Problems and Challenges
DoD Weapon Systems Acquisition Continues To Be High Risk Area

While DOD’s acquisition process has produced the best weapons in the world, it also yields undesirable consequences in weapon system programs – cost increases, schedule delays, and performance shortfalls. Problems occur because weapon programs do not capture early on the requisite knowledge that is needed to effectively manage risks. Programs move forward with unrealistic cost and schedules estimates, lack clearly defined and stable requirements, use immature technologies, and fail to solidify design and manufacturing processes at appropriate junctures in development. As a result, programs require more resources than planned, the buying power of the defense dollar is reduced, and funds are not available for other competing needs.

Paul Francis, Director
Acquisition and Sourcing Management
U.S. Government Accountability Office
May 18, 2004
Problem Statement

A statement of organizational process maturity or capability level does not guarantee performance to that same level of proficiency on an individual project.

Most DoD contractors claim high maturity/capability levels, yet from the perspective of the acquirer, systems engineering and program management practices are severely lacking.

Teaming arrangements further cloud the issue of process execution and proficiency.

Associated problems may not be evident until significant cost, schedule, or performance objectives have been missed at a late point in the program where corrective actions are very costly.

How can the acquirer gain the necessary insight into process execution and proficiency as well as reinforce desired behaviors?
Development Challenges

Huge system/software engineering endeavors in aircraft, space vehicles, ground systems, C2, C4ISR, battle mgt, etc

Significant risks for acquisition programs

- Multi-million SLOC programs; “hybrid” systems combining legacy re-use, COTS, new development
- Multi-contractor teams using different processes; Dispersed engineering & development locations
- New technologies create opportunities/challenges; products change/evolve
- Business/operational needs change - often faster than full system capability can be implemented
- Contractor and Acquirer skills shortfalls; Cost and schedule constraints
Acquirers’ Concerns

Appraisals are conducted just for the “ratings”
Appraisal team/lead objectivity and expertise is questionable, especially with high maturity appraisals
Appraisals are conducted on dissimilar projects and/or in unrelated organizations/sites
The effect of teaming arrangements on project process performance is not accounted for
There is a lack of insight into contractor process execution on specific projects
The effect of process immaturity in acquiring organizations
High Maturity Organizations

Maturity Levels are indicators of organizational potential performance. They describe how the next project may perform based on a sampling of existing projects.

Maturity Levels reside at the organizational level and are not an indication of how an individual project is performing.
Acquirer Needs

A means to assess developer process execution on their project
  • Process performance
  • Process capability
  • Process adherence

A means to assess project process execution across large, distanced, and diverse teams

A means to assess all technical and project management process areas
  • Engineering
  • Project Management
  • Financial Management
  • Support Processes

A means to assess project risks driven by developer process execution

A means to assess the potential process execution risks in source selection
Assessment Alternatives
Standard CMMI Appraisal Method for Process Improvement (SCAMPI)

- Class A Method
  - Maturity or Capability ratings
  - No ratings

- Class B Methods
  - Quick Look
    - “Intentions” for execution
  - No ratings

- Class C Methods
  - Tailorable Assessment
    - “Mini” Appraisal as executed
  - No ratings

Benchmarking and Baselinging

Confidence/Accuracy

Cost/Duration
Assessment Alternatives Mapped to Acquirer Needs

SCAMPI Method A
Institutionalization
Organizational focus
Rigorous, expensive
Ratings

Resource Intensive
Limited utility for source selection

SCAMPI Method B
Deployment and execution
Evidence of implementation
What they are doing

Contract Monitoring
Competitive Downselect

SCAMPI Method C
Approach
Plan for execution
What they will do

Contract Monitoring
Source Selection
Process In-Execution Reviews
PIER Ground Rules

Use the process model – CMMI
• Interview questions based on model
Appraisal of process performance and adherence
Focus on risk assessment – risks associated with process performance, adherence, and capability
Observe strict confidentiality
• Results not attributable to individuals or interview groups
Approach SCAMPI collaboratively
Results in actionable findings by Program Office and/or Contractor
What a PIER Is and Is Not

*Is* an appraisal (SCAMPI-B) of the execution of and the risks associated with process implementation of the entire project team, including sub-contractors

*Is* a mechanism to provide insight into the operations of a specific program with respect to the organization’s published maturity level

*Is not* a formal appraisal (SCAMPI-A)

- No rating
- No multiple projects within the organization; focus on specific project
- No coverage of entire life cycle; focus on phase or near-term milestones
Phase 1: Plan and Prepare for the Appraisal

**Appraisal Team/Lead**
- Lead assists Sponsor in matching appraisal w/business objectives
- Lead and sponsor agree on details of appraisal plan
- Lead prepares team members
- Prepares in-briefs for contractor
- Lead performs readiness review

**SEI/MITRE/ESC**
- Templates and guidance on plan preparation & PIER execution
- Assist PMO
- Model scope guidance
- Role definition guidance for customer & contractor
- Security procedures

**Contractor**
- Coordinates with the PMO
- Identify site coordinator, process lead, and non-voting team member (as appropriate)
- Schedule facilities & resources to support the plan
- Collect relevant objective evidence
- Prepare project to support PIER (schedule interviews, briefings, demos)

**PMO**
- Establishes contractual arrangement
- Sponsors appraisal
- Establishes business goals
- Coordinates with Contractor
- Coordinates & approves appraisal plan
Phase 2: Conduct Appraisal

<table>

<td>• Owns final findings &amp; authorizes release of information to ESC PIER Custodian</td>
</tr>
<tr>
<td></td>
<td>• Analyzes results &amp; integrates into project data for future use in award fee, program reviews, improvement initiatives, etc.</td>
</tr>
</tbody>
</table>
Example

Integrated Supplier Management

Description:
The purpose of Integrated Supplier Management is to proactively identify sources of products that may be used to satisfy the project’s requirements and to manage selective suppliers while maintaining a cooperative project-supplier relationship.

Strengths:
- Proactive engagement with suppliers on early Time and Materials subcontracts expedited the creation of supplier requirements documents and SOWs for the program.

Weaknesses:
- The lack of monitoring of supplier processes may cause execution of supplier agreements to be compromised. (SG 2)
- The Subcontract Management Plan is still in draft form. (GG 2)
Example

Integrated Supplier Management

Notes:
- Issues with critical subcontractors exist and continue to be worked

# PIER Commitment

## Appraisal Team/Lead
- Ensure team composition is high-caliber
- Everyone shares work load based on team expectations
- Collect lessons learned to improve the PIER (SCAMPI-B) process

## SEI/MITRE/ESC
- Support and refine PIER (SCAMPI-B) method
- ESC PIER Custodian
- Work with PMO to ensure appropriate interpretation & use of findings
- Ensure confidentiality of results
- Provide updated templates and materials

## Contractor
- Participation
- Evidence prepared with adequate time to review prior to on-site
- Resolution of access to information issues in advance of on-site
- Relevant personnel provided for interviews
- Act on findings

## PMO
- Contractual obligation
- Resources
- Act on findings
### PIER Lessons Learned

#### Appraisal Team/Lead
- Have consistent approach among team leads across program PIERs
- Train team on appraisal tools and templates prior to the appraisal
- Complete document review prior to start of the on-site
- Site coordinator needs to know the CMMI model
- Team building activities critical

#### SEI/MITRE/ESC
- Need guidance and templates to ensure consistency of PIERs
- Capture observations and trends to isolate potential systemic problems
- Plan PIERs to avoid impacting peak or critical activities
- Contractor non-voting team member proved very valuable
- Credibility counts!

#### Contractor
- Provides feedback on process implementation
- Non-trivial amount of effort to support the PIER activity
- Demonstration of organization’s commitment to CMMI

#### PMO
- Provides confidence in contractor through insight
- Process proficiency and execution varies substantially
- Basis for assessing contractor responsiveness
- PMOs must work internal processes to complement Contractor
ESC Case Studies
ESC Case Studies

Joint Environmental Tool Kit (JET)
  • Contract monitoring

  • Competitive downselect

KG-3X Crypto Modernization Program
  • Contract monitoring
  • Risk identification
  • Competitive downselect

Joint Mission Planning System (JMPS)
  • Contract monitoring
  • Risk identification
Summary
Next Steps for PIER

Expand the scope of PIERs

Financial Management

Assess execution of Earned Value Management System (EVMS) practices especially in correlating product maturity and performance to earned value – Technical Performance Measures (TPMs)

Product Quality

Product quality in terms of technical maturity and product performance using models, simulations, prototypes, and early functional assessments

May integrate with the Integrated Baseline Review (IBR) process
Summary

SCAMPI-A appraisals and advertised CMMI ratings do not guarantee that individual projects will perform to those levels of proficiency.

PIERs have validated the SCAMPI-B Method in a contract monitoring context.

PIERS provide insight into project process execution, both for Program Office and for Contractor.

PIERS demonstrate program office commitment to process.

PIERs can be complementary components to other reviews and technical interchanges.

PIERs can be used to support award fee evaluations.
