CHI). During these last 12 months, we accomplished the majority of the goals proposed in the Statement of Work. Specifically, we contacted 241 potential subjects. We screened 132 and enrolled 79 subjects. We have randomized 9 cohorts, finishing cohorts 1 through 5 and are in the follow-up phase of cohort 6, 7 & 8. We renewed both UNC and WAMC IRBs.

Key Research Accomplishments

- We are achieving enrollment projections and have successfully launched 9 of 12 cohorts.
- We were awarded a no-cost extension until September 2015 and have maintained IRB/Continuing review approvals

Reportable Outcomes

1. Subject Recruitment (Goal: 120 subjects)
   - 241 Contacted
   - 132 Screened
   - 79 Enrolled
     * Cohort 1: 5 enrolled
     * Cohort 2: 8 enrolled
     * Cohort 3: 12 enrolled
     * Cohort 4: 6 enrolled
     * Cohort 5: 10 enrolled
     * Cohort 6: 10 enrolled
     * Cohort 7: 7 enrolled
     * Cohort 8: 7 enrolled
     * Cohort 9: 7 enrolled
     * Cohort 10: 3 enrolled

2. Accomplishments
   - Cohorts #1- #4 completed
   - Cohort #5 pending hit 6 info
   - Cohort #6 pending follow-ups
   - Cohort #7 pending follow-ups
   - Cohort #8 pending 2 week follow-ups
   - Initiated intervention for Cohort #9 December 1, 2014
   - Recruiting for Cohort #10
   - No cost extension approved Nov 13, 2014
   - Continuing Review approved on July 14, 2014.
Conclusion

We have accomplished the majority of the tasks outlined in the SOW. We are on track to complete all interventions, finalize database, complete statistical analyses, and prepare manuscripts by September 2015.
