Supplemental Appropriations Act of 1985 for Engineering and Design and Land Acquisition and Water Resources Development Act of 1986; PL 99-662, Sec.301 (a) Water Resources Development Act of 1992; PL 102-580, Sec. 10 Authorized the Navigation improvements to replace the fixed crest dam at Locks and Dam 2 with a gated dam; raises the existing pool 2 by 5', construct twin 84'x720' locks at Locks and Dam

## PITTSBURGH, PA, DISTRICT

4, and eliminates Locks and Dam 3; lowering the existing pool 3 by 3.2'. Authorized cost of \$705,000,000. Cost of construction is to be paid equally from the general fund of the Treasury and the Inland Waterways Trust Fund.

**Local Cooperation.** None required.

**Terminal Facilities.** City of Pittsburgh constructed a modern wharf for freight. Boat landings are maintained by some municipalities along the river. A large number of tipples at mines and various types of hoists at manufacturing plants and sand and gravel supply companies are maintained for private use in loading and unloading coal, coke, billets, steel products, sand, gravel, and other commodities. These terminals and docks are not available for general commerce. A number of docks and pipelines are also privately maintained for petroleum and acid products. Marine ways are maintained by some of the larger industries. These are also several terminals for rail-to-river and river-to-rail transfer. Facilities are considered adequate for existing commerce.

**Operations During Fiscal Year.** New Work: Work continues on cultural resources and finalizing real estate actions for the remainder of the Grays Landing and Point Marion projects. The present projects consist of 84 acres of fee land and 403.3 acres of easement. The Water Resources Development Act of 1992 authorized the District to proceed with navigation improvements on the Lower Monongahela River. Locks and Dams (L/D) 2, 3 and 4 are located within 50 miles of the "Point" in Pittsburgh. The authorized Lower Mon Project is a two-for-three improvement that will replace the 100-year old fixed-crest dam at L/D 2 with a gated dam (Braddock Dam) and replace the 70-year old, undersized Locks 4 with new twin 84' x 720' locks. The 100-year old L/D 3 will be removed and a new navigation pool will be established that will be 5' higher between Braddock and Elizabeth and 3.2' lower between Elizabeth and Charleroi. The project will adjust all municipally owned facilities adversely affected by these river level changes and dredge existing Pool 3. In addition, the Port Perry Railroad Bridge crossing at river mile 11.7 will be adjusted to accommodate the higher pool level under a cost sharing contract with Norfolk Southern Railroad. The new Braddock Dam is fully operational, dedicated on 27 May 2004, with contract completion in July 2004. Focus is now shifting to construction of the new locks at the Charleroi L/D. Approximately \$303 million of project construction contract work has been undertaken through FY 2005, including the new Braddock Dam; approach dikes for the new Charleroi Locks; initial Pool 3 dredging; relocations for West Elizabeth, Elizabeth, Dravosburg, Glassport, Charleroi and Mon Valley sewage; site development for the new Charleroi Locks, and the demolition of the existing river chamber at the Charleroi Locks. An additional contract for the construction of the new River Wall was awarded in September 04 for \$96.5M.

**Operations & Maintenance, General.** In FY05 government hired labor dewatered lock chamber and replaced gate sill at Point Marion for \$771,475. The

lock chamber at Maxwell Lock and Dam was dewatered and gates were repaired for \$2,542,099. In addition to the dewaterings the valve cylinders were replaced at Lock and Dam 3 for \$40,000.

### 4. OPEN-CHANNEL WORK, OHIO RIVER

See this heading under Ohio River portion.

### 5. TYGART LAKE, WV

**Location.** Tygart Lake is located on the Tygart River in Taylor and Barbour Counties, north central WV. The lake is approximately 26 road miles due east of Clarksburg, WV and 30 road miles south of Morgantown. The dam is situated 22.7 river miles above the mouth of the Tygart River at Fairmont, or 2.25 miles upstream from Grafton, WV, and about 78 miles south of Pittsburgh, PA. (See Geological Survey Charts for Fairmont, Thornton, and Belington, WV.)

**Existing Project.** A reservoir for low water regulation and flood control. Dam is concrete gravity type with an uncontrolled center spillway flanked by abutment sections joining valley sides. Project was authorized by Public Works Administration January 11, 1934, and adopted by 1935 River and Harbor Act. For further project description see Annual Report for 1962. Authorized project is complete. Reservoir is in operation for low water control in Monongahela River and for purpose of flood protection in Monongahela and Ohio Valleys. Construction of dam was started in 1935 and placed in operation in 1938. Present project lands consist of 2,662.9 acres in fee, flowage easements over 1,216.9 acres and 1,731.9 acres of other easements. The project includes a Class C Visitor Center at the dam site and a day use picnic area outside the office, although no significant recreation exists on Corps managed land.

**Local Cooperation.** The State of West Virginia has assumed responsibility for the development and operation of hunting and fishing areas as well as the Tygart Lake State Park. Controlled releases for downstream navigation and recreation are also coordinated with others to the extent feasible. No local cooperation is required at completed project; however, future recreational developments are subject to certain conditions of non-federal cost-sharing under Federal Water Project Recreation Act of 1965. A cost-sharing agreement was executed with the West Virginia Department of Recreation in May 1981.

**Licenses.** The Federal Energy Regulatory Commission granted a license to the City of Grafton for construction of a non-federal hydropower facility at this project (FERC license 11851). Details of the design and other issues are still being finalized. The deadline for the start of project construction expired on April 15, 1995. The developer was granted an extension which expired on March 1, 2004; the City of Grafton submitted an application for a preliminary permit on 26 March 2004.

**Operations During Fiscal Year.** Operations & Maintenance, General: Reservoir was operated for benefit of flood control and low water regulation, as required, and project structures were operated and maintained in a serviceable condition throughout the

## REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2005

year. Estimated flood control benefits achieved by this project for FY 2005 were \$31,414,000 and, revised to reflect damages prevented in downstream districts as well as Pittsburgh District, were \$1,152,431,000. Activities under reservoir management program comprising sanitation measures, conservation, land management, and operation and maintenance of public use facilities continued. This work was limited in scope as the State of West Virginia has jurisdiction over most of the recreation in the reservoir area.

Tygart Dam was selected as a Dam Safety Assurance Project in March 1996. The Evaluation Report was initiated in March 1994 to address spillway capacity and structural stability in relation to the probable maximum flood event. Findings of the report concluded that under present conditions, the probable maximum flood would overtop the dam and cause failure. The report recommends protecting the dam from failure to include downstream erosion protection and stilling basin modifications. The Design Memorandum was completed in September 1998 and Plans and Specifications were completed in July 1999. The construction contract was advertised in August 1999 and awarded to Joseph B. Fay Co. on September 28, 1999 for \$5,628,929. The Notice to Proceed was issued in October 1999 and work was completed in November 2002. The project features included construction of a new road to provide access to the left bank abutment of the dam, new concrete channels consisting of a concrete wall (end sill) and concrete slope paving on the downstream side of the dam, new concrete lagging retaining walls on the left and right banks of the dam, modification of the existing parapet wall, and minor repairs to the roadway decking. The project is now in compliance with current Dam Safety requirements. A construction contract to upgrade the electrical and mechanical systems was advertised in September 2003, awarded and started in 2004. Work is expected to be completed by June 2006.

A Section 1135 Streambank Protection Project with the State Park is nearly complete for an estimated cost of approximately \$700,000.

### 6. OTHER AUTHORIZED NAVIGATION PROJECTS

See Table 18-C on other authorized navigation projects.

#### Flood Control - Local Protection

### 7. ELKINS, WV

**Location.** On Tygart River in north central Randolph County, WV, about 155 miles south of Pittsburgh, PA. It is at downstream end of a long, broad reach of upper Tygart Valley, about 75 miles above mouth of river. (See Geological Survey Chart for Elkins, WV.)

**Existing Project.** Provides flood protection by diverting flood discharges from upstream arm of loop of natural river channel into an artificial cutoff channel, thereby bypassing City of Elkins. Improvement is

designed to accommodate discharges equivalent to maximum flood of reasonable expectancy. Project construction was started in May 1946 and completed in May 1949. Completed work, except that portion of channel maintained by federal government, has been operated and maintained by City of Elkins since March 31, 1949. Present project lands consist of 32.04 acres in fee and 526.01 acres in easements. Project was authorized by 1938 Flood Control Act. For further project description see Annual Report for 1962, page 1222. Federal cost of completed project was \$1,772,627; estimated non-federal cost for lands, easements, and rights-of-way was \$40,000.

**Local Cooperation.** Fully complied with.

**Operations During Fiscal Year.** Operation & Maintenance, General: routine investigations and inspections were made. Project was last inspected in September 2004. Next inspection is scheduled for 2006. Total benefits through September 2005, revised to reflect damages prevented in downstream districts as well as Pittsburgh District, were \$23,936,000.

### 8. JOHNSTOWN, PA

**Location.** Project is located in southwestern Cambria County, PA, about 58 miles east of Pittsburgh, PA. It is in a deep and comparatively narrow valley at junction of Stoney Creek and Little Conemaugh River, which unite to form Conemaugh River. (See Geological Survey Chart for Johnstown, PA.)

**Existing Project.** Provides for increased channel capacity by enlarging and realigning channels and protecting banks with concrete pavement. Improvement designed to accommodate discharges equivalent to those of March 1936 flood, maximum natural flow of record, minimum of over-bank flow and to practically eliminate damages there from. Project construction began in August 1938 and was completed in November 1943. Footer protection for Unit 4 was completed in November 1949. Present project lands consist of easements over 199 acres. Project was authorized by Flood Control Acts of 1936 and 1937. For further project description see Annual Report for 1962, page 1215.

**Local Cooperation.** The rules of local cooperation for the rehabilitation of the existing project are governed by the FY 1991 Energy and Water Resources Appropriations Act. Pursuant to this act, the City of Johnstown will have a limited role in securing the needed rights of access to non-federal structures included in the line of protection and will hold and save the United States from damages due to construction or operation and maintenance of the work on the non-federal structures, except for damages due to the fault or negligence of the United States or its contractors.

**Operations During Fiscal Year.** Operations & Maintenance, General: The FY 1991 Energy and Water Resources Development Appropriations Act authorized and directed the Corps to undertake a major rehabilitation of the existing project. The Project Design Memorandum was approved in June 1995. The

## PITTSBURGH, PA, DISTRICT

major rehabilitation work is to be accomplished under the Construction, General (CG) appropriation at an estimate cost of \$32,500,000. Contract plans and specifications were initiated in July 1995. The CG project was physically complete in September 2004 at a cost of \$30,000,000. The Construction, General work consisted of the repair of 54 existing wall sections, slope paving and replacement of balustrade (safety) wall. Also included in the major rehabilitation is all the necessary Operation and Maintenance (O&M) funded work. The O&M work estimated to cost \$7,500,000 consists of concrete spall repairs, slope paving joint repairs, sediment removal and miscellaneous repairs. \$2,535,047 of O&M funded work was completed in FY 2005 and about \$2,000,000 of O&M funded work remains to be complete subject to availability of funds. Estimated flood control benefits achieved by this project for FY 2005 were \$455,000. Flood damages prevented by the project through September 30, 2005 were estimated to be \$805,349,000.

### 9. PUNXSUTAWNEY, PA

**Location.** Borough of Punxsutawney is on Mahoning Creek in Jefferson County, PA, about 85 miles northeast of Pittsburgh, PA. It is on a comparatively wide, alluvial flood plain about 52 miles above mouth of stream and 30 miles above Mahoning Creek flood control dam. (See Geological Survey Charts for Punxsutawney and Smicksburg, PA.)

**Existing Project.** Provides flood protection by channel enlargement, dikes, and walls. Improvement is designed to accommodate discharges 20% greater than that of maximum flood of record. Construction was accomplished by construction of four units. Construction started in May 1946 and was completed in June 1950. Present project lands consist of perpetual easements over 72.6 acres. Completed works, except that portion of channel maintained by the federal government, have been operated and maintained by Borough of Punxsutawney since July 31, 1950. Project was authorized by 1938 Flood Control Act. For further project description see Annual Report for 1962, page 1209.

**Local Cooperation.** Fully complied with.

**Operations During Fiscal Year.** Operations & Maintenance, General: operation activities continued and routine investigations and inspections were made. Project was last inspected in July 2005. The estimated flood control benefits in FY05 were \$633,000; total flood control benefits through September 2005 were \$98,212,000.

### 10. SAW MILL RUN, PITTSBURGH, PA

**Location:** The project is located within the City of Pittsburgh, Allegheny County, at Ohio River mile 0.7 and traverses upstream from the mouth of Saw Mill Run approximately 4,700 L.F.

**Existing Project:** The proposed project was authorized in the 1986 WRDA in accordance with the Chief of Engineers report dated January 30, 1978. The

1996 WRDA increased the project estimate to \$12,780,000 and increased to \$22,000,000 in the FY04 Appropriations Act. This project was included in the FY97 appropriations as a new construction start.

**Local Cooperation:** The City of Pittsburgh is the local sponsor for this project and is responsible for real estate acquisition and relocation design and construction. The project will be cost shared 75% federal and 25% non-federal in accordance with the requirements of the 1986 WRDA.

**Operations During Fiscal Year:** In October 1997, a Project Cooperation Agreement was executed with the City of Pittsburgh. In June 1998, the District executed a Memorandum of Agreement (MOA) for the purpose of allowing the District to acquire the real estate and complete relocation work on behalf of the city. With the MOA executed and the funds for this effort transferred to the District in July 1998, real estate acquisition was initiated, and was completed in November 2000. Plans and specifications for the project were completed in March 2000 and the construction contract was advertised in November 2000. The contract was awarded in April 2001 for \$12,881,875. The current construction contract was completed in May 2004 and turned over to the City of Pittsburgh for operation and maintenance responsibilities in June 2004. Due to contract overruns and unforeseen conditions certain project features were deleted from the existing construction contract in order to maintain project cost within funding constraints. The project was completed to a 5-year level of protection in 2005.

### 11. WEST VIRGINIA & PENNSYLVANIA FLOOD CONTROL

**Location.** Projects under this program in the Pittsburgh District are located in the Tygart River Basin in West Virginia and the lower Allegheny River in Pennsylvania. The priority (named in the legislation) communities located in West Virginia are Phillipi, Belington, Parsons and Rowlesburg. The priority communities in Pennsylvania are New Bethlehem, Clymer, Benson, Hooversville, Meyersdale, Connellsville and Dubois. Section 581 of the Water Resources Development Act of 1996 authorizes the Secretary of the Army to design and construct flood control measures for these priority communities at a level of protection sufficient to prevent future losses from flooding equivalent to that which occurred in January 1996, but at least no less than a 100 year level of protection. Project development will consist of developing a least cost plan including structural and/or non-structural elements, to provide the authorized level of protection without guard to a benefit/cost ratio.

**Local Cooperation.** The reconnaissance phase is 100% federally funded. The Detailed Project Report (DPR), Plans and Specifications and Construction phases are cost shared at 65% federal funds and 35% non-federal funds. A Design Agreement is required to design efforts and a Project Cooperation Agreement is required prior to the project construction. In September 1998, Director of Civil Works, HQUSACE, approved the District's request for a waiver of the up-front cost

## REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2005

sharing for the design portion of the West Virginia projects. The basis for the approval of the waiver was that the priority communities in West Virginia qualified for a reduced cost share (5%) based on the ability to pay provisions of Section 103(m) of the Water Resources Development Act of 1986.

**Operation During Fiscal Year.** In Pennsylvania, the General Management Plans for the seven communities were completed in January 1999. Project Study Plans (PSP) for the seven communities were completed in July 2000. Design Agreements are being prepared and current plans call for the execution of these agreements pending the local sponsors' ability to obtain the non-federal cost share. Design Agreements were executed for the Meyersdale and Hooversville projects in FY 2001.

In West Virginia, the PSPs for the two communities were completed in September 1998 and approved in November 1998. Since no Design Agreement is required for these communities, work on the Detailed Project Reviews started in December 1998. Least cost plans and locally preferred plans for both communities have been developed. A decision to implement a Flood Warning System for the two communities as the first phase of the projects was made in September 1999. An interim DPR for the Flood Warning System was submitted in November 2001. Installation of the Flood Warning System was completed. The Philippi DPR was completed in FY 2004 and approved in FY 2005. Design has been initiated at the Philippi project.

### Flood Control – Reservoirs

#### 12. BERLIN LAKE, OH

**Location.** Dam is on Mahoning River about 73 miles above its confluence with Shenango River. It is about 10 miles above existing Milton Reservoir Dam and 35 miles upstream from Warren, Ohio. Reservoir is in Portage, Mahoning and Stark Counties, OH. (See Geological Survey charts for Warren, Ravenna, and Alliance, OH.)

**Existing Project.** A reservoir for flood control and water supply. Dam consists of a partially controlled, concrete gravity, center spillway flanked by rolled-earthfill abutment sections joining valley sides. Authorized project is complete and in operation for flood control and low water regulation purposes in industrialized Mahoning Valley below. Construction of dam was started in January 1942 and completed in June 1943. Present project lands consist of 6,885.3 acres in fee and 1,098.7 acres in easements. For further project description, see Annual Report for 1962, page 1233.

**Local Cooperation.** None required at completed project; however, future recreational developments are subject to certain conditions of non-Federal cost-sharing under Federal Water Project Recreation Act of 1965.

**Operations During Fiscal Year.** Operations & Maintenance, General: Reservoir was operated as required and necessary repairs were made to structures and appurtenances. In FY 2005, fire and hurricane

damage necessitated repairs to the electrical and mechanical system for \$508,000. Estimated flood control benefits achieved by this reservoir for FY 2005 were \$40,134,000; total flood control benefits through September 2005 were \$999,848,000.

#### 13. CONEMAUGH RIVER LAKE, PA

**Location.** Dam is on Conemaugh River in Indiana and Westmoreland Counties, PA, 7.5 miles above junction of Conemaugh River and Loyalhanna Creek, which form the head of the Kiskiminetas River. It is about 2 miles northeast of Tunnelton, PA, and about 42 miles east of Pittsburgh, PA. Reservoir is in Westmoreland and Indiana Counties, PA. (See Geological Survey Charts for Latrobe, New Florence and Elders Ridge, PA.)

**Existing Project.** A flood control reservoir dam of concrete gravity type with a gate-controlled center spillway flanked by abutment sections joining valley sides and an earth embankment ending in right abutment. Authorized project is complete. Reservoir system is designed for protection of Pittsburgh and reduction of flood heights in upper Ohio Valley, generally. Present project lands consist of 7608.7 acres in fee and 522.8 acres in easements. Project authorized by Flood Control Acts of 1936 and 1938. For further project description see Annual Report for 1962, page 1217.

**Local Cooperation.** None required by law.

**Licenses.** A non-federal hydropower project utilizing Conemaugh Lake was constructed downstream of the dam under FERC Licenses 3207. The 15-megawatt project began commercial operation on February 6, 1989. It is owned by National Renewable Resources, Inc.

**Operations During Fiscal Year.** Operation & Maintenance, General: Reservoir was operated for benefit of flood control as required, and necessary repairs were made to structures and appurtenances. In FY 2005 the plans and specifications were completed for the Gantry Crane Power Supply for \$42,000. Estimated flood control benefits achieved by this reservoir for FY 2005 were \$178,793,000; total flood control benefits through September 2005, revised to reflect damages prevented in downstream districts as well as Pittsburgh District, were \$2,129,377,000. Activities under reservoir management program comprising sanitation measures, conservation, land management and operation and maintenance of public use facilities were continued.

#### 14. CROOKED CREEK LAKE, PA

**Location.** Dam is on Crooked Creek 6.7 miles above junction of creek with Allegheny River near Ford City, PA, and about 32 miles northeast of Pittsburgh, PA. (See Geological Survey Charts for Freeport and Elders Ridge, PA.)

**Existing Project.** A flood control reservoir dam of earth-fill type with separate uncontrolled saddle spillway and tunnel outlet works. Authorized project is complete. Reservoir is in operation as a unit of a

## PITTSBURGH, PA, DISTRICT

coordinated reservoir system designed for protection of Pittsburgh and reduction of flood heights in upper Ohio Valley, generally. Construction of dam was started in March 1938 and completed in October 1940. Present project lands consist of 2,561.7 acres in fee and 100.22 acres in easements. Project was authorized by Flood Control Acts of 1936 and 1938. For further project description see Annual Report for 1962, page 1213.

**Local Cooperation.** None required by law

**Operations During Fiscal Year.** Operations & Maintenance, General: Reservoir was operated for benefit of flood control, as required, and necessary repairs were made to structures and appurtenances. The lease with Manor Township for the Armstrong Horse Park remained in effect. Congress has mandated the transfer of 97.48 acres of free land to Manor Township for operation of the Armstrong Horse Park.; the lease has not yet been transferred. In FY 2005 the service bridge access road was repaired for \$78,000 due to flood washout. Estimated flood control benefits achieved by this reservoir for FY 2005 were \$46,736,000; total benefits achieved through September 30, 2005, revised to reflect damages prevented in down stream districts as well as Pittsburgh District, were estimated at \$534,744,000. Activities under reservoir management program comprising sanitation measures, conservation, land management, and operation and maintenance of public-use facilities continued.

### 15. EAST BRANCH, CLARION RIVER LAKE, PA

**Location.** Dam is in Elk County, PA on East Branch of Clarion River above Middle Fork, 7.3 miles above junction of East and West branches of Clarion River at Johnsonburg, PA, and about 105 miles northeast of Pittsburgh, PA. Reservoir is in Elk County, PA. (See Geological Survey Chart for Mount Jewett, PA.)

**Existing Project.** A reservoir for flood control and low-water regulation. Dam is rolled-earthfill type with gate-controlled concrete tunnel under right abutment and a paved uncontrolled spillway on left abutment slope. Authorized project is complete. Reservoir is in operation for low-water regulation purposes in Clarion River Valley below and for flood control as a unit of a coordinated reservoir system for protection of Pittsburgh and upper Ohio Valley, generally. Construction of dam was started in June 1947 and completed in July 1952. Present project lands consist of 287.2 acres in fee and 1,296.7 acres in easements. Project was selected for construction under general authorization for Ohio River Basin in Flood Control Acts of 1938 and 1944. For further project description. See Annual Report for 1962, page 1206.

**Local Cooperation.** None required by law.

**Operations During Fiscal Year.** Operations & Maintenance, General: reservoir was operated for flood control and low-water regulation, as required; and necessary repairs were made to structures and appurtenances. Volunteers continued to apply limestone sand to

tributary streams in an effort to neutralize acid mine drainage into the lake. For the past 5 years, the Elk County Fishermen and Watershed Group have installed fish habitat structures in the lake under the guidance of the Pennsylvania Fish and Boat Commission's Adopt-A-Lake Program. In FY 2000 under a Cost Share Agreement between the District, US Forest Service, Willamette Industries, now known as Weyerhaeuser, Inc. and utilizing labor from the Federal Bureau of Prisons, the District began a modernization program in the campground. Twenty two of thirty-two camp sites have been redesigned and enlarged with sixteen of the sites having 20/30/50 amp electrical service installed. Rehabilitation of non-electric sites will continue in FY 2006. Nine "walk-in" tent sites are planned when funding becomes available which will bring the total campsites available to the authorized forty-one campsites. In FY 2005 comfort station repairs were initiated for \$351,000 and expected to be completed in FY06. Boat launch repairs were initiated for \$309,000 a results of a Congressional Add. Some reservoir management activity was performed throughout the year comprising sanitation measures, conservation, land management and operation of public-use facilities. Estimated flood control benefits achieved by this reservoir for FY 2005 were \$555,000. Total flood control benefits for this reservoir through September 30, 2005 were \$81,450,000.

### 16. KINZUA DAM & ALLEGHENY RESERVOIR, PA & NY

**Location.** Dam site is on Allegheny River 7 miles above Warren, PA, and 198 miles above mouth of river at Pittsburgh, PA. Reservoir is in Warren and McKean Counties, PA, and Cattaraugus County, NY. (See Geological Survey Charts for Warren and Kinzua, PA-NY, and Randolph and Salamanca, NY.)

**Existing Project.** Reservoir provides flood control, low water regulation and recreation. Dam consists of a combination concrete gravity structure and rolled earth embankment with gate-controlled spillway and discharge conduits controlled by slide-gates in gravity section. Construction of project, initiated in February 1960, is complete. Construction of dam was started in September 1960 and completed in December 1965. Development of recreation area at Onoville under a cost-sharing agreement with Cattaraugus County was completed in June 1978. Present project lands consist of 2,646 acres in fee and easements over 22,420.0 acres. For further details see Annual Report for 1962, page 1202. Project was authorized by Flood Control Acts of 1936, 1938 and 1941.

**Local Cooperation.** None required by law.

**Licenses.** The Federal Power Commission granted a license to Pennsylvania Electric Company and Cleveland Electric Illuminating Company on December 28, 1965, for the joint construction, operation and

## REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2005

maintenance of a 435-megawatt pumped-storage installation (FPC Project No. 2280). The project is complete. Present ownership is with First Energy Corporation.

**Operations During Fiscal Year.** Operations and Maintenance, General: Reservoir was operated for benefit of flood control, hydropower, fish and wildlife, recreation and low water regulation, as required and necessary repairs were made to structures and appurtenances. Estimated flood control benefits achieved by this reservoir for FY05 were \$31,626,000. Total flood control benefits for this reservoir through September 30, 2005 were \$1,126,330,000.

### 17. LOWER GIRARD DAM, OH

**Location.** Lower Girard Lake (formerly called Liberty Lake) is located in the northeast section of Ohio in Trumbull County in the City of Girard which lies just northwest of the City of Youngstown, OH. Lower Girard Lake Dam is located on Squaw Creek approximately 5,000' downstream of Girard Lake and approximately 2 miles upstream from Squaw Creek's confluence with the Mahoning River.

**Existing Project.** Lower Girard Lake together with Girard Lake, located immediately upstream, is a system of water supply reservoirs that was constructed in 1917 and operated by the Ohio Water Service Company to provide process water to local steel mills and industry. The Lower and Upper Girard Dams were purchased by the City of Girard from the Consumer Ohio Water Company in 1995. The dam is an Ambersen type buttress dam. It has been determined that the dam requires rehabilitation to meet modern dam safety standards.

**Local Cooperation.** The City of Girard, OH is the non-federal sponsor for this project. The city owns the dam and the lake impounded by it. A Design Agreement was executed in July 1998 with cost-sharing for the design portion set at 75% federal and 25% by the city.

**Operations During Fiscal Year.** In WRDA 1998 Congress added \$2,500,000 for the Corps to investigate the safety of, and rehabilitate the Lower Girard Dam. The "Special Report and Environmental Assessment" recommended a rehabilitation plan to bring the dam up to present safety standards. Total cost for design and rehabilitation is estimated at \$12,600,000. However, the economic analysis for the plan did not result in a favorable B/C ratio. Subsequently, in March 2002 the ASA(CW) determined that the least cost plan to render the dam safe would be to breach and decommission it at a cost of \$1,100,000. During FY 2004 the City of Girard administration worked with the City Council and the Corps to propose alternatives to a full-breach which would leave the dam safe, but still retained. Presently, a \$3,500,000 proposal is to lower the crest of the dam twelve feet which will result in a smaller but safe dam.

### 18. LOYALHANNA LAKE, PA

**Location.** Dam is on Loyalhanna Creek, 4.5 miles

above junction of creek with Conemaugh River at Saltsburg, PA, and about 29 miles east of Pittsburgh, PA. Reservoir is in Westmoreland County PA. (See Geological Survey Chart for Latrobe, PA).

**Existing Project.** A flood control reservoir dam of concrete gravity type with a gate-controlled center spillway flanked by abutment sections joining valley sides, and an earth embankment section ending in left abutment. Authorized project is complete. Reservoir is in operation as a unit of a coordinated reservoir system designed for protection of Pittsburgh and reduction of flood heights in upper Ohio Valley, generally. Construction of dam was started in October 1939 and completed in June 1942. Present project lands consist of 3,330.8 acres in fee and easements over 86.7 acres. Project was authorized by Flood Control Acts of 1936 and 1938. For further project description see Annual Report for 1962, page 1219.

**Local Cooperation.** None required by law.

**Operations During Fiscal Year.** Operations & Maintenance, General: Reservoir was operated for benefit of flood control, as required and necessary repairs were made to structures and appurtenances. At the request of the Borough of Saltsburg, PA, the U.S. Congress added \$50,000 for the Pittsburgh District to conduct a 3-year study/test of special weekend water releases from Loyalhanna Dam for downstream recreation. Estimated flood control benefits achieved by this project for FY 2005 were \$56,022,000. Total benefits for this reservoir through September 30, 2005 were \$514,379,000. Activities under reservoir management program comprising sanitation measures, conservation, land management and operation and maintenance of public use facilities continued.

### 19. MAHONING CREEK LAKE, PA

**Location.** Dam is on Mahoning Creek in Armstrong County, PA, 22.9 miles above junction of creek with Allegheny River. It is about 6.50 miles southeast of New Bethlehem, PA, and about 51 miles northeast of Pittsburgh, PA. Reservoir is in Armstrong, Indiana and Jefferson Counties, PA. (See Geological Survey Charts for Rural Valley and Smicksburg, PA).

**Existing Project.** A flood control reservoir dam of concrete gravity type with a gate-controlled center spillway flanked by abutment sections joining valley sides. Authorized project is complete. Reservoir is in operation as a unit of a coordinated reservoir system designed for protection of Pittsburgh and reduction of flood heights in upper Ohio Valley, generally. Construction of dam started in February 1939 and was completed in June 1941. Present project lands consist of 2,519.36 acres in fee and easements over 83.5 acres. Project was authorized by Flood Control Acts of 1936 and 1938. For further project description see Annual Report for 1962, page 1210.

**Operations During Fiscal Year.** Operations & Maintenance, general: reservoir was operated for benefit of flood control, as required and necessary repairs were made to structures and appurtenances. Estimated flood damages prevented by this project for FY 2005 were \$40,400,000; total benefits through

## PITTSBURGH, PA, DISTRICT

September 30, 2005, revised to reflect damages prevented in downstream districts as well as Pittsburgh District, were \$662,473,000. Activities under reservoir management program comprising sanitation measures, conservation, land management and operation and maintenance for public-use facilities continued.

### 20. MICHAEL J. KIRWAN DAM & RESERVOIR, OH

**Location.** Dam site is on West Branch of Mahoning River which joins Mahoning River at Newton Falls, OH. It is 11 miles above mouth of branch and about 15 miles upstream from Warren, OH. Reservoir is in Portage County, OH. (See Geological Survey Charts for Ravenna, Garrettsville, Chagrin Falls, and Kent, OH.)

**Existing Project.** Reservoir provides flood control, low-water regulation and recreation. Dam consists of a rolled-earth embankment structure with gate-controlled outlet works and an uncontrolled side-hill spillway through left abutment. Authorized project is completed and in operation for flood control and low water regulation purposes. Present project lands consist of 6,298.9 acres fee and easements over 27.9 acres. For further description see Annual Report for 1962, page 1231 (West Branch Reservoir, Mahoning River, Ohio). Project was authorized by 1958 Flood Control Act (H. Doc. 191, 85th Cong. 1st sess.), with local contribution requirements modified by Flood Control Act of 1960. Federal costs of completed project are \$17,370,000. Local interests contributed \$3,230,000 during period of construction bringing initial project cost to \$20,600,000. The State of Ohio has a lease from the Secretary of the Army for development and operation of recreation facilities in the reservoir area.

**Local Cooperation.** Local interests must contribute \$5,200,000 for water pollution abatement and for municipal and industrial water supply purposes, of which \$3,230,000 was paid in cash during construction. Unpaid balance at time project is placed in operation, \$1,970,000, will be paid in cash at that time or on an annual basis. Of the unpaid balance of contributed funds due and payable, payment in full of Trumbull County's share in the amount of \$663,040 has been received. Mahoning County elected to pay their share (\$1,306,960) in 50 annual installments of \$50,323.32, including interest.

**Operations During Fiscal Year.** Operations & Maintenance, General: reservoir was operated for benefit of flood control and low-flow augmentation, as required and necessary repairs were made to structures and appurtenances. Estimated flood control benefits achieved by this project for FY 2005 were \$18,133,000. Total benefits for this reservoir through September 30, 2005 were \$488,618,000. Activities under reservoir management program comprising sanitation measures, conservation, land management, and operation and maintenance of public-use facilities continued. This work was limited in scope as state of Ohio has jurisdiction over most of the recreation in reservoir area.

### 21. MOSQUITO CREEK LAKE, OH

**Location.** Dam is on Mosquito Creek, 12.6 miles above junction of creek with Mahoning River at Niles, OH, and about 18 miles northwest of Youngstown, OH. (See Geological Survey Charts for Bristolville and Kinsman, OH, and PA.)

**Existing Project.** A reservoir for flood control, low-water regulation and water supply storage. Dam is rolled-earthfill type with outlet facilities through dam, and an uncontrolled natural wasteway to discharge overflow from reservoir. Authorized project is complete and in operation for flood control and low-water regulation purposes in industrialized Mahoning and Beaver Valleys below. Construction of dam was started in July 1943 and was ready for beneficial use in January 1944. Present project lands consist of 11,180.4 acres in fees and easements over 276.0 acres. State of Ohio has a license from Secretary of the Army for development and operation of recreation facilities in reservoir area. Project was selected for construction under general authorization for Ohio River Basin in 1938 Flood Control Act. For further project description see Annual Report for 1962, page 1228.

**Local Cooperation.** There is a water supply agreement with the City of Warren for municipal and industrial water storage in an amount equal to 11.1% of total reservoir storage. The City makes annual payments for this storage. No other local cooperation is required at completed project; however, future recreational developments are subject to certain conditions of non-Federal cost-sharing under Federal Water Project Recreation Act of 1965.

**Operations During Fiscal Year.** Operation & Maintenance, General: Reservoir was operated for benefit of flood control and low-flow regulation as required and necessary repairs were made to structures and appurtenances. Estimated flood control benefits achieved by this reservoir for FY05 were \$6,599,000. Total flood control benefits for this reservoir through September 30, 2005 were \$196,275,000. Activities under reservoir management program comprising sanitation measures, conservation, land management and operation and maintenance of certain public-use facilities continued. This work was limited in scope as State of Ohio has jurisdiction over most of the recreation in reservoir area. In FY 2002 the District initiated a Dam Safety Assurance Study to determine the best alternative in bringing the dam up to current dam safety standards. A draft report is scheduled to be completed in FY 07.

### 22. OHIO RIVER BASIN (PITTSBURGH DISTRICT)

**Location.** A series of dikes, floodwalls, channel improvements, and reservoirs/lakes in Ohio River Basin within Pittsburgh District.

**Existing Project.** Individual projects considered in comprehensive plan within Pittsburgh District. (See Tables 18-B, 18-E and 18-K on Acts authorizing existing projects, local protection projects and reservoirs.)

## REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2005

**Operations During Fiscal Year.** New Work: none by the United States except as stated in individual projects. Completed local protection projects operated and maintained by local interests, including those projects for which individual reports have been included.

### 23. SHENANGO RIVER LAKE, PA & OH

**Location.** Dam is on Shenango River about 0.8 mile above Sharpsville, PA, and about 33 miles above junction of river with Mahoning River, which unite near New Castle, PA, to form Beaver River. Reservoir is in Mercer County, PA and Trumbull County, OH. (See Geological Survey Chart for Kinsman, OH, and Shenango, PA.)

**Existing Project.** A reservoir for flood control, low-flow augmentation and recreation. Dam consists of a concrete gravity structure with gate-controlled outlet works and an uncontrolled center spillway section. Authorized project is complete. Reservoir is in operation for low-water regulation purposes in Shenango River valley below and for flood control as a unit of a coordinated reservoir system for protection of Shenango River valley and the Beaver and upper Ohio River Valley, generally. Construction of dam was started in March 1963 and completed in May 1965. Present project lands consists of 14,485.94 acres in fee and easements over 198 acres. Approximately 65.94 acres in abandoned railroad right-of-way were acquired for project use. Future work consists of completion of project lands of any additional recreation facilities as required to serve the public needs. For further project description, see Annual Report for 1962, page 1230. Project was authorized by 1938 Flood Control Act.

**Local Cooperation.** None required by law.

**Operations During Fiscal Year.** Operations and Maintenance, General: Reservoir was operated for benefit of flood control and low-flow augmentation, as required and necessary repairs were made to structures and appurtenances. In FY 2005 plans and specifications were completed on the sewage treatment plant replacement for \$51,000. Estimated flood control benefits achieved by this reservoir for FY 2005 were \$18,133,000. Total flood control benefits for this reservoir through September 30, 2005 were \$140,225,000. Continuing activities under the reservoir management program are comprised of sanitation measures, conservation, land management and operation and maintenance.

### 24. STONEWALL JACKSON LAKE, WV

**Location.** In Lewis County, North Central West Virginia, on the West Fork River, which joins the Tygart River at Fairmont, WV to form the Monongahela River. Dam site is located on Route 30 at Brownsville, WV, about 4 miles south of Weston and 72 miles above mouth of West Fork River at Fairmont, WV. (See Geological Survey Charts for Weston and Crawford, WV.)

**Existing Project.** Provides for construction of a reservoir for flood control, water supply, water quality

control, area redevelopment and recreation. Dam is concrete gravity type, 95' high and 620' long. Outlet works consist of two multi-level sluices and three fixed-level sluices, spillway is uncontrolled. Storage capacity is 74,650 acre-feet controlling an area of 102 square miles. A station hydropower plant completed in 1995 supplies power to the dam, with excess power being sold to an electric utility company. Project was authorized by 1966 Flood Control Act. Estimated initial federal cost for new work (1991) is \$231,000,000 (includes an estimated \$24,900,000 reimbursement by non-federal interests.) Present project lands consist of 20,451 acres in fee and easements over 398 acres.

**Local Cooperation.** The reservoir contains 2,200 acre feet of storage designated for the purpose of municipal and industrial water storage. The storage is not under contract and there are no prospects of near-term water supply agreements. In accordance with the Federal Water Project Recreation Act local interests are required to administer project land and water areas for recreation and fish and wildlife enhancement to make arrangements for repayment, under the provisions of the Water Supply Act of 1958, as amended, of that part of the construction cost and annual operation, maintenance and replacement costs allocated to municipal and industrial water supply, an amount presently estimated at \$4,350,000 for construction; and \$15,000 annually for operations, maintenance and replacements. Also, in accordance with Federal Water Project Recreation Act, local interests are required to administer project land and water areas for recreation and fish and wildlife enhancement, pay, contribute in kind or repay (which may be through user fees) with interest, one-half of the separable first costs of the reservoir project allocated to recreation and fish and wildlife enhancement, an amount presently estimated at \$24,810,000, bear all costs of operation, maintenance and replacement of recreation and fish and wildlife land and facilities, the amount involved being currently estimated on an average annual basis to be \$457,000, exercise to the full extent of their legal capability, control against removal of stream flow made available for water quality control; and contribute to the control of pollution of streams subject to low-flow augmentation by adequate treatment or other methods of controlling wastes at their source. The requirements of Section 221 were amended in 1971 to exempt assurances for future demands for water supply pursuant to the Water Supply Act of 1958 from the contractual requirements of the Act. Accordingly, the city of Weston, WV has provided assurances that it will enter into a water supply contract with the Department of the Army within a period of time which will permit paying out the costs allocated to the water supply storage within the life of the project. A recreation cost-sharing contract, in accordance with the requirements of the Federal Water Project Recreation Act, PL 89-72, was executed by the State of West Virginia on March 27, 1977. Local cooperation assurances for recreation cost-sharing were executed by the Governor and Attorney General of West Virginia on May 29, 1973. In this connection, Section 8 of PL 92-222 deleted the requirement that the State of West Virginia "hold and save the United States free from damages resulting from water rights claims due to

## PITTSBURGH, PA, DISTRICT

construction and operation of the project.” Legislation relieving Stonewall Jackson Lake, WV, project of the requirements of Section 221, PL 96-611 was contained in Water Resources Development Act of 1974 signed by the President on March 7, 1974.

**Operations During Fiscal Year.** New Work: The Corps worked with the State of West Virginia to revise the Master Plan to incorporate higher revenue producing recreation facilities, including a lodge, golf course, cabins and camping. The revised Master Plan was approved by the Corps in 1992. The FY92 Energy and Water Development Appropriations Act allows the state cost-sharing credits for all of these facilities except the golf course. In March 1994, the State and the Assistant Secretary of the Army for Civil Works executed an amendment to the 1977 Stonewall Jackson Lake Recreation Cost-Sharing Contract to reflect these credits. The state must design and build the approved remaining recreation facilities by March 2006, in accordance with the schedule and conditions set forth in the amended contract. The state broke ground in July 2001 for the \$50,000,000 Stonewall Resort, which includes a 200-room lodge, conference center, spa, cabins and more camping areas, in addition to a championship 18-hole golf course that is not eligible for cost share credit. By the end of FY 2002, the state had essentially completed and opened to the public all facilities except miscellaneous recreation facilities. The District is currently completing miscellaneous real estate actions related to the original construction with the project.

Activities under reservoir management program comprising sanitation measures, conservation, land management, and operation and maintenance of public-use facilities continued. This work was limited in scope as State of West Virginia has jurisdiction over most of the recreation in reservoir area.

In 2005 the plans and specifications were completed on the dam gate controls for \$17,000. Estimated flood control benefits achieved for this project for FY 2005 were \$2,641,000; total flood control benefits through September 30, 2005, were \$154,889,000.

### 25. TIONESTA LAKE, PA

**Location.** Dam is on Tionesta Creek, 1.25 miles above junction of creek with Allegheny River at Tionesta, PA, and about 78 miles northeast of Pittsburgh, PA. Reservoir is entirely in Forest County, PA. (See Geological Survey Charts for Tionesta, Tidioute and Sheffield, PA.)

**Existing Project.** A flood control reservoir dam of earthfill type with separate uncontrolled saddle spillway and tunnel outlet works. Authorized project is complete. Reservoir is in operation as a unit of a coordinated reservoir system designed for protection of Pittsburgh and reduction of flood heights in upper Ohio Valley, generally. Construction of dam was started in May 1938 and completed in January 1941. Present project lands consists of 2,794.77 acres in fee and easement over 13.1 acres. Approximately 2.53 acres of fee were disposed at the project. Future work consists of provision on project lands of additional recreational

facilities as required to serve public needs. Project was authorized by Flood Control Acts of 1936 and 1938. For further project description see Annual Report for 1962, page 1203.

**Local Cooperation.** None required by law.

**Operations During Fiscal Year.** Operation & Maintenance, General: reservoir was operated for benefit of flood control, as required and necessary repairs were made to structures and appurtenances. Estimated flood control benefits achieved for this project for FY 2005 were \$31,414,000; total flood control benefits through September 30, 2005, were \$1,152,431,000. Activities under reservoir management program comprising sanitation measures, conservation, land management and operation and maintenance of public-use facilities continued.

### 26. UNION CITY DAM, PA

**Location.** In Erie County, northwestern PA, on French Creek, a tributary of Allegheny River. Dam site is 24 miles upstream from Cambridge Springs, PA, and 41 miles upstream from Meadville, PA. (See Geological Survey Chart for Union City, PA - NY.)

**Existing Project.** A flood control reservoir dam of earth embankment non-gated type with uncontrolled side-channel spillway. Outlet works consist of a lower outlet located in valley floor constructed of reinforced concrete conduit 8' by 4.5' and an upper outlet consisting of an uncontrolled slot 9.5' wide through the north end of the ogee weir in the spillway. Dam is 1,420' long at top rising 88' above streambed and provides gross capacity of 47,640 acre-feet from a drainage area of 222 square miles. Project authorization was modified to provide for a conservation pool and addition of recreation facilities. On November 5, 1974, a referendum proposal was defeated by the constituents of Erie County in regard to the cost-sharing for construction of recreation facilities. In view of the foregoing, all action toward implementation of the authorized project modification was discontinued. Reservoir is operated as one of a two-reservoir system for reduction of flood stages in French Creek Basin between dam site and mouth, Allegheny River from Franklin, PA, to Pittsburgh, PA, inclusive, and upper Ohio River Valley. Initial highway relocations were completed in October 1968 and remaining highway relocations were completed in May 1972. Construction of the dam was started in July 1968 and completed in September 1971. Present project lands consist of 161.4 acres in fee and easements over 2,410.29 acres. Existing project was authorized by 1962 Flood Control Act.

**Local Cooperation.** Local interests are required to inform affected interests in French Creek Basin at least annually, that the system of reservoirs of which Union City Dam is a part, will not provide protection against maximum floods. On November 10, 1964 the Department of Forests and Waters of the Commonwealth of Pennsylvania furnished formal assurances of local cooperation in respect to notifying local interests at least annually that the system of reservoirs will not provide protection against maximum

## REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2005

floods. A referendum on the ballot during the November 1974 election regarding the approval to cost-share the maintenance of a summer pool was defeated by the local voters.

**Operations During Fiscal Year.** Operation & Maintenance, General: maintenance of the structure and appurtenances was performed as required. This dam acted as an uncontrolled detention type dam during the fiscal year. Estimated flood control benefits achieved for this project for FY 2005 were \$6,191,000. Total flood control benefits for this reservoir through September 30, 2005, revised to include downstream districts, were \$59,774,000.

### 27. WOODCOCK CREEK LAKE, PA

**Location.** In Crawford County, northwestern PA, on Woodcock Creek, a tributary of French Creek. Dam site is about 4.1 miles above mouth of Woodcock Creek and about 5 miles northeast of Meadville, PA. (See Geological Survey Chart for Meadville, PA.)

**Existing Project.** A flood-control reservoir dam of rolled-earth embankment type, gate-controlled outlet works with a 6 foot-wide by 7.75 foot-high conduit and uncontrolled saddle spillway on the left abutment. Dam is 4,650' long at top rising 90' above streambed and provides for gross capacity of 20,000 acre-feet from a drainage area of 46 square miles. Reservoir is operated as one of a two-reservoir system for reduction of flood stages in French Creek Basin between dam site and mouth. Allegheny River from Franklin, PA, to Pittsburgh, PA, inclusive, and upper Ohio River Valley. Authorized project is complete. Construction of dam was started in July 1970 and completed in July 1973. Land acquired for project consists of 1,731.5 acres in fee and easements over .56 acres. Project was authorized for flood control and recreation by 1962 Flood Control Act. Storage for water quality control was added to the project during the preconstruction planning stage.

**Local Cooperation.** Local interests must inform affected interests in French Creek Basin at least annually, in a manner satisfactory to District Engineer, that a system of reservoirs of which Woodcock Creek is a part, will not provide protection against maximum floods. Pennsylvania Department of Forests and Waters assumed responsibility of local cooperation for project.

**Operations During Fiscal Year.** Operation & Maintenance, General: maintenance of the structure and appurtenances was performed as required. Estimated flood control benefits achieved by this project for FY 2005 were \$1,205,000. Total flood control benefits achieved by this project through September 30, 2005, revised to include downstream districts were \$29,180,000. Activities under reservoir management program comprising sanitation measures, conservation, land management and operation and maintenance of public use facilities continued.

### 28. YOUGHIOGHENY RIVER LAKE, PA & MD

**Location.** Dam is on Youghiogheny River about 74.2 miles above its junction with Monongahela River

at McKeesport, PA. It is 1.2 miles upstream from Confluence, PA, and about 57 miles southeast of Pittsburgh, PA. Reservoir is in Fayette and Somerset Counties, PA, and Garrett County, MD. (See Geological Survey Charts for Confluence, PA, Accident, MD, West Virginia and Pennsylvania.)

**Existing Project.** Reservoir for flood control, low-flow augmentation, pollution abatement, and recreation purposes. Dam is rolled-earthfill type with separate uncontrolled side channel spillway and tunnel outlet works. Authorized project is complete. For flood control, reservoir is operated as a unit of a coordinated reservoir system designed for protection of Pittsburgh and reduction of flood heights in upper Ohio Valley, generally. Construction of dam was started in June 1940 and completed in May 1944. Present project lands consist of 3,914.9 acres in fee and easements over 0.62 acres.

Project was selected for construction under general authorization for Ohio River Basin in 1938 Flood Control Act. For further project description see Annual Report for 1962, page 1223.

**Local Cooperation.** None required.

**Licenses.** A non-federal hydropower project utilizing releases from Youghiogheny River Lake was constructed in accordance with FERC License 3623. D/R Hydro Company is the authorized representative of the Licensee, Youghiogheny Hydroelectric Authority, and is responsible for operation of the plant. It has a 10-megawatt capacity. The plant began commercial operation on December 7, 1989.

**Operations During Fiscal Year.** Operations & Maintenance, General: Reservoir was operated for benefit of flood control and low flow augmentation, as required and necessary repairs were made to structures and appurtenances. Total flood control benefits achieved by this project through September 30, 2005 were \$36,432,000; revised to include damages prevented in downstream districts, were \$523,396,000. Activities under reservoir management program comprising sanitation measures, conservation, land management and operation and maintenance of public use facilities continued.

### 29. INSPECTION OF COMPLETED FLOOD CONTROL PROJECTS

Flood Control Act of June 22, 1936, and subsequent acts require local interests to furnish assurances that they will maintain and operate certain local protection projects after completion in accordance with regulations prescribed by Secretary of the Army. District Engineers are responsible for administration of these regulations within boundaries of their respective districts. Inspections were made of completed units transferred to local interests for maintenance and operation and local interests were advised, as necessary, of measures required to maintain these projects in accordance with standards prescribed by regulations. (See Table 18-L for dates of inspections.)

Costs for FY 2005 were \$125,000; total cost to September 30, 2005 was \$2,678,451.

### 30. OTHER AUTHORIZED FLOOD CONTROL PROJECTS

See Table 18-E on other authorized flood control projects.

### 31. FLOOD CONTROL WORK UNDER SPECIAL AUTHORIZATIONS

**For emergency bank protection pursuant to Section 14, 1946 Flood Control Act, PL 79-526, as amended**

See Table 18-M.

**For flood control activities pursuant to Section 205, 1948 Flood Control Act, PL 80-858, as amended**

See Table 18-M.

**For aquatic ecosystem restoration pursuant to Section 206, 1996 WRDA, PL 104-303, as amended**

See Table 18-M.

**For modification for improvement of the environment pursuant to Section 1135, 1986 WRDA, PL 99-662, as amended**

See Table 18-M.

**For flood control and coastal emergencies pursuant to 1955 Emergency Flood Control Funds Act, PL 84-99 and antecedent legislation**

See Table 18-M.

### Environmental

### 32. CONEMAUGH RIVER BASIN, NANTY GLO, PA ENVIRONMENTAL RESTORATION

**Location.** Conemaugh River Basin is an area of 1,372 square miles located in southwestern Pennsylvania in Cambria and Indiana Counties. The Nanty Glo project is located in the headwaters of South Branch Blacklick Creek in the Borough of Nanty Glo, Cambria County.

**Existing Projects.** Authorized by WRDA 1992 (PL 102-580), Section 331, the Conemaugh River Basin Reconnaissance Report completed in February 1994 identified seven sites as candidates for ecosystem restoration studies. Remediation of a site at Nanty Glo, PA was identified as highest priority. The project involves restoration of environmental damage caused by the abandoned Webster Coal Mine. Its discharge accounts for much of the acid load in the creek and approximately 5% of the acid load downstream at the Corps' Conemaugh River Lake. Water from the mine is discharged into Pergrin Run, approximately 1,300' upstream from its confluence with South Branch Blacklick Creek. The project will involve a passive treatment system consisting of dual vertical flow ponds and a wetland. The project will treat the Webster Mine discharge, design flow of 450 gallons per minute with a PH of 3.0. The vertical flow ponds provide 3.9 acres of surface treatment area and the wetland provides 2.3 acres of surface treatment area. A pipe will carry water from Webster Mine to the vertical flow ponds. The PH

of the treated design flow discharged from the wetland to Pergrin Run will be 6.5 Project implementation will restore the lower seven miles of the creek and promote return of a viable fishery to the waters.

**Local Cooperation.** The non-federal cost-sharing sponsor is the Cambria County Conservation and Recreation Authority (CCCRA). CCCRA has been the cost-sharing partner on this project since inception in 1994. The CCCRA will cost share 25% of total project costs.

**Operations During Fiscal Year.** Notice to Proceed issued September 20, 2002. Amount of contract was \$4,200,000. Contractor was Charles J. Merlo Construction Incorporated. Contract was completed in October 2004. In FY05 \$11,584 was expended mainly for fiscal close out.

### 33. SOUTH CENTRAL, PA ENVIRONMENTAL IMPROVEMENT WORK

**Location.** Projects under this program in the Pittsburgh District are located in the South Central, PA counties of Allegheny, Armstrong, Cambria, Fayette, Greene, Indiana, Somerset Washington and Westmoreland.

**Existing Projects.** Section 313 authorizes the Secretary of the Army to establish a program to provide design and construction assistance to non-federal interests in south central Pennsylvania including projects for waste water treatment and related facilities, water supply, storage, treatment, and distribution facilities, and surface water resource protection and development. A total of 30 projects are physically complete. The largest project was a regional wastewater treatment plant and interceptor system for the Forest Hills Municipal Authority located in the suburbs of Johnstown, PA. Additional projects identified for FY 2005 funding include Mount Pleasant, Upper Allegheny (Frazier Township), National Pike, Central Mainline, New Kensington and Franklin Township (Greene County).

**Local Cooperation.** Legislation requires the project to be cost shared at no more than 75% federal funds and a minimum of 25% non-federal funds. Project Cooperation Agreements are executed between the Corps of Engineers and the non-federal sponsors. Operation and maintenance of the projects will be at 100% non-federal costs.

**Operations during Fiscal Year.** A Design Project Cooperation Agreement was executed for Deemston Borough and the design was completed. Design/construction PCAs were executed for Unity Township, Blacklick Route 422, Paint Borough, Mount Pleasant, and Upper Allegheny (Frazier Township). Construction was completed for Blacklick Route 422 and Upper Allegheny. Construction is continuing for Fayette Business Park.

**34. THREE RIVERS WET WEATHER DEMONSTRATION PROJECT**

**Location.** The Three Rivers Wet Weather Demonstration Program administers grants to Allegheny County communities for innovative, cost-effective, watershed-based methods of wet weather sewer overflow elimination and management.

**Existing Project.** The District is working with the Three Rivers Wet Weather Demonstration Program under Section 219 of the 1992 WRDA, as amended. Under this program, the District is authorized to provide assistance to non-federal interests for carrying out water-related environmental infrastructure and resource protection and development project in Allegheny County. These projects include wastewater treatment and related facilities and water supply, storage, treatment and distribution facilities. Projects currently being worked on during FY05 are Sheraden Park and Homestead Run.

**Local Cooperation.** For the current study phase the Three Rivers Wet Weather Demonstration Program identified the Allegheny County Sanitary Authority (ALCOSAN) as the cost sharing partner for the Sheraden Park effort. The project is cost shared 75% federal and 25% non-federal.

**Operations During Fiscal Year.** The Corps of Engineers will assist ALCOSAN (Allegheny County Sanitary Authority) and the Three Rivers Wet Weather Demonstration Program (a partnership of stakeholder organizations) in the planning and design of environmentally sustainable and economical solutions for reducing combined sewer overflows that originate within Sheraden Park, which is located in the Sheraden section of the City of Pittsburgh. The park is 53 acres in size and is located in the natural stream valley of an unnamed tributary to Chartiers Creek. In 2005, project sponsorship was transferred from ALCOSAN to PWSA (Pittsburgh Sewer and Water Authority). A new Design PCA was executed for the new sponsor.

A-E contract was awarded to take the project from 60 – 100% completion of plans and specifications. The infrastructure assistance project will reconfigure the combined sewer to remove the stream inflow from the sewer and reduce combined sewer discharges. This includes storm sewer re-routing. A second project Homestead Run has been initiated. The local sponsor for the Homestead Run will be Munhall Borough. The Borough is negotiating with other affected communities regarding funding of the project. Once the funding commitments have been obtained, the letter report will be finalized. A design agreement to prepare plans and specifications will follow.

Other projects will be identified as funds become available.

**35. FORMERLY USED SITES REMEDIAL ACTION PROGRAM (FUSRAP)**

**Location.** Shallow Land Disposal Area (SLDA) is a 44-acre site in Armstrong County, Pennsylvania, about 23 miles east-northeast of Pittsburgh.

**Existing Project.** The site includes ten trenches

containing estimated 23,500-36,000 cubic yards of potentially contaminated waste and soil. The total trench surface-area is 1.2 acres. The trenches are separated into two general areas; one area containing trenches 1 through 9 and a second area containing trench 10. Uranium and thorium contaminated wastes consisting of process wastes, equipment, scrap and trash from the nearby Apollo nuclear fuel fabrication facility were disposed of in the SLDA between 1961 and 1970. The uranium in the trenches is present at various levels of enrichment from highly depleted to highly enriched. Americium and plutonium, whose presence is attributed to storage of equipment used in the Parks Facility, have been detected in surface soils in trench 10 area. Nuclear Materials and Equipment Corporation (predecessor of current owner BWX Technologies) conducted the disposals according to the Atomic Energy Commission regulations. The NRC license requires BWXT to properly maintain the site to ensure the protection of workers and the public.

PL 107-117, Section 8143 directs the Corps of Engineers to clean up radioactive waste at the SLDA site, consistent with the Memorandum of Understanding between the United States Nuclear Regulatory Commission and United States Army Corps of Engineers dated July 5, 2001 for the coordination of cleanup and decommissioning of FUSRAP sites with NRC-licensed facilities and in accordance with Section 611 of PL 106-60. The SLDA site will be remediated following the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) process.

**Local Cooperation.** The project is currently conducted with congressionally authorized FUSRAP funds.

**Operations During Fiscal Year.** The site designation and preliminary assessment stages of the CERCLA process are completed. The remedial investigation stage was completed in FY 2005. The feasibility study has been initiated and is scheduled to be completed in FY 2006. The proposed plan, record of decision, remedial design, remedial action and project closeout are forthcoming.

**General Investigations**

**36. SURVEYS**

Navigation Studies	\$550,660
Flood Damage Prevention Studies	0
Special Studies	132,137
Review of Authorized Projects	0
Miscellaneous Activities	47,898
Coordination with other Federal Agencies	26,098
Total Federal Cost for Fiscal Year	<u>\$756,793</u>

**37. COLLECTION & STUDY OF BASIC DATA**

Federal costs this fiscal year were \$79,894 for flood plain management services.

**PITTSBURGH, PA, DISTRICT**

**38. PRECONSTRUCTION, ENGINEERING &  
DESIGN**

Mon River, WV (project close out)	\$14,594
Weirton Port, WV	<u>0</u>
 Total Federal Cost for Fiscal Year	 \$14,594

<sup>1</sup> Includes \$2,453,737 from emergency relief funds and \$1,250,049 from public works funds.

<sup>2</sup> Includes \$64,365 public works acceleration, executive funds (1963) and \$191,400 provided from the Productive Employment Appropriations Act (PL 98-8) 1983 funds. Also includes \$995,000 appropriated and expended for major maintenance at L&D 2, 3 & 4.

<sup>3</sup> Includes amounts appropriated to date for: Point Marion, L&D 8, PA - \$113,013,400 for CG and IWTF, \$3,322,057 for raising crest of dam in 1958-9, \$2,086,438 for original reconstruction years 1923-26 and \$618,758 for AE&D. Grays Landing, L&D 7, PA - \$172,793,200 for CG and IWTF, and \$803,000 for AE&D. L&D 2, 3 & 4 - \$237,481,700 for CG and IWTF.

<sup>4</sup> Includes amounts expended to date on: Point Marion, L&D 9, PA - \$112,667,403 for CG and IWTF, \$3,322,057 for raising crest of dam in 1958-9, \$2,086,438 for original reconstruction years 1923-6 and \$618,758 for AE&D. Grays Landing, L&D 7, PA - \$172,751,744 for CG and IWTF, and \$803,000 for AE&D. L&D 2, 3 & 4 - \$237,123,612 for CG and IWTF.

<sup>5</sup> Includes \$22,549 public works acceleration, executive funds (1963), \$742 for maintenance for previous project and \$582,000 provided from the Productive Employment Appropriations Act (PL 98-8) 1983 funds.

<sup>6</sup> Includes \$22,549 public works acceleration, executive funds (1963), \$742 for maintenance for previous project and \$464,508 provided from the Productive Employment Appropriations Act (PL 98-8) 1983 funds.

<sup>7</sup> Includes \$1,999,995 emergency relief funds, \$10,000,000 public work funds, \$234,000 Code 711 funds and \$412,088 Code 713 funds, \$462,000 appropriated to and \$218,374 expended on the Dam Safety Assurance Program - CG; excludes \$409,622 contributed by local interest.

<sup>8</sup> Includes \$89,000 provided from the Productive Employment Appropriations, Act (PL 98-8) 1983 funds. Also includes \$425,000 appropriated to and \$424,493 expended on the Dam Safety Assurance Program O&M.

<sup>9</sup> Includes \$33,423 from emergency relief funds.

<sup>10</sup> Excludes \$180,485 for new work expended from contributed funds.

<sup>11</sup> Includes \$283,988 provided from the Productive Employment Appropriations Act (PL 98-8) 1983 funds.

<sup>12</sup> Includes \$1,542,500 Code 711 funds, \$809,700 Code 712 funds and \$99,111 Code 713 funds; excludes \$100,000 contributed by local interest.

<sup>13</sup> Includes \$40,000 provided from the Productive Employment Appropriations Act (PL 98-8) 1983 funds. Includes \$7,679 appropriated to and expended from M&O of dams in FY97 and \$703,407 expended to date on M&O of dams.

<sup>14</sup> Includes \$5,351 from emergency relief funds and \$328,000 Code 711 funds.

<sup>15</sup> Includes \$63,788 from emergency relief funds. Also includes \$278,044 Code 711 funds.

<sup>16</sup> Includes \$45,000 provided from the Productive Employment Appropriations Act (PL 98-8) 1983 funds. Includes \$1,918 appropriated to and expended from M&O of dams in FY97 and \$697,646 expended to date on M&O of dams.

<sup>17</sup> Includes \$156,812 Code 711 funds.

<sup>18</sup> Includes \$322,000 provided from the Protective Employment Appropriations Act (PL 98-8) 1983 funds. Also includes \$12,674 appropriated to and \$12,674 expended to date on M&O of dams.

<sup>19</sup> Includes \$2,791 emergency relief funds, \$14,622 Code 711 funds, \$568,265 Code 713 funds; excludes \$389,370 contributed by local interest.

<sup>20</sup> Includes \$7,339 from emergency relief funds and \$274,669 Code 711 funds.

<sup>21</sup> Includes \$256,000 provided from the Protective Employment Appropriations Act (PL 98-8) 1983 funds. Also includes \$104,866 appropriated to and \$104,864 expended to date on M&O of dams.

<sup>22</sup> Includes \$25,671 emergency relief funds, \$162,381 Code 711 funds, \$561,247 Code 713 funds; excludes \$500,086 contributed by local interests.

<sup>23</sup> Includes \$25,671 emergency relief funds, \$162,381 Code 711 funds, \$561,247 Code 713 funds; excludes \$456,611 contributed by local interests.

<sup>24</sup> Includes \$74,900 Code 711 funds; excludes \$4,585,627.29 for new work contributed by local interest.

<sup>25</sup> Includes \$315,500 provided from the Protective Employment Appropriations Act (PL 98-8) 1983 funds. Also includes \$3,174 appropriated to and \$3,713 expended to date on M&O of dams.

<sup>26</sup> Includes \$122,729 Code 711 funds and \$94,900 Code 713 funds.

<sup>27</sup> Includes \$8,914 from emergency relief funds.

<sup>28</sup> Includes \$1,730,100 Code 711 funds and \$1,618,300 Code 713 funds.

## REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2005

- <sup>29</sup> Includes \$152,000 provided from the Protective Employment Appropriations Act (PL 98-8) 1983 funds. Also includes \$11,896 appropriated to and \$11,891 expended to date on M&O of dams.
- <sup>30</sup> Includes \$2,303,076 Code 711 funds (\$256,760 provided from the Productive Employment Appropriations Act PL 98-8, 1983 funds), \$275,900 Code 712 funds, and \$24,201 emergency relief funds.
- <sup>31</sup> Includes \$2,303,077 Code 711 funds, (\$256,531 provided from the Productive Employment Appropriations Act PL 98-8, 1983 funds), \$275,900 Code 712 funds, and \$24,201 emergency relief funds.
- <sup>32</sup> Includes \$203,000 provided from the Protective Employment Appropriations Act (PL 98-8) 1983 funds. Also includes \$9,362 appropriated to and \$9,360 expended to date on M&O of dams.
- <sup>33</sup> Includes \$1,671,366 Code 711 funds.
- <sup>34</sup> Includes \$1,671,366 Code 711 funds.
- <sup>35</sup> Includes \$85,000 provided from the Productive Employment Appropriations Act (PL 98-8) 1983 funds).
- <sup>36</sup> Includes \$2,846,263 Code 711 funds (\$293,000 provided from the Productive Employment Appropriations Act. (PL 98-8) 1983 funds).
- <sup>37</sup> Includes \$591,000 provided from the Protective Employment Appropriations Act (PL 98-8) 1983 funds. Also includes \$22,240 appropriated to and \$22,236 expended to date on M&O of Dams.
- <sup>38</sup> Includes \$1,840,000 (non-federal) original construction cost and an additional \$4,205,000 (non-federal) contributed and \$4,159,759 (non-federal) expended to date.
- <sup>39</sup> Includes \$701,504 appropriated to and \$701,504 expended to date on M&O of dams.
- <sup>40</sup> Includes \$104,684 appropriated to and \$104,683 expended to date on M&O of dams.
- <sup>41</sup> Includes \$4,225,188 (non-federal) contributed and expended to date.
- <sup>42</sup> Includes \$285,000 (non-federal) contributed funds and \$282,914 (non-federal) expended to date.
- <sup>43</sup> Includes \$4,894,000 appropriated to date for Rehab O&M and \$2,925,000 appropriated to date for Rehab Construction, General. Also includes \$222,000 (non-federal) contributed funds to date.
- <sup>44</sup> Includes \$4,880,202 expended to date for Rehab O&M and \$2,824,695 expended to date for Rehab Construction, General. Also includes \$205,323 (non-federal) expended to date.
- <sup>45</sup> Includes \$701,504 appropriated to and \$701,504 expended to date on M&O of dams.
- <sup>46</sup> Includes \$3,244,435 (non-federal) contributed funds and \$2,565,808 (non-federal) expended to date.
- <sup>47</sup> Includes \$131,618 (non-federal) contributed funds and \$102,016 (non-federal) expended to date.
- <sup>48</sup> Includes \$480,560 (non-federal) contributed funds and \$440,103 (non-federal) expended to date.
- <sup>49</sup> Includes \$867,703 (non-federal) contributed funds and \$852,806 (non-federal) expended to date.
- <sup>50</sup> Includes \$125,000 (non-federal) contributed funds and \$99,511 (non-federal) expended to date.

PITTSBURGH, PA, DISTRICT

TABLE 18-B

AUTHORIZATION LEGISLATION

Section in Text	Authorizing Act Date	Project and Work Authorized	Documents
1.	Aug 5, 1886	<b>Allegheny River, PA</b> For lock and dam 1. (Fixed dam contemplated. Sep 29, 1891 Secretary of War authorized change to a moveable dam.)	Annual Report, 1886, p. 1545 Annual Report, 1891, p. 2366
	Jun 3, 1896	For locks and dams 2 and 3.	H. Doc. 204, 54 <sup>th</sup> Cong., 1 <sup>st</sup> Sess. Annual Report 1896, p. 2212
	Jul 25, 1912	For locks and dam 4 to 8 inclusive.	H. Doc. 540, 62 <sup>nd</sup> Cong., 2 <sup>nd</sup> Sess.
	Jul 3, 1930	For a depth of 9' in the lower 61 miles.	H. Doc. 356, 71 <sup>st</sup> Cong., 2 <sup>nd</sup> Sess.
	Aug 30, 1935 <sup>1</sup>	Replace lock and dam 1 by a dredged channel, 9' deep and 200' wide up to lock 2, and construct new locks and dams 2 and 3, to replace existing locks and dams 2 and 3.	Rivers and Harbors Committee, Doc. 16, 72 <sup>nd</sup> Cong., 1 <sup>st</sup> Sess.
	Aug 30, 1935 <sup>1</sup>	Construct locks and dam 9, raising crest of dam 8, and dredging a navigable channel to head of pool 8.	H. Doc. 721, 71 <sup>st</sup> Cong., 3 <sup>rd</sup> Sess. Rivers and Harbors Committee, Doc. 27, 73 <sup>rd</sup> Cong., 2 <sup>nd</sup> Sess.
Jun 26, 1934 <sup>2</sup>	Operation and care of locks and dams provided for with funds from War Department appropriation for rivers and harbors.		
3.		<b>Monongahela River, PA &amp; WV</b>	
	Mar 3, 1899	Enlarge and improve lock and dam 6, additional work at lock 3; new repair steamer and new dredge boat with equipment; all at an estimated cost of \$185,556.	Annual Report, 1897, p. 2423
	Jun 13, 1902	Rebuild lock and dam 2 at estimated cost of \$655,961. (Estimate increased in 1910 to \$698,961.)	Annual Report, 1909, p. 1756
	Mar 3, 1905	Acquisition of land and additional improvements at 5 and 6 at a cost of \$7,850.	Annual Report, 1904, p. 460
	Mar 3, 1905	Rebuild lock and dam 3 at estimated cost of \$589,196.	H. Doc. 209, 58 <sup>th</sup> Cong., 2 <sup>nd</sup> Sess.
	Mar 2, 1907	Reconstruct lock and dam 5 at estimated cost of \$756,042.	H. Doc. 209, 58 <sup>th</sup> Cong., 2 <sup>nd</sup> Sess.
	Mar 4, 1913	Reconstruct lock and dam 6 at estimated cost of \$356,400. (Estimate increased in 1916 to \$418,860.)	H. Doc. 1217, 62 <sup>nd</sup> Cong., 3 <sup>rd</sup> Sess.
	Sep 22, 1922	Additional improvements at estimated cost as follow: Guide walls and guard walls, 1 to 6, \$1,255,130; lengthen land chamber of lock 3 to 720', \$787,722; new chamber (360' \$1,161, 24 long), lock 4, \$699,786; lock and dam 7, Lock and dam 8, \$1,165,758; lock and dam 7 second chamber, \$419,126; Lock and dam 8 second chamber, \$504,465; reconstruction dam 4, \$397,211; marine ways, repair plant, office and warehouse, \$250,000 for a total of \$6,640,439.	H. Doc. 288, 67 <sup>th</sup> Cong., 2 <sup>nd</sup> Sess.
	Jul 3, 1930	Construct new locks and dam 2.5 miles below existing structure, at estimated cost of \$2,175,000 in lieu of work authorized at old lock and dam 4.	Rivers and Harbors Committee, Doc. 22, 70 <sup>th</sup> Cong., 2 <sup>nd</sup> Sess.
	Jan 31, 1931 <sup>3</sup>	Chief of Engineers authorized to locate new locks and dam 4 above existing structure and on such site as they may deem most desirable.	
	Jun 26, 1934 <sup>2</sup>	Operation and care of locks and dams provided for with funds from War Department appropriations for rivers and harbors.	
May 17, 1950	Modification of existing project as follows: Provide 2 new locks and dams similar to Morgantown lock and dam to replace existing locks and dams 12 to 15 inclusive. Provide a movable crest on existing dam 8 to raise existing pool full elevation 4'. Provide a navigation channel of 300' minimum bottom width and a 9' project depth above lock and dam 8. Provide an extension of navigable channel of upper Monongahela River, into lower Tygart River for 2.1 miles at a maximum bottom width of 200' and a 9' project depth.	S. Doc. 100, 81 <sup>st</sup> Cong., 1 <sup>st</sup> Sess.	

REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2005

TABLE 18-B

AUTHORIZATION LEGISLATION

Section in Text	Authorizing Act Date	Project and Work Authorized	Documents
	Nov 17, 1986	Construct new lock and dam 7 (Grays Landing Lock and Dam) as follows: The Grays Landing Lock and Dam will be located 3.0 miles downriver from existing Lock and Dam 7. It will consist of a single lock chamber, 84' wide by 720' long, with a fixed crest dam 576' in length. The existing Maxwell Pool at elevation 763.0 will be shortened 3 miles and the existing Pool 7 at elevation 778.0 will be extended downriver to the new dam. There will be no change in pool elevation above existing Dam 7. Upon completion of the new replacement lock and dam, existing Lock and Dam 7 will be removed. Total authorized cost is \$181,000,000.	Supplemental Appropriations Act of 1985 for Engineering and Design and Land Acquisition and Water Resources Development Act of 1986; PL 99-662, Sec. 301(a)
	Nov 17, 1986	Replace existing 56' by 360' lock chamber at Point Marion Lock and Dam (Lock and Dam 8) with new 84' x 720' chamber. Existing movable crest dam to remain; no change in pool elevations. Total authorized cost is \$53,600,000.	Supplemental Appropriations Act of 1985 for Engineering and Design and Land Acquisition and Water Resources Development Act of 1986; PL 99-662, Sec. 301 (a)
	Oct 31, 1992	Navigation improvements as follows: The project replaces the fixed crest dam at Locks and Dam 2 with a gated dam; raises the existing pool 2 by 5', constructs twin 84' x 720' locks at Locks and Dam 4, and eliminates Locks and Dam 3; lowering the existing pool 3 by 3.2'. Authorized cost is \$705,000,000. Cost of construction is to be paid equally from the general fund of the Treasury and the Inland Waterways Trust Fund.	Water Resources Development Act of 1992; PL 102-580, Sec. 101
5.		<b>Tygart Lake, WV</b>	
	Jan 11, 1934	Construction of a dam and reservoir for low water regulation and flood control.	H. Doc. 1792, 64 <sup>th</sup> Cong., 2 <sup>nd</sup> Sess.
	Aug 30, 1935		H. Doc 106, 76 <sup>th</sup> Cong., 1 <sup>st</sup> Sess.
7.		<b>Elkins, WV</b>	
	Jun 28, 1938	For construction of local flood protection projects.	H. Doc 306, 74 <sup>th</sup> Cong., 1 <sup>st</sup> Sess. FCC Doc. 1, 75 <sup>th</sup> Cong., 1 <sup>st</sup> Sess.
8.		<b>Johnstown, PA</b>	
	Jun 28, 1938	For construction of local flood protection projects.	H. Doc. 306, 74 <sup>th</sup> Cong., 1 <sup>st</sup> Sess. FCC Doc. 1, 75 <sup>th</sup> Cong., 1 <sup>st</sup> Sess.
9.		<b>Punxsutawney, PA</b>	
	Jun 28, 1938	For construction of local flood protection projects.	H. Doc. 306, 74 <sup>th</sup> Cong., 1 <sup>st</sup> Sess. FCC Doc. 1, 75 <sup>th</sup> Cong., 1 <sup>st</sup> Sess.

# OHIO RIVER

For actual construction of locks and dams, and operation and care of completed structures, the Ohio River is divided into three sections under immediate supervision and direction of District Engineers at Pittsburgh, Huntington, and Louisville. Pittsburgh section extends 127 miles from head of river at Pittsburgh, PA, to a point immediately upstream from New Martinsville, WV, and includes Emsworth, Dashields, Montgomery, New Cumberland, Pike Island, and Hannibal Locks and Dams. Huntington section

extends 311 miles from mile 127 to 438 immediately upstream from Foster, KY, and includes Willow Island, Belleville, Racine, Robert C. Byrd, Greenup, and Captain Anthony Meldahl Locks and Dams. Louisville section extends 543 miles from mile 438 to mouth of river, and includes Markland and McAlpine Locks and Dams (with Louisville and Portland Canal), Cannelton, Newburgh, John T. Myers, and Smithland Locks and Dams, and Locks and Dams 52 and 53.

### Navigation

## 1. CONSTRUCTION OF LOCKS AND DAMS ON OHIO RIVER

**Location.** Ohio River is formed by junction of Allegheny and Monongahela Rivers at Pittsburgh, PA, and flows generally southwesterly for 981 miles to join Mississippi River near Cairo, IL. For description of river see page 1227, 1932 Annual Report.

**Previous Projects.** For details see page 1907 of Annual Report for 1915.

**Existing project.** Provides for improvement of entire river by construction of locks and dams to provide channel depth of 9 feet and for widening Louisville and Portland Canal at Louisville, KY. Project provides for two locks (110 feet by 600 feet and 56 feet by 360 feet) at Emsworth, Dashields and Montgomery. The dams at Emsworth and Montgomery are movable crests while at Dashields it is a fixed crest. Below Montgomery Locks and Dam, the existing project consists of fixed dams with

movable crests with two locks (110 by 1,200 feet and 110 by 600 feet) at New Cumberland, Pike Island, Hannibal, Willow Island, Belleville, Racine, Greenup, Captain Anthony Meldahl, Markland, Cannelton, Newburgh, and John T. Myers; two locks 110 by 1,200 feet at Robert C Byrd and Smithland; 110- by 1,200-foot temporary locks in addition to the existing locks at Locks and Dams 52 and 53, and reconstruction to provide a 110- by 1,200-foot lock in addition to existing locks and a fixed dam with two sections of movable crest at McAlpine Locks and Dam; widening Louisville and Portland Canal to 500 feet. Auxiliary lock 56 by 360 feet at McAlpine Locks and Dam has been inoperative since failure of downstream lock gates in December 1972. Rehabilitation of existing Locks and Dams 52 and 53 was started in September 1979 under the purview of Section 6, March 1909 Act. Mound City was also considered authorized under purview of 1909 Act, and preconstruction planning was performed in the period 1965 to 1972. The ruling of the U.S. District Court, District of Columbia, on September 6, 1974, with reference to Lock and Dam 26, Mississippi River, would

## REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2005

also apply to this project. Consequently, it is no longer considered authorized. Operation and care of locks and dams were included in project July 1, 1935, under provisions of Permanent Appropriations Repeal Act of June 26, 1934. Estimated Federal cost of new work, is \$3,600,490,636. Foregoing estimate does not include expenditures on previous projects. Various items previously included in this project are considered inactive or unnecessary and are excluded from foregoing cost estimate. See page 693, Annual Report, 1968, for items and estimated cost. Under authority of 1910 River and Harbor Act, Louisville and Portland Canal was widened to 200 feet; Locks and Dams 40 and 42 eliminated; Locks and Dams 1 and 2 replaced by Emsworth Locks and Dam; Lock and Dam 3 replaced by Dashields Locks and Dam; and Locks and Dams 4, 5, and 6 replaced by Montgomery Locks and Dam. Locks and Dams 24, 25, and 26 were replaced by Robert C. Byrd Locks and Dam authorized by August 30, 1935, Act, and constructed under project for improving lower Kanawha River. Locks and Dams 7, 8, and 9 were replaced by New Cumberland Locks and Dam; Locks and Dams 10 and 11 were replaced by Pike Island Locks and Dam; Locks and Dams 12, 13, and 14 were replaced by Hannibal Locks and Dam; Locks and Dams 15, 16, and 17 were replaced by Willow Island Locks and Dam; Locks and Dams 18, 19, and 20 were replaced by Belleville Locks and Dam; Locks and Dams 21, 22, and 23 were replaced by Racine Locks and Dam; Locks and Dams 27, 28, 29, and 30 were replaced by Greenup Locks and Dam; Locks and Dams 31, 32, 33, and 34 were replaced by Captain Anthony Meldahl Locks and Dam; Locks and Dams 35, 36, 37, 38, and 39 were replaced by Markland Locks and Dam; the Louisville and Portland Canal at McAlpine Locks and Dam was widened to 500 feet. Locks and Dams 43, 44, and 45 were replaced by Cannelton Locks and Dam; Locks and Dams 46 and 47 were replaced by Newburgh Locks and Dam; Locks and Dams 48 and 49 were replaced by John T. Myers Locks and Dam, and Locks and Dams 50 and 51 were replaced by Smithland Locks and Dam, as modifications to existing project under purview of Section 6, March 3, 1909 Act, reducing total number of structures to 20. The Water Resources Development Act of 1974 combined the Newburgh Bank Protection Works project with the Newburgh Locks and Dam project. A December 1981 Act established the Falls of the Ohio National Wildlife Conservation Area near McAlpine Locks and Dam to protect and preserve existing fossilized coral and a diversity of wildlife. A November 17, 1988 Act authorized a replacement structure for Locks & Dams 52 & 53 at Olmsted, IL. A November 28, 1990 Act authorized an interpretive center at the Falls of the Ohio National Wildlife Conservation Area near McAlpine Locks & Dam and a replacement of the existing 110 foot x 600 foot lock at McAlpine Locks &

Dam, IN & KY. Table 19-J contains data relative to various features of locks and dams included in existing project. For list of principal towns and cities along Ohio River with their mileage below Pittsburgh, PA, see page 1060, 1962 Annual Report. See Table 19-I for licenses.

Navigation system of 20 locks and dams is in operation and 9-foot navigation throughout length of river is generally available at all times. At certain unstable bars project depth is maintained by dredging, supplemented by contraction works. (See "Open Channel Work, Ohio River.") Table 19-J shows cost and year completion of locks and dams now in operation. New Cumberland, Pike Island, Hannibal, Willow Island, Belleville, Racine, Greenup, Captain Anthony Meldahl, Markland, McAlpine, Cannelton, Newburgh, John T. Myers, and Smithland replacement locks and dams are in operation, replacing 39 old low-lift locks and dams. For total cost of existing project, see Table 19-H.

**Terminal facilities.** Modern public terminals, with warehouses, equipped with operating machinery for transferring materials, have been constructed by private interests at some of the larger cities and towns. A list of terminals on Ohio River is revised annually and can be obtained from Division Engineer, U.S. Army Engineer Division, Great Lakes & Ohio River, Cincinnati, Ohio.

**Operations during fiscal year.** New work by contract and hired labor:

**Emsworth Locks and Dam:** The major rehabilitation will consist providing two sets of emergency bulkheads, providing permanent erosion protection downstream of the dams, and replacing 13 lift gates and associated electrical and mechanical systems. \$3.5M was appropriated and \$3.2 was expended in FY 2005 through the Dam Safety Program to initiate contract plans and specifications, complete a hydraulic model study of the stilling basin, award the emergency bulkhead supply contract, and award the dam lift gates contract.

**Greenup Locks and Dam:** WRDA 2000 authorized improvements to Greenup L&D, KY and OH. Preconstruction Engineering and Design is underway consisting of geotechnical investigations, design report for the lock extension, mitigation model studies, and archaeological, historical, cultural, and biological work. Studies are scheduled for completion in 2007.

**Robert C. Byrd Locks and Dam:** The existing project, constructed under project for improving lower Kanawha River, was placed in operation in August 1937. The dimensions of the original lock chambers and poor approach conditions, particularly to downstream traffic, had created a higher than normal accident rate to the structure with corresponding hazards and delays to

## OHIO RIVER

traffic. The Water Resources Development Act of 1976 authorized Phase I studies for 1,200-foot locks in a bypass canal. These studies are complete.

**Initial Construction.** General funds for the continuation of engineering activities were received in September 1985. Real estate acquisition is complete. The contract for the Locks was awarded in October 1987 and the new locks were put into operation in 1993. The contract for the Dam Rehabilitation was awarded in June 1993 and is 99 percent complete. The total estimated cost of the project is \$383,500,000, which is 50 percent federal cost and 50 percent Inland Waterways Trust Fund cost.

**Falls of the Ohio National Wildlife Conservation Area** Was authorized by 97-137 on December 29, 1981 and modified by Public Law 101-640 on November 28, 1990 to design and construct an interpretive center. The Conservation Area protects 1,000 acres, which consists of birdlife and other wildlife. Planning consisted of efforts to define facilities to be cost shared with local interests. All Real Estate tracts have been acquired and one tract remains in a condemnation trial. A construction contract to construct the cost-shared recreation facilities was awarded on 30 September 1993, and completed in February 1995. The Indiana Department of Natural Resources manages the area under a Public Park and Recreation Lease granted on 1 January 1992. A portion of the Ohio River Shoreline within the Conservation Area abutting the location of Emery Crossing Road in the vicinity of the historic town of Clarksville, Indiana, collapsed into the river in the spring of 2004, exposing remnants of a prehistoric village and one human burial site. Consequently, an extensive investigation and limited recovery preceded bank stabilization construction, which was closely coordinated with the Indiana State Historic Preservation Office. Construction to restore the bank and provide a base for Town of Clarksville to rebuild the road was completed in July 2005, including a modification to increase toe protection by placing rock berm between road collapse repair and Mill Creek Bridge.

**John T. Myers Locks and Dam:** Construction was initiated in June 1965. All work is complete. An extension of the existing 600-foot x 110-foot auxiliary lock chamber to a 1,200-foot x 110-foot chamber was authorized by the WRDA of 2000 in Public Law 106-541 on 11 December 2000. This effort will give the J.T. Myers project twin 1,200-foot locks for inland navigation tow traffic. Preconstruction and Design efforts are underway consisting of the preparation of geotechnical investigations, design reports for the lock extension and aquatic mitigation, hydraulic model

studies, and economic and archeological, historical, cultural and biological work were completed in September 2004. A construction contract for the first site preparation was awarded in September 2004 for \$392,000. Ongoing Preconstruction and Design efforts consisting of the preparation of design reports and plans and specifications for the lock extension, aquatic mitigation, and miter gate storage pier continue.

**McAlpine Locks and Dam:** A replacement of the existing 110 foot x 600 foot lock with a new 100 foot x 1,200 foot lock was authorized by WRDA of 1990 in Public Law 101-640. Construction has been initiated. A contract to construct a cofferdam and demolish the 360 foot and 600 foot locks was awarded in May 2000 and was completed March 2003. A contract to construct a boat mooring facility was awarded 4 April 2002 for \$2,680,000 and was completed in April 2004. A contract to construct the new 1,200 foot lock and an access bridge to Shipping port Island was awarded on 24 September 2002 for \$221,441,468. Notice to proceed was issued 30 October 2002. \$166,575,000 has been allocated for the lock replacement and ancillary efforts.

**Olmsted Locks & Dam:** A replacement structure for Locks and Dams 52 & 53 was authorized by the WRDA of 1988 in Public Law 100-676 on 17 November 1988. Planning Engineering and Design continued. A contract to construct the approach wall was awarded 26 August 1999. Construction was physically completed in March 2004 with final acceptance occurring in May 2005. A contract for the Operating and Maintenance Bulkheads was awarded on September 27, 2001 and was physically completed in FY 2005. The design-build contract for the Gate Storage contract was awarded 8 March 2002 and was physically completed in FY 2005. The Dam construction contract was awarded on 28 January 2004. Notice to proceed was issued on 18 February 2004, mobilization efforts continued. Construction of the precast yard is underway. Progress was approximately 6% due to limited funds. In FY05, \$58,767,064 was expended on the Olmsted project.

**Emsworth Locks and Dam:** FY05: completed repairs of miter gates at \$268,000, truck assembly at \$114,000, and a gate damage job at \$75,000. Total maintenance cost for FY05 was \$457,000.

**Montgomery Locks and Dam:** FY05: completed the repairs to damaged gate for \$35,000, and the renovation of land wall filling valve & operating machinery for \$650,000. Total maintenance cost for FY05 was \$685,000.

**New Cumberland Locks and Dam:** FY05: completed dredging for \$50,000 and repairs to the lift

## REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2005

span at \$48,000. Total maintenance cost for FY05 was \$98,000.

**Pike Island Locks and Dam:** FY05: completed dredging for \$50,000, renovation of the land wall filling valve for \$1,031,000, and repair to gate arms for \$300,000. Total maintenance cost for FY05 was \$1,381,000.

**Hannibal Locks and Dam:** FY05: completed dredging for \$50,000, renovation of the land wall emptying valve for \$888,000, repair to quoin seals for \$515,000. Total maintenance cost for FY05 was \$1,453,000.

**Dashields Locks and Dam:** FY05: completed the repairs to the operating machinery at \$35,000, the access road at \$184,000, and an accident repair to the upstream land wall at \$50,000. Total maintenance cost for FY05 was \$269,000.

### **Operation and maintenance, general.**

Locks and dams operated as required and necessary repairs and improvements made thereto and to operator's quarters, grounds and esplanades. Costs were \$23,326,306 for Huntington District, \$30,807,991 for Louisville District and \$20,398,457 for Pittsburgh District.

## **2. OPEN CHANNEL WORK,**

### **OHIO RIVER**

**Location.** Under jurisdiction of District Engineer in whose district work is located. Portion of river included in project extends 974.7 miles from head of river at Pittsburgh, PA, to mouth of Cache River (Mound City, IL). Open channel improvement from mouth of Cache River to mouth of Ohio River is under jurisdiction of Mississippi River Commission.

**Existing Projects.** Before completion of canalization project, no project depth had been fixed by Congress under project for open channel work; but, in order to properly aid packet and barge navigation, it was necessary to secure a low-water channel with a minimum depth of 4 to 6 feet, and a width, depending upon difficulty of running channel, of 400-600 feet; also, to permit movement of large coal tows, which movement occurred at stages of water exceeding 10 feet, it was necessary to remove points of projecting bars which formed at various locations along river. Accomplishment of this purpose involved concentration of current by closing back channels at islands with low dams, contraction and straightening wide open channels by low dikes, dredging bars and shoals, and removal of snags and wrecks. Incidental to direct improvement of Ohio River is construction and maintenance of ice piers

as required for protection of river craft. Stage of extreme high water on Ohio River varies from 46 feet at Pittsburgh, PA, to 80 feet at Cincinnati, OH, with 57.2 feet at Louisville, KY (head of falls, 53.8 feet at Evansville, IN, and 59.5 feet at Cairo, IL (mouth of river). Estimated cost of new work is \$16.16 million, exclusive of following items which are considered inactive: Ice piers authorized by 1927 River and Harbor Act; reforestation of sloughs of Kentucky Peninsula near Evansville, IN, authorized by 1930 River and Harbor Act; dredging to widen channel at certain points; and placing revetment at various points. Estimated cost of these items is \$6,565,000. Operation of snag boats on Ohio River below Pennsylvania State line was included in project July 1, 1935, under provisions of Permanent Appropriations Repeal Act of June 26, 1934. See Table 19-B for authorizing legislation.

New work under this project is substantially complete, since it is not anticipated that work on inactive portion of project will be accomplished. In addition to dredging, local stabilization of channel has been effected at various points by construction of dikes and revetment. Work, which remains, consists of dredging to widen channels at certain points to project depth.

**Local cooperation.** River and Harbor Act of January 21, 1927, authorizing construction of ice piers for general open channel work, imposes condition that before work is begun on any pier, local interests convey to the United States free of cost such riparian rights as may be deemed necessary in connection with the improvements at locality (H. Doc. 187, 67th Congr., 2nd Sess.). Existing ice piers are adequate for present purposes and local cooperation is not needed since no additional construction is under consideration. River and Harbor Act of July 3, 1930, provides for reforestation of sloughs of Kentucky Peninsula and bank protection and that no expense shall be incurred by the United States for acquiring lands required for purpose of this improvement (H. Doc. 409, 69th Congr., 1st Sess.). However, since no serious overbank erosion has occurred since bank revetment in 1933-34, reforestation is not considered justifiable at this time and no local cooperation is required.

**Operations during fiscal year.** Operation and maintenance, general: Dredging was done where required to provide an adequate and dependable channel of project depth at minimum pool conditions. Dikes and revetments were maintained and routine work of maintaining navigation aids, removing snags, making channel studies, hydrographic surveys and mapping was performed as required. Channel soundings, hydrographic surveys, stream gauging operations, channel inspections and aids to navigation, and miscellaneous inspections and reports cost \$1,173,220. In FY 2005 dredging by contract in the Huntington

## OHIO RIVER

District was 360,493 cubic yards at \$1,706,397, Louisville District 712,268 cubic yards at \$3,028,483, and Pittsburgh District 211,000 cubic yards at \$606,346.

### **General Investigations:**

#### **1. UPPER OHIO NAVIGATIONAL STUDY**

Emsworth, Dashiels and Montgomery (EDM) are the uppermost Lock and Dam structures on the Ohio River and are located at river miles 6.2, 13.3 and 33.7 respectively, below the "Point" in Pittsburgh, Pennsylvania. All three have dual lock chambers, 110' x 600' (main) and 56' x 360' (auxiliary). These lock chambers are smaller than the typical 110' x 1200' Ohio River locks and are considered undersized compared to the other downstream Ohio River navigation facilities, are 60 to 70 years old, have already been rehabilitated to extend their useful lives and have a critical need for structural reconstruction or additional rehabilitation. Study of EDM will include both three-for-three and two-for-three lock strategies. The latter strategy would involve the removal of Dashiels Locks and Dam and involve a Montgomery pool modification by up to five feet and/or a lowering of Dashiels pool by up to ten feet.

The site-specific EDM feasibility report was Congressionally added in the Fiscal Year 2003 Omnibus Act. The District has prepared a Project Management Plan (PMP) for the feasibility study. The PMP was approved by the Great Lakes and Ohio River Division Office in Cincinnati, Ohio, on August 17, 2004. The Study is proceeding with activities associated with the "without project condition" and preparation for a Feasibility Scoping Meeting to be scheduled after completion of the Ohio River Main Stem Systems Study System Investment Plan.

- 1 Includes \$17,003,761 for previous 6-foot canalization project.
- 2 Includes \$36,943,217 expended from 1885 to 1937 on operation and care of work of improvement under provisions of permanent indefinite appropriations for such purposes.
- 3 Includes \$215,812 public works acceleration, executive 1963.
- 4 Includes \$38,766 public works acceleration, executive 1963.
- 5 Excludes \$251,769 contributed funds for new work.
- 6 Excludes \$250,102 contributed funds for new work.
- 7 Excludes \$1,621,349 expended in operation of snag boats under provisions of permanent indefinite appropriation for such purposes, and \$267 transferred to project without reimbursement.
- 8 Includes \$1,040,236 Public Works funds.
- 9 Includes \$1,000 for removal of obstructions in Licking River under authority of Section 3, R&H Act of 1930.
- 10 Includes \$100,000 placed in FY 1971 Budget Reserve.
- 11 Excludes \$3,899 transferred from project without reimbursement.
- 12 Surplus property valued at \$3,553 transferred to project without reimbursement.

- 13 Excludes \$2,140 transferred to project without reimbursement.
- 14 Excludes surplus property valued at \$73,832 transferred to Project without reimbursement.
- 15 Includes \$87,724,158 prior construction cost.
- 16 Excludes surplus property valued at \$297,385 transferred to Project without reimbursement.
- 17 Includes \$549,392 Code 710 Funds, \$572,162 Code 711 Funds, \$532,677 Code 712 Funds and \$1,759,812 Code 713 Funds.
- 18 Includes \$549,392 Code 710 Funds, \$342,162 Code 711 Funds, \$532,677 Code 712 Funds and \$1,989,812 Code 713 Funds.
- 19 Includes \$2,158,073 Funds provided from The Productive Employment Appropriations Act of 1983 (PL 98-8).
- 20 Includes \$920,945 cost for operations & care of previous projects.
- 21 Includes \$ 542,561,750 Inland Waterways Trust Funds.
- 22 Includes \$ 542,414,927 Inland Waterways Trust Funds.
- 23 Excludes \$9,525,437 settlement from the U S Treasury Dept. Judgment Fund.

## OHIO RIVER

**Table 19-B** **Authorizing Legislation**

See Section in Text	Date of Authorizing Act	Project and Work Authorized	Documents
<b>2. Open Channel Work, Ohio River</b>			
March 3, 1827		Project adopted by this act originally covered entire length of Ohio River from its mouth near Cairo to Pittsburgh, a distance of 981 miles. It provided for removal of all obstructions, which tend to endanger steamboat navigation.	
January 21, 1927		Construct ice piers as a part of allotted from appropriations for general open channel work.	H. Doc. 187, 67th Cong., 2 <sup>nd</sup> Sess.
July 3, 1930		Reforestation of sloughs on Kentucky Peninsula near Evansville, IN, and a 200-foot strip along bank and for bank protection at an estimated cost of \$200,000.	H. Doc. 409, 69th Cong., 1 <sup>st</sup> Sess.
July 3, 1958		Act of March 3, 1827, modified to include maintenance of existing Licking River Channel within lower 3-mile limit of river slack water, at an estimated increase of \$1,000 in cost of average annual maintenance.	H. Doc. 434, 84th Cong., 2 <sup>nd</sup> Sess.
<b>Locks and Dams, Ohio River</b>			
December 29, 1981		Act of December 29, 1981, established the 1,000-acre Falls of the Ohio National Wildlife Conservation Area, at a cost not to exceed \$300,000.	H.R. 2241, PL97-137, Title II, 95 Stat. 1710
October 17, 1986		Act of October 17, 1986 authorized lock replacement, improvement, and rehabilitation at Gallipolis Lock and Dam, Ohio River, Ohio and West Virginia for 1200 –foot locks to provide a uniform lockage system thought the central reach of the Ohio River at a total cost of \$285,000,000.	PL 99-622, 99 <sup>th</sup> Cong
November 17, 1988		Act of November 17, 1988 authorized a replacement structure for Locks and Dams 52 and 53 at Olmsted, Illinois.	PL 100-676, 100th Cong., 2nd Sess.
November 17 1988		Act of November 17, 1988 prohibited conveyance to the state of West Virginia the land known as Lesage/Greenbottom Swamp that was acquired by he United States for mitigation purposes in connection with the Gallipolis Locks and Dam replacement project.	PL 100-676, 100 <sup>th</sup> Cong..
November 28, 1990		Act of November 28, 1990, modified PL 97-137 by authorizing an interpretive center at Falls of the Ohio National Wildlife Conservation Area, at an estimated total cost of \$3,200,000.	PL 101-640, 101st Cong., 2nd Sess.
November 28, 1990		Act of November 28, 1990 authorized a modernization of the existing 110 foot x 600 foot lock at McAlpine Locks and Dam, Indiana and Kentucky at a total cost of \$219,600,000 with one-half appropriated from the Treasury and one-half from the Inland Waterways Trust Fund.	PL 101-640, 101st Cong., 2nd Sess.
October 31, 1992		Act of October 31, 1992 renamed the Gallipolis Locks and Dam to the Robert C. Byrd Locks and Dam.	PL 102-580, 102nd Cong., 2nd Sess.
October 1, 1996		Act of October 1, 1996 renamed the Uniontown Locks and Dam to the John T. Myers Locks and Dam.	PL 104-303, 104 <sup>th</sup> Cong.
October 31, 2000		Act of October 31, 2000 authorized a modernization of the existing 110' x 600' lock at John T. Myers Locks and Dam, Indiana and Kentucky at a total cost of \$181,700,000 with one-half appropriated	PL 106-541, 106 <sup>th</sup> Cong.

**REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2005**

from the Treasury and one-half from the Inland Waterways Trust Fund.

October 31, 2000	Act of October 31, 2000 authorized a modernization of the existing 110' x 600' lock at Greenup Locks and Dam, Kentucky and Ohio, at a total cost of \$175,500,000 with one-half appropriated from the Treasury and one-half from the Inland Waterway Trust Fund.	PL 106-541, 106 <sup>th</sup> Cong.
October 31, 2000	Act of October 31, 2000 authorized projects for ecosystem restoration on Ohio River Mainstem, Kentucky, Illinois, Indiana, Ohio, West Virginia and Pennsylvania at a total cost of \$307,700,000 with an estimated Federal cost of \$200,000,000 and an estimated non-Federal cost of \$107,700,000.	PL 106-541, 106 <sup>th</sup> Cong.

**Table 19-H Construction of Locks and Dams on Ohio River  
Total Cost of Existing Project to September 30, 2005  
(See Section 1 of Text)**

Funds	New Work	Operations and Maintenance General	Rehabilitation	Total
Regular				
Public Works				
Emergency Relief				
Maintenance & Operation				
Public Works Acceleration				
Executive 1963				
<b>Total</b>				

<sup>1</sup>Excludes \$36,943,217 expended from 1885 to 1937 under permanent indefinite appropriation.

<sup>2</sup>Excludes \$920,945 cost for operation and care of previous projects.

<sup>3</sup>Excludes \$87,724,158 prior construction cost.

<sup>4</sup>Includes \$33,914,252 cost for O & M Rehabilitation.

Note: All other cost variations are listed in the Footnotes of Table 19-A.

OHIO RIVER

**Table 19-J Ohio River Locks and Dams  
(Continued)**

**Footnotes**

- 1 Depths are on emergency dam foundation and re-controlling depths.
- 2 Change from fixed dam to lift-gate dam completed in 1938.
- 3 Depths are on poiree dam foundation and are controlling depths.
- 4 Land chamber.
- 5 River chamber.
- 6 Lock and Dam 41 completed with 110- by 600-foot lock in 1921. Completed with new dam and raised canal and lock wall in 1928. Auxiliary 56- by 360-foot lock constructed in 1929-30. Reconstruction and modernization began 1956, renamed McAlpine Locks and Dam in 1960. Operation of auxiliary lock suspended in 1971.
- 7 Existing structures are complete except for deferred alteration of railroad bridge. Construction of the new 110 foot x 1,200 foot lock began in September 2002.
- 8 Dam below not yet constructed. Depth on lower miter sill at lower water.
- 9 Excludes \$2,219,975 payment for settlement of damage to dam caused by barge accident in April 1978.
- 10 Major rehabilitation (\$8,876,000) initiated in FY 79 is complete.
- 11 Major rehabilitation (\$4,593,572) initiated in FY 79 is complete.

- 12 For preconstruction planning 1965 to 1972. No longer considered authorized. (See Section 1 of Text.)
- 13 Includes \$37,485,870 for major rehabilitation completed in FY 84
- 14 Includes \$33,914,252 for major rehabilitation completed in FY 90 (O&M funds).
- 15 Includes \$33,016,696 for major rehabilitation completed in FY 89.
- 16 Includes \$205,902,209 Inland Waterways Trust Funds.
- 17 Includes \$345,714,608 Inland Waterways Trust Funds.
- 18 Includes \$113,670,548 Inland Waterways Trust Funds.
- 19 Exclusive of \$7,013,405 details below.
- 20 Includes \$102,190,120 original construction cost, \$5,205,058 PED costs and \$713,776 Inland Waterways Trust Funds for Lock Improvement.

Additional Features Entering into Cost of Project	
Louisville and Portland Canal and Indiana chute (under previous project).	\$5,359,203
Examinations, survey contingencies, plants, and miscellaneous	966,232
Waterfront Development at Huntington, WV (Greenup Pool)	19,170
Recreation facilities, pool area, Gallipolis Locks and Dam.	668,800
	Total 7,013,405
Grand Total	\$2,584,629,297

# BUFFALO, NY DISTRICT

The District comprises northern OH, northwestern PA and western and northern NY, embracing U.S. waters of Lake Erie exclusive of a small portion of the western end, Lake Ontario, and St. Lawrence River, with their tributary drainage basins from boundaries between the states of OH and MI to international boundary line east of Frontier, NY.

## NAVIGATION

### 1. ASHTABULA HARBOR, OH

**Location.** On the south shore of Lake Erie, at mouth of Ashtabula River, 59 miles easterly from Cleveland, OH. (See NOAA Nautical Chart 14836.)

**Previous projects.** For details see pg. 1963 of Annual Report for 1915, and pg. 1593 of Annual Report for 1938.

**Existing project.** For description see pgs. 1297-1299 of the 1966 Annual Report. Federal cost of completed project is \$12,240,147. Non-Federal costs of \$5,743,000, including contribution of \$47,000, were for construction of access roads, docks, storage and handling facilities and dockside dredging. (See Table 20-B for authorizing legislation.)

**Local cooperation.** Fully complied with. Local interests contributed \$47,000 for work authorized by 1936 and 1970 Acts.

**Terminal facilities.** There are sixteen piers and wharves. Coast Guard owns one facility. Ten facilities are along banks of Ashtabula River and six are on south side of outer harbor. Eleven terminals have railroad connections and six have mechanical handling facilities. Facilities are considered adequate for existing commerce. (See Port Series No. 42, revised 1972, Corps of Engineers.)

#### **Operations and results during fiscal year.**

Operations: Federal funds for Project Condition Surveys cost \$47,000, and Real Estate Management Activities cost \$4,982. Maintenance: A total of \$497,046 was expended for government floating plant to rebuild 210' (laid up wall shore side) and repair 210' (lake side rubble mound) of the East Breakwater [Station 19+90 to 22+00]. The derrickboat *McCauley* and the tugboat *Koziol* were utilized for these structure repairs. Costs associated with the Ashtabula River Partnership Project for removal of contaminated sediments from the Ashtabula River totaled \$112,112. This amount includes \$99,790 expended for coordination with partnering agencies and \$12,322 expended for continuation of Preconstruction Engineering and Design. In addition, \$90,990 was expended for sampling and testing for the 401 Certification required for maintenance dredging.

### 2. BLACK ROCK CHANNEL AND TONAWANDA HARBOR, NY

**Location.** Improvement is essentially that of upper 13.5 miles of Niagara River from its head at Lake Erie, Buffalo, NY, to and including Tonawanda

Harbor, NY. It comprises improvements formerly designated by three titles; Lake Erie entrance to Black Rock Harbor and Erie Basin, NY, Black Rock Harbor and Channel, NY and Tonawanda Harbor and Niagara River, NY. (See NOAA Nautical Chart 14832.)

**Previous projects.** For details, see items 5 and 7, pg. 1970 of Annual Report for 1915, and pg. 1612 of Annual Report for 1938.

**Existing project.** For description of existing project and Federally owned Black Rock ship lock, see pg. 1548 of Annual Report for 1962. Improvement of guide pier at Black Rock Lock, as authorized by 1935 Act was de-authorized by Congress in Aug 1977. Cost for completed portion of new work is \$10,457,093. Enlarging of existing 21-foot turning basin and deepening lower 1,500 feet of Tonawanda Inner Harbor from 16 to 21 feet, authorized by the 1954 Act, was de-authorized by Congress in May 1981, and is excluded from foregoing cost. Non-Federal costs are estimated at \$1,540,000 for costs incurred by NY State for construction of Erie Basin and protecting breakwater, and construction and extension of Bird Island Pier, and by other local interest for relocation of utilities. (See Table 20-B for authorizing legislation.)

**Local cooperation.** Fully complied with for existing project. Contract for cost-shared recreation development at completed projects (Code 713 program) was executed by the NY State Department of Environmental Conservation, Albany, NY on Apr 16, 1985, and was approved by the Assistant Secretary of the Army and Chief of Engineers on May 3, 1985.

**Terminal facilities.** Two facilities are along the upstream end of the channel. Below Black Rock Lock and at Tonawanda Harbor there are 13 privately owned terminals. There are two state-owned barge canal terminals at Tonawanda, NY, and several marine service and supply docks for recreational and other small craft. The Corps owns a wharf adjacent to Black Rock Lock that is private. Ten terminals have railroad connections and six mechanical-handling facilities. Facilities considered adequate for existing commerce. (Port Series No. 41, revised 1971, Corps of Engineers.)

#### **Operations and results during fiscal year**

Operations: Project Condition Surveys cost \$32,998, Water Control Management and Data Collection cost \$29,989, Formal Periodic Inspection cost \$8,817, Real Estate Management Activities cost \$10,000, and Operation and Care of Lock cost \$681,680. Maintenance: The lock was dewatered during the 2005 fiscal year in order to complete the replacement of the operating gate mounted filling/emptying valves and the associated reach rods. Four of the gate-

## BUFFALO, NY DISTRICT

mounted butterfly valves and all eight reach rods were replaced at a total cost of \$329,014. The valves were failing or had failed, causing an increase in the cycle times for the lock. A comprehensive engineering analysis of the operating gates, machinery and associated systems was completed at a total cost of \$113,404. This study identified significant rehabilitation and maintenance efforts that will be required in order for the lock to meet its required availability rate and to efficiently program available funding. \$365,111 was expended for rehabilitation of the Upper West Wing Wall. All maintenance required during FY 2005 was accomplished with minimal impact on commercial and recreational navigation interests. Costs in addition to the aforementioned work were distributed as follows: Ordinary Maintenance and Repair cost \$236,591, Environmental Compliance Site Assessment and Management cost \$24,878, and Snagging and Clearing cost \$102,981.

### 3. BUFFALO HARBOR, NY

**Location.** At eastern end of Lake Erie, at head of Niagara River, 176 miles easterly from Cleveland, OH. (See NOAA Nautical Charts 14820 and 14833.)

**Previous projects.** For details see pg. 1967 of Annual Report for 1915 and pg. 1606 of Annual Report for 1938.

**Existing project.** For description see pg. 1368 of Annual Report for 1963. In addition, on Dec 15, 1980, OCE authorized the removal of bridge abutments of South Michigan Avenue Bridge. New work for completed project cost \$18,837,601. Estimated non-Federal costs were \$9,188,000 for deepening, widening, and improving Buffalo River and ship canal, constructing piers, retaining walls, and dikes and performing dockside dredging. (See Table 20-B for authorizing legislation.)

**Local cooperation.** Fully complied with.

**Terminal facilities.** There are 27 piers, wharves, and docks of which five are on the outer harbor, nine are on the Lackawanna, Union, and Buffalo Ship Canals, and thirteen are located along the deep-draft section of the Buffalo River. Gateway Metroport, Division of Gateway Trade Center, Inc., owns and operates, for the former Bethlehem Steel Corp., wharves at Lackawanna for the receipt and shipment of general cargo and bulk commodities. Buildings of the former steel plant are utilized for transit and long-term storage of cargo as required. The Niagara Frontier Transportation Authority owns Terminals A and B in the outer harbor used for handling general cargo. Twenty terminals have railroad connections. The city of Buffalo owns a slip on the right bank of Buffalo River just north of Michigan Avenue Bridge

for mooring the city fireboat. Coast Guard facilities are at the mouth of Buffalo River along the left bank. (See Port Series No. 41, revised 1991, U.S. Army Corps of Engineers.)

#### **Operations and results during fiscal year.**

Operations: Federal funds for Project Condition Surveys cost \$69,369 and Water Control Management cost \$31,995. Maintenance: Environmental Compliance Activities cost \$10,000 to provide technical support/review for preparation of Contaminant Monitoring Assessment report on the harbor's dredged material confined disposal facility (CDF). In addition, reviewed analytical sediment quality data to determine whether non-Federal dredged material is suitable for disposal in CDF.

### 4. CLEVELAND HARBOR, OH

**Location.** On south shore of Lake Erie, at mouth of Cuyahoga River, 176 miles westerly from Buffalo, NY. (See NOAA Nautical Chart 14839.)

**Previous projects.** For details see pg. 1962, Annual Report for 1915, and pg. 1585, Annual Report for 1938.

**Existing project.** For description of existing project, as authorized through the 1966 modification, see pg. 1269 of Annual Report for 1967. Further improvements in the interest of commercial navigation and recreational navigation were authorized in the 1985 Supplemental Appropriations Act (PL 99-88). For details of the commercial navigation portion of the project, see pg. 20-4 of the Annual Report for 1995. For details of the recreational navigation portion of the project, see pg. 20-3 of Annual Report for 1994. The Water Resources Development Act of 1986 (PL 99-662) and the FY 88 Energy and Water Appropriations Act (PL 100-202) authorized the recreational navigation project. These acts authorized additional undefined improvements to Cleveland Harbor. A portion of the project was de-authorized by the Inter-modal Surface Transportation Efficiency Act of 1991. Estimated total Federal cost of the existing project is \$33,852,100 (Oct 1991) exclusive of undefined, inactive and deferred portions of the project. The amount of \$29,315,100 is for completed work and the balance of \$4,537,000 is for new work. Estimated non-Federal cost is \$13,740,000 (Oct 1991) of which \$9,203,000 is actual cost for completed work and the balance of \$4,537,000 is required for work authorized by PL 99-88, PL 99-662, and PL 100-202. Remaining work authorized by 1946 River and Harbor Act, consisting of widening and deepening the right bank of Cuyahoga River at the downstream end of Cut 4, is considered inactive and excluded from foregoing cost estimate. Estimated Federal cost

## REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2005

(1966) of this portion is \$85,600 and non-Federal cost (1966) \$5,000,000. Remaining work authorized by 1958 R&H Act, consisting of planning and replacement of bridges number 19 (E.L.R.R.) and 32 (B. & O.R.R.) and widening Cuyahoga and Old River channels, and remaining work authorized by the 1960 R&H Act, consisting of deepening the remainder of the Cuyahoga River from bridge number 1 to and including the Old River to a depth of 27 feet, has been classified as deferred and is also excluded from foregoing estimate. Estimated Federal cost (Oct 1976) of this portion is \$18,033,300 and estimated non-Federal cost (Oct 1976) is \$21,251,000. The 1989 Energy and Water Development Appropriations Act (PL 101-101) authorized the Corps to begin a Reconnaissance study of the Cuyahoga River, to address the concerns of boat traffic congestion and related risks, accidents and safety of the public. Preliminary plans were studied to alleviate the commercial navigation problem and inadequate width and depth, in the Old and Cuyahoga Rivers. The cost of this Reconnaissance study was \$250,000. The Reconnaissance Report recommended a feasibility study for one plan, which has three structural features, and the potential for yielding commercial (priority) outputs. The non-Federal sponsor did not commit to provide its total share of the cost of the feasibility phase of the study. Therefore, the study was reclassified as "inactive". (See Table 32-B for authorizing legislation.) A confined disposal facility (CDF) (Dike 10B) was constructed adjacent to the Burke Lakefront Airport for containment of dredged material from Cleveland Harbor. The rubble mound structure was designed to hold material unsuitable for open-lake disposal. The sixty-eight (68) acre site should provide sufficient CDF capacity for approximately twenty years. The project was constructed with Federal O&M funds at a cost of \$17,500,000 and was completed in 1998.

**Terminal facilities.** Fifty-one piers, wharves, and docks are situated in the Port of Cleveland. Eleven are located in the east and west basins of the outer harbor; 7 along the banks of the Old River and 17 and 16 along the right and left banks of the Cuyahoga River, respectively. Twenty-two terminals have both railroad connections and mechanical-handling facilities. The Corps owns a wharf at the foot of East 9th Street. The city of Cleveland owns and operates a wharf for mooring the city fireboat. U.S. Coast Guard vessels are moored east of the foot of 9th Street in the east basin. (See Port Series No. 43, revised 1989, U.S. Army Corps of Engineers.)

### **Operations and results during fiscal year.**

Operations: Federal funds for Project Condition Surveys cost \$74,000, Sediment Sampling and Analysis cost \$18,959, Real Estate Management

Activities cost \$14,994 and Phase II of the Dredged Material Management Plan (DMMP), a feasibility-level management plan study was initiated at a first year cost of \$183,966. The City of Cleveland finalized their Waterfront Master Plan in December 2004. Coordination with the Cleveland area Federal and non-Federal municipal and regulatory agencies continued in FY05. Maintenance: Environmental Compliance Activities cost \$7,978 to provide technical support/review for preparation of Contaminant Monitoring Assessment report on the harbor's dredged material confined disposal facility (CDF). In addition, reviewed analytical sediment quality data to determine whether non-Federal dredged material is suitable for disposal in CDF. Dredging cost \$1,594,524 to remove approximately 189,127 cubic yards of shoaled material from the Cuyahoga River. [River Channel: Sta. 780+00 to 799+00, Width 150', Depth -26 LWD; Sta. 767+00 to 780+00, Width 120', Depth -25 LWD; Sta. 740+00 to 764+00, Width 50', Depth -25 LWD; Sta. 732+50 to 735+00, Width 40', Depth -25 LWD; Sta. 699+00 to 707+00, Width 50', Depth -24 LWD; Sta. 666+00 to 668+50, Width 50', Depth -24 LWD; Sta. 648+50 to 664+00, Width 50', Depth -24 LWD. Harbor: Sta. 8+00 to 10+00, Width 200', Depth -28 LWD]. CDF 12 - Continued work on the development of the Fill Management Plan (FMP) cost \$82,340, including real estate necessary for the use of this site pursued with the Port Authority. Surveys of the CDF were also completed. CDF 10B - Continued work on the development of the Fill Management Plan (FMP) in concert with the FAA requirements for this FMP cost \$29,061, including real estate necessary for the FMP was pursued and continuous surveys of the CDF site were completed. Initiation of construction on the East Pier Head cost \$1,534,769. Work included encasing the pierhead by installing of 280 LF of steel sheet pile wall, light house removal/reinstallation, and concrete cap replacement. Engineering & Design for the West Pierhead construction totaled \$111,562 and is 30% complete. Proposed construction includes encasing the pierhead by installing of approximately 250 LF of steel sheet pile wall, light house removal/reinstallation, and concrete cap replacement. A total of \$359,585 was expended to rebuild 120' of Cleveland West Arrowhead and \$8,343 was expended to repair 120' of the Cleveland Dike 10B CDF. The derrickboat *Simonsen* and the tugboat *Cheraw* were utilized for these structure repairs.

### **5. CONNEAUT HARBOR, OH**

**Location.** On the south shore of Lake Erie, at mouth of Conneaut River, 73 miles easterly from Cleveland, OH. (See NOAA Nautical Chart 14824.)

## BUFFALO, NY DISTRICT

**Previous projects.** For details see pg. 1964, Annual Report for 1915.

**Existing project.** For description see pg. 1274 of Annual Report for 1967. Actual costs for new work for completed portion of the project were \$7,541,369. For completed work, non-Federal costs were \$200,000 for dockside dredging and removal of existing dolphins. The most southerly 300 feet of the 1,670-foot long shore arm, authorized by the R&H Act of 1910, was de-authorized Oct. 96. (See Table 20-B for authorizing legislation.)

**Local cooperation.** Fully complied with for completed portion of project.

**Terminal facilities.** There are seven piers and wharves. Six are privately owned and operated and located in inner harbor. Remaining facility is city owned on the south side of outer harbor. Six terminals have railroad connections and four mechanical-handling facilities. (See Port Series No. 42, revised 1972, Corps of Engineers.)

### **Operations and results during fiscal year.**

Operations: Federal funds for Project Condition Surveys cost \$43,000. Maintenance: Cost to finalize FY04 Dredging totaled \$21,169. Engineering & Design on the outer 300' LF of the West Pier cost \$269,957. Engineering & Design for the West Pier construction totaled \$269,957 and is complete. The construction contract was awarded for \$1,749,156 in September 2005. Work includes installation of 420 LF of steel sheet pile wall, steel h-piles, rock anchors, 300 LF of stone pier repair, installation of a new concrete cap and misc. fendering/cleat fixtures.

## **6. DUNKIRK HARBOR, NY**

**Location.** On south shore of Lake Erie, 37 miles southwestly from Buffalo, NY. (See NOAA Nautical Chart 14823.)

**Previous projects.** For details see pg. 1966 of Annual Report for 1915, and pg. 1604 of Annual Report for 1938.

**Existing project.** For description of completed portion of existing project see pg. 32-8 of Annual Report for 1976. For description of small boat harbor project as authorized under Section 201 of Flood Control Act of 1965, see pg. 32-8 of Annual Report for 1978. Actual costs for completed work are \$3,010,024. Actual non-Federal costs are \$1,961,000. (See Table 20-B for authorizing legislation.)

**Local cooperation.** Fully complied with.

**Terminal facilities.** Facilities consist of private docks for recreational craft and privately owned servicing and storage handling facilities for recreational and other small craft.

### **Operations and results during fiscal year.**

Operations: Federal funds for Project Condition Surveys cost \$38,284.

## **7. ERIE HARBOR, PA**

**Location.** On southerly side of bay formed by Presque Isle Peninsula, on south shore of Lake Erie, 78 miles westerly from Buffalo, NY. (See NOAA Nautical Chart 14835.)

**Previous projects.** For details see pg. 1965 of Annual Report for 1915 and pg. 1600 of Annual Report for 1938.

**Existing projects.** For description see pgs. 1363-64 of the Annual Report for 1963. The FY 93 Appropriations Act (PL102-377) authorized the planning, design and dredging of an access channel and berthing area. Entire project modification authorized by 1945 River and Harbor Act, providing for deepening channel and basin, both 23 feet deep, to Penn Central Company coal docks at westerly end of harbor, was de-authorized by Congress in Aug 1977. Actual costs for new work for completed portion of project were \$2,860,906. Extension of north pier portion, authorized by 1899 Act was de-authorized in Nov 1981. A portion of work authorized by 1960 Act, deepening strips adjacent to north and south piers, was de-authorized in Aug 1982. Non-Federal costs for completed work were \$51,000 for providing ore dock and dredging slip adjacent thereto. (See Table 20-B for authorizing legislation.)

**Local cooperation.** Fully complied with.

**Terminal facilities.** Sixteen piers and wharves, of which twelve are privately owned and operated. Erie International Marine Terminal No. 1 owned by Port Commission, city of Erie, is along main waterfront on south side of Presque Isle Bay and Coast Guard facilities are on north side. Two offshore oil docks are on Lake Erie. Eight terminals have railroad connections and six mechanical-handling facilities. Facilities are considered adequate for existing commerce. (See port Series No. 42, revised 1972, Corps of Engineers.)

### **Operations and results during fiscal year.**

Operations: Federal funds for Project Condition Surveys cost \$31,000, Real Estate Activities cost \$10,000. Maintenance: Environmental Compliance Activities cost \$9,887 to provide technical support/review for preparation of Contaminant Monitoring Assessment report on the harbor's dredged material confined disposal facility (CDF). In addition, reviewed analytical sediment quality data to determine whether non-Federal dredged material is suitable for disposal in CDF.

**8. FAIRPORT HARBOR, OH**

**Location.** On south shore of Lake Erie at mouth of Grand River, 33 miles easterly from Cleveland, OH. (See NOAA Nautical Chart 14837.)

**Previous projects.** For details see pg. 1963 of Annual Report for 1915, and pg. 1590 of Annual Report for 1938.

**Existing project.** For description of existing project, see pg. 1526 of Annual Report for 1962. Total Federal cost of \$2,591,000 is actual cost for completed portion of project. Total non-Federal cost is \$101,000 for bulkheads and dockside dredging for completed portion of project. (See Table 20-B for authorizing legislation.)

**Local cooperation.** See pg. 32-11 of 1976 Annual Report regarding assurances of local cooperation for work authorized by R&H Act of 1927.

**Terminal facilities.** Sixteen piers and wharves, all along banks of Grand River. Coast Guard owns one facility. Nine terminals have railroad connections and ten mechanical-handling facilities. Facilities considered adequate for existing commerce. (See Port Series No. 42, revised 1972, Corps of Engineers.)

**Operations and results during fiscal year.** Operations: Federal funds for Project Condition Surveys cost \$46,000, and Sediment Sampling & Analysis cost \$59,311. Maintenance: Dredging cost \$927,818 to remove approximately 90,000 cubic yards of shoaled material from the Federal channel. [River Channel: Sta. 121+00 to 135+00, Width 70', Depth -25 LWD. Lake Approach: Sta. 29+00 to 34+00, Width 500', Depth -26 LWD]. In addition, there was a negative expenditure on the Repair of the West Breakwater due to the transfer of excess stone, and corresponding cost, to Wilson Harbor, NY in the amount of \$50,045.

**9. GREAT SODUS BAY HARBOR, NY**

**Location.** On Sodus Bay, which is a nearly land-locked indentation on south shore of Lake Ontario, 29 miles westerly from Oswego, NY. (See NOAA Nautical Chart 14814.)

**Previous project.** For details, see pg. 1972 of Annual Report for 1915, and pg. 1526 of Annual Report for 1938.

**Existing project.** For description, see pg. 1380 of Annual Report for 1963. Improvements authorized by 1962 Act, consisting of deepening lake approach channel, entrance channel and inner approach channel were deauthorized by Congress in Aug 1977. Actual costs of new work for completed portion of project were \$249,187. Costs incurred by local

interests are not available. (See Table 20-B for authorization legislation.)

**Local cooperation.** Fully complied with.

**Terminal facilities.** Facilities consist of private docks for recreational craft and privately owned servicing and storage handling facilities for recreational and other small craft.

**Operations and results during fiscal year.** Maintenance: Structure Repair cost \$149,897 to build 88' of armor protection to the East Breakwater. In addition, placed 360 tons of rubble stone on the West Pier, completing the armor protection. Close out of FY04 maintenance dredging contract cost -\$802.

**10. HURON HARBOR, OH**

**Location.** On south shore of Lake Erie at mouth of Huron River, 47 miles westerly from Cleveland, OH. (See NOAA Nautical Chart 14843.)

**Previous project.** For details, see pg. 1961 of Annual Report for 1915, and pg. 1576 of Annual Report for 1938.

**Existing project.** For description, see pg. 1347 of Annual Report for 1963 and pg. 32-12 of Annual Report for 1978. Cost of completed portion of existing project was \$4,834,006. Construction of detached breakwater as authorized by 1962 R&H Act was de-authorized Jan 1, 1990. Non-Federal costs of \$163,000 were incurred by local interests in 1963 for dockside dredging of areas between Federal improvement and terminal facilities. (See Table 20-B for authorizing legislation.)

**Local cooperation.** Fully complied with.

**Terminal facilities.** Six privately owned wharves and docks, one along left bank of Huron River and remainder along right bank. Four terminals have railroad connections and four mechanical-handling facilities. Facilities are regarded as adequate for existing commerce. (See Port Series No. 42, revised 1972, Corps of Engineers.)

**Operations and results during fiscal year.** Operations: Federal funds for Project Condition Surveys cost \$52,500 and Sediment Sampling & Analysis cost \$56,562. Maintenance: Environmental Compliance Activities cost \$9,892 to provide technical support/review for preparation of Contaminant Monitoring Assessment report on the harbor's dredged material confined disposal facility (CDF). In addition, reviewed analytical sediment quality data to determine whether non-Federal dredged material is suitable for disposal in CDF. Dredging cost \$477,290 to remove approximately 65,000 cubic yards of shoaled material from the Federal channel. [Sta. 119+00 to 126+00, Width 150' , Depth -27 LWD; Sta. 126+00 to 133+00, Width 250' , Depth -27 LWD]. A total of \$214,797

## BUFFALO, NY DISTRICT

was expended by the government floating plant to rebuild 100' of the East Breakwater (both sides), repair the Weir, repair 50' of the West Breakwater at the USCG light, repair 75' of the CDF, and repaint the USACE sign and the West Pier ladders. The derrickboat *Simonsen* and the tugboat *Cheraw* were utilized for these structure repairs.

### 11. IRONDEQUOIT BAY, NY

**Location.** On south shore of Lake Ontario, 4 miles east of Rochester, NY at mouth of Irondequoit Creek, Monroe County, NY. (See NOAA Nautical Charts 14804 and 14815).

**Existing project.** For details of existing project, see pg. 32-7 of Annual Report for FY 87. Total estimated project cost is \$15,363,000 (Oct 1994) including \$3,582,000 Federal (which includes the COE \$3,536,000 and the USCG \$46,000) and \$11,781,000 non-Federal, including a cash contribution of \$2,661,000, lands and damages \$290,000 and the cost of a movable highway bridge \$8,830,000. Existing project was authorized by 1958 River and Harbor Act (H. Doc. 332, 84th Cong., 2nd sess.).

**Local cooperation.** The Buffalo District has a Local Cooperation Agreement with New York State, executed April 20, 1983.

**Terminal facilities.** Facilities consist of private docks for recreational craft and privately owned servicing and storage handling facilities for recreational and other small craft.

**Operations and results during fiscal year.** Maintenance: Federal funds for Sediment Sampling and Analysis cost \$13,981.

### 12. LITTLE SODUS BAY HARBOR, NY

**Location.** Little Sodus Bay, on south shore of Lake Ontario, 15 miles west of Oswego, NY. (See NOAA Nautical Chart 14803.)

**Previous projects.** For details see page 1973 of Annual Report for 1915, and page 1628 of Annual Report for 1938.

**Existing project.** For description see page 1378 of Annual Report for 1958. New work for completed project cost \$69,066. Non-Federal costs of \$6,000 were incurred for channel dredging. (See Table 20-B for authorizing legislation.)

**Local cooperation.** Not required.

**Terminal facilities.** Facilities consist of private docks for recreational craft and privately owned servicing and storage handling facilities for recreational and other small craft.

**Operations and results during fiscal year.**

Maintenance: Dredging cost \$382,605 to remove approximately 12,000 cubic yards of shoaled material from the Federal channel by government plant. [Sta, 11+00 to 26+00, Width 120' Depth – 8 LWD].

### 13. LORAIN HARBOR, OH

**Location.** On south shore of Lake Erie at mouth of Black River, 25 miles westerly from Cleveland, OH. (See NOAA Nautical Chart 14841.)

**Previous projects.** For details, see pg. 1961 of Annual Report for 1915, and pg. 1580 of Annual Report for 1938.

**Existing project.** For description see pgs. 1319-22 of the Annual Report for 1966. Federal cost of new work is \$20,475,000. Deepening and widening remainder of Black River Channel at Cut 1 and construction of bank stabilization, authorized by 1960 Act and modified by 1965 Act was de-authorized Jan 1, 1990. A portion of work authorized by 1960 Act, dredging of 15-to-25 foot wide strips adjacent to the U.S. East and West Piers were also de-authorized Jan 1, 1990. Total non-Federal cost is \$3,000 contributed by local interests towards construction of west shore arm. (See Table 20-B for authorizing legislation.) The Water Resources Development Act (WRDA) of 1986 (PL 99-662) authorized construction of commercial navigation improvements consisting of two bend cuts on the Black River to widen and straighten the channel between the Norfolk and Western Railroad Bridge and the 21st Street Bridge. These cuts are to be excavated to the existing channel depth of 27 feet. The authorized plan also includes widening the Upper Turning Basin at the existing depth of 21 feet. Estimated costs for this work are \$2,290,000 Federal and \$1,510,000 non-Federal (Oct 1989). This portion of the project has been classified deferred. On Mar 12, 1986, the Chief of Engineers under authority of Section 107 of the 1960 River and Harbors Act, as amended, authorized construction of a small boat harbor that was completed in Jul 1987. The project consists of a 225-foot detached rubble mound breakwater and an 800-foot long rubble mound breakwater attached to the east breakwater shorearm in the east basin of the outer harbor. Construction costs for this project, including supervision and administration, were \$775,025 Federal and \$775,025 non-Federal.

**Local cooperation.** For completed work, local interests contributed \$3,000. Work authorized by 1960 Act (and modified by 1965 Act) is de-authorized. All other conditions fully complied with. On Mar 25, 1986, the city of Lorain, OH signed the Local Cooperation Agreement (LCA), for the Section 107 project. For details see pg. 32-7 of Annual Report for 1986. For details of LCA for deferred

## REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2005

project authorized by the 1986 WRDA, see pgs. 32-9 of the Annual Report for FY 87.

**Terminal facilities.** There are 23 piers and wharves, of which three are on the outer harbor and the remainder is along banks of Black River. Two are owned by the city. Eight terminals have railroad connections and 15 mechanical-handling facilities. Facilities are considered adequate for existing commerce. (See Port Series No. 42, revised 1972, Corps of Engineers.)

### **Operations and results during fiscal year.**

Operations: Federal funds for Project Condition Surveys cost \$53,000, Real Estate Management Activities cost \$5,000, Sediment, Sampling and Analysis cost \$84,399, and costs for continuing Phase II of the Dredged Material Management Plan (DMMP) were \$ 269,256. These costs included plan formulation and identification of alternatives including beneficial use of sediments. Extensive DMMP coordination with the Lorain area Federal and non-Federal municipal and regulatory agencies continued in 2005. Maintenance: Cost Engineering and Design for increasing the capacity of the CDF cost \$125,009. Costs for the West Pier construction totaled \$2,000,602 and is physically complete. Work included installing of 1,000 LF of steel sheet pile wall, tie rods, anchor wall, and concrete cap replacement. Environmental Compliance Activities cost \$9,916 to provide technical support/review for preparation of Contaminant Monitoring Assessment report on the harbor's dredged material confined disposal facility (CDF). In addition, reviewed analytical sediment quality data to determine whether non-Federal dredged material is suitable for disposal in CDF. A total of \$47,546 was expended to repair 50 LF along the CDF. In addition, a total of \$713,704 was expended to rebuild 200 LF of the East Breakwater, repair 75 LF around the exterior of the West Breakwater lighthouse and repaint the East Pier ladders. The derrickboat *Simonsen* and the tugboat *Cheraw* were utilized for these structure repairs.

## **14. OAK ORCHARD, NY**

**Location.** On south shore of Lake Ontario, at mouth of Oak Orchard Creek, 33 miles westerly of Rochester, NY. (See NOAA Nautical Chart 14805.)

**Previous project.** For details see pg. 628 of Annual Report for 1905.

**Existing project.** For description of completed existing project see pg. 32-14 of 1975 Annual Report. Actual Federal cost for completed project was \$1,613,500. Estimated non-Federal cost is \$270,000 (Jul 1971) including cash contribution of \$170,700 and \$54,002 for recreational facilities and remainder for lands and construction of wharf. Existing project

was authorized by the 1945 River and Harbor Act (H. Doc. 446, 78th Cong., 2nd sess.).

**Local cooperation.** Fully complied with. Local interests contributed \$224,702.

**Terminal facilities.** There is no commercial navigation at Oak Orchard Harbor. Terminal facilities consist of private docks for recreational craft.

### **Operations and results during fiscal year.**

There were no Operations or Maintenance activities conducted in the harbor this FY.

## **15. OLCOTT HARBOR, NY**

**Location.** On south shore of Lake Ontario at mouth of Eighteen Mile Creek about 18 miles east of mouth of Niagara River and 63 miles by water west of Rochester, N.Y. (See NOAA Nautical Chart 14806.)

**Previous project.** For details see page 1971 of Annual Report for 1915 and page 1621 of Annual Report for 1938.

**Existing project.** For description see page 1555 of Annual Report for 1962. Cost of new work for completed project was \$1,500 exclusive of amount expended on previous projects, all of which was contributed by local interests. (See Table 20-B for authorizing legislation.) The authorized modification to the existing project consists of breakwaters to provide optimum harbor protection a stone jetty and recreational fishing facilities including a footbridge, walkways and guardrails, access facilities, sanitary facilities and parking areas. The estimated cost of the authorized modification is \$17,000,000 (Oct. 1990) of which \$8,500,000 is Federal and \$8,500,000 is non-Federal. Modification of the existing project was authorized by the 1986 Water Resources Development Act (WRDA) (PL 99-662).

**Local cooperation.** Fully complied with for completed project. Local interests contributed \$1,500. Modifications authorized by the 1986 WRDA will require local interests to pay 50% of project cost including lands easements, right-of-way and dredge disposal areas. They are also responsible for construction of necessary docks and berthing spaces, construction of launching ramp, parking areas, sanitary facilities, and necessary access roads. After construction, non-Federal responsibilities would include fishing facility maintenance, except for the aids to navigation.

**Terminal facilities.** Facilities consist of private docks for recreational craft and privately owned servicing and storage handling facilities for recreational and other small craft.

### **Operations and results during fiscal year.**

## BUFFALO, NY DISTRICT

There were no Operations or Maintenance activities conducted in the harbor this FY.

### 16. OSWEGO HARBOR, NY

**Locations.** On South shore of Lake Ontario, at mouth of Oswego River, 59 miles easterly from Rochester, NY. (See NOAA Nautical Chart 14813.)

**Previous projects.** For details see pg. 1973 of Annual Report for 1915, and pg. 1630 of Annual Report for 1938.

**Existing project.** For description see pgs. 1383-84 of the Annual Report for 1963. Completed portion of project cost \$7,242,039 and non-Federal costs for completed work were \$4,440,000 for lands, dockside dredging, construction of terminal wharves, and cargo handling facilities. Deepening a 200-foot wide strip along harbor line east of mouth of Oswego River, remaining feature of work authorized by the 1930 Act, was de-authorized Jan 1, 1990. Deepening to 22 feet a 150-foot wide strip along harbor line in west outer harbor, remaining feature of work authorized by 1940 Act, was de-authorized in May 1981. The portion of the Federal Channel from the southernmost alignment of the Route 68 Bridge upstream to the northernmost alignment of Lake Street Bridge authorized by the 1910 R&H Act as amended by the 1935 R&H Act was de-authorized Oct 96. (See Table 20-B for authorizing legislation.)

**Local cooperation.** Fully complied with.

**Terminal facilities.** There are seven piers and wharves in the harbor and along the river channel. The Port of Oswego owns and operates a general cargo terminal at the mouth of the Oswego River. The Port Authority also operates a grain elevator west of the mouth of the river. The U.S. Coast Guard moors patrol and environmental research vessels west of the mouth of the river.

**Operations and results during fiscal year.**

Operations: Federal funds for an economic evaluation of the harbor cost \$14,666. Maintenance: \$1,009,834 was expended to completely rebuild 200 LF of the West Arrowhead Breakwater [Station 8+50 to 10+50] with rubble mound foundation underwater on lake side, build 60 LF of above water crown using laid up construction with cast in place concrete deck, build 140 LF of above water crown using rubble mound construction, and repair two sections of failed crown, 100 LF, using rubble mound construction.

### 17. OTTAWA RIVER HARBOR, MI & OH

**Location.** At westerly end of Lake Erie, at Toledo, OH 99 miles westerly from Cleveland, OH (See NOAA Nautical Chart 14847).

**Existing project.** A Biddability, Constructability, Operability and Environmental Review Two (BCOE 2) review was conducted in October 2004. Design Branch reviewed recent survey data and prepared plans which, along with the survey data, was turned over to the city of Toledo (sponsor). Ongoing work included coordination of the CZM compliance with the states of Michigan and Ohio, and application for the 401 certification from the state of Ohio. The project, originally authorized under provisions of Section 201 of the Rivers & Harbors Act, (PL 89-298) by the House and Senate Committees on Public Works Resolutions, dated December 15 and 17, 1970, respectively, was continued by the 1990 Water Resources Development Act (PL 101-640).

**Local cooperation.** The potential local sponsor is the city of Toledo, OH. The local sponsor must provide 50% of the total project cost that includes lands, easements, rights-of-way, and relocations.

**Operations and results during fiscal year.** FY05 cost was \$68,393, which was used to prepare plans, coordinate CZM reviews, and to prepare the application for 401 certification. Extensive coordination with the Toledo area Federal and non-Federal municipal and regulatory agencies continued in 2005.

### 18. PORT CLINTON HARBOR, OH

**Location.** Comprises lower half-mile of Portage River. River empties into Lake Erie 72 miles westerly from Cleveland, OH. (See NOAA Nautical Chart 14820.)

**Existing project.** Provides for parallel jetties at river mouth and a channel in Lake Erie and Portage River with a project depth of 10 feet. For additional details, see pg. 1899 of Annual Report for 1951. (See Table 20-B for authorizing legislation.)

**Terminal facilities.** A total of 11 docks exist; one public fish dock, one private sand dock, one private fuel dock, one lumber dock, one coal dock and five private docks. The village of Port Clinton owns a dock at the foot of Madison Avenue that is open to the public. A shipyard builds small boats. Terminal facilities are adequate for existing commerce.

**Operations and results during fiscal year.**

Operations: Federal funds for Real Estate Management Activities cost \$4,987. Maintenance: Cost for Engineering & Design for the East Jetty totaled \$142,637. Cost for Environmental Work and Permitting Required for Dredging totaled \$29,872.

### 19. ROCHESTER HARBOR, NY

**Location.** On south shore of Lake Ontario, at mouth of Genesee River, 59 miles westerly from

## REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2005

Oswego, NY. (See NOAA Nautical Chart 14815.)

**Previous project.** For details see pg. 1471 of Annual Report for 1915, and pg. 1623 of Annual Report for 1938.

**Existing project.** For description see pg. 1556 of Annual Report for 1962. Actual cost for new work for completed project is \$2,191,514. Non-Federal costs are estimated at \$2,260,000, all for 1960 Act, for lands, relocation of submarine cable crossing, relocations of small docks and boathouses, dockside dredging, structure modifications, and replacement of Baltimore & OH coal loader. (See Table 20-B for authorizing legislation.)

**Local cooperation.** Complied with except provision for replacement of coal loading facility as required by River and Harbor Act of Jul 14, 1960.

**Terminal facilities.** There are 3 docks at Rochester Harbor. The city of Rochester owns an 830-foot long wharf at the entrance to the Genesee River. Three storage buildings at the terminal, formerly used as transit sheds, have approximately 100,000 square feet of storage space. Approximately 3 acres of open storage area is located at the upper end of the facility. The facility has not been used for handling cargo for over 10 years. The U.S. Coast Guard moors search and rescue vessels at the mouth of the Genesee River. Another private facility is located 1.6 miles above the Stutson Street Bridge.

### **Operations and results during fiscal year.**

Operations: Federal funds for Real Estate Management Activities cost \$15,000, Project Condition Surveys cost \$47,000, and Sediment, Sampling & Analysis cost \$82,928.

## 20. ROCKY RIVER, OH

**Location.** At mouth the of the Rocky River which empties into Lake Erie seven miles westerly from Cleveland, OH. (See NOAA Nautical Chart 14826.)

**Existing project.** For description see pg. 1329 of Annual Report for 1966. Federal cost for completed project was \$343,494 and non-Federal cost was a cash contribution of \$249,346. (See Table 20-B for authorizing legislation.)

**Local cooperation.** Fully complied with. Local interests contributed \$249,346 for new work.

**Terminal facilities.** Facilities consist of private docks for recreational craft and privately owned servicing and storage handling facilities for recreational and other small craft.

### **Operations and results during fiscal year.**

Maintenance: \$2,834 was expended to finalize an FY04 maintenance dredging contract.

## 21. SANDUSKY HARBOR, OH

**Location.** On south shore of Lake Erie, in southeastern portion of Sandusky Bay, 50 miles westerly from Cleveland, OH. (See NOAA Nautical Chart 14845.)

**Previous project.** For description see pgs. 1511-12 of Annual Report for 1962. Actual costs for new work for completed project were \$6,250,121, excluding \$325,000 contributed by local interests. Non-Federal costs for completed project are estimated at \$675,000, including \$325,000 cash contribution and the remaining \$350,000 is for dockside dredging adjacent to deepening channels authorized by 1960 Act. (See Table 20-B for authorizing legislation.)

**Local cooperation.** Fully complied with. Local interests contributed \$325,000 for new work.

**Terminal facilities.** Fourteen piers and wharves, three at west end of harbor and remainder along dock channel. One is a base for state-owned fish research and patrol boats. One publicly owned and six privately owned used for mooring fishing boats and recreational craft and for ferry service. Five terminals have railroad connections and five mechanical-handling facilities. Facilities are considered adequate for existing commerce. (See Port Series No. 42, revised 1972, Corps of Engineers.)

### **Operations and results during fiscal year.**

Operations: Federal funds for Project Condition Surveys cost \$46,000. Maintenance: Preparation of a reconnaissance report for the beneficial reuse of dredged materials for wetlands creation cost \$54,046. Dredging cost \$618,327 to remove approximately 119,607 cubic yards of shoaled material from the Federal channel. [Sta. 298+00 to 368+00, Width 150', Depth -25 LWD].

## 22. STURGEON POINT, EVANS, NY

**Location.** On south shore of Lake Erie, 17 miles southwest of Buffalo, NY and 22 miles northeast of Dunkirk, NY. (See Geological Survey map of Angola, NY.)

**Existing project.** For description of existing project, see pg. 20-11 of Annual Report for 1991. Federal project cost is \$ 1,460,000. Non-Federal project cost is \$1,475,000. In addition, the local sponsor provided associated costs for upland development of \$1,000,000.

**Local cooperation.** The Buffalo District has a properly executed Local Cooperation Agreement with the Town of Evans, NY, signed Oct 26, 1987.

### **Operations and results during fiscal year.**

## BUFFALO, NY DISTRICT

Maintenance: Federal funds for annual sand by-pass reimbursement cost \$14,787.

### 23. TOLEDO HARBOR, OH

**Location.** Comprises lower seven miles of Maumee River and channel through Maumee Bay to Lake Erie. Maumee River has its source in northern Indiana and empties into Lake Erie. Harbor is at the westerly end of Lake Erie, 99 miles westerly from Cleveland, OH. (See NOAA Nautical Chart 14847.)

**Previous projects.** For details see pg. 1959 of Annual Report for 1915, and pg. 1565 of Annual Report for 1938.

**Existing project.** For description of existing project see pgs. 32-18 and 32-19 of the Annual Report for 1978. Cost of completed existing project was \$15,567,147. (See Table 20-B for authorizing legislation.)

**Local cooperation.** Fully complied with.

**Terminal facilities.** Thirty-five piers, wharves and docks are located in the Port of Toledo. Seven are located on Maumee River; and 28 are equally divided along the right and left banks of the lower seven miles of the Maumee River. The Toledo-Lucas County Port Authority Facility No. 1 Wharf handles conventional and containerized general cargo as well as an increasing amount of miscellaneous bulk materials. Fifteen of the terminals have railroad connections and mechanical handling facilities. (See Port Series No. 44, revised 1989, U.S. Army Corps of Engineers.)

#### **Operations and results during fiscal year.**

Operations: Federal funds for Project Condition Surveys cost \$124,000, Sediment Sampling and Analysis cost \$18,980, and \$269,001 was used to continue work on the Dredged Material Management Plan for placing dredging materials over a minimum of the next twenty years including development of a base plan; development of site capacity analysis of the existing open lake placement area, to begin modeling of existing circulation and thermal patterns as an existing condition for comparison to alternatives involving new Confined Disposal Facilities, or restoration of islands in Maumee Bay using dredged materials; and to developing a Memorandum of Agreement between the Corps, OEPA, ODNR to establish a path forward as part of the resolution to the Toledo Harbor dredging 401 Water Quality Certification appeals from 2003 and 2004. Maintenance: Environmental Compliance Activities cost \$7,496 to provide technical support/review for preparation of Contaminant Monitoring Assessment report on the harbor's dredged material confined disposal facility (CDF). Reviewed analytical sediment quality data to

determine whether non-Federal dredged material is suitable for disposal in CDF. \$319,937 was used to clear a maintenance path around Island 18, repair and modify the berms, construct two new weirs, and reclaim approximately 400,000 cubic yards of space for placement of dredged material. Closeout of FY04 CDF maintenance and Cell 1 & 2 Dewatering cost -\$526. Dredging cost \$1,512,813 to remove 360,838 cubic yards of shoaled material from the Maumee Bay and includes the completion of the FY04 contract. [Sta. 664+00 to 738+00, Width 200', Depth -29 LWD Sta. 664+00 to 669+00, Width 200', Depth -29 LWD]. \$877,708 was expended to remove 265,932 cubic yards of shoaled material from the Maumee River and includes the completion of the FY04 contract. [Sta. 400+00 to 450+00, Width 400, Depth -29 LWD].

### 24. TOUSSAINT RIVER, OH

**Location.** At westerly end of Lake Erie, 8 miles west of Port Clinton and 22 miles east of Toledo, Ohio. (See NOAA Nautical Chart 14847.)

**Existing project.** For description of existing project, pg 20-12 of Annual Report for 1991. (See Table 20-B for authorizing legislation.) Project is deferred due to discovery of unexploded ordnance in the dredging area.

**Local cooperation.** The Buffalo District has a properly executed Local Cooperation Agreement with Carroll Township, OH, signed Apr 3, 1991.

#### **Operations and results during fiscal year.**

Maintenance: Coordination for the Environmental Evaluation/Cost Analysis (EE/CA), site visits, numerous reviews of the EE/CA, and coordination for public meeting in November cost \$13,841.

### 25. VERMILION HARBOR, OH

**Location.** On south shore of Lake Erie at mouth of Vermilion River, 37 miles westerly from Cleveland, OH. (See NOAA Nautical Chart 14826.)

**Existing project.** For description of existing project see pgs. 32-17 and 32-18 of the Annual Report for 1975. Actual Federal cost for the completed existing project was \$1,156,118. Estimated non-Federal cost for new work is \$754,679 including cash contribution of \$740,679 and remainder for relocation of submarine cable and construction of public wharf. (See Table 20-B for authorizing legislation.)

**Local cooperation.** Fully complied with. Local interests contributed \$740,679.

**Terminal facilities.** Facilities consist of private docks for recreational craft and privately owned servicing and storage handling facilities for

REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2005

recreational and other small craft. A reconnaissance study to alleviate the ice-jam and free-flow flooding of the river was completed in 1986 at a cost of \$180,000. The proposed project was an ice-retention structure. The non-Federal sponsor did not commit to provide its total share of the cost of the feasibility study; the project was therefore reclassified as "inactive".

**Operations and results during fiscal year.**

Close out of a FY04 maintenance dredging project cost -\$2,779.

**26. WEST HARBOR, OH**

**Location.** On the southwest shore of Lake Erie, 13 miles northeast of Port Clinton, OH. (See NOAA Nautical Chart 14847.)

**Existing project.** For description of existing project, see pg. 32-10 of Annual Report for 1983. Total Federal cost for new work was \$3,303,898. Total non-Federal cost for new work was \$3,922,000 including cash contribution of \$3,795,000. Existing project was authorized by 1965 River and Harbor Act (H. Doc. 245, 88th Cong., 2nd sess.).

**Local cooperation.** See pg. 32-20 of 1978 Annual Report for requirements of local cooperation. By letter dated Jan 31, 1978, state of OH stated its intent to furnish assurances of local cooperation, and executed LCA was received on Mar 9, 1981.

**Terminal facilities.** Commerce at the harbor presently consists of recreational boating and affiliated activities.

**Operations and results during fiscal year.**

Close out of a FY04 maintenance dredging project cost -\$31,398.

**27. WILSON HARBOR, NY**

**Location.** At mouth of east branch of Twelve-Mile Creek, which enters Lake Ontario 12 miles easterly of mouth of Niagara River, and 67 miles westerly of Rochester Harbor, NY. (See NOAA Nautical Chart 14806.)

**Previous projects.** For details see pg. 2395 of Annual Report for 1889, and pg. 628 of Annual Report for 1905.

**Existing project.** For description of existing project see pg. 32-18 of Annual Report for 1975. Actual Federal cost for completed existing project was \$477,904. Estimated non-Federal costs are \$774,000 that includes cost of \$16,000 for previously completed work. Remainder of non-Federal costs is for work required for 1968 R&H Act including cash contribution of \$166,988. (See Table 20-B for authorizing legislation.)

**Local cooperation.** Fully complied with.

**Terminal facilities.** Facilities consist of private docks for recreational craft and privately owned servicing and storage handling facilities for recreational and other small craft. Facilities are considered adequate for existing commerce.

**Operations and results during fiscal year.**

Maintenance: \$173,631 was expended to build a 185 LF extension of the West Pier to the shoreline, and install 4 new ladders and paint all ladders on the East and West Piers.

**28. PROJECT CONDITION SURVEYS: NY, OH & PA**

Condition surveys performed in FY05 by the Buffalo District cost \$272,547.

**NAVIGATION WORK UNDER SPECIAL AUTHORIZATION**

**30. NEW YORK STATE CANAL SYSTEM**

**Location.** The New York State Canal System runs primarily east-west through New York State. It

## BUFFALO, NY DISTRICT

consists of four components: Erie Canal, Oswego Canal, Cayuga/Seneca Canal, and Champlain Canal.

**Existing Project.** Reimburse the state of New York 50% of non-Federal operation, maintenance and rehabilitation costs as well as make capital improvements. Sec. 1105, WRDA 1986 and Sec. 553, WRDA 1996 and Sec 341, WRDA 1999 authorized the existing project.

**Local Cooperation.** Fully complied with.

**Terminal Facilities.** Numerous piers, wharves and locks used for recreational craft.

**Operations and Results during fiscal year.** New work: Funds in the amount of \$456,218 were expended to prepare a Decision Document and reimburse the state of New York for a completed project.

### SHORE PROTECTION

#### 31. PRESQUE ISLE PENINSULA, ERIE, PA

**Location.** At Erie, PA, on south shore of Lake Erie, 78 miles southwest of Buffalo, NY and 102 miles east-northeast of Cleveland, OH. (See NOAA Nautical Charts 14824 and 14835.)

**Existing Project.** For description of completed portion of existing project see pg. 1393 of Annual Report for 1963. For details of project authorized by the 1974 Water Resources Development Act (WRDA), 1976 WRDA and 1986 WRDA, see pg. 32-14 of Annual Report for FY 87. Actual Federal cost for the authorized beach nourishment project modifications through FY 92 is \$16,879,000 which includes \$5,646,000 for completed work authorized by the 1954 and 1960 R&H Acts and 1974 WRDA Act and \$11,233,000 for completed work authorized by the 1976 WRDA Act. Actual non-Federal cost for the authorized project and modifications through FY 92 is \$8,798,000 which includes \$3,983,000 for completed work authorized by 1954 and 1960 R&H Acts and 1974 WRDA Act and \$4,815,000 for completed work authorized by the 1976 WRDA Act. Beach nourishment as authorized by the 1976 WRDA was completed in FY 91. The estimated Federal cost (June 2003) for the 55 breakwaters project is \$56,310,000. This estimate includes \$13,435,000 for the initial construction and \$42,875,000 for 50 years of post-construction beach nourishment. The estimated non-Federal cost for the breakwater project is also \$56,310,000. (See Table 20-B for authorizing legislation.)

**Local Cooperation.** Fully complied with for completed project as authorized by 1954 and 1960 R&H Acts and 1974 WRDA Act. An agreement between the United States of America and the Commonwealth of Pennsylvania, acting through the

Department of Environmental Resources was entered into on Feb 21, 1979 for the annual nourishment which was extended by the 1976 WRDA Act.

**Operations and Results during fiscal year.** New work: Annual nourishment for a 50 year period, beginning in FY 93, continued in FY 05 for the thirteenth year of this 50-year period. Federal cost for Presque Isle totaled \$277,984, which included \$195,000 for the nourishment contract, and \$82,984 for engineering, contract supervision and administration. Non-Federal costs totaled \$680,574, which included \$630,321 for the nourishment contract and \$50,253 for engineering, contract supervision and administration. \$427,000 of the Non-Federal funding was provided as supplemental funding and is not subject to cost sharing.

### FLOOD CONTROL

#### 32. MORRIS LAKE, GENESEE RIVER, NY

**Location.** Dam is on Genesee River 66.9 miles above river mouth and about 32 miles southwesterly of Rochester, NY. Reservoir is in Livingston and Wyoming Counties, NY. (See Ecological Survey maps of Nunda and Portage, NY).

**Existing Project.** For description of existing project, as authorized by 1944 Flood Control Act, see pg. 1575 of Annual Report for 1962. New work for completed project cost \$23,365,559. In addition, \$5,000 contributed funds were expended for new work.

**Local Cooperation.** None required. Local interests contributed \$5,000 for new work.

**Operations and results during fiscal year.** Operations: Federal funds for the Operation of the Dam, Reservoir, and Service Facilities, Periodic Inspection Activities, and Real Estate Management Activities were accomplished by hired labor resulting in a cost of \$557,825. Cost for Cooperative Stream Gauging Program was \$165,000 with an additional cost of \$194,997 for Water Control Management. Seismic Instrumentation Support cost \$9,288. Cost for Flood Emergency Plans totaled \$62,047. Cost for Operation of the Visitor Center and Recreation Facilities totaled \$224,393. Cost for Environmental Stewardship and Compliance totaled \$113,651. Through the Dam Safety Program, \$51,888 was utilized to perform non-destructive testing of the slide gates in the dam. Maintenance: Cost for Debris Removal totaled \$570,660 at the face of the Mt. Morris Dam to insure that debris would not block the culverts in the dam and/or prevent culvert gate closing to continue to provide flood damage reduction. This included removal of additional debris

## REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2005

deposited by hurricane remnants that affected the Genesee River watershed. Completion of the Training Wall Clean Up project started in FY04 cost \$56,880. Closeout of the FY04 Hydraulic Steel Structure project cost -\$747. Data Collection Platforms cost \$27,935, Environmental Compliance-Site Investigation cost \$19,490, Maintenance and Repair of the Dam and Recreation Features cost \$245,074.

### 33. SURVEILLANCE OF NORTHERN BOUNDARY WATERS: NY, OH & PA

Cost for providing consulting engineering services to the following International Joint Commission Boards and Committees: the International St. Lawrence River Board of Control, its Working Committee and its Operations Advisory Group; the International St. Lawrence River Committee on River Gaging; the International Niagara River Board of Control and its Working Committee; and the International Niagara Committee totaled \$614, 574 for FY05. Buffalo District also supports the Coordinating Committee on Great Lakes Basic Hydraulic and Hydrologic Data, and the International Lake Ontario-St. Lawrence Study.

## ENVIRONMENTAL RESTORATION

### 34. OHIO ENVIRONMENTAL INFRASTRUCTURE

**Location.** The program is applicable to the entire state of Ohio and falls within the Buffalo District boundary and includes at present, a total of 18 project sites. These sites include the city of Toledo, the townships of Madison, Lafayette and Perry and the smaller cities and villages of Fremont, Chardon, Jenera, Benton Ridge, Cuyahoga River, Elmira, Elyria, Hudson, Norwalk, Ottawa and Parma.

**Existing Project.** The Ohio Environmental Infrastructure Program was authorized under Section 594 of Water Resources Development Act of 1999 (PL 106-53) for the purpose of providing Federal assistance for design and/or construction of water related environmental infrastructure, resource protection and development projects. Projects implemented as part of this program typically address combined sewer overflows (CSOs), sewer treatment plants and sewer line extensions. In FY05, the Federal cost was \$1,679,222 (75%) and the non-Federal share was approximately \$558,000 (25%).

**Local Cooperation.** The projects are cost-shared 75% Federal and 25% non-Federal. The current authorized Federal appropriation limit is \$60 million.

### **Operations and results during fiscal year.**

Ongoing: Project management for one design and seven design/construction projects (Toledo 3, Chardon, Fremont, Lafayette, Perry Village, Perry Township, Jenera and Concord). New work: Ten new design and design/construction projects (Toledo 4, Benton Ridge, Cuyahoga River, Elmira, Elyria, Hudson, Madison, Norwalk, Ottawa and Parma).

### 35. ONONDAGA LAKE, NY

**Location.** The project area is located in the Onondaga Lake watershed in Onondaga County, NY and includes the city of Syracuse. Onondaga Lake is part of the Oswego River basin, which is tributary to Lake Ontario. It is also part of the New York State Canal System.

**Existing Project.** The Onondaga Lake Partnership project (OLP) involves two major efforts: a) USACE leadership of the OLP and watershed-scale planning through General Investigation (GI) appropriations and b) USACE implementation of cost-shared planning, design and construction projects and grants in the Onondaga Lake watershed through Construction General (CG) appropriations. Projects implemented as part of this program typically address combined sewer overflows (CSOs), hydrogeology, habitat restoration, non-point source pollution, and related water resource impairments. The total project cost for USACE leadership of the OLP and completion of a comprehensive watershed study through General Investigation appropriations is estimated to be \$12.76 million, which is 100 percent Federal expense. The total project cost for planning, design and construction of cost-shared OLP projects and grants through Construction General appropriations is estimated to be \$42.86 million, with the Federal costs anticipated to be \$30 million (70%) and the non-Federal share of \$12.86 million (30%).

**Local Cooperation.** The Construction General projects are cost-shared 70% Federal and 30% non-Federal. The current authorized Federal appropriation limit is \$10 million.

**Operations and results during fiscal year.** On going: Project management for 5 individual planning and design projects totaling \$1,210,000 (Federal) and \$520,000 (non-Federal) and 2 grants cost-shared with Onondaga County totaling \$1,040,000 (Federal) and \$447,300 (non-Federal) and for 3 grants cost-shared with Onondaga County totaling \$4,290,000 (Federal) and \$1,840,000 (non-Federal). New work: No new agreements were executed in FY 2005. Total Federal expenditures were \$1,726,478. Total non-Federal expenditures were \$6,389.

39. FORMERLY UTILIZED SITES REMEDIAL ACTION PROGRAM (FUSRAP)

Buffalo District began work in FUSRAP in October 1997 when Congress transferred this Program from the Department of Energy (DOE) to the Corps. Total FUSRAP expenditures for FY 2005 were \$45,738,600. The FY 2005 accomplishments for these sites are briefly stated in the following paragraphs:

**Niagara Falls Storage Site, Lewiston, NY** – FY 2005 accomplishments include continued progress on the Remedial Investigation (RI) report and Feasibility Study, completion of the draft Potentially Responsible Party (PRP) report, and continuation of yearly site maintenance, monitoring and surveillance activities. Continued community outreach activities with local interest groups. Total FY 2005 expenditures were \$2,686,600.

**Rattlesnake Creek (Ashland 1), Tonawanda, NY** – Through FY 2005 the Corps began and completed the remedial action at Rattlesnake Creek. The Corps excavated, transported and disposed of 33,000 tons of material out of state. Backfilling and restoration of the site will be completed in October 2005. Total FY 2005 expenditures were \$14,406,400.

**Ashland 2, Tonawanda, NY** – The remediation of this site was completed in 1999 and the only work accomplished in FY 2005 was some additions to cost recovery records. Total FY 2005 expenditures were

-\$5,800, which includes a return of funds after contract close-out.

**Linde Site, Tonawanda, NY** – FY 2005 funds were used to safely remove and dispose out of state over 34,000 cubic yards of contaminated materials and continue the Linde Soils remedial action, complete removal of the Building 14 operable unit, prepare an Addendum to the Groundwater Feasibility Study, and complete the Remedial Investigation at the Tonawanda Landfill/Mudflats Vicinity Property. Total FY 2005 expenditures were \$25,124,600.

**Seaway Industrial Park, Tonawanda, NY** – FY 2005 funds were used to continue work on the Feasibility Study Addendum (FSA), which included additional characterization of the Areas A, B and C, and incorporates additional soil volume left from the Ashland 1 remedial action in the vicinity of Seaway Area D. The FSA was sent out for stakeholder review in September 2005. Buffalo District anticipates finalizing the FSA in January 2006 and preparing the Proposed Plan by October 2006. Total FY 2005 expenditures were \$292,600.

**Luckey Site, Luckey, OH** – FY 2005 funds were used to continue preparation of the Record of Decision (ROD) and conduct annual groundwater sampling and testing. Total FY 2005 expenditures were \$237,200.

**Painesville Site, Painesville, OH** – FY 2005 funds were used to complete the Feasibility Study Addendum, the Proposed Plan for Remediation, prepare the Scope of Work for Remediation, and begin pre-remediation field sampling. Total FY 2005 expenditures were \$1,276,800.

**Former Harshaw Chemical Co., Cleveland, OH** – FY 2005 funds were used to continue the second phase of the Remedial Investigation (RI). Total FY 2005 expenditures were \$1,299,400.

**Scioto Laboratory Complex, Marion, OH** – FY 2005 funds were used to complete the draft Preliminary Assessment and co-ordinate internally. Total FY 2005 expenditures were \$2,800.

**Dayton Unit I, III, IV and the Warehouse, Dayton OH** – FY 2005 funds were used to complete the Preliminary Assessments and/or Site Inspections and coordination with stakeholders. Total FY 2005 expenditures, for all four sites, were \$22,300.

**Guterl Specialty Steel Corp., Lockport, NY** – FY 2005 funds were used to complete the Site

## REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2005

Ownership and Operational History Investigation and hold a collaborative planning session to initiate Remedial Investigation activities with stakeholders. Total FY 2005 expenditures were \$429,400.

### **40. EPA SUPERFUND PROGRAM**

Total FY 2005 expenditures for Ford Road Landfill, OH were \$30,009 to provide technical review of CERCLA documents.

	Nov 17, 1986	Two bed cuts on Black River between the Norfolk and Western Railroad Bridge and 21 <sup>st</sup> Street Bridge, excavated to existing channel depth of 27 feet. Widening Upper Turning Basin at existing authorized depth of 21 feet. <sup>1</sup>	H. Doc. 124, 99 <sup>th</sup> Cong., 1 <sup>st</sup> sess. Water Resources Development Act of 1986, PL 99-662
<b>32</b>		<b>MT. MORRIS LAKE, GENESEE RIVER, NY</b>	
	Dec 22, 1944	Construction of a concrete gravity dam and reservoir.	H. Doc. 615, 78 <sup>th</sup> Cong., 2 <sup>nd</sup> sess. Flood Control Act of 1944, PL 78-534
	Jan 3, 1992	Construct a visitor center at Mt. Morris Dam to be known as the "William B. Hoyt II Visitor Center."	Sec. 103 of the Water Resources Development Act of 1992, PL 102-580
<b>30</b>		<b>NEW YORK STATE BARGE CANAL, NY</b>	
	Nov 17, 1986	Authorizes the Secretary to reimburse the state of New York for 50% of the cost of operating, maintaining and rehabilitating the New York State Barge Canal. The Federal contribution shall be limited in any fiscal year to \$5,000,000, or 50% of the expenditures in that fiscal year, whichever is the lesser. <sup>1</sup>	Sec. 1105 of the Water Resources Development Act of 1996, PL 99-662
	Oct 12, 1996	The Secretary may make capital improvements to the New York State Canal System for the purposes of rehabilitation, renovation, preservation, and maintenance of the New York State Canal System and its related facilities. The Federal share of the cost of capital improvements shall be 50%, up to a limit of \$8,000,000.	Sec. 553, Water Resources Development Act of 1996, PL 104-303 as amended by Sec 341 of the Water Resources Development Act of 1996, PL 104-303
<b>34</b>		<b>OHIO ENVIRONMENTAL INFRASTRUCTURE, OH</b>	
	Aug 17, 1999	Multiple projects for providing Federal assistance for design and/or construction of water related environmental infrastructure, resource protection and development projects often by reimbursement to non-Federal sponsor.	Section 594 of Water Resources Development Act of 1999, PL 106-53
<b>15</b>		<b>OLCOTT HARBOR, NY</b>	
	Mar 2, 1867	Dredging a channel 11 feet deep between parallel piers.	Annual Report, 1866, pt. III, p. 15 pt. IV, p. 158
	Mar 4, 1913	Deepening channel to 12 feet and maintenance of west pier.	H. Doc. 780, 62 <sup>nd</sup> Cong., 2d sess.
	Nov 17, 1986	Construct the project for Navigation, Report of the Chief of Engineers	Sec. 601 of Water Resources Development Act of 1986, PL 99-662
<b>35</b>		<b>ONONDAGA LAKE, NY</b>	

<sup>1</sup> Classified deferred.

**REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2005**

**Table 20-B AUTHORIZING LEGISLATION**

<u>See Section</u>	<u>Acts</u>	<u>Work Authorized</u>	<u>Documents</u>
	Nov 16, 1990	The Assistant Secretary of the Army for Civil Works, the administrator of the Environmental Protection Agency, and the Governor of the State of New York, acting jointly, shall convene a management conference for the restoration and management of Onondaga Lake and develop a management plan. Repealed by Section 573 of Water Resources Development Act of 1999, PL 106-53.	Title IV of the Great Lakes Critical Programs Act of 1990, PL 101-596
	Nov 28, 1990	The Assistant Secretary of the Army for Civil Works, the administrator of the Environmental Protection Agency, and the Governor of the State of New York, acting jointly, shall convene a management conference for the restoration and management of Onondaga Lake and develop a management plan. This is a Reaffirmation of PL 101-596. Repealed by Section 573 of Water Resources Development Act of 1999, PL 106-53.	Sec. 411 of the Water Resources Development Act of 1990, PL 101-640
	Oct 31, 1992	The Secretary is authorized to design and construct projects to address water quality problems associated with storm water discharges from large storm events for the watershed areas of Onondaga County and Syracuse, New York, from which waters discharge into Onondaga Lake, New York. The design of projects shall ensure the development of effective Federal and non-Federal actions, which will contribute toward compliance with the Federal Water Pollution Control Act. Total project cost shall be shared at 75% Federal and 25% non-Federal. Operation and maintenance cost shall be 100% non-Federal. Project physically complete in FY03, financially complete in FY04.	Water Resources Development Act of 1992, PL 102-580
	Aug 17, 1999	Secretary of the Army to lead Partnership for the development and implementation of Onondaga Lake improvement projects. Repeals Title IV of the Great Lakes Critical Programs Act of 1990 and section 411 of the Water Resources Development Act of 1990.	Section 573 of Water Resources Development Act of 1999, PL 106-53
<b>16</b>		<b>OSWEGO HARBOR, NY</b>	
	Jul 11, 1870	Construction of outer west breakwater. <sup>1</sup>	Annual Report, 1870, pp. 54, 220 and 221
	Mar 2, 1907	Repair of outer west breakwater under Plan (A). <sup>2</sup>	H. Doc. 55, 58 <sup>th</sup> Cong., 2 <sup>nd</sup> sess.
	Jul 3, 1930	Construction of arrowhead breakwaters; deepening outer harbor between arrowhead breakwaters; west outer harbor east of Erie-Lackawanna coal dock, and Oswego River north of Seneca St., to 21 feet; and deepening west outer harbor, west of Erie-Lackawanna coal dock, to 16 feet. <sup>3</sup>	Rivers and Harbors Committee Doc. 24, 71 <sup>st</sup> Cong., 2 <sup>nd</sup> sess.
	Aug 30, 1935	Widening channel to harbor line in Oswego River north of Seneca Street.	Rivers and Harbors Committee Doc. 7, 74 <sup>th</sup> Cong., 1 <sup>st</sup> sess.

<sup>1</sup> Completed under previous projects.

<sup>2</sup> Replacement of bridges 19 and 32, widening Cuyahoga and Old River Channels, classified deferred.

<sup>3</sup> Deepening a 200-foot strip along harbor line east of mouth of Oswego River is de-authorized.

**BUFFALO, NY DISTRICT**

	Jul 14, 1960	Extending Moseley channel and deepening that channel and the outer end of Straight channel to 26 feet, from deep water in the lake to the vicinity of Cedar Point dock; widening the bend at the junction of the Moseley and Straight channels to 25 feet from the vicinity of Cedar Point dock to Junction Bay channel; deepening the Bay channel from the junction with the Straight channel to the outer end of the Pennsylvania Coal dock no. 3 to 24 feet, thence from outer end of the coal dock to the turning basin to 24 feet in removal of approximately 300 feet of the rock dike, and deepening to 24 feet in soft material and 25 feet in hard.	H. Doc. 144, 85 <sup>th</sup> Cong., 1 <sup>st</sup> Sess. River & Harbor Act of 1960, PL 86-645
<b>22</b>		<b>STURGEON POINT, EVANS, NY</b>	
	Jul 14, 1960	Rehabilitate existing breakwater, construct rubble mound, west breakwater extension, construct rubble mound east breakwater, a shore revetment and dredging.	Sec. 107 River & Harbor Act of 1960, PL 86-645. Authorized by Chief of Engineers Oct 21, 1987.
<b>23</b>		<b>TOLEDO HARBOR, OH</b>	
	Mar 3, 1899	A channel 400 feet wide and 21 feet deep from 25-foot contour in Maumee Bay to Fassett Street Bridge, 200 feet wide and 19 feet deep above that point and a 500-foot turning basin at upper end. A stone re-vetted earth dike in Maumee Bay channel.	H. Doc. 198, 55 <sup>th</sup> Cong., 2 <sup>nd</sup> sess. and Annual Report 1898, p. 2693
	Jun 25, 1910	Act 1899 modified to insure a navigable channel to 21 feet from Fassett Street Bridge to lake.	H. Doc. 865, 60 <sup>th</sup> Cong., 1 <sup>st</sup> sess.
	Aug 30, 1935	Channel 25 feet deep and 500 feet wide from 25-foot contour to mouth of Maumee River (300 feet wide on each side of center dike in bay channel), thence 400 feet wide to Fassett Street Bridge, 200 feet wide above that point and a turning basin at upper end 18 feet deep.	River and Harbors Committee Doc. 21, 72 <sup>nd</sup> Cong., 1 <sup>st</sup> sess.
	May 17, 1950	Widening at bend of mouth of River opposite Chesapeake and Ohio Railway Dock.	H. Doc. 189, 81 <sup>st</sup> Cong., 1 <sup>st</sup> sess. River & Harbor Act of 1950, PL 81-516
	Sep 3, 1954	Removal of center dike in Maumee Bay channel.	H. Doc. 620, 81 <sup>st</sup> Cong., 2 <sup>nd</sup> sess. River & Harbor Act of 1954, PL 83-780
	Jul 3, 1958	Enlarge widening at bend opposite Chesapeake and Ohio dock and turning basin opposite American Shipbuilding Co. dock.	H. Doc. 436, 84 <sup>th</sup> Cong., 2 <sup>nd</sup> sess. River & Harbor Act of 1958, PL 85-500
	Jul 14, 1960	Deepening Bay channel including widening to 28 feet, deepen river channels to NY Central Railroad bridge to 27 feet and construct new turning basin below Anthony Wayne Bridge.	H. Doc. 153, 86 <sup>th</sup> Cong., 1 <sup>st</sup> sess. <sup>1</sup> River & Harbor Act of 1960, PL 86-645
<b>24</b>		<b>TOUSSAINT RIVER, CARROLL TOWNSHIP, OH</b>	
	Jul 14, 1960	Dredged channel from the mouth of the Toussaint River, 2,100 feet into Lake Erie, 4 feet below LWD, 150 feet wide in Lake Erie and tapered to 100 feet at the river mouth.	Sec. 107 of the River & Harbor Act of 1960, PL 86-645. Authorized by Chief of Engineers Sep 29, 1990.

**BUFFALO, NY DISTRICT**

One hundred and two Inspections of completed flood control works for compliance with Federal requirements were made during the period October 1, 2004 through September 30, 2005 at a cost of \$262,032. This includes updating the hydraulics and hydrology of various local flood control projects. Total cumulative cost for Inspection of Completed Flood Control Projects through September 30, 2005 is \$4,992,761.

# DETROIT, MI, DISTRICT

The District is composed of the upper and lower peninsulas of Michigan and portions of Indiana, Wisconsin and Minnesota, which border the lakes. It includes U.S. waters of Lakes Superior, Michigan, Huron, St. Clair and western Lake Erie. Unless otherwise indicated, all depths stated in this report are referred to low water datum as follows: Lake Superior, 601.1 feet; Lake Michigan-Huron, 577.5 feet; Lake Erie, 569.2 feet; and Lake St. Clair, 572.3 feet. These elevations are in feet above the mean water level at Rimouski, Quebec -- International Great Lakes Datum, 1985 (IGLD 1985).

The IGLD 1985 is a datum or reference system used to define water levels within the Great Lakes - St. Lawrence River system. This datum was implemented in January 1992, officially replacing IGLD 1955. At the time IGLD 1955 was established, it was recognized that this datum would have to be periodically revised due to isostatic rebound. Isostatic rebound is the gradual rising or bouncing back of the earth's crust from the weight of the glaciers that covered the Great Lakes region during the last ice age.

**NAVIGATION**

**1. ALPENA HARBOR, MI**

**Location.** At mouth of Thunder Bay River which empties into Thunder Bay, Lake Huron. Harbor is 100 miles southeast of Cheboygan Harbor, MI. River has its source in Montmorency and Alpena Counties, MI. (See NOAA Nautical Chart 14864.)

**Previous Project.** For details see page 1957 of Annual Report for 1915 and page 1548 of Annual Report for 1938.

**Existing Project.** Provides for a bay channel 200 feet wide and 25 feet deep from deep water in Thunder Bay to a point 300 feet lakeward of the Alpena Light; thence an entrance channel 24 feet deep, narrowing to a width of 100 feet at a point 700 feet upstream from the light; a river channel 100 feet wide, 23 feet deep to Second Avenue Bridge; thence 18.5 feet deep and 75 feet wide for 1,600 feet to upper limit of Federal project; a turning basin at upstream end of project, basin at river mouth 19 feet deep, trapezoidal in shape, with a maximum width of 700 feet including the channel width and a maximum length of 900 feet along the channel line, including

removal of existing rubble breakwater; and a breakwater about 550 feet long paralleling lakeward side of new turning basin. Work authorized by the 1965 River and Harbor Act, which consists of the proposed turning basin and breakwater reconfiguration, was deauthorized by the Water Resources Development Act (WRDA) OF 1986; Public Law (PL) 99-662, November 17, 1986, 99th Congress, Title X.

**Local Cooperation.** Fully complied with.

**Terminal Facilities.** Several commercial docks along Thunder Bay River used primarily for receipt of coal and petroleum products. Also a municipal marina basin about 0.25 mile southwest of river mouth. Facilities are considered adequate for existing commerce.

**Operations During Fiscal Year. Maintenance:** Condition surveys and miscellaneous inspections and reports performed by Government forces cost \$1,729.

Existing project was completed in 1939. The modification of existing project at Alpena Harbor, as authorized by the 1965 River and Harbor Act, was reclassified into an inactive status May 22, 1969 based on an unfavorable benefit-cost ratio. In 1975 the modification was recommended and reviewed for

## DETROIT, MI, DISTRICT

TABLE 21-A

### COST AND FINANCIAL STATEMENT

deauthorization, which was withdrawn by Congressional Resolution the same year. Subsequently, the work authorized by the 1965 Act was deauthorized by the WRDA of 1986. Project features are in excellent condition. Total cost of the existing project to end of FY was \$2,438,365, of which \$337,394 was for new work and \$2,100,971 for maintenance.

## 2. ARCADIA HARBOR, MI

**Location.** On east shore of Lake Michigan, 193 miles northeasterly from Chicago, IL, and 15 miles northerly from Manistee, MI. (See NOAA Nautical Chart 14907.)

**Existing Project.** Provided for maintenance dredging of the existing harbor built by private interests, for a period of five years. The five years covered by this project were the calendar years 1905 to 1909, inclusive. Funds were also appropriated and maintenance was performed in calendar years 1911, 1912, 1913 and 1915, inclusive. There is at present no approved project for the improvement of this harbor. (See Table 21-B for authorizing legislation.)

**Local Cooperation.** None required.

**Terminal Facilities.** Dock facilities are considered adequate for existing recreational traffic.

**Operations During Fiscal Year.** Maintenance: A contract for maintenance dredging was awarded and completed this FY, removing 3,980 cubic yards of shoal material at a cost of \$59,840. Supervision and administration cost \$3,776.

Existing project was completed in 1909. Varying depths of 5-12 feet exist in the channel at present. Maintenance of the harbor is based on providing a 9-foot depth. Piers and revetments are in good condition. Total cost of the existing project to end of FY was \$5,805,772.

## 3. ASHLAND HARBOR, WI

**Location.** At head of Chequamegon Bay, on south shore of Lake Superior, about 65 miles east of Duluth, MN. (See NOAA Nautical Chart 14974.)

**Existing Project.** A west channel 20 and 21 feet deep and an east basin 25 and 27 feet deep, both all

protected by an 8,000-foot breakwater. For additional details see page 1008 of Annual Report for 1965. (See Table 21-B for authorizing legislation.)

**Local Cooperation.** Fully complied with.

**Terminal Facilities.** City of Ashland owns 4,150 feet of waterfront for future public needs. Wharves for handling coal, ore, limestone, logs and pulpwood are served by railroads. Detail on actual port and harbor facilities is in Port Series No. 49 (revised 1999) prepared and published by the Water Resources Support Center. Facilities are considered adequate for existing commerce. Handling of ore and logs has been discontinued for the present.

**Operations During Fiscal Year.** Maintenance: Condition surveys, and miscellaneous inspections and reports performed by Government forces cost \$12,910.

Work authorized prior to 1960 Act was completed in 1950. Work authorized by 1960 Act was completed in November 1962. Navigation structures are in fair condition. Total cost of the existing project to end of FY was \$6,615,146 of which \$1,695,645 was for new work and \$4,919,501 was for maintenance.

## 4. BLACK RIVER (PORT HURON), MI

**Location.** This river has its source in the northern part of Sanilac County, MI, is about 60 miles long, and flows in a southeasterly direction into the St. Clair River. (See NOAA Nautical Chart 14852.)

**Previous Project.** For details see page 1441 of Annual Report for 1916, and page 1554 of Annual Report for 1938.

**Existing Project.** Provides for a channel 20 feet deep from deep water in St. Clair River to the Grand Trunk Western Railroad Bridge, 160 feet wide at the mouth, decreasing to 100 feet, about 800 feet from the mouth, thence 100 feet wide for 2,600 feet, decreasing to 75 feet for a distance of 4,800 feet; widening two bends to 100 feet, one at the foot of 12<sup>th</sup> Street, and the other below the Grand Trunk Western Railroad Bridge; for a settling basin 75 feet wide and 20 feet deep, beginning at the Grand Trunk Western Railroad Bridge in Port Huron and extending upstream a distance of about 2,300 feet; and then for a distance of 2.6 miles as a 100-foot wide river channel, 8 feet deep to the I-94 bridge

## REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2005

where it decreases to 6 feet deep and continues to the vicinity of the Black River Drainage Canal with suitable widening where required at bends in the channel. The project modification authorized by the Act of August 30, 1935, is considered to be inactive and is excluded from the foregoing cost for new work. The cost of this modification was last revised in 1954 and was estimated to be \$194,000 exclusive of \$194,000 to be contributed by local interests. (See Table 21-B for authorizing legislation.)

**Local Cooperation.** Fully complied with.

**Terminal Facilities.** There are docks on both sides of Black River near its mouth, and between these docks and the upper limit of improvement there are 5 other docks varying in length from 100 to 500 feet. All docks are privately owned and are restricted to the use of the owners. The facilities are considered adequate for existing commerce. Public recreational boating facilities constructed by the State and local agencies are available, as are privately owned and operated marinas.

**Operations During Fiscal Year.** Maintenance: Condition survey cost \$619.

All work, except that authorized by Act of August 30, 1935, and the latest modification, has been completed. Total cost of the existing project to end of FY was \$3,243,467, of which \$830,165 was for new work (includes \$349,921 contributed funds) and \$2,413,302 for maintenance.

### 5. BOLLES HARBOR, MI

**Location.** On west shore of Lake Erie at mouth of La Plaisance Creek 7 miles southwest of Monroe, MI. (See NOAA Nautical Chart 14846.)

**Existing project.** Provides for an entrance channel in Lake Erie, 8 feet deep and 80 feet wide from deep water to a point opposite the outer end of existing jetty, thence widening to 100 feet at creek mouth; an access channel in La Plaisance Creek, 6 feet deep and 100 feet wide at the mouth widening to 120 feet and extending to the first bend, thence narrowing to 50 feet wide and continuing at that width to the La Plaisance Road bridge; a steel sheet pile revetment, about 200 feet long, located along Michigan State Conservation Department property on west side of channel at creek mouth. Project also provides for inclusion of existing 400-foot long steel sheet pile jetty constructed by Michigan State Waterways

Commission at the mouth of La Plaisance Creek. (See Table 21-B for authorizing legislation.)

**Local cooperation.** Fully complied with.

**Terminal facilities.** The Monroe Boat Club and three marinas provide facilities adequate for existing recreational boat traffic. There is also a public launching ramp and parking area at the Conservation Department fishing site at creek mouth.

**Operations During Fiscal Year.** Maintenance: Condition survey cost \$98.

The existing project was completed in 1970. (Adequate depths exist over the project length except for the upstream 800 feet.) Facilities are in good condition. Total cost of the existing project to end of FY was \$4,634,310, of which \$472,916 was for new work (includes \$255,000 contributed funds) and \$4,161,394 for maintenance.

### 6. CASEVILLE HARBOR, MI

**Location.** At mouth of Pigeon River on south shore of Saginaw Bay about 17 miles southwest of Port Austin, MI. (See NOAA Nautical Chart 14860.)

**Existing project.** A small craft harbor of refuge consisting of a breakwater protected channel extending from the 10-foot contour in Saginaw Bay into Pigeon River. Project depths are 10 and 8 feet. For additional details see page 1320 of Annual Report for 1963. Widening river channel from 50 to 60 feet for about 1,000 feet, with widening to 80 feet in upper 300-foot reach, is considered inactive. Estimated (1963) cost of this portion of project is \$30,00 (See Table 21-B for authorizing legislation).

**Local cooperation.** Fully complied with.

**Terminal Facilities.** Complete public boating facilities constructed by State and local agencies are available in addition to privately owned and operated marinas.

**Operations During Fiscal Year.** Maintenance: Condition surveys, environmental studies, and miscellaneous inspections and reports performed by Government forces at a cost of \$22,721. A contract for maintenance dredging was awarded and completed this FY, removing 24,000 cubic yards of shoal material at a cost of \$300,030. Supervision and administration cost \$7,215.

DETROIT, MI, DISTRICT

TABLE 21-A

COST AND FINANCIAL STATEMENT

The existing project was completed in 1964 except for the inactive portion of the project. Project features are in fair to good condition. Total cost of the existing project to end of FY was \$2,945,031 of which \$587,314 was for new work (including \$293,657 contributed funds) and \$2,357,717 for maintenance.

**7. CHARLEVOIX HARBOR, MI**

**Location.** On east shore of Lake Michigan, 276 miles northeasterly from Chicago, IL, and 75 miles northerly from Frankfort, MI. (See NOAA Nautical Chart 14942.)

**Existing Project.** A channel 24 feet deep in Lake Michigan and a river channel 23 feet deep in the lower and upper channels connecting Lake Michigan with Lake Charlevoix via Round Lake. The channels are protected where needed by piers and revetments. For additional details see page 1476 of Annual Report for 1962. (See Table 21-B for authorizing legislation.) Section 25 of the WRDA of 1988 provides authorization pertaining to the South Pier to Charlevoix Harbor. It states, "The Secretary shall take such action as may be necessary to restore recreational uses established prior to May 1, 1988, or provide comparable recreation uses at the South Pier to Charlevoix Harbor project, Charlevoix, Michigan in order to mitigate any adverse impact on recreational uses resulting from reconstruction of the South Pier..."

**Local Cooperation.** None required except the latest project modification is subject to the following: Provide without cost to the United States, all lands, easements, and rights-of-ways required for construction and subsequent maintenance of the modified project upon the request of the Chief of Engineers, including suitable areas determined by the Chief of Engineers to be required in the general public interest for initial and subsequent disposal of excavated materials and any necessary retaining dikes, bulkheads, and embankments, therefore, or the cost of such retaining works; hold and save the United States free from damages due to the constructing and maintenance of the modified project, except for damages due to the fault or negligence of the United States or its contractors; provide and maintain without cost to the United States depths in berthing areas and local access channels serving the terminal commensurate with the depths provided in the related project areas; accomplish, without cost to the United States, such

alterations of submarine utility crossing as are required by the modified project; establish regulations prohibiting discharge of pollutants into the waters of the harbor by users thereof which regulations shall be in accordance with applicable laws or regulations of Federal, State and local authorities responsible for pollution prevention and control; if acquiring lands, easements and rights-of-ways for construction of the project, local interests will comply with the applicable provisions of the Uniform Relocation Assistance and Real Property Acquisition Policies Act of 1971; PL 91-646, approved January 2, 1971; contribute all costs in excess of \$1,000,000 should the total cost of construction of the general navigation facilities exceed that amount, in accordance with provisions of Section 107 of the 1960 River and Harbor Act, as amended. The total first cost of construction (1975) is estimated at \$625,000.

**Terminal Facilities.** Several small landing places in Round Lake at Charlevoix for handling fish and miscellaneous commodities, a wharf for petroleum products at west end of Lake Charlevoix, and coal wharves at Advance and Boyne City. Charlevoix, Boyne City, and East Jordan provide public docks for small craft. Facilities considered adequate for existing commerce.

**Operations During Fiscal Year.** Maintenance: Condition surveys, environmental studies, and miscellaneous inspections and reports performed by Government forces cost \$57,720. Safety maintenance performed by hired labor cost \$15,750. Real estate activities cost \$10,849.

Existing project was completed in 1939 except for the latest modification. Navigation structures are in good to fair condition with miscellaneous repairs scheduled in future years. Total cost of the existing project to end of FY was \$12,478,797, of which \$180,623 was for new work, \$11,168,778 for maintenance (Bank Stabilization \$46,352), and \$1,129,396 for rehabilitation.

**8. CLINTON RIVER, MI**

**Location.** Has its sources in Oakland County, MI, flows easterly about 60 miles and empties into Anchor Bay in northwestern part of Lake St. Clair. (See NOAA Nautical Chart 14850).

**Previous Project.** For details see page 1958 of Annual Report for 1915, and page 1556 of Annual Report for 1938.

## REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2005

**Existing Project.** An entrance channel in Anchor Bay 8 feet deep, 300 feet wide at 8-foot depth contour in the bay, gradually decreasing to 50 feet wide at about 1,000 feet upstream from mouth of Clinton River, a length of about 4,600 feet; a channel 8 feet deep and 50 feet wide in the river about 38,700 feet long from entrance channel upstream to Mt. Clemens at Cass Avenue; closing old channel and making a cutoff at Shoemakers Bend; closing Catfish Channel; construction of revetments as needed in the river; and a harbor basin, 5 feet deep and 11 acres in area at entrance along bay channel, protected by breakwaters on north and south sides. (See Table 21-B for authorizing legislation).

**Local Cooperation.** Fully complied with.

**Terminal Facilities.** River is used exclusively by recreational craft. There are numerous public and private wharves along the river below the city. They are considered adequate.

**Operations During Fiscal Year.** Maintenance: Condition surveys, and miscellaneous inspections and reports performed by Government forces and contract cost \$49,964. A contract awarded this FY for maintenance dredging in the amount of \$192,920. The contract was 80% complete at the end of the FY, removing approximately 2,420 cubic yards of shoal material at a cost of \$156,920. Engineering and design and supervision and administration cost \$76,764.

Existing project was completed in 1966. Total cost of the existing project to end of FY was \$9,142,758, of which \$549,798 was for new work (includes \$289,752 contributed funds), \$4,796,780 for maintenance and \$3,796,180 for diked disposal.

### 9. CORNUCOPIA HARBOR, WI

**Location.** At mouth of Siskiwit River on south shore of Lake Superior, 49 miles east from Duluth, MN. (See NOAA Nautical Chart 14973).

**Existing Project.** Provides for an entrance channel between piers; an irregular-shaped turning basin; two inner channels, and reconstruction and Federal maintenance of deflection dike and entrance piers constructed by local interests. Project depths are 10 feet between piers and 8 feet in turning basin and inner channels. For additional details see page 1010 of Annual Report for 1965. (See Table 21-B for authorizing legislation).

**Location cooperation.** Fully complied with.

**Terminal Facilities.** About 1,000 linear feet of privately owned docking space is available.

**Operations During Fiscal Year.** Maintenance: Miscellaneous inspections and reports performed by Government forces and contract cost \$7,418. A contract awarded this FY for maintenance dredging in the amount of \$196,826, removing approximately 4,576 cubic yards of material at a cost of \$87,786. Supervision and administration cost \$17,681.

Work authorized by earlier Act was completed in 1939. Work authorized in 1954 was completed in 1963. Navigation structures are in fair to good condition; repairs will be scheduled in future years. Total cost of the existing project to end of FY was \$2,036,716, of which \$462,653 was for new work and \$1,574,063 for maintenance.

### 10. DETROIT RIVER, MI

**Location.** One of the Great Lakes connecting channels, 31 miles long, flows south from Lake St. Clair to Lake Erie. (See NOAA Nautical Chart 14848.)

**Previous Project.** For details see page 1958 of Annual Report for 1915, and page 1541 of Annual Report for 1938.

**Existing Project.** Improving Detroit River main channels to provide 25.5-foot draft navigation; improving certain auxiliary and side channels; and construction of various water level and crosscurrent control structures. Details are in accompanying Table 21-H. Project depths are referred to local low water datum planes which correspond to low water datums for Lakes St. Clair and Erie, 572.3 and 569.2 feet above mean water level at Rimouski, Quebec, IGLD 1985. (See Table 21-B for authorizing legislation.)

**Local Cooperation.** Fully complied with. No local cooperation is required for modifications authorized by Acts of July 1946 and March 1956. The uncompleted portion of the project authorized by the 1946 and the 1956 R & H Acts, construction of the Compensating Works, with the uncompleted portion of the Trenton Channel modification approved Aug. 13, 1968, were deauthorized Dec. 31, 1989, in accordance with Section 1001 of the WRDA of 1986 (PL 99-662).

**Terminal Facilities.** Numerous commercial installations used for handling coal, iron ore,

DETROIT, MI, DISTRICT

TABLE 21-A

COST AND FINANCIAL STATEMENT

limestone, steel products, petroleum products, and other items such as overseas general cargo. Detail on actual port and harbor facilities is in Port Series No. 45 (revised 1996) prepared and published by the Water Resources Support Center. Facilities are considered adequate for existing commerce.

**Operations During Fiscal Year.** Maintenance: Condition surveys, environmental studies, confined disposal facility monitoring, support of water control center, and miscellaneous inspections and reports performed by Government forces and contract cost \$913,775. Location and removal of obstructions was performed using the U.S. Cranebarge VELER at a cost of \$2,612,001. Maintenance of disposal area performed by hired labor cost \$59,220. The contract awarded last FY for maintenance dredging was completed, removing approximately 9,277 cubic yards of shoal material at a cost of \$194,104. Engineering, design, surveys, real estate, and supervision and administration cost \$243,617.

Latest modification of connecting channels project in the Detroit River is complete except for compensating works. Pertinent data concerning channels covered by project at end of FY are set forth in Table 21-H. Total cost of the existing project to end of FY was \$266,855,720, of which \$76,877,357 was for new work (\$75,346,669 regular funds and \$1,530,688 Public Works Funds), \$147,507,778 (includes \$361,235 Section 150 contributed funds) for maintenance and \$42,470,585 for diked disposal.

**11. DULUTH-SUPERIOR HARBOR, MN AND WI**

**Location.** At extreme western end of Lake Superior. Cities of Duluth, MN, and Superior, WI, are on north and south sides, respectively. (See NOAA Nautical Chart 14975.)

**Previous Projects.** See page 1246 of Annual Report for 1962.

**Existing Project.** Provides for rebuilding canal piers at Duluth entry, replacement or construction of piers and breakwater at Superior entry and dredging approaches and channels within harbor, St. Louis Bay, and St. Louis River. Channels vary in depth from 32 to 28 feet in entrances, are 27 feet deep in iron-ore route channels, and are from 20 to 23 feet deep in inner channels. (See Table 21-B for authorizing legislation.)

For details of authorized channel dimensions and dimensions of structures, see pages 1246 and 1247 of Annual Report for 1962 and page 1011 of Annual Report for 1965. Portion of project for deepening Twenty-first Avenue West channel was deauthorized Dec. 31, 1989, in accordance with Section 1001 of the WRDA of 1986 (PL 99-662).

The WRDA of 1986 authorized modifications to the project to deepen the western portions of North and South Channels, the entire Upper Channel and the Minnesota Channel to 27 feet LWD; widen the Cross Channel to provide a minimum turning basin of 1,500 feet; widen the bend at the Arrowhead Bascule Bridge to 600 feet; and construct an upland confined disposal facility. The current recommended plan involves only the mechanical dredging of the Cross Channel Turning Basin with disposal at the Erie Pier CDF. The remainder of the project is now unscheduled.

**Local Cooperation.** Fully complied with for completed portion of project. Local cooperation items for the newly authorized project in the WRDA of 1986 (PL 99-662), are as described in House Document 150, 86th Congress, 1st Session and also includes, as a result of PL 99-662, construction cost sharing.

**Terminal Facilities.** There are 113 docks or terminals including some 54 major ones; all but one privately owned. Detail on actual port and harbor facilities is in Port Series No. 49 (revised 1999) prepared and published by the Water Resources Support Center. Facilities for handling iron ore, coal, limestone, petroleum, steel and scrap iron, cement, general cargo, and grain are believed adequate for most existing commerce.

**Operations During Fiscal Year.** Maintenance: Operation and maintenance of the museum performed by Government forces and contract cost \$569,772. Operation and maintenance of service facilities and park pier performed by hired labor cost \$271,484. Condition surveys, environmental studies, confined disposal facility monitoring, support of water control center, and miscellaneous inspections and reports performed by Government forces and contract cost \$697,167. Safety repairs performed by hired labor cost \$90,758. Duluth and Superior Entry Breakwater repairs were performed using the U.S. Derrickbarge SCHWARTZ at a cost of \$637,448. A contract for Superior Entry Repairs to the South revetment was awarded in the amount of \$2,633,900. Repairs to the South Revetment cost \$1,183,996. A contract for maintenance dredging was awarded and completed this FY, removing 99,740 cubic yards of

## REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2005

shoal material at a cost of \$946,821. Engineering, design, surveys, real estate, and supervision and administration cost \$199,292.

Work authorized prior to 1960 Act was completed in June 1956. Under the 1960 Act, work on the outer harbor, included in House Document 150, was completed in June 1965. Work in the inner harbor, included in House Document 196, started in May 1963, was completed in November 1968 except for 21st Avenue West channel portion which was deauthorized December 31, 1989. Of the work authorized in WRDA 1986, only the Cross Channel dredging has been completed (September 1994). All other authorized improvements are unscheduled.

The United States owns 34.90 acres of land in fee in Minnesota and Wisconsin of which 2.15 acres are used for a vessel yard. Navigation structures are in poor to excellent condition; repairs are scheduled in the near future. Total cost of the existing project to end of FY was \$123,431,315, of which \$17,226,343 was for new work (includes \$331,685 contributed funds), \$93,093,313 for maintenance, \$1,556,249 for diked disposal and \$11,555,410 for rehabilitation.

### 12. FOX RIVER, WI

**Location.** Rises in Columbia County, WI, and flows about 176 miles northerly into Green Bay. Wolf River, physically a main river but by designation a tributary of Fox River, rises in central part of Fort County, WI and flows southerly. (See NOAA Nautical Chart 14916 for Lake Winnebago and lower Fox River.)

**Previous Projects.** See page 1368 of Annual Report for 1962.

**Existing Project.** Deepening and widening channel of Fox River from DePere 7 miles above mouth to confluence of Wolf River, a total length of 59 miles, to 6 feet, with 9.6 feet in rock cut below DePere lock and 7 feet in other rock cuts on lower river below Menasha lock; construction and reconstruction of 19 locks and 9 dams; a concrete retaining wall at Kaukauna; construction and maintenance of harbors having depths of 6 feet on Lake Winnebago; widening Neenah Channel to 100 feet, with a 6-foot depth for about 1 mile; and dredging, snagging, and otherwise improving Wolf River 47 miles from its mouth to New London, depth to be 4 feet.

Cost of completed portion of project is \$513, 424 for the lower river exclusive of previous projects. The uncompleted portion of the project authorized by the River and Harbor Act of 1925, was deauthorized

Dec. 31, 1989, in accordance with Section 1001 of the WRDA of 1986 (PL 99-662). Section 332 of the WRDA of 1992 authorized the transfer of the navigation system to the State of WI subject to agreement; however, water regulation and dam operation will be continued by the Federal government. (See Table 21-B for authorizing legislation.)

**Local Cooperation.** None required.

**Terminal Facilities.** Wharf and landing facilities are, in general, adequate for existing needs. (See Table 21-I on locks and dams, Fox River, WI.)

**Operations During Fiscal Year.** Maintenance: Condition surveys, environmental activities, safety training, miscellaneous inspections and reports, and plans for flood emergencies were performed at a cost of \$592,349. Water control studies, monitoring and regulation of water levels were performed at a cost of \$292,773. Real Estate activities cost \$15,455. The operation and maintenance of nine (9) dams and ten (10) overflow weirs totaled \$607,888. Final renovation activities of the gate hoist was completed this FY at a cost of \$9,643. The contract for repair of the right abutment at Upper Appleton Dam was completed at the end of the FY at a cost of \$235,669. Supervision and administration cost \$77,946.

Existing project is complete except for the inactive portion. Nineteen original locks and nine original dams were rebuilt. (See Table 21-I for year of completion of each). Structures and dredging in pools have increased original depths generally about 2 feet. Work remaining to complete project consists of dredging in upper portion of Wolf River, and rock removal and deepening of Neenah Channel on lower Fox River, which are no longer considered necessary. The dams tainter gates are receiving new hoist mechanisms. Existing dams repairs are underway or programmed in the near future; but many of the locks are in extremely poor condition. Total cost of the existing project to end of FY was \$98,757,641, of which \$3,753,334 was for new work and \$95,004,307 for operation and maintenance. Between July 5, 1884 and June 30, 1935, funds in the amount of \$3,706,187 were expended on operation and care of works of improvement under provisions of permanent indefinite appropriation for such purposes.

### 13. FRANKFORT HARBOR, MI

**Location.** On east shore of Lake Michigan, 204 miles northeasterly from Chicago, IL, and 28 miles

## DETROIT, MI, DISTRICT

TABLE 21-A

### COST AND FINANCIAL STATEMENT

northerly from Manistee, MI. (See NOAA Nautical Chart 14907.)

**Existing Project.** Provides for constructing an exterior basin in Lake Michigan formed by two breakwaters, 450 feet apart at the outer ends, diverging at an angle of about 90 degrees, the main arm and shore connection on north breakwater are 972 and 1,000 feet long, respectively, and the main arm and shore connection of south breakwater 1,188 and 1,400 feet long, respectively; for removing 801 feet of north pier and 1,172 feet of south pier; dredging basin 20 feet deep and 800 feet wide at entrance, decreasing toward new pier heads to 600 feet wide, dredging approach and entrance channel through outer basin to a depth of 24 feet from deep water in Lake Michigan to a point 500 feet landward of opening between breakwaters, over the entire width outside the breakwaters; thence to maximum width of 500 feet inside the breakwaters and to 23 feet deep through inner portion of outer basin to outer end of north pier, over widths decreasing from 500 to 160 feet; and thence to 22 feet deep between the piers to the inner basin in Lake Betsie; dredging an 18-foot deep interior basin in Lake Betsie from within 50 feet of existing structures on the west and extending eastward about 1,550 feet to easterly boundary and from within 50 feet of existing structures on the north and extending southward 800 feet to the southerly boundary; dredging a recreational craft anchorage area 10 feet deep and 300 feet wide, extending 600 feet eastward of the east limit of the interior basin, with its north side in line with the north limit of the basin. Breakwaters and shore connections are built of concrete caissons and piling capped with concrete. Inner piers and revetments are built of stonefilled timber cribs and piling, all capped with concrete, except for 476 feet of south revetment which consists of steel sheet piling. (See Table 21-B for authorizing legislation.)

**Local Cooperation.** Fully complied with.

**Terminal Facilities.** Two car ferry slips on south shore and several docks along north shore of Lake Betsie. The City and State provide a recreational docking facility on north side of Lake Betsie which is open to all on equal terms. There is also a marine railway capable of handling small craft. Facilities are considered adequate for existing commerce.

**Operations During Fiscal Year.** Maintenance: Miscellaneous report cost \$40.

Existing project was completed in 1939, with exception of the latest modification that was

completed in 1969. For additional details on completion of existing project see page 1474 of Annual Report for 1962. Navigation structures are in fair to good condition. Total cost of the existing project to end of FY was \$14,530,177, of which \$1,955,159 (includes \$31,709 contributed funds) was for new work, \$11,095,742 for maintenance, \$1,204,500 for diked disposal and \$274,776 for rehabilitation.

## 14. GRAND HAVEN HARBOR AND GRAND RIVER, MI

**Location.** Harbor is on east shore of Lake Michigan, 108 miles northeasterly from Chicago, IL, and 23 miles northerly from Holland, MI. River rises in Jackson County, MI, and flows 260 miles westerly into Lake Michigan. (See NOAA Nautical Chart 14933, and Geological Survey Grand Rapids quadrangle.)

**Previous Project.** For details see page 1949 of Annual Report for 1915, and page 1481 of Annual Report for 1938.

**Existing Project.** An entrance channel protected by parallel piers and revetments at mouth of Grand River, a deep draft channel in river extending to Spring Lake, a turning basin, and a shallow draft channel in river extending 14.5 miles upstream to Bass River. Project depths are 23 feet in entrance channel, 21 feet in river to turning basin, 18 feet in turning basin and channel to Spring Lake, and 8 feet in upper Grand River channel. For additional details see page 1461 of Annual Report for 1962. Dredging on northerly side of inner channel is considered inactive. Estimated cost of this portion (1954) is \$38,600. The WRDA of 1986 authorized modifications to deepen the harbor entrance and river channels to 29 and 27 feet, respectively; and provides for a new and larger turning basin. Estimated cost (Oct 90) is \$20,400,000, which includes \$11,754,000 Federal and \$8,646,000 non-Federal. (See Table 21-B for authorizing legislation.)

**Local Cooperation.** Fully complied with for completed portions of project. Local cooperation items for the newly authorized project in the WRDA of 1986 (PL 99-662), are as described in House Document 661, 76th Congress, 3d Session, and also includes, as a result of PL 99-662, construction cost sharing requirements as follows:

## REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2005

a. Contribute in cash 25 percent of the total cost of construction of general navigation facilities, exclusive of aids to navigation, a contribution presently estimated at \$4,246,000. The estimated cash contribution of \$4,246,000 to be paid in lump sum, prior to initiation of construction, or in annual installments during the construction period at a rate proportionate to the proposed or scheduled expenditure of Federal funds as required by the Chief of Engineers, or under another arrangement satisfactory to the Secretary of the Army, the final apportionment of cost to be made after actual costs have been determined; and

b. Repay, with interest, over a period of up to 30 years following project completion, 10 percent of the total cost of construction of general navigation facilities, an amount presently estimated at \$2,040,000. The Secretary of the Army may count against all or part of the 10 percent repayment, the amount of the local contribution of lands, easements, rights-of-ways, dredged/demolition material disposal sites and relocations. In no case are these costs to count against the cash payment during construction, and in no case would the amount waived exceed 10 percent of project cost.

**Terminal Facilities.** Several wharves exist for handling coal, limestone, sand and gravel, petroleum products, fish, and miscellaneous commodities. There is also a car-ferry slip, which is inactive. The State and local agencies provide recreational boating facilities, which are open to all on equal terms. Facilities are considered adequate for existing commerce.

**Operations During Fiscal Year.** Maintenance: Condition and structure surveys, environmental studies, and miscellaneous inspections and reports performed by Government forces cost \$238,894. Minor safety repairs performed by hired labor cost \$31,369. Final option of the FY02 multi-year maintenance dredging contract was completed this FY, removing approximately 35,888 cubic yards of shoal material at a cost of \$209,451. Supervision and administration and real estate activities cost \$89,154. Final cost for FY04 Section 111 beach nourishment contract was \$41.

Existing project was substantially completed in 1949. For additional details on completion of existing project see page 1463 of Annual Report for 1982. Condition of navigation structures range from good to poor with portions in a general state of deterioration and are scheduled for repairs. Total cost of the existing project to end of FY was \$42,332,636; of which \$1,458,469 was for new work,

\$39,280,154 for maintenance (includes \$15,585 contributed funds), \$780,400 diked disposal and \$813,613 for rehabilitation.

### 15. GRAND MARAIS HARBOR, MI

**Location.** On south shore of Lake Superior, 93 miles west of Sault Ste. Marie, MI (See NOAA Nautical Chart 14962.)

**Existing Project.** Provides for a channel protected by parallel piers and for closing natural entrance channel with a pile dike. Project depths are 18 feet between piers and 20 feet in lake approach. For additional details see page 1449 of Annual Report for 1962. (See Table 21-B for authorizing legislation.)

**Local Cooperation.** None required.

**Terminal Facilities.** Several small piers, a Coast Guard Station, and a small boat pier and launching ramp built by the State of Michigan provide facilities adequate for present traffic.

**Operations During Fiscal Year.** Maintenance: Condition surveys performed by Government forces cost \$3,845. Breakwater repairs were performed using the U.S. Derrickbarge SCHWART at a cost of \$133,612. Real estate activities cost \$9,040.

Existing project is complete except for widening a portion of channel from 250 to 300 feet. Project now being maintained to 19 and 15 feet below I.G.L.D., in lieu of 20 and 18 feet, which is adequate for current usage. The Pile Dike Breakwater is severely deteriorated and no longer maintained; major repair is required to make the Breakwater functional. Total cost of the existing project to end of FY was \$4,196,701, of which \$1,055,871 was for new work and \$3,140,830 for maintenance.

### 16. GRAND MARAIS HARBOR, MN

**Location.** On north shore of Lake Superior, 106 miles northeasterly from Duluth, MN. (SEE NOAA Nautical chart 14967).

**Existing Project.** Provides breakwater piers to narrow the entrance; concrete seawalls across ledge at southeast corner of harbor; an anchorage area and a small-boat basin protected by a rubblemound breakwater. Project depths are 16 feet in anchorage area increasing to 20 feet near entrance and 8 feet in

DETROIT, MI, DISTRICT

TABLE 21-A

COST AND FINANCIAL STATEMENT

small-boat basin. For additional details see page 1014 of Annual Report for 1965. (See Table 21-B for authorizing legislation).

**Local Cooperation.** Fully complied with.

**Terminal Facilities.** Two active pulpwood wharves and several fish wharves all privately owned. Facilities are considered adequate for existing commerce.

**Operations During Fiscal Year.** Maintenance: Condition surveys performed by Government forces and contract cost \$1,861.

Existing project is complete. Structures range from good to fair. Total costs of the existing projects to end of FY was \$3,010,048 of which \$450,972 was for new work and \$2,559,076 for maintenance.

## 17. GREEN BAY HARBOR, WI

**Location.** At mouth of Fox River, at head of Green Bay, about 180 miles from Milwaukee, WI, via Sturgeon Bay Canal, and about 49 miles southwest of Menominee Harbor, MI and WI. (See NOAA Nautical Chart 14918.)

**Previous Projects.** See page 1366 of Annual Report for 1962.

**Existing Project.** See Chicago District 1979 Annual Report, Table 30-C, page 30-30.

For more detailed description of project see page 1216 of Annual Report for 1963.

Cost of completed portion of project is \$9,335,000 Federal, and non-Federal cost is \$490,000 including \$100,000 contributed funds. Local interests requested that the inactive portion of the 1962 River and Harbor Act, consisting of dredging the reach from 150 feet downstream of the Chicago & Northwestern Railway Bridge to 1,700 feet upstream of this bridge, be reactivated and the authorization modified to include deepening the adjacent turning basin and modifying the Chicago & Northwestern Railway Bridge to provide increased horizontal clearance. Estimated cost of this portion (1990) is \$6,130,000; \$4,030,000 Federal and \$2,100,000 non-Federal which includes \$1,970,000 local contribution. Section 601c of the WRDA of 1986 authorized deepening the Fox River Channel, Green

Bay, WI, to 27 feet. (See Table 21-B for authorizing legislation.)

**Local Cooperation.** Fully complied with for existing project.

**Terminal Facilities.** There are 16 wharves for handling coal, petroleum products, cement, limestone, general overseas cargo and miscellaneous commodities. Facilities are considered adequate for existing commerce.

**Operations During Fiscal Year.** Maintenance: Condition and structure surveys, environmental studies, confined disposal facility monitoring, and miscellaneous inspections and reports performed by Government forces cost \$543,647. Maintenance of the confined disposal facility cost \$15,502. The contract awarded last FY for maintenance dredging was completed this FY, removing 84,550 cubic yards of shoal material at a cost of \$1,306,954. Engineering, design, surveys, and supervision and administration cost \$117,005. A contract was awarded this FY for maintenance dredging in the amount of \$1,546,300. The contract was 81% complete at the end of the FY, removing approximately 76,000 cubic yards of shoal material at a cost of \$1,249,980. Engineering, design, surveys, real estate an supervision and administration cost \$154,253.

Existing project is complete. The 1962 modification was started in November 1966 and completed in September 1973, except for dredging the reach from 150 feet downstream of the Chicago & Northwestern Railway Bridge to 1,700 feet upstream of this bridge. Dredging of the turning basin above C & N.W. Railway Bridge was commenced in August 1938. The turning basin was enlarged under authority of Section 5 of the Rivers and Harbors Act of March 4, 1915, in order to provide sufficient area for the large ships that use it. The work was performed as part of a maintenance dredging contract in September and October 1973. East revetment at Grassy Island was entirely removed in July 1935. Dredging Fox River and entrance channel to Tail Point Light was completed in September 1967. Total cost of the existing project to end of FY was \$74,453,558 (\$73,512,758 regular funds and \$940,800 Public Works Funds), \$9,946,395 for new work, \$56,602,852 for maintenance and \$7,904,311 for diked disposal. The new work cost does not include \$100,000 contributed funds.

## 18. HARBOR BEACH HARBOR, MI

**Location.** On west shore of Lake Huron about 60 miles north of Port Huron, MI. (See NOAA Nautical Chart 14862).

**Existing Project.** Harbor of refuge protected by three breakwaters; a main entrance 23 feet deep; and an anchorage area 21 feet deep. For additional details see page 1485 of Annual Report for 1962. (See Table 21-B for authorizing legislation).

**Local Cooperation.** None required.

**Terminal Facilities.** Coal and limestone are received at a private wharf. In addition, there is a public recreational craft pier, a Coast Guard pier, and several small installations engaged in docking and servicing light-draft commercial and recreational vessels. These facilities satisfy current commerce and traffic requirements.

**Operations During Fiscal Year.** Maintenance: Condition surveys and miscellaneous inspections and reports performed by Government forces cost \$27,712.

Existing project was completed in 1928. For additional details on completion of existing project see page 1485 of Annual Report for 1962. Navigation structures are in good condition. Total cost of the existing project to end of FY was \$17,029,534, of which \$1,200,598 was for new work, \$15,391,332 for maintenance, \$243,100 for diked disposal and \$194,504 for rehabilitation.

## 19. HOLLAND HARBOR, MI

**Location.** On east shore of Lake Michigan 95 miles northeasterly from Chicago, IL, and 23 miles southerly from Grand Haven, MI. (See NOAA Nautical Chart 14932.)

**Previous Project.** For details see page 1948 of Annual Report for 1915, and page 1478 of Annual Report for 1938.

**Existing Project.** An outer breakwater protected approach channel in Lake Michigan, an entrance channel to Lake Macatawa protected by piers and revetments, a channel through Lake Macatawa into Black River, and a turning basin. Project depths are 23 feet in outer portion of approach channel decreasing to 21 feet at outer end of inner piers, 21

feet to upper end of project, and 18 feet in turning basin. For additional details see page 1458 of Annual Report for 1962.

The uncompleted portion of the project, widening bend of entrance channel into Lake Macatawa, was deauthorized Dec, 31, 1989, in accordance with Section 1001 of the WRDA of 1986 (PL 99-662). (See Table 21-B for authorizing legislation.)

**Local Cooperation.** Fully complied with for completed portions of project.

**Terminal Facilities.** Wharves are at inner end of Lake Macatawa and used for handling coal, building materials, petroleum products, and miscellaneous commodities. Two shipbuilding yards are on south shore of the lake. Holland provides a public wharf for small craft. Facilities are considered adequate for existing commerce.

**Operations During Fiscal Year.** Maintenance: Condition and structure surveys, environmental studies, water quality testing, and miscellaneous inspections and reports performed by Government forces and contract cost \$146,418. Engineering and design for repair of the North Pier continued at a cost of \$31,253. Maintenance of the confined disposal facility performed by hired labor cost \$4,803. Minor safety repairs cost \$4,002. Concrete repairs were performed using the Cranebarge MANITOWOC at a cost of \$267,978. Final option of the FY02 multi-year contract for maintenance dredging the outer harbor was completed this FY, removing 44,474 cubic yards of shoal material at a cost of \$265,730. Supervision and administration cost \$38,371. A contract was awarded this FY for maintenance dredging in the amount of \$1,866,426. The contract was 64% complete at the end of the FY, removing approximately 77,000 cubic yards of shoal material at a cost of \$1,193,564. Engineering, design, surveys, real estate activities and supervision and administration cost \$98,891.

Existing project, with exception of widening bend in revetted entrance channel authorized by Act of September 3, 1954, was completed in 1957. For additional details on completion of existing project, see page 1460 of Annual Report for 1962. Navigation structures are in good to fair condition with repairs anticipated within the next 5 years. Total cost of the existing project to end of FY was \$37,027,624, of which \$1,392,827 was for new work (\$1,180,502 regular funds, \$176,620 for previous project and \$35,705 contributed funds), \$33,469,045

DETROIT, MI, DISTRICT

TABLE 21-A

COST AND FINANCIAL STATEMENT

for maintenance, \$1,663,300 for diked disposal and \$502,452 for rehabilitation.

**20. THE INLAND ROUTE, MI**

**Location.** A series of interconnected lakes and streams stretching across northern tip of Lower Peninsula of Michigan, and extends from Conway near Lake Michigan to Cheboygan on Lake Huron; a distance of 35 miles. Crooked and Indian Rivers are connecting channels in the waterway. (See NOAA Nautical Chart 14886.)

**Existing Project.** Provides for a channel 30 feet wide and 5 feet deep, with necessary widening at bends, through Crooked and Indian Rivers, and Crooked, Burt, and Mullett Lakes, and from Conway (west end of Crooked Lake) to navigation lock at Cheboygan; in Pickerel Channel from Pickerel Lake to Crooked Lake. It also provides for suitable jetties at head of Indian River. The addition of a lock and dam was approved by the Chief of Engineers on Sep. 2, 1964, to correct a design deficiency. (See Table 21-B for authorizing legislation.)

**Local Cooperation.** Fully complied with.

**Terminal Facilities.** None exist for commercial cargo-handling along the Crooked and Indian Rivers. Numerous small privately owned timber piers and wharves, some equipped with covered boat wells for serving and storing recreational craft, have been constructed. Landings maintained by hotel and resort operators are open to the public for transfer of passengers. Public docks are at Conway and Oden on Crooked Lake; the village of Indian River, Topinabee, and Mullett Lake Village on Mullett Lake; and at Cheboygan. About 30 highways dead end at water's edge, permitting public access for various marine activities. Dock facilities are considered adequate for existing traffic.

**Operations During Fiscal Year.** Maintenance: The navigation lock was operated and maintained by the State of Michigan at no cost to the Government. In FY 05, the lock was operated from 9:00 a.m. to 5:00 p.m. April 29, 30, May 6, 7, 13, 14, 20, 21, September 18-30. The lock was operated 8:00 a.m. to 9:00 p.m. May 27-June 30, and 8:00 a.m. to 8:00 p.m. September 5-17. The lock was operated from 8:00 a.m. to 10:00 p.m. July 1-September 4. The lock was operated from 9:00 a.m. to 11:00 a.m. and 3:00 p.m. to 5:00 p.m. October 7, 8, 14, 15. The lock

closed for the season on October 15 at 5:00 p.m. Environmental studies, and miscellaneous inspections and reports performed by Government forces cost \$16,997.

The existing project was completed in 1958. The lock and dam was completed in FY 1968. For additional details see page 1382 of Annual Report for 1960. Total cost of the existing project to end of FY was \$5,017,028, of which \$918,222 was for new work (includes \$148,000 contributed funds), \$3,694,506 for maintenance, and \$404,300 for diked disposal.

**21. KENOSHA HARBOR, WI**

**Location.** On west shore of Lake Michigan about 35 miles south of Milwaukee and about 54 miles north of Chicago. (See NOAA Nautical Chart 14904.)

**Previous Project.** See page 1390 of Annual Report for 1962.

**Existing Project.** For detailed description see page 1237, Annual Report for 1963. Estimated (1986) Federal cost is \$455,000 exclusive of amounts expended on previous projects, and \$195,000 non-Federal which includes \$155,000 local contribution. (See Table 21-B for authorization legislation.)

The uncompleted portion of the project authorized by the 1962 River and Harbor Act, dredging of 25-foot wide strips adjacent to the north and south piers, was deauthorized Dec. 31, 1989, in accordance with Section 1001 of the WRDA of 1986 (PL 99-662).

**Local Cooperation.** Fully complied with.

**Terminal Facilities.** Three wharves used for miscellaneous foreign overseas commodities and autos, and also several fish wharves. While these facilities are considered generally adequate for existing commerce, more efficient use of existing terminals and utilization of available frontage for development of additional terminals should be made.

**Operations During Fiscal Year.** Maintenance: Condition surveys, and miscellaneous inspections and reports performed by Government forces cost \$20,970. Real estate activities cost \$9,364. Placement of stone and breakwater repairs were performed using the Cranebarge MANITOWOC at a cost of \$141,031.

## REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2005

Existing project is complete except for dredging 25-foot strips adjacent to the north and south piers which was deauthorized December 31, 1989. The north and south piers were completed in 1900 and the breakwater in 1909. Navigation structures range from fair to good condition; Detached North Breakwater needs repair. Total cost of the existing project to end of FY was \$14,778,364 (\$14,750,706 were regular funds and \$27,658 Emergency Relief Funds), of which \$988,969 was for new work, \$8,140,520 for maintenance, \$4,378,600 for diked disposal and \$1,270,275 for rehabilitation. The new work cost does not include \$3,000 contributed funds.

### 22. KEWAUNEE HARBOR, WI

**Location.** On west shore of Lake Michigan, about 105 miles north of Milwaukee, WI, and about 78 miles from Green Bay, via Sturgeon Bay Canal. Harbor is at mouth of Kewaunee River. (See NOAA Nautical Chart 14908.)

**Previous Projects.** See page 1375 of Annual Report for 1962.

**Existing Project.** See Chicago District 1979 Annual Report, Table 30-C, page 30-31.

Costs of completed project are \$603,021 Federal, and \$9,000 non-Federal, exclusive of amount expended on previous projects. Uncompleted portion (estimated \$200,000, July 1965) of 1935 River and Harbor Act is considered inactive, and excluded from present cost estimate. The portion authorized by the 1960 River and Harbor Act was deauthorized in 1977. (See Table 21-B for authorizing legislation.)

**Local Cooperation.** Fully complied with.

**Terminal Facilities.** Two car-ferry slips, a petroleum tank farm, a Corps of Engineers project office, and several fish wharves. Facilities are considered adequate for existing commerce.

**Operations During Fiscal Year.** Maintenance: Condition and structure surveys, environmental studies, and miscellaneous inspections and reports performed by Government forces cost \$86,634.

Active portion of existing project is complete. The north pier was completed in 1897 and the remaining portion is in generally good condition. Rehabilitation of the south pier was completed in June 1967. Construction of north breakwater and shore connection, except for a gap of 150 feet about 830 feet from shoreward end, and removal of outer 706.5

linear feet of north pier was commenced in September 1935 and completed in June 1937. Removed 500 linear feet of north pier in April/May 1963 and widened and deepened the adjacent channel in 1965. Outer end of the north pier was struck and severely damaged by car ferry vessel in October 1973 and a 24-foot section at outlet end was subsequently removed, thus reducing the structure to a length of 626 feet. Dredging entrance channel in interior basin to the existing project depth was commenced in April and completed in October 1938. Kewaunee River is navigable to about 6.5 miles above mouth for craft drawing not more than 4 feet. Navigation structures range from fair to good condition. Total cost of the existing project to end of FY was \$13,292,913, of which \$758,333 was for new work (\$338,333 regular and \$420,000 Emergency Relief Funds) \$8,955,819 for maintenance, \$2,961,461 for diked disposal and \$617,300 for rehabilitation.

### 23. KEWEENAW WATERWAY, MI

**Location.** In Lake Superior across Keweenaw Peninsula in upper peninsula of Michigan. The west entrance is 169 miles east of Duluth, MN. (See NOAA Nautical Chart 14972.)

**Existing Project.** A navigable channel, minimum width 300 feet, 25 miles long, partially natural and partially artificial, across Keweenaw Peninsula via Portage Lake. For details see page 1121 of Annual Report for 1963. (See Table 21-B for authorizing legislation.)

The uncompleted portion of the project for navigation at Keweenaw Waterway, Houghton County, MI, authorized by the River and Harbor Act of Aug. 30, 1935, PL 409, 73rd Congress, which consists of extending the lower entrance breakwater by 2,000 feet, including the necessary alteration or replacement of structures due to channel deepening, was deauthorized by the WRDA of 1986; PL 99-662, Nov. 17, 1986, 99th Congress, Title X.

**Local Cooperation.** None required.

**Terminal Facilities.** Six coal docks, a petroleum dock, and several general merchandise and miscellaneous wharves, all privately owned. Facilities are considered adequate for existing commerce. Also present is a government constructed recreational area with facilities to include a picnic area and small boat landing range.

DETROIT, MI, DISTRICT

TABLE 21-A

COST AND FINANCIAL STATEMENT

**Operations During Fiscal Year.** Maintenance: Condition and structure surveys, environmental studies, and miscellaneous inspections and reports performed by Government forces cost \$30,862. Breakwater repairs were performed using the U.S. Derrickbarge SCHWARTZ at a cost of \$303,847. Real estate activities cost \$9,359.

Active portion of the project is complete. Lower entry piers are in fair condition. It is anticipated repairs will be required within the next ten years. Upper entry breakwaters are in good condition, but require annual stone maintenance due to severity of the wave climate. Total cost of the existing project to end of FY was \$37,084,641, of which \$5,974,141 was for new work, \$29,587,000 for maintenance and \$1,523,500 for diked disposal.

**24. LAC LA BELLE HARBOR, MI**

**Location.** On the south shore of Lake Superior on the eastern shore of Keweenaw Peninsula, 41 miles northeasterly from Portage entry to Keweenaw Waterway. Lack La Belle, Bete Grise Bay, and Mendota Ship Canal combine to form the harbor. (See NOAA Nautical Chart 14964.)

**Existing Project.** Provides for construction of two parallel piers at the entrance having lengths of 584 and 682 feet for north and south piers, respectively; for an entrance channel between the piers 50 feet wide and 12 feet deep, about 820 feet long with a flared approach; and for an inner canal 50 feet wide and 10 feet deep, about 730 feet long. For additional details see page 1039, Annual Report for 1964. (See Table 21-B for authorizing legislation.)

**Local Cooperation.** Fully complied with.

**Terminal Facilities.** Several small, privately owned wharves are available in the harbor for use of small craft engaged in fishing and recreational activities. A State owned dock for small craft is located at the northwest corner of Lac La Belle Bay.

**Operations During Fiscal Year.** Maintenance: Miscellaneous report cost \$13.

The existing project was completed in 1960. Controlling depths are about 11 feet in the approach channel and 10 feet in the inner channel. Navigation structures range from fair to good condition. Total cost of the existing project to end of FY was \$1,132,657, of which \$269,270 was for new work

and \$863,387 for maintenance. The new work does not include \$38,190 contributed funds.

**25. LAKE ST. CLAIR, MI, CHANNELS MI**

**Location.** Lake St. Clair, a section of Great Lakes connecting channels, is an expansive shallow basin having a vessel track length of about 15 miles from mouth of St. Clair River to head of Detroit River. (See NOAA Nautical Chart 14850.)

**Previous Project.** For details see page 2882, Annual Report for 1896; pages 1957-58, Annual Report for 1915; and page 1539, Annual Report for 1938.

**Existing Project.** An improved channel through Lake St. Clair 800 feet wide, 27.5 feet deep, and about 14.5 miles long; extending from mouth of Southeast Bend cutoff channel at lower end of St. Clair River to head of Detroit River Channel. (See Table 21-B for authorizing legislation.)

**Local Cooperation.** None required.

**Terminal Facilities.** None.

**Operations During Fiscal Year.** Maintenance: Condition surveys, environmental studies, support of the water control center, and miscellaneous inspections and reports performed by Government forces and contract cost \$25,879. Real estate management activities for Gull Island, MI continued at a cost of \$11,009.

Total cost of the existing project to end of FY was \$22,180,691, of which \$7,675,357 was for new work (\$6,666,762 regular funds and \$1,008,595 Public Works Funds), \$9,385,534 for maintenance, and \$5,119,800 for diked disposal.

**26. LELAND HARBOR, MI**

**Location.** A light-draft harbor on eastern shore of Lake Michigan at mouth of Carp River, about 40 miles north of Frankfort, MI, and 40 miles southwest of Charlevoix, MI. (See NOAA Nautical Chart 14912.)

**Existing Project.** Provides for a harbor of refuge consisting of a breakwater about 1,200 feet long, a protected anchorage and maneuver area about 3 acres

## REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2005

in extent and 10 feet deep, a 12-foot deep flared approach channel decreasing in width to 90 feet, an existing south pier 440 feet long, a 35-foot long cellular extension to south pier, an entrance channel 6 feet deep and 40 feet wide extending to mouth of Carp River, and for elimination of existing north pier. (See Table 21-B for authorizing legislation.)

**Local Cooperation.** Fully complied with.

**Terminal Facilities.** Privately owned wharves on each side of river below the dam which is 400 feet above the river mouth. These wharves serve the local fishing interests and recreational craft. Public facilities are operated by the State and local agencies. All available dockage space is utilized.

**Operations During Fiscal Year.** Maintenance: A contract for maintenance dredging was awarded and completed this FY, removing 20,465 cubic yards of shoal material at a cost of \$106,976. Engineering, design, surveys, and supervision and administration cost \$10,412.

The existing project was completed in 1932 except for the 1962 authorization, which was completed in 1967. Navigation structures are in good condition. Total cost of the existing project to end of FY was \$5,602,873 of which \$1,027,089 was for new work (includes \$354,139 contributed funds), \$4,505,106 for maintenance and \$70,678 for rehabilitation.

### 27. LEXINGTON HARBOR, MI

**Location.** On southwest shore of Lake Huron, 20 miles north of Port Huron, MI. (See NOAA Nautical Chart 14862.)

**Existing Project.** Provides for two offshore breakwaters opening to the southeast and totaling about 2,400 feet long with provisions for recreational fishing on the main breakwater; an anchorage and maneuver area of about 5 acres, 8 feet deep; and a flared approach channel 10 feet deep, decreasing to 160 feet in width through the breakwaters. Project also provides for recreational fishing facilities. Estimated (1979) Federal cost of new work is \$1,647,306 excluding \$1,088,888 to be contributed by local interests. (See Table 21-B for authorizing legislation.)

**Local Cooperation.** Assurances of local cooperation were furnished by the Michigan

Department of Natural Resources to the Secretary of the Army. The cash contribution was \$1,088,888.

**Terminal Facilities.** An existing public fishing pier of open pile construction is not adequate for existing and prospective commerce. Complete boating facilities are planned by State and local agencies in connection with the harbor construction.

**Operations During Fiscal Year.** Maintenance: A contract for maintenance dredging was awarded and completed this FY, removing 7,565 cubic yards of shoal material at a cost of \$66,900.

The existing project was completed during FY 1977. Navigation structures are in fair condition. Total cost of the existing project to end of FY was \$6,579,043 of which \$3,107,192 (includes \$1,088,888 contributed funds) was for new work and \$3,471,851 for maintenance.

### 28. LITTLE LAKE HARBOR, MI

**Location.** On south shore of Lake Superior 21 miles west of Whitefish Point and 30 miles east of Grand Marais, MI. (See NOAA Nautical Chart 14962.)

**Existing Project.** Provides for a small-craft harbor of refuge by dredging an entrance channel 12 feet deep from Lake Superior into Little Lake, suitably protected by breakwaters and revetments. (See Table 21-B for authorizing legislation.)

**Local Cooperation.** Fully complied with.

**Terminal Facilities.** Only terminal facility at project consists of a public dock built by the State of Michigan for light-draft craft.

**Operations During Fiscal Year.** Maintenance: Condition surveys and miscellaneous inspections and reports performed by Government forces cost \$10,446.

This project is considered complete; however, because of shifting sand, the harbor entrance shoals rapidly with the result that full project depth is not usually available. Navigation structures are in good condition. Total cost of the existing project to end of FY was \$6,230,655, of which \$600,478 was for new work (includes \$57,670 contributed funds) and \$5,630,177 for maintenance.

DETROIT, MI, DISTRICT

TABLE 21-A

COST AND FINANCIAL STATEMENT

**29. LUDINGTON HARBOR, MI**

**Location.** On east shore of Lake Michigan, 156 miles northeasterly from Chicago, IL, and 67 miles northerly from Grand Haven, MI. (See NOAA Nautical Chart 14937.)

**Previous Project.** For details see page 1951 of Annual Report for 1915, page 1491 of Annual Report for 1938, and page 1307 of Annual Report for 1963.

**Existing Project.** Provides for an exterior basin in Lake Michigan protected by north and south breakwaters, north breakwater is 1,800 feet long and south breakwater 1,700 feet long, 550 feet apart at outer ends, diverging at an angle of 90 degrees, with shore connections, 1,103 and 2,004 feet long, respectively; for dredging exterior basin to 18 feet deep with a maximum width of 1,500 feet; for a channel with a depth of 29 feet from deep water in Lake Michigan decreasing to 27 feet at the west end of the north pier, over a maximum width of 600 feet; thence a channel with a depth of 27 feet, over a minimum width of 230 feet with necessary widening at Pere Marquette Lake; and for inner piers and revetments, 1,649 feet long on north and sufficiently long on the south for turn at Pere Marquette Lake. The estimated (1977) Federal cost for new work is \$8,250,000. Estimated total cost for local interests is \$147,000. (See Table 21-B for authorizing legislation.)

**Local Cooperation.** Fully complied with.

**Terminal Facilities.** In addition to main terminal of Chesapeake & Ohio Railway Company consisting of three car ferry slips, a wharf, and warehouses, there are several wharves which handle coal, limestone, and miscellaneous commodities. Facilities are adequate for existing commerce.

**Operations During Fiscal Year.** Maintenance: Condition surveys, and miscellaneous inspections and reports performed by Government forces cost \$138,080. Safety maintenance performed by hired labor cost \$5,239. Breakwater repairs were performed using the U.S. Cranebarge MANITOWOC at a cost of \$294,619. Supervision and administration and real estate activities cost \$42,778.

Existing project was completed in 1918. For additional details on completion of existing project see page 1469 of Annual Report for 1962. Structures are in good condition except for the south breakwater head that needs repair. Total cost of the existing

project to end of FY was \$31,767,365, of which \$8,532,202 was for new work, \$22,877,250 for maintenance, and \$357,913 for rehabilitation. The maintenance cost does not include \$136,286 contributed funds.

**30. MANISTEE HARBOR, MI**

**Location.** On east shore of Lake Michigan, 179 miles northeasterly from Chicago, IL, and 26 miles northerly from Ludington, MI. (See NOAA Nautical Chart 14938.)

**Previous Project.** For details see page 1952 of Annual Report for 1915, and page 1493 of Annual Report for 1938.

**Existing Project.** An entrance channel in Lake Michigan protected by a breakwater, piers, and revetment; a channel in Manistee River to Manistee Lake; and Federal participation in cost of replacing Maple Street Bridge. Project depths are 25 feet in entrance channel and 23 feet in river channel. For additional details see page 1470 of Annual Report for 1962. (See Table 21-B for authorizing legislation.)

**Local Cooperation.** Fully complied with.

**Terminal Facilities.** Installations are on both sides of river and on Manistee Lake. Commerce handled includes coal, sand, salt, and general cargo. In addition, there is a Government wharf and a State and City owned recreational craft pier which is open to the public. These facilities satisfy current commerce requirements.

**Operations During Fiscal Year.** Maintenance: Condition surveys, and miscellaneous inspections and reports performed by Government forces cost \$80,817. Breakwater inspections and maintenance performed by hired labor cost of \$273,326. Real estate activities cost \$37,588.

Existing project was completed in August 1967. For additional details on completion of existing project see page 1470 of Annual Report for 1962. Navigation structures range from generally fair to good condition. Total cost for existing project to end of FY was \$17,783,604, of which \$2,696,522 was for new work, \$13,712,918 for maintenance, and \$1,374,164 for rehabilitation.

### 31. MANITOWOC HARBOR, WI

**Location.** On west shore of Lake Michigan about 79 miles north of Milwaukee, WI, and about 106 miles from Green Bay Canal. (See NOAA Nautical Chart 14922.)

**Previous Projects.** See page 1379 of Annual Report for 1962.

**Existing Project.** The total estimated (Oct. 1981) project cost is \$3,080,000; the Federal cost is \$1,085,000 and non-Federal cost is \$1,995,000, which is a cash contribution. See Chicago District Annual Report for 1979, Table 30-C.

For detailed description see page 1228 of Annual Report for 1963. Estimated costs (1970) of new work for 1968 modification are \$81,000 Federal and \$30,000 non-Federal which includes a cash contribution of \$18,000. Work on the 1968 modification was postponed until 1982. The portion authorized by the 1962 River and Harbor Act was deauthorized Dec. 31, 1989, in accordance with Section 1001 of the WRDA of 1986 (PL 99-662). (See Table 21-B for authorizing legislation.)

Construction of a small boat harbor within the existing harbor was authorized by the Chief of Engineers, June 26, 1979, and 720-foot channel extension affirmed in July 1982, under authority of Section 107, 1960 River and Harbor Act, as amended.

**Local Cooperation.** Fully complied with for completed modifications. For 1968 modification local interests must make an annual cash contribution equivalent to 50% of the annual costs associated with construction and maintenance of the channel extension until such time that a second user utilizes the channel extension. Such a contribution is presently estimated at \$9,206; additional assurances require that the sponsor provide without cost to the United States all lands, easements, and rights-of-way required for construction and subsequent maintenance, including suitable areas determined by the Chief of Engineers to be required in the general public interest for initial and subsequent disposal of dredged materials, and the necessary retaining dikes, bulkheads and embankments therefor or the costs of such retaining works; hold and save the United States free from damages due to the construction works and subsequent use, operation, and maintenance of the project, not including damages due to the fault or

negligence of the United States or its contractors; provide and maintain without cost to the United States adequate berthing areas at the docks adjacent to the improvement; accomplish at no cost to the United States all relocations and alterations of utilities necessary for the project; assume full responsibility for all project first costs in excess of the Federal cost limitation of \$2,000,000; and comply with the Uniform Relocation Assistance and Real Property Acquisition Policies Act of 1970.

**Terminal Facilities.** Three car-ferry slips, a grain elevator, one shipbuilding yard, and three other wharves used for handling coal, building materials, cement, and miscellaneous commodities. While these facilities are considered adequate for existing commerce, it is believed the city should provide a suitable wharf with warehouse and railway connection open to the general public.

**Operations During fiscal year.** Maintenance: Condition and structure surveys, and miscellaneous inspections and reports performed by Government forces cost \$61,617. A contract was awarded this FY for maintenance dredging in the amount of \$321,900. Mobilization costs were \$54,000.

Existing project is complete except for the 1962 and 1968 modifications. The 1962 modification was deauthorized December 31, 1990. Work on the 1968 modification was essentially completed in FY 83. The Federal modification, adopted July 15, 1985, included the expansion of the new entrance channel to the Section 107 project and extension of the rubblemound breakwater. Dredging a channel through the outer basin to existing project depth and removal of a portion of old north stub pier at the river entrance were completed in December 1937. Dredging river channel was completed in July 1942. South Breakwater, Section E, is in fair condition and is programmed for repair. Total cost of the existing project to end of FY was \$17,350,008 of which \$3,960,044 was for new work (includes \$1,911,130 contributed funds), \$10,308,208 for maintenance (includes \$66,735 contributed funds), and \$3,081,756 for diked disposal.

### 32. MARQUETTE HARBOR, MI

**Location.** In Marquette Bay on south shore of Lake Superior, 160 miles west of Sault Ste. Marie, MI, and 265 miles east from Duluth, MN. (See NOAA Nautical Chart 14970.)

DETROIT, MI, DISTRICT

TABLE 21-A

COST AND FINANCIAL STATEMENT

**Existing Project.** Provides for a breakwater, and a harbor basin 26.5 feet deep, giving a protected area of 350 acres. Project was modified in 1960 to provide a 27-foot depth in harbor area. (See Table 21-B for authorizing legislation.)

**Local Cooperation.** None required for earlier authorizations. Fully complied with for the 1960 Act.

**Terminal Facilities.** One ore dock, unused at present; two coal docks; one petroleum dock; and three other unused docks. There are also several small fish wharves without railroad connections. Facilities are considered adequate for existing commerce.

**Operations During Fiscal Year.** Maintenance: Real estate activities cost \$10,141.

Navigation structures are in fair to good condition. Total cost of the existing project to end of FY was \$5,947,455, of which \$1,282,893 was for new work, \$4,198,805 for maintenance and \$465,757 for rehabilitation.

### 33. MENOMINEE HARBOR AND RIVER, MI AND WI

**Location.** On Lake Michigan at the mouth of Menominee River on the western shore of Green Bay, 16 miles northwest of the mouth of Sturgeon Bay, and 49 miles northeast of Green Bay Harbor, about 155 miles from Milwaukee via Sturgeon Bay Canal. The river forms the boundary between the commercial harbors at Marinette, WI, and Menominee, MI. (See NOAA Nautical Chart 14917.)

**Previous Projects.** See page 1361 of Annual Report for 1962.

**Existing Project.** See Chicago District Annual Report for 1979, Table 30-C, page 30-26.

For detailed description see page 1214, Annual Report for 1963. The portion authorized by 1960 River and Harbor Act is inactive and estimated (1964) at \$442,000 Federal, and \$105,000 non-Federal. Costs of completed new work, exclusive of inactive work and amount expended on previous projects, are \$221,053 Federal and \$40,762 non-Federal, which includes a cash contribution of

\$36,762. (See Table 21-B for authorizing legislation.)

**Local Cooperation.** Fully complied with for completed work.

**Terminal Facilities.** There are 9 wharves for handling coal, limestone, pulp and miscellaneous commodities. City of Marinette, WI, provided a public wharf. Facilities are considered fairly adequate for existing commerce, except that there is need for a public wharf owned by city of Menominee, with warehouse and railway connection.

**Operations During Fiscal Year.** Maintenance: Condition surveys, and miscellaneous inspections and reports performed by Government forces cost \$19,910. Concrete repairs were performed using the Cranebarge MANITOWOC at a cost of \$105,003.

The project in effect prior to the modification of March 2, 1945, was completed in 1938. No additional work was necessary under the modification of March 2, 1945, to provide a depth of 12 feet in the extension of the channel to the vicinity of the Marinette Yacht Club, as project depth or more was available. The entrance piers were completed in 1884, were rehabilitated (1954-1964) and are in excellent condition. Dredging of the channel below the Marinette municipal wharf, together with enlarging the turning basin to existing project depth, was commenced in May 1938. Modification of the project authorized by the 1960 River and Harbor Act is inactive. Construction for the 1967 modifications was started August 17, 1968, and completed in October 1968. Navigation structures are in good condition. Total cost of the existing project to end of FY was \$6,189,398, of which \$570,238 was for new work (includes \$36,762 contributed funds), \$3,673,648 for maintenance, \$593,660 for diked disposal and \$1,351,852 for rehabilitation.

### 34. MILWAUKEE HARBOR, WI

**Location.** On west shore of Lake Michigan about 85 miles north of Chicago, IL, and about 83 miles west of Grand Haven, MI. (See NOAA Nautical Chart 14924.)

**Previous Projects.** See page 1385 of Annual Report for 1962.

**Existing Project.** See Chicago District Annual Report for 1979, Table 30-C, page 30-26. For

## REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2005

detailed description see page 1232 of Annual Report for 1963.

Completed new work costs are \$6,934,804 Federal and \$478,000 non-Federal, exclusive of amount expended on previous projects. The uncompleted portion authorized by the 1935 River and Harbor Act was deauthorized Dec. 31, 1989, in accordance with Section 1001 of the WRDA of 1986 (PL 99-662). Uncompleted portion of 1945 River and Harbor Act was deauthorized in 1977. (See Table 21-B for authorizing legislation.)

**Local Cooperation.** Complied with for Acts of March 2, 1945, October 23, 1962, and July 14, 1960, except deauthorized portion of 1945 Act. Act of Aug. 30, 1935, provided that original dredging of outer harbor area be done by city of Milwaukee and city of Milwaukee be reimbursed at actual cost but not to exceed 10 cents per cubic yard, place measurement, for original dredging done subsequent to authorization of work by Congress. Agreement covering dredging was executed by Secretary of War, Feb. 23, 1934, after this work was originally authorized as part of public works program. City was reimbursed for 10 percent of dredging.

**Terminal Facilities.** There are 4 car-ferry slips, and 57 other wharves, private and municipal, used for handling coal, grain, building materials, cement, petroleum products, and miscellaneous commodities. As facilities in inner harbor were inadequate for existing commerce, Milwaukee Harbor Commission has constructed nine docks in the outer harbor for handling general cargo. Detail on actual port and harbor facilities is in Port Series No. 48 (revised 1994) prepared and published by the Water Resources Support Center.

**Operations During Fiscal Year.** Maintenance: Condition and structure surveys, environmental studies, confined disposal facility monitoring, and miscellaneous inspections and reports performed by Government forces and contract cost \$323,211. Placement of stone and repairs to the breakwater were performed using the Cranebarge MANITOWOC at a cost of \$511,165.

Existing project is complete except for inactive portions. The 1962 modification was completed in July 1967. North breakwater and shore connection, 9,954 feet long, was completed in August 1925. North pier was completed in 1905 and construction of south pier was completed in November 1910. Construction of south breakwater and shore connection was completed in October 1929. Before

modification of August 30, 1935, City of Milwaukee also dredged most of the area in the outer harbor south of inner entrance piers and lakeward of pierhead line to more than 21 feet below datum without cost to the United States. City of Milwaukee also dredged a portion of the area of the outer harbor north of inner entrance piers to provide an approach channel to the passenger and auto pier opposite East Claybourn Street. Work on the 1945 modification was completed in August 1957, except for the uncompleted portion, which consists of dredging the Milwaukee River from Buffalo Street to upper limit of the project at Humboldt Avenue. The uncompleted portion of the project authorized by the 1945 Rivers and Harbors Act was deauthorized in 1977. Navigation structures range from fair to excellent condition. Total cost of the existing project to end of FY was \$77,580,420, of which \$8,231,024 was for new work, \$50,252,911 for maintenance (includes \$322,471 contributed funds), \$6,380,925 for diked disposal and \$12,715,560 for rehabilitation.

### 35. MONROE HARBOR, MI

**Location.** On lower reach of River Raisin, which empties into Lake Erie and is 36 miles south of Detroit, MI. (See NOAA Nautical Chart 14830.)

**Existing Project.** Provides for a channel in Lake Erie and River Raisin to city of Monroe, for a turning basin, and for riprapping protecting dikes at river mouth. Project depths are 21 feet to turning basin, 18 feet in turning basin, and 9 feet to upstream end of project. For additional details see page 1490 of Annual Report for 1962. Project feature for riprapping protecting dikes is considered inactive. Estimated cost of this feature (1954) is \$90,000. (See Table 21-B for authorizing legislation.)

The WRDA of 1986 authorized modifications to deepen the River Raisin portion of the existing 200-foot navigation channel from 21 to 27 feet between existing turning basin and the river's mouth; deepen the lake channel from 21 to 28 feet, and widen the channel from 200 to 500 feet, for a distance of approximately 47,000 feet from the river's mouth to the Maumee Bay Entrance Channel; dredge a new turning basin 24 feet deep, with a diameter of at least 1,600 feet, at the river's mouth; and construct a 190 acre confined disposal area in Plum Creek Bay behind which would enable the creation of a 700 acre marsh. Estimated total cost (Oct. 88) is \$150,200,000; \$59,000,000 Federal and \$91,200,000 non-Federal, which includes a cash contribution of \$19,650,000.

## DETROIT, MI, DISTRICT

TABLE 21-A

### COST AND FINANCIAL STATEMENT

**Local Cooperation.** Fully complied with for completed portion of project. Local cooperation items for the newly authorized project in the WRDA of 1986 (PL 99-662), are as described in the Rivers and Harbors Committee Document 22, 71st Congress, 1st Session; R & H Comm. Doc. 12, 72d Congress, 1st Session, and 45, 75th Congress, 1st Session, and also includes, as a result of PL 99-662, construction cost sharing as follows:

a. Contribute in cash 25 percent of the total cost of construction of general navigation facilities, exclusive of aids to navigation, a contribution presently estimated at \$19,650,000. The estimated cash contribution of \$19,650,000 to be paid in lump sum prior to initiation of construction, or in annual installments during the construction period at a rate proportionate to the proposed or scheduled expenditure of Federal funds as required by the Chief of Engineers, or under another arrangement satisfactory to the Secretary of the Army, the final apportionment of cost to be made after actual costs have been determined;

b. Repay, with interest, over a period of up to 30 years following project completion, 10 percent of the total cost of construction of general navigation facilities, an amount presently estimated at \$7,860,000. The Secretary of the Army may count against all or part of the 10 percent repayment, the amount of the local contribution for lands, easements, rights-of-way, dredged/demolition material disposal sites and relocations. In no case are these costs to count against the cash payment during construction, and in no case would the amount waived exceed 10 percent of project cost; and

c. The confined dike area construction is a non-Federal responsibility and is estimated to cost \$70,156,000.

**Terminal Facilities.** Several privately owned docks and a municipal terminal. Port of Monroe Authority built a steel and concrete wharf on southeast side of turning basin for commercial use. Detail on actual port and harbor facilities is in Port Series No. 45 (revised 1996) prepared and published by the Water Resources Support Center. Facilities are considered adequate for existing commerce.

**Operations During Fiscal Year.** Maintenance: Condition surveys, and miscellaneous inspections and reports performed by Government forces cost \$120,190. Maintenance of the confined disposal facility performed by hired labor cost \$20,593.

Total cost of the existing project to end of FY was \$62,752,086, of which \$987,340 was for new work (includes \$300,000 contributed by the Port Commission of Monroe) \$23,075,164 for maintenance (includes \$166,667 contributed funds: \$125,000 by Consolidated Paper Company and \$41,667 by River Raisin Company) and \$38,689,582 for diked disposal (includes \$83,182 contributed funds).

### 36. MUSKEGON HARBOR, MI

**Location.** On east shore of Lake Michigan, 114 miles northeasterly from Chicago, IL, and 80 miles easterly from Milwaukee, WI. (See NOAA Nautical chart 19434.)

**Previous Project.** For details see page 1950 of Annual Report for 1915; page 1399, Annual Report for 1924; and page 1484, Annual Report for 1938.

**Existing Project.** A breakwater protected outer basin in Lake Michigan and an entrance channel from Lake Michigan to Muskegon Lake protected by piers and revetments. Project depths vary from 29 feet in the lakeward portion of the outer basin to 27 feet in the channel between the inner piers to Muskegon Lake. For additional details see page 1303 of Annual Report for 1963. (See Table 21-B for authorizing legislation.)

**Local Cooperation.** Fully complied with.

**Terminal Facilities.** Several privately owned wharves primarily for commercial use. Details on actual port and harbor facilities are in Port Series, No. 48 (revised 1981) prepared and published by the Water Resources Support Center. Facilities are considered adequate for existing commerce.

**Operations During Fiscal Year.** Maintenance: Miscellaneous inspections and reports performed by Government forces cost \$34,229. The maintenance dredging contract awarded last FY was completed at a cost of \$92,975 removing approximately 26,264 cubic yards of shoal material. Engineering, design, surveys and supervision and administration cost \$33,321.

Existing project, including latest project modification, was completed in 1965. For additional details on completion of existing project see page 1465 of Annual Report for 1962. Navigation structures are in good condition. Total cost of the existing project to end of FY was \$31,903,026, of

REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2005

which \$3,017,110 was for new work, \$15,061,616 for maintenance, and \$13,824,300 for rehabilitation.

**37. NEW BUFFALO HARBOR, MI**

**Location.** At mouth of Galien River on southeast shore of Lake Michigan in Berrien County, about 45 miles easterly from Chicago, IL. (See NOAA Nautical Chart 14905).

**Existing Projects.** Provides for an entrance channel 10 feet deep by 80 feet wide and 850 feet long, to mouth of Galien River; new north and south breakwaters 1,305 and 740 feet long, respectively, and deepening inner channel to Galien River to 8 feet and 80 feet wide and 1,250 feet long. (See Table 21-B for authorizing legislation).

**Local Cooperation.** Fully complied with.

**Terminal Facilities.** One village owned boat ramp and three privately operated marinas, and a private boat club facility.

**Operations During Fiscal Year.** Maintenance: A contract was awarded and completed this FY for maintenance dredging, removing 11,107 cubic yards of shoal material at a cost of \$103,306. Supervision and administration cost \$5,115.

Existing project is complete. The North and South Breakwaters are in fair condition. It is anticipated repairs will be required within the next five years. Total cost of the existing project to end of FY was \$8,358,721, of which \$2,472,183 was for new work (includes \$1,186,467 contributed funds), \$5,705,038 for maintenance, and \$181,500 for diked disposal.

**38. ONTONAGON HARBOR, MI**

**Location.** About 140 miles east of Duluth, MN, on south shore of Lake Superior, at mouth of Ontonagon River; provides the only refuge for small craft between the Keweenaw Waterway upper entrance and Black River Harbor. (See NOAA Nautical Chart 14965.)

**Previous Project.** For details see page 1931 of Annual Report for 1915, and page 1406 of Annual Report for 1938.

**Existing Project.** Provides for approach channel 16

feet deep, a channel between piers with 17- and 15-foot depths, an inner basin 12 feet deep, and maintenance of channels, basin, and entrance piers. Completed project cost \$19,619. See page 1100 of Annual Report for 1966 for details. A modification authorized by 1962 River and Harbor Act provides for increasing depths of channels, construction of an inner basin and a sedimentation basin. (See Table 21-B for authorized legislation.)

The turning basin feature of the project for navigation at Ontonagon Harbor, Ontonagon County, MI, authorized by the River and Harbor Act of 1962, was deauthorized by the WRDA of 1986; PL 99-662 (Section 1002) Nov. 17, 1986, 99th Congress, Title X. The channel modification project authorized by the 1962 River and Harbor Act was deauthorized Dec. 31, 1989, in accordance with Section 1001 of the WRDA of 1986 (PL 99-662).

**Local Cooperation.** None required.

**Terminal Facilities.** There are no publicly owned wharves. There are three coal wharves, an oil receiving facility, and a few small fish wharves. Facilities are considered adequate for existing commerce.

**Operations During Fiscal Year.** Maintenance: Condition and structure surveys, environmental studies, and miscellaneous inspections and reports performed by Government forces and contract cost \$34,469. Final option year two of the FY03 multi-year maintenance dredging contract was completed this FY removing approximately 36,757 cubic yards of shoal material at a cost of \$379,697. Engineering, design, surveys, real estate activities and supervision and administration cost \$61,673.

All work authorized under previous Acts was completed in 1938. Navigation structures range from fair to excellent condition. Several areas along the piers have had tie rod failures and repairs are underway. Total cost of the existing project to end of FY was \$28,799,193, of which \$953,903 was for new work, \$27,824,290 for maintenance and \$21,000 for diked disposal.

**39. PENTWATER HARBOR, MI**

**Location.** On east shore of Lake Michigan, 146 miles northeasterly from Chicago, IL, and 14 miles southerly from Ludington, MI. (See NOAA Nautical Chart 14907.)

DETROIT, MI, DISTRICT

TABLE 21-A

COST AND FINANCIAL STATEMENT

**Existing Project.** Provides for widening old entrance channel to 150 feet between parallel piers and revetments, channel to extend from Lake Michigan to Pentwater Lake, with a depth of 16 feet. Piers and revetments are built of stone filled timber cribs and piling and capped with concrete. The 200-foot extension to south pier portion of project is considered inactive. Estimated cost (1954) of this portion is \$65,100. (See Table 21-B for authorizing legislation.)

**Local Cooperation.** None required.

**Terminal Facilities.** Several small privately owned wharves on west end of Pentwater Lake. The City and Michigan Waterways Commission jointly constructed a dock on northwest side of Pentwater Lake for public use. Facilities are considered adequate for existing commerce.

**Operations During Fiscal Year.** Maintenance: A contract for maintenance dredging was awarded and completed this FY, removing 14,285 cubic yards of shoal material at a cost of \$81,568. Supervision and administration cost \$4,004.

Existing project was completed in 1959 except for a 200-foot extension to the south pier, which is not considered necessary under present conditions. For additional details see page 1468 of Annual Report for 1962. Navigation structures are in excellent condition. Total cost of the existing project to end of FY was \$15,650,524, of which \$179,899 was for new work, and \$15,470,625 for maintenance.

**40. POINT LOOKOUT, MI  
(AU GRES RIVER), MI**

**Location.** At Au Gres River on westerly shore of Lake Huron at entrance to Saginaw Bay, about 17 miles northeast of mouth of Saginaw River. (See NOAA Nautical Chart 14863.)

**Existing Project.** Provides for construction of a small boat harbor having a 12-foot deep, 100-foot wide, 2,800-foot long outer entrance channel; a 5,600-foot long, 100-foot wide inner entrance channel having a 10-foot depth; an 8,270-foot long, 6-foot deep river channel ending just downstream from U.S. 23 highway bridge and having a width of 60 feet; a 4,000-foot long north breakwater and a 3,800-foot long south breakwater. (See Table 21-B for authorizing legislation.)

**Local Cooperation.** Fully complied with.

**Terminal Facilities.** Small boat marina facilities are under construction by the State of Michigan.

**Operations During Fiscal Year.** Maintenance: Condition surveys, and miscellaneous inspections and reports performed by Government forces cost \$49,695.

Existing project was completed in 1974. Navigation structures are in good condition. Total cost of the existing project to end of FY was \$7,404,545 of which \$2,642,584 was for new work, \$4,640,361 for maintenance (includes \$9,257 contributed funds) and \$121,600 for diked disposal.

**41. PORT AUSTIN HARBOR, MI**

**Location.** On west shore of Lake Huron at extreme southeastern limit of Saginaw Bay, and 29 miles south of AuSable River (Oscoda). (See NOAA Nautical Chart 14863.)

**Existing Project.** A harbor of refuge at the mouth of Bird Creek, consisting of a harbor basin dredged to a depth of 10 feet protected by a breakwater structure, and for dredging an entrance channel to the harbor basin to a depth of 12 feet. (See Table 21-B for authorizing legislation.)

**Local Cooperation.** Fully complied with.

**Terminal Facilities.** A number of docks near mouth of Bird Creek and a State-owned dock inside breakwater. Facilities accommodate recreational craft and are considered adequate for existing traffic.

**Operations During Fiscal Year.** Maintenance: Miscellaneous report cost \$55.

Navigation structures are in good condition. Total cost for existing project to end of FY was \$5,811,081; of which \$3,363,334 was for new work (includes \$172,100 contributed funds), \$2,288,747 for maintenance and \$159,000 for diked disposal

**42. PORT SANILAC HARBOR, MI**

**Location.** On southwest shore of Lake Huron, 30 miles north of Port Huron, MI. (See NOAA Nautical Chart 14862.)

## REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2005

**Existing Project.** Provides for a harbor of refuge protected by breakwater structures extending to 12-foot depth contour in lake; for dredging a harbor basin 10 feet deep; for dredging an entrance channel 12 feet deep; a 70-foot extension of the south breakwater; a 300-foot arm added to the north breakwater; and riprap placed at the lakeward side of the breakwater addition. (See Table 21-B for authorizing legislation.)

**Local Cooperation.** Fully complied with.

**Terminal Facilities.** There is one privately owned dock used principally as a fishing terminal by owner and a municipally owned pier for recreational craft. Facilities are considered adequate for existing commerce.

**Operations During Fiscal Year.** Maintenance: Condition surveys performed by Government forces cost \$654.

The project was completed in 1951 except for latest modification that was completed in FY 76. The breakwaters are in good condition, with miscellaneous repairs programmed in the next 5 years. Total cost of the existing project to end of FY was \$5,925,873, of which \$1,733,071 was for new work (includes \$487,108 contributed funds), \$4,183,644 for maintenance (includes \$115,000 contributed funds) and \$9,158 for diked disposal.

### 43. PORT WING HARBOR, WI

**Location.** On south shore of Lake Superior, 34 miles easterly from Duluth, MN. (See NOAA Nautical Chart 14966.)

**Existing Project.** Provides for two parallel piers at entrance, 835 and 1,017 feet long, respectively, 200 feet apart; an entrance channel between piers 150 feet wide with 15-foot depth; an irregular-shaped turning basin 15 feet deep at inner end of piers from which two inner channels with 8-foot depth extend. One of these is 60 feet wide extending southerly for 340 feet and one 70 feet wide extending easterly 1,170 feet.

Portion of dredging entrance channel to complete project width and depth is considered unnecessary to meet present navigation requirements. (See Table 21-B for authorizing legislation.)

**Local Cooperation.** Fully complied with.

**Terminal Facilities.** There are four privately owned fishing wharves that are considered adequate for existing conditions.

**Operations During Fiscal Year.** Maintenance: A contract was awarded and completed this FY for maintenance dredging, removing 7,200 cubic yards of shoal material at a cost of \$109,040. Engineering, design, surveys, real estate activities and supervision and administration cost \$39,408.

Existing project is complete, except channel between piers, and has been dredged to only a 100-foot width. Widening the channel an additional 50 feet was considered unnecessary to meet present navigation requirements. That work was classified inactive and deauthorized on August 5, 1977, under Section 12 of Public Law 93-251. Land owned by the United States totals 7.80 acres. Navigation structures are in fair condition. Total cost of the existing project to end of FY was \$2,036,628, of which \$63,393 was for new work and \$1,973,235 for maintenance.

### 44. PORTAGE LAKE HARBOR, MI

**Location.** On east shore of Lake Michigan about 186 miles northeasterly from Chicago, IL, and about 37 miles northerly from Ludington, MI. (See NOAA Nautical Chart 14939.)

**Existing Project.** Provides for a harbor of refuge with an entrance channel from Lake Michigan to Portage Lake protected by piers and revetments. Project depth is 18 feet. For additional details see page 1297 of Annual Report for 1958. (See Table 21-B for authorizing legislation.)

**Local Cooperation.** None required.

**Terminal Facilities.** There are landing places and marinas at inner end of Portage Lake. Facilities are considered adequate for existing commerce.

**Operations During Fiscal Year.** Maintenance: Condition surveys performed by Government forces cost \$132.

Existing project was substantially completed in 1912. For additional details on completion of existing project see page 1298 of Annual Report for 1958. Navigation structures are in generally poor condition and major repairs are underway. Total cost of the existing project to end of FY was \$9,030,619

DETROIT, MI, DISTRICT

TABLE 21-A

COST AND FINANCIAL STATEMENT

of which \$256,129 was for new work and \$8,774,490 for maintenance.

**45. ROUGE RIVER, MI**

**Location.** Rises in Oakland and Washtenaw Counties, MI, 30 miles long, flows southeasterly through Wayne County, and joins Detroit River at westerly limit of city of Detroit. (See NOAA Nautical Chart 14854.)

**Previous Project.** For details see page 1530 of Annual Report for 1932, and page 1558 of Annual Report for 1938.

**Existing Project.** Provides for: (a) Main channel from Detroit River through Short Cut Canal extending to upstream limit of the project, a distance of 3.5 miles. Project depths are 25 and 21 feet in navigation channel, 21 feet in turning basin, and 13 feet in upper reach of project. (b) Old Channel from Detroit River extending to junction of Old Channel with Short Cut Canal. Project depths are 25, 18, 17, and 21 feet. For additional details see page 1324 of Annual Report for 1963. In 1973, work authorized by the 1962 River and Harbor Act was reclassified from the active to inactive category. Estimated cost (1972) of this work is \$880,000. Except for dredging 25-foot channel 1,150 feet upstream from mouth of Old Channel, work authorized in Act of Aug. 30, 1935, is considered inactive. Estimated cost (1958) of inactive portion is \$255,000. Work authorized by Act of July 3, 1958, is considered inactive. Estimated cost (1960) of this work is \$210,000. (See Table 21-B for authorizing legislation.)

**Local Cooperation.** Act of Oct. 23, 1962, requires local interests to provide lands and rights-of-way for construction upon request of the Chief of Engineers; hold the United States free from damages; provide terminal facilities to accommodate prospective commerce considered in report of District Engineer; dredge and maintain areas between the Federal improvement and terminal facilities to depths commensurate with improved Federal channel; make alterations in docks, bulkheads and other structures, and take such other measures as may be necessary to assure stability of banks adjacent to channel; and provide bridge protection. The assurances of local cooperation for the River and Harbor Act of 1962 were furnished by the Michigan State Waterways Commission and accepted on Jan. 7, 1965. Fulfillment of all items of local cooperation has not been accomplished.

**Terminal Facilities.** Numerous large commercial docks for handling various type cargo. Details on actual port and harbor facilities are contained in the Port Series No. 45 (revised 1984) prepared and published by the Water Resources Support Center. Facilities are considered adequate for existing commerce.

**Operations During Fiscal Year.** Maintenance: Condition surveys, environmental studies, confined disposal facility monitoring, and miscellaneous inspections and reports performed by Government forces and contract cost \$66,948. Real estate activities and engineering and design for future maintenance dredging was initiated this FY in the amount of \$225,398.

Work authorized before 1962 modification is complete or deauthorized. For additional details on completion of existing project see Annual Report for 1962. Total cost of the existing project to end of FY was \$40,527,641, of which \$675,251 was for new work (\$29,563 was expended from Emergency Relief Act Funds), \$24,945,072 for maintenance and \$14,907,318 for diked disposal.

**46. SAGINAW RIVER, MI**

**Location.** Formed by union of Tittabawassee and Shiawassee Rivers, 22 miles long, and flows northerly into extreme inner end of Saginaw Bay, Lake Huron. Cities of Saginaw and Bay City are on the river. (See NOAA Nautical Chart 14867.)

**Previous Project.** For details, see page 1957 of Annual Report for 1915; and page 1550 of Annual Report for 1938.

**Existing Project.** Provides for an entrance channel 27 feet deep and 350 feet wide from 27-foot contour in Saginaw Bay to river mouth; thence a channel 26 feet deep and 200 feet wide to New York Central Railroad Bridge at Bay City; thence 22 feet deep and 200 feet wide to C&O Railroad Bridge in Saginaw; thence 16.5 feet deep and 200 feet wide to upstream limit at Green Point. Project also provides for five turning basins; one 25 feet deep at Essexville, 600 feet wide with a maximum length of 1,850 feet; one 22 feet deep on east side of channel about 1 mile upstream from Cass Avenue in Bay City, 650 feet wide and 1,000 feet long; one 20 feet deep at Carrollton, 100 to 300 feet wide and 900 feet long; one 20 feet deep downstream from C&O Bridge in Saginaw, 650 feet wide and 1,000 feet long; and one 15 feet deep between Bristol Street Bridge and New

## REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2005

York Central Railroad Bridge in Saginaw. (See Table 21-B for authorizing legislation.)

**Local Cooperation.** Fully complied with.

**Terminal Facilities.** Numerous large commercial docks for handling a great variety of cargo. Details on actual port and harbor facilities are in Port Series No. 45 (revised 1996) prepared and published by the Water Resources Support Center. Facilities are considered adequate for existing commerce.

**Operations During Fiscal Year.** Maintenance: Condition surveys, environmental studies, confined disposal facility monitoring, support of water control center and miscellaneous inspections and reports performed by Government forces and contract cost \$616,125. Dredged material management plans study for the Upper Saginaw River continued at a cost of \$531,860. Maintenance of confined disposal facility performed by hired labor cost \$187,883. A contract was awarded for the construction of the confined disposal facility for placement of dredged disposal material for Upper Saginaw River using Construction General funds in the amount of \$1,561,602. Pre-award activities cost \$2,904. Supervision and administration for the FY04 maintenance dredging contract cost \$38,279. A contract was awarded this FY for maintenance dredging of the bay and river in the amount of \$526,560. Engineering, design, surveys, real estate, and supervision and administration cost \$204,181.

Existing project is complete except for small part of the work authorized by the Act of October 23, 1962. Section D (Sixth Street Turning Basin) of the 1962 Act is complete except for the channel portion, which is pending modification. Total cost of the existing project to end of FY was \$104,330,740, of which \$14,933,631 was for new work (includes \$13,600 for contributed funds), \$68,445,221 for maintenance, and \$20,951,888 for diked disposal.

### 47. ST. CLAIR RIVER, MI

**Location.** A 40 mile long section of Great Lakes connecting channels which flows southerly from Lake Huron and discharges into Lake St. Clair. (See NOAA Nautical Chart 14852.)

**Existing Project.** Provides for channels through St. Clair River, which, at low water datum, are suitable for vessels drawing 25.5 feet. Project also provides

for improvement of North Channel outlet, 100 feet wide and 10 feet deep, for recreational craft. Project depths are referred to low water datums for Lakes Huron and St. Clair; 577.5 and 572.3 feet above mean water level at Rimouski, Quebec, IGLD 1985. (See Tables 21-B

and 21-H for authorizing legislation and features of existing project.) Act of July 24, 1946, provides for widening and deepening of southeast bend and improvement of outlet of north channel at an estimated cost (1986) of \$870,000; \$435,000 Federal and \$435,000 non-Federal. On June 16, 1969, the Director of Civil Works approved substitution of the middle channel of the St. Clair River for the authorized north channel. Subsequently, however, the work authorized by the River and Harbor Act of July 24, 1946, was deauthorized by the WRDA of 1986; PL 99-662, Nov. 17, 1986, 99th Congress, Title X.

**Local Cooperation.** None required.

**Terminal Facilities.** This improvement serves through commerce, between the upper and lower Great Lakes, and has not materially influenced terminal facilities along its route. A number of privately owned piers and wharves are at Port Huron, Marysville, St. Clair, and Marine City, MI, which handle coal, limestone, petroleum products, wood-pulp, salt and general cargo. These installations satisfy present commerce requirements.

**Operations During Fiscal Year.** Maintenance: Condition surveys, environmental studies, support of water control center, and miscellaneous inspections and reports performed by Government forces and contract cost \$304,066. Breakwater inspections and maintenance performed by hired labor cost \$11,078. The contract awarded last FY for maintenance dredging was completed, removing 15,772 cubic yards of shoal material at a cost of \$257,736. Engineering, design, surveys, real estate, and supervision and administration cost \$111,354.

Existing project is complete. Total cost of the existing project to end of FY was \$52,810,091 of which \$19,213,246 was for new work and \$33,596,845 for maintenance

### 48. ST. JOSEPH HARBOR, MI

**Location.** On east shore of Lake Michigan, 60 miles easterly from Chicago, IL, and 24 miles southerly from South Haven, MI. (See NOAA Nautical Chart 14930.)

## DETROIT, MI, DISTRICT

TABLE 21-A

### COST AND FINANCIAL STATEMENT

**Previous Project.** For details see page 1945 of Annual Report for 1915, and page 1470 of Annual Report for 1938.

**Existing Project.** Provides for protecting mouth of St. Joseph River by two piers, 250 to 325 feet apart at their inner and outer ends, respectively, having lengths of 2,758 feet on north side and 2,603 feet on south side; for a channel 21 feet deep from Lake Michigan to mouth of Benton Harbor Canal, a length of about 6,900 feet with widths of 265 feet at outer end of piers, 190 feet at inner end of piers and revetments, thence generally 215 feet to lower end of turning basin, increasing to 250 feet above the turning basin to mouth of Paw Paw River, thence generally 110 feet in Paw Paw River to mouth of Benton Harbor Canal; for dredging channel in Benton Harbor Canal up to west line of Riverview Drive extended northerly, to 18 feet deep and 80 feet wide; and a turning basin 18 feet deep on north side of channel above mouth of Morrison Channel and a turning basin 18 feet deep near mouth of Paw Paw River. Public Law 88-88 declared a portion of Benton Harbor Canal a non-navigable stream. (See Table 21-B for authorizing legislation.)

**Local Cooperation.** Fully complied with.

**Terminal Facilities.** Several commercial wharves for handling coal, building materials, petroleum products, and miscellaneous commodities. A package freight terminal and a public docking facility is also available. Facilities considered adequate for existing commerce.

**Operations During Fiscal Year.** Maintenance: Condition and structure surveys, environmental studies, and miscellaneous inspections and reports performed by Government forces cost \$73,656. Option year two of the multi-year contract for maintenance dredging the outer channel was completed this FY, removing 48,089 cubic yards of material at a cost of \$329,450. Final option of FY02 multi-year contract was completed this FY, removing approximately 14,322 cubic yards of shoal material at a cost of \$287,800. Engineering, design, surveys, real estate, and supervision and administration cost \$45,600. Banks lawsuit cost \$98,853. Monitoring in connection with Section 111 of P.L. 90-483 cost \$91. Monitoring in connection with Section 111 of P.L. 90-483 cost \$91.

Existing project was completed in 1956. For additional details on completion of existing project see page 1454 of Annual Report for 1962. Navigation structures are in generally good condition. Total cost of the existing project to end of FY was

\$36,456,926, of which \$1,804,485 was for new work, \$33,052,149 for maintenance, \$638,076 for diked disposal and \$962,216 for rehabilitation.

## 49. SAUGATUCK HARBOR AND KALAMAZOO RIVER, MI

**Location.** Harbor is on east shore of Lake Michigan, 90 miles northeasterly from Chicago, IL, and 22 miles northerly from South Haven, MI. (See NOAA Nautical Chart 14906.)

**Previous Project.** For details see page 1947 of Annual Report for 1915, and page 1475 of Annual Report for 1938.

**Existing Project.** Entrance channel protected by parallel piers at mouth of Kalamazoo River and a river channel to village of Saugatuck, MI. Project depths: 16 feet in entrance channel, 14 feet in river channel. Additional details on page 1456 of 1962 Annual Report. (See Table 21-B for authorizing legislation.)

**Local Cooperation.** None required.

**Terminal Facilities.** At city of Saugatuck, MI, there are several landing places for recreational craft and one for small commercial vessels. At village of Douglas, MI, there is a landing pier. Facilities are considered adequate for present traffic.

**Operations During Fiscal Year.** Maintenance: Condition surveys performed by Government forces cost \$595.

Existing project was completed in 1903. Navigation structures are in excellent to poor condition and are programmed for major repair. Total cost of the existing project to end of FY was \$10,809,899 of which \$364,527 was for new work and \$10,445,372 for maintenance.

## 50. SHEBOYGAN HARBOR, WI

**Location.** On west shore of Lake Michigan about 26 miles south of Manitowoc and about 55 miles north of Milwaukee, WI. (See NOAA Nautical Chart 14922.)

**Previous Project.** See page 1381 of Annual Report for 1962.

## REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2005

**Existing Project.** See Chicago District Annual Report for 1979, Table 30-C, page 30-27.

For detailed description see page 1230 of Annual Report for 1963. New work for project as completed cost \$648,271, exclusive of amounts expended on previous projects. (See Table 21-B for authorizing legislation.)

**Local Cooperation.** Fully complied with.

**Terminal Facilities.** Three wharves for handling coal, petroleum products and miscellaneous commodities. City provided a public wharf. Facilities considered adequate for existing commerce.

**Operations During Fiscal Year.** Maintenance: Condition and structure surveys, and miscellaneous inspections and reports performed by Government forces cost \$225,529. Safety maintenance performed by hired labor cost \$174,963. Harbor and Breakwater repairs were performed using the Derrickbarge SCHWARTZ at a cost of \$946,726. Real estate activities cost \$11,000.

Existing project was completed in 1904. Construction of north breakwater was commenced in October 1913 and completed in October 1915. Dredging entrance channel to existing project depth was commenced in June and completed in July 1938. Work on 1954 modification was completed in December 1956. Inner 260 feet of south pier was replaced with a revetment by private interests under permit granted July 16, 1931, by the Secretary of War. Piers, therefore, are maintained only for a length of about 2,490 feet. Sheboygan River is navigable about 2.4 miles above its mouth for craft drawing not more than 2 feet. Navigation structures range from fair to good condition. It is anticipated repairs will be required in the next 5 to 7 years. Total cost of the existing project to end of FY was \$13,822,554, of which \$1,136,088 was for new work, \$11,169,646 for maintenance, \$907,792 for diked disposal and \$609,028 for rehabilitation.

### 51. SOUTH HAVEN HARBOR, MI

**Location.** On east shore of Lake Michigan, 77 miles northeasterly from Chicago, IL, and 24 miles northerly from St. Joseph, MI. (See NOAA Nautical Chart 14906.)

**Previous Project.** For details see page 1947 of Annual Report for 1915, and page 1473 of Annual Report for 1938.

**Existing Project.** An entrance channel protected by parallel piers and revetments at mouth of Black River, a river channel and a turning basin. Project depths are 21 feet in entrance channel and 19 feet in river channel and turning basin. For additional details see page 1455 of Annual Report for 1962. The turning basin feature was subsequently deauthorized by Section 116 of the WRDA of 1992 (PL 102-580). (See Table 21-B for authorizing legislation.)

**Local Cooperation.** Fully complied with.

**Terminal Facilities.** Several wharves for handling coal, building materials, wood-pulp, fish, and miscellaneous commodities; two have warehouses. Facilities satisfy current commerce requirements.

**Operations During Fiscal Year.** Maintenance: Miscellaneous report and monitoring in connection with Section 111 of P.L. 90-483 cost \$78.

Existing project was completed in 1960. Project now being maintained to 14-foot and 12-foot depths, respectively (in lieu of the 21 feet and 19 feet authorized), which is adequate for current usage. For additional details on completion of existing project see page 1456 of Annual Report for 1962. Navigation structures are in good to fair condition and are under repair. Total cost of the existing project to end of FY was \$13,632,206, of which \$984,426 was for new work, \$10,973,323 for maintenance, \$42,381 for diked disposal and \$1,632,076 for rehabilitation.

### 52. STURGEON BAY AND LAKE MICHIGAN SHIP CANAL, WI

**Location.** On west shore of Lake Michigan about 52 miles northeast of Green Bay and about 128 miles north of Milwaukee, WI. (See NOAA Nautical Chart 14919.)

**Previous Project.** See page 1373 of Annual Report for 1962.

**Existing Project.** See Chicago District Annual Report for 1979, Table 31-C, page 30-27. For detailed description, see page 1223, Annual Report for 1963. (See Table 21-B for authorizing legislation.)

**Local Cooperation.** Fully complied with.

DETROIT, MI, DISTRICT

TABLE 21-A

COST AND FINANCIAL STATEMENT

**Terminal Facilities.** As the canal and connecting channel is a through waterway, only terminal facilities are in city of Sturgeon Bay, 4 miles from west end of revetted portion of canal. These facilities consist of two wharves for handling coal, petroleum products and miscellaneous commodities, and four shipbuilding yards. City of Sturgeon Bay provided a public wharf about 5 miles northwesterly from city of Sturgeon Bay. Two major shipyards are located in Sturgeon Bay where repair facilities are available including dry docks, marine railways and hoists. Facilities are considered adequate for existing commerce.

**Operations During Fiscal Year.** Maintenance: Condition surveys, miscellaneous inspections and reports performed by Government forces and contract cost \$118,513. Placement of stone on the breakwaters were performed using the Cranebarge MANITOWOC at a cost of \$295,876. Repairs to the breakwaters were performed using the Derrickbarge SCHWARTZ at a cost of \$276,400.

Navigation structures are in good to fair condition, the South Revetment, Section N, is in poor condition and is programmed for major repair. Total cost of the existing project to end of FY was \$14,894,220 of which \$1,059,722 was for new work, \$12,638,480 for maintenance, \$311,119 for diked disposal and \$884,899 for rehabilitation. In addition, between April 25, 1893, and June 30, 1917, \$235,940 was expended for operating and care of works of improvements under provision of permanent indefinite appropriations for such purposes.

**53. TWO HARBORS, MN**

**Location.** Harbor is on north shore of Lake Superior, 27 miles northeasterly from Duluth, MN. (See NOAA Nautical Chart 14966.)

**Existing Project.** Narrowing natural entrance by construction of two breakwaters, 1,628 and 900 feet long, from eastern and western points of bay, respectively; and dredging a maneuvering area on north side of harbor to 28 and 30 feet deep. A walkway on east breakwater is provided for public recreational use. For details see page 1026 of Annual Report for 1965. Dredging to deepen areas along easterly and northerly edges of channel was completed in 1980. This portion of project was reclassified from the "inactive" to "active" category in 1973. (See Table 21-B for authorizing legislation.)

**Local Cooperation.** Fully complied with. A section 221 local cooperation agreement was entered into with the City of Two Harbors on August 14, 1978.

**Terminal facilities.** No publicly owned wharves. Three ore docks, tug wharf, an unused coal dock, and merchandise wharf are privately owned. Detail on actual port and harbor facilities is in Port Series No. 49 (revised 1999) prepared and published by the Water Resources Support Center. Facilities considered adequate for existing commerce.

**Operations During Fiscal Year.** Maintenance: Condition surveys and miscellaneous inspections and reports performed by Government forces cost \$7,496.

The existing project is complete. Navigation structures are in good condition. Total cost of the existing project to end of FY was \$9,577,462, of which \$4,170,710 was for new work and \$5,406,752 for maintenance.

**54. TWO RIVERS HARBOR, WI**

**Location.** On west shore of Lake Michigan about 82 miles north of Milwaukee and about 101 miles from Green Bay, WI, via Sturgeon Bay Canal. (See NOAA Nautical Chart 14903.)

**Previous Project.** See page 1377, Annual Report for 1962.

**Existing Project.** See Chicago District Annual Report for 1979, Table 30-C, page 30-28.

For detailed description see page 1226 of Annual Report for 1963. Completed project cost \$147,463, exclusive of the amount expended on previous projects. The 1935 River and Harbor Act portion of project is essentially complete, except for dredging a 10-foot width along each side of the entrance channel between the piers. The uncompleted portion of the project authorized by the 1935 R & H Act was deauthorized Dec. 31, 1989, in accordance with Section 1001 of the WRDA of 1986 (PL 99-662). (See Table 21-B for authorizing legislation.)

**Local Cooperation.** Fully complied with.

**Terminal Facilities.** A coal wharf and several fishing wharves. City provided a wharf for receipt of petroleum products and public use. Facilities considered adequate for existing commerce.

**Operations During Fiscal Year.** Maintenance: Condition surveys and miscellaneous inspections and reports performed by Government forces cost \$15,983. A contract was awarded this FY for maintenance dredging, removing approximately 44,000 cubic yards of shoal material at a cost of \$242,400. Engineering, design, surveys and supervision and administration cost \$44,274.

Existing project is complete except for portion deauthorized in December 1989. Present width of channel is considered adequate for present and reasonably prospective commerce. North Pier was completed in 1908. North Revetment, completed in 1917, was rebuilt in May to August 1962. Dredging entrance channel and inner basin to existing project depth was commenced in March and substantially completed in May 1937. Navigation structures range from fair to good condition and are under repair. Total cost of the existing project to end of FY was \$13,313,624, of which \$360,320 was for new work, \$11,707,775 for maintenance, \$1,187,472 for diked disposal and \$58,057 for minor rehabilitation

## 55. WHITE LAKE HARBOR, MI

**Location.** On the east shore of Lake Michigan 120 miles northeasterly from Chicago, IL, and 45 miles southerly from Ludington, MI. (See NOAA Nautical Chart 14935.)

**Existing Project.** Parallel piers, revetments, and a channel 16 feet deep, 200 feet wide, 1,950 feet long, extending from Lake Michigan to White Lake. For additional details see page 1465 of Annual Report for 1962. (See Table 21-B for authorizing legislation.)

**Local Cooperation.** None required.

**Terminal Facilities.** A privately owned chemical shipping dock on the north side of the lake about 3 miles from the inner end of revetted entrance channel. Across the lake, at village of Whitehall, there are several installations serving light draft vessels. These terminals satisfy present recreational and commercial traffic requirements.

**Operations During Fiscal Year.** Miscellaneous inspections and reports performed by Government forces cost \$560. Monitoring in connection with Section 111 of P.L. 90-483 cost of \$98.

Existing project was completed in 1908. Stone was placed on the north and south revetments in FY 1972. Project now being maintained to 14-foot depth

authorized, which is adequate for current usage. Navigation structures are in excellent condition. Total cost of the existing project to end of FY was \$12,847,704, of which \$457,562 was for new work and \$12,390,142 for maintenance.

## COST AND FINANCIAL STATEMENT

**63. PROJECT MODIFICATION FOR IMPROVING THE QUALITY OF THE ENVIRONMENT**

See Table 21-O.

**FLOOD CONTROL****64. FORT WAYNE METRO AREA, IN**

**Location.** Fort Wayne, which is located in northeastern Indiana in Allen County, is in the Maumee River drainage basin. In all, the Maumee basin covers an area of 6,586 square miles. Of this area, 4,856 square miles are in northwest Ohio, 1,260 are in northeast Indiana and 470 are in southeast Michigan. This basin is one of the largest and most important tributaries in the Great Lakes-St. Lawrence River system. There are four main tributary streams to the Maumee River: the Auglaize, Tiffin, St. Joseph and St. Marys Rivers. The St. Joseph and Tiffin Rivers originate in the hills of southern Michigan and flows southerly to the Maumee. The St. Marys and Auglaize originate in Ohio and flow northward. In the City of Fort Wayne, the St. Joseph and St. Marys Rivers join to form the headwaters of the Maumee River. From this point, the Maumee flows northeasterly and empties into Lake Erie at Toledo, Ohio. The central business district is located on the south side of the Maumee and the St. Marys Rivers. The St. Joseph River bisects primarily residential areas on the north side of the central business district. While some portions of the central business district are prone to flooding in the immediate vicinity of the St. Marys River, the majority of the business district is sufficiently elevated to avoid flood damages. The residential areas, however, are generally low lying and are prone to frequent flooding.

**Existing Project.** The Fort Wayne and Vicinity, Indiana, Flood Control Study was authorized by resolution of the Committee on Public Works, House of Representatives on October 12, 1972. The authorization requested that the Corps determine the advisability of providing improvements for flood control and allied purposes at and in the vicinity of Fort Wayne, Indiana. The study authorization resulted in completion of a Final Feasibility Report entitled "Fort Wayne and Vicinity, Indiana Flood Control Study," dated September 1987, and revised in April 1988, which identified and evaluated a number of different alternatives to flood control in the Fort

Wayne area. The Final Feasibility Report also contained the "Final Environmental Impact Statement" for this project. Preparation of the General Design Memorandum began in August 1989 and was approved in December 1993. Construction was authorized in Section 101 of the Water Resources Development Act of 1990 (Title 1 Public Law 101-640). This project was a Congressionally added new construction start in FY 1994. The Project Cooperative Agreement (PCA) was executed in August 1994 and construction was initiated in September 1995. The project will provide a 100-year level of flood protection to a large part of the central area of the City of Fort Wayne, Indiana that has experienced numerous flooding events in the past. The project is located along the north side of the St. Marys River, the east and west banks of the St. Joseph River, and the north bank of the Maumee River. Junk Ditch and Spy Run Creek which are tributary to the St. Marys River will also have protection installed or improved along their north and east banks respectively. The project area has been broken into four (4) segments that provide flood protection to various areas within the project limits. The West Segment is located along the St. Marys River and the Junk Ditch Tributary. The Central Segment is located along the Spy Run Tributary to the St. Marys River, a short section of the St. Marys River itself (at the confluence with the St. Joseph River), and along the west bank of the St. Joseph River. The East-North Segment is located along the east bank of the St. Joseph River and the East-South Segment is located along the north bank of the Maumee River. The total project length is approximately 54,000 feet. The project consists of several types of flood protection improvements. The most common type of flood protection improvements proposed are earth levees. The levees proposed are to have turf or rock protected slopes depending on the available space for their construction. Levees account for approximately 63 percent of the total project length. Concrete floodwalls are proposed in those areas where insufficient space exists to construct levees due to site constraints. Concrete flood walls account for 20 percent of the project length. An additional eight percent of the project length consists of a combination of a ½ Reduced levee and concrete L-Wall. The remaining length is composed of various types of road closures (stoplogs, clay dikes and high curbs), and 3,000 feet in several areas that do not require improvements due to adequate existing surface grades. The fully funded total project cost estimate is \$50,104,000. The Federal cost is \$37,222,000 and the non-Federal cost is \$12,882,000.

## REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2005

**Local Cooperation.** The non-Federal sponsors for the project are the City of Fort Wayne and Allen County. A Project Cooperation Agreement (PCA) was executed with the Mayor of Fort Wayne and the Allen County Board of Commissioners on 22 August 1994. Under the terms of the PCA, the non-federal sponsors shall contribute a minimum of 25 percent, but not to exceed 50 percent, of the total project costs attributed to flood control purposes. This shall consist of all required lands, easements, rights-of-way and relocations for the project; and a cash contribution equal to a minimum of five percent of the total project flood control cost. The Assistant Secretary of the Army (CW) has approved a credit in the amount of \$1,123,500 under Section 104 of the Water Resources Development Act of 1986. This will be applied to the non-Federal share of the project flood control cost. In addition to the above, the non-federal sponsor shall provide 50 percent of the total project recreation costs, 100 percent of all betterment costs, and shall operate and maintain all works after completion. Cash contributions totaling \$8,022,221 have been provided through the end of FY 04. Real estate requirements for the East-South Segment were completed on July 27, 1995, East-North Segment on July 19, 1996, Central Segment on November 11, 1997 and the West Segment on April 8, 1999.

**Operations During Fiscal Year.** No project expenditures were incurred in FY 05. However, the Project was financially closed out and \$12,834 were received as contributed funds to equalize and balance the project. Total cost to end of FY was \$45,281,758.

### 65. TRIBAL PARTNERSHIP PROGRAM

**Location.** This program serves federally recognized American Indian and Alaska Native tribal governments throughout the county. In the Detroit District, projects were located within Michigan and Wisconsin.

**Existing Project.** Section 203 of WRDA 2000 provides authority for the Tribal Partnership Program (TPP). Six tribes within the Detroit District boundaries applied for assistance under this authority in FY 2005. A reconnaissance-level study (up to \$93,000) was conducted for each project. These Section 203 studies addressed projects for flood damage reduction, environmental restoration and protection, preservation of cultural and natural resources and other such projects on tribal lands or

reservations, determined (by the ASA (CW)) to be appropriated.

The six projects located with the Detroit District include: 1) Nottawaseppi Huron Band of Potawatomi, Preservation of Cultural Resources, Pine Creek Reservation, Calhoun County, Michigan – identify, locate and access improvements to burial locations on reservation property; 2) Nottawaseppi Huron Band of Potawatomi, Erosion Control Study, Pine Creek Reservation, Calhoun County, Michigan – protect tribal cemetery from river erosion; 3) Oneida Tribe of Indians of Wisconsin – consisting of eight sites; two burial identification sites, five erosion reduction sites and one flood reduction site; 4) Rice Lake, Sokaogon Chippewa Community Mole Lake Band, Forest County, WI – restoration of wild rice within Rice Lake; 5) Stockbridge-Munsee Community Band of The Mohican Indians, Shawano County, WI – restoration of a segment of the Red River, and 6) Little River Band of Ottawa Indians, Manistee County, MI – restoration of Manistee Lake.

**Operations During Fiscal Year.** The Tribal Partnership Program was funded in FY 2005 and the cost was \$501,435 for the six reconnaissance-level studies.

### 66. SEBEWAING RIVER, MI

**Location.** Sebewaing River drains an area of 105 square miles in Huron and Tuscola Counties on the westerly side of Thumb area of Lower Peninsula of Michigan and discharges into Saginaw Bay, an arm of Lake Huron, 20 miles northeast from mouth of Saginaw River. Village of Sebewaing is near mouth of River. (See NOAA Nautical Chart 14863.)

**Existing Project.** Enlarging present channel of Sebewaing River through village of Sebewaing, MI, to a capacity of 7,500 cubic feet per second from junction of Columbia and State drains to a point 4,500 feet lakeward from railroad bridge near mouth; altering railroad bridge and three highway bridges to permit free passage of ice; and removal of present dike on south side of channel lakeward from railroad bridge. Project is designed to provide protection for village of Sebewaing from floods with a frequency of once in 15 years and with a magnitude greater than the maximum flood of record. (See Table 21-B for authorizing legislation.)

**Local Cooperation.** Complied with except for furnishing easements and rights-of-way for removal

**DETROIT, MI, DISTRICT**

**TABLE 21-A**

**COST AND FINANCIAL STATEMENT**

of remaining portion of dike on south side of channel lakeward from railroad bridge.

**Operations During Fiscal Year.** Maintenance: Miscellaneous inspections and reports performed by Government forces cost \$3,307. Total costs to the end of FY were \$853,638 of which \$365,642 was for new work and \$487,996 for maintenance.

**67. INSPECTION OF COMPLETED FLOOD CONTROL PROJECTS**

<u>NAME OF PROJECT</u>	<u>DATE OF INSPECTION</u>
Fort Wayne, IN.....	Oct 2004
Red Run, MI.....	May 2005

Paw Paw Lake & River, MI.....	June 2005
Frankenmuth, MI.....	Aug 2005

**Operations During Fiscal Year.** Maintenance: Miscellaneous inspections and reports performed by Government forces and contract cost \$106,556.

Total cost to the end of FY was \$4,147,111.

**68. OTHER AUTHORIZED FLOOD CONTROL PROJECTS**

See Table 21-E.

**69. FLOOD CONTROL WORK UNDER SPECIAL AUTHORIZATION**

**Emergency Flood Control Activities, Flood Fighting (Public Law 84-99 and PL 93-288 and Antecedent Legislation).**

<u>Project and Location</u>	<u>FY Cost for Sep 30, 2005</u>
Disaster Preparedness .....	\$352,837
Emergency Operations .....	\$70,466
Rehabilitation .....	\$606,570
Advance Measures.....	\$70,724

**Flood control activities pursuant to Section 205 of the 1948 Flood Control Act, as amended.**

See Table 21-P.

**Flood control activities pursuant to Section 208 of the 1954 Flood Control Act.** Snagging and clearing activities pursuant to Section 208 of the Flood Control Act of 1954, as amended. None.

**70. SURVEILLANCE OF NORTHERN BOUNDARY WATERS AND INTERNATIONAL WATER STUDIES**

**International Activities.** The Detroit District has successfully supported the International Joint Commission (IJC) for many years. This has included numerous engineering and scientific assignments supporting the Commission's boards of control, working committees, and study boards.

The Detroit District conducted the following activities, specifically for the IJC Boards and Committees:

**a. Semi-Annual Meetings.** Members of the Detroit District staff attended the semi-annual meetings of the three Great Lakes Boards of Control. They also attended the spring and fall appearances of the Boards before the IJC, in Washington, D.C. in April 2005, and the fall appearances, in Ottawa, Ontario in October 2005.

**b. International Lake Superior Board of Control.** The Detroit District Engineer is the United States Regulation Representative of this Board. In support of the U.S. Section of the Board, the District provided monthly Lake Superior outflow recommendations based upon a review of the hydrologic factors that influence the monthly regulation decisions for Lake Superior. These recommendations were based upon the use of probability forecasts of water supplies routed through the lakes using the approved operating regulation plan, Plan 1977-A. Plan 1977-A has been in operational use since June 1990. The District's program to evaluate the hydraulic rating of the Compensating Works in the St. Marys River was continued in 2004 with measurements ranging from ½ gate open to 7 gates open. During FY2005, flow measurements were conducted in the Edison Sault Electric Company, Great Lakes Power Limited, and the U.S. Government power canals at Sault Ste. Marie, MI as part of an ongoing program to verify the power plant rating.

The Board is required by the IJC to hold at least one public meeting each year to inform them of the

## REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2005

Board's activities and to solicit feedback regarding activities and current issues. As such, the District participated in the Board's FY2005 annual meeting held in June 2005. This meeting was held simultaneously at two locations: Sault Ste. Marie, Michigan; and Midland, Ontario. After similar presentations were made at each site, discussions were held between all sites via a conference call. The District also disseminates extensive Board information to the public, the media and user interests via news releases, letters and the Board's web page. Hydropower peaking and ponding causes flow and water level variations in the St. Marys River downstream of the power plants. With water levels and Lake Superior outflows below average, these fluctuations have become a concern to commercial navigation. The District provided significant technical support to the Board to evaluate this issue and make a recommendation on peaking and ponding operations in early 2002. The Board submitted a follow-up report on St. Marys River hydropower plant peaking and ponding operations to the IJC in January 2004. In May 2004, the IJC approved continuation of peaking and ponding until March 2006, subject to prior approval by the Board at the beginning and middle of each month. District staff provide ongoing technical support to the Board for these peaking and ponding recommendations.

In May 2005, the IJC revised its plan for an Upper Great Lakes Study. District staff contributed heavily to this Plan of Study revision. Its directive focused on reviewing IJC Orders of Approval for Lake Superior outflow regulation and water level impacts on affected interests in the upper Great Lakes system from Lake Superior downstream through Lake Erie. The revised plan assumes no changes to the Treaties and other bi-lateral agreements between Canada and the United States will be made. Two issues were added for consideration in the study. The first, looking at possible physical changes in the upper St. Clair River which could impact water level changes on the upstream (Michigan-Huron) and downstream lakes (St. Clair and Erie). The second issue involves incorporating lessons learned from the nearly complete lake Ontario – St. Lawrence River Study, which may help streamline the study. The final POS was submitted to the IJC in October 2005. Implementation of the POS will not be initiated until the Governments of the United States and Canada appropriate funds.

**c. International Niagara Board of Control, International Niagara Working Committee, and International Niagara Committee.** The District provides direct technical support and consulting

engineering services to this Board and its Committees. The Chief of the Great Lakes Hydraulics and Hydrology Office is a member of the Niagara Working Committee. Under the auspices of the Committee, the Detroit District, with Canada, computes, coordinates, and publishes the monthly flows in the Niagara River.

The Detroit District and the Water Survey of Canada routinely conduct discharge measurements in the lower Niagara River at the Cableway Section. This is part of a continuing effort to verify the Ashland Avenue stage-discharge equations. The Ashland Avenue equations are used to compute the flow out of the Maid-of-the-Mist Pool, which encompasses the total flow over the American and Canadian Falls, to ensure that the hydropower plants operate within the terms of the Niagara Treaty. Information is currently being evaluated to determine if the existing equations are adequate to represent the present hydraulic regime over the Niagara Falls. Discharge measurements at the Cableway Section, to verify the Ashland Avenue rating curve, are scheduled every three years. The last sets of measurements were made in 2004. An additional series of measurements is scheduled for Spring 2006, to assist in the process of investigating a revision to the current rating.

Discharge measurements are also made routinely in the Welland Canal. These are part of the continuing effort to verify the ratings for the Welland Canal supply weir. Data collected to date indicates that the present equations may be underestimating the flow. Revision of the ratings is being evaluated. The last sets of measurements were made in 2004 and the next measurements at this section are scheduled for 2007, in accordance with the three-year schedule.

Due to the dynamic nature of the Niagara River at the Niagara Falls, the District is also involved with periodic verification of the rating curves for the flow in the American Falls Channel and for the Niagara River flow out of Lake Erie. Discharge measurements are made in the American Falls Channel on a five-year schedule. Due to an alteration of the bridge used for measurements, alternate sites are being investigated for the next scheduled series. The last set of measurements were made in 2000, and the next is scheduled for 2005. Discharge measurements are made at the International Railway Bridge Section to verify the rating equations for the flow out of Lake Erie. The rating equation based on the Buffalo gage was recently revised based on measurements collected at this section since 1974. Measurements are made at the International Railway Bridge Section on a three-year schedule. The last set

## DETROIT, MI, DISTRICT

TABLE 21-A

### COST AND FINANCIAL STATEMENT

of measurements was made in 2003, and the next is scheduled for 2006.

**d. Great Lakes Basin Studies** The Detroit District participated in the International Lake Ontario - St. Lawrence River Study in 2005. The study was initiated in 2000 by the IJC to assess and evaluate the Commission's Order of Approval used to regulate outflows from Lake Ontario through the St. Lawrence River. The Study is evaluating the impacts of changing regulation and the resulting changes in water levels on environmental factors, shore erosion, flood damages, recreational boating, and tourism. The District provided technical support to the Coastal Technical Working Group and the Information Management Technical Working Group in 2005. The final report is being submitted to the IJC by the Study Board in early 2006.

In FY2002 efforts were begun to develop a prioritization of areas on the upper Great Lakes (Lakes Superior, Huron, St. Clair, and Erie) that are susceptible to potential losses due to erosion, flooding, and low water. The analysis also identified available data for the upper Great Lakes that could be used in future studies. The importance of sensitive environmental issues, anthropogenic effects, and recreation and tourism were also prioritized on a county-by-county basis across the upper Great Lakes. This effort was completed in FY2003. Future investigations on other areas of the upper great Lakes will benefit from the results of this effort.

**Coordinating Committee on Great Lakes Basic Hydraulic and Hydrologic Data.** The Chief of the Great Lakes Hydraulics and Hydrology Office is the U.S. Secretary to this Committee. Other Office personnel also hold membership on the three subcommittees: the Vertical Control-Water Levels, Hydraulics, and Hydrology.

The District continued its support of Committee operations pertaining to the coordination of basic hydraulic and hydrologic data with Canada. District efforts have also continued to closely coordinate the formats of the U.S. and Canadian water level bulletins in order to avoid confusion and to better inform the public.

Efforts continued in 2005 on refinement of a coordinated Great Lakes regulation and routing model (CGLRRM). The Corps uses this model to evaluate levels and flows in the Great Lakes system from Lake Superior to Lake Ontario. A user-friendly graphical user interface (GUI) is also being finalized. This GUI will allow the user to change input

parameters easily to evaluate the effects of different scenarios on water levels. The CGLRRM has been developed under the guidance of the Coordinating Committee with support from Environment Canada, Buffalo District, and the Hydrologic Engineering Center (HEC).

During FY2005, the District continued development and/or supported development of 2-dimensional hydrodynamic models of all the Great Lakes connecting channels. These models can be used to analyze effects of dredging, channel encroachments, and any other changes to river cross-sections. These models will also serve as valuable tools in answering the many "what if" questions that are asked about the rivers.

**Field Operations.** In addition to field operations conducted in support of the IJC, and as a continuing and ongoing mission, the Detroit District conducts hydraulic flow measurements throughout the Great Lakes Connecting Channels and St. Lawrence River system. This capability is unique among the Corps Districts (and other federal agencies) on the Great Lakes. During FY2005, the Detroit District continued gathering hydraulic data using the ADCP (Acoustic Doppler Current Profiler) instrumentation at several sections on the lower St. Marys River, the upper and lower Detroit River, the St. Clair River, and the Niagara River. These hydraulic data sets are currently being used to develop two-dimensional flow models of the river systems, and to help refine the flow retardation estimates for weed conditions through the growing season.

As an ongoing mission, during the winter months the District monitors the extent of ice in the St. Marys, St. Clair, and Detroit Rivers. Water levels are monitored continuously at key water level gages in these rivers to detect possible ice jams and potential flooding. The Corps and other governmental agencies, including the National Weather Service and the Coast Guard, can use this information to provide advance warning to area residents and to trigger emergency actions. Currently, data are obtained through phone access of these gages or from a satellite data relay to the District's water management data system and remote laptop personal computers. These systems provide water level information to the District office within minutes of data collection.

**Water Management Data System.** In FY2005, the Detroit District continued to provide an extensive variety of water management products for the entire Great Lakes system, based on the water level gage network, on its Internet web pages. Weather

information and meteorological data are also received and processed within the District and available on the Internet. The Detroit District has 21 active data collection platforms (DCPs). In FY2005, the Detroit District continued implementation of the Corps of Engineers Water Management Software (CWMS) suite with its initial prototype development being placed on modernizing the Lake Winnebago watershed outflow management.

**Great Lakes Hydrology.** The Great Lakes Hydraulics and Hydrology Office uses water supply forecasts routinely in forecasting water levels on all the Great Lakes and regulating the outflows from Lake Superior. Studies to improve the existing Great Lakes water level forecasting system, including investigations into the factors affecting the Great Lakes water balance relationship (i.e., runoff, over-lake precipitation, evaporation, ice retardation, etc.) and use of real-time hydrologic data such as the new National Weather Service Doppler radar networks were continued during FY 2005.

**Great Lakes Water Levels.** The Great Lakes Hydraulics and Hydrology Office continued to make routine short-term (30 day) and long-term (six month) Great Lakes still water level forecasts. These forecasts are distributed in the form of weekly, semi-monthly and monthly news releases and bulletins. The Monthly Bulletin of Lake Levels for the Great Lakes, containing a six-month projection of Great Lakes water levels, has a circulation of about 5,000 copies per month by mail and 1,000 by email. Included with the monthly bulletin on a quarterly basis is an informational enclosure entitled Great Lakes Update, which covers various topics of interest pertaining to the water resource management of the Great Lakes.

Water levels on the Great Lakes started FY 2005 closer to average on Lakes Superior and Michigan-Huron, while rising above average on Lakes St. Clair, Erie and Ontario. A very dry summer caused all the lakes to drop below average later in FY 2005, finishing the year lower than they started. Media and public attention has been about average. Office personnel provided essential expertise regarding water level forecasts, recorded lake levels, and the potential impacts of these water levels on interested parties. These parties include members of Congress, state and local officials, news media, navigation and power interests, property owners, and recreational boaters. Water level information is supplied to the public via the District's web pages, telephonic and written responses to inquiries, presentations to

various interest groups, and interviews with the news media.

The total cost for FY 2005 under the Surveillance of Northern Boundary Waters was \$2,811,002.

## MULTIPLE-PURPOSE PROJECTS INCLUDING POWER

### 71. ST. MARYS RIVER, MI

**Location.** A Great Lakes connecting channel about 63 miles long, flows southeasterly between State of Michigan and Providence of Ontario, Canada, from eastern end of Lake Superior into northern end of Lake Huron. (See NOAA Nautical Charts 14882, 14883, and 14884.) At Sault Ste. Marie, MI, about 14 miles downstream from Lake Superior, there are four parallel locks and a hydroelectric power plant.

**Previous Project.** For details see page 1955, Annual Report for 1915; and page 1529, Annual Report for 1938.

**Existing Project.** Channels permitting 25.5-foot draft navigation in St. Marys River and Lake Superior and Lake Huron approaches thereto; constructing and operating four locks and two canals; constructing an electric plant of 14,000 kilowatt capacity (45,000 kilowatt ultimate capacity) constructing anchorage areas in river above and below locks; and constructing various other works in conjunction with project. Subsequently, in 1932, the Unit 10 powerhouse was installed raising the capacity to 18,400 kilowatts (45,000 ultimate capacity). Original State Locks were operated and maintained under permanent indefinite appropriation from Jun. 9, 1881, to Nov. 2, 1886, after which they were destroyed by excavation for the Poe Lock in 1896. Weitzel Lock, destroyed in 1942 by excavation for the MacArthur Lock, was operated and maintained under the same appropriation from Sep. 1, 1881, to Jun. 30, 1935. Poe Lock was operated and maintained under the same appropriation from Aug. 3, 1896, Davis Lock from Oct. 21, 1914, and Sabin Lock from Sep. 18, 1919, to end of FY 1935. The 1,200-foot by 110-foot new Poe Lock was authorized in 1962 and put into operation in 1968. Details of existing project are set forth in Table 21-F.

Project depths are referred to low water datum corresponding to sloping surface of river as follows: Above locks: When water surface of Lake Superior is at elevation 601.1 feet and at upstream side of

DETROIT, MI, DISTRICT

TABLE 21-A

COST AND FINANCIAL STATEMENT

locks is 600.6 feet above mean water level at Rimouski, Quebec, IGLD 1985. Below locks: When water surface at downstream side of locks is at elevation 578.4 feet and Lake Huron is 577.5 feet above mean water level at Rimouski, Quebec, IGLD 1985. Estimated (1974) cost for new work is \$163,087,000. (See Table 21-B for authorizing legislation.)

The WRDA of 1986 authorized construction of a second lock 1,294 feet in length, 115 feet in width, and 32 feet in depth, adjacent to the existing lock. The replacement lock is to be located in the North Canal of the St. Marys Falls Canal at Sault Ste. Marie, MI, on the site of the existing Davis and Sabin Locks. Material removed during construction of the replacement lock will be placed on the Northwest Pier to serve as a windbreak for downbound vessels approaching the lock. Estimated cost (Oct. 90) is \$174,200,000 Federal and \$93,800,000 non-Federal.

**Local Cooperation.** Fully complied with for completed portion of project. Local cooperation items for the newly authorized project in the WRDA of 1986 (PL 99-662), are as follows:

(a) Provide without cost to the United States all lands, easements, and rights-of-way necessary for implementation and later maintenance of the proposed project, and for aids to navigation upon the request of the Chief of Engineers, including suitable areas determined by the Chief of Engineers to be required in the general public interest for initial and later disposal of dredged/demolition material and including necessary retaining dikes, bulkheads, and embankments therefor, or the costs of such retaining works;

(b) Hold and save the United States free from damages due to the implementation and maintenance of the project, not including damages due to the fault or negligence of the United States or its contractors;

(c) Accomplish without cost to the United States such alterations and relocations of pipelines, powerlines, cables, sewer, water supply, drainage, and other utilities, structures, and improvements made necessary by the project. (Any such costs of the items on Federal property at the locks, would be part of the total construction cost and not separable local sponsor cost.);

(d) Contribute in cash 25 percent of the total cost of construction of general navigation facilities, exclusive of aids to navigation, a contribution presently estimated at \$67,000,000. The estimated

cash contribution of \$67,000,000 to be paid in lump sum prior to initiation of construction, or in annual installments during the construction period at a rate proportionate to the proposed or scheduled expenditure of Federal funds as required by the Chief of Engineers, or under another arrangement satisfactory to the Secretary of the Army, the final apportionment of cost to be made after actual costs have been determined;

(e) Repay, with interest, over a period of up to 30 years following project completion, 10 percent of the total cost of construction of general navigation facilities, an amount presently estimated at \$26,800,000. The Secretary of the Army may count against all or part of the 10 percent repayment, the amount of the local contribution for lands, easements, rights-of-way, dredged/demolition material disposal sites and relocations. In no case are these costs to count against the cash payment during construction, and in no case would the amount waived exceed 10 percent of project cost; and

(f) Any construction needed to prevent/mitigate for erosion or shoaling attributed to the lock would be cost shared in the same proportion as the project.

**Terminal Facilities.** This improvement serves through commerce between Lake Superior and lower lakes and has not materially influenced terminal facilities at localities along its route. Three piers at Sault Ste. Marie receive coal and petroleum products. Limestone is shipped from a pier at Drummond Island. Vessel refueling stations are at Lime Island and village of DeTour; they receive coal and petroleum products. Present terminals satisfy current traffic requirements.

**Operations During Fiscal Year.** New Work: Construction of a replacement lock. The St. Marys River project includes four navigation locks: MacArthur, Poe, Davis and Sabin. Currently, the MacArthur and Poe service loaded commercial vessel traffic. The Davis Lock is rarely used and the Sabin Lock is in disrepair and has been closed for several years. The new lock will replace the Davis and Sabin Locks in the North Canal of the St. Marys Falls Canal. As a minimum, the new lock would have the same dimensions as the 1200-foot by 110-foot Poe Lock. FY05 funds in the amount of \$1,942,964 were expended on the continued coordination of the Limited Reevaluation Report (LRR) with HQUSACE and the ASA (CW). Additional work was initiated on the design documentation reports (DNR) for the guide walls, channel excavation and lock. The 30% DDR for the lock was completed and substantial

**REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2005**

efforts were made on the 30% DDR for the guide wall and channel excavation. Also, a Value Engineering study of the project was initiated.

Operations, maintenance, and care of locks: Two canals and three locks were operated (the fourth lock, Sabin, was in caretaker status) as required. Necessary repairs and improvements were made thereto and to appurtenant structures and equipment. Canals were open to navigation 303 days during the period 1 October 2004 through 30 September 2005. A total of 7,781 vessels, aggregating 82,203,950 short tons of freight and 93,522 passengers passed through the MacArthur, Davis and Poe Locks. Total cost for operation, maintenance, and care of the locks during the FY was \$8,635,483.

Powerhouse and equipment: A total of 170,612,735 kilowatt-hours of power was generated this FY. Income from the sale of power, sent to the U.S. Treasury, amounted to \$1,323,036. Total cost of operation and maintenance for two hydroelectric powerhouses during the FY was \$1,480,298.

Other operation and care items: Buildings and grounds were operated and maintained, condition surveys, operations studies, environmental activities, real estate, and miscellaneous inspections and reports cost \$1,990,073. A contract was awarded for custodial, snow removal and grounds upkeep for \$418,376 and a service contract for security measures for \$1,009,833. A contract was also awarded for the Soo lock complex critical infrastructure security program for \$1,393,903. Supervision and administration cost \$261,468.

Channels and canals: St. Marys River channels and canal approach depths were surveyed by sweeping. Location and removal of obstructions were performed by hired labor using the U.S. Derrickbarge NICOLET and the U.S. Cranebarges HARVEY and VELER at a cost of \$2,235,202. The contract awarded in FY 03 to replace the canal feeders continued at a cost of \$61,000. Supervision and administration cost \$6,000.

Other miscellaneous items: The FY02 contract for repair of the West Center Piers was completed this FY at a cost of \$736,825. Engineering and design during construction cost \$19,820. Supervision and administration cost \$91,435.

Recreational facilities: Information center, visitors center, comfort stations, park fountain, and observation and overlook platforms were operated and maintained at a cost of \$123,306. Visitors

entering the Soo Locks Visitors Center numbered 328,205. Visitors to the observation platforms overlooking the locks numbered 338,567. Total visitors to the Soo Locks Park numbered 454,567. A grand total of 548,089 people (includes tour boat visitors of 93,522) visited the Soo Locks.

Total project costs in FY05 amounted to \$16,735,795.

Project in effect prior to modification of March 21, 1956, is complete and work authorized by 1956 modification to provide a safe draft of 25.5 feet for both upbound and downbound traffic is also complete. Public Works Acceleration Funds used for maintenance were \$118,000. Total cost of the existing project to end of FY was \$666,045,062, of which \$168,548,024 was for new work and \$497,497,038 for maintenance (includes \$340,400 contributed funds).

	Jul. 13, 1892	New Channel, with Piers and Revetments.	No Prior Survey or Estimate. <sup>31</sup>
	Mar. 2, 1907	Present project depth of Channel.	
64.		<b>FORT WAYNE METRO AREA, IN</b>	
	Oct. 30, 1990	Provides 100-year level of flood protection to part of Central area of city of Fort Wayne, IN.	Public Law 101-640 (Section 101 of WRDA of 1990)
66.		<b>SEBEWAING RIVER, MI</b>	
	Aug. 18, 1941	Enlarging present Channel of Sebewaing River, altering Railroad and Highway Bridges, removal of Dike.	H. Doc. 286, 76th Cong. 1st Sess. <sup>1</sup>
71.		<b>ST. MARYS RIVER, MI</b>	
	Jul. 11, 1870	Weitzel Lock (Replaced in 1943 by MacArthur Lock), widen and deepen existing State Channel. <sup>26</sup>	Report by Maj. O.M. Poe, Corps of Engineers, not published.
	Aug. 5, 1886	Poe Lock. <sup>1</sup>	H. Ex. Doc. 72, 49th Cong., 2d Sess.
	Jul. 13, 1892	Dredging through shoals above falls and shoals below falls between lower end of Canal and upper entrance Channel into Lake Nicolet (formerly Hay Lake).	H. Ex. Doc. 207, 51st Cong., 2d Sess., and Annual Report, 1891, p. 2810.
	Jun. 13, 1902	Enlarging the Old Channel.	H. Doc. 138, 56th Cong., 2d Sess., and 215, 58th Cong., 3rd Sess.
	Jun. 13, 1902	Lake Nicolet and Neebish Channels work in that section of River below Locks.	H. Doc. 128, 56th Cong., 2d Sess.
	Mar. 2, 1905		H. Doc. 215, 56th Cong., 3rd Sess.
	Mar. 3, 1907	Davis Lock Second Canal, and Emergency Dam.	H. Doc. 333, 59th Cong., 2d Sess. (Plan 3).
	Mar. 3, 1909	Lease of Waterpower at Falls, Lease entered into with Michigan Northern Power Company provided for construction of remedial and compensating works.	
	Jul. 25, 1912	Fourth Lock (Renamed 'Sabin' Lock in 1943).	H. Doc. 65, 62d Cong., 1st Sess.
	Mar. 4, 1915	Deepen Tailrace of Power Plant.	
	Sep. 22, 1922	Widen upper approach to Canals through Vidal Shoals, extend anchorage and maneuver area below locks.	District Engineer Report, Oct. 29, 1920.
	Jan. 21, 1927	Remove Round Island, middle ground extension of	H. Doc. 270, 69th Cong., 1st Sess.

**DETROIT, MI, DISTRICT**

**TABLE 21-B**

**AUTHORIZING LESISLATION**

<b>See Sec .</b>	<b>Date of Authorizing Act</b>	<b>Project and Work Authorized</b>	<b>Documents</b>
		Northwest Canal Pier, and widen Channels Middle Neebish Route.	
	Jul. 3, 1930 Jun. 26, 1934 <sup>9</sup>	Deepen Channels throughout downbound Route. Operation and Care of Canal and Locks provided from War Department Appropriations for Rivers and Harbors.	H. Doc. 253, 70th Cong., 1st Sess.
	Aug. 30, 1935	Widen Brush Point Turn and Channel from Brush Point to Point Louise.	Rivers and Harbors Committee Doc. 53, 74th Cong., 1st Sess.
	Mar. 7, 1942	Construct new (MacArthur) Lock on site of former Weitzel Lock, deepen approach Channels to 27 feet, and reconstruct approach Piers.	H. Doc. 218, 77th Cong., 1st Sess.
	Jun. 15, 1943	Name 'MacArthur' Lock and changed name of 'Fourth' Lock to 'Sabin' Lock.	
	Mar. 2, 1945	Remove Bridge Island and construct new Hydroelectric Power Plant.	H. Doc. 679, 78th Cong., 2d Sess., and 339, 77th Cong., 1st Sess.
	Jul. 24, 1946	Replace Poe Lock at St. Marys Falls Canal with a new structure 800 feet long, 100 feet wide and 32 feet deep with necessary construction of Nose and Center Piers, and widen and deepen Channel across Point Iroquois Shoals and in Lake Nicolet to provide wider anchorage and maneuver areas in St. Marys River.	H. Doc. 335, 80th Cong., 1st Sess.
	Mar. 21, 1956	Deepen to provide a Project Safe Draft of 25.5 feet over full width to downbound and 2-way Channels (including anchorage areas) and over Westerly 300-foot width of upbound Middle Neebish Channel, when levels of Lakes Superior and Huron are at their respective LWD's.	S. Doc. 71, 84th Cong., 1st Sess. <sup>1</sup>
	Jul. 9, 1956	Repeal Authorization of Bridge as a part of Project, authorize alteration with cost to be apportioned by Sec. 6, Truman Hobbs Act, Jun. 21, 1940.	None.
	Nov. 17, 1986	Construct a second large lock 1,294 feet in length, 115 feet in width, and 32 feet in depth, adjacent to the existing lock. The replacement lock is to be located in the North Canal of the St. Marys Falls Canal at Sault Ste. Marie, MI, on the site of the existing Davis and Sabin Locks.	H. R. 6 (formerly S. 1567), 99th Cong., 2d Sess. (WRDA of 1986).

**REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2005**

- <sup>1</sup>Contains latest published map.
- <sup>2</sup>Including Emergency Relief Administration Work authorized May 28, 1935.
- <sup>3</sup>Included in Public Works Administration Program September 6, 1933.
- <sup>4</sup>This modification deauthorized August 5, 1977, under Section 12, Public Law 93-251.
- <sup>5</sup>Administrative Act, Section 4.
- <sup>6</sup>Public Law 568, 82d Congress.
- <sup>7</sup>Public Law 388, 87th Congress.
- <sup>8</sup>This portion inactive.
- <sup>9</sup>Permanent Appropriations Repeal Act.
- <sup>10</sup>Transfer completed June 1962.
- <sup>11</sup>Amended 1868, 1879, 1892.
- <sup>12</sup>Completed under previous project.
- <sup>13</sup>Included in Public Works Administration Program January 3, 1934.
- <sup>14</sup>Inactive portion; removal of 200 linear feet of north pier, widening inner 200 feet of channel through outer basin, and closing gap in north shore connection of breakwater.
- <sup>15</sup>Latest published map is in Annual Report, 1914, p. 2974.
- <sup>16</sup>Latest published map in Annual Report, 1914, p. 2914.
- <sup>17</sup>Superseded by Act of October 23, 1962.
- <sup>18</sup>Uncompleted portion was deauthorized in 1977 (dredging Milwaukee River from Buffalo Street Bridge to North Humboldt Avenue Bridge).
- <sup>19</sup>Modified by Act of June 10, 1872.
- <sup>20</sup>Riprapping of protecting dikes portion of project is inactive.
- <sup>21</sup>War Department Appropriations Act.
- <sup>22</sup>Uncompleted portion deauthorized December 31, 1989, under Section 1001, P.L. 99-662.
- <sup>23</sup>Contains latest published maps. See also map with Rivers and Harbors Committee Doc. 19, 72d Cong., 1st Sess.
- <sup>24</sup>Except for dredging 25-foot channel to 1,150 feet upstream of mouth of old channel, work authorized in this Act is considered inactive.
- <sup>25</sup>This modification deauthorized August 5, 1977, under Section 12, Public Law 93-251.
- <sup>26</sup>Completed under previous projects. Public Law 130, 75th Cong., 1st Sess.
- <sup>27</sup>Work recommended in H. Doc. 588, 64th Cong., 1st Sess.
- <sup>28</sup>Deauthorized in 1977.
- <sup>29</sup>This modification deauthorized December 31, 1989, under Section 1001, P.L. 99-662.
- <sup>30</sup>Latest published map is in H. Doc. 588, 64th Cong., 1st Sess.
- <sup>31</sup>Latest published map is in H. Doc. 2053, 64th Cong., 2d Sess.

<sup>1</sup>Includes Detroit and St. Clair Rivers.

**TABLE 21-H** **FEATURES OF EXISTING PROJECT**

Name of Channel	Length of Channel (Feet)	Miles from River Mouth	Upbound or Downbound Vessels	Project Width (Feet)	Project Depth (Feet)	Project Datum Planes IGLD 1985 (Feet)	Year Complete
<b>DETROIT RIVER, MI (SEE SECTION 10 OF TEXT)</b>							
Channel north of Belle Isle <sup>1</sup>	---	30	Both	200	21.0	571.9	1964
Channel at head of Detroit River	38,800	32	Both	800	28.5	572.1-571.5	1964
Misc. shoals and obstructions Belle Isle to Fighting Island Channel	44,500	25	Both	---	28.5	571.5-570.9	1964
Fighting Island Channel	24,800	17	Both	800	28.5	570.4	1962
Ballards Reef Channel north of Junction with Livingstone Channel	12,200	12	Both	600	28.5	570.4	1964
Livingstone Channel Upper	26,000	10	Down	450	27.7	570.4-569.2	1964
Livingstone Channel Lower:							
CS 260+00 to 368+87	10,887	5	Down	450-800	29.0	569.2	1961
CS 368+87 to 492+00	12,313	---	Both	800-1,200	29.0	569.2	1961
East Outer Channel	42,000	---	Both	1,200	28.5	569.2	1964
Misc. shoals and obstructions, Detroit River to Pelee Passage	---	---	Both	---	28.5-29.5 <sup>3</sup>	569.2	1964
Pelee Passage Shoal	---	---	Both	---	29.5	569.2	---
Amherstberg Channel:							
Upper Section, Ballards Reef Channel	6,500	10	Up	600	27.5	570.4-570.1	1960
Middle Section	12,000	---	Up	600	21-27.5 <sup>4</sup>	570.1-569.5	1960
Lower Section, Hackett Range	24,000	---	Up	600	21-28.5 <sup>5</sup>	569.5-569.2	1960
West Outer Channel	21,000	---	Down	800	22.0	569.2	1929
Trenton Channel:							
Wyandotte Reach	31,500	17	Local	300	27.0		1964 <sup>6</sup>
Trenton Channel (Upper)	5,100	---	Local	300	28.0	570.3-570.2	1964
Trenton Reach (Lower)	600	---	Local	250-300	28.0	570.2-569.4	1941
Grosse Ile Shoal	600	14	Local	---	20.0	570.4	1904
<b>ST. CLAIR RIVER, MI (SEE SECTION 47 OF TEXT)</b>							
Channel at foot of Lake Huron	26,500	44	Both	800	30.0	577.5-577.1	1961
Channel north of Blue Water Bridge	4,100	39	Both	800	30.0	577.1-576.5	1962
Port Huron to Stag Island:							
Widening at Upper and Lower Ends of Stag Island	38,000	38	Both	1,000-	27.4	577.1-575.3	1961
St. Clair to Russell Island	37,600	31	Both	1,400	27.3	575.3-574.3	1962
Russell Island to Southeast Bend	77,000	24	Both	900-1,000	27.3	574.3-572.6	1962
Southeast Bend:							
CS 324+00 to 250+00	20,600	11	Both	1,000	27.2	572.6-572.3	1962
Cutoff Channel	7,400	5	Both	700-1,000	27.1	572.3-572.2	1962
North Channel Outlet	30,300	---	Both	700	27.1	572.2	1962
	8,000	---	Small Craft	700	10.0	572.2	---

<sup>1</sup>This is a side channel.  
<sup>2</sup>Extends from deep water near Windmill Point to a point opposite Fairview Slip, about 3,000 feet.  
<sup>3</sup>Project depth 29.5 feet over Rock Shoals and 28.5 feet over other than Rock Shoals.  
<sup>4</sup>Project depth 21 feet in easterly 300-foot width of channel and 27.5 feet in westerly 300-foot width.  
<sup>5</sup>Project depth 21 feet in easterly 300-foot width of channel and 28.5 feet in westerly 300-foot width.  
<sup>6</sup>Project complete except for work authorized by Rivers and Harbors Act of 1950.

**Navigation****1. BURNS WATERWAY HARBOR, IN**

**Location.** Northwestern Indiana on the southern shore of Lake Michigan in Porter County, 28 miles southeast of Chicago Harbor. (See NOAA Nautical Chart Numbers 14905 and 14926.)

**Previous Projects.** None.

**Existing Project.** Provides for (a) a rubblemound north breakwater 4,630 feet long and a rubblemound breakwater west arm 1,200 feet long, for a total breakwater length of 5,830 feet; (b) an approach channel 30 feet deep and 400 feet wide; (c) an outer harbor 28 feet deep; (d) an east harbor arm 27 feet deep and 620 feet wide; and (e) a west harbor arm 27 feet deep and 620 feet wide. The project was authorized by the River and Harbor Act of October 27, 1965 (Public Law 89-298; House Document Number 160, 88th Congress, 1st Session). The authorizing act also provided the Secretary of the Army with the authority to reimburse the State of Indiana for expenditure of funds used to construct such portions of the project as approved by the Chief of Engineers and constructed under the supervision of the Chief of Engineers (See tables 22-B,C).

**Local Cooperation.** Fully complied with.

**Terminal Facilities.** Eleven berths are available at the facilities owned and administered by the Indiana Port Commission. One berth, committed to grain, is located on the outer harbor. Four berths on the East Harbor Arm are dedicated to handling dry and liquid bulk commodities. The East Harbor Arm also includes a small-boat harbor designed to accommodate working tugs for vessel assistance and barge movement. On the West Arm there are six berths. Although one berth is available for dry bulk cargoes, these berths are primarily used for the shipment and receipt of general cargo. Additionally, the Indiana Port Commission, through a lease, administers the west side of the West Harbor Arm for barge fleetings. The remaining available harbor berthing on the east side of the East Harbor Arm is privately owned.

**Operations and Results During Period.** A study of the effectiveness of the underwater reef was performed at a cost of \$48,806 for hired labor, \$135,450 by other Corps of Engineers, and \$27,000 for contracted engineering services. Breakwater maintenance costs were \$443,219 for hired labor,

\$729,534 by other Corps of Engineers, \$1,327,624 by construction contract, \$788,095 for the purchase of armor stone, and \$46,823 for other contracted services. Channel maintenance costs were \$105,969 for hired labor and \$325 for work by other Corps of Engineers. Project operation costs were \$106,671 for hired labor, \$25,074 for work by other Corps of Engineers, and \$2,575 for other contracted services.

**Condition at End of Fiscal Year.** The existing project is complete. Total costs to September 30, 2005 were \$43,594,885 of which \$13,599,900 was for new work (\$13,584,000 federal and \$15,900 non-federal) and \$29,994,985 (\$29,886,623 federal and \$108,362 non-federal) for was maintenance.

**2. BURNS WATERWAY SBH, IN**

**Location.** Northwestern Indiana on the southeast shore of Lake Michigan in Porter County, at the mouth of the Burns Waterway, approximately 27 miles southeast of Chicago Harbor. (See NOAA Nautical Chart Numbers 14905 and 14926.)

**Previous Projects.** None

**Existing Project.** Provides for (a) a rubblemound west breakwater 1,043 feet long; (b) a rubblemound north breakwater 678 feet long; and (c) channel improvements of 5,200 linear feet with 145,000 cubic yards of dredged material used for beach nourishment (See table 22-C).

**Local Cooperation.** Fully complied with.

**Terminal Facilities.** There are several marinas located along Burns Waterway and Burns Ditch. The principal marina, which is owned and operated jointly by the City of Portage and the Little Calumet River Basin Commission, was built in 1996 to comply with the local cooperation agreement. The commodities handled at this harbor are fresh fish caught as a result of charter boat fishing.

**Operations and Results During Period.** Breakwater maintenance was performed at a cost of \$405 for hired labor.

**Condition at End of Fiscal Year.** Total costs of the existing project to September 30, 2005 were \$7,833,596 of which \$3,770,558 was for new work (\$2,000,000 federal and \$1,770,558 non-federal), and \$4,063,038 for maintenance (federal).

**3. BURNS WATERWAY HARBOR (MAJOR REHAB), IN**

**Location.** The project is located in northwestern Indiana on the southern shore of Lake Michigan in Porter County.

**Existing Project.** The rehabilitation project consists of constructing a segmented reef breakwater system, 75 feet lakeward of the northern section of the existing rubblemound breakwater. The project provides for seven reef segments, one 1,575 feet long and six 375 feet long with 25 feet spacing between segments

**Local Cooperation.** None required.

**Operations and Results During the Period.** New Work: Following construction completion in 1998, project closeout was completed in 1999.

**Condition at the End of Fiscal Year.** The construction contract was financially completed. The total cost of the existing project to September 30, 2005 was \$13,384,200.

#### 4. CALUMET HARBOR AND RIVER, IL and IN

**Location.** Northeastern Illinois, on the southwest shore of Lake Michigan in Cook County, 15 miles south of Chicago Harbor, within the corporate limits of the City of Chicago, except for breakwaters, and approach channel and an anchorage area which are in Indiana. (See NOAA Nautical Chart Numbers 14926 and 14929.)

**Previous Projects.** For details see page 1400 of Annual Report for 1962.

**Existing Project.** Provides for (a) a stone-filled timber crib breakwater 6,714 feet long; (b) a stone-filled double-row steel sheet pile detached breakwater 5,007 feet long; (c) an approach channel 29 feet deep and 3,200 feet wide; (d) an outer harbor anchorage area 28 feet deep and 3,000 feet wide; (e) an entrance channel 27 feet deep and 230 to 290 feet wide; (f) a channel in the Calumet River 27 feet deep and at least 200 feet wide to the north side of 130th Street; (g) three turning basins designated as numbers, 1, 3, and 5; and (h) a channel extending into Lake Calumet at a width of about 1,000 feet. The project was authorized by the River and Harbor Acts of March 3, 1899, June 13, 1902, August 30, 1935, July 14, 1960, October 23, 1962, and October 27, 1965 (See tables 22-B,C).

**Local Cooperation.** Fully complied with.

**Terminal Facilities.** Thirty six docks, wharves, and terminals are available. The Illinois International Port District owns four wharves, two grain elevators, one dock, and one terminal. The United States Government owns one stone dock. The most important cargoes handled are general cargo, grain, iron ore and concentrates, coal, and cement. Some docks are vacant and some docks are dedicated to handling barge traffic from the Illinois Waterway Project.

#### Operations and Results During Period.

Routine operations were conducted at costs of \$61,784 for hired labor. The Dredged Material Management Plan was continued at a cost of \$171,233 for hired labor and \$33,501 for contracted engineering services. Monitoring of Combined Disposal Facility was conducted at a cost of \$107,763 for hired labor. Work on the Stone Dock continued at cost of \$33,554 for hired labor and \$-28,560 for work performed by other Corps of Engineers. Channel maintenance was conducted at costs of \$104,276 for hired labor, \$17,618 for work performed by other Corps of Engineers, \$-859 for work performed by other federal agencies, \$317,472 for the close-out of contracted dredging activities, and \$21,383 for contracted engineering services. Routine breakwater maintenance was conducted at costs of \$148,878 for hired labor, \$524,172 for work performed by other Corps of Engineers, and \$-7,418 contracted construction services. Operational facility maintenance was conducted at a cost of \$34,401 for hired labor, \$16,721 for work by other Corps of Engineers, \$35,062 for work by other federal agencies, and \$48,180 for contracted construction services.

**Condition at End of Fiscal Year.** The existing project is complete. Total costs of the existing project to September 30, 2005 were \$82,031,706 of which \$22,578,567 was for new work (\$19,541,964 federal funds and \$3,036,603 public works funds), \$54,025,138 for maintenance (\$53,188,471 federal and \$836,667 non-federal funds) and \$5,428,001 federal funds for rehabilitation.

#### 5. CHICAGO HARBOR, IL

**Location.** Northeastern Illinois on the southwest shore of Lake Michigan in Cook County, within the corporate limits of the City of Chicago. (See NOAA Nautical Chart Numbers 14926, 14927, and 14928.)

**Previous Projects.** See page 1396 of Annual Report for 1962.

**Existing Project.** Provides for (a) a stone-filled timber crib shore and extension breakwater 2,250 feet long; (b) a stone-filled timber crib exterior breakwater 5,421 feet long; (c) a rubblemound and stone-filled concrete caisson southerly extension to the exterior breakwater 4,944 feet long, exclusive of a 582-foot entrance gap enclosing an outer basin of about 970 acres; (d) a stone-filled timber crib north pier 960 feet long; (e) a stone-filled timber crib north inner breakwater 4,034 feet long with a 304-foot shore return and a 754-foot gap; (f) a stone-filled timber crib south inner breakwater 2,544 feet long, enclosing an inner basin of approximately 224 acres; (g) a lake approach channel 29 feet deep and 800 feet wide; (h) a channel and maneuver area inside the exterior breakwater and southerly extension breakwater 28 feet deep with a maximum width of 1,300 feet; (i) an entrance channel 21 feet deep and (j) the Chicago Harbor Lock. The Chicago Lock was constructed in 1938 by the Metropolitan Water Reclamation District of Greater Chicago. The deep-draft lock is 600 feet long, 80 feet wide, and 23 feet deep over the sill and is of steel cellular design.

The project was authorized by the River and Harbor Acts of July 11, 1870, June 14, 1880, March 3, 1899, July 25, 1912, March 2, 1919 and October 23, 1962 (See table 22-B).

Lock operation and maintenance responsibilities, in the interest of navigation, were transferred to the Federal Government pursuant to Public Law 98-63 approved July 30, 1983; Section 107 of the Public 97-88; and the Memorandum of Agreement between the Department of Army and the Metropolitan Water Reclamation District of Greater Chicago.

**Local Cooperation.** Fully complied with.

**Terminal Facilities.** There are five docks with 18 berths for passenger excursion boats and 10 berths for visiting large vessels. The most important cargoes handled through the lock are petroleum products, in addition to sugar and non-metallic minerals.

**Operations and Results During Period.** The Chicago Harbor Lock was operated by contract at a cost of \$925,588. Bulkhead storage lease was \$24,375. Breakwater maintenance costs were \$2,093 for hired labor and \$-1,715 for work by other Corps of Engineers. The Lock Control House design was completed by AE contract at a cost of \$150,806 and

\$-5,578 for design review work by other Corps of Engineers. A \$500,000 continuing contract was awarded to begin construction of the new control house. In-house hired labor costs required to operate and maintain the project during the period were as follows: \$305,710 for Lock Contract S&A; \$65,405 for Lock Maintenance, \$536,530 for Control House Design review; \$3,514 for Breakwater Major Rehabilitation Report; and \$18,566 for Lock Property Maintenance. Miscellaneous equipment and services required for the support of the lock were procured at a cost of \$16,925.

**Condition at End of Fiscal Year.** The existing project is complete. Total costs to September 30, 2005 were \$68,153,996 of which \$4,788,827 was for new work, \$61,868,569 was for maintenance, \$1,326,600 for rehabilitation and \$160,000 Harbor and Dams funds. The approved Major Rehabilitation of the Lock (Gates, Control House and Concrete Repair) has not been completed.

## 6. CHICAGO RIVER, IL

**Location.** Northeastern Illinois, in Cook County within the corporate limits of the City of Chicago. (See NOAA Nautical Chart Numbers 14926, 14927 and 14928.)

**Previous Projects.** See page 1394 of Annual Report for 1962.

**Existing Project.** Provides for (a) a channel 21 feet deep in the main river from its mouth at Rush Street to the junction of the North and South Branches (0.7 miles); (b) a channel 21 feet deep in the North Branch from the junction to North Avenue (2.22 miles); (c) a channel 21 feet deep on the North Branch Canal (1.04 miles); (d) a 21-foot deep North Branch Turning Basin just south of North Avenue; and (e) a channel 9 feet deep in the North Branch from North Avenue to Addison Street (authorized but not constructed). The project was authorized by the River and Harbor Acts of March 3, 1899, June 13, 1902, March 2, 1907, and July 24, 1946 (See tables 22-B, C). The portion of the project authorized by the River and Harbor Act of 1946 is presently being restudied to confirm economic feasibility.

**Local Cooperation.** Fully complied with for completed modifications. The River and Harbor Act of July 24, 1946, which provided for the improvement of the channel, is subject to the condition that local interests furnish assurances that they will hold the United States government free from

damages that may result from construction and maintenance of the improvement. Requirement has not been complied with.

**Terminal Facilities.** Six docks are available. The most important cargoes handled are sand, gravel and crushed rock, non-metallic minerals and scrap iron.

**Operations and Results During Period.** Water control activities were performed by hired labor at a cost of \$121,878, by other Corps of Engineers at a cost \$20,815 and by other federal agencies at a cost of \$166,830.

**Condition at End of Fiscal Year.** The project is complete except for dredging the channel between North Avenue and Addison Street as authorized by the 1946 River Harbor Act. Channel maintenance for the reach from Clark Street to head of navigation has been deferred pending location and approval of suitable dredged material disposal site. Head of navigation for deep-draft vessels is North Avenue, 5.97 miles from the Michigan Avenue bridge. Total costs of the existing project to September 30, 2005 were \$19,586,624 of which \$1,500,565 was for new work and \$18,086,059 was for maintenance.

## 7. INDIANA HARBOR, IN

**Location.** Northwestern Indiana, on the southwest shore of Lake Michigan in Lake County, 19 miles southeast of Chicago Harbor. (See NOAA Nautical Chart Numbers 14926 and 14929.)

**Previous Projects.** For details see page 1943 of Annual Report for 1915, and page 1520 of Annual Report for 1938.

**Existing Project.** Provides for (a) a northerly rubblemound breakwater 1,120 feet long; (b) an easterly concrete capped caisson breakwater 201 feet long with a rubblemound extension 2,324 feet long; (c) a lake approach channel 29 feet deep and 800 feet wide; (d) an anchorage and maneuver basin 28 feet deep; (e) a main canal entrance channel 27 feet deep and 280 feet wide; (f) a main canal 22 feet deep; (g) a turning basin 22 feet deep; (h) the Forks Turning Basin 22 feet deep; (i) the Lake George Branch 22 feet deep; and (j) the Calumet River Branch 22 feet deep. The project was authorized by the River and Harbor Acts of March 4, 1913, March 2, 1919, March 20, 1922, July 3, 1930, August 30, 1935, August 28, 1937, and July 14, 1960 (See tables 22-B, C).

**Local Cooperation.** Substantially complied with. See FY 1986 Annual Report for full requirements.

**Terminal Facilities.** Fifteen docks and wharves are available. Six docks handle iron ore and limestone. Six docks are for handling petroleum products and three docks for handling gypsum, scrap metal and steel, and bulk products. However, not all docks are presently being used for the shipment or receipt of waterborne commodities.

**Operations and Results During Period.** Routine operations were conducted at a cost of \$72,973 for hired labor. The preparation of dredging plans and specifications were continued at a cost of \$231,371 for hired labor. The preparation of an operations plan for the Confined Disposal Facility was initiated at a cost of \$659 for hired labor and \$13,587 for contracted engineering services. The development of an environment management system was initiated at a cost of \$218,415 for hired labor, \$100,000 for work by other Corps of Engineers, \$138,532 for contracted engineering services, and \$281 for other miscellaneous services.

**Condition at End of Fiscal year.** The existing project is complete. Total costs of the existing project to September 30, 2005 were \$20,966,586 of which \$4,909,648 (\$4,897,148 federal and \$12,500 non-federal contributed funds) was for new work and \$16,056,938 (federal) for maintenance. Channel maintenance has been deferred pending construction of suitable Confined Disposal Facility.

## 8. INDIANA HARBOR AND CANAL CONFINED DISPOSAL FACILITY (CDF), IN

**Location.** The navigation project is located on the southwestern shore of Lake Michigan within the City of East Chicago, Lake County, Indiana, 4-1/2 miles east of the Indiana-Illinois state line and 17 miles from downtown Chicago, Illinois. A CDF will be constructed at the Energy Cooperative Incorporate (ECI) site in East Chicago, Illinois.

**Existing Project.** IHC is an authorized Federal navigation project with an entrance channel and outer harbor protected by breakwaters, and an inner harbor which includes the Indiana Harbor Canal and its two branches, the Lake George Branch, which extends west for a distance of 6,800 feet, and the Calumet River Branch which extends to the south for about 2 miles where it joins the Grand Calumet River. The harbor has not been dredged since 1972, when the United States Environmental Protection Agency

determined that disposal in Lake Michigan was no longer acceptable due to the polluted character of the harbor sediments.

A 4.8 million cubic yards capacity CDF will be constructed on the 164 acres of land adjacent to the Lake George Branch of the IHC, formerly occupied by an oil refinery owned by the Atlantic Richfield Company and subsequently acquired by ECI. The ECI property currently has open Resource Conservation and Recovery Act (RCRA) status due to the contaminated soil and groundwater that exists on the site. Use of this site for the CDF is contingent upon the construction of specific RCRA closure and corrective action features that will be integral aspects of the CDF construction. The elements of the CDF include construction of an impervious cutoff wall built around the 11,000 linear feet perimeter of the site to approximately 30-35 feet depths, tied into the clay layer below; groundwater monitoring and extraction wells and pumps to maintain an inward gradient and prevent any contaminated groundwater from leaving the site; an air monitoring system; an on-site water treatment facility to treat water from drying dredged materials, precipitation falling on the site and groundwater; dikes built in two 15 foot stages, with an impervious clay layer on the interior of the dikes; a re-handling area; and a cap constructed using 3 feet of clay, 6 inches of sand, 2 feet of clean fill and 6 inches top soil with grass cover. This cap configuration, used for both the CDF and the buffer areas, will satisfy the RCRA closure requirement for the ECI site.

**Local Cooperation.** The local sponsor is the East Chicago Waterway Management District (ECWMD). The local sponsor is required to provide all lands, easements and rights-of-way; provide all required relocations; and hold and save the United States government free from any damages due to construction or operation of the project. In addition, the ECWMD is required to pay a cash contribution to bring the total non-federal share to twenty-five percent of the costs allocated to general navigation facilities during construction and pay 100 percent of the costs of maintenance of CDF allocated to additional capacity provided for material from berthing areas and non-channel dredging. The local sponsor is also required to reimburse an additional 10 percent of the costs of the general navigation facilities allocated to commercial navigation within a period of 30 years following completion of construction, as partially reduced by a credit allowed for the value of lands, easements, rights of way, relocations, and dredged or excavated material

disposal provided for commercial navigation. In addition, the ECWMD is required to pay 100 percent of the costs allocated to general navigation facilities during construction for the local service facilities (non-federal berthing areas) and 100 percent of costs for the local service facilities. The Project Cooperation Agreement for the project was executed 7 August 2000. Congressional language was enacted effective May 12, 2005, which provides for the project costs to be 100% Federal from that date. A PCA amendment is under development to reflect the changes that occur on both the Federal and Non-Federal parties on roles and responsibilities, project costs, and any other impacts, as a result of this language. A financial audit is to be performed to define the Federal and Non-Federal cost sharing responsibilities through May 12, 2005.

**Operations and Results During the Period.**

Engineering and design work continued to include data collection for Air Monitoring. The obstruction removal construction contract was completed, and the Dikes I contract was continued. Total cost of the project in FY05 was \$10,455,316 (\$5,948,518 was federal and \$4,506,798 non federal.)

**Condition at the End of Fiscal Year.** Total cost of the existing project to September 30, 2005 was \$34,230,045 (\$25,137,185 federal and \$9,092,860 non-federal.)

**9. LAKE MICHIGAN DIVERSION**

**Location.** Northeastern Illinois on the southwest shore of Lake Michigan in Cook County, within the corporate limits of the City of Chicago. (See NOAA Nautical Chart Numbers 14926, 14927, and 14928.)

**Previous Projects.** See page 22-3 of Annual Report for 1988.

**Operations and Results During Period.**

Operations: Water accounting studies and preparation of reports were performed at costs of \$289,454 by hired labor, \$105,915 by other federal agencies, and \$81,511 by contract.

**Condition at End of Fiscal Year.** Total cost of the existing project to September 30, 2005 was \$9,436,085.

**10. MICHIGAN CITY HARBOR, IN**

**Location.** Northwestern Indiana, on the southeast

shore of Lake Michigan in La Porte County, 38 miles southeast of Chicago Harbor. (See NOAA Nautical Chart Numbers 14905 and 14926.)

**Previous Projects.** See page 1407 of Annual Report for 1992.

**Existing Project.** Provides for (a) a stone-filled timber crib detached breakwater 1,304 feet long; (b) a pile and steel sheeting west pier 835 feet long; (c) a stone-filled timber crib, pile and steel sheeting east pier 2,276 feet long; (d) a stone-filled timber crib east breakwater 1,000 feet long; (e) an entrance channel 18 feet deep and 425 feet wide; (f) a turning basin No. 1, 18 feet deep; (g) a channel in Trail Creek 18 feet deep; (h) an outer basin 12 feet deep in the northerly portion and 8 feet deep in the southerly portion; and (i) a channel in Trail Creek 6 feet deep and 50 feet wide from turning basin No. 2 to the E Street bridge. The project was authorized by the River and Harbor Acts of March 3, 1899, March 3, 1905, January 21, 1927, August 30, 1935, and Section 107 of July 14, 1960, River and Harbor Acts, September 30, 1966 (See tables 22-B, C).

**Local Cooperation.** Fully complied with.

**Terminal Facilities.** There are several marinas in the lower mile of Trail Creek. The commodity handled at this harbor is fresh fish.

**Operations and Results During Period.**

Routine operations were conducted at cost of \$5,385 for hired labor. The Dredged Material Management Plan was maintained at cost of \$24,063 for hired labor. Contracted breakwater repairs were conducted at costs of \$97,532 for hired labor, \$10,032 for contracted engineering services, and \$60,989 by construction contract. Channel maintenance was performed at costs of \$10,994 for hired labor and \$153,032 for work performed by other Corps of Engineers.

**Condition at End of Fiscal Year.** Total costs of existing project to September 30, 2005 were \$24,305,562 of which \$1,574,158 was for new work (\$1,543,646 federal and \$30,512 non-federal funds), \$21,112,734 for maintenance (\$21,057,734 federal and \$55,000 non-federal) and \$1,618,670 for rehabilitation (federal funds).

**11. WAUKEGAN HARBOR, IL**

**Location.** Northeastern Illinois on the west shore

of Lake Michigan in Lake County, 38 miles north of Chicago Harbor. (See NOAA Nautical Chart Numbers 14904 and 14905.)

**Previous Projects.** See page 1392 of Annual Report for 1962.

**Existing Project.** Provides for (a) a northerly stone-filled timber crib breakwater 588 feet long; (b) a stone-filled reinforced concrete caisson shore connection 270 feet long; (c) a stone-filled double-row steel sheeting shore connection 640 feet long; (d) a single-row steel sheeting shore connection 398 feet long; (e) a stone-filled timber crib north pier 998 feet long; (f) a single-row steel sheet piling north pier 444 feet long; (g) a steel piling revetment 632 feet long; (h) a stone-filled timber crib pier 1,399 feet long; (i) a stone-filled double-row pile and sheeting south pier 1,712 feet long; (j) an entrance channel 22 feet deep and 390 feet wide; (k) a channel between the piers 18 feet deep and 200 feet wide; (l) an inner basin 18 feet deep; and (m) an anchorage area in the southwest corner of the inner basin 8 feet deep. An authorized, but as yet constructed project modification provides for (a) an entrance channel 27 feet deep, (b) a channel between the piers 23 feet deep and (c) an inner basin and channel extension 23 feet deep. The project was authorized by the River and Harbor Acts of June 3, 1902, July 13, 1930, and March 2, 1945, and on December 17, 1970 by delegated authority under Section 201 of the Rivers and Harbor Act of October 27, 1965. (See tables 22-B, C). The portion of the project authorized by the 1970 modification is being restudied to confirm economic feasibility.

**Local Cooperation.** Fully complied with for completed portions. The Dec. 17, 1970 modification, which provides for modifications to the channel, is subject to the conditions that local interests furnish assurances that they will hold the United States government free from damages from construction and maintenance of the improvement and that certain lands, easements and rights-of-way be provided.

**Terminal Facilities.** Four docks are available. The commodities handled at this harbor are gypsum and building cement.

**Operations and Results During Period.** Routine operations were conducted by hired labor at a cost of \$15,640. Dredging of the outer harbor channel was conducted at a cost of \$65,424 for hired labor and \$378,000 for work performed by other Corps of Engineers. The South Pier was resurfaced at a cost of \$164,748 for hired labor, \$22,561 for contracted

engineering services, and \$729,814 by construction contract. The development of plans and specifications to dredge the inner harbor begin at a cost of \$97,902 for hired labor and \$3,500 for other contracted services.

**Condition at End of Fiscal Year.** The existing project is complete except for the 1970 modification, which is being restudied. Maintenance of the channel between the pier to the head of navigation has been deferred pending location, approval and probable construction of a suitable dredged material disposal site. Total costs of existing project to September 30, 2005 were \$22,890,620 of which \$823,026 was for new work and \$22,067,594 was for maintenance.

## 12. RECONNAISSANCE AND CONDITION SURVEYS

In Fiscal Year 2005 Condition surveys were performed at a cost of \$86,676.

## 13. NATIONAL EMERGENCY PREPAREDNESS

Fiscal Year 2005 costs for management and mobilization planning were \$19,902.

### Alteration of Bridges

## 14. OTHER AUTHORIZED BRIDGE ALTERATIONS

See table 22-D.

### Beach Erosion Control

## 15. CASINO BEACH, IL

**Location.** Casino Beach is located along the Lake Michigan shoreline at Jackson Park in Chicago, Illinois.

**Existing Project.** The Casino Beach project was authorized by Section 501 (a) of the 1986 Water Resources Development Act. The project consists of rehabilitating 1,800 feet of the Casino jetty by encasing the existing timber pile and stone structure in steel sheet piling and a concrete cap.

**Local Cooperation.** The local project sponsor is the Chicago Park District. The local sponsor is required to provide all lands, easements and rights-of-way; complete all necessary relocations; hold and save the United States free from damages due to

construction or operation of the project; operate and maintain the completed project; and make cash contribution toward the cost of construction.

**Operations and Results During Period.** No new work.

**Condition at End of Fiscal Year.** Construction is complete. The total cost of the existing project to September 30, 2005 was \$2,465,517 federal and \$2,499,481 non-federal.

## 16. CHICAGO SHORELINE, IL

**Location.** The project area includes 9.2 miles of revetment reconstruction within 24 miles of publicly owned shoreline along Lake Michigan in Chicago, Illinois.

**Existing Project.** The Chicago Shoreline project is not authorized. The Federally supportable plan consists of constructing rubblemound revetments along 16,750 and 25,400 feet of the shoreline in the Lincoln Park and Burnham Park areas, respectively. Other project features include: revetments near the Adler Planetarium and at Meigs Field; a breakwater to protect the South Filtration Plant near 78th Street; and nourishment of a short reach of shoreline near Fullerton Avenue and 31st Street. The local sponsor prefers to substitute steel sheet pile step stone revetments (the locally preferred plan, or LPP) for the rubblemound revetments in the Lincoln and Burnham Park areas. They have agreed to pay the increased cost above the federally supportable plan. The LPP is the authorized plan.

**Local Cooperation.** This project has three separate Project Cooperation Agreements (PCA's). The first PCA, for the Reach 5 breakwater reconstruction, was executed on 28 April 1997. The second PCA, for Section 215 work, was executed on 7 August 1998, and covers construction of three portions of the project: 1,000 feet of revetment at Belmont Harbor in Reach 2, an 800 foot stretch of shoreline at 31<sup>st</sup> Street beach in Reach 4 (both of these are being constructed by the non-federal sponsor), and revetment reconstruction from 31<sup>st</sup> to 33<sup>rd</sup> streets in Reach 4 (Corps work). The project Cooperation Agreement for the balance of the project work was executed on 17 May 1999, implementing section 206 of WRDA 92 which allows the non-federal sponsor to perform a significant portion of the work. Design and construction of the project is well underway. Project construction is estimated to be completed in the year 2007.

The local sponsor is required to provide all lands, easements, and rights-of-way; complete all necessary relocations; hold and save the United States free from damages due to construction or operation of the project; operate and maintain the completed project; perform work for credit towards their cash contribution; and make cash contribution toward the cost of any outstanding balance.

**Operations and Results During Period.** The Corps completed construction at Belmont to Diversey North, Montrose North, Diversey to Fullerton and 37<sup>th</sup> to 40<sup>th</sup> Street. In addition, the Corps awarded a construction contract for the 40<sup>th</sup> to 41<sup>st</sup> Street Beach. Engineering and design work was continued on various reaches. The non-federal sponsor provided cash in the amount of \$2,785,540. Total costs for the fiscal year FY05 were \$11,421,288 of which \$8,635,748 was federal and \$2,785,540 was non-federal.

**Condition at End of Fiscal Year.** . The total cost of the existing project to September 30, 2005, was \$240,962,021 of which \$142,718,158 is federal and \$66,259,7277 is non-federal cash and \$31,984,136 in non-federal in-kind services.

#### 17. ILLINOIS BEACH STATE PARK, IL

**Location.** Northeastern Illinois on the west shore of Lake Michigan along the 9-mile reach of shoreline immediately south of the Illinois-Wisconsin State line. (See NOAA Nautical Chart Numbers 14901 and 14904.)

**Previous Projects.** None.

**Existing Project.** Provides for annual beach nourishment and construction of a sediment trap at the south end of the State Park. The project would entail placement of coarse-graded sediment at six stockpile sites at the rate of 124,000 cubic yards in the first year, 104,000 cubic yards in the second year, and 60,000 cubic yards in the third year. Thereafter, 60,000 cubic yards would be placed at the northernmost stockpile annually. The sediment trap would consist of a rubble-mound groin, with a total length of 600 feet from the base of the dunes (400 feet lakeward from the shoreline), with a crest height of about +8 feet above Low Water Datum (LWD). The project was conditionally authorized in Section 501 (b) of the 1986 Water Resources Development Act subject to a report by the Corps of Engineers and

approval by the Secretary of the Army. A Feasibility Review Conference was held in April 1991. As a result, the District Engineer was directed to terminate work on this project and to submit a letter report to the Congress summarizing the feasibility study and the results of the Washington level review. Work on the feasibility report was resumed in FY 1994 as directed by the Assistant Secretary of the Army for Civil Works in response to a letter from Congressman John Porter, 10th Congressional District of Illinois.

**Local Cooperation.** The local project sponsor would be required to provide all lands, easements and rights-of-way; accomplish all required relocations; hold and save the United State free from damages; and provide a cash contribution.

**Operations and Results During Period.** No work was completed on the pre-construction engineering and design (PED) phase of the project. FY05. No work on the feasibility phase was continued in FY 2005.

**Condition at End of Fiscal Year.** Total cost of the existing Feasibility study to September 30, 2005 was \$344,291 .

#### 18. INDIANA DUNES NATIONAL LAKESHORE BANK PROTECTION, BEVERLY SHORES, IN

**Location.** Northwestern Indiana, on the southeast shore of Lake Michigan in Porter County, about 35 miles southeast of Chicago Harbor. (See NOAA Nautical Chart Numbers 14095 and 14926.)

**Existing Project.** Provides for placement of 13,000 feet of stone revetment and periodic repair of riprap to maintain the full length of Lake Front Drive in Beverly Shores, Indiana. The current project was authorized by Public Laws 97-88 and 98-63.

**Local Cooperation.** Fully complied with. Project lands are held by the National Park Service.

**Operations and Results During Period.** No work was performed during this reporting period.

**Condition at End of Fiscal Year.** Total costs of existing project to September 30, 2005 were \$2,956,000 of which \$660,000 was for new work and \$2,296,000 was for maintenance.

#### 19. INDIANA SHORELINE EROSION, IN

**Location.** On the south end of Lake Michigan along a two-mile reach of shore west of Michigan City Harbor, Indiana. (See NOAA Nautical Chart Numbers 14095 and 14926.)

**Existing Project.** The project consists of beach nourishment along approximately two miles of beach between Michigan City Harbor and Beverly Shores, Indiana, requiring an initial placement of 264,500 cubic yards of sand. Periodic replenishment of about 264,500 cubic yards of sand at five year intervals would be required throughout the life of the project. The project was authorized for construction by Section 501 of the Water Resources Development Act of 1986. Estimated federal cost (1997) for new work is \$184,000,000, including future beach nourishment.

**Local Cooperation.** None required.

**Operations and Results During Period.** Plans and specifications for sand placement were prepared and the placement of 11,000 tons of sand between stations 321+75 and 338+50 occurred in FY 2005. Various tests including petrographic and soundness tests were conducted after the completion of the sand placement. There was no real estate related cost. Total Federal cost of the existing project was \$476,337 in FY2005.

**Condition at End of Fiscal Year.** Initial construction was completed. Monitoring of project and preparation of plans and specifications for additional sand placement was continued. The total cost of the existing project to September 30, 2005 is \$11,537,698 (Federal)

## 20. OTHER AUTHORIZED BEACH EROSION CONTROL PROJECTS

See table 22-E.

## 21. BEACH EROSION CONTROL UNDER SPECIAL AUTHORIZATION

Beach erosion control activities pursuant to Section 103 of the Rivers and Harbors Act of 1962, as amended. None.

### Flood Control

## 22. CHICAGO RIVER, IL (NORTH BRANCH)

**Location.** Northern Illinois, in Cook and Lake Counties.

**Existing Project.** Provides for clearing the channel of the North Branch of the Chicago River of fallen trees, roots, and other debris and objects which contribute to the flooding, unsightliness, and pollution of the river. The project extends from Wolf Point in Chicago, Illinois, to its source just south of Rockland Road east of Libertyville, Illinois. The project was authorized by the River and Harbor Act of December 31, 1970 (Section 116) and amended by the River and Harbor Act of March 7, 1974 and the Water Resources Development Act of 1986.

**Local Cooperation.** The 1970 Act provided that local interests furnish without cost to the United States all lands, easements, rights-of-way, and disposal areas necessary for construction of the project; hold and save the United States free from damages due to construction; maintain and operate all works after completion without cost to the United States; and agree to bear all costs in excess of \$200,000 for completing construction. The 1974 Act provided that the United States will maintain the channel free of trees, roots, debris and objects at a cost not to exceed \$150,000 per year with non-federal interests paying 25 percent of the cost of maintenance. The 1986 Water Resources Development Act changed the cost sharing to require that non-federal interests pay 50 percent of the cost of maintenance plus the cost of disposal. The requirements are fully complied with.

**Operations and Results During Period.** No work was performed during this reporting period.

**Condition at End of Fiscal Year.** Total cost of existing project to September 30, 2005 was \$4,775,908 of which \$231,884 was for new work (\$191,884 federal funds and \$40,000 contributed funds), and \$4,543,807 was for maintenance (\$2,768,632 federal funds and \$1,775,175 non-federal contributed funds).

## 23. DES PLAINES RIVER, ILLINOIS

**Location.** The Upper Des Plaines River is located in the northeastern Illinois counties of Lake and Cook. Its 67 miles flow through 33 communities, which are part of the Chicago metropolitan area.

**Existing Project.** The Des Plaines flood control project was authorized by Section 101(b) (10) of the 1999 Water Resources Development Act. The optimized project provides a maximum 0.12 foot reduction in stage for the 100-year flood, and the

levee features meet the FEMA criteria for 100-year protection. The project consists of six features to construct (three in Lake County and three in Cook County), environmental mitigation, and a flood warning plan. The project adds 1,975 acre-feet of storage by constructing 6 features: a lateral storage area in Van Patton Woods (412 acre-feet); enlarging the existing North Fork Mill Creek Dam by elevating the crest of spillway (500 acre-feet); and excavating the existing reservoirs at Buffalo Creek (476 acre-feet) and at Big Bend Lake (587 acre-feet). The remaining 2 project features are levees with appurtenant interior drainage features. Levee 37 raises portions of Des Plaines River Road and Milwaukee Avenue between Palatine Road and Euclid Avenue from 0.5 to 5 feet over a total length of 8,500 feet. Levee 50 is a combination levee/flood wall in the City of Des Plaines between Dempster Road and the Chicago and Northwestern railroad. The length of this levee would be about 2,600 feet and the length of the floodwall would be 2,115 feet.

**Local Cooperation.** The nonfederal sponsor is the Illinois Department of Natural Resources (IDNR). IDNR is required to provide all lands, easements and rights-of-way; complete all required utility relocations; hold and save the United States free from damages due to construction or operation of the project; provide the required interior drainage improvements; operate and maintain the completed project; and make a cash contribution toward the cost of construction.

**Operations and Results During the Period.** In 2005 Engineering and design work was continued at a federal cost of \$43,189 for (GI), \$1,229,819 (CG) and non-federal cost of \$0 (GI).

**Condition at End of Fiscal Year.** Total cost of the existing project to September 30, 2005 is \$3,275,726 of which (\$977,157 (GI), \$1,912,077 (CG) and non-Federal cost \$386,492).

## 24. LAKE GEORGE, HOBART, IN

**Location.** Lake George in Hobart, Indiana and Deep River watershed upstream of the lake through Lake Station, Indiana.

**Existing Project.** The project consists of the removal of silt, aquatic growth and other material and the construction of silt traps or other devices to prevent and abate the deposition of sediment. Project was authorized by Section 602 of the Water Resources Development Act (WRDA) of 1986.

**Local Cooperation.** Section 602(b), Water Resources Development Act of 1986 applies. By letter dated March 9, 1987 the City of Hobart, Indiana indicated that it was a potential local project sponsor and applied for credit for previous work applicable to the project under the provisions of Section 104 (d) of the 1986 WRDA. By letter dated March 19, 1999, the City of Hobart, Indiana withdrew it's interest in the project.

**Operations and Results During Period.** Project was terminated in FY 1999.

**Condition at End of Fiscal Year.** Pre-construction engineering and design was terminated. Total cost of the existing project to September 30, 2005 is \$1,314,167.

## 25. LITTLE CALUMET RIVER, IN

**Location.** The Little Calumet River project is located in northwest Indiana between the Illinois-Indiana State line and the Conrail Railroad in east Gary, Indiana.

**Existing Project.** The project consists of replacing 9.5 miles of existing spoil bank levees with 12.2 miles of new levees, floodwalls, closure and appurtenant structures between the Illinois-Indiana State line and Cline Avenue; construction of 9.7 miles of set-back levees in Gary; a diversion structure at Hart Ditch; permanent evacuation of 29 structures in the Black Oak area of Gary; flood proofing 38 residential structures in Gary; modifying 7 miles of channel and 3 accompanying bridge culvert modifications; modifying one highway bridge; construction of 16.8 miles of hiking trails and accompanying recreation support facilities; and preservation of 788 acres of wetlands with wildlife mitigation measures. The project was authorized by Section 401 of the Water Resources Development Act of 1986. The construction contract for Stages II-3A, III and V-1 levee segment and the Stage I-4 demolition contract were completed. Completed construction on East Remediation, and Stage IV-2B.

**Local Cooperation.** The local sponsor is the Little Calumet River Basin Development Commission. The local cooperation agreement was signed on August 16, 1990. The local sponsor is required to provide all lands, easements and rights-of-ways; provide all required relocations; and hold and save the United States from any damages due to construction or

operation of the project. In addition, the local sponsor is required to pay a five percent cash contribution for structural flood control measures, fifty percent for recreation features and twenty-five percent for fish and wildlife enhancements. A memorandum of agreement with the local sponsor to design non-federal improvements was signed on May 20, 1992.

**Operations and Results During Period.**

Continued construction work on wetland mitigation, Stage VI-1 South and Landscaping Contract 2. Completed Stage III remediation and North 5<sup>th</sup> pumps and continued work on engineering and design. Awarded VI-1North and VI-2 construction contracts.

At the end of FY 2005, total annual Federal cost was \$5,328,106 and non-federal annual cost was \$258,977 with a betterment cost of \$0. Total project cost was \$5,587,083.

**Condition at End of Fiscal Year.** Construction is in progress. Total cost of existing project to September 30, 2005 was \$104,679,100 of which Federal cost was \$97,453,828, required non-federal cost was \$7,225,272 and non-federal betterment costs \$2,196,677.

**26. LITTLE CALUMET RIVER BASIN, CADY MARSH DITCH, IN**

**Location.** Cady Marsh is located in Lake County, Indiana. The Ditch is a tributary of the Little Calumet River system in northwest Indiana and flows through the Towns of Griffith and Highland, Indiana.

**Existing Project.** The Cady Marsh Ditch flood control project was authorized by Section 401 (a) of the 1986 Water Resources Development Act. The project provides for diverting flood flows from Cady Marsh Ditch to the Little Calumet River through a diversion system under Arbogast Avenue in Griffith. Specifically, the project consists of improving 1,290 feet of Cady Marsh Ditch between Colfax and Arbogast Avenues in Griffith, constructing approximately 5,000 feet of large conduit pipes under Arbogast Avenue, excavating an open channel approximately 2,850 feet long from the north end of Arbogast Avenue to the Little Calumet River, and constructing interior drainage improvements.

**Local Cooperation.** The local project sponsor is the Town of Griffith, IN. The local sponsor is required to provide all lands, easements and rights-of-way; complete all required utility relocations; hold

and save the United States free from damages due to construction or operation of the project; provide the required interior drainage improvements; operate and maintain the completed project; and make a cash contribution toward the cost of construction.

**Operations and Results During the Period.**

Engineering and design was continued. Awarded the Genis pump station construction contract. Continued work on the tunnel construction contract.

At the end of FY 2005, total annual Federal cost was \$7,221,486 and non-federal annual cost was \$2,036,322. Total project cost was \$9,257,808.

**Condition at End of Fiscal Year.** Construction is in progress. The total cost of the existing project to September 30, 2005 was \$12,638,393 of which federal cost was \$10,602,071 and non-federal cost was \$2,036,322.

**27. McCOOK AND THORNTON RESERVOIRS, IL**

**Location.** The McCook Reservoir will be located near the communities of McCook, Justin and Bedford Park, Illinois at the existing Metropolitan Water Reclamation Solids Management Area. The Thornton Reservoir will be located in the community of Thornton, Illinois at the existing Thornton Quarry.

**Existing Project.** The project consists of converting two quarries into flood storage reservoirs. The McCook Reservoir will have a storage volume of 21,400 acre-feet (7 billion gallons); the Thornton Reservoir will have a volume of 24,200 acre-feet (7.9 billion gallons). The reservoirs will store floodwater from tunnels constructed or under construction by the U.S. Environmental Protection Agency and the Metropolitan Water Reclamation District of Greater Chicago as part of the Tunnel and Reservoir Project (TARP). The project was authorized by Section 3 of the Water Resources Development Act of 1988.

**Local Cooperation.** The Metropolitan Water Reclamation District of Greater Chicago will be the local sponsor and provide the required local cooperation. The local sponsor is required to provide all lands, easements and rights-of-way; provide all required relocations; and hold and save the United States government free from any damages due to construction or operation of the project. In addition, local sponsors are required to pay a cash contribution to bring the total non-federal share of the flood

control improvements to twenty-five percent of the total project cost. The Project Cooperation Agreement for the McCook Reservoir was executed on May 10, 1999. The project Cooperation Agreement for the Thornton Reservoir was executed on September 18, 2003.

**Operations and Results During the Period.** Continued construction work on the distribution tunnel and pump contracts. Continued engineering and design work.

Total cost of the project in FY05 was \$21,073,795 of which \$27,587,622 is federal and (\$-6,513,827) is non-federal.

**Condition at End of Fiscal Year.** Construction and engineering and design work are in progress. Total costs of the existing project through FY 2005 were \$137,174,791 of which federal cost was \$104,278,472 and non-federal cost was \$32,896,319.

## 28. NORTH BRANCH, CHICAGO RIVER, IL

**Location.** The North Branch Chicago River Basin is located north of the City of Chicago in suburban Cook and Lake Counties.

**Existing Project.** The project was authorized by the Water Resources Development Act of 1986 and consists of constructing two excavated floodwater storage reservoirs on the West Fork and one excavated reservoir on the Middle Fork. Section 401 of the 1986 Act also included authorization to reimburse non-federal interests 50 percent of the costs of planning and construction for three existing reservoirs on the West Fork, known as Techny Reservoirs, and the existing Mid Fork Reservoir on the Middle Fork. In July 1990, the federal government reimbursed the non-federal interests \$4,467,298 for the Techny and Mid Fork Reservoirs. The total federal cost was \$4,537,435 for these reservoirs. Reservoir 27 in the Village of Bannockburn, is located on the West Fork, 12.7 miles above its confluence with the North Branch Chicago River. It has a floodwater storage capacity of 525 acre-feet. The reservoir construction was completed in June 1990. Reservoir 29A is located 9.6 miles above the mouth of the West Fork and 3.1 miles south of Reservoir 27. The floodwater storage capacity is 575 acre-feet. Two project features, channel relocation and construction of two bridges, are a non-federal responsibility. Reservoir 29A was substantially completed in September 1994. Reservoir 15 is located near the City of Green Oaks on the

Middle Fork, 22.1 miles above its confluence with the North Branch Chicago River. The floodwater storage capacity is 500 acre-feet. The reservoir is approximately 42 feet deep except in the sedimentation pool area which is about 15 feet deeper. Construction of Reservoir 15 was completed in May 1992. The local sponsor has contributed \$550,100 for the non-federal improvements for Reservoir 29A.

**Local Cooperation.** The local sponsor is required to provide all lands, easements and rights-of-way; provide all required relocations; and hold and save the United States government free from any damages due to construction or operation of the project. In addition, local sponsors are required to pay a cash contribution to bring the total non-federal share of the flood control improvements to twenty-five percent of the total project cost.

**Operations and Results During Period.** Total cost in FY04 was \$130 federal.

**Condition at End of Fiscal Year.** The existing project is 100% complete. Total costs of the existing project to September 30, 2004 were \$31,758,971 of which \$25,006,588 is federal and \$2,259,085 is non-federal required contributions. This total also includes the \$4,493,298 non-federal cost for the Techny and Mid Fork Reservoirs. Non-federal betterment funds of \$550,101 has been expended on bridge and channel betterments at Reservoir 29A. A total of \$7,576,668 in non-federal funds has been expended on investigations in connection with the clean-up of soils contaminated with lead shot pellets at Reservoirs 29A. Non-federal betterment funds in the amount of \$38,500 were expended for work on an impact assessment. A total of \$11,166 (non-federal betterment) was spent at Reservoir 27 for the Illinois Tollway project.

## 29. O'HARE RESERVOIR, IL

**Location.** The reservoir is located in an unincorporated portion of Elk Grove Township in Northwestern Cook County, Illinois about 1 mile northwest of Chicago O'Hare International Airport.

**Existing Project.** The project consists of a 1,050 acre-foot capacity reservoir, excavated to a depth of 80 feet. The reservoir has been constructed at the terminus of the existing system of 6.6 miles of deep tunnels, constructed under the U.S. Environmental Protection Agency and the Metropolitan Water Reclamation District of Greater Chicago Tunnel and

CHICAGO, ILLINOIS, DISTRICT

Reservoir Project (TARP). The project was authorized by Section 401 of the Water Resources Development Act of 1986.

**Local Cooperation.** The local sponsor is the Metropolitan Water Reclamation District of Greater Chicago. The local cooperation agreement for the first construction contract, creek relocation, was signed on July 31, 1990. The local sponsor is required to provide all lands, easements and rights-of-way; provide all required relocations; and hold and save the United States government free from any damages due to construction or operation of the project. In addition, the local sponsor is required to pay a cash contribution of five percent of the total project costs. The local cooperation agreement for the remainder of the project, reservoir excavation and lining, was signed July 29, 1991.

**Operations and Results During Period.** Conducted financial close-out of the project. There were no costs in FY 2005.

**Condition at End of Fiscal Year.** The total costs of the existing project to 30 September 2005 were \$39,273,041 of which (\$30,614,144 federal and \$6,033,516 non-federal and non-federal improvement costs were \$2,652,481)

**30. OTHER AUTHORIZED FLOOD CONTROL PROJECTS**

See table 22-F.

**31. FLOOD CONTROL WORK UNDER SPECIAL AUTHORIZATION**

Emergency flood control activities, repair, flood fighting and rescue work (Public Law 99, 84th Congressional antecedent legislation).

<b>Program</b>	<b>Fiscal Year Costs to September 30, 2005</b>
Disaster Preparedness	\$ 260,651

Flood control activities pursuant to Section 205 of Flood Control Act of 1965, as amended:

Fiscal Year 2005 costs were \$4,131,273 federal and \$442,318 non-federal for flood control activities. A total of \$4,828 was spent on the Section 205 Coordination Account. Fox River, McHenry Co., IL, construction phase was completed at the cost of \$ 0 federal and \$25,705 non-federal. Libertyville Estates, IL, construction phase continued at the cost of

\$215,064 federal and \$31,250 non-federal. Monticello Avenue, Chicago, P & S were continued at the cost of \$8,421 federal and \$ 0 non-federal. Kankakee River and Newton Co. (Sumava) P&S was continued at the cost of \$56,184 federal and \$ 0 non-federal. City of Oak Forest (Natalie Creek) DPR completed at the cost of \$ 0 federal and \$363 non-federal. Stony Creek, IL, P&S discontinued at the cost of \$3,192 federal and \$ 0 non-federal. Deer Creek construction continued at a cost of \$3,843,584 federal and \$ 385,000 non-federal.

Section 14, Emergency Streambank and Shoreline Protection:

Fiscal Year 2005 costs were \$351,127 federal and \$220,005 non-federal. A total of \$2,988 was spent on Section 14 Coordination Account. Waukegan Sanitary construction completed at (\$-15,613) federal and \$13,460 non-federal. Zion Sanitary construction was continued at \$3,293 federal and \$10,368 non-federal. North Park University PDA was continued at a cost of \$66,120 federal and \$ 0 non-federal. Village of Riverside construction was continued at \$43,466 federal and \$37,341 non-federal. Fox Lake construction was continued at \$250,873 federal and \$158,836 for non-federal.

Section 208, Clearing and Snagging: Deep River PDA was continued at a cost of \$31,916.

Section 1135, Project modification to improve Environment:

Fiscal Year 2005 Federal costs were \$36,466 and non-Federal cost \$445,158. Indian Ridge Marsh P&S were continued at \$3,991 federal. The Chicago Sanitary and Ship Canal Dispersal Barrier construction was completed and operated at a cost of \$32,475 federal and \$445,158 non-federal.

Section 206, Aquatic Ecosystem Restoration: Fiscal Year 2004 costs were \$1,212,993 federal and \$269,084 non-federal. A total of \$3,410 was spent on Section 206 Coordination Account. Sqaw Creek, Lake County, IL DPR continued at a cost of \$39,329 federal. Chicago Botanical Garden, IL, construction was continued at a cost of \$170,358 federal and \$183,679 non-federal. Cuneo Press, Chicago River, construction was completed at (\$-39,816) federal and \$55,866 non-federal. Weed Street, Chicago River construction was completed at (\$-17,017) federal and \$22,120 non-federal. Northside PREP/Von Steuben Chicago construction continued at \$33,245 federal and \$7,419 non-federal. Butler Lake, IL, P&S continued at a cost of \$96,829 federal. Hoffman Dam, IL, DPR continued at a cost of

**REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2005**

---

\$29,417 federal. Federal \$68,297 Non Federal \$ 0  
Wolf Lake, IN, P&S continued at a cost of \$380,694 federal. Grass Lake, Fox River, IL, PDA was continued at a cost of \$3,895 federal. Kankakee Sands, Fair Oak Farm, IN, DPR was continued at a cost of \$136,827 federal. Lockport Prairie Nature Preserve, IL, DPR was continued at \$970 federal. Cedar Lake, IN, DPR was continued at a cost of \$139,062 federal. Sequoit Creek PRP continued at a cost of \$1,394 federal. Orland Park DPR continued at \$83,662 federal. South Fork of the South Branch DPR continued at \$4,599 federal. Ping Tom Park PDA continued at \$1,250 federal. Long Lake DPR continued at \$137,929 federal. Winfield Creek PRP continued at \$876 federal. Yellow River PRP continued at \$1,087 federal. Red Mill Pond Dam DPR continued at (\$-1,410) federal. Peck Lake, IL, PRP initiated at \$6,401 federal

Section 107, Navigation Harbor:  
Fiscal Year 2005 costs were \$43,840 federal and \$36,943 non-federal. Whiting Shoreline DPR was continued at \$43,590 Federal and \$36,943 non-Federal. Evanston Shoreline DPR was continued at \$250 federal.

**General Investigations**

**32. SURVEYS**

Fiscal Year 2005 costs were \$2,042,216 federal and \$271,028 non-federal. Itemized as follows:

<u>Federal</u>	<u>Non-federal</u>
Flood Damage Prevention Studies	
\$829,607	\$260,086
Shoreline Protection	
\$17,510	\$ 0
Special Studies	
\$1,127,206	\$ 0
Review Authorized Projects	
\$6,634	(\$-2,601)
Miscellaneous Activities	
\$43,500	\$ 0
Coordination Studies	
\$17,759	\$13,543

**33. COLLECTION AND STUDY OF BASIC DATA**

Fiscal Year 2005 costs were \$77,697 federal and \$0 non-federal itemized as follows:

Flood Plain Management Services:

<b>BURNS WATERWAY HARBOR, IN</b>		
(See Section 1 and 3 of Text)		
Oct. 27, 1965	Provides for breakwater and channel to present dimensions and depths, a north breakwater, west bulkhead, approach channel and outer harbor, east and west harbor arms.	Public Law, 89-298, H. Doc. 160. 88 <sup>th</sup> Cong., 1 <sup>st</sup> Sess.
Nov. 20, 2004	Provides for the dredging of sediments accumulating at the water intake structure of the Bailey Generating Plant (NIPSCO) at 100% federal cost or \$100,000.	Sec. 121 of Conf Rpt HR 4818 Report 108-792
<b>BURNS WATERWAY SBH, IN</b>		
(See Section 2 of Text)		
Jul. 14, 1960 Sec. 107	Provides for a 700-foot north breakwater, a 950-foot west breakwater an entrance channel 11-foot deep, a harbor-of-refuge area 10 feet deep and a channel in Burns Waterway 6 feet deep.	Detailed Project Report detailed February 1983.
<b>CALUMET HARBOR AND RIVER, IL AND IN</b>		
(See Section 4 of Text)		
Mar. 3, 1899	Outer harbor protected by breakwaters.	Annual Report, 1896, pp. 2584 et Seq. and H. Doc. 277, 54 <sup>th</sup> Cong., 1 <sup>st</sup> Sess.
Jun. 13, 1902		H. Doc. 172, 54 <sup>th</sup> Cong., 2 <sup>nd</sup> Sess.
Mar. 3, 1905	Five turning basins.	H. Doc. 346, 60 <sup>th</sup> Cong., 1 <sup>st</sup> Sess.
Jun. 25, 1910	Provided for shape and dimensions of turning basins.	H. Doc. 346, 60 <sup>th</sup> Cong., 1 <sup>st</sup> Sess.
Sep. 22, 1922 Aug. 30, 1935 <sup>1,2</sup>	Consolidated the two projects for Calumet Harbor and Calumet River. Detached breakwater, dredging outer harbor to existing project depth and dimensions; deepen river entrance channel and river to existing project depths; widen and straighten river channel; five turning basins to same depth as adjacent channel.	H. Doc. 494, 72 <sup>nd</sup> Cong., 2 <sup>nd</sup> Sess.
Aug. 30, 1935	Dredging area A and B in south end of Lake Calumet and an entrance channel 300 feet wide and 21 feet deep.	H. Doc. 180, 73 <sup>rd</sup> Cong., 2 <sup>nd</sup> Sess.
Mar. 2, 1945 <sup>3</sup>	An approach channel to harbor 3,200 feet wide and 28 feet deep through shoals outside breakwater and closing existing gap between breakwaters.	H. Doc. 233, 76 <sup>th</sup> Cong., 1 <sup>st</sup> Sess.
Jul. 14, 1960 <sup>13</sup>	Depth of 29 feet in lake approach to 28 feet in outer harbor, and 27 feet in river entrance up to E.J. & E. Ry. Bridge.	H. Doc. 149, 86 <sup>th</sup> Cong., 1 <sup>st</sup> Sess. <sup>8</sup>
Oct. 23, 1962 <sup>13</sup>	Deepen, widen and straighten channel in Calumet River from E.J. and E. Ry. Bridge, to and including turning basins 1, 3 and 5 to 27 feet; enlarge turning basins 3 and 5; channel into Lake Calumet to 27 feet deep for 3,000 feet and a width of 1,000 feet; and eliminate turning basins 2 and 4 from project.	H. Doc. 87 <sup>th</sup> Cong., 2 <sup>nd</sup> Sess. <sup>5</sup>
Oct 27, 1965 <sup>13</sup>	Modification of Act of Oct 23, 1962. Protection for Elgin, Joliet and Eastern Railway Bridge over the Calumet River, to permit dredging to full width of the south draw to depth of 27 feet, and temporary protection for center pier and south abutment of the New York, Chicago and St. Louis Railroad Bridge (Nickel Plate) to permit dredging of full width of south bridge draw to depth of 27 feet prior to its replacement.	H.R. 973, 89 <sup>th</sup> Cong., 1 <sup>st</sup> Sess.

**TABLE 22-B AUTHORIZING LEGISLATION**

Acts	Work Authorized	Documents
<b>CHICAGO HARBOR, IL</b>		
(See Section 5 of Text)		
Jul. 11, 1870	Inner breakwaters and inner basin.	H. Ex. Doc. 114, 41 <sup>st</sup> Cong. 2 <sup>nd</sup> Sess. and Annual Report 1870, pp. 1562-1567
Jun. 14, 1880	Exterior breakwater.	Annual Report 1870, pp. 1562-1567
Mar. 3, 1899	Present project depth in basin and entrance to Chicago River.	Annual Report 1897, pp. 2790-2791
Jul. 25, 1912	Shore-arm and southerly extension of exterior breakwater	H.Doc 710, Cong, 2 <sup>d</sup> Sess
Mar. 2, 1919	Modification of area to be dredged in inner basin.	H.Doc 1303, 64 <sup>th</sup> Cong, 1 <sup>st</sup> Sess.
Mar 3, 1931	Shore-arm extension of exterior breakwater transferred to Lincoln Park Commissioners.	Public Law 797, 71 <sup>st</sup> Cong
Mar. 2, 1945	Resumption of jurisdiction over shore-arm extension breakwater and over certain navigable waters in Lake Michigan which lie in northwestern part of outer harbor.	Public Law 14, 79 <sup>th</sup> Cong.
Oct. 23, 1962	Deepen a lake approach channel to 29 by 800 feet wide for 6,600 feet; deepen channel and maneuver area inside harbor entrance to 28 by 1,300 feet wide.	H.Doc. 485, 87 <sup>th</sup> Cong., 2 <sup>nd</sup> Sess. <sup>4</sup>
Dec. 4, 1981	Provides for lock operations and maintenance responsibilities in the interests of navigation.	Sec. 107 of P.L. 97-88
Jul. 30, 1983		P.L. 98-63
<b>CHICAGO SHIP AND SANITARY CANAL DISPERSAL BARRIER I</b>		
Nov. 29, 1990	Provide a Barrier Demonstration Project to prevent non-indigenous aquatic species from traveling between the Mississippi River and Great Lakes drainage basins	Sec 1202(i)(3) of P.L. 101-636
Oct. 26, 1996	Funding increased to complete project.	P.L. 101-636, Amended
<b>CHICAGO SHIP AND SANITARY CANAL DISPERSAL BARRIER II</b>		
Oct. 18, 2004	Provide a Permanent Barrier to prevent non-indigenous aquatic species from traveling between the Mississippi River and Great Lakes drainage basins	Sec. 345 of P.L. 108-335
<b>CHICAGO RIVER, IL</b>		
(See Section 6 of Text)		
Mar. 3, 1899	For project depth of 21 feet in lieu of that fixed by act of Jun 3, 1896.	Specified in act.
Jun. 13, 1902	Turning basins	Specified in act.
Mar. 2, 1907	Interpreted by Chief of Engineers, April 11, 1908, as adopting new work of the then existing project for 21-foot depth.	H. Doc. 95, 56 <sup>th</sup> Cong. 1 <sup>st</sup> Sess. (Annual Report, 1900, p. 3863 and Annual Report 1909, p. 709)
Mar. 2, 1919	Eliminated all work except maintenance of main river.	H. Doc. 1294, 64 <sup>th</sup> Cong. 1 <sup>st</sup> Sess.
Jul. 24, 1946	Dredging channel 9 feet deep to within 30 feet of existing bulkheads and river banks from North Ave. to Belmont Ave., thence 9 feet deep and 50 feet wide to Addison St.	H. Doc 767, 78 <sup>th</sup> Cong., 2 <sup>nd</sup> Sess. <sup>6,7</sup>
<b>INDIANA HARBOR, IN</b>		

**CHICAGO, ILLINOIS, DISTRICT**

---

	(See Section 7 of Text)	
Jun 25, 1910	Maintenance of outer harbor. Maintenance of inner harbor channel when deeded free of cost to and accepted by the United States.	H. Doc. 1113, 60 <sup>th</sup> Cong., 2 <sup>nd</sup> Sess.
Mar. 4, 1913	Breakwaters.	H. Doc. 690, 62 <sup>nd</sup> Cong., 2 <sup>nd</sup> Sess.
Mar 2, 1919	Lighthouse crib, present length and alignment easterly and northerly breakwaters.	Rivers and Harbors Committee Doc. 6, 65 <sup>th</sup> Cong., 2 <sup>nd</sup> Sess.

**TABLE 22-B AUTHORIZING LEGISLATION**

Acts	Work Authorized	Documents
Mar. 20, 1922 Mar. 3, 1925	Reduce channel length to be maintained in extension to Lake George Authorized Secretary of War to modify project so far as relates to length and alignment of breakwaters and to sell Youngstown Steel and Tube Co. about 1,180 linear feet of shoreward end of existing north breakwater.	Public Law 176, 67 <sup>th</sup> Cong
Mar. 2, 1929 July 3, 1930 <sup>10</sup>	Accept 2.3 acres of land for construction of the Forks Turning Basin. Existing project channel width and depth in Lake George Branch and turning basin at the Forks	Rivers and Harbors Committee Doc. 21, 71 <sup>st</sup> Cong., 2 <sup>nd</sup> Sess.
Jul. 30, 1932	Authorized Secretary of War to sell to Inland Steel Co., about 1,903 linear feet of southerly end of existing east breakwater.	Public Law 219, 72 <sup>nd</sup> Cong.
Aug. 30, 1935 <sup>11</sup>	Extended easterly breakwater, dredge entrance channel and outer harbor, deepen channel between bulkhead fills, widen main stem of canal and portion of Calumet River Branch to 141 <sup>st</sup> St.	Rivers and Harbors Committee Doc. 29, 72 <sup>nd</sup> Cong., 1 <sup>st</sup> Sess.
Aug. 28, 1937	Modified conditions of local cooperation required before enlargement of Indiana Harbor Canal is undertaken by United States.	Rivers and Harbors Committee Doc. 13, 75 <sup>th</sup> Cong., 1 <sup>st</sup> Sess.
Jul. 14, 1960	Increase authorized depths of 29 feet in outer harbor entrance channel, 28 feet in outer harbor and 27 feet in canal entrance channel to first E. J. and E. Ry. Bridge.	H. Doc. 195, 86 <sup>th</sup> Cong. 1 <sup>st</sup> Sess.
Oct. 27, 1965 <sup>12</sup>	Deepen main canal from landward end of canal entrance channel to a point lakeward of Dickey Place Bridge over a modified channel width of 190 feet, except through bridge openings.	H. Doc. 227, 89 <sup>th</sup> Cong. 1 <sup>st</sup> Sess.
<b>INDIANA HARBOR CDF, IN</b> (See Section 8 of Text)		
<b>LAKE MICHIGAN DIVERSION</b> (See Section 9 of Text)		
Nov. 17, 1986	Responsible for monitoring of Lake Michigan Diversion.	Section 1142, WRDA of 1986
<b>MICHIGAN CITY HARBOR, IN</b> (See Section 10 of Text)		
	East breakwater and old east pier enclosing the outer basin.	Recommendations of a Board of Engineers, Annual Report 1870, p. 123.
	Extension of east pier.	Reports of Boards of Engineers, Annual Rpt 1851, pp. 2187-2189; Annual Report 1882, p. 2264-2266.
Mar. 3, 1889	Extend east pier and construct detached breakwater.	Annual Report 1897, pp. 2903-2904.
Mar 3, 1905	Lower turning basin. Rebuild west pier as at present location. Present project dimensions of entrance channel.	Joint Resolution of Cong. approved May 13, 1908. Public Law 23.

**TABLE 22-B AUTHORIZING LEGISLATION**

Acts	Work Authorized	Documents
Jun. 21, 1927	Existing project depth in channel, and in lower and middle turning basins, eliminated improvement of Trail Creek above middle turning basin and uncompleted portion of detached breakwater, abandonment of old east breakwater and old east pier enclosing outer basin.	H. Doc. 279, 69 <sup>th</sup> Cong., 1 <sup>st</sup> Sess.
Aug. 30, 1935	Restore and repair westerly 1,000 feet of east breakwater, dredging outer basin and enlarging entrance to basin through east pier.	River and Harbors Committee Doc 34, 74 <sup>th</sup> Cong., 1 <sup>st</sup> Sess.
Jul. 14, 1960 Sec. 107	Dredge river channel 50 feet wide and 6 feet deep from upper turning basin to E. Street Bridge.	Detailed Project Report dated June 1965 <sup>8</sup> .
<b>WAUKEGAN HARBOR, IL</b>		
(See Section 11 of Text)		
Jun. 14, 1880	Parallel piers and basins.	Annual Rpt 1880, p. 142
Aug. 3, 1882	Modified location of harbor entrance.	Annual Report 1882, pp. 277, 2162.
Jun. 13, 1902	Detached breakwater, extend piers, increase width of harbor at inner end of north pier and dredge channel and basin to depth of 20 feet.	H. Doc. 343, 56 <sup>th</sup> Cong., 1 <sup>st</sup> Sess.
Jul. 3, 1930	Extension of breakwater to shore, dredging near outer end of north piers and enlarging inner basin.	Rivers and Harbors Committee Doc 27, 71 <sup>st</sup> Cong., 2 <sup>nd</sup> Sess.
Mar. 2, 1945	Dredge an entrance channel to existing project dimensions from outer end of north pier to project depth in lake and dredge an anchorage area in southwest corner of inner basin to existing project depth. Abandonment of dredging triangular area in southwest corner of inner basin to 18 feet deep.	H. Doc. 116, 77 <sup>th</sup> Cong., 1 <sup>st</sup> Sess.
Dec. 17, 1970 Sec. 201	Provides for deepening the existing entrance channel in the outer harbor to 25 feet and extending to the depth in Lake Michigan, at	H. Doc. 368, 90 <sup>th</sup> Cong., 2 <sup>nd</sup> Sess.
Oct. 27, 1965	widths varying from 380 feet to 500 feet; deepening the channel between piers to a depth of 23 feet at a width of 180 feet and deepening the inner basin to 23 feet and extending its limits approximately 275 feet northward.	
<b>CASINO BEACH, IL</b>		
(See Section 15 of Text)		
Nov. 17, 1986	Provides for encasing approximately 1,800 feet of the existing Casino Beach jetty in steel sheet piling and a concrete cap and replacing beach fill.	Feasibility Report dated Feb. 1983.
<b>ILLINOIS BEACH STATE PARK, IL</b>		
(See Section 17 of Text)		
Nov. 17, 1986	Provides for 46 offshore breakwaters approximately 150 feet long, initial beach nourishment of 100,000 cubic yards and periodic nourishment of 100,000 cubic yards at 5-year intervals.	Feasibility Report dated June 1982.

**TABLE 22-B AUTHORIZING LEGISLATION**

Acts	Work Authorized	Documents
<b>INDIANA DUNES NATIONAL LAKESHORE, BEVERLY SHORES, IN</b>		
(See Section 18 of Text)		
Dec. 4, 1981	Provides for emergency shore protection repairs to stone revetment initially constructed in 1973.	Public Law 97-88
Jul. 30, 1983	Provides for operations and maintenance of shore protection measures.	Public Law 98-63
<b>INDIANA SHORELINE EROSION, IN</b>		
(See Section 19 of Text)		
Nov. 17, 1986	Beach nourishment of 2-mile reach of shore west of Michigan City Harbor, Indiana	Sec. 501, WRDA 1986
<b>DES PLAINES, IL</b>		
(See Sections 23 of Text)		
Aug. 17, 1999	Project has six structural features: Prospect Heights (Levee 37), Des Plaines (Levee 50), Big Bend Lake expansion, North Fork Mill Creek dam raise, Buffalo Creek expansion, Van Patten Woods lateral storage area.	Sec. 101, WRDA 1999
<b>LAKE GEORGE, HOBART, IN</b>		
(See Section 24 of Text)		
Nov. 17, 1986	Removal of silt, aquatic growth and construction of silt traps.	Sec. 602, WRDA 1986.
<b>LITTLE CALUMET RIVER, IN</b>		
(See Section 25 of Text)		
Nov 17, 1986	Provides for levee construction, a diversion control structure at the mouth of Hart Ditch. Permanent evacuation of a portion of the Black Oak area of Gary and non-structural flood proofing measures in Gary.	Sec. 401, WRDA 1986
Nov. 19, 2005	Authorizes project to exceed original Section 902 (b) cost limits. New total cost of \$198,000,000; fed share is \$148,500,000; non-fed share is \$49,500,000.	Sec. 127 of P.L. 109-103
<b>LITTLE CALUMET RIVER BASIN, CADY MARSH DITCH, IN</b>		
(See Section 26 of Text)		
Nov. 17, 1986	Widening and deepening 1,250 feet of Cady Marsh Ditch, installing 4,880 feet of pipe and excavating 2,850 feet of open channel.	Feasibility Report dated April 1984
<b>McCOOK AND THORNTON RESERVOIRS, IL</b>		
(See Section 27 of Text)		
Nov. 17, 1988	Provides for construction of two floodwater storage reservoirs in the quarries of the same name.	Sec. 3, WRDA 1988
<b>NORTH BRANCH CHICAGO RIVER, IL</b>		
(See Sections 22 and 28 of Text)		
Nov. 17, 1986	Construction of three reservoirs and reimbursement to locals for 50% of the costs of Techny and Mid-Fork Reservoirs	H. Doc. 100-72, 100 <sup>th</sup> Cong., 1 <sup>st</sup> Sess., Sec. 401, WRDA 1986.

### 1. CHICKAMAUGA LOCK AND DAM, TN

**Location.** Chickamauga Lock is seven miles northeast of Chattanooga at Tennessee River Mile 471.

**Existing Project.** The 60 feet x 360 feet lock has been in operation since 1940 and passes over 1.6 million tons of traffic each year. Soon after construction, TVA recognized that an alkali aggregate reaction problem (commonly called concrete growth) existed throughout the project. This expansion of the concrete leads to stability concerns throughout the structure and misalignment of mechanical components. The problem will continue to affect lock operations and eventually result in closure of the lock. TVA and the Corps have determined the lock could remain open until at least 2010 with annual aggressive maintenance but costs to maintain the lock will begin to exceed replacement costs.

**Project Description.** The existing lock will be replaced through construction of a 110 ft x 600 ft lock riverward of the existing structure and downstream of the dam. The work includes at least three major contracts; road, bridge and utilities relocations; cofferdam construction; and construction of the new lock and decommissioning of the existing lock. In February 1999 TVA provided funds (\$1.5M) to initiate feasibility studies for a Chickamauga Lock replacement. WRDA 00 directed the Corps to use TVA funds to prepare a Chief of Engineer's Report for a replacement lock. FY01 Supplemental Appropriations Act language directed that \$500K of Chickamauga O&M funds be used to complete the feasibility effort. The feasibility study was completed April 2002 at a cost of \$2M. A Chief's Report was signed in May 2002 recommending construction of a 75-foot x 400-foot replacement lock adjacent to the existing structure. Preconstruction engineering and design (PED) funds were provided in FY02 (\$364K) to evaluate innovative lock construction methods and initiate preliminary design. In FY03 Congress authorized a 110-ft x 600-ft lock replacement and funds (\$2.8M) were provided for design of road and utilities relocations, model construction and testing, and subsurface exploration to determine foundation conditions for the new lock. . FY04 funds were used to continue design and initiate project construction through relocations of mussel species and utilities

**Activities during fiscal year.** FY05 funds were used to complete design and award the road and bridge relocation contract. Funds were also used to advance design efforts for the lock and cofferdam.

### 2. CUMBERLAND RIVER, TN AND KY

**Location.** Formed by junction of Poor and Clover Forks in Harlan County, KY, about 694.2 miles above its mouth, and flows west to Burnside, KY, from whence it makes a loop southwestward into Tennessee, passes Nashville, and returns northwestward to Kentucky, emptying into Ohio River near

Smithland, KY (See Geological Survey base maps of Tennessee and Kentucky.)

**Previous projects.** For details see pages 1898 and 1901 of Annual Report for 1915, and page 1208 of Annual Report for 1938, and pages 1069 and 1070 of Annual Report for 1962.

**Existing project.** For details, see Annual Report for FY02.

**Local cooperation.** Under modified project for 9-foot navigation and multiple-purpose development, recreation features of reservoir components are subject to certain conditions of non-Federal cost-sharing under Federal Water Project Recreation Act of 1965.

**Terminal facilities.** There are 42 terminals on the Cumberland River (5 Municipally owned and open for public use; 5 government owned facilities and 32 privately owned facilities). A total of 18 terminals have railroad connections. Principal commodities handled are petroleum products, stone, sands, gravel, coal, coke, iron, steel, chemicals and grain. Facilities considered adequate for existing commerce. For further information see page 695 of Annual Report for 1969.

**Operations during fiscal year.** New work: None. Maintenance: Operations and Maintenance work included dewatering and repairs to Old Hickory and Cordell Hull Locks. Mooring cells were repaired at Barkley Lock. Repairs began on Old Hickory spillway gates. Major rehab studies were continued for Barkley Power Plant and Old Hickory Power Plant. Work continued on facility protection improvements at Cordell Hull and was completed at Barkley and Old Hickory. An estimated 22 million tons of commodities were locked through the Cumberland River Locks. Commercial lockages were approximately 5,400 and 4,500 recreational craft were also locked through. Total sales energy generated at Barkley Dam (810,318,686 kw-hr) was made available through Southeastern Power Association to the Tennessee Valley Authority, Southern Illinois Power Cooperative, Big Rivers Rural Electric Cooperative Corporation, and Indiana Statewide Rural Electric Cooperative, Inc., Hoosier Energy Division. Total sales energy generated at Cheatham Dam (199,723,565 kw-hr), Cordell Hull (470,820,546 kw-hr), and Old Hickory (577,070,210 kw-hr) was made available for distribution. Activities under reservoir management program comprising malaria control, shoreline sanitation, land management and disposal, and maintenance of public-use facilities continued.

### 3. KENTUCKY LOCK ADDITION, KY

**Location.** Kentucky Lock and Dam is located in western Kentucky at Mile 22.4 of the Tennessee River between Livingston and Marshall Counties.

**Existing Project.** Kentucky L&D was completed in 1945 by the Tennessee Valley Authority. TVA continues to operate the dam and powerhouse while operation of the 110'x600' navigation lock is the responsibility of the Nashville District. Products from 20 states pass through the system of Kentucky and Barkley Locks, the lower-most locks on the Tennessee and Cumberland Rivers, respectively. Over 80% of the commercial tows hauling these products pass through KY

Lock instead of Barkley Lock because of difficult and costly navigation on the Cumberland River below Barkley. Since most of the tows are greater than 600' in length, they must perform a time-consuming double lockage to transit through the existing 600' long KY Lock. This results in average delays between three to five hours per tow under existing traffic levels. Since the traffic levels are expected to grow in the near future, these delays will also increase. The last traffic forecast developed in 1995 estimated that 43 M tons of products would be transported through the Kentucky-Barkley system in the year 2000. Actual tonnage for the system in 1997 was 43.5 M tons and has leveled out and decreased slightly over the few years since. The system tonnage in 2004 was 39.6 M tons. It typically costs a tow over \$400/hour to wait in line at the lock. Construction of a new 1200' lock would eliminate the delay time in the near term and drastically shorten it for forecasted traffic levels past the year 2020.

**Project Description.** The 1992 Kentucky Lock Feasibility report recommended a new 110' X 1200' lock adjacent and landward of the existing 110' X 600' lock. The project was authorized for construction in WRDA 96. Average annual benefits attributed to a new lock are \$71M (October 2003). Most of these benefits are associated with improving the performance of the lock by reducing traffic delays and disruptive lock outages for maintenance and major rehabilitation work. Based on an estimated construction cost of \$642M (October 2005), the new lock project has a Benefit/Cost ratio of 1.7 (@7%). Other project features in addition to the new lock itself are three major relocation efforts: 1) four large TVA transmission towers, 2) about 2 miles of the Paducah and Louisville Railway, including a major river bridge, and 3) about 2 miles of U.S. Highway 62, also on a new major river bridge.

**Activities during fiscal year.** FY 2005 funding of \$28.4 M was used to advance the design of the project, continue construction on two contracts: 1) the Tennessee River Bridges' Substructures (95% complete), and 2) the Upstream Cofferdam (90% complete); and award two new construction contracts: 1) the \$8M East Bank Approaches (awarded August 2005) and 2) the \$88.6M Bridges Superstructure (awarded September 2005). Significant design activities that were progressed in the FY include design of the lock including advancements in wall monoliths and electrical/mechanical features. Plans and Specifications were essentially completed for the upcoming Upstream Lock Excavation construction contract.

#### 4. TENNESSEE RIVER, TN, AL AND KY

**Location.** Formed by junction of French Broad and Holston Rivers in eastern Tennessee, 4.4 miles above Gay Street Bridge at Knoxville, flows southwest into northern Alabama, thence in a generally westerly course across north Alabama, to northeast boundary of Mississippi, thence nearly due north across Tennessee and Kentucky, entering Ohio River at Paducah, 652.1 miles from junction of French Broad and

Holston Rivers. (See Geological survey base map of Tennessee River Basin.)

Previous projects. For details see pages 1902-1906, Annual Report for 1915; pages 1190-1194, 1196-1216, and 1220-1222, Annual Report for 1929; and page 1216, Annual Report for 1938.

**Existing project.** Originally provided for permanent improvement of river for a navigable depth of 9 feet at low water from mouth about 650 miles to Knoxville, TN. Only work performed by the Corps was construction of locks at General Joe Wheeler Dam and Wilson Dam. Tennessee Valley Authority program provided for obtaining authorized 9-foot project by construction of high dams and locks and utilization of certain locks and dams previously constructed under jurisdiction of the Corps. (See Table 23-B for Authorizing Legislation.) Subsequent construction by the TVA of Melton Hill Dam extends navigable channel of Tennessee River system up the Clinch River about 38 miles above damsite (mile 23.1) to vicinity of Clinton, TN. (See table 23-I on Tennessee River.) In accordance with general navigation laws placing control and supervision over navigable waters under direction of Secretary of the Army, the Corps of Engineers operates and maintains all locks, and maintains navigation channels and safety harbors by performing all necessary maintenance dredging and snagging operations. For information concerning other functions of the Corps under division of responsibilities for Tennessee River since adoption of Tennessee Valley Authority Act of 1933, see page 1084 of Annual Report for 1962.

**Local cooperation.** Authorization requires no local cooperation in construction of alternate system of low dams. It does, however, provide that if high dams are built before the United States builds projected locks and low dams which are to be replaced, the United States shall contribute to cost of substituted structures an amount equal to estimated cost of works of navigation for which substitution is made.

**Terminal facilities.** There are 150 terminals on the Tennessee River (13 municipally owned, 15 government owned facilities and 122 privately owned facilities). A total of 79 terminals have railroad connections. Principal commodities handled are petroleum products, stone, sand, gravel, coal, coke, grain, chemicals, iron, and steel. Facilities considered adequate for existing commerce. A list of terminals is revised annually and can be obtained from Division Engineer, Ohio River Division, Corps of Engineers, Cincinnati, Ohio. For further information see page 698 of Annual Report for 1969.

**Operations during fiscal year.** Channel work by government plant and hired labor consisted of dredging and snagging at various locations, and maintenance of mooring facilities and safety harbors. Cost of channel maintenance was \$1,408. Maintenance: Major maintenance included repairs to mooring cells at Watts Bar & Kentucky Locks. Placed mooring floats and weights at Ft Loudoun Lock and replaced three mooring floats above Wheeler Lock. Approximately 150,000 cubic yards of material were dredged for hired labor channel maintenance at Looney and Post Oak Islands. An

estimated 52.4 million tons of commodities were locked through the Tennessee River Locks. Commercial lockages were approximately 18,700 and 18,500 recreational craft were also locked through. The long-term program of maintenance continues to keep the Chickamauga Lock operational. Analysis of the lock also continues with three scoped and awarded contracts. An instrumentation report was completed which cleaned up the instrument database and provided information used for two finite element analysis contracts. One of the finite element analysis contracts will provide information on the stability of the downstream approach wall and the monolith which holds the bridge pier, while the other looks at the integrity of the gate embeds on monolith 47.

**5. TENNESSEE-TOMBIGBEE WATERWAY, AL AND MS**

**Location.** West Central Alabama and Northeastern Mississippi; in Marengo, Sumter, Greene and Pickens Counties, Alabama, and Noxubee, Lowndes, Clay, Monroe, Itawamba, Prentiss and Tishomingo Counties, Mississippi.

**Existing project.** For details, see Annual Report for FY02.

**Local cooperation.** Authorization requires local interests to construct, maintain and operate all highway bridges, construct and maintain all highway relocations or alterations, make and maintain alterations as required to sewer, water supply and drainage facilities, assume cost of operation and maintenance of utility crossings, provide and maintain as required suitable and adequate river and canal terminals in accordance with plans approved by the Secretary of the Army and the Chief of Engineers.

**Operations during fiscal year.** The Mobile District is responsible for operation and maintenance of the entire Tennessee-Tombigbee Waterway. The project is 100% complete.

**6. NAVIGATION WORK UNDER SPECIAL AUTHORIZATION**

*Navigation activities pursuant to Sec. 107, Public Law 86-645, as amended (preauthorization).*

During FY05 a total of \$7,806 were expended for Section 107 projects, \$3,451 for Barton Riverfront Park, TN River, Muscle Shoals, AL, \$3,589 for Point Mallard Park, Decatur, AL, and \$766 for Tri-State Commerce Park, Luica, MS.

**ALTERATION OF BRIDGES**

**7. AUTHORIZED ALTERATION OF BRIDGES**

Work on Woodland Street Bridge, under Truman-Hobbs Act, was initiated in 1965 and completed in 1966. Costs were \$987,632. For details see page 922 of Annual Report for 1967.

**FLOOD CONTROL**

**8. BIG SOUTH FORK NATIONAL RIVER AND RECREATIONAL AREA, KY AND TN**

**Location.** The project is located in Northeastern Tennessee and Southeastern Kentucky along the Big South Fork River and its tributaries in Pickett, Scott, Fentress, and Morgan Counties, Tennessee, and McCreary County, Kentucky.

**Existing project.** A National River and Recreation Area was established in accordance with the concept included in the interagency report prepared pursuant to section 208 of Flood Control Act of 1968. Total acreage was not to exceed 125,000 acres. The act specifically established the National Area for the purpose of preserving and interpreting the scenic, biological, archeological and historical resources of the river gorge area and developing the natural recreational potential of the area. The project was authorized by the Water Resource Development Acts of 1974, 1976, and 1986. (See table 23B for authorizing legislation). The authorized cost (ceiling) for the project was \$156,122,000. \$112,588,920 was appropriated to the Corps of Engineers for design and construction of park facilities. The first construction contract was awarded in June 1981. By Memorandum of Agreement dated 1 October 1990 jurisdiction of the area was transferred to The Department of Interior.

**Local cooperation.** None required.

**Operation during fiscal year.** The Memorandum of Agreement between the Department of Army and the Department of Interior, transferring jurisdiction of the Big South Fork National River and Recreation Area, itemized activities to be completed by the Army. No construction items were completed this fiscal year.

**9. BLACK FOX, MURFREE, AND OAKLAND SPRINGS, TN**

**Location.** Black Fox, Murfree, and Oaklands Springs, wetlands lie in Murfreesboro, Tennessee.

**Existing project.** Project features include trails, boardwalks, observation platforms, parking, removing exotic invasive vegetation, and planting native species. At Oaklands, the existing ante-bellum mansion will be enhanced by planting tree species native to Tennessee. Ecosystem restoration features include the creation of additional wetlands and in-stream structures. Murfree Springs plans include demolishing several existing buildings to provide space for an environmental education center and creating additional wetland habitat. Only ecosystem restoration measures will be constructed at Black Fox. Funding was provided from FY95 thru FY02 for Master Plan, Design, and Construction on Murfree, Oaklands and Black Fox. The Oaklands Phase I and Murfree Springs Phase II contracts were awarded in Sep 01 and construction continued through FY02 and FY03. Construction at Black Fox was initiated in Oct 01 and completed in Dec 02. A supplement to the decision document was completed in May 02 and approved by the Assistant Secretary of the Army for Civil Works in Dec 02. FY03 appropriations were used to bring the Phase I Oaklands and

Phase II Murfree contracts to 99% completion. Design of Oaklands Phase II and Murfree Phase III and the interpretive features was also initiated. FY04 appropriations were used to complete design of Oaklands Phase II and Murfree Phase III, initiate fabrication and installation of the signs and initiate a design contract to complete the project.

**Local cooperation.** The project authorization by WRDA 96 and the City of Murfreesboro, TN is the local sponsor. Cost sharing is 75% Federal and 25% non-Federal. Real estate costs over 25% will be borne by the Federal Government.

**Operations during fiscal year.** In FY05, carryover funds were used to initiate construction of Oaklands Phase II and Murfree Phase III. Sign installation and the final design contract were also completed.

#### 10. HAMILTON COUNTY STREAMBANK STABILIZATION, TN

**Location.** The project is on the Tennessee River, in central Chattanooga, TN from approximate river mile 464 to 468. The bank stabilization consists of stone protection at 5 sites along this reach of the river.

**Existing project:** High floodwaters have caused slope failures and erosion along both previously protected and unprotected areas of the riverbank. Endangered facilities include a large interceptor sewer line (which serves a major portion of North Chattanooga), riverwalk trails, observation decks, fishing piers, drain pipes, ramps, power poles, roads, bridge abutments and parks/recreation facilities. Streambank protection is stone armament using graded limestone (referred to as "riprap").

**Local cooperation:** WRDA of 1996 authorized \$7.5 M (Federal) for Streambank Stabilization. Hamilton County is the project's sponsor; the City of Chattanooga is also sponsoring the project through a separate agreement with Hamilton County. Chattanooga and Hamilton County provided funding to initiate a feasibility study in FY97 (\$150K) under our Work for Others Program. This information was the basis for development of the decision document called a Detailed Project Report (DPR). Congress appropriated \$6.0M through \$1.5M increments each for FY98 through FY01. The Corps has received \$4.23M in Federal funds during this time and has expended \$4.1M through September 03. We have prepared a Detailed Project Report (DPR) and Environmental Assessment (EA), executed a Project Cooperation Agreement (PCA) and completed construction on 4-1/2 of 5 sites. Sites 1 through 4 (Coolidge Park, Heritage Landing and Manker Patten to Curtis Pole Road) were completed in 2000. Construction was completed on the lower two-thirds of Site 5 - Rivermont Park to Crutchfield Bar during FY02.

**Operations during fiscal year:** The project was completed and fiscally closed-out.

#### 11. MARTINS FORK LAKE, KY

**Location.** Dam located at mile 15.6 on Martins Fork of Clover Fork, Cumberland River, about 10 miles southeast of

city of Harlan, with reservoir extending about 6 miles upstream within Harlan County, southeastern Kentucky.

**Existing project.** Multiple-purpose improvement Combining flood control with water quality control and recreation development adopted by 1965 Flood Control Act (H.Doc. 244, 89th Cong.), in general accordance with recommendations. Dam is concrete type, 504 feet long and rising 97 feet above streambed. Outlet works provide for release of water from reservoir at varying levels. Drainage area above damsite is 55.7 square miles. At full pool level, spillway crest at elevation 1341 above mean sea level, reservoir will cover 578 acres and contain 21,120 acre-feet of storage capacity. Provision is made for 17,450 acre-feet of reservoir capacity between elevations 1341 and 1300 for control of floods in winter and spring season, and 14,360 acre-feet (El. 1341-1310) during summer and fall, in conjunction with which storage of 3,090 acre-feet would be available on a seasonal basis to meet streamflow requirements for water quality control and fish life below the dam. A minimum permanent pool of 3,670 acre-feet, 274 acres in extent, is available during the potential flood seasons; and during late spring and summer when flood storage can be reduced, the lake is operated generally at a higher level (El. 1310) to maintain a larger surface area of 340 acres for recreation and provide the required seasonal storage for releases of water during critical low-flow periods. Project prevents a major portion of average annual flood losses at Harlan and results in significant stage reductions with related benefits along rural reaches and to other urban areas downstream. Actual cost of project including \$95,000 code 710 funds is \$20,479,911. First construction contract awarded in December 1972. Project completed for beneficial use in September 1978.

**Local cooperation.** Federal Water Project Recreation Act of 1965 (P.L. 89-72) applies in regard to non-Federal participation in recreation development, in addition to which local interests are to provide certain safeguards to ensure functioning of reservoir as intended. In May 1981 a final recreation cost-sharing contract with Harlan County was approved and certain recreation facilities have been jointly developed by the Corps and the County. These facilities, consisting of a swimming beach and a picnic area are now operated and maintained by Harlan County. Recreation investment to date (Corps and Local) is about \$100,000.

**Operations during fiscal year.** New work: None. Maintenance: Only routine maintenance.

#### 12. MIDDLESBORO, CUMBERLAND RIVER BASIN, KY

**Location.** At Middlesboro, Ky., on Yellow Creek, a tributary entering Cumberland River about 660 miles above its mouth.

**Existing project.** A system of canals and levees around one side of town, arranged so as to divert most headwaters of Yellow Creek away from present channel through heart of city. Protection is thus afforded in large measure to life and property within business district and a large part of residential

section. For project details, see page 1088 of Annual Report for 1962.

**Local cooperation.** None required.

**Operations during fiscal year.** New work: None.  
Maintenance: Only routine maintenance.

**13. TUG AND LEVISA FORKS OF THE  
BIG SANDY RIVER AND UPPER  
CUMBERLAND, WV, VA AND KY**

**Location.** The project is located in the State of West Virginia and the Commonwealths of Kentucky and Virginia. The Cumberland portion consists of the Upper Cumberland River Basin, above Cumberland Falls, KY. The basin is approximately 100 miles in length, averaging 30 miles in width at the lower portion and 10 miles in width upstream at Harlan KY. The Big Sandy Basin is within the Huntington District and the Cumberland within the Nashville District.

**Existing project.** Provides for flood control measures for communities in the Tug and Levisa Forks and Upper Cumberland River Basins. The Cumberland portion has been assigned to the Nashville District. Only activities of the Nashville District are reported herein. Estimated Federal cost of new work under jurisdiction of the Nashville District is \$464,731,000. The project was authorized by the Energy and Water Development Appropriation Act of 1981, Section 202 of PL 96-367.

**Local cooperation.** Flood protection costs for City of Cumberland, Middlesborough, Harlan County, and Clover Fork Projects are shared with their sponsors in accordance with provisions defined by WRDA 86. The sponsors have responsibility to operate and maintain such works upon completion of construction.

**Operations during fiscal year.** Nonstructural evacuations and floodproofings continued in the Clover Fork, Poor Fork, and Cumberland River basins. A project cooperation agreement was executed with the City of Cumberland in Harlan County, KY.

**14. OHIO RIVER BASIN  
(NASHVILLE DISTRICT)**

**Location.** A series of levees, floodwalls, channel improvements, and reservoirs in Ohio River Basin within Nashville District.

**Existing project.** The general comprehensive plans approved for flood control and other purposes in Ohio River Basin is set forth in legislation listed in Table 23-B. Individual projects, local protection projects and lakes, considered in comprehensive plan within Nashville District are listed in Table 23-K.

**15. INSPECTION OF COMPLETED  
FLOOD CONTROL PROJECTS**

Flood Control Act of June 22, 1936, and subsequent acts, requires local interests furnish assurances they will maintain and operate certain local protection projects after completion in accordance with regulations prescribed by Secretary of the

Army. District Engineers are responsible for administration of these regulations within their respective districts. Maintenance inspections were made during fiscal year of completed protective works in localities transferred to local interests for maintenance and operation. Local interests were advised, as necessary, of measures required to maintain projects in accordance with standards prescribed by regulations. Fiscal year cost was \$38,221. Total cost to September 30, 2005 was \$690,118. For project inspection data see table 23-M.

**16. FLOOD CONTROL WORK UNDER  
SPECIAL AUTHORIZATION**

Flood control and coastal emergencies (Public Law 99, 84th Cong., and antecedent legislation). Actual Federal cost for the fiscal year was \$366,493 for disaster preparedness.

**MULTIPLE-PURPOSE PROJECTS,  
INCLUDING POWER**

**17. CENTER HILL LAKE, OHIO  
RIVER BASIN, TN**

**Location.** Dam is on Caney Fork River, 26.6 miles above its confluence with Cumberland River (mile 309.2) at Carthage, TN. It is in DeKalb County, TN., about 55 miles east of Nashville, and 14 miles southeast of Carthage, TN. Reservoir extends about 64 miles up main stream and about 10 miles up Falling Water River and lies within DeKalb, Putnam, White, and Warren Counties, TN.

**Existing project.** A combination earth and concrete gravity-type dam, hydroelectric powerplant, and reservoir for primary purposes of flood control and power production, with a permanent pool for public use and conservation purposes. In addition to main dam structure, provision was made for a rolled-earth dike to close a saddle in reservoir rim near damsite. For further details, see page 1099 of 1962 Annual Report. Actual cost of project including \$8,940,642 code 710 funds is \$53,412,022.

**Local cooperation.** None required on completed project. Recreation development subject to certain conditions of non-Federal cost-sharing under Federal Water Project Recreation Act of 1965.

**Operations during fiscal year.** New work: None. Maintenance: Dam was operated and structure and its appurtenance maintained as required. Operation of powerplant was continuous except for normal interruptions and necessary shutdowns for inspection and maintenance purposes. Total sales energy generated (354,669,000 kw-hr) was made available through the Southeastern Power Association to Tennessee Valley Authority for distribution. Activities under reservoir management involved land management, public relations, and maintenance of public use facilities. Operations and Maintenance work included continued investigation of leakage through the rim of the dam. A major rehab study of the power plant was continued. Work was started on the dam

to remediate concrete growth. Work continued on facility protection improvements.

**18. DALE HOLLOW LAKE, OHIO  
RIVER BASIN, TN AND KY**

**Location.** Dam is on Obey River, 7.3 miles above its confluence with Cumberland River (mile 380.9) at Celina, TN. It is in Clay County, TN, and about 80 miles northeast of Nashville, TN 28 miles north of Cookeville, TN, and 3 miles east of Celina, TN. Reservoir extends about 51 miles up main stream, 10 miles up East Fork, and 6 miles up West Fork of Obey River, and lies within Cumberland and Clinton Counties, KY, and Clay, Pickett, Overton, and Fentress Counties, TN.

**Existing project.** A concrete gravity-type dam, hydroelectric powerplant, and reservoir for primary purposes of flood control and power production with a permanent pool for public use and conservation purposes. See page 1096 of 1962 Annual Report for project details. Cost of project including \$2,195,600 code 710 funds and \$150,000 non-Federal funds recreation facilities under the completed projects program is \$28,317,746.

**Local cooperation.** None required on completed project; future recreation development subject to certain conditions of non-Federal cost-sharing under Federal Water Project Recreation Act of 1965.

**Operations during fiscal year.** New work: None. Maintenance: Dam was operated and structures and appurtenances maintained as required. Operation of powerplant was continuous except for normal interruptions and necessary shutdowns for inspection and maintenance purposes. Total sales energy generated (158,427,000 kw-hr) was made available through the Southeastern Power Association to Tennessee Valley Authority for distribution. Activities under reservoir management program involved public relations, and management and maintenance of public-use facilities. Work continued on facility protection improvements. An additional voltage transformer was installed in the power plant.

**19. J. PERCY PRIEST DAM AND  
RESERVOIR, OHIO, RIVER  
BASIN, TN**

**Location.** Damsite is on Stones River, 6.8 miles above its confluence with Cumberland River (mile 205.9); in Davidson County, TN.; and about 7 miles east of Nashville, TN. Reservoir extends southeasterly from dam about 32 miles along main stream, 10 miles up East Fork, 6.5 miles up West Fork, and for shorter distances up other tributaries of Stones River; and lies within Davidson, Rutherford, and Wilson Counties, TN.

**Existing project.** A combination earth and concrete gravity-type dam, hydroelectric powerplant, and reservoir for primary purposes of flood control, power production and recreation. For further details see page 703 of 1969 Annual Report. Cost of project including \$3,260,400 under code 710

funds and \$46,000 non-Federal funds for recreation facilities under the completed projects program is \$56,914,039.

**Local cooperation.** Recreation development subject to certain conditions of non-Federal cost-sharing under Federal Water Project Recreation Act of 1965.

**Operations during fiscal year.** New work: None. Maintenance: Dam was operated and structures and appurtenances maintained as required. Total sales energy generated (67,734,600 kw-hr) was made available through Southeastern Power Association to Tennessee Valley Authority for distribution. Activities under reservoir management program involved public relations, fish and wildlife management, and maintenance of public-use facilities. Work continued on facility protection improvements.

**20. LAUREL RIVER LAKE, OHIO  
RIVER BASIN, KY**

**Location.** Damsite is at mile 2.3 on Laurel River, a tributary of Cumberland River, in south-central Kentucky. The two streams meet about 9 miles below Cumberland Falls, a prominent physiographic feature at head of Lake Cumberland, which is formed by Wolf Creek Dam. Reservoir extends 19.2 miles upstream to site of Corbin, KY water-supply dam and lies within Laurel and Whitley Counties.

**Existing project.** Project approved in general accordance with recommendations of House Document 413, 86th Congress, by 1960 Flood Control Act, as amended by Public Law 88-253, was designed for purposes of flood control, power, and recreation as an integral unit of a coordinated plan for development of water resources of Cumberland River Basin. With the view of net gain in power potential on a system basis, the plan of improvement incorporated appropriate flood control storage in the proposed project and corresponding adjustment in operations of Wolf Creek Dam - Lake Cumberland for flood control and power, which in effect constituted a transfer of reservoir capacity without entailing a change in flood control benefits. Further detailed study giving full consideration to power capabilities and marketing arrangements indicated the advantage of maintaining present storage allocation at Wolf Creek and use of all available storage capacity of Laurel River Lake for power. The power plant is complete. Recreation was completed in FY86. Total cost is \$56,741,232.

**Local cooperation.** None required.

**Operations during fiscal year.** New work: None. Maintenance: Dam was operated and structures and Appurtenances maintained as required. Total sales energy generated (72,983,000 kw-hr) was made available through Southeastern Power Association for distribution. A portable generator was purchased for the power plant.

**21. WOLF CREEK DAM - LAKE  
CUMBERLAND, OHIO RIVER  
BASIN, KY**

**Location.** Wolf Creek Dam is on Cumberland River at mile 460.0 (above mouth) in Russell County, KY, about 10

miles southwest of Jamestown and 12 miles north of Albany, KY. Lake Cumberland extends 101 miles up main stream, 48 miles up South Fork of Cumberland River, in Russell, Clinton, Wayne, Pulaski, McCreary, Laurel, and Whitley Counties, KY.

**Existing project.** A combination earth and concrete gravity-type dam, hydroelectric powerplant, and reservoir for primary purposes of flood control and power production, with a permanent pool for public-use and conservation purposes. See page 1094 of 1962 Annual Report for project details. Cost of project is \$188,267,195. This cost includes \$3,259,372 code 710 funds, \$880,000 non-Federal funds for recreation facilities under the completed pro-gram, and \$104,999,237 for major rehabilitation. WRDA 96 authorized an Uprate Project of the hydroelectric power-plant. Activity involving the integrity of the structure began in 1968 when a leak or seepage developed in the embankment. The major rehab embankment contract was physically completed in September 1982.

**Local cooperation.** None required on completed project; future recreation development subject to certain conditions of non-Federal cost-sharing under Federal Water Project Recreation Act of 1965.

**Operations during fiscal year.** New work: None. Maintenance: Dam was operated and structures and appurtenances maintained as required. Operation of powerplant was continuous except for normal interruptions and necessary shutdowns for inspection and maintenance purposes. Total sales energy generated (1,113,825,000 kw-hr) was made available through Southeastern Power Association to Tennessee Valley Authority for distribution. Activities under reservoir management program involved land management activities, public relations, and maintenance of public-use facilities. Operations and Maintenance work included completing concrete crack repairs and approved report of investigation of seepage through the dam. The PRIDE of the Cumberland debris removal floating plant started operation. Work was completed for facility protection improvements at the dam. A major rehab study of the power plant was continued. Work continued on rehab of the power plant overhead crane and rewind of generator unit 4.

**Dam Safety:** Initial plans for the design of the cutoff wall were begun such as required relocations and physical layout of a contractor staging area. The district began preparation of dam failure inundation mapping for downstream emergency management personnel. Also, public involvement and a communication plan were initiated. These included establishing a website and various briefings and public meetings. Total funds expended were \$33,073.

## GENERAL INVESTIGATIONS

### 22. SURVEYS

Costs for this period were \$536,737 for which \$60,910 was for Navigation Studies, \$217,528 for Flood Damage Prevention Studies, \$207,305 for Special Studies, \$36,551 for

Miscellaneous Activities and \$14,443 for Coordination With Other Agencies and Non-Federal Interests.

### 23. COLLECTION AND STUDY OF BASIC DATA

Costs for this period were \$98,900, for which \$95,968 was for Floodplain Management Services and \$2,932 for General Hydrologic studies.

### 24. PRECONSTRUCTION ENGINEERING AND DESIGN

Costs for this period were \$63,017 for Local Protection (\$63,017 for East Ridge Hamilton County, TN).

NASHVILLE, TN, DISTRICT

**AUTHORIZING LEGISLATION**

<b>See Section In Text</b>	<b>Date of Authorizing Act</b>	<b>Project and Work Authorized</b>	<b>Documents</b>
	Oct 1, 1980	Design and construct flood control measures for communities in the Upper Cumberland River basins.	Sec. 202, PL 96-367
	Oct 17, 1996	Authorized ecosystem restoration at three wetlands and historic sites in Murfreesboro, TN.	WRDA 96
	Oct 12, 1996	Authorized hydropower update at Wolf Creek Dam	WRDA 96
<b>4.</b>		<b>TENNESSEE RIVER</b>	
	Jul 3, 1930	Authorized navigable depth of 9 feet from mouth about 650 miles to Knoxville, Tennessee to be obtained by construction of low dams.	H. Doc. 328, 71st Cong., 2d sess.
	May 18, 1933	Authorized TVA to construct such dams in the Tennessee River as will provide a 9 foot channel.	
	Oct 12, 1996	Authorized flood damage reduction by nonstructural methods in Hamilton County, TN.	WRDA 96
	Oct 12, 1996	Authorized a study for a bank stabilization project on the Tennessee River in Hamilton County, TN.	WRDA 96
	Oct 12, 1996	Authorized assistance to non-Federal interests for environmental activities in Jackson County, AL.	WRDA 96
<b>14.</b>		<b>OHIO RIVER BASIN, NASHVILLE DISTRICT</b>	
	Aug 28, 1937	Construct levees, floodwalls, and drainage structures for protection of cities and towns in Ohio River Basin. Project to be selected by Chief of Engineers with approval of Secretary of War at a cost not to exceed \$24,877,000 for construction.	Flood Control Committee Doc. 1, 5th Cong., 1st sess.
	Jun 28, 1938	Approved general comprehensive plan for flood control and other purposes in Ohio River Basin as may be advisable at discretion of Secretary of War and Chief of Engineers and for initiation and partial accomplishment of plan, authorized \$75million for reservoirs and \$50,300,000 for local flood protection works.	Flood Control Committee Doc. 761, 75th Cong., 3d sess.
	Aug 18, 1941	Additional \$45 million for prosecution of comprehensive plan for Ohio River Basin.	
	Dec 22, 1944	Additional \$70 million for further prosecution of comprehensive plan for Ohio River Basin.	H. Doc. 762, 77th Cong., 2d sess.
	Jul 24, 1946	Additional \$125 million for further prosecution of comprehensive plan.	H. Doc. 506, 78th Cong., 1st sess.
	May 17, 1950	Additional \$100 million for prosecution of comprehensive plan for Ohio River Basin.	
	Dec 30, 1963	Additional \$150 million for further prosecution of comprehensive plan for flood control and other purpose in Ohio River Basin.	

**REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES, FY 2005**

**TABLE 23-B** **AUTHORIZING LELGISLATION**  
*(continued)*

<b>See Section In Text</b>	<b>Date of Authorizing Act</b>	<b>Project and Work Authorized</b>	<b>Documents</b>
	Jun 18, 1965	Additional \$89 million for further prosecution of comprehensive plan for Ohio River Basin.	H. Doc. 6755, 89th Cong., 1st sess.
	Aug 13, 1968	Additional \$35 million for further prosecution of comprehensive plan for Ohio River Basin.	S. 3710, 90th Cong., 2d sess.
	Jun 19, 1970	Additional \$69 million for further prosecution of comprehensive plan for Ohio River Basin.	H. R. 15166 91st Cong., 2d sess.
	Mar 7, 1974	Authorized Big South Fork National River and Recreation Area, KY and TN. Total area not to exceed 125,000 acres.	H. R. 10203 93rd Cong. Water Resources Develop. Act of 1974 Amended by PL 94-587, 94th Cong.
	Mar 7, 1974	Additional \$120 million for further prosecution of comprehensive plan for Ohio River Basin.	H. R. 10203 93rd Cong. River Basin Monetary Authorization Act of 1974.
<b>5.</b>		<b>TENNESSEE-TOMBIGBEE WATERWAY</b>	
	Jul 24, 1946	Construction of waterway to connect above rivers and provide a 9 foot channel and minimum bottom width of 170 feet in river and canal sections and 150 feet in the divide cut, with locks 110 by 600 feet clear inside dimensions.	H. Doc. 486, 79th Cong. 2d sess.
		Subsequent studies determined most practical plan consists of channel with bottom width of 300 feet (280 feet in divide cut), fewer locks with higher lifts resulted in reducing number of lifts from 18 to 10 and reduced length from 260 to 253 miles.	Page 1343, Part I, FY68 House Hearings

1. Contains latest published maps. Included in Public Works Administration Program Sept. 6, 1993.  
 2. Permanent Appropriation Repeal Act.

**(See Section 1 of Text)**

1. Clear width and length available for full width.
2. Exclusive of lock section.
3. Surcharge.
4. Normal operation (elv. 375-359) during nonflood season; flood control allowance to be increased to 1,472,000 acre-feet (elev. 375-354) during season of major floodflows.
5. Surcharge storage.
6. During flood season (3lev. 508-501); minimum 51,800 acre-feet (elev. 508-504) with normal operation during non-flood season.
7. Daily pondage allowance; run-of-river project.
8. Completed for full beneficial use.
9. Includes recreation facility costs.
10. Includes \$15,557,895 cost for Cross Creek.

# LOUISVILLE, KY DISTRICT

This district encompasses southwestern Ohio, all of Central Kentucky and portions of western and eastern Kentucky, the southern 3/4 of Indiana, and southeastern Illinois, all included in the drainage basin of the Ohio River and its tributaries (exclusive of Tennessee and Cumberland Rivers) from mile 438 (below Pittsburgh)

immediately upstream from Foster, KY., to the mouth of the Ohio.

All cost and financial statements for projects are listed at the end of this chapter. All other tables are referenced in text and also appear at the end of this chapter.

## IMPROVEMENTS

### Navigation - Channels and Harbors

1. Open Channel Work, Licking River, KY .....	24-2
---	------

### Navigation - Locks and Dams

2. Construction of Locks and Dams, Ohio River .....	24-2
3. Green and Barren Rivers, KY .....	24-2

**Navigation - Channels and Harbors**

**1. OPEN CHANNEL WORK, LICKING RIVER, KY**

**Location.** The Licking River originates in southeastern Kentucky and flows generally northwesterly to its confluence with the Ohio River at Covington, KY, mile 470.2 below Pittsburgh, PA. The Licking River Basin includes the drainage area of the Licking River, and all other left bank tributaries of the Ohio River from Markland Locks and Dam (Ohio River Mile 531.5) upstream to Meldahl Locks and Dam (Ohio River Mile 436.2).

**Existing project.** There are no locks and dams on the Licking River. However, a navigable depth of 9 feet is maintained up to mile 7.0 on the Licking River.

**Local Cooperation.** None.

**Terminal facilities.** Facilities for bulk commodities, oil products, and coal are considered adequate for existing traffic.

**Operations during fiscal year.** New Work: None. Maintenance: None.

**Navigation - Locks and Dams**

**2. CONSTRUCTION OF LOCKS AND DAMS, OHIO RIVER**

For report on this improvement, see the heading under Ohio River.

**3. GREEN AND BARREN RIVERS, KY**

**Location.** Green River rises in Casey County, KY, flows northwesterly 370 miles, and empties into the Ohio River about 8 miles above Evansville, IN. Barren River rises in Monroe County, KY, flows northwesterly 130 miles, and empties into Green River 1/2 mile above Lock 4 and 149.5 miles above the mouth of Green River.

**Existing project.** Six locks and dams on Green River and one on Barren River were constructed in pools of dams to provide a navigable depth of 9 feet and width of 200 feet from the Ohio River to mile 103 Green River, 3.2 miles upstream from Paradise, KY and a navigable depth of 5.5 feet from mile 103 Green River to Mammoth Cave, KY, mile 197.8 Green River, and from mouth of Barren River mile 149.5 Green River to Bowling Green, KY, mile 30.1, Barren River. Of these facilities, only Green River L&D 1 and 2 are still operational. Green River L&D 3, 4, 5, 6 and Barren River L&D 1 are maintained by the Corps in a caretaker status.

Fluctuations in stage vary considerably at different locks. At Lock 3, Green River, ordinary high stages are from 12 to 15 feet above pool level, and at Lock 1, Barren River, from 7 to 10 feet above pool. Maximum stages of record are 34 feet above normal pool stage at Lock 3, Green River, and 29 feet at Lock 1, Barren River, obtained during floods of 1937 and 1913, respectively. (See Table 24-B for authorizing legislation and Table 24-H for principal features of the locks and dams.)

The Louisville District has released a final report regarding the disposal of Locks and Dams 3 through 6 on the Green River and Lock and Dam 1 on the Barren River in August 2005. The report recommends filling the lock chambers at all of the sites and removal of the dam at Green River L&D 6.

**Local Cooperation.** Fully complied with.

**Terminal facilities.** Coal handling facilities located on the Green River between miles 81.5 and 108.1 near South Carrollton, Rockport, Paradise and Rochester, Kentucky, are considered adequate for existing commerce.

**Operations during fiscal year.** New Work: None. Maintenance: Routine maintenance was performed.

**Condition at end of fiscal year.** Locks and Dams 1 and 2, Green River, are in good condition. Dam 3 on the Green and Dam 1 on the Barren are in fair condition and the locks at those locations are in poor condition. Lock 4, Green River, is in poor condition. Dam 4, Green River, failed May 24, 1965, when 120 feet washed out. Breach later widened, and repairs have been permanently deferred. Pool of Dam 1, Barren River, is maintained for local small boat use, but navigation through lock is suspended because of loss of lower pool. Operation activity was discontinued at Lock 4 Green River and Lock and Dam 1 Barren River in January 1974 and at Lock 3, Green River in September 1981. The residences and associated buildings and certain real estate at Lock 4 Green River and Lock and Dam 1 Barren River were disposed of in January 1975. Operation of Locks 5 and 6, Green River, was discontinued August 1951, as they were no longer used by river traffic. Controlling project depth in lower 103 miles of Green River is 9 feet; controlling depth from mile 103 to Bowling Green, KY, is 5.5 feet. Channel of Green River above Lock 3 is no longer maintained.

**4. KENTUCKY RIVER, KY**

**Location.** Formed by confluence of its North and Middle Forks about 4 miles east of Beattyville in east central Kentucky, (South Fork joins the main stream at that location), flows northwesterly and empties into Ohio River at Carrollton, KY, mile 545.8 below Pittsburgh, PA.

**Existing project.** Provides for 14 locks and fixed dams to give, in connection with improvement of Ohio River, slack water navigation of 6 feet minimum depth from Ohio River to places on the three forks that are short distances above Beattyville, KY. Length of 6-foot-depth project on main stem of Kentucky River is 258.6 miles to confluence of Middle and North Forks. Cost of completed new work is \$7,328,263. River frequently rises to 35 feet or higher. Extreme height at Lock 1 due to flood backwater from Ohio River is 60.3 feet, while extreme floods reach height of 47.6 feet at Lock 4, and 35.5 feet at Lock 14. At some intermediate locks extreme height of floods exceeds 40 feet. All flood heights refer to upper pool gages. Existing project was adopted by 1879 River and Harbor Act (H. Ex. Doc. 47, 45<sup>th</sup> Cong., 3d Sess., and Annual Report, 1879, p. 1398). Operation and care of locks and dams were included in project July

## LOUISVILLE, KY DISTRICT

1, 1935, under provision of Permanent Appropriations Repeal Act of June 26, 1934. (See Table 24-H for principal features of the locks and dams.)

On December 19, 1976, the lock operation schedules for commercial traffic and recreational craft on the Kentucky River System were reduced from continuous 24-hour year-round operation to two-shift year-round operation of Locks 1 through 4, intermittent daily operation of Locks 5 through 10, and intermittent operation five days weekly of Locks 11 through 14. Since that time the hours for operation of Locks 5 through 14 have been reduced in several increments. On October 1, 1981, Locks 5 through 14 were closed to traffic and placed in caretaker status. On May 21, 1985 Locks 5 through 14 were leased to the Commonwealth of Kentucky and were operated on weekends during the summer boating seasons through October 15, 1989 when the lease expired. The Commonwealth of Kentucky continued operation again under a lease agreement signed in 1990 with several extensions that allow the Commonwealth to operate the Locks until 2019. In 2001 the last commercial operator in pool 4 ceased operations ending federal interest in operating Locks and Dams 1 through 4. The Commonwealth of Kentucky now operates and manages Locks and Dams 1 through 4 under Department of the Army Lease for Public Park and Recreation, which was granted March 1, 2002.

The FY 1993, 1994, 1996, 2000 and 2001 Energy and Water Development Appropriation Acts provided a total of \$14.75 million to the Corps to repair the Kentucky River Locks and Dams 5 through 14 to ensure water supply prior to and in preparation for a direct transfer of ownership to the Commonwealth of Kentucky. This construction work was all completed by December 2001. During fiscal year 2002 construction of a visitors pavilion and restrooms were also initiated at Lock and Dam 14 and the work was completed in September 2003. In December 1996 the Assistant Secretary of the Army (CW) signed the first quitclaim transfer deed for Lock and Dam 10 for direct transfer from the Corps to the Commonwealth. Lock and Dam 6 were transferred in March 2005. The Kentucky River Authority (KRA) currently manages both facilities. The Corps continues efforts to transfer the remaining Locks and Dams 5, 7 through 9 and 11 through 14 to the Commonwealth. Locks 1-14 are now operated or maintained by the Kentucky River Authority.

Although Lock and Dam 10 was transferred to the Commonwealth of Kentucky, FY 2001 authorization language directed the Corps to take all measures to further stabilize and renovate Lock and Dam 10 for the purpose of extending the design life of the structure. The Corps is currently performing a detailed evaluation of the existing facility that will ultimately recommend a long-term method to "stabilize and renovate" including possibly raising Lock and Dam 10. The results of this evaluation will be presented in a report. Since construction of the plan that will be recommended is several years away, the Corps and KRA investigated what could be done to assure near-term safety and stability. Design was completed and a construction contract was

awarded in July 2005. The scope of the work involves stabilizing the existing dam.

**Licenses.** Federal Regulatory Commission License No. 539, to Kentucky Utilities Co., at Dam 7, Kentucky River, Annual charge, \$4,400; total collections through September 30, 2005 \$359,205.

**Terminal facilities.** Facilities for bulk commodities are considered adequate for existing traffic.

**Operations during fiscal year.** New Work: None. Maintenance: None.

**Condition at end of fiscal year.** Existing project was completed in 1917. Work accomplished was rehabilitation of the five old State locks and dams and construction of new Locks and Dams 6 to 14 inclusive. Repairs have been made to deteriorated locks and dams as required to keep locks in operation and maintain pool levels above dams except in extreme dry weather, when some pools fall below normal levels, details in Annual Reports for 1963, 1964, and 1965. Channel work was performed as required to provide for existing river traffic. Controlling navigable depth in length of river covered by existing project was 6 feet at end of fiscal year.

### 5. OPEN CHANNEL WORK, OHIO RIVER

For report on this improvement, see this heading under Ohio River.

### 6. OTHER AUTHORIZED NAVIGATION PROJECTS

See Table 24-C.

### 7. NAVIGATION WORK UNDER SPECIAL AUTHORIZATION

None.

#### Flood Control - Local Protection

### 8. BEARGRASS CREEK, KENTUCKY

**Location.** The project is located in eastern Jefferson County in the suburbs of Louisville, Kentucky, along the South Fork of Beargrass Creek and Buechel Branch.

**Existing Project.** The project consists of construction of eight detention basins, about 2,000 linear feet of channel improvement, and 1,400 linear feet of floodwall/levee on the South Fork of Beargrass Creek and Buechel Branch. The project will provide protection to 830 structures (combination of residential and commercial). Of those structures, an estimated 314 will be removed from the 100-year flood plain. The 100-year flood plain will be reduced an average of 1.5 feet, as a result of project implementation. The project was authorized by the Water Resource Development Act of 1999. Estimated cost of the new work is \$14,747,200 of which \$9,585,680 is federal cost and \$5,161,520 is non-federal cost.

**Local Cooperation.** The non-Federal cost sharing partner is the Louisville and Jefferson County Metropolitan Sewer District (MSD). A Preconstruction, Engineering and Design (PED) Phase cost sharing agreement with MSD was executed in January 1998. The Chief of Engineers report approved the project in May

## REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2005

1998. A Project Cooperation Agreement (PCA) with MSD was executed in September 2001.

**Operations during fiscal year.** Work this year included completion of plans and specifications for Phase II-B, continuation of the Phase II-A construction contract, and completion of work on the Phase 1 construction contract.

**Conditions at end of fiscal year.** The project is about 70% complete. Design is complete for all three construction contracts. The first contract was awarded 4<sup>th</sup> quarter FY2002 and the second contract was awarded 4<sup>th</sup> quarter FY2003.

### 9. COMBINED SEWER OVERFLOWS, INDIANAPOLIS, IN

**Location.** Indianapolis, IN.

**Existing Project.** The existing project consists of providing the City of Indianapolis technical, planning and design assistance for implementation of their Long Term Control Plan. The Long Term Control Plan is designed to improve water quality in Marion County and modernize the City's 19<sup>th</sup> century sewer system that discharges raw sewage to local streams at 135 overflow points during wet weather events. Work was authorized under Section 219 of the Water Resources Development Act of 1992, as amended. Authorization for construction is contained in FY04 Energy & Water Development Act by amending Water Resources Development Act of 1992.

**Local Cooperation.** The non-federal cost sharing partner is the City of Indianapolis, Indiana. The Corps and the City of Indianapolis signed the Design Agreement in March 2003.

**Operation during fiscal year.** The report for the Fall Creek Reach Evaluation study was completed in September 2005. Also plans and specs were developed for the Relocation of CSO 205. Design work was initiated for the Fall Creek reach.

**Condition at end of fiscal year.** Design work is about 30% complete for the Fall Creek/White River reach. Scopes of Work are being developed to continue technical design assistance.

### 10. DUCK CREEK, OH

**Location.** The project area is located in the City of Cincinnati and the Village of Fairfax in Hamilton County, Ohio. The project encompasses 3.2 miles of the stream and begins approximately 2 miles upstream of the confluence of Duck Creek with the Little Miami River.

**Existing project.** The project consists of approximately 7,100 feet of concrete flood wall, 3,300 feet of earth levee, 8,500 feet of riprapped stream bank, 1,200 feet of channel relocation, 1,150 feet of culvert, demolition of an abandoned highway bridge, widening of a railroad bridge, a pump station, and automatic road closure, and an emergency access road. Estimated cost of new work is \$41,284,000 of which \$37,084,000 is Federal and \$4,200,000 is non-Federal. The project was originally authorized by the Water Resources Development Act of 1996 and reauthorized by the Water Resources Development Act of 2000.

**Local Cooperation.** The non-Federal sponsors are the City of Cincinnati and the Village of Fairfax. The Project Cooperation Agreement (PCA) was executed in December 1997.

**Operations during fiscal year.** Work this year included continuation and substantial completion of the Phase 3 contract involving the construction of a concrete arch culvert, floodwalls and stone protection within the Village of Fairfax, Ohio.

**Condition at end of fiscal year.** The project is about 54 percent complete overall with design approximately 85 percent complete.

### 11. HOLES CREEK, OH

**Location.** Project area is located on Holes Creek in West Carrollton, Montgomery County, Ohio. West Carrollton is situated in the southwestern portion of Ohio and is a suburb of Dayton. Holes Creek drains 28.2 square miles and empties into the Great Miami River at river mile 72.6.

**Existing project.** Project construction completed to date consists of approximately 4,300 feet of channel widening (80-foot bottom width) with associated bank protection. The box culvert type railroad bridge was replaced with a 70-foot clear span structure. Completed project provides protection to 420 structures in West Carrollton and Moraine. Remaining project includes construction of 2400-foot long by up to 6 feet high earthen levee/floodwall to protect five commercial/industrial structures, purchase and demolition of three structures and development of 4.1 acres of wetland habitat. Estimated total cost (including additional work) is \$12,376,000 Federal and \$1,305,650 non-Federal.

**Local Cooperation.** The non-Federal cost-sharing partner is the Miami Conservancy District (MCD). MCD formed the Holes Creek/Owl Creek Conservancy Subdistrict to act as formal sponsor for this project. The Subdistrict entered into the Project Cooperation Agreement (PCA) with the Government in September 1996. Funds were provided to the Subdistrict by Montgomery County, the City of West Carrollton, the City of Moriane, and Miami Township. The PCA was amended subsequent to enactment of Section 594(a) of the Water Resources Development Act of 1999 to cap the non-Federal cost share amount to \$1,305,650.

**Operations during fiscal year.** Work this fiscal year included completion of Addendum No. 2 to the Final Reevaluation Report to address a small remaining area requiring additional protection. Development of plans and specs was initiated.

**Conditions at end of fiscal year.** The Final Reevaluation Report was completed. Plan for FY06 is to complete the plans and specs, acquire the required real estate, and initiate the construction contract.

### 12. LOUISVILLE WATERFRONT PARK, LOUISVILLE, KY

**Location.** Louisville, Jefferson County, Kentucky, on the left bank of the Ohio River at river mile 603.

**Existing Project.** The existing project is for design of

## LOUISVILLE, KY DISTRICT

Phases II and III of the Louisville Waterfront Park public access and recreation project. The design is focused on restoration of the Big 4 Bridge for pedestrian use, and includes a spiral bridge to facilitate a bicycle path and potential emergency vehicle access. The design was authorized by the Conference Report for the Omnibus Consolidated and Emergency Supplemental Appropriations. The design agreement is limited to the spiral to the Big Four Bridge and renovating the bridge for pedestrian access to the Indiana side of the river. Construction authority is in the FY06 Energy and Water Development Act including use of unexpended design funds for construction. Estimated total design costs are \$1,657,000 Federal and \$533,000 non-Federal.

**Local Cooperation.** The Pre-Construction Engineering and Design (PED) agreement was executed with the non-Federal cost sharing partner, the Louisville Waterfront Development corporation (LWDC) in September 2004. \$1,000,000 of Federal funds have been appropriated, and \$250,000 in non-Federal funds were received in September 2004 to begin design.

**Operations during fiscal year.** Work this year consisted of initiating the design work.

**Conditions at end of fiscal year.** The project is designed to approximately 30%. Plan for FY06 is to complete design.

### 13. MILL CREEK, OH

**Location.** Project is located along the 18-mile length of Mill Creek and three-fourths mile length of East Fork.

**Existing project.** 17.5 miles of channel improvement, 2 miles of levees, three pumping plants, modification of 29 bridges, and the addition of two pumping units at the present Mill Creek Barrier Dam, located near the Ohio River, are included in the project. Acquisition and development with appropriate landscaping of 620 acres along the creek will be provided for high-density urban oriented recreational use.

**Local Cooperation.** Section 3, Flood Control Act of 1936 as amended, applies. An assurance agreement covering local cooperation requirements for the project consistent with Section 221 of the 1970 Flood Control Act and the Uniform Relocation Assistance and Real Property Acquisition Policies Act of 1970 was executed by the Millcreek Valley Conservancy District February 6, 1975, and for the Secretary of the Army March 28, 1975. A recreation cost-sharing contract was executed by the Conservancy District February 25, 1975, and approved by the Secretary of the Army May 28, 1975. A Contributed Funds Agreement for the General Reevaluation Report was executed in August 1998. An Operations and Maintenance Agreement for the completed portions of the project was also executed in August 1998.

**Operations during fiscal year.** The U.S. Army Corps of Engineers has completed work on a General Reevaluation Report that provides a new course of action for completing the project. In addition construction was completed for remedial repairs to one previously constructed section of the project (Section 3) in order to turn it over to the local sponsor for assumption of full

maintenance on that portion of the total project.

**Condition at end of fiscal year.** Construction of channel and levee-Sections 1, 2, 3, 4A, and 7A (Phase 1) are complete. Original channel modification project is about 45 percent complete overall. The final GRR and EIS were completed by March 2005. Remedial repairs of previously completed sections 1, 2, and 4A still need to be performed in order to turn over to the Sponsor for Operations and Maintenance.

## 14. OHIO ENVIRONMENTAL INFRASTRUCTURE SECTION 594 PROGRAM

**Location.** The project location includes the entire state of Ohio, which includes portions of the Louisville, Huntington, Buffalo, and Pittsburgh Districts. The program is for the design and construction assistance of environmental infrastructure projects.

**Existing Projects:** Under the Section 594 Authority, we have 10 in varying states of progress in Clark, Clinton, and Montgomery Counties in Ohio.

Clark County – Springfield, OH Southern Interceptor Sewer Project: PCA for design/construction was signed in September 2002. Construction complete.

Clark County – Springfield, OH #2 Southern Interceptor Sewer Project: PCA execution August 2004 for construction. Construction complete.

Clark County – Donnelville Sewer Project: PCA executed in September 2005 for design and construction. Design complete and construction to be initiated in March 2006.

Clark County – Springfield Applied Research and technology Park: PCA being developed for design and construction of a water storage tank and surface water protection facilities. PCA execution anticipated in March 2006.

Montgomery County – Tech Town Infrastructure Project: Design and construction of sewer infrastructure for High Tech Industrial site in Dayton, OH. PCA executed in FY04. Design underway.

Montgomery County – Dayton International Airport Project: Design and construction of rental car campus to include sewer, water and drainage. PCA executed January 2004. Design and construction complete.

Montgomery County – University of Dayton Brown and Stewart Streets Redevelopment Project: PCA for design was being developed. Execution expected in FY 06.

Montgomery County – City of Dayton Northeast Quadrant Redevelopment Project: PCA for design and construction was being developed. Execution expected in FY 06.

Clark County – Southwest Regional Wastewater Treatment Plant: PCA for design and construction was being developed. Execution expected in FY 06.

Clinton County – Clinton-Massie School District: PCA for design and construction was being developed.

## REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2005

Execution expected in FY 06.

**Local Cooperation.** Project Cooperation Agreements are required for each project.

**Operations during fiscal year.** Work continued to develop PCAs for five projects.

**Conditions at end of fiscal year.** Three projects were completed. Design and construction work continued on two projects. PCAs for five projects were under development.

### 15. OHIO RIVER FLOOD PROTECTION (INDIANA SHORELINE), IN

**Location.** The six existing local flood protection projects are located along the Indiana shore from Ohio River mile 492 in Lawrenceburg downstream to mile 792 in Evansville. They are in the communities of Evansville, Tell City, Cannelton, New Albany, Jeffersonville-Clarksville, and Lawrenceburg.

**Existing project.** Each of the six local flood projects was constructed by the Corps and have been locally operated and maintained. All six projects were constructed to protect against the 1937 flood plus three feet of freeboard. Rehabilitation measures are necessary at each of the six sites in order to maintain their integrity and to insure that they continue to provide the benefits for which they were designed. Rehabilitation would consist of slip lining (or where necessary replacement) of all pipes and culverts which are part of the flood protection facilities, replacing aging pump station equipment, restoring expansion joints and closures, and repairing, as needed, floodwalls and other structures. Estimated cost of new work is \$7,390,000 of which \$5,542,500 is Federal and \$1,847,500 is non-Federal.

**Local Cooperation.** The following Project Cooperation Agreements (PCA) have been executed with the communities: Lawrenceburg PCA - September 1998, Evansville - November 1998, Tell City PCA - June 1998, Cannelton PCA - September 1999, New Albany - November 1999 and Jeffersonville-Clarksville - November 1999.

**Operations during fiscal year.** Construction is complete at Tell City, Lawrenceburg, Evansville and Cannelton.

**Conditions at the end of fiscal year.** Project is about 65 percent overall with design 90 percent complete. Federal funds of \$650,000 were included as a Congressional Add to the energy and Water Development Appropriations Act of 2004 (PL108-37) for the purpose of initiating construction of the New Albany and Jeffersonville-Clarksville projects. The Corps of Engineers used a portion of those funds to perform slipline repairs to a 72-inch corrugated metal drainage pipe at New Albany, IN. The Corps will obligate the remainder of the funds in FY 2006 to replace expansion joint material and seal cracks in the Jeffersonville-Clarksville floodwall. The remaining project work consists of repairs to deteriorated corrugated metal drainage pipes at both communities. The work will be

completed upon receipt of additional funds.

### 16. OHIO RIVER GREENWAY PUBLIC ACCESS, IN

**Location.** The Ohio River Greenway is a seven-mile linear corridor that extends from the City of Jeffersonville through the Town of Clarksville to the City of New Albany, Indiana, along the Ohio River Shoreline. The project extends from the Ohio River Mile 602 to Ohio River Mile 609. The corridor adjoins the McAlpine Locks and Dam project and the Falls of the Ohio National Wildlife Conservation Area on the Indiana side of the river.

**Existing project.** The project features consist of a vehicular parkway, pedestrian and multi-use paths, a bridge, and two levee cuts for additional access to the river. The project was authorized by the Water Resources Development Act of 1996. Estimated cost for the project is \$41,700,000 of which \$20,850,000 is federal cost and \$20,850,000 is non-federal cost.

**Local Cooperation.** There are four non-federal sponsors: The Ohio River Greenway Development Commission, the City of New Albany, the Town of Clarksville, and the City of Jeffersonville. The Project Cooperation Agreement was executed 2 June 2003.

**Operation during fiscal year.** Work this year included completion of the plans and specifications for a segment in Jeffersonville and continuation of plans and specifications for a segment in New Albany.

**Condition at end of fiscal year.** The project was approved for construction by the ASA(CW) in April 2000. Construction of the first segment in Clarksville was completed in 2004. The project is 17% complete overall.

### 17. POND CREEK, LOUISVILLE, KY

**Location.** The project is located in the central and eastern portions of the 126 square mile Pond Creek watershed in southern Jefferson County, Kentucky.

**Existing project.** The project consists of constructing a 1500 acre-feet detention basin storage facility along Northern Ditch. An existing abandoned rock quarry adjacent to Fishpool Creek will be converted to a detention basin. Approximately 2.4 miles of the Pond Creek channel will be enlarged as well as 1.5 miles of Northern Ditch. A multi-purpose maintenance road/recreation trail will be constructed along the length of the Pond Creek channel improvement. In addition, three inactive settling basins owned by the local sponsor will be converted into an environmental restoration site. Estimated cost for the project is \$20,724,000 of which \$15,224,000 is Federal and \$5,500,000 is non-Federal. The project was authorized by the Water Resources Development Act of 1996.

**Local Cooperation.** The non-Federal cost-sharing partner is the Louisville and Jefferson County Metropolitan Sewer District (MSD). MSD has included all funds necessary for their cost share of the project in their capital budget plan. The Project Cooperation Agreement (PCA) was executed in March 1998.

## LOUISVILLE, KY DISTRICT

**Operations during fiscal year.** Work this year included real estate acquisition by the local sponsor for the Phase IV Channel Improvements.

**Conditions at end of fiscal year.** The project is about 83 percent complete. Design is complete. The first three phases of the construction project have been completed. The local sponsor is acquiring the real estate needed prior to the award of Phase IV.

### 18. SALYERSVILLE, KY

**Location.** Project is located along the banks of the Licking River from approximately mile 266 and 271 in Magoffin County, Kentucky along the Mountain Parkway about 75 miles southeast of Lexington, Kentucky.

**Existing Project.** The most cost-effective and feasible plan to provide the authorized level of protection (1978 flood protection) is called the "Cut-Thru Plan" and includes two channel cut-thrus, a barrier dam at the upstream cut-thru, and an 0.8-mile reach of channel improvement connecting the two cut-thrus. Estimated total cost of new work is \$8,541,000 of which \$7,730,000 is Federal and \$811,000 is non-Federal.

**Local Cooperation.** The local sponsor qualifies for an "ability to pay" reduction pursuant to Section 103(m) of the 1986 Water Resource Development Act. Based on current costs and economics, the local sponsor share would be 9.5 percent of the total project cost. The Project Cooperation Agreement (PCA) was executed in August 1995. The construction contract was awarded in September 1996 and completed in July 1998.

**Operations during fiscal year.** Construction was completed in FY 99.

**Conditions at the end of fiscal year.** Project is complete, except for pending real estate actions on two tracts of land. Progress was made on acquiring this land and they are scheduled to be acquired in FY 2006.

### 19. SOUTHERN AND EASTERN KENTUCKY ENVIRONMENTAL INFRASTRUCTURE SECTION 531 PROGRAM

**Location.** The project location comprises a 27 county region in southern and eastern Kentucky, which includes portions of Louisville, Huntington, and Nashville Districts. The program is for the design and construction assistance of environmental infrastructure projects.

**Existing Projects.** Under the Section 531 Authority, to date we have six projects complete. PCAs are being developed for two projects and four projects are underway.

Bath County – Preston, KY Decentralized Wastewater Treatment System project: PCA executed in FY03 for design and construction. Design initiated in FY04. Design and construction complete.

Jackson County – McKee Utility Improvement Project: PCA executed September 2000. Design completed.

Jackson County – McKee High School Extension: PCA being developed. Expect execution in FY 2006.

Magoffin County – Salyersville/Magoffin County Sewer line Extension Project: PCA executed June 2000.

Design and construction complete.

Pulaski County – Science Hill Sewer Project: PCA executed September 2001. Design continued in FY 2005.

Leslie County – Hyden Sewer Project: PCA executed September 2001. Design and construction complete.

Perry County – Vicco Wastewater Treatment and Collection Project: PCA executed November 2001. Design 95% complete in FY 2005.

Perry County – Regional Wastewater Treatment Plant and Collection System. PCA being developed. Expect execution in FY 2006.

Laurel County – Northland Estates Sewer Project: PCA executed November 2001. Design and construction complete.

Laurel County - Wood Creek Wastewater Treatment Project: PCA executed September 2003. Design and construction complete.

Work is authorized under Section 531 of the Water Resources Development Act of 1996 (P.L. 104-303).

**Local Cooperation.** Project Cooperation Agreements have been executed for Pulaski County, Leslie County, Menifee County, Floyd County, Laurel County, Magoffin County, Perry County and Jackson County.

**Operations during fiscal year.** Work this year included initiation or continuation of design and construction on all projects.

**Condition at end of fiscal year.** Six projects are physically complete. Designs and/or construction continued on four projects. PCAs are being developed for two projects.

### 20. WHITE RIVER, INDIANAPOLIS CENTRAL WATERFRONT, IN

**Location.** Project is located along the White River in the City of Indianapolis, IN.

**Existing project.** Project consists of infrastructure improvements such as public access parking, walkways, pedestrian bridges, landscaping, lighting, and water features. The project also includes continuous public access along both sides of the White River waterfront through the construction of walkways, bike paths, landscaped promenades, and the rebuilding and reconfiguring of the existing concrete slopewalls. Estimated cost of new work is \$113,804,500 of which \$52,475,000 is Federal and \$61,329,500 is non-Federal.

**Local Cooperation.** The non-Federal sponsors are the White River State Park (State of Indiana) and the City of Indianapolis. All lands for the project have been acquired by the sponsors. The Project Cooperation Agreement (PCA) was executed in December 1997. Amendments to the PCA were executed in June 1999 to add the Upper Canal feature to the Project and in February 2001 to add the Beveridge Paper feature.

**Operations during fiscal year.** Work this year included completion of the final construction contract (Upper West Bank. #2)

**Condition at end of fiscal year.** Construction of the

## REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2005

project is complete. The only remaining item is project closeout.

### 21. WHITE RIVER INDIANAPOLIS (NORTH), IN

**Location.** The project is located in metropolitan Indianapolis, Indiana, along the northern reaches of the White River within Marion County.

**Existing project.** The project is located along 3 miles of the White River in the City of Indianapolis, IN, and consists of a combination of levees and floodwalls, rehabilitation of an existing pump station, two mitigation sites, and a flood warning system. Estimated cost of the project is \$25,884,000 of which \$19,412,000 is Federal and \$6,472,000 is non-Federal.

**Local Cooperation.** The non-Federal cost-sharing partner is the City of Indianapolis, Department of Public Works.

**Operations during fiscal year.** Work this fiscal year included design activities on the Phase 3C Monon-Broad Ripple section of floodwall.

**Conditions at the end of fiscal year.** The project is 40 percent complete. Construction is authorized and funding provided. The rehabilitation of the existing pump station and flood warning system are complete. A construction contract for the Monon-Broad Ripple section of the floodwall (Phase 3C) will be awarded in FY 2006.

#### Flood Control - Reservoirs

### 22. BARREN RIVER LAKE, KY

**Location.** Dam is on Barren River, 79.5 miles above its confluence with Green River and 10 miles northeast of Scottsville, KY. A flood control pool reservoir extends upstream about 40 miles in Barren and Allen Counties, KY. (See U.S. Geological Survey map of Lucas, KY.)

**Existing project.** A reservoir for flood control and allied purposes. Dam is rolled earth and rockfill, 146 feet high and 3,970 feet long, with gate-controlled outlet works and uncontrolled open-cut spillway. Total storage capacity is 815,200 acre-feet (768,000 for flood control and 46,600 for water supply storage). For further details, see page 1125 of Annual Report for 1962. Cost of the completed project is \$27,479,717 including \$2,335,055 Federal funds and \$108,418 non-Federal funds for construction of recreation facilities under the completed projects program. Project was authorized by Flood Control Act of 1938.

**Local Cooperation.** None required by authorizing act. Under provision of Water Supply Act of 1958, contract with City of Glasgow for water supply storage was approved by Secretary of Army on October 4, 1965. Terms require City to pay \$23,433, which is project cost allocated to water storage plus capitalized prepayment of proportionate share of operation, maintenance, and major replacement costs. A contract, with the Commonwealth of Kentucky for development of additional campsites, shoreline protection and breakwater extension at Barren River Lake State Park under the cost-sharing category of the completed projects program was approved by the

Secretary of the Army November 4, 1977.

**Operations during fiscal year.** New work: Increased ADA parking and access at Bailey's Point. Maintenance: Routine maintenance was performed. During the 2005 flood season estimated damages of \$5,406,000 were prevented. Visitor expenditures were \$36,290,830.

**Condition at end of fiscal year.** Construction started in March 1960 and all major construction and relocation items were completed in October 1964. Project was placed in operation in March 1964. Land acquisition is complete.

### 23. BROOKVILLE LAKE, IN

**Location.** Dam site is on East Fork of Whitewater River, 2.4 miles above confluence with West Fork, and about 1-1/2 miles north of Brookville, Indiana. The reservoir lies in Franklin and Union Counties, Indiana. (See U.S. Geological Survey map of Brookville, IN.)

**Existing project.** A reservoir for flood control and allied purposes. Dam is earthfill, 182 feet high and 3,004 feet long, with gate-controlled outlet works, and uncontrolled open spillway. Total storage capacity is 359,600 acre-feet (214,700 for flood control, 89,300 for water supply, and 35,500 for conservation). A minimum pool of 20,100 acre-feet is maintained. Cost of completed new work is \$45,402,565 of which \$37,905,073 is Federal cost and \$7,497,492 is non-Federal contribution for water supply storage. Project was authorized by 1938 Flood Control Act.

**Local Cooperation.** None required by authorizing act. Contract with State of Indiana for water supply storage under provisions of Water Supply Act of 1958 was approved by Secretary of Army, August 5, 1965. Under terms of contract, State paid initial costs allocated to water supply feature of project plus capitalized prepayment of proportionate share of operation and maintenance costs.

**Operation during fiscal year.** New work: None. Maintenance: Routine maintenance was performed. During 2005 flood season flood damages of \$1,200,000 were prevented. Visitor expenditures were \$21,693,986.

**Condition at end of fiscal year.** Construction was started in November 1965 and project was placed in operation January 1974. Construction and land acquisition are complete.

### 24. BUCKHORN LAKE, KY

**Location.** Dam is on Middle Fork of Kentucky River, 43.4 miles above mouth, and 0.5 mile upstream from Buckhorn, Perry County, KY. Reservoir extends upstream about 34 miles and lies in Leslie and Perry Counties, Kentucky. (See U.S. Geological Survey map of Buckhorn, KY.)

**Existing project.** A reservoir for flood control and allied purposes. Dam is earth and rockfill type, with gate controlled outlet works. Total storage capacity is 168,000 acre-feet, of which 157,600 are for flood control. For further details, see page 1120 of Annual Report for 1962. Cost of completed new work is \$12,466,206 including \$386,707 for construction of recreation facilities under

## LOUISVILLE, KY DISTRICT

the completed projects program. Existing project was authorized by general authorization for Ohio River Basin in 1938 Flood Control Act.

**Local Cooperation.** Department of Parks of the Commonwealth of Kentucky has undertaken management of certain lands and recreational facilities in accordance with license granted by Secretary of the Army on June 29, 1962.

**Operations during fiscal year.** New work: None. Maintenance: A new hoist was installed in the Tower and the cables on the spillway hoists were replaced. Operation for flood control during 2005 flood season prevented damages of \$502,000. Visitor expenditures were \$8,655,334.

**Condition at end of fiscal year.** Construction started in September 1956 and project was placed in operation in August 1960. All construction and land acquisition is complete for original project. A contractor began construction of a shower house and Class A campground facilities at the Trace Branch recreation area in late FY2003. These facilities, funded with the FY2002 Construction General appropriations, were physically complete in the 4<sup>th</sup> quarter of FY 2004.

### 25. CAESAR CREEK LAKE, OH

**Location.** Dam site is on Caesar Creek, about 3.0 miles above its confluence with Little Miami River, in Warren County, OH, about 3.5 miles southeast of Waynesville, OH, and 10.5 miles northeast of Lebanon, OH. Reservoir lies in Warren, Clinton, and Green Counties, OH. (See U.S. Geological Survey map of Oregonia, OH.)

**Existing project.** Provides for construction of a reservoir for flood control and allied purposes. It includes an earth and rockfill dam, four saddle dams, outlet works and an uncontrolled saddle spillway. Total storage capacity of reservoir is 242,200 acre-feet, of which 148,500 acre-feet are reserved for flood control storage. Cost of new work is \$62,881,010 Federal and \$5,037,000 non-Federal reimbursement for water supply storage. Existing project was authorized by general authorization for Ohio River Basin in 1983 Flood Control Act.

**Local Cooperation.** None required. However, the State of Ohio requested inclusion in the project of storage for future municipal and industrial water supply uses. Contract with State of Ohio for water supply storage under provisions of Water Supply Act of 1958, as amended, was approved by Secretary of the Army, May 20, 1970. Under terms of contract, State will reimburse the Federal Government for costs allocated to water supply storage over a period not to exceed 50 years after use of this storage is initiated plus estimated annual amount for cost of operation, maintenance and major capital replacements required for the water supply facilities.

**Operations during fiscal year.** New work: Replaced lower seals in bypass gates. Maintenance: Routine maintenance was performed. During the 2005 flood season estimated damages of \$16,095,000 were prevented. Visitor expenditures were \$45,847,071.

**Condition at end of fiscal year.** Construction was started in January 1968 and the project was placed in operation January 1978. Land acquisition is complete. All relocation and construction features are complete.

### 26. CAGLES MILL LAKE, IN

**Location.** Dam is on Mill Creek, 2.8 miles above its confluence with Eel River, in Putnam County, IN, and about 25 miles east of Terre Haute, IN. Reservoir extends upstream about 11 miles and is in Putnam and Owen Counties, IN. (See U.S. Geological Survey map of Poland, IN.)

**Existing project.** A reservoir for flood control and allied purposes. Dam is earth and rockfill embankment. Total storage capacity is 228,100 acre-feet, of which 201,000 acre-feet are for flood control. For details, see Annual Report for 1962, page 1136. Cost of new work is \$4,369,997, which includes \$4,256,903 Federal funds, and \$113,094 contributed funds for construction of recreation facilities under the completed projects program. Existing project was selected for construction under general authorization for Ohio River Basin in 1938 Flood Control Act.

**Local Cooperation.** None required. State of Indiana has undertaken development and management of recreation facilities for use of the public in reservoir area in accordance with license granted by Secretary of the Army on January 17, 1952. A contract with the Indiana Department of Natural Resources for expanding the boat ramp and parking area at Site 3, Lieber State Park, under the cost sharing category of the completed projects program was signed by the State of Indiana on August 26, 1981 and approved by the Deputy Chief of Engineers on March 26, 1982.

**Operations during fiscal year.** New Work: Installed new motor control center in dam tower. Maintenance: Routine maintenance was performed. During the 2005 flood season estimated damages of \$8,830,000 were prevented. Visitor expenditures were \$12,686,570.

**Condition at end of fiscal year.** Construction started in July 1948 and completed in June 1953. Recreation facilities constructed under the cost-sharing category of the completed projects program are complete.

### 27. CARR CREEK LAKE, KY

**Location.** Dam site is 8.8 miles above mouth of Carr Fork, a tributary of North Fork of Kentucky River, 16 miles upstream from Hazard, KY. The reservoir lies entirely within Knott County. (See U.S. Geological Survey maps of Carrie and Vicco, KY.)

**Existing project.** Provides for construction of a reservoir for flood control and allied purposes. Dam is rock and earth fill with impervious core, 720 feet long and 130 feet high, with uncontrolled open cut spillway through left abutment. Outlet works has two control gates and 8-foot diameter conduit to stilling basin. Total storage capacity is 47,700 acre-feet (31,600 for flood control and 4,300 for water quality control). A higher-level seasonal pool for recreation is provided. Cost of completed work is \$51,854,826 including \$76,724 for recreation facilities under the completed projects

## REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2005

program. Project was authorized by the 1962 Flood Control Act.

**Local Cooperation.** None required for reservoir project. Division of Flood Control and Water Usage of Commonwealth of Kentucky gave assurance that encroachments on downstream channel capacity will be prevented. Under the terms of a new lease, the State of Kentucky assumed operation of the Irishman Creek Beach and Campground in 1996. This establishes a State Park at the lake and also provides the impetus for additional resort development. Project name was changed from Carr Fork Lake, KY to Carr Creek Lake, KY effective February 16, 1997 by Public law 104-303, October 12, 1996.

**Operations during fiscal year.** New work: Construct additional Campgrounds, phases 1, 2, 3 complete except for 40% of phase 3. Maintenance: Routine maintenance was performed. During the 2005 flood season estimated damages of \$569,000 were prevented. Visitor expenditures were \$13,852,666.

**Condition at end of fiscal year.** Project was placed in operation January 1976. Construction started in January 1966 is complete.

### 28. CAVE RUN LAKE, KY

**Location.** Dam site is on Licking River, about 4 miles upstream from U.S. Highway 60 near Farmers, KY, and 7 miles southwest of Morehead, KY. Reservoir will be in Rowan, Bath, Morgan, and Menifee Counties, KY. (See U.S. Geological Survey maps of Salt Lick and Morehead, KY.)

**Existing project.** Plan provides for construction of a reservoir for flood control and allied purposes. Dam is rolled earthfill, with gate controlled outlet works and uncontrolled open spillway. Total storage capacity is 614,700 acre-feet (438,500 for flood control and 28,300 for water quality control). Cost of new work is \$81,159,541 of which \$6,900,000 is U.S. Forest Service cost. Project was authorized by Flood Control Acts of June 22, 1936 and June 28, 1938.

**Local Cooperation.** None required.

**Operations during fiscal year.** New work: None. Maintenance: Routine maintenance was performed. During the 2005 flood season estimated damages of \$1,396,000 were prevented. Visitor expenditures were \$12,361,173.

**Condition at end of fiscal year.** Project has been in operation since February 1974. Construction was started in June 1965 and is complete. Land acquisition is complete. All relocation and construction features are complete.

### 29. CECIL M. HARDEN LAKE, IN

**Location.** Dam is on Raccoon Creek, 32.4 miles above its confluence with Wabash River, and 25 miles northeast of Terre Haute, IN. At flood control pool, reservoir extends upstream about 15 miles in Parke and Putnam Counties, Indiana. (See U.S. Geological Survey Map of Mansfield, IN.)

**Existing project.** A rolled earth dam and reservoir, for

flood control and allied purposes. Total storage capacity is 132,800 acre-feet of which 116,600 acre-feet area for flood control. For details, see Annual Report for 1962, page 1132. Cost of completed new work is \$6,987,807 made up of \$6,260,134 for the initial project and \$373,678 Federal cost and \$353,995 non-Federal contribution in kind for recreation facilities under the completed projects program. Project was selected for construction under general authorization for Ohio River Basin in 1938 Flood Control Act. Project name was changed from Mansfield Lake to Cecil M. Harden Lake by Public Law 93-521, December 14, 1974.

**Local Cooperation.** State of Indiana has undertaken management of lands and recreational facilities in accordance with license granted by Secretary of the Army on April 19, 1961. A contract with the Indiana Department of Natural Resources, approved by the Secretary of the Army in May 1974, provided for that agency to design and construct certain additional recreation facilities at Cecil M. Harden, Huntington, Mississinewa, Monroe and Salamonie Lakes under the cost-sharing category of the completed projects program.

**Operation during fiscal year.** New work: None. Maintenance: Routine maintenance was performed. During the 2005 flood season estimated damages of \$2,528,000 were prevented. Visitor expenditures were \$30,363,626.

**Condition at end of fiscal year.** Construction started in October 1956 and all major items of work were completed December 1961. Land acquisition is complete. Project has been in operation since August 1960. Cost shared recreation facilities constructed by the State of Indiana under the completed projects program are completed.

### 30. CLARENCE J. BROWN DAM & RESERVOIR, OH

**Location.** Dam site is just east of Springfield, Clark County, OH, at mile 7.3 of Buck Creek, a tributary of Mad River. (See U. S. Geological Survey maps of New Moorefield and Springfield, OH.)

**Existing project.** A reservoir for flood control and allied purposes. It includes an earthfill dam, 6,620 feet long and 72 feet high, with gated outlet works and open cut spillway with concrete chute through right abutment. Total storage capacity of reservoir is 63,700 acre-feet (32,900 for flood control and 20,800 for water quality control). Federal cost of completed project is \$22,083,660. Project was authorized by 1962 Flood Control Act. Project name was changed from Buck Creek Dam and Reservoir to Clarence J. Brown Dam and Reservoir by Public Law 90-46, July 4, 1967.

**Local Cooperation.** Assurances from City of Springfield, Springfield Conservancy District, and Clark County, Ohio, covering protection against detrimental channel encroachment below dam to mouth of Buck Creek, were accepted March 5, 1964.

**Operations during fiscal year.** New work: Replaced water line to office. Constructed picnic shelters. Maintenance: Routine maintenance was performed.

## LOUISVILLE, KY DISTRICT

During the 2005 flood season \$466,000 in damages were prevented. Visitor expenditures were \$22,694,500.

**Condition at end of fiscal year.** Construction started in September 1966. Land acquisition and all major project features were completed in November 1973. The project was placed in operation in January 1974.

### 31. GREEN RIVER LAKE, KY

**Location.** Dam site is 305.7 miles above mouth of Green River in Taylor County, KY, about 8 miles south of Campbellsville. Reservoir lies in Taylor and Adair Counties. (See U.S. Geological Survey map of Cane Valley, KY.)

**Existing project.** A reservoir for flood control and allied purposes. Dam is earth and rockfill, 141 feet high and 2,350 feet long. Outlet works is slide gate-controlled and spillway open and uncontrolled. Total storage capacity is 723,200 acre-feet (560,600 for flood control and 64,500 for low-flow augmentation). Cost of completed new work is \$33,462,330, consisting of \$33,105,184 initial project funds, \$40,001 for water supply, and \$317,145 Federal funds for construction of recreation facilities under the completed projects program. Existing project was authorized under general authorization for Ohio River Basin in 1938 Flood Control Act.

**Local Cooperation.** None required by authorizing act. Taylor County, by lease approved by Secretary of Army February 15, 1968, undertook operation and maintenance of Smith Ridge public access area. In May 1980, the lease was amended to turn back responsibility for maintenance and operation of the site to the Corps. Under provision of Water Supply Act of 1958, contract with City of Campbellsville for water supply storage was approved by Secretary of Army April 23, 1969. Terms require city to repay, with interest and annual charges for operation, maintenance and major replacement, the investment cost of \$85,765 allocated to its water supply storage space. The Department of Parks of the Commonwealth of Kentucky, by lease approved by Secretary of Army, October 4, 1971, has undertaken the management of the Lone Valley public access area.

**Operations during fiscal year.** New work: Renovated 3 lift stations, replaced an old pit toilet with a new comfort station, replaced hydraulic pumps and motors in tower, constructed new comfort stations at Smith Ridge campground and at Holmes Bend boat ramp. Maintenance: Routine maintenance was performed. During the 2005 flood season estimated damages of \$3,096,000 were prevented. Visitor expenditures were \$33,610,476.

**Condition at end of fiscal year.** Construction began in August 1965 and all major construction and relocation items were completed in 1972. Project has been in operation since February 1969. Project including all land acquisition complete in 1973. Construction of sanitary dump station for boats at Dam Site in conformance with EPA and State standards and rehabilitation of sewage treatment facilities, washhouses and restrooms at Smith Ridge site is complete.

### 32. J. EDWARD ROUSH LAKE, IN

**Location.** Dam site is on Wabash River, about 2 miles from Huntington, IN, and 411.4 miles above mouth. Reservoir is in Huntington and Wells Counties, IN. (See U.S. Geological Survey maps of Majenica and Mt. Etna, IN.)

**Existing project.** A reservoir for flood control and allied purposes. Dam consists of a rolled earth embankment 4,700 feet long and 89 feet high, a concrete spillway and outlet section 155 feet long, and a concrete gravity section 310 feet long. Spillway is controlled by three gates, and outlet works by six sluices. Project also provides local flood protection for Markle, IN. Total storage capacity of reservoir is 153,100 acre-feet, of which 149,000 acre-feet is reserved for flood control storage. Cost for new work is \$19,621,777 made up of \$19,428,355 Federal cost for the initial project and \$193,422 non-Federal contributed funds for low flow augmentation storage, and \$155,354 non-Federal contribution in kind for recreation facilities under the completed projects program. Project was authorized by Flood Control Act of 1958. Project name was changed from Huntington Lake, IN to J. Edward Roush Lake, IN effective 16 February 1997 by Public law 104-303, 12 October 1996.

**Local Cooperation.** Local interests must contribute in cash an amount equal to one percent of project first cost. State of Indiana has met this obligation. Contract with the Indiana Department of Natural Resources, approved by the Secretary of the Army May 17, 1974, provided for that agency to design and construct certain additional recreational facilities at Cecil M. Harden, Huntington, Mississinewa, Monroe and Salamonie Lakes under the cost shared category of the completed projects program.

**Operations during fiscal year.** New work: None. Maintenance: Routine maintenance was performed. During the 2005 flood season estimated damages of \$13,061,000 were prevented. Visitor expenditures were \$5,365,197.

**Condition at end of fiscal year.** Land acquisition and all major construction complete. Project was placed in operation January 9, 1969. Cost shared recreation facilities constructed by the State of Indiana under the completed projects program are complete.

### 33. MISSISSINEWA LAKE, IN

**Location.** Dam site is 7.1 miles above mouth of Mississinewa River, which flows into Wabash River about 2 miles upstream from Peru, IN. At flood control pool level, reservoir extends upstream about 28 miles, in Wabash, Grant, and Miami Counties, IN. (See U.S. Geological Survey map of Peoria, IN.)

**Existing project.** Provides for construction of a reservoir for flood control and allied purposes. It includes an earthfill dam 137 feet high and 8,100 feet long, gate-controlled outlet works, and an uncontrolled open spillway through right abutment. Total storage capacity of reservoir is 368,400 acre-feet, of which 345,100 acre-feet are reserved for flood control storage. Cost for completed new work is \$77,468,775 made up of

## REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2005

\$23,791,816 Federal cost for the initial project, \$239,200 non-Federal contributed funds for low flow augmentation storage. \$174,392 Federal cost and \$174,392 non-Federal contribution in kind for recreation facilities under the completed projects program, and \$53,088,975 for major rehabilitation. Project was authorized by the Flood Control Act of 1958.

**Local Cooperation.** Local interests must contribute in cash an amount equal to 1 percent of project first cost. State of Indiana assumed this obligation. A contract with the Indiana Department of Natural Resources, approved by the Secretary of the Army in May 1974, provided for that agency to design and construct certain additional recreation facilities at Cecil M. Harden, Huntington, Mississinewa, Monroe and Salamonie Lakes under the cost-sharing category of the completed projects program.

**Operations during fiscal year.** New work: None. Maintenance: Construction contract for placement of 2600 feet of concrete cut-off wall in the right embankment 150' to 180' depth to rock foundation to remediate poor foundation conditions was continued. The initial contract amount was \$29,800,000 and has a three-year performance period. After preliminary construction activity on roads, construction of the cut-off wall test section began April 4, 2002. During initial excavations the contractor experienced sudden and complete loss of bentonite slurry used to support the excavation. He then moved to the far end of the 100-foot test section and attempted another excavation with the same result. The contractor was issued a stop work order on May 17, 2002. Analysis of the problem has shown the upper layer of rock foundation contains excessive voids requiring pre-treatment with grout to enable the cut-off wall excavation to then proceed with minimal slurry loss. The grouting program was initiated on July 10, 2002, completed November 17, 2003, and will add up to \$20,000,000 to the contract cost. Cut-off wall excavation in the test section resumed October 2002 and was completed in February 2003. Construction of the cut-off wall resumed August 4, 2003 and continues. Project was substantially completed in 2005. Total cost of cut-off wall is now estimated at \$55,000,000. The project is on the HQUSACE High Priority List. During the 2005 flood season estimated damages of \$22,318,000 were prevented. Visitor expenditures were \$13,891,953.

**Condition at end of fiscal year.** Project was placed in operation in May 1968. Cost shared recreation facilities constructed by the State of Indiana under the completed projects program are complete. Construction continued on cut-off wall contract and construction was 46% complete at the end of September 2004. Because of the uncertainty regarding the conditions under which the embankment is performing, the Mississinewa Lake will be operated with restricted reservoir elevations until construction of the cut-off wall is complete.

### 34. MONROE LAKE, IN

**Location.** Dam is on Salt Creek, a tributary of White River, 25.9 miles above mouth, and 2 miles east of Harrodsburg, Monroe County, IN. At flood control pool level, reservoir will extend upstream 44 miles in Monroe,

Brown, and Jackson Counties. (See U.S. Geological Survey map of Clear Creek, IN.)

**Existing project.** A reservoir for flood control and allied purposes. Dam is earth core and rock shell, with gate-controlled outlet works and uncontrolled open spillway. Total storage capacity is 441,000 acre-feet (258,800 for flood control and 159,900 for low flow augmentation.) Cost of completed new work is \$16,570,774 consisting of \$7,032,484 Federal funds, \$7,797,604 non-Federal contributed funds for low-flow regulation storage and \$870,343 Federal cost and \$870,343 non-Federal contribution in kind for recreation facilities under the completed projects program. Project was authorized by 1958 Flood Control Act, modifying comprehensive plan for Ohio River Basin.

**Local Cooperation.** Section 3, 1944 Flood Control Act applies. Local interests must contribute 54.1 percent of project cost, this being the proportion allocated to low-flow regulation feature, plus a capitalized amount representing that part of average annual maintenance and operation cost allocated to low-flow regulation. State of Indiana assumed this cost-sharing obligation. A contract with the Indiana Department of Natural Resources, approved by the Secretary of the Army in May 1974, provided for that agency to design and construct certain additional recreation facilities at Cecil M. Harden, Huntington, Mississinewa, Monroe and Salamonie Lakes under the cost-sharing category of the completed projects program.

**Operations during fiscal year.** New work. Replaced motor control center in tower. Maintenance: Routine maintenance was performed. During the 2005 flood season estimated damages of \$2,574,000 were prevented. Visitor expenditures were \$33,127,590.

**Condition at end of fiscal year.** Project is complete and was placed in operation in February 1965. Cost shared recreation facilities constructed by the State of Indiana under the completed projects program are complete.

### 35. NOLIN LAKE, KY

**Location.** Dam is on Nolin River 7.8 miles above its confluence with Green River, about 70 air miles southwest of Louisville, KY. Reservoir extends upstream about 57 miles and is in Edmonson, Grayson, Hart, and Hardin Counties, KY. (See U.S. Geological Survey maps of Nolin Reservoir and Dickey's Mill, KY.)

**Existing project.** A reservoir for flood control and allied purposes. Dam is rockfill-earth core type with gate-controlled outlet works, and uncontrolled open spillway. Total storage capacity is 609,400 acre-feet, of which 545,600 acre-feet is for flood control. For further details of project, see Annual Report for 1962, page 1124. Cost of new work is \$17,193,278 including \$2,594,274 for construction of recreation facilities. Project was selected for construction under general authorization for Ohio River Basin in 1938 Flood Control Act.

**Local Cooperation.** None required for authorized project. State of Kentucky contributed \$18,195 for increased width of dam for public road. Kentucky

## LOUISVILLE, KY DISTRICT

assumed responsibility of the Brier Creek site to establish a State Park in 1996. Improvements are planned by Kentucky.

**Operations during fiscal year.** New work: Paved problem was areas at Wax and Moutardier, expanded boat ramp at Moutardier. Maintenance: Routine maintenance was performed. During the 2005 flood season estimated damages of \$3,142,000 were prevented. Visitor expenditures were \$42,389,550.

**Condition at end of fiscal year.** Construction started in January 1959. Project was completed and placed in operation in March 1963.

### 36. OHIO RIVER BASIN (Louisville District)

**Location.** Works covered by this project are a series of levees, floodwalls, channel improvements, and reservoirs in Ohio River Basin within Louisville District.

**Existing project.** Individual projects considered in comprehensive plan within the Louisville District. (See Table 24-B for authorizing legislation and Table 24-I for cost and listing of projects in the basin plan.)

**Operations during fiscal year.** No costs were incurred except for the projects for which individual reports are given.

### 37. PATOKA LAKE, IN

**Location.** Dam site is in Dubois County, IN, 118.3 miles above mouth of Patoka River, and 50 miles west-northwest of New Albany, IN. Reservoir extends into Dubois, Orange, and Crawford Counties. (See Geological Survey map of Cuzco, IN.)

**Existing project.** Reservoir for flood control and allied purposes. Dam is earth and rock fill, 1,550 feet long and 85 feet high, with gate-controlled outlet works and uncontrolled open spillway. Total storage capacity is 301,600 acre-feet (121,000 for flood control and 167,500 for water supply and water quality control). Cost of new work is \$76,243,083 of which \$56,060,638 is Federal cost for other construction, and \$20,182,445 is non-Federal contribution for water supply storage and recreation facilities. Project was authorized by 1965 Flood Control Act, and emergency measures and snagging and clearing the Patoka River downstream of Patoka Lake to ensure effective operation of the project for flood control was directed by 1981 Appropriation Act for Energy and Water Development.

**Local Cooperation.** Local interests are required to reimburse the Federal Government for costs allocated to water supply storage presently estimated at 29.316 percent of the joint-use facilities cost, exclusive of interests, plus \$287,000 for the cost of operating and maintaining water supply storage for a period of 50 years, plus \$42,000 for the cost of major capital replacements required for water supply storage space for a period of 50 years. Local interests are also required to pay, contribute in kind, or repay (which may be through user fees) with interest, one-half of the separable first cost of the project allocated to recreation. Present laws of the State of Indiana require that agency to make cash contributions during construction of the project. Local interests must

also agree to prevent encroachments on channel of Patoka River from dam to mouth, and to pay allocated initial and annual maintenance and operation costs for water supply storage. Formal assurances of local cooperation, executed by the Indiana Natural Resources Commission, were accepted August 27, 1970. Contracts with State of Indiana for water supply and recreation were approved by the Secretary of the Army November 2, 1970.

**Operations during fiscal year.** New work: None. Maintenance: Routine maintenance was performed. During the 2005 flood season estimated damages of \$2,867,000 were prevented. Visitor expenditures were \$19,438,848.

**Condition at end of fiscal year.** Construction was started in July 1972. Engineering studies are complete. Real Estate relocation work is complete. All major features are complete. Permanent impoundment was started in February 1978 and the project was placed in operation about August 1980.

### 38. ROUGH RIVER LAKE AND CHANNEL IMPROVEMENT, KY

**Location.** Dam is on Rough River, 89.3 miles above its confluence with Green River, 160.3 miles above Ohio River, and about 60 miles southwest of Louisville, KY. Reservoir extends upstream about 30 miles and is in Breckinridge, Hardin, and Grayson Counties, KY. Channel improvement work is on Rough River, Barnett Creek, and West Fork of Barnett Creek. (See U.S. Geological Survey maps of McDaniels and Falls of Rough, KY.)

**Existing project.** Reservoir is for flood control and allied purposes. Dam is rolled earthfill type, with gate-controlled outlet works. Storage capacity is 334,380 acre-feet, of which 314,210 acre-feet is for flood control. Project also includes channel clearing of lower Rough River, and channel improvement on Barnett Creek, a tributary of Rough River. For further details, see page 1126 of Annual Report for 1962. Cost of completed new work is \$11,064,087 including \$890,008 Federal funds and \$22,612 non-Federal funds for construction of recreation facilities under the completed projects program. Existing project was selected for construction under general authorization for Ohio River Basin in 1938 Flood Control Act. Modification of previously approved plan to include channel improvement items was authorized by the 1944 Flood Control Act.

**Local Cooperation.** None required for construction of reservoir unit. Provisions of Section 3, Flood Control Act of 1936, are applicable to channel improvements. Assurances were obtained from Ohio County for channel improvement. Department of Parks, Commonwealth of Kentucky, has undertaken management of certain lands and recreation facilities in accordance with license granted by Secretary of the Army on August 18, 1961. A contract with the Commonwealth of Kentucky to improve and pave road at the Below Dam Area - State Park under the cost-sharing category of the completed projects program was approved by the Secretary of the Army November 4, 1977.

## REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2005

**Operations during fiscal year.** New work: Repaired and painted vent pipes in control tower. Maintenance: Routine maintenance was performed. Deficiencies in the dam at Rough River have been identified through Dam Safety Assurance Program activities. Deficiencies existing at the dam are as follows: Embankment – a sinkhole formed on the downstream face of the dam in fall 2002. Indications are it resulted from the lack of a filter between the interior of the dam and a buried downstream rock toe. Stilling Basin –The stilling basin is inadequate resulting in expensive periodic repairs using Operation and Maintenance funds. Basin needs to be extended to approximately double its present length. Spillway –The spillway is inadequate. Instead of widening the spillway, the road across the dam will be raised 1.5 feet and a 3.5 foot tall highway barrier will be added to the upstream side of the road. That provides additional storage capacity to protect against probable maximum flood event. A Dam Safety Assurance Evaluation Report (DSAER) defining scope of corrective actions needed for the deficiencies was prepared and approved 1 July 2004. Approval of the DSAER provides authorization to proceed with the repairs. Design began in October 2004 and will be complete in 2006. Construction contracts will be awarded in 2006. Total cost of repairs is estimated at \$4.7 million. During the 2005 flood season estimated damages of \$6,011,000 were prevented. Visitor expenditures were \$51,832,380.

**Condition at end of fiscal year.** Construction started in November 1955 and reservoir was placed in operation in June 1959. Land acquisition and all major items of construction and relocation are complete. The DSAER was approved 1 July 2004.

### 39. SALAMONIE LAKE, IN

**Location.** Dam site is 3.1 miles above mouth of Salamonie River, which enters Wabash River about 6 miles upstream from Wabash, IN. Reservoir extends upstream about 27 miles at flood control pool and lies in Wabash and Huntington Counties, IN. (See U.S. Geological Survey maps of Lagro and Majenica, IN.)

**Existing project.** Provides for construction of a reservoir for flood control and allied purposes. It includes an earthfill dam with a maximum height of 133 feet and length of 6,100 feet, gate-controlled outlet works with a 16-foot-diameter conduit and an uncontrolled open spillway through right abutment. Total storage capacity of reservoir is 263,600 acre-feet, of which 250,500 acre-feet is for flood control storage. Cost for new work is \$17,039,321 made up of \$16,244,356 Federal cost for the initial project and \$163,867 non-Federal contributed funds for low-flow augmentation storage and \$315,549 Federal cost and \$315,549 non-Federal contribution in kind for recreation facilities under the completed projects program. Project was authorized by Flood Control Act of 1958.

**Local Cooperation.** Local interests must contribute in cash an amount equal to one percent of project first cost. State of Indiana assumed this obligation. A contract with the Indiana Department of Natural Resources, approved by the Secretary of the Army in May 1974, provided for

that agency to design and construct certain additional recreation facilities at Cecil M. Harden, Huntington, Mississinewa, Monroe, and Salamonie Lakes under the cost-sharing category of the completed projects program.

**Operations during fiscal year.** New work: None. Maintenance: Routine maintenance was performed. During the 2005 flood season estimated damages of \$17,682,000 were prevented. Visitor expenditures were \$13,211,382.

**Condition at end of fiscal year.** Land acquisition and all major construction and relocation contracts are complete. Reservoir was placed in operation in spring 1967. Cost shared recreation facilities constructed by the State of Indiana under the completed projects program are complete.

### 40. TAYLORSVILLE LAKE, KY

**Location.** Dam site is in Spencer County, KY, 60.0 miles above the confluence of Salt River and Ohio River, 4 river miles above Taylorsville and 36.9 river miles above Shepherdsville, KY. (See U.S. Geological Survey map of Taylorsville, KY.)

**Existing project.** A reservoir for flood control and allied purposes. Dam is an earth and rock fill structure, 164 feet high and 1,280 feet long. Outlet works are slide gate controlled and spillway is uncontrolled open cut. Total storage capacity is 291,670 acre-feet (211,230 for flood control, winter months), and 52,245 for water quality and fish and wildlife. Cost of completed new work is \$87,004,456, including \$82,991,363 federal funds and \$4,013,093 non-federal funds. Project was authorized by 1966 Flood Control Act.

**Local Cooperation.** Local interests must agree to administer project land and water areas for recreation; pay, contribute in kind, or repay (which may be through user fees) with interest one-half of the separable first costs of the project allocated to recreation; bear all costs of operation, maintenance, and replacement of recreation lands and facilities under P.L. 89-72. Local interests must also agree to prevent encroachments on flow-carrying capacities of stream channels below the reservoir to the extent needed to provide reasonably effective reservoir operation. Commonwealth of Kentucky has indicated intent to fulfill requirements for recreation cost sharing and has assumed responsibility for channel encroachments and pollution control. The Commonwealth furnished assurance agreements covering prevention of encroachment on capacity of stream channels in April and May 1973 and executed the recreation cost sharing contract in April 1973. On April 2, 1980, the U.S. District Court for the Western District of Kentucky ruled that the 1973 recreation cost sharing contract between the Commonwealth and the United States that provided for repayment after completion was invalid under the Kentucky Constitution which prohibits one General Assembly from obligating future appropriations that would be binding on a subsequent legislature. In response to the Court's ruling, the Commonwealth and the United States entered into a new contract providing for cash contributions. Contract was approved by the Secretary of the Army June 11, 1980.

## LOUISVILLE, KY DISTRICT

The contract was found to be valid and enforceable by the Court July 14, 1980.

**Operations during fiscal year.** New work: None. Maintenance: Routine maintenance was performed. During the 2005 flood season estimated damages of \$868,000 were prevented. Visitor expenditures were \$20,201,468.

**Condition at end of fiscal year.** Engineering and design studies are complete. Land acquisition is 100 percent complete. Construction was started in June 1974. All major construction items are complete. The dam gates were closed in January 1983 for permanent impoundment. Dedication ceremony was May 28, 1983. Two sections of county road were washed out by heavy rainfall. Both sections were originally upgraded for project operation prior to washout. The repairs were completed by the Corps in 1996-97 at a cost of \$700,000.

### 41. WABASH RIVER BASIN

**Location.** Works covered by this project are located in the Wabash River Basin, a drainage area of 33,100 square miles, covering parts of Indiana, Illinois, and Ohio.

**Existing project.** One local protection project and five reservoir projects were authorized for this basin plan. (See Table 24-B for authorizing legislation and Table 24-J for project list and total cost of basin plan.)

### 42. WEST FORK OF MILL CREEK LAKE, OH

**Location.** Dam is on West Fork of Mill Creek 6.5 miles above its junction with Mill Creek and 2 miles northeast of Mount Health, OH, and 10 miles north of downtown Cincinnati. Reservoir extends upstream about 3 miles and is in Hamilton County, OH. (See U. S. Geological Survey map of Glendale, OH.)

**Existing project.** An earth embankment dam and a reservoir for flood control and allied purposes. Total storage capacity of reservoir is 11,300 acre-feet, of which 9,850 acre-feet is for flood control. For further details, see page 1119 of Annual Report for 1962. Cost of completed new work is \$4,722,463 made up of \$3,092,941 Federal cost for the initial project, \$520,800 non-Federal cost for sewer relocation and dam, \$50,000 non-Federal contributed funds in fulfillment of project authorization and \$529,361 Federal cost and \$529,361 non-Federal contribution in kind for recreation facilities under the completed projects program. Existing project selected for construction under additional authorization for Ohio River Basin in 1946 Flood Control Act.

**Local Cooperation.** Local interests were to release necessary land under their control and give assurance that future channel encroachment below dam site would be prevented. For enlargement of reservoir to include a conservation pool, local interests would contribute one-half additional cost of such pool, including one-half cost of relocation of sanitary sewer, and agree to hold the United States free from damages resulting from its provision. Board of County Commissioners of Hamilton County, Ohio, adopted a resolution October 8, 1947, signifying willingness to fulfill requirements including provision of conservation pool. Assurances were executed on same date. A contract with the United States

for relocation of sanitary sewer outside reservoir area in order to include conservation pool in project was accepted by Hamilton County, in which the United States paid one-half cost of such relocation work. Hamilton County Commissioners furnished \$50,000, required as a local contribution toward additional cost of providing conservation pool. Hamilton County Park District has undertaken development and management of recreation facilities in reservoir area for use of the public in accordance with the license granted by Secretary of the Army on October 31, 1951. Contract for cost shared recreation development under the completed works program was executed by the Board of Park Commissioners, Hamilton County Park District, Ohio, in September 1975 and approved by the Chief of Engineers in December 1975.

**Operations during fiscal year.** New work: None. Maintenance: Routine maintenance was performed. During the 2005 flood season estimated damages of \$605,000 were prevented. Visitor expenditures were \$15,839,836.

**Condition at end of fiscal year.** Construction started in March 1949 and reservoir was placed in operation in December 1952. Project is complete. Cost shared recreation development under the completed projects program is complete.

### 43. WILLIAM H. HARSHA LAKE, OH

**Location.** Dam site is on East Fork of Little Miami River between Batavia and Williamsburg, OH, about 6.0 miles above Batavia and 32.6 miles above mouth of the Little Miami River. Entire project lies in Clermont County, OH. (See U.S. Geological Survey map of Batavia, OH.)

**Existing project.** A reservoir for flood control and allied purposes. It includes an earthfill dam, outlet works, an uncontrolled saddle spillway, and a dike to close a saddle north of spillway. Total storage capacity of reservoir is 294,800 acre-feet, of which 210,600 acre-feet is reserved for flood control storage. Cost of completed new work is \$52,023,157 and a estimated \$3,485,840 non-Federal reimbursement for water supply storage. Existing project was authorized by general authorization for Ohio River Basin in 1938 Flood Control Act. Project name was changed from East Fork Lake to William H. Harsha Lake effective January 4, 1981, by Public Law 96-383, October 6, 1980.

**Local Cooperation.** None required. However, the State of Ohio requested inclusion in the project of storage for future municipal and industrial water supply uses. Contract with State of Ohio for water supply storage under provisions of Water Supply Act of 1958, as amended, was approved by Secretary of the Army, May 20, 1970. Under terms of contract, State will reimburse the Federal Government for costs allocated to water supply storage over a period not to exceed 50 years after use of this storage is initiated plus estimated annual amount for cost of operation, maintenance, and major capital replacements required for the water supply facilities.

**Operations during fiscal year.** New work: None. Maintenance: Routine maintenance was performed. During the 2005 flood season estimated damages of \$6,429,000 were prevented. Visitor expenditures were \$32,819,809.

**Condition at end of fiscal year.** Construction was started in May 1970. Project is complete and reservoir was placed in operation in February 1978.

#### 44. INSPECTION OF COMPLETED FLOOD CONTROL PROJECTS

Flood Control Act of June 22, 1936, and subsequent acts require local interests to maintain and operate local protection projects in accordance with regulations prescribed by Secretary of the Army. Inspections were made to determine extent of compliance and to advise interests as necessary to measures required to correct deficiencies. (See Table 24-K for the latest dates of inspection performed on the local protection projects, channel improvements, and bank revetments).

Fiscal year costs were \$251,825. Total costs to September 30, 2005, were \$6,724,725.

#### 45. OTHER AUTHORIZED FLOOD CONTROL PROJECTS

See Table 24-E.

#### 46. FLOOD CONTROL WORKS UNDER SPECIAL AUTHORIZATION

Environmental restoration activities pursuant to Section 1135, 1986 Water Resources Act, as Amended. There were no costs for fiscal year 2005.

Flood control activities pursuant to Section 205, 1948 Flood Control Act, Public Law 858, 80th Congress, as amended. Cost for fiscal year were \$310,033 for thirteen feasibility reports; \$9,883 for plans and specifications on two projects; \$8,750 for one project under construction; minus \$13,668 for one project completing construction with final closeout moving cost to non-federal funds to balance proportionate cash share; minus \$8,518 for terminated studies on three projects with final closeout moving cost to non-federal funds to balance proportionate cash share; and \$20,000 for coordination activities.

Reflects federal cost only, for full costs see table 24-L.

Emergency bank protection (Section 14, 1946 Flood Control Act, Public Law 526, 79th Congress). Costs for fiscal year were \$184,581 for eight planning and design analyses; \$482 for two projects completing construction; \$14,323 for one study termination; and \$22,000 for coordination activities.

Reflects federal cost only, for full cost see table 24-L.

Aquatic Ecosystems Restoration (Section 206). Cost for fiscal year was \$9,136 for one preliminary restoration plans.

Clearing and Snagging (Section 208). Cost for fiscal year was \$12,386 for one Planning Design Analysis.

Navigation – Rivers & Harbors (Sec. 107). Cost for fiscal year was \$27.51 for one Feasibility Report.

#### EMERGENCY MANAGEMENT and SECURITY BRANCH

Emergency flood control; activities pursuant to Public Law 99, 84th Congress, and antecedent legislation. The Louisville District participated in the following emergency management activities.

**Continued Hurricane Response from FY04.** The Louisville District (LRL) continued Hurricane response to states affected by hurricanes in FY04. This included individuals assigned to responses to Hurricanes Charley, Frances, Ivan and Jeanne in Florida, response to Hurricane Ivan in Alabama and response to Tropical Storm Ivan in Ohio.

Alabama. The primary LRL Debris Planning and Response Team (PRT) was deployed to Alabama on 15 Sep 2004 for 30 days in response to Hurricane Ivan. The team was still deployed at the beginning of FY05 and the bulk of the team remained in Alabama through mid-Oct 2004. Several individuals were deployed through March 2005.

Ohio. Tropical Storm (TS) Ivan caused flooding in southeastern Ohio in Sep 2005. The Louisville District received missions from FEMA to remove debris from streams, assess properties for potential demolition and assist with the temporary housing mission.

**IN-KY Flooding Jan 05.** The Louisville District Commander declared a flood emergency for the district on 4 January 05. The E. Fork of the White, White, and Wabash Rivers in Indiana and the lower Ohio River in Illinois and Kentucky flooded in January 2005 in response to record snowfalls in December 2004 followed by heavy rainfall the first week of January 2005. Crest elevations on the White River were less than 1 foot below the record crests from 1917 at several gaging stations. Crest elevations on the lower Ohio River threatened the town of Smithland, KY. Louisville District (LRL) provided pumps and technical assistance to the state of Indiana for major floodfight efforts in Hazleton, West Terre Haute, Vincennes and Ft. Wayne, IN, and technical assistance to local levee sponsors at Island Levee, Gill Township, Levee Unit 5, Martinsville and Rushville. The floodfight effort in Hazleton attracted national attention and saved the town from complete inundation. Two non-federal levees on the Wabash River, Island Levee in Sullivan County and Honey Creek Levee in Vigo County, failed during the flooding. In Kentucky, LRL provided sandbags, pumps and technical assistance for floodfighting efforts in Smithland and Ledbetter, KY. Local authorities in Smithland erected a temporary levee under Corps oversight. LRL also provided technical assistance to Brookport, IL and the Russell Allison Levee in Lawrence County, IL. A total of 36 district personnel were directly involved in the response effort: 13 in the field, 2 liaisons to IN SEMA, and 21 in the district office. \$206,836.18 in labor and travel funds and \$208,752.38 in funds for pump rental, sandbags and other supplies were expended.

## LOUISVILLE, KY DISTRICT

**Tropical Storm Dennis.** The LRL commander declared a flood emergency on 11 Jul 2005 in response to rainfall predictions related to Tropical Storm (TS) Dennis. TS Dennis was predicted to pass through the Wabash and White River valleys in central Indiana. Early predictions showed as much as 12 inches of rainfall across the lower Wabash and White River valleys. These predictions produced particular concern because the two levees that failed during the Jan 05 flooding, Island Levee and Honey Creek Levee, were on the lower Wabash River. LRL was preparing Project Information Reports for the rehabilitation of those levees as well as a third damaged levee, McGinnis Levee on the lower White River, at this time. Actual rainfall amounts turned out to be 1-2 inches through most of the area and river elevations never approached flood stage.

**Hurricane Katrina.** The LRL commander declared an emergency on 28 Aug 2005 in response to the predicted landfall of Hurricane Katrina. Hurricane Katrina was predicted to pass through the Louisville District as a tropical storm, causing localized heavy rains and possible tornados. In addition, the district anticipated requirements to support other commands directly affected by Hurricane Katrina. Support for the subsequent Hurricanes Rita and Wilma is included in the Hurricane Katrina support.

Flooding. Locally heavy rains caused flooding in Todd and Christian County in southwestern Kentucky. LRL provided 45,000 sandbags on 29 Aug 2005 and 150,000 sandbags on 30 Aug 2005 to the state of Kentucky.

Deployments. LRL began deployments to support Hurricane Katrina response on 30 Aug 2005, when 2 members of the LRD Logistics Support Team were deployed. The primary LRL Debris Planning and Response Team (PRT) was deployed to Mississippi on 8 Sep 2005, and 2 additional teams were identified, trained and equipped. Team #2 was deployed to Louisiana on 21 Sep 2005 and Team #3 was deployed to Mississippi on 1 Nov 05 to relieve Team #1. Including PRT members, a total of 133 personnel were deployed for Hurricane Katrina, Rita or Wilma response during 2005.

Hurricane Katrina Resource Center. On 4 Sep 2005, Headquarters USACE requested LRL support in identifying the availability of vital resources, especially pumps and generators, for Hurricane Katrina support. The district opened the Hurricane Katrina Resource Center on 6 Sep 2005. The resource center maintained a database of equipment available for rent, purchase or offered for donation worldwide. Equipment information such as size, vendor, location and any special attributes were entered into a database. The center worked with the Philadelphia District Contracting Office for equipment procurement. The center was manned by engineers with specialized experience in generator and pump systems. The center operated through Hurricanes Ophelia, Rita and Wilma, and shut down on 1 Nov 2005. The database lists 2,241 generators (0-200 KW), 663 high end generators (greater than 200 KW), and 1648 pumps. The center took 43 calls for assistance with generators and 2 calls for assistance with pumps.

The cost of Hurricane Katrina EOC support to responders and operation of the Hurricane Katrina Resource Center was \$81,255.79 in labor and travel. The cost of responder equipment and sandbags for the state of Kentucky was \$64,169.74.

**Other FY05 Hurricane Response.** LRL sent individuals out in response to Hurricanes Ophelia and Hurricane Rita.

**Rehabilitation efforts under Public Law 84-99.** Three eligible non-federally constructed, operated and maintained levees were damaged by flooding in the Wabash River Basin in Indiana during January 2005. The three projects were the Island Levee (Sullivan County, Indiana); Honey Creek Levee (Vigo County, Indiana) and the McGinnis Levee (Knox and Greene Counties, Indiana). Project Information Reports (PIRs) were prepared for all three projects and submitted to LRD for review and approval. The PIR for Island Levee was approved June 27, 2005, and plans and specs were prepared for the repairs. The contract for the construction effort for Island Levee was not awarded due to lack of funding. Awaiting approval of the PIRs for Honey Creek Levee and McGinnis Levee at the end of FY05.

**Geographic Information Systems (GIS):** Together with OP-TM, OP-E continued work on Inland Electronic Navigation Charts (IENCs) for the Ohio River from river mile 436 to river mile 981. The U.S. Army Corps of Engineers continued development of this product in response to demand from the inland navigation industry and capability of technology with small computers and availability of accurate GPS. Second generation IENCs were completed during CY05 with primary focus being the refinement and addition of data to improve the accuracy and quality of the charts.

OP-E produced Debris, Ice, and Water estimates for the Planning and Response Teams (PRTs) who responded to Hurricanes Dennis, Emily, Katrina, Ophelia, Rita and Wilma in 2005. These estimates were produced using GIS-based models and provide a range of numbers for debris removal, for ice and water needs, and for temporary roofing and temporary housing needs prior to and immediately following these hurricane events. Refinement of the models to improve on the accuracy of the estimates is an on-going process.

OPIE initiatives for 2005 included support to others with continued support to LRL Lake projects. These computers will ultimately help personnel at the lakes perform some of the functions of their job. With the assistance of lake project personnel, the datasets available for each project will continue to grow and improve. Personnel from Engineering, Real Estate, and Planning Divisions were instructed on the use of and connected to OPIE in order to assist them in their job functions. Other OPIE initiatives include the continued development and improvement upon current datasets (newer imagery, improved Hydrologic Use Codes, improved District / Division boundaries).

## REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2005

GIS support for January 2005 flooding was provided to the Emergency Operations Center, the Indiana State Emergency Management Agency (SEMA), the Kentucky Department for Emergency Management (KyDEM) and to several Congressmen. Products that were created depicted the extent of flooding that would occur in specific locations when the rivers reached their forecasted crests. New this year was the product called FloodVis which allows early estimates of flooded extents, water surface elevations and water depth.

LRL GIS Team continues to support the ICW Team with its use of a GIS-based inspection program. This program spatially records all relevant issues for all levees that are included in its annual inspection program. By doing so, a historical record is being developed that will track any relevant and/or significant issues at a given project. Other Corps Districts are using this program for individual levee projects and other Districts are expected to join LRL in wider use of this technique for a more complete inspection process.

### **Critical Project Security Program (CPSP):**

Infrastructure security assessments and designs have been completed at all eleven **critical** USACE facilities in the Louisville District. HQUSACE has funded construction of the designed security improvements at these critical projects, and a contract is in place to complete the construction efforts. CISP expenditures for FY 05 totaled over \$10.0 million, and FY 06 expenditures will total approximately \$2.8 million (excluding any additional funds from HQ for contractor claims). Based on current progress, construction should be completed by the end of FY 06.

Although each facility will have the capability to monitor their security system, the Louisville District plans to utilize an offsite location for complete monitoring of proposed detection and assessment devices. Therefore, a central monitoring station is being installed in the Louisville District EOC to allow consolidation of security data from all eleven critical sites and to initiate a response to alarms.

CISP team members have also assisted in other security-related activities throughout the District: Participating in U.S. Coast Guard security programs; Evaluating security concerns for new construction activities/projects and recommending security improvements; Conducting security assessments and/or reviews of non-critical facilities; Developing strategy to assess and design

security improvements at an additional critical facility; Testing new security technology for potential use (LRAD).

**Force Protection:** Infrastructure Security Assessments have been completed at all of the district's remaining non-critical USACE Facilities. All facilities have been entered into the Force Protection Funding Program which will ensure they are considered for security upgrade funding on a continuing basis in future years.

During FY05, the Emergency Management and Security Branch executed \$43,404 for Disaster Preparedness and \$2,405,285 in reimbursable funds for emergency operations.

### **General Investigations**

#### **47. SURVEYS**

Fiscal year costs was \$820,603 for one navigation study; \$271,768 for four flood damage prevention studies; \$93,075 for three special studies; \$15,092 for review of one authorized project; and \$63,001 for four miscellaneous activities.

Reflects Federal cost only, for full cost see Table 24-M.

#### **48. PRECONSTRUCTION ENGINEERING AND DESIGN**

Fiscal year costs were \$294,915 for one Navigation project; \$313,087 for one flood control projects.

Reflects Federal cost only, for full cost see Table 24-M.

#### **49. COORDINATION WITH OTHER AGENCIES**

Fiscal year total cost was \$5,573 for one coordination with other agencies project and \$126,461 for eight planning assistance to states projects.

Reflects federal cost only, for full costs see Table 24-M.

#### **50. COLLECTION AND STUDY OF BASIC DATA**

Fiscal year total cost was \$69,059 for four flood plain management projects; and \$9,989 for one hydrologic study.

- 43 Includes \$529,361 Code 713 funds, \$50,000 contributed funds, \$529,361 non-Federal contribution in kind for recreation facilities, and \$520,000 non-Federal cost for sewer relocation and dam.
- 44 Includes \$58,571 for preconstruction planning, engineering and design completed before FY 1953.
- 45 Includes \$57,000 contributed funds.
- 46 Includes \$45,194 contributed funds.
- 47 Includes \$3,511 "maintenance and operation of dams and other improvements of navigable water."
- 48 Includes \$5,476 "maintenance and operation of dams and other improvements of navigable water."
- 49 Includes \$8,126 "maintenance and operation of dams and other improvements of navigable water."
- 50 Includes \$8,764 "maintenance and operation of dams and other improvements of navigable water."
- 51 Includes \$418,970 contributed funds.
- 52 Includes \$418,971 contributed funds.
- 53 Includes \$964,000 contributed funds.
- 54 Includes \$677,528 contributed funds.
- 55 Includes \$1,228,000 contributed funds.
- 56 Includes \$971,099 contributed funds.
- 57 Includes \$1,084,135 contributed funds.
- 58 Includes \$999,135 contributed funds.
- 59 Includes \$914,090 Code 511 funds and \$3,022,910 Code 772 funds.
- 60 Includes \$557,517 Code 511 funds and \$781,789 Code 772 funds.
- 61 Includes \$573 "maintenance and operation of dams and other improvements of navigable water".
- 62 Includes \$693,690 contributed funds.
- 63 Includes \$1,298,375 contributed funds.
- 64 Includes \$827,373 contributed funds.
- 65 Includes \$2,562,300 contributed funds.
- 66 Includes \$1,529,181 contributed funds.
- 67 Includes \$665,000 contributed funds

**TABLE 24-B**

**LOUISVILLE, KY DISTRICT  
AUTHORIZING LEGISLATION**

<b>Acts</b>	<b>Work Authorized</b>	<b>Documents</b>
<b>GREEN AND BARREN RIVERS, KY (See Section 3 of Text)</b>		
Aug 11, 1888	Purchase of original improvement	H. Doc 111, 49th Cong., 2d Sess., Ann. Rept. 1887, p.1903 Annual Report, 1891, p. 2439
Mar 3, 1893 <sup>1</sup>	Construction of Lock 2, Green River	Annual Report, 1891, p. 2478
Jul 13, 1892	Construction of Lock 5, Green River	
Jul 13, 1902	Construction of Lock 6, Green River	
Mar 3, 1905 <sup>2</sup>	Appropriated \$5,000 for continuing improvements of Green River above mouth of Big Barren River, with provision "That the Secretary of War may, in his discretion, expend such portion of said amount as may be necessary for removal of snags in Nolin River."	
Mar 3, 1909	Construct new Lock 1 and new Lock and Dam 2, Green River	S. Doc. 82, 83d Cong., 2d Sess. Rivers and Harbors Committee Doc. 2, 71st Cong., 1st Sess., and H. Doc. 685, 69th Cong., 2d Sess.
Jul 3, 1930 <sup>2</sup>	Construct new locks at Dam 5, Green River and Dam 1, Barren River; modification of Dam 5, Green River, widens bends in Bear Creek, KY	
Jun 26, 1934 <sup>3</sup>	Operation and care of locks and dams with War Department Appropriations for rivers and harbors	
Aug 30, 1935 <sup>2</sup>	Improvement of Nolin River	H.D. 480, 72d Cong., 2d Sess. S.D. 82, 83d Congress, 2d Sess.
Sep 3, 1954	Channel enlargement of lower 103 miles of Green River revocation of authorities for improvement of Bear Creek and Nolin River	
<b>KENTUCKY RIVER (See Section 4 of Text)</b>		
1879	Existing project was adopted	H. Ex, Doc 47, 45th Cong., 3d Sess., Ann. Rept. 1879, p.1398
Jun 26, 1934 <sup>3</sup>	Operation and care of locks and dams	Public Law 99-662, 99 <sup>th</sup> Congress 2 <sup>nd</sup> Session
Nov 17, 1986	Authorized disposition of Kentucky River Locks & Dams 5 through 14 without any construction cost	
1992	Appropriated not more than \$300,000 to identify the most critical repair items to enhance the dependability of the dams for their water supply function prior to transfer to the Commonwealth of Kentucky	Public Law 102 – 102 <sup>nd</sup> Congress 2 <sup>nd</sup> Session
1993	Appropriated \$5,000,000 for critical maintenance work on Locks and Dams 5-14 and directs the Corps to transfer those facilities to the Commonwealth of Kentucky	Public Law 103-
1995	Appropriated \$3,000,000 to continue Locks and Dams 5-14 repairs in preparation for transfer	Public Law 104-46, 104 <sup>th</sup> Congress 1 <sup>st</sup> Session
Aug 26, 1999	Appropriated \$2,000,000 for work on lock and dam #10	Public Law 106-377, 106 <sup>th</sup> Congress, 1 <sup>st</sup> Session
Dec 21, 2000	Authorization to stabilize and renovate lock and dam #10	Public Law 106-553, 106 <sup>th</sup> Congress 1 <sup>st</sup> Session
<b>OHIO RIVER BASIN (Louisville Dist.) (See Section 36 of Text)</b>		
Aug 28, 1937	Construct levee, floodwalls, and drainage structures for protection of cities and towns in Ohio River Basin, projects to be selected by Chief of Engineers with approval of Secretary of War, at a cost not to exceed \$24,877,000 for construction	Flood Control Committee Document 1, 75th Congress, 1st Session

1 At normal pool Dam 48, Ohio River, Elev. 337.3, Green River datum (Elev. 338.0 Ohio River datum)

2 New Lock 1 placed in operation May 25, 1956, old Dam 1, completed 1835-40, replaced with new cellular concrete masonry dam constructed 1970-71 with O&M funds at cost of \$822,000.

3 Does not include \$179,110 cost of old Lock and Dam 1.

4 New Lock and Dam 2, placed in operation June 18, 1956.

5 Does not include \$295,696 cost of old Lock and Dam 2.

6 Operation discontinued September 30, 1981.

7 Breaching of dam on May 24, 1965, stopped through traffic to Bowling Green, KY.

8 With moveable A-frame crest 3 feet high.

9 Operation discontinued August 1, 1951.

10 Does not include \$179,434 cost of old Lock and Dam 5. Transferred to State, December 1996.

11 Distance from mouth of Green River is 164.5 miles. Lock closed to navigation as the result of loss of pool at Green River Lock and Dam 4 on May 24, 1965.

12 Piles in old gravel dam completed in 1934.

13 Includes \$729,269 for new large lock completed in 1934.

14 At normal pool McAlpine Dam, Ohio River Elev. 421.8 Kentucky River datum (Elev. 420 Ohio River datum).

15 Reconstruction completed by United States in 1882.

16 Built by State of Kentucky. Cost given is for repairs by United States to Locks and Dams 1 through 5. Original construction costs to State were: L&D 1, \$220,300; L&D 2, \$151,983; L&D 3 \$135,857; L&D 4, \$131,607; and L&D 5, \$137,436.

17 Lock was closed to traffic and placed in caretaker status in September 1982.

# HUNTINGTON, WV, DISTRICT

All cost and financial statements for projects are listed at the end of this chapter. All other tables are referenced in the text and also appear at the end of this chapter.

The Huntington District includes central and south-eastern Ohio, all of West Virginia except the northern panhandle and northeastern portion, the

eastern portion of Kentucky, a portion of midwestern Virginia, and a very small portion of northwestern North Carolina, embraced in the drainage basin of the Ohio River and its tributaries from approximate river mile 127 (below Pittsburgh, PA) to approximate river mile 438, immediately upstream from Foster, KY. The drainage area of the Huntington District is approximately 44,914 square miles.

## NAVIGATION

### 1. CONSTRUCTION OF LOCKS AND DAMS ON THE OHIO RIVER

See this heading under Chapter 19 – Ohio River.

### 2. KANAWHA RIVER, WV

**Location.** The Kanawha River is approximately 97 miles in length and is formed by the junction of the New and Gauley Rivers, a short distance above Kanawha Falls, WV, and flows generally northwesterly to the confluence with the Ohio River at Point Pleasant, WV.

**Previous projects.** For details of previous projects see the Annual Reports for 1875, 1915 and 1938.

**Existing project.** The existing project consists of three navigation structures on the Kanawha River. London Locks and Dam are located approximately 83 miles above the mouth of the Kanawha River and approximately two miles downstream from Montgomery, WV. Marmet Locks and Dam are located approximately 68 miles above the mouth of the Kanawha River at Marmet, WV. Winfield Locks and Dam are located approximately 31 miles above the mouth of the Kanawha River at Winfield, WV. The lower 31 miles of the Kanawha River are located in the Robert C. Byrd Locks and Dam navigation pool. For information about Robert C. Byrd Locks and dam, see Chapter 19 – Ohio River. This system of locks and dams provides a navigable depth of nine feet from the mouth of the Kanawha River to a point approximately 91 miles upstream. For further cost details see Table 17-B, see also, Appendix C. Public Law 99-88 authorized the initiation of engineering and design and real estate acquisition for Winfield locks replacement, and WRDA 1986 authorized the construction of the project. The project consists of construction of an additional 800 foot by 110 foot lock chamber adjacent to the existing locks and continued use of the riverward lock chamber and the navigation dam. The contracts for Lock Replacement – Phase I, Construction of Additional Lock and Gate Bay, Phase IIA, lock replacement, Phase IIB, are complete. The full funding estimate for new work is \$236,300,000, which is 50 percent Federal cost and 50 percent Inland Waterways Trust Fund cost. Remaining activities include completion of the system environmental mitigation requirements and disposal of surplus lands to the National Guard. Public Law 104-303 authorized construction of a new

lock chamber at Marmet Locks and Dam. The plan includes construction of a new 800 foot by 110 foot lock chamber on the right descending bank landward of the existing locks and the continued use of the twin 360 foot by 56 foot chambers and the navigation dam. Real estate acquisition activities, begun in FY 1998, are complete. The contract for lock replacement was awarded in May 2002 and is 60% complete. The full funding estimate for new work is \$359,300,000, which is 50% Federal cost and 50% Inland Waterways Trust Fund cost. The new lock is scheduled to be operational in 2008 with all construction complete in 2009. The London Locks and Dam major rehabilitation efforts are complete. For details, see the Annual Report for 2004.

In addition to the navigation structures on the Kanawha River, the Corps of Engineers participated with the City of Charleston in construction of a riverfront park on the right descending bank near downtown Charleston. The total cost of the project was \$8,755,242. The federal share was \$4,370,121 and the non-federal share was \$4,385,121. The additional \$15,000 in the non-federal share was for betterments paid for by the City of Charleston. The project was completed in January 1999.

**Local cooperation.** All requirements for local cooperation have been completed.

**Terminal facilities.** There are 100 terminals along the Kanawha River located from the mouth of the river to 30 miles east of Charleston, WV. These terminals are constructed principally of steel and wood mooring piles and steel pile mooring cells. Eighteen of these terminals have railroad connections. Five terminals are paved wharves and one is owned by the City of Charleston, WV. The remaining terminals are privately owned. The principal commodities handled are coal, chemicals, acids, cement, gasoline and oil, and sand and gravel. For further details see the 1962 Annual Report.

**Operations during the fiscal year.** The locks and dams were operated as required and necessary repairs and improvements were made to the locks and dams as well as to the appurtenant structures and grounds. Channel inspections were conducted periodically. In FY 2005 no dredging was conducted on the Kanawha River.

### 3. OPEN CHANNEL WORK, OHIO RIVER

See this heading under Chapter 19 – Ohio River.

## HUNTINGTON, WV, DISTRICT

### 4. DREDGING

Channel inspections are conducted periodically on the Big Sandy River, Elk River, and the Portsmouth Harbor as necessary. No dredging was conducted on the Elk River or at the Portsmouth Harbor in FY 2005. During FY 2005, 241,540 cubic yards was dredged by contract on the Big Sandy River at a cost of \$1,226,738.

### 5. OTHER AUTHORIZED NAVIGATION PROJECTS

See Table 25-c.

## FLOOD CONTROL

### 6. ALUM CREEK LAKE, OH

**Location.** The damsite is located in Delaware County, OH, on Alum Creek, a tributary of Big Walnut Creek, approximately 26 miles above the mouth of Alum Creek and 15 miles north of Columbus, OH, and approximately 157 miles above the mouth of the Scioto River. The reservoir is located in Delaware County, OH.

**Existing project.** The existing project consists of a rolled earthfill dam 93 feet in height and 10,200 feet in length with a gate controlled spillway located in the right abutment. The reservoir provides for a total storage of 134,800 acre-feet and controls a drainage area of approximately 123 square miles. See also Appendix A. Construction of the dam and appurtenant works was initiated in August 1970 and completed in August 1974. A total of 405 tracts of land were acquired for the project. The non-Federal sponsor is required to reimburse the Government an estimated \$27,880,000, exclusive of interest, for cost allocated to water supply. The Ohio Department of Natural Resources reimburses the Government \$1,500,000 towards the principal and interest on this amount and \$250,000 for the cost of providing the water annually. The total cost of the project was \$56,267,422.

**Local cooperation.** For details of required local cooperation see the 1981 Annual Report.

**Operations during the fiscal year.** The entire project is complete. The project was operated for flood control as required and necessary repairs were made to the structure and appurtenances. During the fiscal year the project prevented flood damages

estimated to be \$32,550,000. To date, the project has prevented an estimated \$128,077,000 in flood damages.

### 7. BEECH FORK LAKE, WV

**Location.** The damsite is located in Wayne County, WV, on Beech Fork Creek, a tributary of Twelvepole Creek, approximately four miles above the mouth of Beech Fork Creek and 20 miles above the confluence of Twelvepole Creek and the Ohio River. The reservoir is located in Wayne County, WV.

**Existing project.** The existing project consists of a rolled earth-fill dam 86 feet in height and 1,080 feet in length, an uncontrolled spillway landward of the left abutment of the dam with a control structure at the upstream end. The reservoir provides a total storage of 37,540 acre-feet and controls a drainage area of approximately 78 square miles. Construction of the dam was initiated in December 1972 and completed in February 1977. See also Appendix A. A total of 485 tracts of land were acquired for the project. The total cost of the project was \$41,987,500.

**Local cooperation.** None required.

**Operations during the fiscal year.** The entire project is complete. The project was operated for flood control as required and necessary repairs were made to the structure and appurtenances. During the fiscal year the project prevented flood damages estimated to be \$2,146,000. To date the project has prevented an estimated \$20,419,000 in flood damages.

### 8. BLUESTONE LAKE, WV

**Location.** The damsite is located on the New River in Summers County, WV, approximately three miles above Hinton, WV, and one mile from the confluence of the New and Greenbrier Rivers. The reservoir is located in Summers County, WV, and Giles County, VA.

**Existing project.** The existing project consists of a concrete gravity dam 165 feet in height and 2,048 feet in length. Appurtenant structures consist of a gated spillway 790 feet in length located in the channel section of the dam. The stilling pool is formed by a 23-foot-high weir located 364 feet downstream of 16 gated sluices through the spillway section and discharging into the stilling pool.

## REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2005

Penstocks were installed at the time of construction to permit the future installation of hydropower. The reservoir provides for a total storage of 631,000 acre-feet and controls a drainage area of approximately 4,565 square miles. See also Appendix A. For further details see the 1939 and 1962 Annual Reports. Construction of the dam was initiated in January 1942 and completed in April 1952. A total of 338 tracts of land were acquired for the project. The total cost of the project was \$29,458,652, which includes expenditures under the recreation at completed projects program.

In FY 2000 Dam Safety Assurance activities were initiated at Bluestone Dam. Modifications include increasing the height of the dam 8 feet; installing over 600 anchors; constructing thrust blocks; constructing gate closures across State Route 20; modifying penstocks to supplement discharge capacity; and relocating electrical lines. The Phase 1 contract, consisting of construction of a temporary access bridge, modification to existing penstocks, and construction of concrete thrust block is complete. Phase 2A, consisting of constructing a fishing pier, Route 20 gate closure, east abutment, and miscellaneous other work, was awarded in June 2004 and is about 95% complete. Phase 2B, consisting of installation of anchors on critical monoliths, is anticipated to start in FY 2006. Phases 2C and 2D are in the design stage. The full funding estimate for this work is \$220,000,000 (full Federal expense).

Public Law 106-53, Section 361, authorized the Corps to implement a plan for debris management at Bluestone Lake, which included a multi-level intake tower for passing drift through the dam, improved access to Leatherwood Landing to facilitate debris removal from the lake surface, improved operating equipment, a public awareness program, and downstream cleanup of manmade debris. In April 2001, a contract to construct the tower and other project features was awarded and is complete. The full funding estimate for this work is \$15,700,000.

The Project Cooperation Agreement to provide for downstream cleanup is currently being developed and is expected to be executed in FY 2006. The public awareness program has been developed and is being conducted by non-Federal interests throughout the watershed.

**Local cooperation.** None required.

**Operations during the fiscal year.** The entire project is complete. The project was operated for flood control as required and necessary repairs were

made to the structure and appurtenances. During the fiscal year the project prevented flood damages estimated to be \$14,474,000. To date, the project has prevented an estimated \$2,070,089,000 in flood damages.

### 9. BURNSVILLE LAKE, WV

**Location.** The damsite is located in Braxton County, WV, on the Little Kanawha River, approximately two miles above Burnsville, WV, and 124 miles above the confluence of the Little Kanawha River and the Ohio River. The reservoir is located in Braxton County, WV.

**Existing project.** The existing project consists of a rockfill embankment dam 89 feet in height and 1,400 feet in length with a gated spillway in the left abutment. The outlet works is an integral part of the spillway, consisting of five sluice gates and one low flow sluice. The reservoir provides for a total storage of 65,900 acre-feet and controls a drainage area of approximately 165 square miles. Construction of the dam was initiated in June 1974 and completed in January 1976. See also Appendix A. A total of 357 tracts of land were acquired for the project. The total cost of the project was \$57,166,839.

**Local cooperation.** None required.

**Operations during the fiscal year.** The entire project is complete. The project was operated for flood control as required and necessary repairs were made to the structure and appurtenances. During the fiscal year the project prevented flood damages estimated to be \$2,837,000. To date, the project has prevented an estimated \$134,576,000 in flood damages.

### 10. DEER CREEK LAKE, OH

**Location.** The damsite is located in Pickaway County, OH approximately seven miles south of Mount Sterling, OH, on Deer Creek, a tributary of the Scioto River, approximately 21 miles above the mouth of Deer Creek and approximately 106 miles above the mouth of the Scioto River. The reservoir is located in Pickaway and Fayette Counties, OH.

**Existing project.** The existing project consists of a rolled earth-filled dam 93 feet in height and 3,880 feet in length, a 741-foot concrete gravity channel section controlled by three tainter gates, an outlet works consisting of five gated sluices through a concrete spillway section discharging into a stilling

## HUNTINGTON, WV, DISTRICT

basin and an earth dike 15 feet by 4,600 feet in a saddle located approximately four miles southwest of the damsite. The reservoir provides a total storage of 102,540 acre-feet and controls a drainage area of approximately 278 square miles. Construction of the dam was completed in May 1968. A total of 138 tracts of land were acquired for the project. For further project details see the 1965 Annual Report. See also Appendix A. The total cost of the project was \$20,406,545, including expenditures under the recreation at completed projects program.

**Local cooperation.** For details of required local cooperation see the 1981 Annual Report.

**Operations during the fiscal year.** The entire project is complete. The project was operated for flood control as required and necessary repairs were made to the structure and appurtenances. The project prevented an estimated \$20,272,000 in flood damages during the fiscal year. To date, the project has prevented an estimated \$65,606,000 in flood damages.

### 11. DELAWARE LAKE, OH

**Location.** The damsite is located on the Olentangy River, approximately six miles north of Delaware, OH, and approximately 32 miles above the confluence of the Olentangy and Scioto Rivers at Columbus, OH. The reservoir is located in Delaware, Marion and Morrow Counties, OH.

**Existing project.** The existing project consists of a rolled earth-fill dam 92 feet in height and 18,600 feet in length, a gate controlled ogee type spillway, and five outlet conduits in the channel. The reservoir provides for a total storage of 132,800 acre-feet and controls a drainage area of approximately 386 square miles. Construction of the dam was initiated in April 1946 and completed in July 1948. For further details see the 1962 Annual Report. See also Appendix A. Total real estate requirements of 7,703 acres of fee acquisition and 2,428 acres of flowage easements were acquired for the project. The total cost for the project was \$7,631,821.

**Local cooperation.** None required.

**Operations during the fiscal year.** The entire project is complete. The project was operated for flood control as required and necessary repairs were made to the structure and appurtenances. During the fiscal year the project prevented flood damages estimated to be \$26,325,000. To date, the project has

prevented an estimated \$123,429,000 in flood damages.

### 12. DEWEY LAKE, KY

**Location.** The damsite is located on Johns Creek, approximately seven miles southeast of Paintsville, KY, and approximately six miles above the confluence of Johns Creek and the Levisa Fork of the Big Sandy River. The reservoir is located in Floyd County, KY.

**Existing project.** The existing project consists of an earthfill dam 118 feet in height and 913 feet in length, a controlled outlet works discharging through a channel excavated in the left abutment, and a rolled earth-fill dike blocking a low divide to Brandykeg Creek and the Levisa Fork. The reservoir provides for a total storage of 93,300 acre-feet and controls a drainage area of approximately 207 square miles. Construction of the dam was initiated in March 1946 and completed in July 1949. For further project detail see the 1965 Annual Report. See also Appendix A. Total real estate requirements for the project of 12,458 acres in fee acquisition and 1,170 acres in flowage easements were acquired for the project. The total cost of the project was \$7,845,547, including expenditures for recreation under the completed project program.

Dam safety assurance activities are complete at Dewey Dam. Modifications include raising the height of the main dike with compacted earth, construction of a parapet wall across the dam, addition a 125-foot auxiliary spillway, and restricting the existing spillway to its original design capacity by providing vertical restriction walls on each side. A construction contract was awarded in May 2000 and is 100% complete. The total cost for this work was \$20,573,500 (full Federal expense).

**Local cooperation.** None required.

**Operations during the fiscal year.** The entire project is complete. The reservoir was operated for flood control as required and necessary repairs were made to the structure and appurtenances. The project prevented an estimated \$3,780,000 in flood damages during the fiscal year. To date, the project has prevented an estimated \$84,467,000 in flood damages.

### 13. DILLON LAKE, OH

**Location.** The damsite is located on the Licking River, approximately six miles above the confluence of the Licking and Muskingum Rivers at Zanesville, Ohio. The reservoir is located in Muskingum County, OH.

**Existing project.** The existing project consists of a rolled earth-fill dam 118 feet in height and 1,400 feet in length, a controlled outlet works discharging through a 20-foot conduit in the right abutment, an ungated 280-foot spillway adjacent to the left abutment of the dam, and two rolled earthfill dikes. The reservoir provides for a total storage of 274,000 acre-feet and controls a drainage area of approximately 748 square miles. Construction of the dam was completed in July 1959. For further project details see the 1962 Annual Report. See also Appendix A. Total real estate requirements of 8,232 acres in fee acquisition and 5,380 acres of flowage easements were acquired for the project. See also Appendix A. The total cost of the project was \$30,218,135.

**Local cooperation.** None required.

**Operations during the fiscal year.** The entire project is complete. The project was operated for flood control as required, and necessary repairs were made to the structure and appurtenances. During the fiscal year the project prevented flood damages estimated to be \$218,503,000. To date, the project has prevented an estimated \$570,940,000 in flood damages.

### 14. EAST LYNN LAKE, WV

**Location.** The damsite is located in Wayne County, WV, approximately six miles southeast of Wayne, WV, 10 miles above the mouth of East Fork and 42 miles above the confluence of Twelvepole Creek and the Ohio River. The reservoir is located in Wayne County, WV.

**Existing project.** The existing project consists of an earth-fill dam 113 feet in height and 652 feet in length, an uncontrolled spillway near the left abutment of the dam, and a 13-foot reinforced concrete tunnel in the right abutment with a control structure at the upstream end. The reservoir provides for a total storage of 82,500 acre-feet and controls a drainage area of approximately 133 square miles. A total of 552 tracts of land were acquired for the

project. See also Appendix A. The total cost of the project was \$85,872,963.

**Local cooperation.** None required.

**Operations during the fiscal year.** The entire project is complete. The project was operated for flood control as required and necessary repairs were made to the structure and appurtenances. To date, the project has prevented an estimated \$83,649,000 in flood damages.

### 15. FISHTRAP LAKE, KY

**Location.** The damsite is located in Pike County, KY, on the Levisa Fork of the Big Sandy River, approximately 15 miles upstream from Pikeville, KY, approximately three miles above the confluence of Levisa and Russell Forks and 103 miles above the mouth of the Levisa Fork. The reservoir is located in Pike County, KY.

**Existing project.** The existing project consists of a rock-fill dam 195 feet in height and 1,100 feet in length, a controlled spillway containing four tainter gates located in the valley wall adjacent to the left abutment of the dam; the outlet works consist of an intake structure with three conduits controlled by slide gates and discharging into a horseshoe shaped tunnel. The reservoir provides for a total storage of 164,360 acre-feet and controls a drainage area of approximately 392 square miles. The dam was completed in February 1969. See also Appendix A. A total of 1,301 tracts of land were acquired for the project. The total cost for the project was \$54,754,126, which includes expenditures under the recreation at completed projects program.

**Local cooperation.** None required.

**Operations during the fiscal year.** The entire project is complete. The project was operated for flood control as required, and necessary repairs were made to the structure and appurtenances. During the fiscal year the project prevented flood damages estimated to be \$3,213,000. To date, the project has prevented an estimated \$451,479,000 in flood damages.

## 16. GRAYSON LAKE, KY

**Location.** The damsite is located in Carter County, KY, on the Little Sandy River approximately 49 miles above the confluence with the Ohio River, and 11 miles upstream from Grayson, KY. The reservoir is located in Carter County, KY.

**Existing project.** The existing project consists of a random earthfill dam 120 feet in height and 1,460 feet in length, and a controlled outlet works discharging through a 14-foot spillway beyond the left abutment. The reservoir provides for a total storage of 119,000 acre-feet and controls a drainage area of approximately 196 square miles. The dam was completed in January 1968. See also Appendix A. A total of 484 tracts of land were acquired for the project. The total cost of the project was \$19,162,741, which includes expenditures for recreation facilities under the completed projects program. The non-Federal sponsor is required to reimburse the Government for cost allocated to water supply. The Rattlesnake Ridge Water District reimburses the Government \$5,600 towards the principal and interest of the construction cost and \$4,500 for the cost of providing the water annually.

**Local cooperation.** None required.

**Operations during the fiscal year.** The entire project is complete. The reservoir was operated for flood control as required and necessary repairs were made to the structure and appurtenances. During the fiscal year the project prevented flood damages estimated to be \$6,927,000. To date, the project has prevented an estimated \$105,660,000 in flood damages.

## 17. JOHN W. FLANNAGAN DAM AND RESERVOIR, VA

**Location.** The damsite is located in Dickenson County, VA, approximately four miles northwest of Haysi, VA, on the Pound River approximately two miles above the confluence of the Pound River and Russell Fork and approximately 150 miles above the mouth of the Big Sandy River. The reservoir is located in Dickenson County, VA.

**Existing project.** The existing project consists of a rock-fill dam 250 feet in height and 970 feet in length, an outlet tunnel located near the left abutment of the dam with a control structure at the upstream end, and spillway controlled by six tainter gates located in a saddle just upstream from the damsite.

The reservoir provides for a total storage of 145,700 acre-feet and controls a drainage area of approximately 221 square miles. The project was modified to include water quality control by adding control gates to the previously uncontrolled spillway, which increased the total storage capacity by 39,000 acre-feet. The dam was completed in December 1963. See also Appendix A. A total of 382 tracts of land were acquired for the project. The total cost of the project was \$20,444,383, which includes expenditures for recreation under the completed projects program. The non-Federal sponsor is required to reimburse the Government for cost allocated to water supply. The John W. Flannagan Water Authority reimburses the Government \$8,700 for the cost of providing the water annually.

**Local cooperation.** None required.

**Operations during the fiscal year.** The entire project is complete. The project was operated for flood control as required and necessary repairs were made to the structure and appurtenances. During the fiscal year the project prevented flood damages estimated to be \$945,000. To date, the project has prevented an estimated \$244,781,000 in flood damages.

## 18. LEVISA AND TUG FORKS OF THE BIG SANDY RIVER AND UPPER CUMBERLAND RIVER, WV, VA, AND KY

**Location.** The Levisa and Tug Forks form the Big Sandy River at Louisa, KY. The Cumberland portion is the Upper Cumberland River basin above Cumberland Falls, KY. The basin is approximately 100 miles in length and averages approximately 30 miles in width in the lower portion and approximately 10 miles in width above Harlan, KY. The Big Sandy Basin is within the Huntington District, and the Cumberland Basin is within the Nashville District. This report covers that portion of the project located in the Huntington District.

**Existing project.** The authorization language (Section 202 of PL 96-367, 1981) directs the Corps of Engineers to design and construct, at full Federal expense, such flood control measures as are determined to be necessary and advisable for the communities in the Tug and Levisa Forks and Upper Cumberland River basins. The authorization further states that such flood control measures would be located at or in the vicinity of Pikeville, KY, and Grundy, VA, on the Levisa Fork; Pineville, KY, on

## REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2005

the Cumberland River; and Williamson, WV and Matewan, WV on the Tug Fork, in order to afford the named communities and other flood damaged locations and their immediate environs a level of protection against flooding at least sufficient to prevent any future losses from the likelihood of flooding such as occurred in April 1977. Subsequent legislation (WRDA 1986), required that non-Federal interests cost share construction at no less than 5%. The full funding estimate for the project is \$2,471,474,000, which includes \$113,365,000 non-federal contributions.

**Local cooperation.** Local cooperation requirements are met through execution of Project Cooperation Agreements (PCAs) with local sponsors as each project moves into the implementation phase. The agreements contain requirements in accordance with the cost sharing legislation outlined above.

**Operations during the fiscal year.** Engineering studies to determine what is necessary and advisable to address flooding problems have been completed for the Tug Fork Basin and are underway for the Levisa Fork Basin.

Structural measures have been completed at West Williamson and Williamson, WV; South Williamson, KY; and Matewan, WV. Flood warning systems have been completed for the Levisa Basin and Tug Basin.

Non-structural measures are complete at Williamson, WV; Matewan, WV; South Williamson, KY; and Hatfield Bottom, WV.

Non-structural measures are underway at Lower Mingo County, Upper Mingo County, Wayne County and McDowell County in WV; at Pike County, Martin County, and the Town of Martin in KY; in the Levisa Basin, and at Grundy, VA. The Grundy redevelopment site contract awarded in April 2001 is complete; the Grundy access bridge contract, awarded in September 2003, is also complete. The Town of Martin redevelopment contract awarded June 2004 is 50% complete. The Kimball Town Hall contract, McDowell County awarded in September 2004 is complete, and McDowell County school relocations are underway. PCAs have been executed for both Buchanan and Dickenson Counties, VA in the Levisa Basin.

**Operations during the fiscal year.** To date, flood damages prevented in the area include: South Williamson, KY: \$1,826,000; and Williamson LPP, WV: \$3,801,000.

## 19. MASSILLON, OH

**Location.** The project is located in Stark County, on the Tuscarawas River, approximately 200 miles above the mouth of the Muskingum River.

**Existing project.** The existing project consists of channel improvement to the Tuscarawas River, combined with the construction of drainage facilities, levees and pump stations. For further details see the 1962 Annual Report. Construction was initiated in July 1940 and completed in October 1951. The total cost of the project was \$8,139,406.

**Local cooperation.** None required. See the 1962 Annual Report for details of local contribution of work beyond the scope of the project. To date, the system has prevented an estimated \$5,711,000 in flood damages.

**Operations during the fiscal year.** Routine inspections were conducted to determine that the improved channel was maintained in satisfactory condition.

## 20. MUSKINGUM RIVER LAKES, OH

**Location.** The Muskingum River and its tributaries lie in Southeast Ohio and drain approximately 8,000 square miles. The headwaters rise about 25 miles south of Lake Erie and flow into the Ohio River at Marietta, OH, 172 miles below Pittsburgh, PA. The reservoirs are located in Ashland, Carroll, Coshocton, Muskingum, Guernsey, Harrison, and Tuscarawas Counties.

**Existing project.** The existing project consists of 14 reservoirs and appurtenant works in the Muskingum River Basin. The existing project was originally authorized by the Public Works Administration in February 1934. Construction of the system was initiated in January 1935 and completed in November 1938. The system was initially operated and maintained by the Muskingum Watershed Conservancy District of Ohio, the sponsoring agency, from July 1938 to August 1939 when operation and maintenance became the responsibility of the Corps of Engineers in accordance with the provisions of the 1939 Flood Control Act. For further project details, see the 1962 Annual Report. See also Appendix A. The total cost of the project was \$41,247,815, which includes expenditures for recreation facilities under the completed projects program.

## HUNTINGTON, WV, DISTRICT

A significant Major Rehabilitation program was approved in December 1977 in order to assure the integrity of the existing 14 structures under the originally designed maximum pool conditions. Underseepage and abutment seepage problems are being corrected through the installation of downstream blankets, toe drains and/or relief wells and grouting.

A related but separate program entitled Dam Safety Assurance has been initiated. Under current hydrologic design standards, deficiencies exist in the spillways at the 14 projects in the system. Corrective measures, including widening present spillways, constructing new spillways and installing parapet walls on top of the dams, have been completed at 7 projects. Seven remaining projects with deficiencies need corrective measures. New seismic criteria will require all dams to be evaluated for seismic deficiencies and corrective measures will be taken if deficiencies are found. Dam Safety Assurance activities are 100% complete at Beach City Lake. Modifications involved upgrading spillway adequacy including raising the dam and dike, constructing a parapet wall, raising roadways, and modifying a railroad stoplog closure. The full funding estimate for this work was \$3,789,578, which includes \$130,740 from the non-Federal sponsor, the Muskingum Watershed Conservancy District. Work was begun at Magnolia Levee, which protects the town of Magnolia during flood events, and is a part of the Bolivar Dam area. Magnolia Levee experienced a seepage problem during high water and was in danger of failure. Construction was completed in FY 2005. The remaining activity is real estate closeout, which is expected to be completed in FY 2006.

Muskingum Dam Safety Seepage Analyses have been initiated at Bolivar and Mohawk Dams. A dam Safety Assurance initial appraisal has also been initiated at Dover Dam. A study of the operation of the existing projects is also underway, including an optimization study and analysis of water resource needs in the basin. A study of the outlet tunnels at Atwood, Clendening, Leesville, Piedmont, and Tappan was also conducted.

**Local cooperation.** All requirements for local cooperation have been met. For further details see the 1942 Annual Report.

**Operations during the fiscal year.** The projects were operated for flood control as required, and necessary repairs were made to the structures and

appurtenances. The system prevented an estimated \$609,288,000 in flood damages during the fiscal year. To date, the system has prevented an estimated \$3,324,553,000 in flood damages.

## 21. NEWARK, OH

**Location.** The project is located in Licking County, OH at the junction of the North and South Forks of the Licking River, approximately 29 miles above the confluence with the Muskingum River at Zanesville, OH.

**Existing project.** For details of the existing project see the 1981 Annual Report. Construction of the existing project was initiated in July 1940 and completed in November 1941. As a result of the 1968 Flood Control Act the existing project was modified to include improvement of the interior drainage facilities, construction of Log Pond Run diversion channel and modification of the North Fork Channel. Construction of the Log Pond Run diversion channel was awarded in September 1980 and completed in December 1981. The total cost of the project was \$11,151,232.

**Local cooperation.** For details of required and completed local cooperation see the 1981 Annual Report.

**Operations during the fiscal year.** Routine inspections were conducted to determine that the improved channel was maintained in satisfactory condition. To date, the project has prevented an estimated \$3,299,000 in flood damages.

## 22. NORTH BRANCH OF KOKOSING RIVER LAKE, OH

**Location.** The damsite is located in Knox County, OH, on the North Branch of Kokosing River, approximately nine miles above the confluence of the Kokosing and North Branch Rivers, and two miles northwest of Fredericktown, OH. The reservoir is located in Knox County, OH.

**Existing project.** The existing project consists of a rolled-earth dam 70 feet in height and 1,400 feet in length with an uncontrolled spillway adjacent to the right abutment, and an uncontrolled, reinforced concrete outlet work located in the right abutment of the dam. The reservoir provides for a total storage of 14,885 acre-feet and controls a drainage area of approximately 45 square miles. A total of 56 tracts

of land were acquired for the project. Construction of the dam was completed in May 1972. See also Appendix A. The total cost of the project was \$6,665,985, which includes expenditures under the recreation at completed projects program.

**Local cooperation.** None required.

**Operations during the fiscal year.** The entire project is complete. The project was operated for flood control as required and necessary repairs were made to the structure and appurtenances.

### 23. NORTH FORK OF POUND RIVER LAKE, VA

**Location.** The damsite is located in Wise County, VA, on the North Fork of Pound River, approximately one mile upstream from the confluence of the North and South Forks which form the Pound River and approximately three miles upstream from Pound, VA. The reservoir is located in Wise County, VA.

**Existing project.** The existing project consists of a rockfill dam, 122 feet in height and 600 feet in length, an uncontrolled spillway in a saddle upstream from the dam, and an outlet tunnel in the right abutment with a control structure at the upstream end. The reservoir provides a total storage of 11,300 acre-feet and controls a drainage area of approximately 17 square miles. Construction of the dam was completed in January 1966. See also Appendix A. A total of 127 tracts of land were acquired for the project. The total cost for the project was \$6,186,901, which includes expenditures for recreation under the completed projects program. The non-Federal sponsor is required to reimburse the Government for cost allocated to water supply. The Town of Pound, VA reimburses the Government \$5,000 for the cost of providing the water annually.

**Local cooperation.** None required.

**Operations during the fiscal year.** The entire project is complete. The project was operated as required for flood control and necessary repairs were made to the structure and appurtenances. During the fiscal year the project prevented an estimated \$94,000 in flood damages. To date, the project has prevented an estimated \$13,014,000 in flood damages.

### 24. OHIO RIVER BASIN (HUNTINGTON DISTRICT)

**Location.** The work covered by this project consists of a series of levees, floodwalls, channel improvements and dams and lakes in the Ohio River Basin within the Huntington District.

**Existing project.** The existing project consists of the individual projects considered in the Ohio River Basin comprehensive plan within the Huntington District.

**Operations during the fiscal year.** The completed local protection projects are operated and maintained by local interests, except for those local protection projects for which individual reports have been included. During the fiscal year, the project prevented an estimated \$39,966,000 in flood damages. To date the project has prevented flood damages of an estimated cumulative total of \$1,065,085,000.

### 25. PAINT CREEK LAKE, OH

**Location.** The damsite is located in Ross County, OH, on Paint Creek, a tributary of the Scioto River, approximately 37 miles above the mouth of Paint Creek and 100 miles above the mouth of the Scioto River and approximately four miles east of New Parkersburg, OH. The reservoir is located in Ross and Highland Counties, OH.

**Existing project.** The existing project consists of a rock and random earth fill dam, 118 feet in height and 700 feet in length, a gate controlled spillway located near the right abutment, an outlet tunnel located in the right abutment with a control structure at the upstream end, and a random rockfill dike located at the right abutment of the spillway. The reservoir provides for a total storage of 145,000 acre-feet and controls a drainage area of approximately 576 square miles. Construction of the dam was completed in July 1973. See also Appendix A. A total of 257 tracts of land were acquired for the project. The total cost for the project was \$26,969,962, which includes expenditures under the recreation at completed projects program. The non-Federal sponsor is required to reimburse the Government for cost allocated to water supply. The Highland County Water Authority reimburses the Government 0.764% of annual operation and maintenance for the project towards principal and interest of the construction cost and \$8,000 for the cost of providing the water annually.

## HUNTINGTON, WV, DISTRICT

**Local cooperation.** For details of required local cooperation see the 1981 Annual Report.

**Operations during the fiscal year.** The entire project is complete. The project was operated for flood control as required and necessary repairs were made to the structure and appurtenances. During the fiscal year the project prevented an estimated \$18,618,000 in flood damages. To date, the project has prevented flood damages estimated to be \$110,234,000.

### 26. PAINTSVILLE LAKE, KY

**Location.** The damsite is located in Johnson County, KY, on Paint Creek, a tributary of the Levisa Fork of the Big Sandy River, approximately eight miles above the mouth of Paint Creek, and four miles west of Paintsville, KY. The reservoir is located in Johnson and Morgan Counties, KY.

**Existing project.** The existing project consists of a rockfill dam 153 feet in height and 1,600 feet in length, an uncontrolled spillway located southwest of the right abutment of the dam, and an outlet tunnel in the right abutment with a control structure at the upstream end. The reservoir provides for a total storage of 73,500 acre-feet and controls a drainage area of approximately 93 square miles. Construction of the dam was initiated in September 1976 and was completed in September 1980. See also Appendix A. A total of 635 tracts of land were acquired for the project. The total cost of the project was \$60,194,986. The local sponsor has reimbursed the Government \$377,000 for the cost sharing portion of recreation development.

**Operations during the fiscal year.** The project was operated for flood control as required and necessary repairs were made to the structure and appurtenances. During the fiscal year the project prevented flood damages estimated to be \$1,417,000. To date, the project has prevented flood damages estimated to be \$18,499,000.

### 27. R. D. BAILEY LAKE, WV

**Existing project.** The damsite is located in Wyoming County, WV, on the Guyandotte River approximately 108 miles above the confluence with the Ohio River and one mile east of Justice, WV. The reservoir is located in Mingo and Wyoming Counties, WV.

**Existing project.** The existing project consists of a rolled rockfill dam with a concrete face, 310 feet in height and 1,397 feet in length, an uncontrolled spillway located in a saddle in the right abutment of the dam, and an outlet tunnel in the left abutment with a control structure located at the upstream end. The reservoir provides for a total storage of 203,700 acre-feet and controls a drainage area of approximately 540 square miles. Construction of the dam was initiated in November 1973 and completed in December 1979. See also Appendix A. A total of 2,109 tracts of land were acquired for the project. The total cost of the project was \$261,251,678.

**Local cooperation.** None required.

**Operations during the fiscal year.** The entire project is complete. The project was operated for flood control as required and necessary repairs were made to the structure and appurtenances. During the fiscal year the project prevented flood damages estimated to be \$6,458,000. To date, the project has prevented flood damages estimated to be \$180,858,000.

### 28. ROSEVILLE, OH

**Location.** The project is located in Muskingum and Perry Counties, OH on Moxahala Creek, approximately six miles from the confluence with Jonathan Creek, a tributary of the Muskingum River.

**Existing project.** The existing project consists of 7,291 feet of channel improvement; 6,400 feet of levee and railroad embankment enlargements; and the necessary appurtenances for interior drainage. The total cost of the project was \$910,785. Construction was initiated in August 1959 and completed in October 1960.

**Local cooperation.** All requirements for local cooperation have been completed. See also the 1962 Annual Report. Total costs of local requirements were \$62,000.

**Operations during the fiscal year.** Routine inspections of the improved portion of the project were conducted to determine that the project was maintained in satisfactory condition. During the fiscal year the project prevented flood damages estimated to be \$15,000. To date, the project has prevented an estimated \$1,317,000 in flood damages.

## 29. SUMMERSVILLE LAKE, WV

**Location.** The damsite is located at Ruckers Bend in Nicholas County, WV on the Gauley River approximately 35 miles above the confluence of the Gauley and New River at Gauley Bridge, WV. The reservoir is located in Nicholas County, WV.

**Existing project.** The existing project consists of a rockfill dam 390 feet in height and 2,280 feet in length, an outlet tunnel in the right abutment with a control structure located at the upstream end, an uncontrolled spillway located west of the right abutment and two earthfill dikes. The reservoir provides for a total storage of 413,400 acre-feet and controls a drainage area of 803 square miles. See also Appendix A. Construction of the dam was initiated in March 1960 and completed in March 1966. A total of 9,346 acres of land were acquired for the project. The total cost of the project was \$48,375,884, which includes expenditures under the recreation at completed projects program. The non-Federal sponsor is required to reimburse the Government for cost allocated to water supply. The City of Summersville, WV reimburses the Government \$4,100 towards the principal and interest of the construction cost and \$1,700 for the cost of providing the water annually

**Local cooperation.** None required.

**Operations during the fiscal year.** The entire project is complete. The project was operated for flood control as required and necessary repairs were made to the structures and appurtenances. During the fiscal year the project prevented flood damages estimated to be \$19,965,000. To date, the project has prevented an estimated \$629,464,000 in flood damages.

## 30. SUTTON LAKE, WV

**Location.** The damsite is located on the Elk River in Braxton County approximately one mile above Sutton, WV, and 101 miles above the mouth of the Elk River. The reservoir is located in Braxton and Webster Counties, WV.

**Existing project.** The existing project consists of a concrete gravity dam 210 feet in height and 1,178 feet in length, a gated spillway in the channel section of the dam comprised of six tainter gates supported by piers, and an outlet works comprised of five gate sluices through the spillway section. The reservoir provides for storage of 265,300 acre-feet

and controls a drainage area of 537 square miles. See also Appendix A. Construction of the dam was initiated in 1949 and completed in June 1960. The total cost of the project was \$37,029,585.

**Local cooperation.** None required. See the 1981 Annual Report for contributed funds.

**Operations during the fiscal year.** The entire project is complete. The project was operated for flood control as required and necessary repairs were made to the structure and appurtenances. During the fiscal year the project prevented flood damages estimated to be \$15,473,000. To date, the project has prevented an estimated \$373,660,000 in flood damages.

## 31. TOM JENKINS DAM, OH

**Location.** The damsite is located in Athens County, OH on the East Branch of Sunday Creek, a tributary of the Hocking River, approximately three miles north of Glouster, OH, and 57 miles above the mouth of the Hocking River. The reservoir is located in Athens County, OH.

**Existing project.** The existing project consists of a rolled-earth dam, 84 feet in height and 944 feet in length, a controlled works discharging through a tunnel in the left abutment, and an uncontrolled spillway in the ridge running south from the damsite. The reservoir, known as Burr Oak Lake, provides for a total storage of 26,900 acre-feet and controls a drainage area of approximately 33 square miles. See also Appendix A. Construction of the project was initiated in March 1948 and completed in February 1950. A total of 100 acres of land were acquired for the project. The total costs of the project were \$2,086,503, which includes expenditure for recreation at completed project. The non-Federal sponsor is required to reimburse the Government for cost allocated to water supply. The Ohio Department of Natural Resources reimburses the Government \$1,500 for the cost of providing the water annually.

**Local cooperation.** All requirements of local cooperation have been met. See also the 1962 Annual Report. Contributed funds in the amount of \$575,000 have been received from the State of Ohio.

**Operations during the fiscal year.** The entire project is complete. The project was operated for flood control as required and necessary repairs were made to the structure and appurtenances. During the fiscal year the project prevented flood damages estimated to be \$322,000. To date, the project has

## HUNTINGTON, WV, DISTRICT

prevented an estimated \$26,517,000 in flood damages.

### 32. WEST COLUMBUS, OH

**Location.** The project is located on the right bank of the Scioto River in the western part of the City of Columbus, OH, across the river from the downtown area in Franklin County. It is generally bounded by the Scioto River on the north, Interstate 71 on the east, and Frank Road on the south. The area being protected, approximately 2,800 acres, is completely urban with a mix of residential, industrial and commercial development.

**Existing project.** The project under construction consists of a 7.2-mile system including levee, floodwall and high ground. It protects 6,170 structures and 2,800 acres of lands. Fourteen gate closures, interior drainage facilities, construction of two new pump stations and reworking two existing pump stations are included. The project has been operable for flood control since October 2002.

**Local cooperation.** Local interests are required to provide all lands, easements, and rights-of-way; to verify or relocate buildings, utilities, roads, bridges (except railroad bridges), and other facilities where necessary; pay a cash contribution of at least 5%, as required by the Water Resources Development Act of 1986, of the costs allocated to flood control; and bear all costs of operation, maintenance, and replacement of flood control facilities.

**Operations during the fiscal year.** Funds to initiate construction were appropriated in Fiscal Year 1993. The total estimated cost of the project is \$146,000,000 of which \$37,624,957 is non-Federal. Construction contracts underway in 2005 include:

Phase IIB, awarded Mar 2001, 100% complete.

Reliable Power, awarded Nov 2001, 80% complete.

### 33. YATESVILLE LAKE, KY

**Location.** The damsite is located in Lawrence County, KY on Blaine Creek, a tributary of the Big Sandy River, approximately five miles west of Louisa, KY, and 18 miles above the mouth of Blaine Creek. The reservoir is located in Lawrence County, KY.

**Existing project.** The existing project consists of an earth and rockfill dam, 104 feet in height and 760 feet in length, and an uncontrolled spillway located one-half mile southeast of the right abutment of the dam. The outlet works consists of a 13-foot diameter tunnel through the left dam abutment. The reservoir provides for a total storage of 86,951 acre-feet and controls a drainage area of approximately 208 square miles. See also Appendix A. A total of 778 tracts of land were acquired for the project. Construction was completed in May 1995. The total cost of the project was \$99,453,537.

**Operations during the fiscal year.** The entire project is complete. The project was operated for flood control as required and necessary repairs were made to the structure and appurtenances. During the fiscal year the project prevented flood damages estimated to be \$3,738,000. To date the project has prevented an estimated \$23,558,000 in flood damages.

### 34. INSPECTION OF COMPLETED FLOOD CONTROL PROJECTS

The Flood Control Act of June 22, 1936, and subsequent acts require local interests to furnish assurances that they will operate and maintain certain local protection projects after completion in accordance with regulations prescribed by the Secretary of the Army. District Engineers are responsible for the administration of these regulations within their respective districts. The Huntington District is responsible for inspecting projects within the district's geographic boundaries in Kentucky, Ohio, and West Virginia. During the fiscal year, maintenance inspections were made of those completed units transferred to local interests for operation and maintenance. Local interests were advised, as necessary, of measures required to maintain the projects in accordance with the standards prescribed by regulations. Total costs for fiscal year 2005 were \$150,819; total costs through 2005 were \$2,600,691. The flood control works inspected and the dates of inspection are tabulated in Table H.

**35. FLOOD CONTROL WORK UNDER SPECIAL AUTHORIZATION**

Emergency bank protection activities pursuant to Section 14 of the 1946 Flood Control Act (PL 79-526), are tabulated as follows:

<u>Location</u>	<u>FY 2005 Cost</u>
Sec 14, Coordination Account.....	\$8,606
Paden City, WV.....	9,510
Kanawha River, Charleston, WV Magic Island....	14,819
Minersville, OH.....	254
Minersville, OH (contributed).....	17,015
Tuscarawas Co, Johnson Co. Road, OH.....	860
Athens County, SR 144, OH.....	272,782
Athens County, SR 144(contributed).....	18,971

Flood control activities pursuant to Section 205 of the 1948 Flood Control Act (PL 80-852), are tabulated as follows:

<u>Location</u>	<u>FY 2005 Cost</u>
Sec 205, Coordination Account.....	\$3,051
Brush Ck, Gladly Fork, Princeton, WV.....	217
Mercer County, WV.....	43,143
Olive Hill, KY.....	61,238
Hoods Creek, KY.....	-123
Magazine Branch, Elk River, WV.....	19,488
Zimber Ditch, Stark Co, OH.....	30,640
Buckley Lake, OH.....	11,322
North Sand Branch, Raleigh Co, WV.....	13,663

No activities pursuant to Section 208 of the 1954 Flood Control Act (PL 83-780) were underway in FY 2005.

Activities pursuant to Section 107 of the 1960 River and Harbor Act (PL 86-645) for small navigation projects are tabulated as follows:

<u>Location</u>	<u>FY 2005 Cost</u>
Greenup Slackwater Harbor, KY.....	\$4,023

Activities pursuant to Section 1135 of WRDA 1986 (PL 99-662) for Project Modifications to Improve the Environment are tabulated as follows:

<u>Location</u>	<u>FY 2005 Cost</u>
Sec 1135, Coordination Account.....	\$ 725
Wills Creek, Mason Mine 280, OH.....	-19,787

Activities pursuant to Section 206 of WRDA 1996 (PL 104-303) for Aquatic Ecosystem Restoration are tabulated as follows:

<u>Location</u>	<u>FY 2005 Cost</u>
Sec 206, Coordination Account.....	\$1,751
Ore Knob, NC.....	-62
St. Louisville, OH.....	33,211
St. Louisville, OH (contributed).....	21,354
5 <sup>th</sup> Avenue Dam Removal, Columbus, OH.....	233

Work performed under special legislation pursuant to Water Resources Development Act of 1996 (PL 104-303) are tabulated as follows:

<u>Location</u>	<u>FY 2005 Cost</u>
Greenbrier River, Marlinton, WV.....	\$1,762,322
Lower Mud River, Milton, WV.....	393,849
Lower Mud River, Milton, WV(contributed).....	154,160

**ENVIRONMENTAL INFRASTRUCTURE**

**36. CENTRAL WEST VIRGINIA ENVIRONMENTAL INFRASTRUCTURE**

**Location:** The project area consists of 20 counties in Central West Virginia and includes portions of Huntington, Pittsburgh, and Baltimore Districts. The program purpose is to provide design and construction assistance for environmental infrastructure and resource protection and development, including projects for wastewater treatment, water supply, and surface water resource protection and development. Only those projects which are publicly owned may participate in the program.

**Existing project:** In 2005 there were four projects underway in Huntington District: North Putnam PSD, Silverton PSD, Flatwoods – Canoe Run PSD and Cottageville PSD. Work is authorized by Sec 571 of the Water Resources Development Act of 1999 (PL 106-53).

**Local Cooperation.** The program requires reimbursable Project Cooperation Agreements to be executed with local sponsors that stipulate cost sharing provisions of 75% Federal and 25% non-Federal participation.

**Operating during the fiscal year:** During the year, \$122,345 was expended in Huntington District in the various activities related to this program.

### **37. OHIO ENVIRONMENTAL PROGRAM**

**Location:** The program provides environmental infrastructure assistance to communities throughout the State of Ohio and includes portions of Huntington, Louisville, Pittsburgh, and Buffalo Districts. The program includes project design and construction assistance for wastewater treatment and related facilities, combined sewer overflows, water supply and storage and related facilities, mine drainage, environmental restoration, and surface water resource protection and development. Reimbursable projects are allowed.

**Existing project:** In 2005 within Huntington District there were 16 projects underway in Ohio: Whitehall; Village of Hamden/Wellston; Village of Hartford; Pickaway County; Fayette County, Village of Bloomingburg; Morgan County, Bishopville; Village of Corning; Morgan County, Village of McConnelsville; Buckeye Lake; Muskingum County, City of Zanesville; Scioto County, Minford; Vinton County; Jackson County; Village of West Jefferson; City of Louisville; and Stark County, Zimber Ditch. Work is authorized by Sec 594 of the Water Resources Development Act of 1999 (PL 106-53).

**Local cooperation:** Reimbursable construction PCAs, with cost sharing of 75% federal and 25% non-federal, were executed with the appropriate local sponsors.

**Operating during the fiscal year:** During the year, \$1,027,995 was expended in Huntington District in the various activities related to this program.

### **38. SOUTHERN AND EASTERN KENTUCKY ENVIRONMENTAL INFRASTRUCTURE**

**Location:** The project area consists of a 27 county region in southern and eastern Kentucky, which includes portions of the Huntington, Nashville, and Louisville Districts. The program provides for design and construction assistance of environmental infrastructure projects. The focus of the program is on wastewater treatment and collection systems. Reimbursable projects are allowed.

**Existing project:** Within Huntington District, nine projects were underway in 2005 in eastern Kentucky. These were South Williamson, Manchester, Fleming-Neon, Tug Valley Sewer,

Henry Clay Area, Booneville, Pikeville – Indian Hills, Barrenshee Creek, and Oak Dale Christian High school. Work is authorized by Sec 531 of the Water Resources Development Act of 1996 (PL 104-303); as amended by Sec 532 of Water Resources Development Act of 1999.

**Local cooperation:** Reimbursable construction PCAs, with cost sharing of 75% federal and 25% non-federal, were executed with the appropriate local sponsors.

**Operating during the fiscal year:** During the year, \$993,880 was expended in Huntington District in the various activities related to this program.

### **39. SOUTHERN WEST VIRGINIA ENVIRONMENTAL INFRASTRUCTURE**

**Location.** The project area consists of 16 counties in southern West Virginia (all within Huntington District). The program provides for design and construction assistance of environmental infrastructure, largely water supply and wastewater treatment facilities, in that region.

**Existing project.** In 2005, six projects were underway in the program: Krouts Creek, Boone County, Kilsyth, Cool Ridge/Flat Top, Piney Creek and Oak Vale Road PSD. Work is authorized under Section 340 of the Water Resources Development Act of 1992 (PL 102-580) as amended.

**Local Cooperation:** Reimbursable construction PCAs, with cost sharing of 75% federal and 25% non-federal, were executed with the appropriate local sponsors.

**Operating during the fiscal year:** During the year, \$1,516,574 was expended in this program. \$168,015 in non-Federal contributed funds were expended.

### **EMERGENCY RESPONSE ACTIVITIES – FLOOD CONTROL AND COASTAL EMERGENCIES**

#### **40. DISASTERS**

The District's Emergency Operations Center was activated once for flood and hurricane related disasters without any work for FEMA and six times

**REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2005**

for flood and hurricane related disasters with work for FEMA.

**41. OPERATIONAL PROGRAM AREAS**

FY 2005 costs were \$745,624, with \$345,000 for disaster preparedness and \$400,624 for emergency operations.

**42. EMERGENCY WORK IN SUPPORT OF OTHER FEDERAL AGENCIES**

The following was performed for FEMA, under the Stafford Act/Federal Response Plan :

<u>Disaster</u>	<u>FY 2005 Cost</u>
Hurricane Emily .....	\$4,689
Hurricane Katrina .....	1,746,104
Hurricane Jeanne .....	54,910
Ivan in WV and OH.....	1,838,702
May 04 Flooding .....	2,482,668
Hurricane Charley.....	190,619

**43. EMERGENCY FLOOD RECOVERY**

Flood recovery activities pursuant to Section 402 of the 2005 Emergency Supplemental Appropriations Act for Defense, the Global War on Terror and Tsunami Relief (PL 109-13), are tabulated as follows:

<u>Location</u>	<u>FY 2005 Cost</u>
Ceredo Kenova, WV Levee Repairs.....	\$3,060,000
St. Mary's, WV Road Embankment Repairs.....	2,620,000
Spencer, WV Library Bank Stabilization .....	680,000
Ona, WV Bank Stabilization .....	640,000
Kimball Town Hall Sidewalk and Parking .....	140,000
RC Byrd L&D Emergency Dredging .....	110,000
Site Determination and Evaluation .....	200,000

**GENERAL INVESTIGATIONS**

**44. SURVEYS**

Fiscal year 2005 costs were \$1,074,500 itemized as follows:

<u>Project and Location</u>	<u>FY 2005 Cost</u>
<b>Reconnaissance and Feasibility Studies</b>	
Kanawha River Navigation, WV .....	\$512
Ohio River Mainstem Study .....	5,876
South Charleston, WV Port .....	121,648
South Charleston, WV Port (contributed).....	97,232

Belpre, OH Riverfront Park.....	374
Belpre, OH Riverfront Park (contributed) .....	20
Duck Creek, OH .....	34,486
WV Statewide Plan.....	1,682
Columbus Metro Area, OH.....	41,073

WV Comprehensive .....	27,391
New River, Claytor Lake, VA .....	79,340
New River, Claytor Lake, VA (contributed) .....	24,265
Muskingum Basin, Dillon Lake, OH .....	29,823
Muskingum Basin, Dillon Lake, OH (contributed).....	23,790
Hocking River, Monday Creek, OH .....	51,542
Hocking River, Monday Creek, OH (contributed) .....	158
Little Kanawha River, WV .....	165,702

**Miscellaneous Activities**

Special Investigations .....	135,090
FERC Licensing Activities .....	13,690
American Heritage Rivers Navigation.....	88,369
Interagency Water Resource Development .....	10,766
North American Waterfowl Management .....	1,302

**45. PRECONSTRUCTION ENGINEERING AND DESIGN**

Fiscal year 2005 costs were \$ 1,375,958 itemized as follows:

**Greenup Locks and Dam, KY and OH**

The project was authorized for construction by Section 101(b)(15) of WRDA 2000 at \$175,500,000. The Greenup plan of improvement includes a 600-foot extension of the existing 600-foot auxiliary lock to provide an overall length of 1200 feet, extension of the downstream guide wall, filling and emptying system improvements, installation of a miter gate quick change-out system (MGQCS) for faster repairs to the lock miter gates and environmental mitigation measures. Plans and specifications are complete for the mooring cells and new miter gates. Work completed during FY 2005 included: design of the lock extension; physical hydraulic modeling; design of the new miter gates; a geology and foundations Design Documentation Report (DDR); and construction materials DDR.

<u>Project and Location</u>	<u>FY 2005 Cost</u>
Greenup L&D KY and OH.....	\$1,051,862

HUNTINGTON, WV, DISTRICT

**Parkersburg Riverfront Park, WV**

The project was authorized for construction by Section 557(1) of the WRDA 1999 (P.L. 106-53) at a total cost of \$ 8,400,000, with an estimated Federal cost of \$4,200,000 and an estimated non-Federal cost of \$4,200,000.

The project is an expansion and upgrade of an existing recreation facility cost-shared between the Corps and the City of Parkersburg, WV in the early 1980's. The current recreation facility is the primary river terminal for regular ferry service between West Virginia and the Blennerhassett Island Historic WV State Park. Visitor usage of the Parkersburg Riverfront Park for recreation at the site and access to the river is very high and increases annually. Visitor use demands are exceeding the planned uses of the site in the 1980's. A Limited Reevaluation Report (LRR) of the 1998 Feasibility Study was completed in May 2004.

<u>Project and Location</u>	<u>FY 2005 Cost</u>
Parkersburg Riverfront Park, WV .....	\$159,643
Parkersburg Riverfront Park, WV (contributed)..	128,857

**Island Creek at Logan, WV**

The project was authorized by Section 401 of the Water Resources Development Act of 1986 (P.L. 99-662) at a total cost of \$86,000,000, with an estimated first Federal cost of \$62,000,000 and an estimated first non-Federal cost of \$23,800,000.

The recommended project includes widening the Island Creek channel to an 80-foot bottom width for a distance of 3,600 feet upstream of its confluence with the Guyandotte River. In two locations along this channel reach, post and panel retaining walls will be constructed to stabilize the creek bank behind adjacent commercial structures. The project also includes removal of an existing sandbar and implementation of a flood warning system.

The non-Federal sponsor is responsible for providing all lands, easements, rights-of-way, relocations and disposal sites (LERRDs) for the project and required to pay at least 5 percent of the total project cost in cash. It is anticipated the sponsor will negotiate an agreement for the Corps to acquire real estate for the project on their behalf.

<u>Project and Location</u>	<u>FY 2005 Cost</u>
Island Creek at Logan, WV .....	\$35,596

**46. COORDINATION WITH OTHER AGENCIES**

Fiscal year 2005 costs were \$17,121 itemized as follows:

<u>Project</u>	<u>FY 2005 Cost</u>
Cooperation with Other Water Resource Agencies ..	2,139
Planning Assistance to States – Negotiations .....	14,982

**47. COLLECTION AND STUDY OF BASIC DATA**

Fiscal year 2005 costs were \$155,838 itemized as follows:

<u>Project</u>	<u>FY 2005 Cost</u>
National Flood Proofing Committee.....	55,571
Flood Plain Management Services .....	95,578
Technical Services .....	15,897
Quick Responses .....	3,103

Notes for Table 25-A

<sup>1</sup>Includes \$4,294,612 for new work for previous projects, \$4,498,636 Emergency Relief funds, \$9,004,800 Public Works funds and \$686,317 Code 713 funds.

<sup>2</sup>Includes \$3,883,513 for maintenance of previous projects and \$546,090 Maintenance and Operation funds.

<sup>3</sup>Public Works Acceleration funds.

<sup>4</sup>Includes \$516,828 Inland Waterways Trust funds.

<sup>5</sup>Includes \$529,904 Inland Waterways Trust Fund.

<sup>6</sup>Includes \$76,845,486 Inland Waterways Trust funds.

<sup>7</sup>Includes \$76,909,058 Inland Waterways Trust funds.

<sup>8</sup>Includes \$6,043,469 Inland Waterways Trust funds.

<sup>9</sup>Includes \$6,061,288 Inland Waterways Trust funds.

<sup>10</sup>Includes \$1,063 Maintenance and Operation funds.

<sup>11</sup>Includes \$543,960 Emergency Relief funds, \$9,698 Public Works Acceleration funds, \$211,850 Code 711 funds and \$75,000 Code 713 funds.

<sup>12</sup>Includes \$2,795 Maintenance and Operation funds.

<sup>13</sup>Includes \$748,281 Maintenance and Operation funds.

<sup>14</sup>Excludes \$225,090 contributed funds. Includes \$590,000 Code 711 funds.

<sup>15</sup>Includes \$130,000 provided by the Productive Employment Act of 1983.

<sup>16</sup>Includes \$240,000 provided by the Productive Employment Act of 1983.

<sup>17</sup>Includes \$23,087 Public Works Acceleration funds, \$1,089,940 Code 711 funds and \$231,105 Code 713 funds.

<sup>18</sup>Includes \$82,900 Special Recreation Use Fee Funds and \$747,028 Maintenance and Operations Funds.

<sup>19</sup>Includes \$100,000 provided from the Productive Employment Act of 1983.

<sup>20</sup>Includes \$1,924 Maintenance and Operations funds.

<sup>21</sup>Includes \$209,918 Special Recreation Use Fee Funds and \$747,028 Maintenance and Operations Funds.

<sup>22</sup>Includes \$362,649 Code 711 funds and \$10,000 Code 712 funds.

<sup>23</sup>Includes \$38,000 Special Recreation Use Fee Funds and \$748,714 Maintenance and Operations Funds.

<sup>24</sup>Includes \$406,919 Code 711 funds and \$2,317 code 713 funds.

<sup>25</sup>Includes 422,983 Code 711 funds

<sup>26</sup>Includes \$88,710 special recreation use funds.

<sup>27</sup>Includes Cost from Ohio River Division of \$696,000. Excludes \$20,819,782 cumulative contributed funds.

<sup>28</sup>Includes \$477,813 contributed funds.

<sup>29</sup>Includes \$27,190,000 National Industrial Recovery funds and \$528,288 Code 711 funds.

<sup>30</sup>Includes \$206,815 Maintenance and Operations funds.

<sup>31</sup>Includes \$61,945 Public Works Acceleration funds.

<sup>32</sup>Excludes \$160,082 contributed funds.

<sup>33</sup>Includes \$45,177 Code 711 funds.

<sup>34</sup>Includes \$64,233 Code 711 funds.

**REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2005**

<sup>35</sup>Includes \$68,200 special recreation use fees.

<sup>36</sup>Includes \$10,920 Emergency Relief funds.

<sup>37</sup>Includes \$14,153 Code 711 funds.

<sup>38</sup>Includes \$31,496 special recreation use fee funds.

<sup>39</sup>Includes \$5,534 Consolidated Army funds.

<sup>40</sup>Includes \$60,000 provided from the Productive Employment Act of 1983, and \$85,233 Maintenance and Operations Funds.

<sup>41</sup>Excludes \$1,554,707 cumulative contributed funds.

<sup>42</sup>Includes \$300,062 Code 711 funds.

<sup>43</sup>Includes \$214,112 special recreation use fee funds, \$300,000 provided from the Productive Appropriations Act of 1983, and \$100,016 Maintenance and Operation Funds.

<sup>44</sup>Includes \$1,837,337 Code 711 funds and \$287,843 Accelerated Public Works funds. Excludes \$62,800 contributed funds.

<sup>45</sup>Includes \$267,634 special recreation use fee funds, \$215,000 provided from the Productive Employment Appropriations Act of 1983, and \$144,562 Maintenance and Operations Funds.

<sup>46</sup>Includes \$8,064 Code 711 funds and \$30,000 Public Works Acceleration funds. excludes \$575,000 contributed funds.

<sup>47</sup>Excludes \$7,135,157 cumulative contributed funds.

			Construction	Operation and Maintenance	Contributed Funds Expended
Big Sandy River, WV and KY including Levisa and Tug Forks <sup>1 and 2</sup>	completed	1952	1,586,236	15,698,111	131,473
Elk River, WV <sup>3</sup>	completed	1903	30,259		
Gauley River, WV <sup>4</sup>	completed	1903	14,761		
Guyandotte River, WV <sup>5</sup>	completed	1915	27,500		
Little Kanawha River, WV <sup>6</sup>	completed	1960	470,536	1,023,854	
Muskingum River, OH <sup>7</sup>	completed	1955	301,912	6,171,897	6,041
New River, WV and VA <sup>5</sup>	completed	1899	109,691		
Scioto River at Portsmouth, OH <sup>8</sup>	completed	1953	10,951	16,593	

<sup>1</sup>In addition, \$140,068 expended from funds transferred from Department of Commerce, Under accelerated public works program, for repairs of eroded bank at Lock 3 on Big Sandy River, at Louisa, KY.

<sup>2</sup>Operations and maintenance suspended June 30, 1952.

<sup>3</sup>Work closed September 1902. Property transferred to Kanawha River improvements.

<sup>4</sup>Work closed September 1902. Abandonment recommended in H. Doc 467, 69th Congress.

<sup>5</sup>Work suspended.

<sup>6</sup>Operation and maintenance suspended June 30, 1951.

<sup>7</sup>Collections from licensed non-Federal hydroelectric utilities for use of dams on Muskingum River for fiscal years 1923-1953 were \$79,154.

<sup>8</sup>P.L. 954, August 31, 1954, authorized Secretary of Treasury to pay Portsmouth Sand and Gravel Co. \$75,000 in full settlement of claims against government for damages resulting from change in Scioto River Channel.

**Navigation**

OMAHA, NE, DISTRICT

---

**1. MISSOURI RIVER, SIOUX CITY, IA TO MOUTH (SIOUX CITY, IA TO RULO, NE)**

**Location.** Channel of the Missouri River extending from Sioux City, IA to Rulo, NE.

**Previous Projects.** For details see page 1893, Annual Report for 1915, and page 1175, Annual Report for 1938.

**Existing Project.** A navigation channel of 9-foot depth and width not less than 300 feet, obtained by revetment of banks, rock dikes to contract and stabilize waterway, cutoffs to eliminate long bends, closing minor channels, and removal of snags and dredging as required. Construction was initiated on this section of the project (Sioux City to Rulo) in FY 1928, the bank stabilization work was completed in April 1979, and the navigation feature was completed in September 1980. A reliable channel suitable for navigation is available through this section. Controlling depth at ordinary stages of the river is 9 feet, with additional depths available during high stages. Commercial navigation was inaugurated on this section in May 1939, and common carrier transportation service was inaugurated in October 1946. Seven riverside recreation sites are complete and in operation. (See Table 26-A for total cost of construction.)

**Local Cooperation.** Requirements are described in full on page 26-2 of FY 1988 Annual Report.

**Terminal Facilities.** Terminal facilities for loading and unloading grain, liquids and dry bulk products are maintained by private interests at various locations on this section of the river. A complete list of terminal facilities is included in the Missouri River navigation maps and can be obtained from the Omaha District for a small fee.

**Operations During FY.** District personnel accomplished channel reconnaissance, surveys and mapping, engineering and design, surveys and layouts of construction, and supervision and administration. Local interests operate and maintain the recreation sites. Government Hired Labor Forces completed maintenance, which consisted of placing stone on damaged structures and placing structure markers to aid navigation.

**2. NAVIGATION WORK UNDER SPECIAL AUTHORIZATION**

**Small Navigation Projects Not Specifically Authorized by Congress (Sec. 107 of the River and Harbor Act of 1960, as amended, Public Law 645, 86th Congress).**

No work during the period.

**Flood Control**

**3. ABERDEEN, SD**

**Location.** This project is in the Moccasin Creek sub basin in the city of Aberdeen, Brown County, South Dakota. Aberdeen is located in the James River Valley in the northeast quarter of South Dakota.

**Existing Project.** The selected alternative is a 100-year event levee 2.9 miles long on the northeast side of Aberdeen that will prevent 49 percent of the average annual flood damages to structures and contents in that area. The levee will essentially block existing drainage to Moccasin Creek, and a combination of culverts with gates and detention ponds were incorporated into the design to mitigate this interior drainage problem. A two-foot road raise at Fairgrounds Road is also included.

**Local Cooperation.** Section 205, Flood Control Act of 1948, as amended applies. The city of Aberdeen and Brown County is paying the local share of the project.

**Operations During FY.** Construction advertisement and award of Phase II was completed in FY 2004. Project was completed in December, FY 2005. The O&M Manuals will be completed during FY 2006.

**4. ANTELOPE CREEK, LINCOLN, NEBRASKA**

**Location.** Antelope Creek is located in the southeastern portion of Nebraska in Lancaster County and passes through the state capital of Lincoln.

**Existing Project.** The project consists of 2 miles of improved channel extending upstream from the mouth of Antelope Creek, a portion of which is a by-pass channel adjacent to a 4,060 foot-long concrete conduit in the downtown area. The project also includes a labyrinth weir control structure, two existing bridge replacements, one bridge modification, and 2.29 miles of recreation trails along the proposed channel project. The channel improvement project will provide flood damage reduction

## REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2005

---

to the city of Lincoln and the University of Nebraska-Lincoln campus. The Antelope Creek project is just one piece of a larger Antelope Valley project, which combines flood control, urban revitalization, and transportation projects.

**Local Cooperation.** This project is authorized under Section 101(b)(19) of the Water Resources Development Act of 2000. The Project Cooperation Agreement (PCA) with the Lower Platte South Natural Resources District and the Joint Antelope Valley Authority to sponsor the Antelope Creek project was executed in October 2002. PCA Amendment #1 was executed in March 2005 that afforded the sponsor authority to perform Section 215 project work. The current non-Federal cost estimate is \$27,628,000. The current Federal cost estimate is \$27,628,000 for a total project cost of \$55,256,000.

**Operations During FY.** Omaha District continued the in-house design and preparation of plans and specifications for Phase 2 in FY05 but halted further Phase 2 work late in the 1st quarter due to insufficient Federal construction funding required for Phase 2 construction. During the 3rd quarter of FY05, the Omaha District designed and awarded a smaller construction contract to Hawkins Construction Company, Omaha, Nebraska, for construction of Pedestrian Bridge #1, an authorized recreation project feature. Real Estate reviewed numerous Phase 3 sponsor acquisitions. Sponsor initiated and completed numerous utility and road/bridge relocation construction contracts, building demolitions, railroad bridge replacement and modifications, and continued extensive work on adjacent sponsor roadway projects.

### 5. BEAR CREEK LAKE, CO

**Location.** The dam site is on Bear Creek in Jefferson County, CO, about 8 miles above the confluence of Bear Creek with the South Platte River at Denver.

**Existing Project.** Earthfill dam 180 feet high, with a crest length of about 5,300 feet; and a supplementary earthfill dike with a height of 65 feet and a crest length of 2,100 feet, to the south of the main dam, and an uncontrolled earth and rock-cut emergency spillway. The lake provides storage capacity of 30,600 acre-feet for flood control and 1,979 acre-feet for sediment and recreation. Construction of the project was initiated in October 1973 and was completed in September 1982,

exclusive of recreation facilities. (See Table 26-A for total cost of construction.)

**Local Cooperation.** Requirements are described in full on page 21-3 of FY 1981 Annual Report.

**Operations During FY.** Maintenance: Continued routine operation and maintenance activities.

### 6. BIG SIOUX RIVER AND SKUNK CREEK, SIOUX FALLS, SOUTH DAKOTA

**Location.** Sioux Falls is located on a large bend of the Big Sioux River and at the confluence with Skunk Creek in the south half of Minnehaha County in southeastern South Dakota.

**Existing Project.** The project builds upon an existing project. It consists of raising an existing levee from the diversion dam to the upstream tie-off, raising the diversion channel levee, modifying the chute and stilling basin, raising the diversion dam, raising the levees on Skunk Creek, raising Big Sioux levees downstream of Skunk Creek, adding an inflatable dam on the Big Sioux upstream of Skunk Creek, and providing for bridge improvements.

**Local Cooperation.** This project is authorized under Section 101 of the Water Resources Development Act of 1996. The Project Cooperation Agreement (PCA) with the city of Sioux Falls to sponsor the Big Sioux River project was executed on 14 August 2000. The current non-Federal cost estimate is \$11,393,000. The current Federal cost estimate is \$34,179,000, for a total project cost of \$45,572,000.

**Operations During FY.** Finished plans and specifications for Phase 2 and real estate purchases for Phase 2 were all initiated. Plans and specifications for Phase 3 were started.

### 7. BOWMAN-HALEY LAKE, ND

**Location.** The dam site is on North Fork of Grand River in southwestern North Dakota, about 6 miles above Haley, ND.

**Existing Project.** An earth-fill dam 79 feet high, with a crest length of 5,730 feet, and a reservoir with a flood storage capacity of about 72,700 acre-feet, plus

## OMAHA, NE, DISTRICT

---

19,780 acre-feet for sediment storage, fish and wildlife conservation, recreation, and future water supply for communities of Bowman, Reeder, Scranton, and Gascoyne, ND. Construction was initiated in July 1964, and the project was completed in 1970. (See Table 26-A for total cost of construction.)

**Local Cooperation.** Requirements are described in full on page 26-2 of FY 1988 Annual Report.

**Operations During FY.** Maintenance: Continued routine operation and maintenance activities.

### 8. BUFORD TRENTON IRRIGATION DISTRICT, ND (LAND ACQUISITION)

**Location.** The Buford Trenton Irrigation District (BTID) is located in the flood plain along the left (north) bank of the Missouri River near its confluence with the Yellowstone River, in Williams County near Williston, ND.

**Existing Project.** The project consists of the acquisition of permanent flowage and saturation easements within and surrounding the BTID for land that has been affected by rising ground water and the risk of surface flooding. There are approximately 70 affected landowners and 90 tracts. Approximately 10,000 acres are irrigable and 1,750 non-irrigable. Acquisition of easements and relocation assistance under P. L. 91-646 began in FY 1998. The total cost of the project is capped at \$34,000,000 by authorizing legislation.

**Location Cooperation.** The project is authorized under Section 336(a) of the Water Resources Development Act of 1996, P. L. 104-303. Local cooperation is not applicable.

**Operations During FY.** During fiscal year 2005, approximately \$930,000 was expended purchasing three additional easements, relocation payments and associated costs, and the removal of 10 homes that were purchased by the government. The purchase of additional easements and associated costs will continue in FY06, focusing primarily on the publicly held land tracts.

### 9. CHATFIELD LAKE, CO

**Location.** A dam site on the South Platte River, just below the mouth of Plum Creek, about eight miles up-

stream from Denver, CO.

**Existing Project.** Consists of rolled earth-fill dam with a maximum height of 148 feet and a crest length of 13,136 feet; a reservoir with flood control capacity of 235,098 acre-feet and sediment capacity of 26,692 acre-feet, which will be used for recreation; and an enlarged channel from the dam downstream to Denver to accommodate reservoir flood releases. The Corps participated with local interests in acquisition of lands and development of recreation facilities immediately downstream of the Chatfield Dam in lieu of a portion of the channel improvement. Construction of the project was initiated in August 1967 and was physically completed in 1992. (See Table 26-A for total cost of construction.)

**Local Cooperation.** Requirements are described in full on page 26-3 of FY 1993 Annual Report.

**Operations During FY.** Maintenance: Continued routine operation and maintenance activities.

### 10. CHERRY CREEK LAKE, CO

**Location.** A dam site on Cherry Creek in Arapahoe County, CO, approximately 6 miles southeast of Denver, CO, just outside of city limits. Cherry Creek joins South Platte River within city limits of Denver,

**Existing Project.** A rolled earth-fill dam with maximum height of 141 feet above streambed and a crest length of 14,300 feet. Project includes a reinforced concrete outlet works and an uncontrolled side channel spillway canal discharging into adjacent Toll Gate Creek. Cherry Creek project provides reservoir storage capacity of 92,126 acre-feet below spillway canal invert and, in addition, a surcharge storage of 134,470 acre-feet. Plan of operation in ultimate development for multiple-purpose uses includes 13,960 acre-feet for sediment storage and 79,960 acre-feet for conservation purposes. Construction began in FY 1946 and was completed in June 1961, exclusive of recreation facilities. (See Table 26-A for total cost of construction.)

**Local Cooperation.** None required except for recreation cost sharing.

**Operations During FY.** Maintenance: Continued routine operation and maintenance activities.

## REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2005

---

### 11. FALL RIVER BASIN, SD

**Location.** In Custer and Fall River Counties, in and near the town of Hot Springs, SD. Hot Springs unit is in the town of Hot Springs, immediately south of the junction of Cold Brook and Hot Brook, which combine to form the Fall River. Cold Brook Lake unit is approximately 1.25 miles north of the town of Hot Springs on Cold Brook, and Cottonwood Springs Lake unit is approximately 4.5 miles west of the town of Hot Springs on Cottonwood Springs Creek, one-half mile upstream from its confluence with Hot Brook.

**Existing Project.** The general plan of improvement provides flood protection for Hot Springs, SD. The Hot Springs channel improvement unit consisted of widening, deepening and straightening 6,000 feet of channel of Fall River. The Cold Brook Lake unit, an earth-fill dam with appurtenant structures, controls an area of 70.5 square miles. The Cottonwood Springs Lake unit consists of an earth-fill dam with appurtenant structures and controls an area of 26 square miles. Construction of Hot Springs unit was completed during FY 1951. Construction of Cold Brook unit dam and appurtenances was completed in FY 1953 with the exception of a road and parking area, which were completed in FY 1955. Construction of the Cottonwood Springs Dam was completed in FY 1970, with the exception of the recreation facilities, which were completed in FY 1972. (See Table 26-A for total cost of construction.)

**Local Cooperation.** Local cooperation requirements have been fully complied with.

**Operations During FY.** Maintenance: Routine operation and maintenance activities were continued on the Cottonwood Springs and Cold Brook Dams and structures.

### 12. LOGAN CREEK, PENDER, NE

**Location.** This project is located in northeastern NE, approximately 75 miles north-northwest of Omaha, NE. Pender is located along the right bank of Logan Creek, about midpoint in the Logan Creek basin.

**Existing Project.** The selected and constructed plan is a combination levee and floodwall with a detention storage feature. It provides flood protection from Logan Creek as well as incidental benefit from Stage Creek

flooding to the Village's residential and industrial area as well as its central business district. The levee extends approximately 15,000 feet in length along the north, east, and south edge of the community, averaging 10 feet in height.

**Local Cooperation.** Section 205, Flood Control Act of 1948, as amended; Flood Damage Reduction applies. The Village of Pender is paying the local share of the project.

**Operations During FY.** O&M Manuals were completed in 2002. Project modification to drainage structures, Real Estate certification and project closeout are projected for completion late in FY 2006.

### 13. MISSOURI NATIONAL RECREATIONAL RIVER, NE AND SD

**Location.** On the Missouri River between Gavins Point Dam and Ponca State Park, NE. This includes Cedar and Dixon Counties in Nebraska, and Yankton, Clay, and Union Counties in South Dakota.

**Existing Project.** The designation as a National Recreational River will preserve outstanding and important scenic values and will provide additional opportunities for river access and recreation use. The project provides erosion control, consisting of bank stabilization and river management techniques designed to preserve the existing environment, and at the same time preserves high bank flood plain lands. Estimated total cost of construction is \$25,041,000 of which \$21,000,000 is the Federal cost of construction and \$4,041,000 is the non-Federal contributed funds.

**Local Cooperation.** All recreational construction on this project will be done in accordance with the cost-sharing and financing concepts reflected in the Water Resources Development Act of 1986. A cost-sharing contract with the state of South Dakota for the Myron Grove access site was signed on June 24, 1986; and the Yankton-Riverside Park Section 215 Agreement was signed on April 24, 1989. Construction was completed in June 1987 and June 1991, respectively. A Section 215 agreement was signed on May 30, 2001 with the Nebraska Game and Parks Commission for construction of the Ponca Resource and Education Center which was completed in 2004.

## OMAHA, NE, DISTRICT

---

**Operations During FY.** Design and construction of the Ponca Backwater Restoration located at Ponca State Park on the Nebraska side of the river was completed late in 2004.

### 14. MISSOURI RIVER, KENSLERS BEND, NE, TO SIOUX CITY, IA

**Location.** Project is along Missouri River between Ponca Bend, NE, and combination bridge at Sioux City, IA.

**Existing Project.** Construction of dikes, revetments and channel improvement along Missouri River from Miners Bend and vicinity, SD and NE, to Sioux City, IA. Project was started in June 1946 and completed in June 1961. (See Table 26-A for total costs.)

**Operations During FY.** Routine operation and maintenance activities continued.

### 15. PAPIILLION CREEK AND TRIBUTARIES LAKES, NE

**Location.** The Papillion Creek basin is located in Washington, Douglas, and Sarpy Counties, NE. Big Papillion Creek rises west of Blair and flows southeasterly through metropolitan Omaha. It is joined by the Little Papillion Creek just above Offutt AFB, forming Papillion Creek. The combined creeks flow along the side of Offutt AFB to its confluence with the Missouri River.

**Existing Project.** The project consists of a series of four dams and reservoirs, channel improvements, an effluent storage facility, and a flood warning system on tributaries of Papillion Creek. Construction was initiated in FY 1972. Completed projects include Standing Bear Lake, Glenn Cunningham Lake, and Wehrspann Lake. Estimated total costs for the project is \$68,659,000 consisting of \$64,334,000 in Federal funds (\$1,367,000 to be reimbursed by the non-Federal sponsor) and \$2,958,000 non-Federal other costs and cash contributions.

**Local Cooperation.** Requirements are described in full on page 21-6 of FY 1981 Annual Report.

**Operations During FY.** Maintenance: Routine operation and maintenance activities continued.

### 16. PEBBLE CREEK, SCRIBNER, NE

**Location.** Scribner, NE, is located in Dodge County about 47 miles northwest of Omaha. Pebble Creek is a right-bank tributary to the Elkhorn River.

**Existing Project.** The project includes a 3.6 mile-long levee along the Elkhorn River with a maximum height of 5 ft (a modification to the original Pebble Creek project), one closure structure at U.S. HWY 275 at the northern edge of Scribner, and several ramps over the two levees. An automated flood warning system was installed that will allow adequate time to operate the closure structure. Both levees are completed which essentially is one ring levee that provides protection for the entire city of Scribner.

**Local Cooperation.** The city of Scribner strongly supported the entire Pebble Creek levee project, including the Elkhorn River levee and its modification. The City obtained cost-sharing assistance from the Nebraska Natural Resources Commission and the Lower Elkhorn Natural Resources District. The total cost of the project was \$3,146,270. The non-Federal portion of this totaled was \$881,713 which includes \$363,000 for lands, easements, and rights-of-way.

**Operations During FY.** Final audit and project closeout completed in FY 2005.

### 17. PERRY CREEK, IA

**Location.** The Perry Creek basin is located in Woodbury and Plymouth Counties in northwestern Iowa. The downstream five miles of the basin lie within the corporate limits of Sioux City, IA, and drain the central portion of the city.

**Existing Project.** The project consists of 14,800 linear feet of grass and rock lined channel, 1,500 linear feet of new conduit, modification of 710 linear feet of existing conduit, and a concrete stilling basin, to provide capacity for the 100-year event. Also included are 4.25 miles of hiking/biking trail and a basin-wide flood warning system. Estimated project cost is \$96,870,000, of which \$58,677,000 is Federal cost and \$38,193,000 is non-Federal cost.

**Local Cooperation.** The project is authorized under the 1986 Water Resources Development Act. The city of Sioux City, IA, is the local sponsor.

## REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2005

---

**Operations During FY.** The Phase 4 construction contractor continued construction on the grading of the channel, removed bridges and constructed floodwalls during FY05.

### 18. PICK-SLOAN MISSOURI BASIN PROGRAM (OMAHA DISTRICT)

**Location.** Flood control improvements in this project are along the Missouri River and several of its principal tributaries and in states comprising the Missouri River Basin.

**Existing Project.** A general comprehensive plan for flood control and other purposes in the Missouri River Basin provides for levees along Missouri River between Sioux City, IA, and mouth and reservoirs on the Missouri River main stem and tributaries. See individual reports and Table 26-I for projects in the Omaha District included in the program.

### 19. PIPESTEM LAKE, ND

**Location.** On Pipestem Creek in Stutsman County, ND, three miles upstream from where Pipestem Creek joins the James River at Jamestown, ND.

**Existing Project.** The project consists of a rolled earthfill dam approximately 99.5 feet high with a crest length of 4,000 feet and outlet works of a gated reinforced concrete conduit. The reservoir provides 142,107 acre-feet of storage. The multipurpose pool provides space for silt storage and 840 acres of water surface for fish, wildlife and recreation needs. Construction of the project was initiated in FY 1970 and completed in FY 1977. (See Table 26-A for total construction costs.)

**Local Cooperation.** Requirements are described in full on page 26-6 of FY 1988 Annual Report.

**Operations During FY.** Routine operation and maintenance activities continued.

### 20. SALT CREEK AND TRIBUTARIES, NE

**Location.** Salt Creek Basin comprises an area of about 1,627 square miles in and around Lincoln in southeastern Nebraska.

**Existing Project.** The authorized project consists of a system of 10 dams and reservoirs, channel clearing,

enlarging and realignment, levees and necessary bridge alternations. Pursuant to Senate Resolution adopted August 7, 1964, which authorized a review of the Salt Creek survey report, additional units were placed in "inactive" classification. Construction of the project began in the spring of 1962. All work under the active portion of the project, consisting of the 10 dams and reservoirs and the channel improvements and levees through Lincoln, was completed in 1969. Funds were transferred to the project in FY 1980 with concurrence of Congressional Committees. These funds were used to determine an effective method of correction for the dispersive clay problem in the completed downstream levees through Lincoln. (See Table 26-A for total construction costs.)

**Local Cooperation.** Requirements are described in full on page 26-6 of FY 1988 Annual Report.

**Operations During FY.** Maintenance: Routine operation and maintenance activities continued.

### 21. SOUTH PLATTE RIVER BASIN, CO

**Location.** Flood control improvements in this project are along the South Platte River and its tributaries in Colorado.

**Existing Project.** General plan for flood control and other purposes to provide for construction of Chatfield Lake on the South Platte River, Bear Creek Lake on Bear Creek, and levee and channel improvements on the South Platte River. (See individual reports and Table 26-B for authorizing legislation).

### 22. VAN BIBBER CREEK, CO

**Location.** Van Bibber Creek is a right bank tributary of Ralston Creek with the confluence in Arvada, CO. The potential project area includes approximately one mile of the downstream portion of the creek located partially in Arvada and partially in Jefferson County.

**Existing Project.** The proposed project would include channel improvements including an underground conduit to convey Van Bibber Creek flood waters to Ralston Creek.

**Local Cooperation.** Section 205, Flood Control Act of 1948, as amended, applies. The City of Arvada is

OMAHA, NE, DISTRICT

---

paying the local share of this project. The Project Cooperation Agreement with the City of Arvada, Colorado, to sponsor the Van Bibber Creek project was executed in April 2002.

**Operations During FY.** Construction continued during FY05 and was 84% complete at the end of FY05. Construction completion is scheduled for fiscal year 2006.

**23. WOOD RIVER, GRAND ISLAND, NE**

**Location.** This project is located in Hall County Nebraska, approximately midway between the city of Grand Island and Interstate 80.

**Existing Project.** This project consists of a five-mile long diversion channel with levees on both sides. The channel will divert Wood River flood flows to the Platte River. The diversion structure will be located downstream from the Highway 281 bridge that crosses the Wood River. The diversion channel will begin at that point and run eastward to the Platte River. The current county and city bridges that cross the channels will be designed and constructed by the sponsor. One bridge for the Union Pacific Railroad will be constructed. In addition, a two-mile long tie-off levee and small diversion channel will be built west of highway 281 to prevent Wood River flood flows from spilling into the Warm slough basin nearby and outflanking the diversion channel.

**Local Cooperation.** This project is authorized under the Water Resources Development Act (WRDA) of 1996, Section 101K modified by WRDA of 1999, Section 335. The Project Cooperation Agreement (PCA with the Central Platte Natural Resources District was executed on 2 May 2000. The current non-Federal cost estimate is \$4,134,000. The current Federal cost estimate is \$10,562,000, for a total project cost of \$14,696,000.

**Operations During FY.** A small section of levee in the Hall County Park was identified to have construction deficiencies. This section of levee was redesigned and reconstructed.

**24. INSPECTION OF COMPLETED FLOOD CONTROL WORKS**

Flood Control Act of June 22, 1936, and subsequent acts require local interests to furnish assurances that they

will maintain and operate certain local protection projects after completion, in accordance with regulations prescribed by Secretary of the Army. District Engineers are responsible for administration of these regulations within the boundaries of their respective districts.

Inspections of completed local protection projects which have been turned over to local interests for maintenance and operation during the FY are set forth in Table 26-J, Inspections of Completed Local Protection Projects. FY 2005 costs were \$211,468.

**25. SCHEDULING FLOOD CONTROL RESERVOIR OPERATIONS**

Under Sections 7 and 9, Flood Control Act of December 22, 1944, the Corps of Engineers is responsible for detailed scheduling of operations involving storage capacity reserved for or assigned to flood control in reservoirs constructed by the Bureau of Reclamation as well as those constructed by the Corps of Engineers. Costs for FY 2005 were \$306,450; and total costs through September 30, 2005 were \$11,312,881.

**26. FLOOD CONTROL ACTIVITIES UNDER SPECIAL AUTHORIZATION**

**Emergency Response Activities - Repair, Flood Fighting and Rescue Work (Public Law 99, 84th Cong., and antecedent legislation.)**

**Operational Program Areas.** FY costs as follows:

**REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2005**

Preparedness:  
 All Hazards Planning Activities..... \$ 230,418

**Small Flood Control Projects Not Specifically Authorized by Congress (Sec. 205, 1948 Flood Control Act as amended, Public Law 858, 80th Cong., June 30, 1948 as amended.)**

Federal costs for FY 2005 were \$3,648,751 for feasibility studies, plans and specifications and construction measures. See Table 26-L for detailed breakdown by project.

**Emergency Bank Protection (Sec. 14, 1946 Flood Control Act, Public Law 526, 79th Cong., July 24, 1946 as amended.)**

Operations under this heading were as follows: Federal costs for FY 2005 were \$12,404 for projects in the planning and design analysis phase and projects in the construction phase. See Table 26-L for detailed breakdown by project.

**Environmental**

**27. CALIFORNIA BEND, NE**

**Location.** The remnant river channel and floodplain land along river miles 648.5 - 650.0 along the Missouri River, in Washington County, about one mile east of Blair, NE.

**Existing Project.** The project to be modified is the Missouri River Navigation and Bank Stabilization Project. The California Bend modification will restore river flows through the historic river channel adjacent to the navigation channel, to restore fish breeding, brood rearing, resting and feeding habitat, and to benefit the riverine ecosystem as a whole. The downstream end of a 1.5-mile long backwater will be enlarged to provide a permanent connection to the navigation channel, and about 1 mile of excavation will connect its upstream end to the river. This will create permanent flows through about 2.5 miles of channels. Some of the surrounding farmland will be restored to floodplain forest. Also several of the spur dikes along the navigation channel will be lowered to enable navigation flows to create shallow margins along the river.

**Local Cooperation.** Section 1135 of 1986 WRDA applies. The Papio-Missouri River Natural Resources District is providing all needed cost-sharing, including real estate interests valued at approximately \$540,725, and cash of about \$600,000.

**Operations During FY.** Final inspection for construction contract was conducted 28 October 2003. Several contract modifications were issued during the contract period. Final amount paid to Pentzien, Inc. was \$2,083,823.16. The PDT has initiated a draft of the O&M Manual; work on the draft and crediting of LERRD will continue into FY 2006.

**28. CHEYENNE RIVER SIOUX TRIBE, LOWER BRULE SIOUX TRIBE, AND STATE OF SOUTH DAKOTA TERRESTRIAL WILDLIFE HABITAT RESTORATION**

**Location.** Generally lands located in the state of South Dakota and acquired by the Secretary of the Army for the implementation of the Pick-Sloan Missouri River Basin program. Lands to be transferred to the State are Corps land located above the top of the exclusive flood

## OMAHA, NE, DISTRICT

---

pool of the Oahe, Big Bend, Fort Randall and Gavins Point projects and located outside of the external boundaries of a reservation of an Indian Tribe. Lands to be transferred to the Secretary of the Interior are lands located above the top of the flood pool of the Big Bend and Oahe projects and located within the external boundaries of the reservation of the Cheyenne River Sioux Tribe and the Lower Brule Sioux Tribe.

**Existing Project.** Review and submittal to congress of wildlife habitat restoration plans developed by the State and Indian Tribes. Accomplish the transfer of Corps of Engineers land to the State of South Dakota and the Department of Interior for the two Indian Tribes. Estimated total cost of the project is \$100,489,000.

**Local Cooperation.** This project has no cost-sharing sponsor. The entire project is being borne by the Federal government with no cost to either local or tribal governments or the affected state. Therefore, no Project Cooperation Agreements are required. Restoration of terrestrial wildlife habitat loss programs are being accomplished by the transferees through the use of grant instruments until ten years from date of enactment under which the trust funds established under project authorization are fully capitalized.

**Operations During FY.** Coordination efforts with state and tribal entities continued. Grant agreements were implemented.

### 29. FORT PECK FISH HATCHERY, MONTANA

**Location.** The project is located along the Missouri River in northeastern Montana, approximately 18 miles southeast of Glasgow and downstream from the Fort Peck Dam. The hatchery site is located on approximately 96 acres of Corps project land.

**Existing Project.** This project would improve important fisheries resources to the area through construction of a fish hatchery downstream of the existing dam. The hatchery would include 96 acres of land, and an allocation of water to establish a hatchery for native fish recovery and cool-, warm-, and cold-water fish, such as walleye, northern pike, sauger, small- and largemouth bass, catfish, salmon and paid sturgeon. The hatchery will have the flexibility to raise other species that have been hit by heavy fishing pressure in recent years. The project is authorized at \$20,000,000.

**Local Cooperation.** Section 325 of the Water Resources Development Act of 2000 applies. The legislation requires that the State of Montana be credited for all costs of stocking Fort Peck Lake during the period beginning January 1, 1947 and the costs to the State of Montana and the counties having jurisdiction over land surrounding Fort Peck Lake for the construction of local access roads to the lake. When the fish hatchery project is completed, the operation, maintenance, repair, and replacement of the hatchery will be a non-Federal responsibility except for the costs of operation and maintenance associated with raising threatened or endangered species.

**Operations During FY.** All design activities for the Fort Peck Fish Hatchery project have been completed. Construction on the Intake Structure and Pump House contract and Electrical Extension contract are complete. Construction of the Rearing Ponds and Hatchery Complex package is approximately 95 percent complete, with an estimated completion date of fall, 2006.

### 30. LOWER DECATUR, NE

**Location.** The Missouri River's right (west) overbank including side channels, from river mile 684.5 to 689 on the Missouri River in Burt County, NE, about 2 miles southeast of Decatur, NE.

**Existing Project.** Modification of the Missouri River Bank Stabilization and Navigation Project (MRBSN) constructed from 1935 to 1982. Lower Decatur Bend is one of many bend cutoffs (straightenings) created by the Corps during channelization of the Missouri River for navigation and bank stabilization. The proposed project modification includes 3 main off-stream aquatic components: side-channel restoration, lowering of the riverward extent of closure spur dikes, and revetment lowering over an extended length to allow river flows to erode the river bank behind the revetment, thereby increasing the top width of the channel over an extended area. An opportunity exists at Lower Decatur Bend to restore the physical habitat to configurations more similar to those that existed prior to the channelization of this reach of the river. Total Project costs are estimated at \$6,058,000, with a Federal share of \$4,543,000.

**Local Cooperation.** Section 1135 of 1986 WRDA applies. The Papio-Missouri River Natural Resources

## REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2005

---

District is providing all needed cost sharing, including real estate interests valued at approximately \$574,000 and cash of about \$941,000.

**Operations During FY.** Feasibility studies were completed. Plans and specifications were ongoing in FY 2005. Construction of the project is has been delayed due to funding constraints in FY 2006.

### **31. MISSOURI RIVER FISH & WILDLIFE MITIGATION, IA, KS, MO, MT, NE, ND, & SD**

**Location.** The project extends along the Missouri River from Sioux City, IA, to the mouth near St. Louis, Missouri.

**Existing Project.** To mitigate a portion of the fish and wildlife habitat losses resulting from the construction and operation of the Missouri River Bank Stabilization and Navigation project. Estimated total cost of the project is \$3,059,687,000 federal funds.

**Local Cooperation.** This project has no cost-sharing sponsor. The entire project is being borne by the Federal government with no cost to either local governments or the affected states. Therefore, no Project Cooperation Agreement is required. Although the affected states are not participating financially in the project, the states are very actively involved in the planning and design of the project. The states also are participating in the project by furnishing perpetual easements for construction and operation on existing state-owned lands. The states of Missouri and Iowa are the primary donors of such easements.

**Operations During FY.** Significant work efforts were the creating of 70 acres of dredged islands below Gavins Point Dam and 600 acres of cleared islands below Ft. Randall and Gavins Point as emergent sandbar habitat for birds. Support was also given to the fish hatcheries in MT, ND, SD and MO for pallid sturgeon. Design and construction continued on mitigation projects in NE and IA (MO and KS handled by Kansas City District), with limited shallow water habitat construction as we are in a monitoring mode after creating 1,600 acres in the previous year.

### **32. NATHAN'S LAKE/DEER CREEK AQUATIC HABITAT IMPROVEMENT, NE**

**Location:** The project is located in the Missouri River floodplain, several remnant wetland basins and a ditched creek channel, from river mile 632.8 to 633.5 on the Missouri River in Washington County, Nebraska, about 3 miles north of Omaha and 4 miles southeast of Ft. Calhoun, Nebraska.

**Existing Project.** Construction of Nathan's Lake and Mud Lake islands and shallow fingers, expansion of wetland areas, construction of a diversion sediment basin and the west ditch and west berm. Additional work will include emphasis on palustrine emergent wetland benefits as well as stream riparian restoration related to those wetlands and the river. This is the first Section 206 project authorized for study nationwide and the work will be a component of the sponsor's Missouri River Corridor Plan.

**Local Cooperation.** Section 206 of the Water Resources Development Act of 1996 (P.L. 104-303), as amended applies. The Papio-Missouri River Natural Resources District is the local sponsor and providing all necessary cost sharing including real estate interests.

**Operations During FY.** Work continued on draft of O&M Manual. Final O&M Manuals, Real Estate certification and project closeout are projected for completion in 2006.

### **33. RURAL MONTANA, MT**

**Location.** This authority is to establish a program for providing environmental assistance to non-federal interests in rural Montana. In fiscal year 2002 the Corps of Engineers was directed to give consideration to projects at Helena, Laurel and Conrad, Montana.

**Existing Project.** The authorization will establish a program for providing environmental assistance to non-federal interests in Montana. Assistance may be in the form of design and construction assistance for water related environmental infrastructure and resource protection and development projects. There is authorized to be appropriated \$25,000,000 for this program.

**Local Cooperation.** Section 595 of WRDA 1999 applies. The Federal share of project costs under each local cooperation agreement entered into shall be 75 percent and may be provided in the form of grants or reimbursements.

## OMAHA, NE, DISTRICT

---

**Operations During FY.** Projects at Conrad, Laurel and Melstone were completed, resulting in \$2.5 million in constructed facilities. Project Cooperation Agreements were established for three projects; Livingston, Manhattan and Gardiner-Park for a total of \$4.3 million.

### 34. UPPER CENTRAL PLATTE VALLEY COLFAX REACH, CO

**Location.** The project is 13 miles downstream of Chatfield Reservoir on the South Platte River in the City and County of Denver from just upstream of Lakewood Gulch to approximately 500 feet downstream of Interstate 25. The length of the reach is approximately 3000 feet.

**Existing Project.** The project will reestablish and improve the ecosystem structures and functions by restoring fish and wildlife habitat through environmentally sensitive bank modification and creating a low flow meandering channel which existed in the past. Rock jetties, drop structures and a 250 cfs low flow channel will be included as project features. Wetlands and riparian communities will be reestablished along the east bank to create an improved wildlife corridor. Total project costs are currently estimated at \$6,000,000 with a Federal share of \$4,500,000.

**Local Cooperation.** Section 1135 of 1986 WRDA applies. The Greenway Foundation with the support of the City Of Denver is providing all needed cost sharing including real estate interests.

**Operations During FY.** Project is complete with the exception of the preparation of O&M Manuals and financial closeout.

### 35. WEHRSPANN LAKE AQUATIC

**Location.** The existing Papio Dam #20 and its Wehrspann Lake are located on a tributary to the South Branch Papillion Creek, West Branch Papillion Creek Basin, Sarpy County, NE, about 4 miles southwest of Omaha. The subimpoundment is located in the headwaters of Wehrspann Lake, within the lake's flood control pool, and within the existing project's boundaries.

**Existing Project.** Wehrspann Lake Aquatic Improvement Project - Modification of Wehrspann Lake, completed in 1984 as Papio Dam #20 for flood control

and recreation. Wehrspann Lake site is located within Omaha, NE metropolitan area, and as such it is highly visible, heavily utilized and important ecological, recreational, and educational resource. The modification, a subimpoundment in the lake's flood control pool, will play an essential role in maintaining water quality and fish habitat within Wehrspann Lake by decreasing the amounts of influent nutrients and especially sediment. Total project costs are currently estimated at \$2,660,000 with a Federal share of \$1,995,000.

**Local Cooperation.** Section 1135 of 1986 WRDA applies. Papio-Missouri River Natural Resources District is providing all needed cost sharing including real estate interests.

**Operations During FY.** Although project construction was substantially complete in FY 2001, there are several minor modifications pending. During FY 2003, a contract for installation of relief wells and additional riprap was completed. Additional work was completed in FY 2005 to continue with the replacement of mitigation plantings. Financial closeout is projected for completion in FY 2006.

### Multiple Purpose Projects Including Power

### 36. BIG BEND DAM-LAKE SHARPE, MISSOURI RIVER BASIN, SD

**Location.** On the Missouri River, 987.4 miles above the mouth, near Fort Thompson, SD, and approximately 20 miles upstream from Chamberlain, SD. Dam is located in the upstream reach of Fort Randall reservoir (Lake Francis Case). Big Bend reservoir (Lake Sharpe) extends upstream to Pierre, SD.

**Existing Project.** A rolled earth-fill dam 95 feet high, with a crest length of 10,570 feet, a hydroelectric generating plant consisting of five 58,500 kilowatt units, three 67,276 kilowatt units, and a chute-type gated spillway. Reservoir provides gross storage of 1,859,000 acre-feet. Federal cost of the project was \$107,498,000. Construction began in September 1959 and was completed in September 1977, except for Code 710 recreation facilities.

**Local Cooperation.** None required except for recreation cost-sharing.

## REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2005

---

**Operation During FY.** Maintenance: Project was operated in conjunction with other Missouri River reservoirs for flood control, power production and other multiple purpose uses. Normal operation and maintenance procedures were accomplished during the FY. During the period, 593,939,000 net kilowatt-hours of electricity were produced.

### 37. FORT PECK DAM AND LAKE, MT

**Location.** The reservoir is in the Missouri River Valley in McCone, Valley, Garfield, Phillips, Petroleum, and Fergus Counties, MT. Dam is approximately 1,771.6 miles above the mouth of the Missouri River. Nearest towns are Glasgow, 17 miles northwest; and Nashua, nine miles north.

**Existing Project.** A hydraulic earthfill dam with a maximum height of 251 feet, with a crest length of 21,026 feet, and a reservoir for flood control, irrigation, navigation, hydroelectric power, and other purposes, with a gross storage capacity of 18,688,000 acre-feet at maximum operating pool. Work started on the original project in October 1933 and on the second power plant in August 1956. The project was completed in 1965. The power installations at the project were updated in FY 1979. The five generators have a total output of 185,250 KW: two generators at 40,000 KW each, two generators at 43,500 KW each and one generator at 18,250 KW. See page 818 of 1965 Annual Report and page 905 of 1958 Annual Report for project details. Federal cost of the project was \$158,428,000,

**Local Cooperation.** None required except for recreation cost-sharing.

**Operations During FY.** Maintenance: Project was operated in conjunction with the other Missouri River reservoirs for flood control, navigation, power production, and other multiple purpose uses. Normal operation and maintenance procedures were accomplished during the FY. Generating facilities produced 539,035,490 net kilowatt hours of electricity.

### 38. FORT RANDALL DAM-LAKE FRANCIS CASE, MISSOURI RIVER BASIN, SD

**Location.** Located on the Missouri River in Charles Mix and Gregory Counties, SD, about 82 miles above

Yankton, SD. Site is 880 miles above the mouth of the Missouri River and 148 miles above Sioux City, IA.

**Existing Project.** A rolled earth-fill dam with a maximum height of 165 feet; a crest length of 10,700 feet; and a reservoir for flood control, irrigation, navigation, hydroelectric power, and other purposes, with a gross storage capacity of 5,418,000 acre-feet at maximum operating pool. The power installation consists of eight units rated at 40,000 kilowatts each. Construction began in May 1946 and was completed in 1969, except for Code 710 recreation facilities. Federal cost of the project was \$199,066,000. Non-Federal contribution for constructing approaches to the Platte-Winner Bridge was \$720,000.

**Local Cooperation.** None required except for recreation cost-sharing and bridge approaches.

**Operations During FY.** Maintenance: Project was operated in conjunction with other Missouri River reservoirs for flood control, navigation, power production, and other multiple purpose uses. Normal operation and maintenance procedures were accomplished during the FY. Generating facilities produced 1,119,388,400 net kilowatt hours of electricity.

### 39. GARRISON DAM MAJOR REHABILITATION, LAKE SAKAKAWEA, ND

**Location.** Located on the Missouri River in McLean and Mercer Counties, ND, about 11 miles south of Garrison, ND, and 9 miles west of Coleharbor, ND, 1,389.9 miles about the mouth and 75 miles above Bismarck.

**Existing Project.** Garrison Dam is a multi-purpose project consisting of a rolled earth-filled dam with a sheet pile cutoff, a hydroelectric power plant, and a reservoir with storage capacity of 23,821,000 acre feet for flood control, navigation, power, recreation, irrigation, and municipal water supply. This major rehabilitation project will replace the turbine runners on all five existing units with new runners designed to improve reliability and maximize efficiency over a broad range of operating conditions for a total project cost of \$108,128,000.

**Local Cooperation.** None required.

**Operations During FY.** Completed work on the

## OMAHA, NE, DISTRICT

---

rehabilitation of the last of five turbine and generators at the Garrison power plant. This work included installation of new turbine runners and wicket gates, rehabilitated the remaining turbine parts, rewound and rehabilitated the generators, and repaired the cooling water system. The upgrades in the power house were extremely successful with the new units achieving 109.25 MW @ 162 feet of head which is an increase of approximately 15% from the original 1950's designed equipment (95 MW). Design work started on the next critical portion of work (electrical power train) which includes transformers, switchyard, power cables, and miscellaneous support systems. The continuation of the major rehabilitation will allow us to improve the plant reliability and get the increase power from the power house upgrades to the public.

#### **40. GARRISON DAM-LAKE SAKAKAWEA, MISSOURI RIVER BASIN, ND**

**Location.** Located on the Missouri River in McLean and Mercer Counties, ND, about 11 miles south of Garrison, ND, and 9 miles west of Coleharbor, ND. 1,389.9 miles above the mouth and 75 miles above Bismarck, ND.

**Existing Project.** A rolled earth-fill dam 11,300 feet long with a maximum height of 210 feet, and a reservoir for flood control, irrigation, navigation, hydroelectric power, and other purposes, with a gross storage capacity of 23,821,000 acre-feet. It provides five power units (three units rated at 109,250 kilowatts each and two units rated at 95,000 kilowatts each), three flood control tunnels, and a gated spillway. Federal cost of the project was \$299,938,000, including \$4,208,000 for major rehabilitation. Non-Federal contribution in connection with widening Snake Creek Embankment was \$687,000. Construction of the project was initiated in April 1946 and completed in 1966, except for recreational development using Code 710 funds.

**Local Cooperation.** None required except cost-sharing with the state of North Dakota for widening the Snake Creek Embankment and recreation cost-sharing.

**Operations During FY.** Maintenance: Project was operated in conjunction with other Missouri River reservoirs for flood control, navigation, power production, and other multiple purpose uses. Normal operation and maintenance procedures were accomplished during the

FY. Generating facilities produced 1,324,407,000 net kilowatt hours of electricity.

#### **41. GAVINS POINT DAM-LEWIS AND CLARK LAKE, MISSOURI RIVER BASIN, NE AND SD**

**Location.** On the Missouri River in Yankton County, SD, and Knox County, NE, about four miles upstream from Yankton, SD, and 811.1 miles above the mouth.

**Existing Project.** A concrete and rolled earth-fill dam with a maximum height of 74 feet, and a reservoir for flood control, irrigation, navigation, hydroelectric power, and other purposes, with a gross storage capacity of 470,000 acre-feet at maximum operating pool. The power installation consists of three units rated at 44,099 kilowatts each. Federal cost of the project was \$49,617,000. Construction of the original project was initiated in March 1952 and completed in 1964.

**Local Cooperation.** None required except for recreation cost-sharing.

**Operations During FY.** Maintenance: Project was operated in conjunction with other Missouri River reservoirs for flood control, navigation, power production, and other multiple purpose uses. Normal operation and maintenance procedures were accomplished during the FY. Generating facilities produced 575,666,730 net kilowatt hours of electricity during FY 2005.

#### **42. OAHE DAM-LAKE OAHE, MISSOURI RIVER BASIN, SD AND ND**

**Location.** Dam is on the Missouri River in Hughes and Stanley Counties, SD, about six miles northwest of Pierre, SD, and 1,072.3 miles above the mouth.

**Existing Project.** A rolled earth-fill dam with maximum height of 245 feet; a crest length of 9,300 feet; and a reservoir for flood control, irrigation, navigation, hydroelectric power, and other purposes, with a gross storage capacity of 23,137,000 acre-feet at maximum operating pool. It contains seven power units rated at 112,290 kilowatts each. Federal cost of the project was \$346,521,000. Construction was initiated in August 1948

## REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2005

---

and the project was placed in operation in June 1963.

**Local Cooperation.** None required except for recreation cost-sharing.

**Operations During FY.** Maintenance: Project was operated in conjunction with other Missouri River reservoirs for flood control, navigation, power production, and other multiple purpose uses. Normal operation and maintenance procedures were accomplished during the FY. Generating facilities produced 1,340,391,000 net kilowatt hours of electricity.

### 43. MISSOURI RIVER, BETWEEN FT. PECK DAM, MT AND GAVINS POINT DAM, SD, NE

**Location.** The project is located along the Missouri River between Fort Peck Dam, MT, and a point 59 miles downstream of Gavins Point Dam, SD and NE.

**Existing Project.** Consists of undertaking measures, including maintenance and rehabilitation of existing structures, to alleviate bank erosion and related problems associated with releases from the six Missouri River main stem dams that the Secretary determines will be needed. In lieu of structural measures, lands may be acquired in affected areas from willing sellers. The costs of the measures shall be apportioned among project purposes as a joint-use operation and maintenance expense. Estimated Federal cost of the project is between \$140 million for construction or \$14 million for the land requisition alternative. Cost is limited to no more than \$3 million per FY.

**Local Cooperation.** Non-federal funds are not required for this project. One reach, the Missouri National Recreational River downstream from Gavins Point Dam, requires, under its separate authorization, that the landowners make available appropriate land interests to maintain the recreational and scenic qualities of the river and adjacent lands. In the other river reaches, lands can be acquired on a willing-seller basis if land acquisition is the recommended measure for erosion control at a given river site.

**Operations During FY.** Continued coordination for sloughing easements in pursuit of real estate acquisitions in response to requests from landowners. Continued EIS/cumulative impacts study to determine effects of bank erosion.

### 44. PIERRE, SD

**Location.** The project area consists of the Missouri River just downstream of Oahe Dam near Pierre and Fort Pierre, South Dakota.

**Existing Project.** The legislation authorizes that the Secretary may acquire from willing sellers such land and property in the vicinity of Pierre, South Dakota or flood proof or relocate such property within the project area, as the Secretary determines is adversely affected by the full wintertime Oahe Powerplant releases. Total cost of this project is held at \$35,000,000 by authorizing legislation.

**Local Cooperation.** This project has no cost-sharing sponsor. The entire project is completely federally financed as the mitigation is for a problem caused by the Oahe Dam project. By funding the project 100 percent Federal, the costs are allocated to the Oahe Project with 45.83 percent of the costs considered as joint costs to allocate for repayment by the Western Area Power Administration (WAPA). When WAPA invokes the sub-allocation of 15.8 percent of power costs to future irrigation, the 45.83 percent joint use costs will actually result in a final cost share of 38.6 percent to be repaid by non-Federal interests.

**Operations During FY.** Throughout the year, coordination with affected property owners to prioritize and finalize buyback or flood proofing remedies for each tract affected occurred. One hundred thirty nine tracts and their affected owners received the opportunity for reimbursement under this project authority to date. Ongoing appraisal activities, title evidence, and acquisition of one hundred nine tracts with multiple owners resulted in relocation actions under the authority of PL 91-646. Owner's policies, warranty deeds and closing actions were also completed.

### Miscellaneous

### 45. MISSOURI RIVER MASTER WATER CONTROL MANUAL REVIEW AND UPDATE

**Location.** The area being studied is the Missouri River basin, to include the Missouri River Mainstem Reservoir System (System). States included in the study area include Nebraska, Montana, North Dakota, South

**OMAHA, NE, DISTRICT**

---

Dakota, Iowa, Kansas, and Missouri.

**Existing Project.** The Missouri River Master Water Control Manual (Master Manual) sets forth the technical criteria for the operation of the System for the Congressionally authorized project purposes of flood control, hydropower, water supply, water quality, irrigation, navigation, recreation, and fish and wildlife. During the late 1980's, the Missouri River basin experienced a moderate to severe drought, impacting upon the System for the first time since it filled in 1967. The Master Manual Review and Update was initiated in 1989 as a result of the severe impacts on people and industries that use the Missouri River.

There are a myriad of complex operational and resource management issues. Upriver interests want high, stable lake levels to address recreation, irrigation and hydropower needs. Environmental interests seek a hydrograph that more closely approximates the natural hydrograph of the Missouri River. Downriver interests (below the dams) support different flow regimes for commercial navigation, flood protection, municipal water supply, and thermal generation. The Corps' objective was to implement a water control plan that serves Congressionally authorized project purposes, complies with the environmental laws including the Endangered Species Act (ESA), and fulfills the Corps' responsibilities to Native American Tribes.

**Local Cooperation.** None required.

**Operations During FY.** Revision of the Missouri River Master Manual has been an extremely complex and controversial public policy decision that impacts a large portion of our nation. The Manual was revised in March 2004 to include more stringent drought conservation measures that conserve more water in the upstream reservoirs in the early stages of a drought and in severe droughts. However, the revised Manual did not include technical criteria for spring pulse releases from Gavins Point Dam required by the U.S. Fish and Wildlife Service (USFWS) 2003 Amended Biological Opinion. After a rigorous collaborative process in FY05 conducted by the U.S. Institute for Environmental Conflict Resolution (USIECR) and their contractor that involved the Corps, USFWS, U.S. Geological Survey and representation from Basin Tribes, States, and full range of Basin stakeholders, the Manual will be revised in FY 2006 to include technical criteria for the bimodal spring pulse releases.

Subsequent to the signing of the ROD and revision of the Master Manual in 2004, the Federal District Court in Minneapolis, MN granted the federal government's motions for summary judgment and upheld the Corps' revised Master Manual, the 2004 AOP, and the USFWS' 2003 Amended Biological Opinion. In July 2005, the U.S. Eighth Circuit Court of Appeals ruled favorably for the Corps on all challenges to the District Court decision under the 1944 Flood Control Act, National Environmental Policy Act (NEPA), and the ESA. The State of North Dakota, Environmental Defense Fund, and others have requested review of the Eighth Circuit decision by the U.S. Supreme Court.

# KANSAS CITY, MO DISTRICT

The district comprises a portion of southwestern Iowa; northwestern, central and western Missouri; northern Kansas; southern Nebraska; and a portion of northeastern Colorado embraced in drainage basin of the Missouri River and tributaries from Rulo, Nebraska, to the mouth. Report on navigation project for section of Missouri River from Sioux City, Iowa, to Rulo, Nebraska, is in report of Omaha District.

## IMPROVEMENTS

Navigation

1. MISSOURI RIVER, SIOUX CITY, IA, TO MOUTH (RULO, NE, TO MOUTH)

Location. Jefferson, Madison, and Gallatin Rivers conjoin at Three Forks, Montana, to form the Missouri River, which flows southeasterly 2,315 miles (1960 mileage) across or along seven states to the Mississippi River, 17 miles above St. Louis. For description see page 1149, Annual Report for 1932. The river is commercially navigable from Sioux City, Iowa, to the mouth, a distance of 732 miles. The portion of project in Kansas City District extends from Rulo, Nebraska, to the mouth, a distance of 498 miles.

Previous Projects. For details see page 1891 of Annual Report for 1915, and pages 1153 and 1175 of Annual Report for 1938.

Existing Project. A channel of 9-foot depth and width not less than 300 feet, obtained by revetment of banks, construction of permeable dikes to contract and stabilize the waterways, cutoffs to eliminate long bends, closing minor channels, removal of snags, and dredging as required. The improved reach within the Kansas City District extends from the mouth to Rulo, Nebraska, a distance of 498.4 miles. The Bank Stabilization and Navigation features of the project were completed in September 1980. For the reach from Rulo, Nebraska, to the mouth, the total construction cost was \$237,942,190 including \$8,665,594 for previous project. River access sites have been completed at 11 locations. Ordinary and extreme stage fluctuations are 16 and 38 feet, respectively.

Local cooperation. Cooperation from benefited localities may be required where any improvement may confer special benefit. The receipt of contributions from private parties are to be expended along with Government funds upon authorized work where such work would be in the interest of navigation, as authorized by 1915 Rivers and Harbors Act. Secretary of the Army approved general principle of cooperative construction on Missouri River below Kansas City on basis that 25 percent of cost of any special installation shall be paid by the United States and 75 percent by

local interests. Total contributed by local interests in cooperation with the United States from 1918 to June 30, 1964, was \$675,663, of which \$8,647 was returned to contributors. Local interests must share in cost of recreation facilities in accordance with provisions of the Federal Water Project Recreation Act of 1965. Local interests have contributed \$171,816 for cost sharing on construction of recreation in addition to constructing portions of the facility.

Terminal facilities. A listing of terminal facilities are included in Missouri River Navigation Charts and can be obtained from Kansas City District Engineer for a small fee.

Operations during fiscal year. Field hired labor accomplished emergency construction of a new dike to correct a chronic low water navigation problem. Contract and District personnel to improve the aquatic habitat of the river constructed over 80 notches. District personnel also accomplished other work items: Channel reconnaissance, stream gauging condition studies, surveys and mapping, engineering and design, surveys and layouts of construction, and supervision and administration. Project tonnage on the river for CY 2005 is estimated at 8 million tons, excluding waterway improvement materials. District estimates the recreation use on the Missouri River (NWK) at 1.3 million recreation days annually.

2. MISSOURI RIVER FISH AND WILDLIFE MITIGATION, IA, NE, KS, and MO

Location. This project authority extends along the Missouri River from Sioux City, Iowa, to the mouth near St. Louis, Missouri, a river distance of 735 miles. Individual project site may be located along the 735 miles at locations adjacent with the river and within the historic floodplain.

Existing project. This project was authorized under WRDA86 and WRDA99. The purpose of this project is to mitigate losses of fish and wildlife habitat resulting from construction and operation of the Missouri River Bank Stabilization and Navigation Project. An estimated 522,000 acres of aquatic and terrestrial floodplain habitats have been lost in the project area. A total of 166,750 acres has been authorized for mitigation, roughly 32% of the estimated loss. The major components of the Mitigation project are acquisition, design, development and monitoring of floodplain habitats. The mitigation can be implemented on either existing publicly owned lands or could involve acquisition of private lands from willing sellers. The estimated funded cost of the project is \$1,330,000,000 (Oct 2001 price level). The project is 100% Federally

## KANSAS CITY, MO DISTRICT

funded, including O&M. If the project is funded through 2042, the estimated project cost after inflation is \$3,100,000,000. Kansas City District has overall project management responsibility. Omaha District is involved in the implementation of the project in the States of Iowa and Nebraska. Field hired labor, construction contractors and District personnel routine maintenance of a variety of river navigation and bank stabilization structures and performed other work including channel reconnaissance, stream gauging condition studies, surveys and mapping, engineering and design, surveys and layouts of construction and supervision and administration of work. Much special effort \$422,200) was devoted to activities needed to carryout mandates associated with recent USFWS Biological Opinions concerning river habitats for Threatened and Endangered Species. Work also commenced on a special study of river bed degradation in the Kansas City reach of the river.

**Local cooperation.** There is no non-Federal sponsor for the project. The U.S. Fish & Wildlife Service, EPA and the states of Iowa, Nebraska, Kansas, and Missouri are voluntarily serving on a coordinating team, which is actively involved in ongoing project activities and site-specific operation and maintenance.

**Operations during fiscal year.** Funding was continued for land acquisition and construction of mitigation features. Total expenditures for FY 05 were \$18,786,733 (\$6,780,933 NWK + NWO \$12,005,800). No land was purchased in FY05. Planning efforts were undertaken to focus on shallow water habitat creation for the endangered pallid sturgeon. Construction of Columbia Bottoms and Lower Hamburg continued. Construction of Worthwine Island chute was suspended due to a shortage of funds. Construction of Hole in the Rock site was completed and Glovers Point was started, while construction of Kansas Bend continued. Design activities were carried out at Corning. O&M during construction and monitoring activities is being formulated with local agencies.

### Flood Control

#### 3. BLUE RIVER BASIN, KANSAS CITY, MO

**Location.** Along the left bank of the Blue River from U.S. Highway 71 upstream for a distance of about 1-1/4 miles in Jackson County, Missouri, to the Bannister Federal Complex levee.

**Existing project.** The recommended project includes construction of approximately 1-1/4 miles of levee to provide flood protection to 280 acres in the Dodson

Industrial Area and surrounding area in Kansas City. Estimated Federal cost through construction of the project (2004) is \$12,332,000, and estimated non-Federal cost of lands damages and relocations is \$6,785,900. Funds were provided in FY 2002 for a new construction start.

**Local Cooperation.** The Project Cooperation Agreement (PCA) was executed in September 2001.

**Operations during fiscal year.** A first phase of the project, consisting of construction of the floodwall, was constructed in September 2004. A second phase of the project was awarded in September 2005 and the construction will be complete in March 2006. Plans and specifications for Phase 3 and following construction phases continue during the FY06. The third phase of the project will be awarded in July 2006.

#### 4. BLUE RIVER CHANNEL, KANSAS CITY, MISSOURI

**Location.** Along the Blue River and tributaries in Jackson County, Missouri.

**Existing Project.** Project consists of 12.5 miles of improved channel along the Blue River within Kansas City, Missouri. Estimated Federal cost through construction of the project (2002) is \$220,000,000, and estimated non-Federal cost of lands, damages and relocations is \$32,500,000.

**Local Cooperation.** Section 2, Flood Control Act of June 22, 1936 applies. The City of Kansas City, Missouri, passed a resolution of intent on December 9, 1975 to provide the required assurances of local cooperation when requested. The Kansas City District Engineer signed the Section 221 agreement on September 8, 1983.

**Operations during fiscal year.** All work on stages 1 and 2 has been completed. The Stage 3 reach of the project consists of six construction contracts. The 12<sup>th</sup> to 19<sup>th</sup> Street, the 19<sup>th</sup> to Stadium Drive, and the Stadium Drive to Brush Creek contracts are complete. The fourth contract for Alteration of the Union Pacific Railroad Bridges was awarded and is under construction with completion expected in FY06. Plans for the next major contract at the grade control structure are nearing completion. A General Reevaluation Report study effort was continued. A FEMA map revision study from the mouth to Stadium Drive was completed. Construction was initiated on utility relocations adjacent to and supporting the Blue Parkway Bridge replacement.

## 5. BRUSH CREEK, KANSAS CITY, MO

**Location.** A major tributary of the Blue River in Kansas City, Missouri, and Johnson County, Kansas, draining a highly urbanized 29-square-mile area in the two states.

**Existing project.** The authorized project consists of improving about 7,500 feet of the channel from near Roanoke Parkway downstream to near Troost Avenue in Kansas City. At the request of the sponsor, Kansas City, Missouri, a modified project was built which provides identical flood protection, but which also accommodates park and recreation development in the authorized reach. Estimated fully funded Federal cost of the modified project (1996) is \$14,464,000; and estimated non-Federal cost of lands, damages, and cash is \$19,526,000.

**Local cooperation.** The City of Kansas City and the Corps of Engineers entered into a Local Cooperation Agreement (LCA) on the project in March 1991.

**Operations during fiscal year.** The dedication of the project was in June 1995. The project was turned over to the local sponsor in January 1997.

## 6. CLINTON LAKE, WAKARUSA RIVER, KANSAS

**Location.** Damsite is on Wakarusa River about 4 miles southwest of Lawrence, in Douglas County, Kansas. The lake extends into Shawnee and Osage Counties, Kansas.

**Existing project.** An earthfill dam about 9,250 feet long constructed to a height of about 114 feet with an uncontrolled spillway in left abutment. Total reservoir storage capacity 397,200 acre-feet (258,300 for flood control, 28,500 for sediment reserve, and 110,400 of multipurpose storage for municipal and industrial waste supply and recreation). Cost of constructing the completed project was \$57,415,433. Construction was initiated in January 1972, and the project was placed in operation in November 1977.

**Local cooperation.** Section 2, Flood Control Act of June 28, 1938 applies. Reimbursement in the estimated amount of \$6,768,000 is required for water supply storage in accordance with the Water Supply Act of 1958. A contract was signed by the State on September 6, 1978 and was approved by the Secretary of the Army on October 30, 1978. Utilization of storage was initiated in December 1979. Repayment also began at that time.

**Operations during fiscal year.** Visitation for FY 2005 was 8,805,270 visitor hours. Maintenance: Activities consisted of ordinary operation and maintenance and Critical Project Security Program.

## 7. HARLAN COUNTY LAKE, REPUBLICAN RIVER, NEBRASKA

**Location.** Dam is on main stem of Republican River about 235 miles above confluence of stream with Smoky Hill River. Site is in Harlan County, 1-1/2 miles south of Republican City and 13 miles west of Franklin, Nebraska.

**Existing project.** An earthfill dam about 107 feet above streambed with a total length of 11,827 feet, including a gate-controlled, concrete, gravity-type spillway section near the center of dam. Reservoir provides storage capacity of 814,111 acre-feet (500,000 for flood control and 314,111 [sediment survey effective January 2001] for irrigation, sedimentation allowance, and other authorized purposes.). Initial cost of constructing the project was \$45,279,532. Total Federal cost of project, including \$1,017,623 for major rehabilitation work and \$1,832,394 supplemental recreation development (Code 710), is \$48,129,549. Construction of the project was initiated in August 1946. The project was placed in operation in December 1952. Major rehabilitation work was completed in FY 1968.

**Local cooperation.** Section 2, Flood Control Act of 1938, applies.

**Operations during fiscal year.** Visitation for FY 2005 was 5,538,841 visitor hours. Maintenance: Activities consisted of ordinary operation and maintenance consisting of procuring a new dredge pump, cleaning foundation drains and a dam safety assurance study (\$384,700). Continued drought conditions in the Republican River Basin contributed to record low lake levels in FY05. Much extra effort (\$123,200 in funds) was spent to dredge access channels to the two marina harbors on the lake. A partnership effort with the State of Nebraska resulted in the construction of a needed low-water boat ramp on the exposed lakeshore on the North side of the lake.

## 8. HILLSDALE LAKE, BIG BULLCREEK, KANSAS

**Location.** The project is located approximately 12 miles above the mouth of Big Bull Creek, a tributary of the Marais des Cygnes River and about 2½ miles west of Hillsdale, in Miami County, Kansas.

**Existing project.** An earthfill embankment about 11,600 feet long (including approximately 3,300 feet of dike section) about 75 feet above rising valley flood plain. The spillway is gravity type uncontrolled and the outlet works are controlled. The total reservoir storage capacity is 160,000 acre-feet (81,000 for flood control, 11,000 for sediment reserve, and 68,000 for multipurpose storage for water supply, water quality

## KANSAS CITY, MO DISTRICT

control, and recreation). Construction was initiated in December 1974, and the project was placed in operation in October 1981. Federal cost of construction was \$64,161,400.

**Local cooperation.** Section 2, Flood Control Act 1938, applies. Local interests must make reimbursement of \$21,145,338 for water supply storage in accordance with Water Supply Act of 1958. The Kansas Water Resources Board signed a contract in January 1974, approved by the Secretary of the Army in April 1974, for the entire 53,000 acre-feet of water supply storage. The Kansas Department of Wildlife and Parks has a 50-year lease on 12,880 acres for management of land and water areas for public park, recreational, and fish and wildlife purposes.

**Operations during fiscal year.** Visitation for FY 2005 was 2,964,429 visitor hours. Maintenance: Activities consisted of ordinary operation and maintenance.

### 9. KANOPOLIS LAKE, SMOKY HILL RIVER, KANSAS

**Location.** The dam is on the Smoky Hill River about 184 river miles above the mouth of the stream, and about 11 miles northwest of Marquette, Kansas.

**Existing project.** An earthfill dam about 131 feet above streambed, having a total length of 15,360 feet, including 4,070 feet of dike section on the left abutment and 2,550 feet of dike section on right abutment. The reservoir provides storage capacity of 450,000 acre-feet, (400,000 for flood control and 50,000 for recreation and streamflow regulation). Outlet works and spillway are in right abutment. Initial cost of constructing the project was \$12,327,735. Total Federal cost of project, including \$249,492, supplemental recreational development (Code 710), was \$12,577,227. Construction was initiated in June 1940, and project was placed in operation in May 1948.

**Local Cooperation.** Section 2, Flood Control Act of 1938, applies.

**Operations during fiscal year.** Visitation for FY 2005 was 1,766,005 visitor hours. Maintenance: Activities consisted of ordinary operation and maintenance including special emphasis on road repair.

### 10. LITTLE BLUE RIVER LAKES, MO

**Location.** This project consists of two lakes in Jackson County, Missouri, located in Kansas City, Missouri, and suburban communities. The Blue Springs Lake site is on the East Fork of the Little Blue River about ½ mile south of U.S. Highway 40, and the Longview Lake site is on the main stem at approximately 109<sup>th</sup> Street.

**Existing Project.** The Blue Springs dam is an earthfill embankment about 2,500 feet long and rising about 78 feet above the streambed, with an uncontrolled service spillway and uncontrolled outlet conduit. The total reservoir storage capacity is 26,600 acre-feet (15,700 for flood control, 10,600 for multipurpose storage for water quality and recreation, and 300 for sedimentation).

The Longview dam is an earthfill embankment about 1,900 feet long and rising about 120 feet above the streambed, with an uncontrolled service spillway and an uncontrolled outlet conduit. The total reservoir storage capacity is 46,900 acre-feet (24,300 for flood control and 20,600 for multipurpose storage for water quality and recreation, and 2,000 for sedimentation). Federal cost (1992) for both lakes through construction of the project was \$140,809,200. Construction was initiated in September 1977, and the project became operational in September 1988.

**Local cooperation.** Section 2 of the Flood Control Act of June 28, 1938 applies. Local interest must share in separable costs allocated to recreation in accordance with Federal Water Project Recreation Act of 1965. The Jackson County Legislature approved a recreation cost-sharing contract on July 5, 1974, which was approved by the Secretary of the Army on June 24, 1976. A supplemental agreement, signed by Jackson County officials on June 5, 1978, and approved by the Secretary of the Army January 10, 1979, revised the existing contract to include additional costs involved in raising the multipurpose pool elevation at the Blue Springs Lake. Reimbursement for recreation was \$15,047,000, which \$450,000 was accomplished during construction by local interests.

**Operations during fiscal year.** Project is complete. Land acquisition is complete. Visitation for FY 2005 was 4,000,930 visitor hours. Maintenance: Activities consisted of ordinary operation and maintenance.

### 11. LONG BRANCH LAKE, LITTLE CHARITON RIVER, MO

**Location.** The Damsite is on the East Fork Little Chariton River in north central Missouri about 2 miles west of Macon in Macon County.

**Existing project.** An earthfill dam about 3,800 feet long and about 71 feet high with an uncontrolled outlet conduit and an uncontrolled service spillway in the right abutment. Total reservoir storage capacity is 65,000 acre-feet (29,000 for flood control, 4,000 for sediment reserve, and 32,000 of multipurpose storage for water supply, water quality control, fish and wildlife, and recreation). Estimated Federal cost (1997) is \$20,288,000, and estimated non-Federal cost is \$3,605,000. Construction was initiated in March 1973.

## REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2005

The project was placed in useful operation for flood control on September 1, 1980.

**Local cooperation.** Section 2, Flood Control Act of June 28, 1938 applies. Local interests must make reimbursement of \$5,567,000 for water supply storage in accordance with Water Supply Act of 1958 and share in separable cost of \$3,589,000 allocated to recreation in accordance with Federal Water Project Recreation Act of 1965. On September 15, 1972 the Secretary of the Army approved a contract signed by the City of Macon, Missouri, for water supply and recreation development. Missouri State agencies indicated their intent to sponsor future water supply and signed a contract on June 17, 1977 to sponsor recreational development in lieu of the City of Macon. After review by the Office of the Secretary of the Army, the state signed the contract in December 1979, and it was approved by the Secretary of the Army on April 18, 1980. Supplemental Agreement No. 1 to this contract was approved

December 28, 1993 to provide for additional recreational facilities.

**Operations during fiscal year.** Visitation for FY 2005 was 315,794 visitor hours. Maintenance activities consisted of ordinary operation and maintenance and relief until rejuvenation.

### 12. MELVERN LAKE, MARAIS DES CYGNES (OSAGE) RIVER, KS

**Location.** Damsite is on Marais des Cygnes (Osage) River in Osage County, Kansas, about 4 miles west of Melvern, Kansas.

**Existing project.** An earthfill dam about 9,700 feet long and about 98 feet high with an uncontrolled chute-type spillway in the left abutment. Total reservoir storage capacity is 363,000 acre-feet (200,000 for flood control, 26,000 for sediment reserve, and 137,000 for multipurpose storage for water supply, water quality control, and recreation). Cost of constructing the completed project was \$37,436,530. Construction was initiated in July 1967, and the project was placed in operation in August 1972.

**Local cooperation.** Section 2, Flood Control Act of 1938 applies. Project storage was reallocated in 1989 to include municipal and industrial water supply in accordance with provisions of the Water Supply Act of 1958. In accordance with the provisions of the Memorandum of Understanding between the State of Kansas and the Department of the Army dated 1985, payment in full of \$7,131,834 for 50,000 acre-feet of water supply storage was made in March 1995. Utilization of storage for water supply was initiated in September 1993 under an interim contract and continues under the current contract signed in January 1995.

**Operations during fiscal year.** Visitation for FY 2005 was 5,693,780 visitor hours. Maintenance: Activities consisted of ordinary operation and maintenance.

### 13. MILFORD LAKE, REPUBLICAN RIVER, KS

**Location.** The Damsite is on the Republican River near the village of Alida about 10 miles above confluence of Republican and Smoky Hill Rivers which form Kansas River; and about 4 miles northwest of Junction City, Kansas.

**Existing project.** An earthfill dam about 6,300 feet long and 126 feet high with an uncontrolled service-chute spillway in a saddle on right abutment. Total reservoir storage capacity is 1,160,000 acre-feet (700,000 for flood control, 160,000 for sediment reserve and 300,000 of multipurpose storage for water supply, water quality control, and recreation). Water supply storage is included in the project at the request of the Governor of Kansas under provisions of the Federal Water Supply Act of 1958. Initial cost of constructing the completed project was \$48,268,843. Total Federal cost of project, including \$1,297,649 supplemental recreational development (Code 710), was \$49,566,492. Construction was initiated in July 1961. The project was placed in operation in June 1965.

**Local cooperation.** Section 2, Flood Control Act of 1938 applies. Local interests must make reimbursement of \$12,162,134 for water supply storage in accordance with Water Supply Act of 1958. Utilization of storage for water supply was initiated in October 1984. Reimbursement was initiated, at the option of the State, in September 1976.

**Operations during fiscal year.** Visitation for FY 2005 was 5,901,923 visitor hours. Maintenance: Activities included ordinary operation and maintenance, routine relief well rejuvenation (\$193,700), and repair of the left abutment seepage blanket (dam safety item) for \$277,400. Work also continued on The Critical Project Security Program.

### 14. MISSOURI RIVER LEVEE SYSTEM IA, NE, KS AND MO (RULO, NE, TO MOUTH)

**Location.** On both banks of the Missouri River from Sioux City, Iowa, about 760 miles to the mouth near St. Louis, Missouri. The portion of the project in Kansas City District extends from Rulo, Nebraska, 498 miles to mouth.

**Existing project.** A series of levee units and appurtenant works along both sides of Missouri River

## KANSAS CITY, MO DISTRICT

from Sioux City, Iowa, to the mouth, for protection of agricultural lands and small communities against floods. Estimated fully funded (2002) for the active portion of the project from Rulo, Nebraska, to mouth is \$209,379,000, including \$157,521,000 Federal and \$22,720,000 non-Federal contributions, and costs of \$29,138,000 for lands and damages are to be borne by local interests. Remaining portion of project consists of units on which planning and construction are being delayed pending restudy to assure that additional levee construction is economically justified. Current cost estimate for deferred, inactive, and deauthorized portion of project Rulo, Nebraska, to mouth is \$168,865,000 (1964, 1986, and 1987 price levels), of which \$153,233,000 is Federal cost for construction and \$15,632,000 for lands and damages to be borne by local interests. Construction of the project was initiated in June 1948.

**Local cooperation.** Section 3, Flood Control Act of 1936 applies. Fully complied with for all completed units and units under construction. Local sponsors provide all operation and maintenance.

**Operations during fiscal year.** Status of individual units of active portion at end of fiscal year is shown in Table 27-H on Missouri River Levee System. The contract to construct Unit L-385 was awarded on 28 March 2002 with the notice to proceed being issued on April 26, 2002. The project is about 99% complete as of January 2006. The design for L-142 Unit in Jefferson City Missouri has reached 95% complete in FY 2005.

### 15. PERRY LAKE, DELAWARE RIVER

**Location.** The Damsite is on the Delaware River about 5 miles above the mouth in Jefferson County, and about 3 miles northwest of Perry, Kansas.

**Existing project.** An earthfill dam about 7,750 feet long constructed to an elevation about 95 feet above valley floor with gated-outlet works and an uncontrolled spillway in left abutment. Total reservoir storage capacity is 770,000 acre-feet (480,000 for flood control, including 140,000 for sediment reserve and 150,000 of multipurpose storage for water supply, water quality control, and recreation). Water supply storage is included in the project plan at the request of the State of Kansas under provisions of the Federal Water Supply Act of 1958. Initial cost of constructing the completed project was \$48,371,706. Total Federal cost of project, including \$724,212 supplemental recreational development (Code 710), is \$49,095,918. Construction was initiated in March 1964, and the project was placed in operation in January 1969.

**Local cooperation.** Section 2, Flood Control Act of 1938 applies. Local interests must make reimbursement

of \$8,551,805 for water supply storage in accordance with Water Supply Act of 1958. Utilization of storage for water supply was initiated in October 1991. Reimbursement was initiated at the option of the State in September 1978.

**Operations during fiscal year.** Visitation for FY 2005 was 2,962,452 visitor hours. Maintenance Activities included ordinary operation and maintenance and Critical Project Security Program.

### 16. PICK-SLOAN MISSOURI BASIN PROGRAM (KANSAS CITY DIST.)

**Location.** Flood control improvements included in this project are on and along the Missouri River and several of its principle tributaries, in states comprising the Missouri River Basin.

**Existing project.** The Pick-Sloan Missouri Basin program for flood control and other purposes in Missouri River Basin provides for levees along Missouri River between Sioux City, Iowa, and the mouth, flood-protection works at certain municipalities, and reservoirs on main stem of Missouri River and on tributaries for control of flooding. (See Table 27-B for authorizing legislation and Table 27-I on Kansas City District projects included in Pick-Sloan Missouri Basin program.) See individual project reports.

### 17. POMME DE TERRE LAKE POMME DE TERRE RIVER, MO

**Location.** The dam is on the main stem Pomme de Terre River, about 44 miles above the mouth in Hickory County, Missouri. The lake extends upstream into Polk County, Missouri. The site is about 4 miles south of Hermitage, Missouri, and 20 miles north of Bolivar, Missouri.

**Existing project.** An earth and rockfill dam about 4,630 feet long constructed to about 155 feet above riverbed and a dike section on left abutment about 2,790 feet long, providing storage capacity of 650,000 acre-feet (407,000 for flood control and 243,000 for sedimentation and multi-purpose). Initial cost of constructing the complete project was \$14,946,784. Total Federal cost of project, including \$329,140 area redevelopment and \$2,089,529 supplemental recreational development (Code 710), is \$17,365,453. Construction was initiated in January 1957, and the project was placed in useful operation in October 1961.

**Operations during fiscal year.** Visitation for FY 2005 was 19,032,365 visitor hours. Maintenance: Activities consisted of ordinary operation and maintenance

including awarding a contract to construct a new sewage treatment system at Nemo Park.

## 18. POMONA LAKE, ONE HUNDRED TEN MILE CREEK, KS

**Location.** The dam is on One Hundred Ten Mile Creek, a tributary of Marais des Cygnes (Osage) River, 7 miles above mouth of stream in Osage County, Kansas, about 8 miles northwest of Pomona, Kansas, and 34 miles upstream from Ottawa, Kansas.

**Existing project.** An earthfill dam 7,750 feet long constructed to an average height of about 85 feet above streambed, with gated-outlet works and an ungated chute-type spillway near left abutment. Total reservoir storage capacity is 230,000 acre-feet (160,000 for flood control, 14,000 for sediment reserve, and 56,000 of multipurpose storage for water quality control, and recreation). Initial cost of constructing the completed project was \$13,272,108. Total Federal cost of project, including \$731,130 supplemental recreational development (Code 710), was \$14,003,238. Construction began in July 1959, and the project was placed in operation in October 1963.

**Local cooperation.** Section 2, Flood Control Act of 1938 applies. Pomona has water supply reimbursement under Water Supply Act of 1958 totaling \$862,923.

**Operations during fiscal year.** Visitation for FY 2005 was 3,713,538 visitor hours. Maintenance: Activities consisted of ordinary operation and maintenance.

## 19. RATHBUN LAKE, CHARITON RIVER, IA

**Location.** The Damsite is on the Chariton River about 7 miles north of Centerville and 1 mile north of Rathbun, Appanoose County, Iowa.

**Existing project.** An earthfill dam 10,600 feet long constructed to an elevation about 86 feet above valley floor, with gated-outlet works and an uncontrolled service chute with paved sill spillway about a mile upstream from left abutment. Total reservoir storage capacity is 552,000 acre-feet (339,000 for flood control, 24,000 for sediment reserve and 189,000 of multipurpose storage for navigation, water quality control, and recreation). Initial cost of constructing the project was \$27,033,210. Total Federal cost of project, including \$588,948 supplemental recreation development (Code 710), was \$27,622,158. Construction of the project was initiated in September 1964 and completed in November 1969. The operating plan for this project was revised to reduce flood control releases during critical times of the year to allow local

farmers better access during planting and harvesting and to facilitate field drainage and drying out. The revised plan has resulted in more frequent high pool elevations than anticipated, which has inundated roads and recreation facilities. A shoreline erosion study was accomplished; and a supplement to the master plan was approved, which resulted in relocation of recreation facilities and bank stabilization work to compensate for the higher lake levels. In FY 2005, HQ USACE provided \$500,000 in funding to modernize park facilities at the lake. Many campground electrical, camp pad, and sanitary facilities were improved to meet current standards demanded by current recreation visitors and their larger camping equipment.

**Local cooperation.** Section 2, Flood Control Act of 1938 applies.

**Operations during fiscal year.** Visitation for FY 2005 was 6,614,623 visitor hours. Maintenance: Activities included ordinary operation and maintenance and Critical Project Security Program.

## 20. SMITHVILLE LAKE, LITTLE PLATTE RIVER, MO

**Location.** The Damsite is on the Little Platte River about 1 mile northeast of Smithville and about 5 miles north of Kansas City, in Clay and Clinton Counties, Missouri.

**Existing project.** Earthfill dam about 4,200 feet long and 95 feet high with an uncontrolled service spillway. A dike about 2,400 feet long crosses a saddle in the left abutment. Total reservoir storage capacity is 246,500 acre-feet (92,000 for flood control, 52,300 for sediment reserve, and 102,200 of multipurpose storage for water supply, water quality control, and recreation). Cost of constructing the project was \$87,685,314. Construction was initiated in November 1973, and the project was placed in operation in March 1982.

**Local cooperation.** Section 2, Flood Control Act of June 28, 1938 applies. Reimbursement of \$24,000,000 will be required for water supply storage in accordance with Water Supply Act of 1958, and reimbursement of \$7,500,000 will be required for recreation development in accordance with Federal Water Recreation Act of 1965. Additional non-Federal contribution for recreation amounts to \$737,000. All contracts for local cooperation were approved by the Secretary of the Army on November 27, 1972.

**Operations during fiscal year.** Visitation for FY 2005 was 6,995,907 visitor hours. Maintenance: Activities consisted of ordinary operation and maintenance and Critical Project Security Program.

## 21. TURKEY CREEK BASIN, KS & MO

**Location:** The Turkey Creek Basin is a 23-square mile area within Kansas City, KS and suburbs in Johnson and Wyandotte Counties in Kansas.

**Existing Project.** The recommended project is estimated to cost \$82,500,000, with an estimated Federal cost of \$50,967,000 and an estimated non-Federal cost of \$31,533,000, including construction of channel modification and structures to control hillside runoff. This project was reauthorized in 2003 and has moved into Construction, General funding.

**Local Cooperation.** The PCA has been drafted and sent to HQ for final review and should be executed in May 2006.

**Operations during fiscal year.** In 2005, design and development of contracts for tunnel retrofitting, channel modification, and railroad bridges were underway.

## 22. TUTTLE CREEK LAKE, BIG BLUE RIVER, KS

**Location.** The dam is on the main stem of the Big Blue River, about 12 miles above the stream mouth in Riley and Pottawatomie Counties, Kansas. Site is about 3 miles north of Manhattan, Kansas.

**Existing project.** An earth and rock-fill dam 7,500 feet long and 157 feet high. Total reservoir storage capacity is 2,346,000 acre-feet (1,933,000 for flood control, 228,000 for sediment reserve and 185,000 for multipurpose storage, for low-flow regulation, navigation, and recreation). Initial cost of constructing the completed project was \$80,051,031. Total Federal cost of project, including \$533,048 supplemental recreational development (ode 710), was \$80,584,079. Construction began in October 1952. Project was placed in Operation in July 1962.

**Local cooperation.** Section 2, Flood Control Act of 1938 applies.

**Operations during fiscal year.** Visitation for FY 2005 was 2,251,137 visitor hours. The project provided primary water releases into the Big Blue and Kansas Rivers to meet minimum in-stream flow requirements in accordance with agreements with the state of Kansas. The project also provided water releases for supplemental navigation flows on the Missouri River for a portion of the navigation season in fiscal year 2004 Maintenance: Activities included ordinary operation, relief well rejuvenation and also security system maintenance and homeland security.

**Dam Safety Assurance Program:** A \$206 million project to address seismic and hydrologic concerns at Tuttle Creek Dam was approved in 2003. In 2005 the design and development of contracts for all aspects of

the project were underway. The state of the art Dam Failure Warning System was completed in 2005 and is currently operational. Construction began on new campgrounds that serve the purpose of mitigating impacts to the existing downstream campgrounds. The base contract for the Ground Modification Project was awarded to Treviicos South for \$49.7 million dollars in September of 2005.

## 23. WILSON LAKE, SALINE RIVER, KS

**Location.** The dam is on the Saline River about 130 miles above its mouth, near the eastern edge of Russell County, Kansas, about 50 miles west of Salina, 10 miles north of Wilson, and 20 miles east of Russell, Kansas.

**Existing project.** An earthfill dam about 5,600 feet long and 160 feet high with a gated-outlet works, chute spillway, storage capacity is 776,000 acre-feet (511,000 for flood control, 40,000 for sediment reserve and 225,000 multipurpose storage for irrigation, navigation, and low-flow regulation). Initial cost of constructing the project was \$20,015,023. Total Federal cost of project, including \$448,344 supplemental recreational development (Code 710), was \$20,463,367. Construction began in April 1961, and the project was placed in operation in December 1964.

**Local cooperation.** Section 2, Flood Control Act of 1938, applies.

**Operations during fiscal year.** Visitation for FY 2005 was 1,793,799 visitor hours. Maintenance: Activity included ordinary operation; road repair, relief well rejuvenation and completion of the stilling basin wall repair, (\$977,100).

## 24. SCHEDULING OF FLOOD CONTROL RESERVOIR OPERATIONS

Under Sections 7 and 9, 1944 Flood Control Act, the Corps is responsible for detailed scheduling of operations concerning storage capacity reserved for or assigned to flood control in reservoirs constructed by Bureau of Reclamation as well as those constructed by the Corps. Fiscal Year costs were \$286,000.

## 25. INSPECTION OF COMPLETED FLOOD CONTROL PROJECTS

Flood Control Act of June 22, 1936, P.L. 738, and subsequent acts require local interests to furnish assurances that they will maintain and operate certain

local protection projects after completion in accordance with regulations prescribed by the Secretary of the Army. District Engineers are responsible for administration of these regulations within boundaries of their respective district. (See Table 27-J on inspection of completed flood control projects.)

## Multiple Purpose Projects Including Power

### 26. HARRY S. TRUMAN DAM AND RESERVOIR, Osage River, MO

**Location.** The Damsite is on the main stem of the Osage River about 1.5 miles northwest of Warsaw, Benton County, Missouri. Reservoir extends into Bates, Henry, Hickory, St. Clair, and Vernon Counties, Missouri.

**Existing project.** An earthfill dam about 5,000 feet long constructed to an average height of about 96 feet above streambed, including a gate-controlled overfall spillway and a power installation consisting of six inclined pump-generating units with a combined generating capability of 160,000 kilowatts. Total reservoir storage capacity is 5,202,000 acre-feet (3,918,000 for flood control, 244,000 for sediment reserve, and 1,040,000 multipurpose storage for power, low-flow regulation, and recreation). The operating purposes of the project are flood control, hydroelectric power, water supply, recreation, and fish and wildlife. Public Law 91-267, approved May 26, 1970, authorized a change in project name from Kaysinger Bluff Dam and Reservoir, Osage River Basin, Missouri, to the Harry S. Truman Dam and Reservoir. Initial cost of constructing the completed project was \$550,909,000. Construction of relocated Missouri Highway M-13 was initiated September 1964 and completed May 1966. Construction of the dam and reservoir was initiated in October 1964. The project was operational for flood control in October 1979, and multipurpose pool was reached in November 1979. The first power unit was placed on line on December 22, 1979. Subsequent problems with the turbine bearings required remedial repair that was completed in FY 1999. Through September 2005, power generation totaled 6,610,519,000-kilowatt hours. Of the gross income from the sale of power by Southwestern Power Administration, \$154,925,287 was allocated to the Corps of Engineers for project power operating costs, interest, and investment recovery.

**Local cooperation.** Section 2, Flood Control Act of 1938 applies.

**Operation during fiscal year.** Visitation for FY 2005 was 10,881,471 visitor hours. During FY 2005, 366,884,000 kilowatt-hours of electrical power were generated. Maintenance activities consisted of ordinary

operation and maintenance consisting of storm damage repair and continuing watershed repair for \$431,800. Customer funding was utilized to replace the 13.8Kv generator-motor circuit breaker with vacuum type, paint the transformers, and complete plans and specifications for replacement of the raw water header. Funds of \$212,500 were spent to upgrade/replace various audio/visual interpretive displays in the project visitor center. The stilling basin foundation drains were cleared.

### 27. STOCKTON LAKE, SAC RIVER, MO

**Location.** The Damsite is on the Sac River about 49.5 miles above its confluence with the Osage River, and about 1 mile east of Stockton, Cedar County, Missouri. The lake extends into Dade and Polk Counties.

**Existing project.** A rock-shell dam with impervious core about 5,100 feet long constructed to an average height of about 128 feet, with a gated overfall spillway and a 45,200-kilowatt power installation. Total reservoir storage capacity is 1,674,000 acre-feet (774,000 for flood control, 25,000 for sediment reserve and 875,000 multipurpose storage for power and recreation). The authorized project purposes are flood control, hydroelectric power, water quality, water supply, recreation, and fish and wildlife. Initial cost of constructing the completed project was \$75,715,300. Cost of the project, including \$3,758,000 for downstream channel work and \$502,057 for supplemental recreational development (Code 710), was \$79,975,357. Construction was initiated in October 1963, and the project was placed in operation in December 1969. Power operation problems were encountered with the initial operation in March 1973 because the downstream channel did not have the capacity which earlier observations and computations indicated. As a result, it has been necessary to restrict the power operation to about the 30,000-kilowatt level. Right-of-way for construction of a channel cutoff and bridge at Horseshoe Bend were acquired, and construction completed. Sloughing easements downstream to Caplinger Mills were acquired. Completion assured downstream channel capacity to Caplinger Mills of 8,000 c.f.s. for powerplant operation. Discharge in this range will accommodate power operations at a 39,500-kilowatt level. Through September 2005, power generation totaled 1,876,166,000 kilowatt-hours. Of the gross income from the sale of power by Southwestern Power Administration, \$42,657,388 was allocated to the Corps of Engineers for project operating costs, interest, and investment recovery. In May 2003, the Stockton Lake Project Office was destroyed by a tornado. Funding in

## KANSAS CITY, MO DISTRICT

the amount of \$1,224,600 was obtained in FY05 to replace the building. The building was completed in June 2005. The foundation drains were cleared for dam safety.

**Local cooperation.** Section 2, Flood Control Act of 1938, applies.

**Operations during fiscal year.** Visitation for FY 2005 was 9,308,370 visitor hours. During FY 2005, 65,775,000 kilowatt-hours of electrical power were generated. Maintenance: Activities consisted of ordinary operation and maintenance, and preservation of a downstream archeological site known as "Big Eddy" (\$202,700). Customer funding was utilized to paint the OCB's and transformers.

### Work Under Special Authorities

#### 28. CONTINUING AUTHORITIES

**Small Flood Control Projects Not Specifically Authorized by Congress (Sec. 205, 1948 Flood Control Act, Public Law 858, 80<sup>th</sup> Cong., June 30, 1948, as amended).**

Each project selected must be complete in itself, economically and environmentally justified, and limited to a Federal cost of not more than \$7 million. The local sponsoring agency must agree to provide without cost to the Department of the Army, all lands, easements, and rights-of-way, including highway bridge, and utility relocations and alterations; hold and save the Department of the Army free from damages; maintain and operate the project after completion; assume all project costs in excess of the Federal cost limit; and prevent future encroachments on improved channels. The non-Federal sponsors of Section 205 projects are required to pay 50 percent of all feasibility study costs over \$100,000. For structural flood control projects, the sponsor must pay in cash during the construction at least 5 percent of the construction cost. The sponsor's cash and other contributions must equal 35 percent of the total construction cost, but will not be required to exceed 50 percent. There were no Section 205 projects under construction in FY 2005. See Table K for expenditures under Section 205 during 2005.

**Emergency Streambank Protection (Section 14, 1946 Flood Control Act, Public Law 526, 79<sup>th</sup> Cong., July 24, 1946) as amended.**

Each project selected must be complete in itself, engineering feasible, economically justifiable environmentally acceptable, and limited to a Federal statutory cost of not more than \$1,000,000. The local sponsoring entity must agree to provide without cost to the Department of the Army, all lands, easements, and

rights-of-way, including highway, highway bridge, and utility relocations and alterations required for project construction; provide over the period of construction, an amount equal to not less than 35 percent or more than 50 percent of total project cost, at least 5 percent of which will be cash; operate, maintain, repair, replace, and rehabilitate the project upon completion; hold and save the Department of the Army free from damages arising from the construction, operation, and maintenance of the completed project; and assume all project costs in excess of the Federal statutory cost limit. Construction was completed on the Kansas River Eudora Bend Bridge, KS; and Middle Fork Grand, US 169, MO. See Table 27-K for Emergency Streambank Protection expenditures during FY 2005.

**Project Modifications for Improvement of Environment (Section 1135, Water Resources Development Act of 1986, Public Law 662, 99<sup>th</sup> Cong., November 17, 1986).**

Section 1135 authorizes review of the operation of completed water resources projects to determine need for modifications for the purpose of improving environmental quality. Construction of Phase III of the Milford Lake Section 1135 project at the north end of Milford Lake was completed in FY2005. Overall, the project provides over 2,000 acres of wetland habitat restoration to the Milford lake project on lands adversely by the lake project or previously in crop production. The project is a showcase project for the State of Kansas, and has been a great success story for the Kansas Department of Wildlife and Parks, the sponsor, the Kansas Wildscape Foundation, the funding benefactor, and the Corps of Engineers. Another project initiated in FY2005 and will complete in FY2006 is Greenville Marsh, IA. See Table 27-K for Section 1135 studies status and expenditures for FY 2005.

**Aquatic Ecosystem Restoration (Section 206, Water Resources Development Act of 1996, Public Law 303, 104<sup>th</sup> Cong., October 12, 1996).**

Section 206 authorizes small aquatic ecosystem restoration projects to improve the quality of the environment if in the public interest and cost effective. The feasibility study continues for the Chariton Watershed Section 206 project. It will authorize and construct an array of several hundred small detention structures and in stream structures to improve aquatic, riparian, and wetland habitat in the basin. It will serve to reduce sediment and contaminant inflow into Rathbun Lake, greatly improving water quality and habitat in the lake. See Table 27-K for Section 206 Studies status and expenditures for FY 2005.

## 29. EMERGENCY RESPONSE ACTIVITIES

### A. Disaster Preparedness.

(1) The Disaster Preparedness Program (DPP) involves planning, training, inspection of flood control projects, and maintaining supplies and equipment. Planning activities also involve development of response and recovery plans and exercises in support of natural/national disasters and terrorist activities.

(2) Emergency Management (EM) Branch provided District representation at the monthly meetings for the interagency Kansas City Regional Continuity of Operations (COOP) Working Group (KC RCWG) and assisted in the development of the Kansas City Regional Interagency COOP Exercise (KC RICE '05). The exercise was held in June 2005. KC RICE '05 was the largest Federal "continuity of operations" exercise ever conducted by the Federal government outside of Washington D.C. and involved approximately 500 individuals representing 50 agencies. The EM Branch designed and coordinated the District's own COOP exercise held concurrently with KC RICE '05. Over 30 District members participated in the COOP exercise held at the District's Emergency Relocation Site.

(3) EM personnel participated in a NWD/USACE P2 exercise on June 28, 2005.

(4) Corp personnel provided flood fight training for the sponsors of the L-385 and North Kansas City Federal flood control projects on March 15 through 17, 2005. Flood fight training was also conducted for Kansas Department of Emergency Management on March 29 and 30, 2005. NWK Staff Duty Officer training was conducted on April 6, 2005.

(5) EM personnel attended the annual conference of the Missouri State Emergency Management Agency and the Missouri Emergency Preparedness Association in March 2005.

(6) EM personnel conducted an internal NWK EOC activation exercise in February 2005 to test process and equipment functions.

(7) Disaster preparedness includes operational readiness, maintaining the necessary supplies and equipment to support disaster response. To support flood-fighting efforts, an inventory is maintained of over 1 million sandbags, 55 pumps and 2 sandbag filling machines. Two IDIQ Emergency Flood Fight contracts were renewed during FY 05 and are in-place should they be needed.

(8) Activities to support disaster preparedness in FY 05 included training of the District's Emergency Water Planning and Response Team (PRT). Primary and alternate team members participated in a HQ sponsored virtual Level I and II training courses during the 3<sup>rd</sup> and 4<sup>th</sup> quarters. Water SME, Action Officer and mission Manager attended Water PRT training in Mobile, Alabama on June 27 through June 30, 2005.

**B. Public Law 84-99. Rehabilitation of Flood Control Works.** Approximately 53 inspections of active PL 84-99 Program non-Federal Levees were completed during

FY 05. Field investigations were conducted on two levee units during FY05. Both were determined to have damages eligible for rehabilitation assistance. Engineering and design efforts are ongoing for the Steedman Levee (non-Federal) and Lower Chariton Federal levee unit.

**C. Inspection of Completed Works (ICW) Program.** Sixty-one (61) Federal flood control projects were inspected during FY 05.

### D. Emergency Response.

(1) Response operations included activating the EOC to Level II (Emergency Watch) in January and June of 2005 for flooding in Missouri. Two requests for levee rehabilitation assistance were received.

(2) In May 2005, sixty-three employees were deployed in response to the hurricanes in the southeastern United States. The District's Emergency Water PRT was mobilized and deployed for "Dennis" in July 05. The remaining deployments were for "Katrina, Rita and Wilma" and included GIS PRT members, LERT members. IH PRT members, CREST member, Auditor, Administrative, Public Affairs, Contracting, Resource Management SME, Housing Strike Team members, Safety SME, Debris QA, Program Analyst, Roofing QA, County Liaison, Water/Ice Commodity Specialist, and Assistant Team Leader.

(3) The deployments to Iraq and Afghanistan for the Global War on Terrorism (GWOT) missions continued. EM staff facilitated the deployment of 11 District volunteers with a total of 22 in country, during FY 2005. The effort is expected to continue through FY 06.

## General Investigations

### 30. GENERAL INVESTIGATIONS

Fiscal year 2005 costs totaled \$1,575,524 for all General Investigations activities. See Table 27-L, which covers Surveys, Collection and Study of Basic Data and Preconstruction Engineering and Design expenditures in FY 2005.

#### Other Activities

### 31. CATASTROPHIC DISASTER PREPAREDNESS PROGRAM

FY 2005 expenditures of \$26,600 provided for activities required for local and national preparedness.

### 32. MISSOURI RIVER BASIN COLLABORATIVE WATER RESOURCES, PLANNING/ PARTNERING PROCESS

Missouri River Basin Association and the Corps will manage and facilitate the process of collaboration for some limited studies. The collaborative effort allows input from the states, tribes, and Federal agencies economic and environmental interest groups and the general public on both the operation issues, i.e. Master Manual, and non- operational issues. In addition, the collaborative process could address recreation industry development, ecosystem management, streambank erosion, project mitigation, structural changes for endangered species, environmental monitoring tribal water rights, and support to navigation and agriculture.

### 33. REGULATORY PROGRAM

**Statutes.** The Corps of Engineers is charged with regulatory for all waters of the United States, including wetlands. This is accomplished through a Department of the Army permit program pursuant to Section 10 of the Rivers and Harbors Act of 1899 and Section 404 of the Clean Water Act.

**Operations during fiscal year 2005.** The Kansas City District completed 2,604 permit actions during the year. A total of 114 violations were reported and evaluated. One hundred and one were resolved by issuance of permits, voluntary restoration, administrative action or other means. The remaining thirteen violations were unresolved at the end of the reporting period.

**Special projects and significant actions during the year included:** 1) initiation of the biannual monitoring data collection for twelve permitted commercial dredging operations on the Kansas River to aid in the public interest review for reissuance of the expiring permits; 2) continued informal consultation with the U.S. Fish and Wildlife Service for the reissuance of eight expiring commercial dredging permits, and two new permits, on the Missouri River; 3) reissuance of three General Permit in Missouri to authorize shoreline activities at Lake of the Ozarks, gravel excavation in streams, and boat docks in the Missouri and Gasconade Rivers; and reissuance of one General Permit in Kansas to authorize reclamation of mined lands; 4) receipt of a modified application to relocate the proposed Great Plains Power Company plant site adjacent to the existing Iatan Power Plant in Missouri, to omit a proposed new power plant on the Kansas side of the Missouri River, and to change the applicant from Great Plains Power Company to Kansas City Power and Light Company; 5) advancement of a proposed mitigation banking agreement with the Missouri Department of Transportation to near completion; 6) refinement of two proposed in-lieu-fee agreements in Kansas and advancement of those proposals to near completion; 7) receipt of a proposal for a new Osage Mitigation Bank in Cass County, Missouri and advancement to near completion; 8) resolution of an Administrative Appeal of a jurisdictional determination at Cadillac Lake in Sedgwick County, Kansas with the Corps maintaining jurisdiction over the water body; 9) resolution of Takings litigation initiated by Green Acres Farms in favor of the United States; 10) enforcement litigation against Moniteau County, Missouri was tentatively settled by the County's signature to a proposed consent decree with the United States Government; and 11) seven enforcement cases were referred to EPA.

**REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS FOR FY 2005**

DEAUTHORIZED PROJECTS

Project	For Last Full Report See Annual Report For	Date and Authority	Federal Funds Expended	Contributed Funds Expended	Date Deauthorized
Tuttle Creek Lake, KS (Road Improvement--1974 Mod.)	1977	Sec. 18 of Water Resources Development Act of 1974	3,000	--	Nov 17, 1986
Tuttle Creek Lake, KS Road and Bridge (1976 Act)	--	Water Resources Development Act of 1976, Section 189, P.L. 94-587	--	--	Jan 1, 1990
Wolf-Coffee Lake, Blue River, KS	1976	1970 Flood Control Act (H. Doc. 332, 91st Cong., 2d Sess.)	1,095,020	--	Nov 17, 1986

1/ For completed Shoal Creek unit of Chariton-Little Chariton Basin, MO, see Table 27-E.

2/ For completed project see Table 27-C. Deauthorized under Sec. 1001(b)(1) WRDA of 1986, P.L. 99-662.

3/ Hays, Lincoln Draw, KS, Section 205 feasibility study terminated in March 1991 due to lack of identifiable project that would meet dam safety concerns.

4/ For completed Argentine, Amourdale, and Central Industrial Units of project, see Table 27-E.

5/ Incorrectly shown as R263-270 in the deauthorization act.

6/ Operation and maintenance costs \$850,495. Deauthorized under Sec. 1001(b)(1) of WRDA, P.L. 99-662.

# PORTLAND, OR DISTRICT

The territorial limits of the Portland District include the Pacific coastal drainage area of the State of Oregon, the portions of the States of Oregon and Washington which lie within the Columbia River watershed downstream of the Umatilla Bridge below McNary Dam, and south central Oregon west of the Malheur River and the Steens Mountains, but not including that part which drains into the Klamath Lake and River.

## Navigation

### 1. CHETCO RIVER, OR

**Location.** Rises in Siskiyou Mountains of Coast Range at an elevation of 4,000 feet, flows for about 51 miles in a circuitous route, and empties into Pacific Ocean at Brookings, OR, 300 miles south of entrance to Columbia River and 345 miles north of San Francisco Bay. (See National Oceanic and Atmospheric Administration Charts 18600 and 18203).

**Existing project.** Provides for two jetties at the mouth of the river. Modification of 1965 authorized an entrance channel 120 feet wide by 14 feet deep; a barge turning basin about 250 feet wide, 650 feet long, and 14 feet deep; and a small boat access channel 100 feet wide by 12 feet deep. Also authorized was a 450-foot extension of north jetty with an increase in elevation of existing portion and a protective dike about 1,800 feet long with a top elevation of 18 feet. Mean lower low water is plane of reference. Tidal range between mean lower low water and mean higher high water is 6.9 feet and extreme is about 12 feet.

Construction of jetties was completed December 1957. Removal of rock pinnacles and an abandoned bridge structure was accomplished in June 1959. Under authorized modification of October 1965, two contracts were completed. Construction of entrance channel and extension of north jetty was completed in July 1969. Construction of a protective dike, turning basin and small boat access channel was completed in March 1970. The authorization was modified by WRDA 92 to "direct the Secretary of the Army to assume maintenance of the approximately 200-foot long access channel to the south commercial

boat basin consistent with authorized project depths". This channel will be maintained in lieu of the small boat access channel.

**Local cooperation.** Fully complied with.

**Terminal facilities.** The Port of Brookings has developed two large boat basins, one for commercial fishing boats and the other for sport boats, and a public boat-launching ramp. There are four fish receiving docks and a sea-going barge dock for lumber loading and storage. There is also a privately owned marina and a Coast Guard Station.

**Operations during fiscal year.** Maintenance: Routine operation and maintenance continued. (See Table 28R for dredging operations.)

### 2. COLUMBIA AND LOWER WILLAMETTE RIVERS BELOW VANCOUVER, WA AND PORTLAND, OR

**Location.** The Columbia River rises in British Columbia, through which it flows for 425 miles. It enters the United States in northeastern Washington, and empties into the Pacific Ocean 645 miles north of San Francisco Bay and 160 miles south of Strait of Juan DeFuca. Total length of river is 1,210 miles. (See NOAA Charts 18520, 18521, 18522, 18523, 18524, 18526, and 18531; also Geological Survey Map of Washington.) Willamette River rises in Cascade Range in western Oregon, flows northerly, and empties into Columbia River about 100 miles from the sea. Its length from source of Middle Fork is about 294 miles. Project embraces 103.5 miles of Columbia River below Vancouver, WA, and 14.6 miles of Willamette River below Portland, OR. (See NOAA Chart 18526 and Geological Survey Map, State of Oregon.)

**Existing project.** Provides for a channel 35 feet deep and 500 feet wide from River Mile 106.5 to 105.5, the distance between existing highway and railroad bridges; a channel 40 feet deep and 600 feet wide from Vancouver, WA, River Mile 105.5 to mouth of Columbia River, River Mile 3; a turning basin at Vancouver, WA, 40 feet deep, 800 feet wide, and about 5,000 feet long; a turning basin at Longview, WA, 40 feet deep, average width of 1,200 feet, and about 6,000 feet long; and a channel 40 feet deep in the Willamette River with varying widths of 600 to 1,900 feet from the mouth (River Mile 0) to Broadway Bridge (River Mile 11.6) which encompasses Portland Harbor area, subject to provisions that channel from mouth of Willamette River to turning basin at Vancouver, WA, be limited to 500 feet in width until need for additional width is demonstrated by developed traffic. Existing project also provides for auxiliary channels 10 feet deep and 300 feet wide near Cathlamet, WA; 30 feet deep and 300 feet wide in St. Helens, (Oregon); and 30 feet deep and 500 feet wide connecting upper end of St. Helens Channel with main ship channel of Columbia; 24 feet deep and 200 feet wide along frontage of town of Rainier, OR, extended to its upper and lower ends to deep water in Columbia River, 8 feet deep and 150 feet wide from this depth in Columbia River through old mouth of Cowlitz River to a point about 3,000 feet upstream from present terminus of harbor line; a channel from Longview Port dock downstream along pier head line and past Weyerhaeuser Timber Co. plant at Longview to a connection with main ship channel below Mount Coffin, the downstream 2,400 feet of this channel to be 30 feet deep and 300 feet wide and remainder to be 28 feet deep and 250 feet wide; construction of a small boat mooring basin at Astoria, OR, to include a sheet pile, sand-filled breakwater about 2,400 feet long with a 30-foot roadway along its full length, and steel pile shore wings totaling about 1,460 feet long and for stone-and-pile dikes and revetments. Plane of reference in estuary from mouth of Harrington Point is mean lower low water; thence to Portland and Vancouver, adopted low water. Tidal range between mean lower low water and mean higher high water at mouth of Columbia is about 8 feet, and at Portland and Vancouver, about 3 feet at low stage of rivers. Extreme tidal ranges are about 13 and 3 feet, respectively. Annual freshets have little effect on stage of tide at mouth of Columbia; at Portland and Vancouver, they average about 12 feet, while highest know reached a stage of 33 feet above water at Portland.

Work on the 40-foot channel in Columbia River from Portland, OR, and Vancouver, WA, to the sea was completed in 1976. Auxiliary channel in vicinity of Longview was completed in 1949, and improvement of mouth of Cowlitz River and small

boat mooring basin at Astoria were completed in 1950. Project depths are maintained all year except for the period immediately following the annual freshet in May-June when shoaling occurs at several locations. Timing of vessel movement with tidal fluctuations permits maximum draft conditions. In Columbia and Willamette Rivers between mouth and Broadway Bridge at Portland a depth of 40 feet at low tide and 42 feet at high tide is practicable all year. In Columbia River between mouth of Willamette River and Vancouver, WA, depths of 40 and 42 feet at low and high tide, respectively, are practicable all year. (For details relating to previous project, see pages 1995 and 1998 of Annual Report for 1915 and page 1746 of Annual Report for 1938.)

**Local cooperation.** Fully complied with. Requirements are described in full on page 37-3 of FY 1981 Annual Report.

**Terminal facilities.** At Portland, OR, there are six Port of Portland terminals consisting of 43 berths equipped to handle general cargo, bulk cargo, lumber, automobiles, lift-on-lift-off and roll-on-roll-off containers, and break-bulk vessels. The Port of Portland owns and operates a major ship repair yard, which includes the west coast's largest, and the world's third largest, floating dry dock. Also available in the harbor area are privately operated facilities for receiving, storing and out loading petroleum, wood chips, grain, logs, sand and gravel, cement, and steel products.

At Astoria, OR, there is a terminal with facilities for receiving and handling all types of general cargo.

At Vancouver, WA, there are municipal facilities capable of berthing five ships simultaneously. Each berth is completely outfitted with mechanical and lift facilities for receiving and handling all types of cargo. The port has a low dock to handle roll-on-roll-off and side-port discharging vessels. The grain terminal has a storage capacity of 4,500,000 bushels.

Port of Longview has a public terminal on Columbia River and a privately owned grain elevator with a capacity of 6,900,000 bushels. This port also has a heavy lift facility, with a capacity of 600 tons.

Port of Kalama has two berthing areas, one port owned and one private.

At other locations on Columbia River between Portland and Columbia River entrance there are sufficient private facilities to accommodate river vessels and fishing craft. These facilities, with planned extensions, are considered adequate for existing commerce. (For details, see Port Series Nos. 33 and 34, Corps of Engineers, published in 1974 and 1975 respectively.)

**Operations during fiscal year.** Maintenance: Routine operations and maintenance continued. (See Table 28R for dredging operations).

### 3. COLUMBIA RIVER AT BAKER BAY, WA

**Location.** Baker Bay is a shallow body of water about 15 square miles in extent on the north side of Columbia River Estuary near its mouth. The bay is separated from the river by Sand Island, a low-lying sand bar only a few feet above high tide level. (See NOAA Chart 18521.)

**Existing project.** A mooring basin 10 and 12 feet deep, about 20 acres in extent with protecting breakwaters; and a west channel 16 feet deep and 200 feet wide for the first 2,000 feet, then 16 feet deep and 150 feet wide to the boat basin; a channel east of Sand Island to Port of Ilwaco, a distance of about 4 miles. Mean lower low water is plane of reference. Tidal range between mean lower low water and mean higher high water is about 8 feet, and extreme about 13 feet.

Channel extending through easterly passage of Sand Island was completed in 1934. This portion of authorized project is not passable and is not maintained at the present time. Dredging west channel to 8 feet was accomplished September 1948. Deepening west channel to 10 feet, and boat basin and breakwater construction at Ilwaco, WA, was finished December 1957, and again, deepening of the west channel to 16 feet completed in August 1985 under Section 107, finished the project.

**Local cooperation.** Fully complied with.

**Terminal facilities.** Wharves, floats, ramps, and berths, for fishing craft, barges and towboats. Small-boat basin and protecting breakwater provides moorings for numerous fishing and recreational craft all year. Facilities are considered adequate for existing commerce.

**Operations during fiscal year.** Maintenance: None. Project depth was adequate for current use.

### 4. COLUMBIA RIVER BETWEEN CHINOOK, WA, AND HEAD OF SAND ISLAND

**Location.** At easterly end of Baker Bay, lying on north side of Columbia River near mouth. (See Coast and Geodetic Survey Chart 6151.)

**Existing Project.** Channel 10 feet deep and 150 feet wide, extending from head of Sand Island to Chinook; a turning and mooring basin at upper end of channel, 10 feet deep, 660 feet long, and ranging from 275 to 500 feet wide; reconstruction of easterly 393 feet of existing breakwater; and extension of existing breakwater easterly and thence northerly to connect with shore in vicinity of Portland Street, Chinook, WA. Tidal range between mean lower low water and mean higher high water is about 8 feet and extreme about 13 feet.

Project as originally authorized was completed in 1940. The 10-foot channel depth modification was

accomplished September 1958. Rehabilitation of existing breakwater was completed September 1962.

**Local cooperation.** Fully complied with.

**Terminal facilities.** Chinook Packing Company owns a wharf for receiving fresh fish, and one additional fish buying company is located at Chinook. A portion of wharf is also used as a public landing. At upper end of channel there is a turning and mooring basin with facilities for mooring 350 fishing and recreational craft. Adequate terminal and mooring facilities include a public launching ramp, hoist with 10-ton capacity and suitable supply facilities.

**Operations during fiscal year.** Maintenance: Completed dredging initiated in FY 04.

### 5. COLUMBIA RIVER AT THE MOUTH, OR AND WA

**Location.** The Columbia River entrance is 645 miles north of San Francisco Bay. Project is about 120 miles downstream of Portland, OR and Vancouver, WA. For description of Columbia River see Section 3.

**Existing project.** Provides for a one-half-mile-wide channel across a bar 55 feet deep (mean lower low water) for the northernmost 2,000 feet, and 48 feet deep (mean lower low water) along the southern 640 feet, to be secured by two rubble mound jetties, spur jetty "A" on the north shore and by dredging. The north jetty is about 2.5 miles long and the south jetty about 6.6 miles long; spur jetty "A" is about 0.3 miles long. Tidal range on bar between mean lower low water and mean higher high water is about 8 feet, and extreme about 13 feet.

The originally authorized project depth of 40 feet was completed in 1918, south jetty completed in 1914 and north jetty in 1917. A spur jetty (jetty "A") was completed in 1939 (repaired in 1961) for the purpose of channel stabilization. Spur jetty "B" currently is classified "inactive." Dredging of the 48-foot bar channel started April 1956 was completed in September 1957. South jetty rehabilitation started June 1962 was completed September 1964. North jetty rehabilitation started January 1965 was completed April 1965. Additional rehabilitation of the south jetty was initiated in May 1982 and completed in September 1982. Deepening bar channel to 55 feet completed September 1984. In FY 95 a 500-foot section of the south jetty was removed to allow unimpeded access by fisheries resources to 603 acres of intertidal habitat under Section 1135 authority. Project dimensions were available at end of fiscal year. (For details relating to previous projects, see page 1999, Annual Report for 1915 and page 1740 of Annual Report for 1938.)

**Local cooperation.** Fully complied with. Local interests contributed \$500,000 toward construction of the north jetty, which was completed in 1917.

**Operations during fiscal year.** Maintenance: North Jetty interim repairs (58,000 tons) were initiated in May 2005 and completed in December 2005. (See Table 28R for dredging operations).

**6. COLUMBIA RIVER BETWEEN VANCOUVER, WA, AND THE DALLES, OR**

**Location.** On Columbia River, between Interstate Bridge at Vancouver, WA, 106.5 miles above mouth and The Dalles, OR, mile 191, a distance of 84.5 miles. For description of Columbia River, See Section 3, "Columbia and Lower Willamette Rivers Below Vancouver, WA, and Portland, OR."

**Existing project.** Channel 27 feet deep at low water and 300 feet wide between Vancouver, WA, and The Dalles, OR, 84.5 miles; a channel 10 feet deep at low water and 200 feet wide at upstream entrance to Oregon Slough, OR; a suitable turning basin adjacent to site of port development in vicinity of Camas and Washougal, WA; a boat basin at Hood River, OR, 500 by 1,300 feet and 10 feet deep at normal Bonneville pool level, with a connecting channel of same depth to deepwater, and a protecting breakwater on easterly side; a barge channel to waterfront at Bingen, WA, 10 feet deep at normal Bonneville pool level, 200 feet wide and about 1 mile long, and an access channel 7 feet deep at normal Bonneville pool level, 100 feet wide and about 1,000 feet long, to a natural mooring basin for small boats near east end of channel; and construction of The Dalles small boat basin, to provide a breakwater and shear boom protected basin about 400 by 800 feet in size with depth of 8 feet below a pool elevation of 72.5 feet at mean sea level. Tidal range between mean lower low water and mean higher high water at Vancouver is about 3 feet and at Bonneville about 0.2 foot at low stages of the river. Extreme tidal ranges are about 4 feet and 0.4 foot, respectively.

Existing project is complete. Construction of The Dalles small boat basin was completed in 1949. Channel dredging at upper end of Oregon Slough was accomplished in 1957. Project depth of 27 feet between Bonneville and The Dalles, OR, was achieved April 1959. The 27-foot channel depth between Vancouver, WA, and Bonneville, OR, was completed May 1938. Improvement of lower entrance of Bonneville Dam lock was completed in May 1961. At the present time, the channel is maintained to a depth of 17 feet, which is adequate for user traffic. Construction of a boat basin at Hood River, OR, and of Camas-Washougal, WA, turning basin was accomplished February 1962. Construction of a barge channel in Columbia River near Bingen, WA, was completed September 1963. Small boat

recreation channel 100 feet wide 6 feet deep at South Channel Government Island completed 1985 under section 107.

**Local cooperation.** Fully complied with.

**Terminal facilities.** At Vancouver, WA, upstream of Interstate Highway Bridge at River Mile 108.1 on site of former shipyard are numerous shipbuilding facilities equipped with railway and river moorage facilities. Also in this area are a paper-storage warehouse with barge slip, two boat-building businesses, and a storage dock with gantry crane. Sites are available for development to suit lessee.

At Camas, WA, about 13.5 miles upstream from Vancouver, there is a private wharf used for transfer of paper-mill supplies and paper to and from barges, and facilities for discharging bulk oils from barges.

At Port of The Dalles (mile 44 above Bonneville) there is a municipal wharf 125 by 1,100 feet for use by tugs and barges. There is a one-story timber and corrugated iron warehouse, 94 by 461 feet, on this wharf. A private elevator with a capacity of 40,000 bushels and a public elevator of 1,113,800-bushel capacity for handling bulk grain to barges are also at The Dalles. Public elevator has rail, truck, and water connections. There is a port owned rail connection about three-fourths mile below municipal wharf where certain types of cargo may be handled between railroad cars and barges.

At numerous locations along the entire waterway there are facilities for transfer of logs to water from trucks and public and private boat basins. Facilities are considered adequate for present commerce.

**Operations during fiscal year.** Maintenance: Routine operation and maintenance continued. (See Table 28R for dredging operations).

**7. COLUMBIA RIVER CHANNEL IMPROVEMENTS, OR**

**Location.** The project area includes the Lower Columbia and Willamette Rivers. Work includes deepening the navigation channel to 43 feet, construction of wildlife mitigation features and environmental restoration features. The Columbia River section extends from the mouth near river mile (RM) 3 to RM 106.5. The Willamette River section extends from the mouth to RM 11.6. The Willamette River portion of the project has been deferred and will be reevaluated in a subsequent NEPA document after resolution of cleanup issues associated with its being named to the federal National Priorities List by USEPA under the Comprehensive Environmental Response, Compensation, and Liability Act.

**Existing project.** Refer to Columbia & Lower Willamette Rivers below Vancouver, WA and Portland, OR project

**Local cooperation.** The project is sponsored by the five lower Columbia River Ports: Port of Portland, on the Oregon side and the Port of Vancouver, Port of Woodland, Port of Kalama, and Port of Longview on the Washington side.

**Operations during fiscal year.** During the 2005 fiscal year the first dredging contract was initiated for the Columbia River Channel Improvement Project (CRCIP), with the award of the contract in May 2005 to Great Lakes Dredging and Dock, Incorporated of Chicago, Illinois. The contract included three authorized projects, the Mouth of the Columbia River Project, the Columbia and Lower Willamette Rivers operation and maintenance and the CRCIP construction. The CRCIP Dredging Contract, the Dredge, Sugar Island removed a total of 2,617,240 CY of material. Of this total yardage removed, 1,317,978 was disposed of in the Deep Water Site, 557,284 was disposed of in the Columbia River In-water Sites, and 741,978 was disposed of in front of the Dredge Oregon and re-handled to the Gateway Upland Disposal Site. River mile 3 to 21 in the lower river was constructed during FY-05 and completed November 2005. River miles 95 to 104 in the upper river; was completed on December 2005, and the Port of Portland's Dredge Oregon will complete the re-handle of material to the Gateway Upland Disposal Site in FY 06. Construction of Oregon Slough will be completed in FY 06.

## 8. COOS BAY, OR

**Location.** On Oregon coast 200 miles south of mouth of Columbia River and 445 miles north of San Francisco Bay. It is about 13 miles long and 1 mile wide, with an area at high tide of about 15 square miles. (See NOAA Charts 18580 and 18587.)

**Existing project.** Initial Authorization included two rubble mound, high-tide jetties at entrance; a channel across the outer bar 45 feet deep and 700 feet wide, reducing gradually to 35 feet deep and 300 feet wide near River Mile 1 and continuing to about mile 9; thence a channel 35 feet deep and generally 400 feet wide to mile 15; an anchorage area 35 feet deep, 800 feet wide, and 1,000 feet long at Empire (River Mile 5.5); turning basins at North Bend (River Mile 12.5) and Coalbank (River Mile 14.7) 35 feet deep, 650 feet wide and 1,000 feet long; a channel 22 feet deep and 150 feet wide from Smith's Mill (River Mile 15) to Millington (River Mile 17); a small boat basin, about 500 by 900 feet at Charleston, with a connecting channel, 16 feet deep, 150 feet wide and 6,200 feet long, to deep water in Coos Bay, and construction of a protecting breakwater and bulkhead. Plane of reference is mean lower low water. Tidal range between mean lower low water and mean higher high water is 7 feet and extreme is about 11 feet at both the entrance and at Coos Bay.

South jetty was completed in 1928, north jetty in 1929, and 24-foot channel in 1937. The south jetty was restored in 1941 and 1942 by construction of a concrete cap for full length of the jetty. Excavation of channel to 30 feet deep and generally 300 feet wide from entrance of Isthmus Slough was completed in 1951. Dredging outer bar channel to a depth of 40 feet, decreasing to 30 feet at Guano Rock was completed in 1952. Construction of the Charleston Channel and small-boat basin was completed in September 1956. Rehabilitation of south jetty was started in June 1962 and completed December 1963. Repair of north jetty was completed in August 1989. Construction of the deeper and wider channel to mile 15 was completed in 1979. Deepening of Charleston channel and turning basin was completed in 1985 under Section 107. (For details relating to previous projects, see page 1987 to Annual Report for 1915 and page 1728 of Annual Report for 1938.)

A modification to the existing project was authorized in the FY 1996 Energy and Water Development Appropriations Act, Public Law 104-46, November 13, 1995. This authorization provided for deepening the channel by 2 feet to 47 feet below mean lower low water (MLLW) from the entrance to Guano Rock (river mile 1) and to 37 feet below MLLW from river mile 1 to 15. Public Law 104-46 also provided for deepening by two feet and expanding the turning basin at river mile 12 by 100 feet from 800 by 1000 feet to 900 by 1000 feet. The excavation material for the channel deepening was transported to the ocean for disposal. The cost for preparation of the plans and specifications and the construction of the project was \$11,616,000, of which \$8,116,000 was federal and \$3,500,000 was non-federal. In addition, the sponsor paid 100 percent of the estimated cost for dredging the berth areas.

**Local cooperation.** Fully complied with. Requirements are described in full on page 37-5 of FY 1981 Annual Report.

The sponsor, International Port of Coos Bay, signed a Project Cooperation Agreement on May 8, 1996 for the project modification to deepen the channel as authorized in Public Law 104-46. In accordance with cost sharing requirements of the Water Resources Development Act of 1986, the Federal Government provided 75 percent of the costs associated with the general navigation features of the project. The non-federal sponsor was required to provide 25 percent of the total construction cost of the general navigation features up front. The sponsor was also required to provide an additional 10 percent of the cost of the general navigation features of the project in cash over a period not to exceed 30 years.

**Terminal facilities.** At North Bend there is a municipal dock 649 feet long fronting on channel, about 2,380 feet of privately owned mill docks, and three oil receiving terminals in vicinity.

At Coos Bay there is a privately owned dock with a frontage of 1,345 feet, open to the public on equal terms; several small landings for fishing and harbor craft; and three lumber docks with 1,300-foot, 576-foot and 500-foot frontages, respectively.

In the North Spit industrial area, there is one woodchip loading facility having a frontage of 1200 feet and a smaller T-dock operated by the Port of Coos Bay.

At Eastside, on Isthmus Slough, there is a 200-foot dock.

At Empire there is a privately owned lumber dock with frontage of 510 feet, and an oil terminal, owned by Port of Coos Bay, for receipt of petroleum products by barge. A barge slip also owned by the Port was completed in 1986.

At Charleston there are wharves, for receipt of fresh fish and shellfish and large seafood receiving and processing plant. There are also two municipally owned small-boat basins, open to all on equal terms, capable of mooring 250 fishing and recreation craft. Servicing facilities for small craft are available at all facilities, and public launching ramps have been constructed in Charleston area by private interests. A privately owned floating moorage on Joe Ney Slough has facilities for mooring about 50 fishing vessels.

At Jordan Cove area there is a dock, 248 feet long, for wood chip ships.

**Operations during fiscal year** Maintenance: Routine operations and maintenance continued. (See Table 28R for dredging operations).

## 9. COQUILLE RIVER, OR

**Location.** Rises in Coast Range, flows generally westerly for about 100 miles, and empties into Pacific Ocean at Bandon, OR, 225 miles south of mouth of Columbia River and 420 miles north of San Francisco Bay. (See NOAA Charts 18580 and 18186.)

**Existing project.** Two rubble mound high-tide jetties at river mouth, south jetty 2,700 feet long and the north, 3,450 feet long; and a channel 13 feet deep at mean lower low water and of suitable width from the sea to a point 1 mile above old Coquille River Lighthouse, and snagging to State highway bridge at city of Coquille. Mean lower low water is plane of reference. Tidal range between mean lower low water and mean higher high water at mouth is 7 feet and extreme about 10 feet.

Jetties were completed in 1908 and entrance channel in 1933. North jetty was reconstructed in 1942 and a 750-foot extension to easterly end was

constructed in 1951. South jetty was repaired in 1954 and north jetty in 1956. Coquille Lighthouse rehabilitation was completed June 21, 1976. Port of Bandon constructed boat basin facility in conjunction with protective breakwater and entrance channel construction in 1985, under Section 107. (For details relating to previous projects, see page 1986 of Annual Report for 1915 and page 1727 of Annual Report for 1938.)

A plan to deepen the entrance channel of the Coquille River from 13 feet to 18 feet was approved in May 1988. The economics were reevaluated in FY1993 and the project was not economically feasible at that time.

**Local cooperation.** Restoration of lighthouse using Code 710, Recreation Facilities at Completed Projects funding, required 50 percent cost sharing with non-Federal sponsor (Oregon State Parks).

**Terminal facilities.** At Bandon: A publicly owned wharf, and a small-boat basin open to all on equal terms.

**Operations during fiscal year** Maintenance: Routine operations and maintenance continued. (See Table 28R for dredging operations).

## 10. DEPOE BAY, OR

**Location.** Harbor on Oregon coast 100 miles south of mouth of Columbia River. (See Coast and Geodetic Survey Chart 5902.)

**Existing project.** Two breakwaters north of entrance; an entrance channel 8 feet deep and 50 feet wide; an inner basin 750 feet long, 390 feet wide and 8 feet deep with retaining wall along easterly side; and a stone spending beach. Mean lower low water is plane of reference. Tidal range between mean lower low water and mean higher high water is 8 feet and extreme is about 12 feet. Project as originally authorized was completed in 1939 and project modifications, enlarging the basin and deepening to 8 feet, were accomplished in June 1952 and August 1966.

**Local cooperation.** Fully complied with.

**Terminal facilities.** Facilities, in inner basin, consist of landings and floats to accommodate operators of excursion and commercial fishing boats. Facilities considered adequate for existing commerce.

**Operations during fiscal year.** Maintenance: Routine operation and maintenance continued. (See Table 28R for dredging operations).

## 11. PORT ORFORD, OR

**Location.** On Oregon coast 250 miles south of Columbia River entrance and 390 miles north of San Francisco Bay. (NOAA Chart 18203 and Geological Survey Quadrangle, Port Orford, OR)

**Existing project.** Improvement of harbor by 55-foot extension of existing locally constructed breakwater and dredging of a channel 16 feet deep, 90 feet wide, and 750 feet long. Breakwater was completed October 1968. Channel was completed September 1971. The authorization was modified by WRDA 92 to allow the Corps to maintain the authorized navigation channel within 50 feet of the port facility.

**Local cooperation.** Fully complied with.

**Terminal facilities.** In FY 2000 local interests replaced the aging wooden pile dock with a sheet pile bulkhead and backfill dock. This dock provides almost 3 acres of dock area and two large-capacity cranes.

**Operations during fiscal year.** Maintenance: Routine operation and maintenance continued. (See Table 28R for dredging operations).

## 12. ROGUE RIVER HARBOR AT GOLD BEACH, OR

**Location.** Rises in Cascade Range in southwestern Oregon; flows westerly through Coast Range, and empties into Pacific Ocean 264 miles south of mouth of Columbia River and 381 miles north of San Francisco Bay. (See NOAA Chart 18202.)

**Existing project.** Two jetties at entrance, and a channel 13 feet deep and 300 feet wide from ocean to a point immediately below State highway bridge, about 1 mile, including widening channel at a point about 0.25 mile below bridge to form a turning basin 13 feet deep, 500 feet wide, and 650 feet long, and a Boat Basin Channel 10 feet deep by 100 feet wide approximately 2,500 feet long. At request of local interests, turning basin was located in south portion of estuary downstream from a point 0.25 mile below bridge. This change was effected to permit adequate terminal facilities to be constructed adjacent to turning basin. Mean lower low water is plane of reference. Range of tide between mean lower low water and mean higher high water is 7 feet, and extreme about 14 feet.

Project as authorized has been completed. Construction of two jetties at entrance was completed September 1960. Dredging river channel by contract and entrance bar by government plant was completed October 1961. North jetty rehabilitation along channel side was completed October 1966. Breakwater construction and dredging, under contract awarded in September 1964, was 17 percent accomplished when flood of December 1964 destroyed all completed works. Contract was terminated as further construction at that location was considered unfeasible. Bank protection work at Wedderburn location was completed in October 1972. A breakwater, constructed by Port of Gold

Beach, was completed during 1973. In 1985, three pile dikes, located on the south side of channel ocean ward of the boat basin entrance, were completed. In 1997, at the direction of Congress, the boat basin entrance channel was relocated approximately 1,000 feet upstream to a new opening in the breakwater provided by the Port of Gold Beach.

**Local cooperation.** Fully complied with.

**Terminal facilities.** There are various landings for fishing and recreational craft. At Wedderburn, across river from Gold Beach, is a facility to accommodate excursion passengers and small freight items destined for various private landings between Wedderburn and Agness, OR. Facilities considered adequate for existing commerce.

**Operations during fiscal year.** Maintenance: Routine operation and maintenance continued. (See Table 28R for dredging operations).

## 13. SIUSLAW RIVER, OR

**Location.** Rises in coast range, flows about 110 miles westerly and empties into Pacific Ocean about 160 miles south of entrance of Columbia River and 485 miles north of San Francisco Bay, CA. (See NOAA Charts 19583 and 18580.)

**Existing project.** Provides for 2 high-tide, rubble mound jetties 750 feet apart at the outer end, the north jetty 8,390 feet long (600 feet un-constructed) and the south jetty 4,200 feet long; an entrance channel 18 feet deep and 300 feet wide from deep water in ocean to a point 1,500 feet inside the outer end of existing north jetty; thence a channel 16 feet deep, 200 feet wide with additional widening at bends, and about 5 miles long, to a turning basin, 16 feet deep, 400 feet wide, and 600 feet long, opposite Siuslaw dock at Florence; a channel 12 feet deep, 150 feet wide from Florence to mile 16.5; and at River Mile 15.5 a turning basin 12 feet deep, 300 feet wide, and 500 feet long. Mean lower low water is plane of reference. Tidal range between mean lower low water and mean higher high water at mouth of river is 7 feet and extreme about 11 feet. During low stages of river, tidal effect extends to Mapleton, 20.5 miles above mouth. (For details relating to previous project, see page 1988 of Annual Report for 1915.)

A modification to the existing project was authorized by public law 96-367, October 1, 1980. North and south jetty modifications were completed in FY 86. Modifications provide for extending the north and south jetties by 1,900 and 2,300 feet respectively. The jetty extensions terminate at approximately the minus 25-foot contour. Spur jetties were constructed on each jetty extension to reduce long shore currents from transporting material around the heads of the jetties. Each spur jetty is 400 feet long and originates approximately 900 feet shoreward of the jetty head. The north jetty spur is

oriented 45 degrees to the north of the existing jetty alignment and the south jetty spur 45 degrees to the south of the jetty alignment.

In cooperation with local interests and the U.S. Coast Guard, the entrance channel was realigned in FY00. This has resulted in a safer entrance and reduced dredging.

**Local cooperation.** Fully complied with.

**Terminal facilities.** Port dock at Florence, 150 feet wide and 350 feet long, is about 5.3 miles above river entrance and accommodates a fish-receiving station at east end of wharf which maintains a 2-ton capacity winch and supplies gasoline, oil and ice to fishermen. Other facilities at Florence consist of various floatways that provide docking facilities for fishing vessels and other small craft and a floating dock with accommodations for 75 commercial fishing vessels. Adjacent to commercial basin is mooring basin with accommodations for 200 sport boats of all sizes.

Modern docks for loading ocean-going barges with packaged lumber is maintained at Mapleton and owned by the Davison Lumber Company.

There are also a number of private landings and log booms between Cushman and Mapleton to accommodate river traffic. These facilities are considered adequate for existing traffic.

**Operations during fiscal year.** Maintenance: Routine operation and maintenance continued. (See Table 28R for dredging operations).

#### 14. SKIPANON CHANNEL, OR

**Location.** In tidal waterway extending south 2.7 miles from deep water in Columbia River. Channel enters Columbia about 10 miles above mouth and 4 miles below Astoria, OR. (See NOAA Chart 18523.)

**Existing project.** Channel 30 feet deep and generally 200 feet wide extending from deep water in Columbia River to railroad bridge at Warrenton, OR, distance of 1.8 miles, turning basin of same depth, mooring basin 12 feet deep at mean lower low water at Warrenton, OR, and channel 7 feet deep, generally 40 feet wide, with increased widths at log dumps and terminals, for 4,500 feet via cutoff channel above railroad bridge. Channel is maintained to 17 feet, which is adequate for user traffic. Mean lower low water is plane of reference. Tidal range between mean lower low water and mean higher high water is about 8 feet; extreme is about 13 feet.

Project as authorized is complete. Dredging river channel and turning basin was completed in 1939. Construction of small-boat mooring basin at Warrenton, OR, was completed October 1957, and fill stabilization work was accomplished in August 1958.

**Local cooperation.** None required.

**Terminal facilities.** City of Warrenton owns wharf with a 300-foot frontage open to public on equal terms. One privately owned cannery wharf with a 300-foot frontage is used for unloading fish and handling fishnets. One privately owned boatyard has floats and moorage facilities for use by a maximum of 80 small boats. Small-boat basin has facilities for numerous fishing and recreation craft, and a privately owned lumber mill has a barge loading facility for chips and lumber. Facilities are considered adequate for existing commerce.

**Operations during fiscal year.** Maintenance: None. Project depth was adequate for current use.

#### 15. TILLAMOOK BAY AND BAR, OR

**Location.** Bay is on Oregon coast about 50 miles south of mouth of Columbia River. (See NOAA Charts 18520 and 18558.)

**Existing project.** Provides for a jetty about 5,700 feet long on north side of entrance and a jetty 8,000 feet long on south side; a channel through bar 18 feet deep and of such width as can be practically and economically obtained; for a channel 200 feet wide and 18 feet deep from deep water in bay to Miami Cove; and for initial dredging to 12 feet deep of a small-boat basin and approach thereto at Garibaldi, OR. Project also provides for improvement of Bay ocean Peninsula, OR, by construction of sand and rock fill dike 1.4 miles long, on alignment extending between Pitcher Point and town of Bay Ocean. Mean lower low water is plane of reference. Tidal range between mean lower low water and mean higher high water is 8 feet; extreme is about 14 feet. Hobsonville Channel portion of project is inactive.

Except for construction of Hobsonville Channel portion, classified inactive, channels were completed in 1927, north jetty in 1933, improvement of Bay ocean Peninsula in 1956 and small-boat basin in 1958. The north jetty was rehabilitated in 1965 and again in 1991. South jetty construction was initiated in 1969, extended in 1974, and completed to the authorized 8,000 feet in 1978. 18-foot channel to Miami Cove is inactive due to mill closure. (For details relating to previous projects, see page 1989 of Annual Report for 1915 and page 1474 of Annual Report for 1936.)

**Local cooperation.** Fully complied with. Requirements are described in full on page 37-9 of FY 1981 Annual Report.

**Terminal facilities.** At Garibaldi: A facility owned by the Port of Bay City, for shipping lumber and receiving logs, a public landing suitable for mooring fishing vessels, towboats, and other craft. Small-boat basin has adequate facilities for mooring fishing and recreational craft. A privately owned boat ramp and moorage is available for recreational craft.

At Bay City: A privately owned wharf used exclusively for receipt of fresh fish and shellfish. Facilities considered adequate for existing commerce.

**Operations during fiscal year.** Maintenance: North Jetty revetment construction and shoreline monitoring was completed.

## 16. UMPQUA RIVER, OR

**Location.** Rises in Cascade Range, flows westerly about 120 miles, and empties into Pacific Ocean 180 miles south of Columbia River and 465 miles north of San Francisco Bay. (See NOAA Charts 18580 and 18584.)

**Existing project.** A jetty on north side of entrance about 8,000 feet long, a south jetty 4,200 feet long extending to a point 1,800 feet south of outer end of north jetty; dredging to provide a usable entrance channel 26 feet deep, and a river channel 22 feet deep and 200 feet wide, from mouth to Reedsport, a distance of about 12 miles with a turning basin at Reedsport 1,000 feet long, 600 feet wide, and 22 feet deep; deepening of channel at Winchester Bay to 16 feet deep by 100 feet wide for 3,100 feet, then adding 16 feet deep by 100 feet wide for 500 feet, and 12 feet deep by 75 feet wide for 950 feet beyond boat basin making up the East Boat Channel. A new West Boat Channel was added 16 feet deep by 100 feet wide for 4,300 feet and completed in 1984. Project was modified in 1951 to provide a channel in Scholfield River, but this portion of the project is currently inactive. Mean lower low water is plane of reference. Tidal range between mean lower low water and mean higher high water at river mouth is 7 feet, and extreme range is about 11 feet.

North jetty was completed in 1930. Extension to original south jetty was completed in 1938. Dredging a 22-foot channel from mouth of river to Reedsport was completed in 1941. Gardiner Channel and turning basin was completed in 1949 and Winchester Bay Channel and mooring basin in 1956. Rehabilitation of south jetty was completed August 1963. Extension of training jetty was completed October 9, 1980. Deepening Winchester Bay East Channel and new West Channel completed 1984 under Section 107. (For details relating to previous projects, see page 2967 of Annual Report for 1898 and page 1732 of Annual Report for 1938.)

**Local cooperation.** None required.

**Terminal facilities.** At Gardiner there is about 650 feet of wharf frontage. Port of Umpqua owns one wharf with 456 feet of water frontage, of which 228 feet is usable for vessels and another with about 75 feet of water frontage which has not been used generally for commercial shipping.

On Bolon Island across the river from Reedsport a wharf was constructed which has about 5 acres of

open storage for lumber and available to all on equal terms.

At Winchester Bay, 2 miles from river entrance there is a major sports and commercial fishing harbor. Facilities are considered adequate for existing commerce.

**Operations during fiscal year.** Maintenance: None. Project depth was adequate for current use.

## 17. WILLAMETTE RIVER AT WILLAMETTE FALLS, OR

**Location.** Locks and dam covered by this project are at Willamette Falls, a rocky reef in Willamette River at Oregon City, OR, about 26 miles above mouth of river.

**Existing project.** Canal and locks were originally constructed by private interest in 1873 and were purchased by the United States in April 1915 for \$375,000. Final report on purchase and rehabilitation of canal and locks is in the Annual Report for 1923, when project was reported 98 percent complete. The project includes four locks a canal basin and an extra guard lock used to prevent flooding when river levels are high. The system acts as a fluid staircase between the upper and lower reaches of the Willamette River. Total length of existing canals and locks is about 3,500 feet. Principal features of existing canal and locks at Willamette Falls are set forth in Table 28-J. Ordinary fluctuation of stage of water above locks is 12 feet and extreme, due to flood conditions, 20 feet. Below locks, ordinary fluctuation is 15 feet and extreme 50 feet.

Until the 1940's, the gates were opened manually. Now, the gates are operated by hydraulic pumps controlled by switches in two control stations with the aid of closed-circuit television and radio communication. All the gates have been replaced under minor rehabilitation funds. Existing locks and grounds are in good condition and in continuous operation. New service building was completed in 1988 costing \$523,000. The project was placed on the National Register of Historic Places in 1974, and was established as an Oregon Civil Engineering Landmark in 1991.

As a result of the mill closure in 1996, one of two shifts was eliminated and hours of operation reduced.

**Local cooperation.** Fully complied with.

**Terminal facilities.** Simpson Paper closed the mill in 1996 after over 100 years of operations. The mill was sold to West Linn Paper. West Linn Paper has a timber wharf about 850 feet long, extending to and supported by a concrete division wall built in lock canal by the United States. The use of the wharf for operations purposes by the mill may be changed due to shipping changes by the new owner.

**Operations during fiscal year.** Maintenance: Routine operation and maintenance continued.

### 18. YAQUINA BAY AND HARBOR, OR

**Location.** Yaquina Bay is on Oregon coast, 113 miles south of mouth of Columbia River. (See NOAA Charts 18580 and 18581.)

**Existing project.** Two high tide rubble mound jetties at entrance, north jetty 7,000 feet, and south jetty 8,600 feet long; a spur jetty on channel side of south jetty 4,700 feet from its sea end, 800 feet long; five groins channel ward from south jetty; channel 40 feet deep for a general width of 400 feet across bar and at outer end of entrance channel; a channel 30 feet deep and 300 feet wide to a turning basin of same depth, 900 to 1,200 feet wide and 1,400 feet long, and a channel 18 feet deep and 200 feet wide from 30-foot channel at about mile 2.4, thence upstream to abandoned railroad terminus at Yaquina, a distance of about 4.5 miles. Project also provides for two small boat-mooring basins at Newport, OR. Mean lower low water is plane of reference. Tidal range between mean lower low water and mean higher high water is 8 feet and extreme is about 12 feet. At mile 1.2 a 1,300 foot long breakwater protecting the Port of Newport South Beach Marina together with an entrance channel 8 feet long by 100 feet wide for a distance of 2,035 feet.

Project as originally authorized was completed in May 1952. Restoration of jetties was completed in 1934 and extension of north jetty 1,000 feet seaward was completed in 1940. Construction of mooring basin at Newport and dredging of channel and turning basin to project dimensions, were completed during fiscal year 1949. Restoration of north jetty was again accomplished in 1956. Under modification of July 3, 1958, extension of north jetty was completed in September 1966, dredging of 40-foot bar channel and 30-foot river channel was completed in October 1968, and extension of south jetty was completed in June 1972. The north jetty was rehabilitated in 1978, in 1988, and again in 2001. (For details relating to previous projects see Annual Report for 1893, part 4, page 3314, and Annual Report for 1938, page 1736.)

**Local cooperation.** None required.

**Terminal facilities.** At McLean Point, on north side of bay, about 2 miles from entrance, Port of Newport has two berths capable of serving ocean-going vessels, one 435 feet long, the second 520 feet long. At the time the second berth was dredged, a retaining wall and fill of 6 acres were constructed adjacent to deep water. There now is 40 acres of filled land adjacent to deep water, and of this total 7 acres were constructed in 1956-57. This facility has necessary carriers and lifts trucks for handling lumber

cargoes, warehouse for covered cargo storage, and is open to all on equal terms.

Port of Newport also has a public wharf with 300 feet of frontage for servicing fishing boats. In addition, Port of Newport maintains 510 berths for mooring commercial and sport fishing vessels. There are several seafood companies on the bay, which have their own facilities for handling fresh fish and crab. Supplies and petroleum products are readily available for small vessels. On south side of bay about 1.2 miles above entrance, Port of Newport has constructed South Beach Marina which can handle approximately 600 pleasure craft and shallow draft fishing boats. Public facilities include public automobile and boat trailer parking, boat launching ramp, fuel dock, fishing pier, and picnic area. A dry boat moorage of 120 boats is complete. A swing hoist with 3-ton capacity is currently available and one with 60-ton capacity is planned.

About 2.0 miles above entrance, Oregon State University, in conjunction with the Marine Science Center on 52 acres, maintains a 220-foot pier for docking large and small research vessels and a 100-foot float for docking small boats. Docking facilities are restricted to research vessels and State of Oregon small boats.

**Operations during fiscal year.** Maintenance: Routine operation and maintenance continued. (See Table 28R for dredging operations)

### 19. YAQUINA RIVER, OR

**Location.** Rises in Coast Range, flows about 50 miles in a westerly direction, and empties into Yaquina Bay, on Oregon coast. (See US Coast and Geodetic Survey Charts Nos. 5802 and 6058.)

**Existing project.** Provides for two controlling half-tide dikes of piling, brush, and stone, each about 1,100 feet long (constructed by local interests), and for a channel 10 feet deep and generally 150 feet wide on Yaquina River and 200 feet wide in Depot Slough, extending from town of Yaquina near RM 4.0 to Toledo at RM 14.4.

Mean lower low water is plane of reference. Tidal range between lower low water and mean higher high water is 8 feet and extreme about 12 feet. Freshet heights are about 12 feet at mouth of Depot Slough. Channel work authorized March 1913 was completed in 1914. Additional work authorized in 1960 was completed in 1969.

**Local cooperation.** Fully complied with.

**Terminal facilities.** Near town of Yaquina at river mouth, which is also head of Yaquina Bay, there is a moorage for small vessels and a small-craft shipyard. The Port of Toledo has public-terminal facilities for accommodation of local craft. There are also privately owned facilities for loading lumber

barges, receipt of bunker fuel, and log rollways for receipt of logs. These facilities are considered adequate for existing commerce.

**Operations during fiscal year.** Maintenance: None. Project depth was adequate for current use.

## 20. PROJECT CONDITION SURVEYS

Hydrographic surveys are conducted to determine navigation conditions at boat basins, small navigation projects, and channels not funded on a project basis for the current fiscal year. Soundings in subject areas are conducted in order to evaluate shoaling conditions. Hydrographic charts are prepared and distributed. Fiscal year costs were \$120,000. See Table 28-I for surveys conducted during the fiscal year.

## 21. NAVIGATION ACTIVITIES UNDER SPECIAL AUTHORIZATION

**Navigation Activities Pursuant to Section 107 of the 1960 Rivers and Harbors Act, Public Law 645, 86th Congress, as Amended.** In addition to general requirements, each project is limited to a federal statutory cost of not more than \$4,000,000 per project. The local sponsor must agree to provide an amount, in cash, not less than 10 percent or more than 50 percent of total project cost for navigation depending upon the planned depth of channel or basin; pay an additional 10 percent of the construction costs in cash over a period not to exceed 30 years after project completion. The non-federal sponsor must also agree to provide, maintain, and operate an adequate public parking, landing or wharf, service facilities, berthing areas, floats, pier, slips and similar marina and mooring facilities. The remaining portion of the project, such as the access channel or breakwater structure, is maintained by the Corps of Engineers at Federal expense within a limited amount. Federal expenditures for operation and maintenance under the Section 107 authority are administratively limited to the greater of \$4,500,000, or 2.25 times the Federal costs of the project including costs for the feasibility through the construction phases. No projects were under construction during the fiscal year.

See Table 28-L for expenditures during the fiscal year.

**Mitigation of Shore Damages Attributable to Navigation Works, Pursuant to Section 111 of the 1968 Rivers and Harbors Act Public Law 483, 90th Congress, as Amended.** In addition to general requirements, each project is limited to a federal statutory cost of not more than \$5,000,000. The non-federal sponsor must agree to provide a cost share amount in the same proportion as the cost sharing provisions applicable to the project causing the

damage. The non-federal sponsor must also provide interests in real estate in the same manner required for the project causing the shore damage. The non-federal sponsor must also agree to operate and maintain the mitigation measures, and, in the case of interest in real property acquire in conjunction with nonstructural measures, to operate and maintain the property for public purposes in accordance with regulations prescribed by the Corps of Engineers. No projects were under construction during the fiscal year.

See Table 28-L for expenditures during the fiscal year

## Shore Protection

### 22. SHORE PROTECTION ACTIVITIES UNDER SPECIAL AUTHORIZATION

**Hurricane and storm damage reduction pursuant to Section 103 of the River and Harbor Act of 1962, Public Law 874, 87th Congress, as Amended.** In addition to general requirements, each project is limited to a Federal statutory expenditure of not more than \$3,000,000 per project. Costs for protection of federally owned properties are 100 percent Federal. Costs assigned to areas meeting public use criteria are 35 percent non-Federal. Costs assigned to protection of privately owned undeveloped lands and shores that are not open to the public are 100 percent non-Federal. No projects were under construction during the fiscal year

See Table 28-L for expenditures during the fiscal year.

## Flood Control

### 23. APPLGATE LAKE, ROGUE RIVER BASIN, OR

**Location.** In Jackson County, OR, on Upper Applegate River, a tributary of Rogue River, at River Mile 46, about 23 airline miles southwest of Medford, OR.

**Existing project.** A gravel-fill embankment dam, 242 feet high from streambed to crest with an overall length of 1,300 feet. A gate-controlled concrete chute-type spillway on the left abutment, and a regulating outlet conduit, and intake tower with multilevel intakes. Applegate Lake, 5 miles long, provides 75,000 acre-feet of usable storage for flood control and water conservation utilization. Project controls runoff from a drainage area of 223 square miles. In addition to flood control, the reservoir is operated to provide irrigation, fish and wildlife enhancement, water quality control, and recreation benefits. Recreation facilities were provided by the Corps of Engineers, with operation and maintenance by the USFS under a memorandum of agreement. Project is complete and operating.

Freshets regulated by Applegate Lake on Applegate River and Rogue River are shown in Table 28-K.

**Local cooperation.** Authorizing act requires that State of Oregon insure maintenance of stream flow released for fishery. In addition, costs allocated to irrigation would have to be repaid in a manner and to an extent consistent with reclamation laws and policies. Oregon Department of Fish and Wildlife made filing May 31, 1962 with State Engineer for water rights for use of stored water and natural flows for fish habitat improvement in amounts and at times specified in project authorization. The U.S. Bureau of Reclamation has made a feasibility study of Applegate Irrigation Division. The results of the study indicate that at present there does not appear to be a feasible Federal irrigation project for the Applegate River valley. Local interests have furnished all local cooperation specified by the 1970 Flood Control Act. The Secretary of the Army approved the assurances on May 8, 1975.

**Operations during fiscal year.** Maintenance: Routine operation and maintenance continued.

#### 24. BLUE RIVER LAKE, OR

**Location.** On Blue River, a major tributary of McKenzie River, 1.8 miles above confluence of the two streams at the confluence of Quartz Creek and Blue River and about 42 miles easterly of Eugene, OR.

**Existing project.** A gravel-filled embankment dam of 1,329 feet long at crest including spillway and 319 feet above the lowest point of the general foundation. A concrete gravity chute-type spillway with two gates is located on left abutment. Outlet works are in left abutment. On left shore of reservoir an earth-and-gravel fill embankment, about 1,535 feet long and 70 feet high, closes a low saddle between Blue River and McKenzie River. Project controls runoff from drainage area of 88 square miles. Reservoir provides 85,000 acre-feet of usable flood control storage and is operated as a unit of coordinated reservoir system to protect Willamette River Valley and increase low water flows for navigation and other purposes. The U.S. Forest Service under a Memorandum of Agreement provides recreation facilities. Project is complete. Construction of dam and appurtenant works was initiated in May 1963 and operation for flood control was effective in October 1968. Settlement of claims was completed in May 1974.

Eugene Water and Electric Board (EWEB) were granted a FERC license in November 1989 to install two small hydropower units at Blue River Lake project. EWEB has delayed their plans for hydropower units pending the conclusion of a Corps proposal to add water temperature control to the

regulating outlet tower. Refer to the Willamette River Temperature Control project write-up for additional information.

Freshets regulated by Blue River Lake project on Blue River, a major tributary of McKenzie River, are shown in Table 28-K.

**Local cooperation.** None required.

**Operations during fiscal year.** Maintenance: Routine operation and maintenance work performed.

#### 25. COTTAGE GROVE LAKE, OR

**Location.** On Coast Fork of Willamette River, 29 miles from mouth. Coast Fork rises in Douglas County, OR, on western slope of Cascade Range and northern slope of Calapooia Range, flows north for 49 miles, and unites with Middle Fork to form main Willamette River.

**Existing project.** An earth fill dam, 1,750 feet long at crest, 114 feet high from lowest point of the general foundation, a concrete gravity free overflow spillway 264 feet long near the right abutment, and a concrete gravity non-overflow section 96 feet long forming the right abutment. Total length of dam is 2,110 feet. Outlet works, consisting of three gate-controlled conduits, pass through spillway section. Reservoir provides 30,060 acre-feet of usable flood control storage and controls runoff of drainage area of 104 square miles. Project is operated as a unit of coordinated reservoir system to protect Willamette River Valley and increase low water flow for navigation and for other purposes. Recreational development consists of day use and overnight facilities at five sites operated by the Corps of Engineers. Construction of project initiated August 1940 was completed April 1952. Dam and reservoir have been in continuous operation since September 1942.

Freshets regulated by Cottage Grove Lake on Coast Fork Willamette River are shown in Table 28-K.

**Local cooperation.** Development of additional recreation facilities will require a local sponsor willing to cost share and assume all operation and maintenance of park facilities.

**Operations during fiscal year.** Maintenance: Routine operation and maintenance continued.

#### 26. DORENA LAKE, OR

**Location.** On Row River, OR, 7 miles from mouth. Row River rises in Lane County on western slope of Cascade Range, flows northwest for 19 miles, and enters Coast Fork of Willamette River 19.5 miles above mouth.

**Existing project.** An earth fill embankment dam of, 3,352 feet long at crest and 145 feet high from lowest point of the general foundation. Concrete

gravity free-overflow spillway, 200 feet long, forms right abutment. Outlet works on five slide-gate-controlled conduits pass through spillway section. Reservoir provides 70,500 acre-feet of usable flood control storage and controls runoff of 265 square miles. The Project is operated as a unit of coordinated reservoir system to protect Willamette River Valley and increase low water flows for navigational and other purposes. Construction of project initiated June 1941 was completed October 1952 except for construction of additional recreation facilities that were funded under the Code 710 program. Future recreation facility construction will be accomplished in accordance with the cost-sharing contract with Lane County, OR. Dam and reservoir have been in continuous operation since November 1949.

Freshets regulated by Dorena Lake project on Row and Coast Fork Willamette Rivers are shown in Table 28-K.

**Local cooperation.** A multiple project cost sharing agreement has been in force with Lane County since Sept. 1976. It includes 4 projects and 14 parks. At Dorena Lake, 6 parks included in the agreement are managed by Lane County under a lease agreement. Future recreation development will require cost sharing.

**Operations during fiscal year.** Maintenance: Routine operation and maintenance continued.

## **27. ELK CREEK LAKE, ROGUE RIVER BASIN, OR**

**Location.** In Jackson County, OR at River Mile 1.7 on Elk Creek, a tributary of Rogue River, about 26.5 miles northerly from Medford, OR.

**Existing project.** Construction work for the 249-foot high roller compacted concrete gravity dam, 2,600 feet long at the crest, with a gate controlled concrete chute spillway, regulating outlet conduits, power penstock and multiple use intake tower attached to the upstream face of the dam has been stopped due to a court injunction. The project would control runoff from a drainage area of 135 square miles, and provide future municipal and industrial water supply, irrigation, fish and wildlife enhancement, water quality control, and recreation benefits.

Funds to initiate preconstruction planning were appropriated in FY65, and for construction in FY71. Construction was deferred in FY77 due to a lack of state support. Following significant review, evaluation, and a public hearing, the Water Policy Review Board reversed its position and in April 1981 voted to support Elk Creek. Funds were appropriated in FY82 and FY83 to update and continue project design, plans, and specifications. Funds were appropriated in FY85 to resume construction. After initiation of construction, an injunction was placed

against completion of the project and additional analysis under National Environmental Policy Act (NEPA) was required in order to remove the injunction. Construction of the project was terminated with the project at 83 feet, one-third its design height.

After completion of the final Environmental Impact Statement Supplemental #2, the Department of Justice filed a motion with the Court to remove the injunction. The Ninth Circuit Court of Appeals issued a ruling on April 21, 1995. In a 2-1 decision, the Court also reversed the District Court decision that EISS #2 met the requirements of the earlier Ninth Circuit opinion and awarded attorneys fees to the plaintiffs. The case was remanded with instructions to prepare a third supplement adequately addressing all issues raised under the NEPA process.

Due to the Ninth Circuit Court of Appeals decision and the current Federal budgetary climate, the Corps does not plan to perform the environmental studies under NEPA necessary to remove the Federal court injunction against completion of the project. Therefore, an evaluation of the requirements for long term of the project in its uncompleted state will be required.

The FY 97 Energy and Water Development Appropriation Act provided funds for long-term management in an uncompleted state, including passive fish passage. Since 1998 the Corps has attempted to remove a section of the Dam to provide a long-term fish passage solution at the project. A National Marine Fisheries Service January 2001 Biological Opinion stated that this was not the only option available to avoid jeopardy to listed Coho Salmon. The Opinion also stated that there was the potential that risks associated with a new trap haul facility could be reduced to an acceptable level. Based on concerns raised by locally elected officials, the Assistant Secretary of the Army for Civil Works determined a need to conduct an agency level review of our plan to remove a section of the Dam. In order to allow for this review, our effort to remove a section of the Dam was deferred in FY 02. Until a permanent fish passage solution is implemented, fish passage around the project will be provided through operation of a temporary trap and haul facility.

**Local cooperation.** Authorizing act requires that State of Oregon take action prior to construction to insure maintenance in stream of flow to be released for fishery. In addition, costs allocated to irrigation would have to be repaid in a manner and to an extent consistent with the U.S. Bureau of Reclamation laws and policies. On February 24, 1966, State of Oregon Water Resources Board filed for withdrawal rights of 25 cubic feet per second to maintain a minimum flow for fish. Development of recreation facilities requires a local sponsor willing to cost share in recreation

development and assume operations and maintenance of park facilities.

**Operations during fiscal year.** New Work: Operation during construction continued.

## 28. FALL CREEK LAKE, OR

**Location.** On Fall Creek, a tributary of Middle Fork Willamette River, about 7 miles above confluence of the streams and about 19 miles southeasterly of Eugene, OR.

**Existing project.** An earth-and-gravel fill embankment about 5,100 feet long at crest and 193 feet high from lowest point of the general foundation. A gated concrete gravity spillway is in left abutment. Outlet is in right abutment. Reservoir provides 115,000 acre-feet of usable flood control storage and is operated as a unit of coordinated reservoir system to protect Willamette River Valley and increase low water flows for navigation and other purposes.

Construction of project began May 1962 and was essentially complete November 1965. Reservoir storage for flood control was effective October 1965. Sky Camp Lodge was completed October 1978. Future recreation facilities will be provided in accordance with the cost-sharing contract with Bethel School District. Bethel School District has a sub-agreement with the Springfield Kiwanis Club for management of this facility. The Corps manages one park at the project.

Freshets regulated by Fall Creek Lake project on Fall Creek, a tributary of the Middle Fork, Willamette River are shown in Table 28-K.

**Local cooperation.** Fall Creek parks are managed by Oregon State Parks under lease agreement. Future development will not require a cost sharing agreement.

**Operations during fiscal year.** Maintenance: Routine operation and maintenance continued.

## 29. FERN RIDGE LAKE, OR

**Location.** On Long Tom River, 23.6 miles from the mouth. Long Tom River raises in Lane County, OR, on eastern slope of Coast Range, flows north for 50 miles, and enters Willamette River 147 miles above its mouth.

**Existing project.** A main dam of 6,624 feet long at crest and 49 feet high from lowest point of the general foundation and two auxiliary dikes, 915 and 3,929 feet long, along northeasterly boundary of lake. Main dam consists of an earth fill embankment dam 6,330 feet long, a concrete gravity spillway near left abutment with a non-overflow structure 46 feet long, containing outlet works, and an overflow structure, 248 feet long, controlled by six automatic gates. Project includes rectification of channel of Long Tom

River downstream of dam. Reservoir provides 110,000 acre-feet of usable flood control storage and controls runoff of tributary drainage area of 275 square miles. Reservoir protects Long Tom River Valley and is operated as a unit of coordinated reservoir system to protect Willamette River Valley generally and to increase low water-flows for navigation and other purposes. Dam was originally constructed in 1941 to height of 47 feet. Provision of additional storage for flood control was obtained in 1965 by raising embankments 2 feet to 49 feet above lowest point of the general foundation.

Construction of project initiated April 1940 was completed August 1951, except for provision of additional storage for flood control authorized in 1962 and completed April 1965, and construction of additional recreation facilities funded through the Code 710 program. Construction of three water flow impoundments was completed in 1994 under Section 1135 authority. Dam and reservoir have been in continuous operation since December 1941. Development of future recreation facilities will be in accordance with the cost-sharing contract with Lane County, and requires a 50 percent contribution by the county. Development is subject to availability of funds by the Government and the county.

Freshets regulated by Fern Ridge Lake project on Long Tom River are shown in Table 28-K.

**Local cooperation.** Fern Ridge Lake is included in the Lane County multiple project cost sharing agreement. Three parks are managed by Lane County under lease agreements. Future development will require cost sharing. The Oregon Department of Fish and Wildlife manages 5,000 acres of land and water for migratory waterfowl under a lease agreement

**Operations during fiscal year.** Maintenance: In December 2004, a panel of experts determined that the embankment dam was in an "active state of failure." The panel recommended severe restrictions on reservoir operations and immediate repairs to the dam. Subsequent analysis determined that the probability of a storm event that would cause severe flooding downstream, with these new restrictions in place, was very high. Authority for an emergency repair of the dam was supported at all Corps levels. The Portland District began design work in early February, awarded a contract in May and completed a repair of the entire 1.1 mile-long embankment dam prior to the 2005/2006 flood control season. The repair involved removing approximately 1/3<sup>rd</sup> of the embankment dam, replacing the internal drain system and restoring the embankment

Routine operation and maintenance of other features continued.

**30. LOWER COLUMBIA RIVER BASIN BANK PROTECTION, OR AND WA.**

**Location.** Columbia River and tributaries between Sandy River, OR, and mouth of Columbia River.

**Existing project.** Provides for construction of 224,000 linear feet of bank protection works at 96 locations along Lower Columbia River below River Mile 125 and along principal tributaries in this reach, to protect existing improvements such as levees and developed industrial lands from further erosion. Existing project is a unit of general comprehensive plan for flood control, navigation, and other purposes in Columbia River Basin. Construction of project began in July 1961 and is 88 percent complete. A total of 191,000 linear feet of bank protection work at 84 locations has been completed. Estimated Federal cost is \$28,000,000.

**Local cooperation.** Flood Control Act of 1950 provides local interests furnish lands and rights-of-way; make necessary highway, Highway Bridge, and utility alterations; hold the United States free from damages; and maintain and operate completed works. Under Section 103 of the Water Resources Development Act of 1986, Local Interests will also be required to make cash contribution for construction of each site. Estimated costs for all requirements of local cooperation are \$2,000,000.

**Operations during fiscal year.** New Work: Coordination with sponsors and evaluation of local erosion problems continued. No projects were under construction during the fiscal year.

**31. MOUNT ST. HELENS SEDIMENT CONTROL, WA.**

**Location** Sediment Retention Structure (SRS) - North Fork Toutle River, 2 miles upstream from its confluence with the Green River, in Cowlitz County, southwest Washington. Levee Improvements - Kelso, Washington on the Cowlitz River (river mile 3 to river mile 8). The river systems impacted by the project include Toutle, Cowlitz and a portion of the Coweeman and Columbia Rivers. Most of the population affected by the problems resides in the communities of Longview, Kelso, Lexington, and Castle Rock, Washington.

**Existing project.** The project was authorized by the Supplement Appropriations Act, 1985 (Public Law 88, 99th Congress, August 15, 1985). The Act includes authorization "... to construct, operate and maintain a sediment retention structure near the confluence of the Toutle and Green River, Washington, with such design features and associated downstream actions as are necessary, in accordance with the Feasibility Report of the Chief of Engineers dated December 1984." As authorized, the project will provide a permanent solution to potential flooding on the Cowlitz River from sedimentation

problems created by the eruption of Mt. St. Helens. The Decision document recommended construction of a single sediment retention structure (SRS) with a 125-foot high spillway at the Green River site on the North Fork Toutle River, improvements to the levee system at Kelso, Washington, and dredging downstream from the SRS for the near term solution to the sedimentation problem.

**Local cooperation.** Local interests were responsible for provision of all lands, easements, and rights-of-way for the sediment retention structure, dredging disposal areas, and levee improvements. Local interests were also responsible for all alterations and relocations of buildings, roads, bridges and other structures or utilities made necessary by implementation of the project. In addition, operation and maintenance of fish facilities, the levee system at Kelso and dredged material disposal sites are the responsibility of local interests. Cowlitz County offers visitor services in their viewpoint area. Non-federal cash contribution is \$3,600,000 and the estimated non-federal land, easements, right-of-ways, and relocations costs are \$21,000,000.

**Operations during fiscal year.** New Work: Cowlitz River monitoring stream gages were used to collect data used to verify forecasted rates of sediment movement and fill in the river, and ultimately the flood protection levels at authorized communities. Verification analysis comparing forecasted vs. actual sediment migration identified the need to update historic assumptions regarding channel geometry and hydrology for use in future Level of Protection forecasting. Current efforts are focused on collecting and analyzing sediment data to ensure the congressionally mandated flood control can be maintained through the project life, year 2035. This current data collection and analysis work is a critical step in determining what additional measures are required to maintain long-term flood protection for these communities

**Maintenance:** Routine operation and maintenance continued.

**32. WILLAMETTE RIVER BASIN BANK PROTECTION, OR.**

**Location.** On Willamette River and tributaries, between Cascade Range and Coast Range, from a point south of Eugene to Portland, OR.

**Existing project.** Provides for clearing, sloping, and reveting riverbanks; construction of pile and timber bulkheads and drift barriers; minor channel improvements; and maintenance of existing works for control of floods and prevention of erosion at various locations along Willamette River and its tributaries. The current scope of the project is a total

of 510,000 linear feet of bank protection at 236 locations. Estimated Federal cost is \$30,700,000.

Construction of project began in 1938 and is 96 percent complete. A total of 489,795 linear feet of bank protection work at 230 locations consisting of revetment of riverbanks, pile and timber bulkheads, drift barriers, and channel improvements, have been completed on Willamette River and tributaries.

**Local cooperation.** Section 3, Flood Control Act of 1936 and Section 103, Water Resources Development Act of 1986 applies. Estimated costs for all requirements of local cooperation under terms of project authorization were \$2,300,000.

**Operations during fiscal year.** New Work: All repairs continue to be on hold pending development of an "Inventory and Evaluation Report". The report is a requirement of the Draft Willamette River Basin biological opinion. There were no critical facilities requiring repair.

Maintenance: Continued coordination and evaluation of local erosion problems.

### 33. WILLOW CREEK LAKE, HEPPNER, OR.

**Location.** On Willow Creek immediately upstream from Heppner and just downstream from junction of Balm Fork and Willow Creek in Section 35, Township 2 South, Range 26 East, Willamette Meridian.

**Existing project.** Project provides flood protection to the city of Heppner and downstream area by controlling runoff from a drainage area of 96 square miles. The dam is a roller compacted concrete structure 160 feet high at crest elevation 2,130. Ancillary features include a center uncontrolled spillway with a maximum flood capacity of 93,300 cfs (cubic feet per second), an outlet works with a capacity of 500 cfs, a minor flow works and diversion works. Gross storage capacity of the project is 13,250 acre-feet, consisting of 7,750 acre-feet for exclusive flood control, 1,750 acre-feet for joint flood control and irrigation, 1,750 acre-feet exclusive irrigation, and 2,000 acre-feet dead storage for fish, wildlife, recreation, sediment accumulation, and aesthetics. Limited recreation facilities are being provided.

Willow Creek Parks and Recreation District has leased recreation facilities at Willow Creek Lake. A courtesy handling dock was constructed by the Recreation District utilizing Oregon State Marine Board funds. A playfield area below the dam has been leased to the City of Heppner.

The final Environmental Impact Statement was filed with the Environmental Protection Agency on December 20, 1979. The provisions of the Clear Water Act were met by a Section 404(b)(1) Evaluation and a public notice issued January 12,

1980, and a section 401 certification from the State of Oregon on February 15, 1980. Land acquisition is about 99 percent complete.

**Local cooperation.** Development of additional recreation facilities will require a local sponsor willing to cost share and assume all operation and maintenance of facilities.

**Operations during fiscal year.** Maintenance: Routine operation and maintenance continued.

### 34. INSPECTION OF COMPLETED FLOOD CONTROL PROJECTS

Funds appropriated for inspection of completed local flood protection works are used to determine maintenance condition of completed works, and to ascertain whether local interests properly maintain those works. Numerous levied areas and bank protection works were inspected at various locations along both banks of Lower Columbia River below Bonneville Dam, along Oregon Coast, in eastern Oregon, in southern Oregon and in Willamette River Basin. A representative of sponsoring districts accompanied the Portland District representatives performing the levee inspections. Deficiencies in maintenance and need for repairs were discussed with sponsoring districts' representatives and a report were sent to each sponsor with recommendations for improving maintenance. The program to improve maintenance of completed Federal projects initiated by House Appropriations Committee on Civil Functions was continued.

Refer to Table 28-Q for information relating to completed works. Fiscal year costs were \$141,440.00

### 35 SCHEDULING FLOOD CONTROL RESERVOIR OPERATIONS

Corps of Engineers monitored flood control operations at four Bureau of Reclamation projects (Prineville, Ochoco, Emigrant, and Scoggins), one local project operated by Douglas County (Galesville), and one municipal power project operated by Tacoma City Light (Mossyrock). The projects were partially constructed with flood control funds, thereby subjecting project operation to monitoring by the Corps of Engineers under Section 7, Flood Control Act of 1944.

The four Bureau of Reclamation projects, the Douglas County project and Mossyrock project were operated during the fiscal year within the flood control regulations specified for each project. Reservoir levels returned to more normal levels during November and December, as the dry conditions returned to more average conditions. Total cost of monitoring and flood control direction of the six projects during the fiscal year was \$52,282.

**36. FLOOD CONTROL ACTIVITIES UNDER SPECIAL AUTHORIZATION**

**Flood Control Activities Pursuant to Section 205 of the 1948 Flood Control Act, Public Law 858, 80th Congress, as Amended:** In addition to general requirements, each project selected is limited to a federal statutory cost of not more than \$7,000,000. The local sponsor must agree to provide an amount not less than 35 percent or more than 50 percent of total project cost, at least 5 percent of which will be cash; and operate, maintain, repair, replace, and rehabilitate the project upon completion. No projects were under construction during the FY.

No projects were under construction during the fiscal year.

**Emergency Streambank Protection Activities Pursuant to Section 14 of the 1946 Flood Control Act, Public Law 526, 79th Congress, as Amended:** In addition to general requirements, each project is limited to a federal statutory expenditure of not more than \$1,000,000 per project. The local sponsor must agree to provide an amount not less than 35 percent or more than 50 percent of total project cost at least 5 percent of which will be cash; and operate, maintain, repair, replace, and rehabilitate the project upon completion. No projects were under construction during the fiscal year.

See Table 28-L for expenditures during the fiscal year.

**Snagging and Clearing for Flood Control Activities Pursuant to Section 208 of the 1954 Flood Control Act, Public Law 780, 83rd Congress, as Amended:** In addition to general requirements, each project is limited to a federal statutory expenditure of not more than \$500,000 per project. The local sponsor must agree to provide an amount not less than 35 percent or more than 50 percent of total project cost at least 5 percent of which will be cash; and operate, maintain, repair, replace, and rehabilitate the project upon completion. No projects were under construction during the fiscal year.

See Table 28-L for expenditures during the fiscal year.

**Multiple-Purpose Projects, Including Power**

**37. BONNEVILLE LOCK AND DAM - LAKE BONNEVILLE, OR AND WA**

**Location.** Project is on Columbia River, 40 miles east of Portland, OR, about 146 miles above mouth of river. For description of Columbia River, see Sec # 2.

**Existing project.** A dam, power plant, and lock for power and navigation. Spillway dam extends across main channel from Cascade Island (WA) to Bradford Island (OR). Overflow crest at 24 feet

above mean sea level is surmounted by 18 vertical-lift steel gates, 16 with remote control hoists placed between piers which extend to elevation 99 feet where a service roadway provides access, and two 350-ton gantry cranes for regulating gates. Powerhouse No. 1 extending across Bradford Slough to the Oregon shore has an installation of 10 units, consisting of two units of 48,000 kilowatts, and eight units of 60,000 kilowatts each, totaling 576,000 kilowatts. Ordinary and extreme fluctuations of river at lower lock gate are about 21 and 47 feet respectively. Project includes fish ladders to serve main channel, Bradford Slough Channel, and Powerhouse II channel. Navigation lock and powerhouses are founded on andesite, and main dam rests on solidified sedimentary rock of volcanic origin. The pool created by dam provides a navigable channel 27 feet deep between Bonneville and The Dalles Dams, a distance of 47 river miles. Principal data concerning navigation lock, spillway dam, and power plant are set forth in Table 28-N.

Dam, navigation lock, 10-unit power generating installation, fishways, and attendant buildings and grounds cost \$83,239,395, of which \$6,072,480 is for navigation facilities, \$39,350,824 for power facilities and \$37,816,091 for joint facilities, consisting of dam, fishways, buildings and grounds, and headwall section of power units 0 to 6, cost of which \$2,106,000 is allocated to dam and lake facilities.

In response to flow regulations and peakings from upstream plants operating under conditions of Canadian storage and Pacific Northwest-Southwest Intertie, two modifications were undertaken at the Bonneville project. The modification for peaking project was undertaken to minimize adverse environmental effects under rapidly changing flow conditions from upstream dams. The project was completed in 1978 at a cost of \$27,195,000. The second modification provided for increased power installation by building a second powerhouse located on the Washington shore adjacent to the end of the existing spillway. The new powerhouse contains eight units of 66,500 kilowatts each and two fish attraction turbine generator units of 13,100 kilowatts each for a combined capacity of 558,200 kilowatts, bringing the entire Bonneville capacity to 1,145.7 megawatts. Additional fish facilities consist of the powerhouse collection system, second fish ladder on the Washington shore, transportation channel connecting the Cascade Island fish ladder with new exit control section, and fingerling bypass facilities which include fish screens in both the powerhouses. To provide for the anticipated increased visitor use, onsite visitor facilities are included. Under authority of the Bonneville Project Act (August 20, 1937), a letter from Bonneville Power Administration to North Pacific Division dated January 21, 1965, requested construction of a second powerhouse.

## PORTLAND, OREGON DISTRICT

Construction of original project started October 1933, was completed February 1943. Modification of powerhouse control equipment started March 1957, was completed September 1958. First two power units were placed in operation during fiscal year 1938. Powerhouse with complete installation of 10 units was in operation December 1943.

Construction of modification for peaking work commenced in September 1970 and was completed in September 1978.

Construction of second powerhouse is complete. Final environmental impact statement was filed with Council on Environmental Quality in April 1972. In response to increasing visitation which now exceeds 600,000 a year at the dam site itself and 2,700,000 project wide, a visitor center with windows into the fish ladders, a 60-seat theatre, exhibits and displays was completed in 1975. Units 11 through 18 were on-line by October 1982. The visitor facility for the new powerhouse (which does not require cost-sharing) is an integral part of that structure. The total cost for construction of the second powerhouse was \$678,945,000.

In June 1993 work began on the rehabilitation of the First Powerhouse. In the first phase the existing circuit breakers and eight transformers were replaced and the switchyard was rehabilitated. Circuit breaker work was completed in 1995. The remaining work was completed in 1997. Phase I cost was \$24,120,000. The second phase consists of replacing the windings of six generators and replacing ten turbines. The new turbines have minimum gap runners which will increase efficiency and reduce injuries to fish. Second phase work was contracted in 1994 and is scheduled for completion in 2010. Phase II will cost an estimated \$143,000,000. Phase II has expanded to include all 10 first power house turbines and generator windings.

Construction of a new navigation lock just south of the existing lock was authorized in the FY 1985 Supplemental Appropriations Act, Public Law 99-88, August 15, 1985. Inland Waterways Trust Fund funded 50 percent of the project cost in accordance with the Water Resources Development Act of 1986, Public Law 99-662, November 17, 1986. The new lock chamber is 86 feet depth of water over the sill. Cost for construction of the new navigation lock was \$348,100,000. The lock opened to shipping on March 26, 1993. Restoration of the grounds and historic buildings is complete.

The first powerhouse, spillway, navigation lock and associated facilities have been designated as a National Historic District in 1987.

Development of recreation facilities at Home Valley was completed in FY 1989. This is outgranted to Skamania County Parks and Recreation Department.

Electrical power generation for the fiscal year is shown on Table 28-P. Net power generated is marketed by Bonneville Power Administration.

**Local cooperation.** None required, except for non-federal cost sharing for development of recreational facilities.

**Operations during fiscal year:** Maintenance: Routine operation and maintenance continued. Performed increased activities to protect and enhance the anadromous fisheries in the Northwest. These activities included rehabilitation of aging fish passage structures, removal of obstructions from the turbine environments, installation of sea lion exclusion devices, and an upgrade to the adult fishways automation system. Continue HTRW site investigation and risk assessment of Bradford Island landfill. Capital improvements include repair/replacement of the exciters, governors, cranes, power plant efficiency improvements, replacement oil, main unit circuit breakers, HVAC at Powerhouse-II, and headgates. Replacement of the potable water system continued. One fish hatchery well was drilled to supplement the flow of water

Major Rehabilitation: A contract to rehabilitate the generators and turbines in the first powerhouse is in progress. Five units have been rehabilitated to date.

### 38. COLUMBIA RIVER TREATY FISHING ACCESS SITES, OR & WA

**Location.** This project provides for construction of 32 sites along the Columbia River on Bonneville pool, John Day pool, and The Dalles pool.

**Existing project.** In 1988, Congress has provided authority through public law to implement a wide range of land management, transfer, acquisition and development actions to provide fishing access for Indian tribes who exercise treaty fishing rights on the Columbia River. The law designates certain federal sites on Bonneville, John Day, and The Dalles pools for fishing access. The improvements required at the access sites are specified in the authorizing legislation. They include all weather access roads, camping facilities, boat ramps, docks, sanitation, and fish cleaning facilities. Construction of these facilities will greatly improve access by the four tribes, which have fishing rights along this reach of the Columbia River. In March of 2004, Congress authorized rehabilitation of Celilo Village, OR in conjunction with the ongoing project.

**Local cooperation.** None required.

**Operations during fiscal year.** New Work: Continued with construction of the East White Salmon Treaty Fishing Access Site Fish Processing Facility with emphasis on the site work and building construction. Corps also entered into a Cooperative Agreement with the City of White Salmon, WA to

expand sewer service to the fish processing facility. A design build contract for the Celilo Village Longhouse was awarded. Construction of that facility was completed in June. The Longhouse was dedicated in July of 2005.

### 39. COUGAR LAKE, OR

**Location.** At mile 4.4 on South Fork McKenzie River which joins McKenzie River about 56.5 miles above its confluence with Willamette River. Project is about 42 miles east of Eugene, OR.

**Existing project.** A rockfill dam with an impervious earth core, about 1,738 feet long at crest and 445 feet high above the streambed. Reservoir is 6 miles long with storage capacity at full pool of 219,000 acre-feet and controls runoff of tributary drainage area of 210 square miles. Spillway is on right abutment and outlet and power tunnels in left abutment. Outlet tunnel is provided with a chute and stilling basin. Power plant consists of two 12,500-kilowatt units with minimum provisions for installing a third unit of 35,000 kilowatts for future peaking capacity. Improvement functions as a unit in coordinated system of reservoirs for multiple-purpose development of water resources in Willamette River Basin Recreation facilities are provided by the U.S. Forest Service. Also authorized (but un-constructed) is a re-regulating dam, Strube Lake, below Cougar Lake, which would permit Cougar to operate as a peaking power plant. The Strube dam would contain two units totaling 4,600 kilowatts. Estimated Federal cost of Strube Lake and Cougar Additional Units is \$114,000,000.

Construction of project initiated June 1956 is complete, excluding Strube Lake and Cougar Additional Unit for which planning is essentially complete. Also, plans and specifications for the first construction contract (relocations) have been completed. Generating units 1 and 2 were placed in commercial operation March 23 and February 4, 1964, respectively. Physical in-service date for flood control was November 29, 1963.

Freshets regulated by Cougar Lake on South Fork McKenzie River are shown on Table 28-K.

Electrical power generation for the fiscal year is shown on Table 28-P. Net power generated is marketed by Bonneville Power Administration.

Refer to the Willamette River Temperature Control project write-up for additional information.

**Local cooperation.** None required.

**Operations during fiscal year.** Maintenance: Routine operation and maintenance continued. Capital improvements included repair/replacement of exciters and main unit circuit breakers.

### 40. DETROIT LAKE - BIG CLIFF, OR

**Location.** On North Santiam River with dam 50 miles from mouth 40 miles southeast of Salem, OR. North Santiam River flows north and west for 85 miles, and unites with South Santiam River to form Santiam River, which 10 miles downstream enters Willamette River 108 miles above its mouth.

**Existing project.** Main dam and a re-regulating dam, both with power-generating facilities. Detroit Dam is a concrete gravity structure about 1,522 feet long and 454 feet high from lowest point of the general foundation to roadway deck. Spillway is a gate-controlled overflow section, and outlet works are gate-controlled conduits through dam. Powerhouse with two units having a capacity of 50,000 kilowatts each is in right abutment immediately below dam. Reservoir has a storage capacity at full pool of 454,900 acre-feet and controls runoff of tributary drainage area of 438 square miles. It is being operated as a unit in coordinated reservoir system to protect Willamette Valley from floods, to increase low water flows in interest of navigation and irrigation, to generate power, and for other purposes. Re-regulating dam 3 miles downstream at Big Cliff site is concrete gravity type, about 191 feet high from lowest point of the general foundation to roadway deck. Power installation consists of one unit with a capacity of 18,000 kilowatts. Reservoir has a storage capacity of 5,930 acre-feet at full pool. Project is a unit of comprehensive plan for flood control and other purposes in Willamette Basin. Recreation facilities are provided by the U.S. Forest Service, Oregon State Park System and the town of Detroit.

Construction of project begun in May 1947 was completed December 1960. The two powerhouse generating units were placed in commercial operation June and October 1953. At Big Cliff powerhouse, single generating unit was placed on-line June 1954. Use of Big Cliff Dam for re-regulating fluctuating flow from Detroit units was effective October 1953.

Electrical power generation for the fiscal year is shown on Table 28-P. Net power generated is marketed by Bonneville Power Administration.

Freshets regulated by the Detroit Lake project on North Santiam River are shown in Table 28-K.

**Local cooperation.** None required.

**Operations during fiscal year.** Maintenance: Routine operation and maintenance continued. Capital improvements included repair/replacement of main unit circuit breakers, and remote control modifications.

### 41. GREEN PETER-FOSTER LAKES, OR

**Location.** At approximate mile 5.5 on Middle Santiam River which joins South Santiam River about 56.8 miles above its confluence with

Willamette River. Dam is about 30 miles southeast of Albany in Linn County, OR.

**Existing project.** Main dam and a re-regulating dam, both with power-generating facilities. Green Peter Dam is a concrete gravity structure, 1,400 feet long and 385 feet high above the lowest point of the general foundation with a gate-controlled spillway. Outlet works consist of two conduits through spillway, discharging into a stilling basin. Power plant, on right bank adjacent to spillway stilling basin, consists of two units with an installed capacity of 80,000 kilowatts. Reservoir provides storage capacity at full pool of 430,000 acre-feet, extending 6.5 miles up Quartzville Creek and some 7.5 miles up Middle Santiam River above creek junction, forming a Y-shaped pool. Reservoir controls runoff of tributary drainage area of 277 square miles.

Foster Dam, 7 miles downstream from Green Peter Dam is located on South Santiam River about 38 miles above its confluence with Santiam River and 1.5 miles below its confluence with Middle Santiam River. Foster Dam consists of an earth, gravel, and rock-filled embankment, 146 feet high from lowest point of the general foundation and a concrete gravity gate controlled spillway and stilling basin for a total length of 4,800 feet. Power installation consists of two units with capacity of 20,000 kilowatts. Foster Lake has a storage capacity, at full pool, of 61,000 acre-feet. Project functions as a unit in coordinated system of reservoirs for multiple-purpose development of water resources in Willamette River Basin.

All construction on Green Peter-Foster Lakes project initiated June 1961 is completed. Green Peter Lake was placed in operation for useful flood control June 1967 as a unit of coordinated reservoir system for protection of the Willamette River Basin. First power-generation unit was placed on the line June 9, 1967 and second, June 28, 1967. Use of Foster Lake for re-regulating fluctuating flows from Green Peter units was effective December 1967. First power generation unit was placed on-line August 22, 1968 and second, September 6, 1968.

Electrical power generation for the fiscal year is shown on Table 28-P. Net power generated is marketed by Bonneville Power Administration.

Freshets regulated by Green Peter Lake project on Middle Santiam River are shown in Table 28-K.

**Local cooperation.** Future recreation development at Foster or Green Peter will require cost sharing. Recreation facilities at Foster Lake include 4 parks and 2 parks at Green Peter Lake. Five of these parks were developed by the Corps and are operated by Linn County under lease agreement. One park is operated by the Corps.

**Operations during fiscal year.** Maintenance: Routine operation and maintenance continued.

Capital improvements included repair/replacement of main unit exciters.

#### 42. HILLS CREEK LAKE, OR

**Location.** On the Middle Fork, Willamette River, 47.8 miles from mouth and 26.5 miles upstream from Lookout Point Dam. Middle Fork, Willamette River rises on west slope of Cascade Range and flows northwesterly to its junction with Coast Fork, Willamette River. Dam is about 45 miles southeast from Eugene, OR.

**Existing project.** An earth-and-gravel-fill dam about 2,150 feet long at the crest and 338 feet above lowest point of the general foundation. A gate-controlled concrete gravity chute-type spillway is in right abutment. Diversion tunnel, outlet tunnel and power tunnel are in same abutment. Powerhouse with two 15,000-kilowatt units is located next to spillway. Hills Creek Lake is about 8.5 miles long and provides storage capacity at full pool of 356,000 acre-feet. Project controls runoff of drainage area of 389 square miles and is an integral unit of comprehensive plan for development of water resources of Willamette River Basin. Hills Creek Lake and Lookout Point Lake are operated as a unit for control of floods and generation of power on Middle Fork Willamette River. These projects, in conjunction with Dexter re-regulating dam and Fall Creek Lake flood control system, will effectively control floods on Middle Fork and provide maximum efficient generation of hydroelectric power. The U.S. Forest Service provides recreation facilities. Hills Creek power units are remote controlled from Lookout Point.

Construction of project, initiated May 1956, was completed June 1963. The project was placed in service for useful flood control in November 1961. On May 2, 1962, the two power units were placed on-line.

Electrical power generation for the fiscal year is shown on Table 28-P. Net power generated is marketed by Bonneville Power Administration.

Freshets regulated by Hills Creek Lake on Middle Fork Willamette River are shown in Table 28-K.

**Local cooperation.** None required.

**Operations during fiscal year.** Maintenance: Routine operation and maintenance continued. Capital improvements included repair/replacement of main unit exciters.

#### 43. JOHN DAY LOCK AND DAM – LAKE UMATILLA, OR AND WA

**Location.** On Columbia River about 3 miles downstream from mouth of John Day River and about 215 miles above mouth of Columbia River.

**Existing project.** A dam, power plant, navigation lock, fish ladders, and appurtenant facilities with a

slack-water lake about 75 miles long extending to McNary Lock and Dam. Included is relocation of railroads, highways, utilities, and communities affected by the impoundment. The project as originally authorized would have provided 2,000,000 acre-feet of flood control storage. As modified, the project provides 500,000 acre-feet of flood control storage between elevations 257 and 268. The structure is 5,900 feet in length and stands about 161 feet above streambed. Powerhouse has space for 20 generating units of 135,000 kilowatts each; 16 units have been installed for a present capacity of 2,160,000 kilowatts. In 1998, synchronous condensing capability was added to four units. It was done to provide increased stability to the BPA transmission system. Principal project data are set forth in Table 28-N.

A detailed description of project as authorized and modified is on pages 1992 and 1993 of Annual Report for 1962 under the Walla -Walla District.

Construction began July 1958 and the project was opened to navigation April 1968. The main dam contract is complete. Lock rehabilitation work begun in FY 1980 was completed in FY 1986.

Electrical power generation for the fiscal year is shown on Table 28-P. Net power generated is marketed by Bonneville Power Administration.

**Local cooperation.** Recreation facilities at two parks are operated and maintained by local agencies under lease agreement with the Corps. Two developed recreation areas are operated and maintained by the Corps of Engineers. Further recreation development will require cost sharing and assumption of operation and maintenance by local, non-federal sponsor

**Operations during fiscal year..** Maintenance: Routine operation and maintenance continued. Increased activities to protect and enhance the anadromous fisheries in the Northwest. Capital improvements to the powerhouse included: Replacement of the back up battery system; installation of a radar based water level measuring system to increase turbine efficiency; completion of the exciter replacement project; and installation of a system to monitor and record oil concentrations in the pumped discharges

Completed installation of physical security systems.

#### 44. LOOKOUT POINT - DEXTER LAKES, OR

**Location.** On Middle Fork, Willamette River at Meridian site, 21.3 miles from mouth. Middle Fork, Willamette River, rises in Lane County on western slope of Cascade Range and flows northwesterly to its junction with Coast Fork, which is head of

mainstream Willamette River. Dam is about 22 miles southeast from Eugene, OR.

**Existing project.** A main dam at Meridian site and a re-regulating dam 3 miles downstream at Dexter site. Both dams are earth-and-gravel-fills with concrete spillways and have power generating facilities. Main dam is 258 feet high from lowest point of the general foundation to deck and is 3,381 feet long at crest forming a reservoir 14.2 miles long providing storage of 456,000 acre-feet at full-pool level. Reservoir controls runoff of tributary drainage area of 991 square miles. Spillway, 274 feet long, is a gate-controlled overflow type, forming right abutment. Outlet works consisting of slide-gate-controlled conduits pass through spillway section. Powerhouse has three main generating units with a capacity of 120,000 kilowatts. Dexter re-regulating dam has a maximum height of 107 feet above lowest point of the general foundation and is 2,765 feet long at crest, forming a full pool of 27,500 acre-feet extending upstream to main dam and providing pondage to regulate Lookout Point powerhouse water releases to a uniform discharge. Spillway consists of a gate-controlled overflow section 509 feet long forming right abutment.

Flow regulation is accomplished by use of spillway gates and releases through powerhouse, which contains one 15,000-kilowatt unit. Lookout Point and Dexter Lakes are operated as a single unit of a coordinated system of reservoirs to protect Willamette River Valley against floods; to provide needed hydroelectric power, and to increase low water flows for navigation, irrigation, and other purposes. Existing project authorized as a unit of comprehensive plan for flood control and other purposes in Willamette River Basin.

Construction of project initiated May 1947 was completed June 1961, except for construction of additional recreation facilities funded through the Code 710 programs. Future recreation facilities will be provided in accordance with the cost-sharing contract with Lane County and will require a 50 percent contribution by Lane County and is subject to funding availability by the Government and the County. At Lookout Point powerhouse, generating units #1, #2 and #3 were placed in commercial operation December 1954, February 1955, and April 1955, respectively. At Dexter powerhouse the single unit was placed on-line May 1955. Dexter was placed in operation for re-regulation in December 1954.

Electrical power generation for the fiscal year is shown on Table 28-P. Net power generated is marketed by Bonneville Power Administration

Freshets regulated by Lookout Point Lake project on Middle Fork Willamette River are shown in Table 28-K.

**Local cooperation.** Recreation opportunities are provided at 2 parks on Dexter Lake, which are operated by Oregon State Parks via lease instruments. The north shore of Lookout Point Lake is operated by the Corps for recreation purposes; including Signal Point Boat Ramp, which was developed cooperatively with the State of Oregon. Future development will not require a cost sharing agreement.

**Operations during fiscal year.** Maintenance: Routine operation and maintenance continued.

**45. LOST CREEK LAKE, ROGUE RIVER BASIN, OR**

**Location.** On Upper Rogue River at mile 153.6 about 30 miles northeasterly from Medford, OR.

**Existing project.** A rock and gravel-fill embankment dam about 327 feet high from streambed to crest, with an overall length of 3,750 feet with an impervious earth core and a gate-controlled concrete spillway. Powerhouse is on right abutment and houses two Francis-type turbines with installed capacity of 24,500 kilowatts each. Regulating outlet facility with provisions for temperature regulation for releases in interest of fishery enhancement is also on right bank. Reservoir 10 miles long provides 315,000 acre-feet of usable storage. Project provides control of runoff of drainage area of 674 square miles. In addition to flood control, project provides hydroelectric power generation, irrigation, municipal and industrial (M&I) water supply, fish and wildlife enhancement, water quality control and recreation benefits.

Construction of project initiated July 1967 is complete. Generating units 1 and 2 were placed in commercial operation July 6 and July 13, 1977, respectively. Physical in-service date for flood control was February 18, 1977. Final environmental statement was filed with Council on Environmental Quality in June 1972. Four parks at the project provide recreation opportunities. The State of Oregon operates 2 parks, including a 200-unit campground, part of Stewart State Park.

Electrical power generation for the fiscal year is shown on Table 28-P. Net power generated is marketed by Bonneville Power Administration

Freshets regulated by Lost Creek Lake on Rogue River are shown in Table 28-K.

**Local cooperation.** Authorizing act required that local agencies furnish assurances prior to construction that demands will be made for future use of water supply storage within a period that will permit repayment of costs, including interest, allocated to water supply within life of the project; that State of Oregon take action, prior to construction to insure maintenance in stream of flows to be released for fishery; in addition, costs allocated to

irrigation would have to be repaid in manner and to an extent consistent with reclamation laws and policies; and costs allocated to power will be repaid on a system basis by revenue from sales of power in Pacific Northwest Federal system by Bonneville Power Administration. A survey in September, 1980 of M&I water supply needs showed nine communities with water supply needs. A contract for M&I supply has been completed with five of the communities. Assurances for municipal and industrial water supply were obtained from six communities in Rogue River Valley.

On February 26, 1966 Oregon State Department of Fish and Wildlife agreed to operate Cole M. Rivers Fish Hatchery for mitigation and enhancement of fish. The Corps provides full funding for the operation and maintenance of the hatchery. The hatchery became operational in 1972.

**Operations during fiscal year.** Maintenance: Routine operation and maintenance continued.

**46 THE DALLES LOCK AND DAM - LAKE CELILO, WA AND OR**

**Location.** On Columbia River at head of pool behind Bonneville Dam, about 192 miles above mouth of river and 88 miles east of Portland, OR.

**Existing project.** A dam, power plant, navigation lock, and appurtenant facilities. Improvement provides for navigation and hydroelectric power generation. Dam is designed for a normal pool at elevation 160 feet at mean sea level. Normal pool forms a reservoir extending upstream about 23 miles providing slack water to John Day Dam site. The Dalles Dam is 8,700 feet long and consists of a rock, gravel, and sand river closure section from Oregon shore connecting to a non overflow section which in turn joins powerhouse, then concrete non overflow sections connecting spillway with powerhouse and spillway with navigation lock at right abutment on Washington shore. Fish-passing facilities including two ladders and a fish lock are provided. Powerhouse was constructed for 14 units initially with substructure for eight additional units, an ultimate total of 22 units. Initial installation, excluding two 13,500-kilowatt fish-water units, was 1,092,000 kilowatts. The total generating capacity with all units was 1,806,800 kilowatts. Structures are founded on Columbia River basalt.

Principal data concerning lock, spillway, and powerhouse are set forth in Table 28-N.

Major construction of project initiated February 1952, was completed October 1960 when unit No. 14 was placed in commercial operation. Initial contract for additional units 15-22 was awarded in September 1967. Additional 8-unit phase was completed when unit 22 was placed in commercial operation in November 1973. In 1998, synchronous condensing

capability was added to six units. It was done to provide increased stability to the BPA transmission system.

Basic recreation facilities were developed with construction funds at 4 parks on Lake Celilo. These parks were further expanded with code 710 funds in the late 60's and early 70's. Washington State Park Commission operates two parks under a lease agreement.

Studies for adding power generation facilities to the North Shore Fish Ladder Auxiliary Water supply System were initiated in October 1979 and completed in December 1980. These facilities would provide base load generation (3.5 megawatts) and would not impact the present operation of the North Fish Ladder. However, it was determined that it was not within the Chief of Engineer's authority to add these power facilities. A local interest, North Wasco County Public Utility District pursued the construction of these power facilities through the FERC license processes and awarded a construction contract in September 1989.

Seufert Visitor Center was completed in September 1980.

In October 1996 work began on major rehabilitation of powerhouse units 1-14. This rehab project was not funded in the FY 05 civil works appropriation. The Bonneville Power Administration, the Northwest Power Marketing Agency, signed an agreement with the Northwestern Division to fund the completion of this rehab project.

Electrical power generation for the fiscal year is shown on Table 28-P. Net power generated is marketed by Bonneville Power Administration.

**Local cooperation.** Further recreation development will require cost sharing and assumption of operation and maintenance by local, non-federal sponsor.

**Operations during fiscal year.** Maintenance: Routine operation and maintenance continued. Performed increased activities to protect and enhance the anadromous fisheries in the Northwest. These activities included removal of obstructions from the turbine environment, unwatering and inspection of the East Fishladder and repair of diffuser valves and gratings. Also conducted fish transponder studies in the forebay.

Capital improvements included: Installation of a radar based water level measuring system to increase turbine efficiency; replacement of the T2 transformer bank; installation of air storage tanks to aid draft tube depression when changing a turbine/generator to condensing mode; completion of two generator rewinds; and replacement of 12 main unit breakers. Completed installation of physical security systems

## Environmental

### 47. COLUMBIA RIVER FISH MITIGATION, OR AND WA

**Location.** At Bonneville, The Dalles, and John Day Dams on the Columbia River in the states of Oregon and Washington. This project encompasses work at five other locations within Walla Walla District.

**Existing project.** The eight Corps hydroelectric projects on the lower Columbia and Snake Rivers have been identified as a contributing factor in significantly reduced runs of migrating salmon and steelhead. Ten stocks of salmon and steelhead that must pass through the project have been listed by NMFS as threatened or endangered under the Endangered Species Act. The Corps has recognized the need to reduce juvenile mortality and has undertaken measures that include fish bypass systems, surface bypass and barge and truck transportation. Spill, as an additional bypass route over the spillways, is being used to divert fish from entering turbine units, but it is a significant adverse economic factor due to forgone electric power generation. Congress passed and the President signed the FY 1989 Energy and Water Development Appropriations Act (PL 100-371), which mandated the expenditure of funds for the design, testing, and construction of new or improved fish bypass facilities for the Columbia River Juvenile Fish Mitigation projects. Completion of the bypass facilities will increase the survival of migrating downstream juvenile fish and potentially reduce reliance on spill. Mitigation studies will determine the overall scope of the juvenile and adult fish bypass facilities for these Columbia and Snake River dams.

The plan of improvement within Portland District includes the following: (a) Bonneville - new juvenile fish monitoring facilities, bypass system improvements, outfall relocation, surface bypass and spill improvement; (b) The Dalles - enhanced sluiceway guidance and spillway improvements, potential new surface bypass or screened bypass system; (c) John Day - new juvenile fish monitoring facility, spillway improvements, bypass system improvements and potential surface bypass; (d) mitigation studies to analyze long-term alternatives including impacts of federal Columbia River system and other activities on estuary habitat, surface bypass technology, gas abatement and improved turbine passage to improve fish passage and survival through Corps dams on the Columbia and Snake Rivers.

The current fully funded total estimated Federal project cost is \$1,600,000,000 which includes improvements in Walla-Walla District, and in Portland District and \$9,783,000 provided by the Bonneville Power Administration for design of the Bonneville juvenile fish monitoring facility and

contributions to the construction of the monitoring facility at John Day Dam. For information on the planned improvements in the upper Columbia and Snake Rivers, see Walla Walla District's Annual Report

**Local cooperation.** None required.

**Operations during fiscal year.** New work: General: Continued to collect biological and hydraulic data, develop alternatives to improve existing fish bypass methodology and systems, install passage monitoring technology, and improve turbine passage survival.

Bonneville Dam: Completed second year of evaluations of the surface bypass facility (corner collector) at the 2<sup>nd</sup> Powerhouse. At the 2<sup>nd</sup> Powerhouse, construction of guidance improvements for the screened bypass system was initiated. Continued evaluations of fish passage survival and efficiency and 1<sup>st</sup> Powerhouse passage measures. Completed adult passage monitoring facilities.

The Dalles Dam: Continued passage and survival studies, additional spillway improvements and forebay guidance evaluations.

John Day Dam: Continued evaluations of alternative juvenile passage improvements, including surface bypass facilities at the powerhouse or at the spillway and extended length guidance screens on the existing bypass system. Continued to investigate unusually high injury and mortality through the turbines at this project.

**48. WILLAMETTE RIVER TEMPERATURE CONTROL, OR**

**Location.** At the Blue River and Cougar Lake projects in the McKenzie River sub-basin of the Willamette River basin in western Oregon.

**Project Description.** Work consists of retrofitting the intake tower structures with movable weir intakes to allow modification of water temperatures downstream from the Blue River and Cougar projects. Water temperatures are currently cooler in the spring/summer and warmer in the fall/winter than pre-project conditions. This has impacted the fish resources in the McKenzie sub-basin, especially Willamette spring Chinook salmon and bull trout, both species of national and regional significance.

The total project is estimated to cost \$72,000,000.

**Local cooperation.** None required.

**Operations during fiscal year.** New Work: The intake tower construction was completed and the temperature control project was dedicated in July of 2005

**49. LOWER COLUMBIA RIVER ECOSYSTEM RESTORATION**

**Location.** The Lower Columbia River extends from the mouth of the Columbia River to river mile (RM) 145 at Bonneville Lock and Dam. The study areas include the estuary of the Columbia River and all of the tributaries of the Columbia River that are tidally influenced, which include the Willamette River up to Willamette Falls. The river divides the states of Oregon and Washington throughout this area.

**Project Description.** Section 536 of the Water Resources Development Act of 2000, Public Law 106-541. This program provides the authority to the Secretary to conduct studies and implement ecosystem restoration projects for the lower Columbia River and Tillamook Bay estuaries in Oregon and Washington. The projects will be for the protection, monitoring, and restoration of fish and wildlife habitat and are to have no adverse effect on specified water related needs or private property rights. Actions include protection and enhancement of 10,000 acres of tidal wetlands and other key habitats in the Columbia River estuary over 10 years, beginning in 2001, to rebuild productivity for listed salmon and steelhead populations. Operation and maintenance of projects is a non-Federal responsibility. Implementation costs of projects on Federal lands will be 100% Federal expense and the operations and maintenance will be the responsibility of the Federal agency that manages the lands.

Current year costs are shown in Table 28-A.

**Local cooperation.** Studies under Section 536 are subject to the cost sharing requirements of Section 105 of WRDA 1986, including studies on Federal lands. Projects implemented under Section 536 will be cost shared 35% Non-Federal and 65% Federal, and up to 50% of the non-Federal share of project implementation costs can be In-Kind services.

**Operations during fiscal year.** Activities included coordination, ecosystem restoration site identification, plan formulation, monitoring and coordination with local sponsors. Construction was continued on the Crims Island site with completion scheduled for FY 2006.

**50. ENVIRONMENTAL ACTIVITIES UNDER SPECIAL AUTHORIZATION**

**Modifications to Structures and Operations of Constructed Corps Projects to Improve the Quality of the Environment, Pursuant to Section 1135 of the 1986 Water Resources Development Act, Public Law 662, 99th Congress, as Amended.** This program provides the authority to modify

existing civil works projects to restore the environment. A non-federal entity is required to sponsor the project. The project must accomplish restoration by modifying a Corps project or operation of a Corps project, or be located on Corps project lands. The project must be feasible and consistent with the authorized purpose. The non-federal sponsor generally must assume responsibility of the operation and maintenance associated with the project.

Planning studies, detailed design, and construction costs are shared by the Corps 75 percent and non-federal sponsor 25 percent. Total project costs cannot exceed \$6.7 million with the federal share limited to \$5,000,000 without specific congressional authorization.

See Table 28-L for expenditures under Section 1135 during the fiscal year.

Four projects were under construction during fiscal year 2005.

**Lower Columbia Slough, OR**

**Location:** The project modification is located in the City of Portland, Oregon along the Columbia Slough

**Project description:** Columbia Slough represents a portion of the historic flood plain of the Columbia River extending about 20 miles eastward from the Willamette River to the Sandy River. In its natural state, the flood plain was unstable and the Columbia River seasonally inundated this area. A network of lakes, waterways and wetlands spread over the entire area. It was thickly forested along shorelines and low areas, and was also made up of wetland prairie and oak savannah, bordered by riparian forest. It supported vast populations of waterfowl and other birds, elk, deer, river otter and other smaller mammals. In the 150 years since the first settlers began to adapt the flood plain to their own uses, the area has been transformed from a natural system of lakes, sloughs, and wetlands into a highly managed water system of levees and pumps to provide drainage and flood damage reduction. The project modifies channel and culvert conditions in the Columbia Slough, creates wetlands and restores portions of the riparian buffer/wildlife corridor along the slough. Specific actions include creation of wetland benches/islands along 7.5 miles of the slough replacement of 5 culverts within the slough system, and restoration of approximately 14 acres of riparian and open water habitat.

**Local cooperation:** The City of Portland signed a Project Cooperation Agreement (PCA) for the project on 28 September 2001.

**Operations during fiscal year:** Two culverts on Buffalo Slough, a southern arm of the Columbia

Slough, were replaced with rail car bridges to improve flow and access

**Fern Ridge Marsh, OR**

**Location:** This project modification is located at the Fern Ridge Lake project on the Long Tom River, a Tributary of the Willamette River approximately 6 miles west of Eugene, Oregon.

**Project description:** The Fern Ridge Marsh Restoration Project entails marsh restoration and management actions on 347 acres in the western portion of the Fisher Butte Management Unit (West Fisher Butte sub-unit) at Fern Ridge Lake Project. The restoration will restore and provide for management of 347 acres of marsh habitat via construction of 7 water control structures, 15,900 lineal feet of dikes and rock dikes (carp excluders) within the drawdown zone of Fern Ridge Lake Project. The general intent of the proposed action is the restoration of a more diverse and productive marsh plant and wildlife community in areas currently dominated by reed canary grass. This species is an exotic plant found in extensive stands in shallow water areas around the reservoir perimeter. The total project cost, including lands, is estimated at approximately \$540,000.

**Local cooperation:** The Oregon Department of Fish and Wildlife signed a local cooperation agreement for the project on July 19, 1999.

**Operations during fiscal year:** No construction activities were performed this fiscal year.

**Fox Creek, OR**

**Location:** This project is located in the city Rainier, Oregon at the mouth of Fox Creek. Fox Creek enters the Columbia River at river mile 67+20.

**Project description:** The Fox Creek project modifies a dredged material disposal site associated with the Federal Navigation Channel. Flows from Fox Creek were routed through a 72-inch culvert during routine O&M maintenance dredge material disposal actions in 1985. Dredged material was then placed over the culvert. The project modification consists of excavating the dredged material from the former streambed (approximately 535 feet) and restoration of the creek to its approximate former course and gradient. Additionally, reed canary grass was removed over approximately 200 feet of the existing stream channel upstream of the dredged material disposal site. Native riparian trees will be planted along the entire length of the project.

**Local Cooperation:** The City of Rainier signed a Project Cooperation Agreement on 16 August 2001.

**Operations during fiscal Year:** Activities included minor slope grading, placement of rock to stabilize

the confluence with the Columbia River, placement of topsoil, installation of erosion control fabric and planting of the site. Project close out is scheduled for FY 2006.

**Amazon Creek Wetlands Restoration, OR**

**Location:** This project modification is located along Amazon Creek at the western edge of the city of Eugene, Oregon. Amazon Creek is a major drainage channel for Eugene, conveying flows into the Long Tom River, a tributary of the Willamette River.

**Project description:** Prior to settlement in the 1850's, seasonal wet prairie habitat dominated the landscape of the lower Amazon Creek basin and much of the Willamette Valley. Since then, nearly all of this wetland type has been lost to agriculture and urban uses. The Amazon Creek Flood control Project built by the Corps in the 1950's further degraded the wetland hydrology when the creek and connecting drainages were canalized and lined with levees. It is estimated that less than one percent of the Willamette Valley's historic wet prairies remains today. The lower Amazon Creek Wetlands Project will restore the historic hydrology and vegetation community to almost 400 acres of wet prairie. All of the land within the project area is owned by the City of Eugene and BLM, having been acquired for wetland protection and restoration purposes. The total project cost, including lands and recreation facilities, is estimated at approximately \$6.2 million.

Phase I involved removing existing levees along Amazon Creek and associated drainages and restoring the channels more natural meandering stream configurations. New levees were set back around the margin of the wetland restoration area to maintain the flood control function of the project. Interior wetland areas will now be subject to the high frequency flooding that occurred prior the flood control project. The new levees were seeded with a combination of native upland grass species. A slotted weir was constructed to maintain the complex flow relationship between the connected channels. Culverts, some gated, will also be installed to maintain drainage and to allow manipulation of surface hydrology for wetland management purposes. Disturbed areas along the stream channels and the old levee footprints will be seeded and planted with native wet prairie, emergent marsh and vernal pool species. The total cost for this completed in 1999 was \$2.0 million.

Phase II involves removal of non-native plant materials on about 120 acres of wetlands and replacement with native wet prairie plants. A major portion of this effort has been the collection and propagation of native plants and seeds. Phase II also includes modification of surface hydrology through

filling and restoration of old agricultural drainage channels draining into Amazon Creek. Phase II was initiated in 2000 and completed in 2003.

Phase III construction of recreation facilities was initiated in summer 2002 and completed in March 2003. Facilities included access points, viewing structures, interpretive displays and trails.

**Local cooperation:** The City of Eugene signed a Project Cooperation Agreement (PCA) for the project on October 26, 1998. The Bureau of Land Management under its West Eugene Wetlands Project also supports the project. In 1999 the City of Eugene requested that the agreement be modified to include the addition of recreation facilities in accordance with recent Corps guidance. The modified PCA was signed in spring 2001

**Operations during fiscal year:** Activity consisted of developing the Operations Manual. Project is scheduled to be closed out in FY 2006.

**Restoration and Protection of Aquatic Ecosystems to Improve the Quality of the Environment, Pursuant to Section 206 of the Water Resources Development Act of 1996, Public Law 303, 104<sup>th</sup> Congress, as Amended.** This program provides the authority to perform aquatic ecosystem restoration. A non-federal entity is required to sponsor the project. The non-federal sponsor generally must assume responsibility of the operation and maintenance associated with the project.

Planning studies, detailed design, and construction costs are shared by the Corps 65 percent and non-federal sponsor 35 percent. Total project costs cannot exceed \$6.7 million with the federal share limited to \$5,000,000 without specific congressional authorization. Two projects were under construction during the fiscal year

See Table 28-L for expenditures under Section 206 during the fiscal year.

**Eugene Delta Ponds, OR**

**Location:** This project is located in the City of Eugene, Oregon adjacent to the Willamette River.

**Project Description:** This project is to improve access, connectivity, and water quality within the Delta Ponds by reestablishing a hydrologic connection to the Willamette River and within the pond complex. Further objectives include grading the margins of the ponds to establish flat slopes to restore emergent wetland, forested riparian and other habitats indigenous to this reach of the Willamette River and to control and manage non-native weedy vegetation. Benefits to wildlife and fish habitat

would accompany improved water quality, the restoration and enhancement of vegetation, and the establishment of structure such as boulders, large woody debris in the ponds.

**Local Cooperation:** The City of Eugene, Oregon signed a Project Cooperation Agreement (PCA) for the project on 22 December 2003.

**Operations during fiscal year:** The upper pond connection to the Willamette River was completed with additional intra pond grading to improve connectivity and flow.

### East Birch Creek, OR

**Location:** This project modification is located along an approximately 1-mile reach of East Birch Creek between river miles 8.0 and 9.5 (river km 12.9 and river km 15.2) in Umatilla County, Oregon approximately 8 miles (12.9 km) south of the town of Pilot Rock. East Birch Creek is a fork of Birch Creek, a headwater tributary of the Umatilla River, which empties into the Columbia River.

**Project description:** Historically, this reach was an important spawning and rearing area for summer run steelhead trout. The Umatilla stock of summer steelhead was designated part of the Mid-Columbia Evolutionarily Significant Unit (ESU) by National Marine Fisheries Service (NMFS) when it listed that stock as "Threatened" under the Endangered Species Act. Land use practices and channel modifications have resulted in physical changes that have degraded habitat quality to a considerable extent. Habitat degradation has resulted primarily from removal of riparian vegetation, disruption of natural geomorphic processes, alteration of stream flows and increased sediment input. Bioengineering techniques are being utilized to the extent practicable to restore salmonid habitat quality, reduce unnatural bank erosion, restore natural channel function, and associated aquatic and riparian biological processes in East Birch Creek. This approach involved development of plans for erosion resistant stream restoration treatments using primarily natural fluvial processes and natural materials. The riparian zone, essential for aquatic ecosystem restoration, has been re-vegetated with native species.

The other primary goal of the environmental restoration work is to restore geomorphic function of the channel, which will generally mean a narrower, deeper, more meandering channel with more stable, vegetated banks and more diverse instream habitat. This will result in a self-maintaining system that meets specific habitat needs of ESA listed summer steelhead. Summer steelhead uses the proposed project reach for spawning and rearing, therefore, our restoration plan will be based largely on habitat requirements for these life stages.

**Local cooperation:** Oregon Department of Fish and Wildlife signed a Project Cooperation Agreement (PCA) for the project on 16 August 2001.

**Operations during fiscal year:** No construction activities were performed this year. Construction is scheduled for completion in FY 2006

## **General Investigation**

### **51. SURVEYS**

Fiscal year costs were \$1,131,394 of which \$611,173 was for Ecosystem Restoration Studies, \$177,213 for Watershed/Comprehensive Studies, \$226,844 for Miscellaneous Activities, \$143,933 for Coordination with Other Agencies and -\$27,768 for Navigation Studies (final cost share adjustment). Contributed funds in the amount of \$420,662 were expended for: \$32,340 Planning Assistance to States Program, \$12,858 for the Tillamook Bay & Estuary Study, \$25,931 Willamette R. Floodplain Restoration Study, \$111,882 Willamette Basin Review, \$209,883 Amazon Creek Study and 27,768 Columbia R. Channel Improvement Study (close out cost share adjustment).

### **52. COLLECTIONS AND STUDY OF BASIC DATA**

**Flood Plain Management Services.** Flood Plain Management Services Program comes under Section 206 of the 1960 Flood Control Act, PL 86-645, as amended. Through technical services and planning guidance, the program encourages comprehensive flood plain management planning at all levels to reduce the potential for losses to life and property from floods. Federal and non-Federal agencies and the private sector are assisted with planning and development information for flood hazard areas. This assistance is in the form of local flood plain regulations, Federal Insurance Program requirements, and Executive Order 11988 guidelines. Such assistance may include factual flood information (available or determined) and interpretation on flood frequencies, extent of flooding, floodwater velocity, duration of flooding and floodway limits.

Fiscal year costs totaling \$75,129 were associated with the following tasks under the Flood Plain Management Services Program: FPMS Unit \$24,666; Technical Services \$25,177 Quick Responses \$4,643; and special studies \$20,643 FPMS staff attended State of Oregon Flood Hazard meetings throughout the state and provided technical and programmatic information for local communities. Portland District FPMS staff also met with several communities in the Portland District and discussed floodplain management issues and methods. Scopes of work for improving mapping and planning were completed for Cities of Burns, Winston, and John Day in Oregon,

PORTLAND, OREGON DISTRICT

and Wahkiakum County in Washington. Requests for future funding were requested via FPMS program.

**Hydrologic Studies:** Crest stage gages were constructed and installed on streams in an ongoing program to record data from flood events. About 20-25% of these gages were serviced and data recovered during the year. Crest stage gage program now has approximately 225 gages located in the Portland District. Fiscal year costs were \$10,461

**Other**

**53. FLOOD CONTROL AND COASTAL EMERGENCIES**

**Disaster Preparedness Program.** This program encompasses all activities associated with preparing, responding to and recovering from natural disasters. It also provides for man-caused disaster planning. It includes publishing plans and procedures, establishing and training response teams, exercising plans and teams, and coordinating with Federal, state and local agencies. This program maintains response supplies and equipment used to supplement state and local requests for assistance. Significant activities

this year: Flood Response Team trained at MCDD#1. Debris Management Team was fully staffed and trained. See Table 28M for expenditures during the fiscal year.

**Public Law 84-99 Response.** FY 2005 was a dry and mild year. There were no requests for flood assistance, nor requests for drought assistance.

**Public Law 93-288 Assistance to FEMA.** The district deployed 63 people to assist with the 2005 Hurricane Season. Responders were sent to Florida, Louisiana, Mississippi and Texas.

**Continuing Eligibility Inspections.** The district completed all inspections of Federal and non-Federal Flood Control Works.

**Footnotes:**

1. Excludes \$17,742 contributed funds for new work.
2. Includes \$1,529,413 for previous project.
3. Includes \$150,955 allotted from deferred maintenance funds, Code 700, \$62,296 for public works accelerated program repair, and \$1,214,865 for previous project. Excludes \$24,320 expended from contributed funds prior to 1964.
4. Excludes \$31,636 contributed by city of Astoria and Bumble Bee Sea Foods, Astoria, OR (not part of regular project). Includes \$223,026 expended from contributed funds prior to 1964 and \$428,136 contributed by Port of Portland and \$14,792 by Port of Vancouver.
5. Includes \$84,930 rehabilitation funds.
6. Includes \$1,986,253 for previous project and \$608,111 allotted and expended under Code 710, recreation facilities at completed project. Excludes \$500,000 contributed funds.
7. Includes \$2,186,000 for previous project and \$1,188,625 under deferred maintenance, Code 700.
8. Includes funds under Code 721 (small authorized projects) \$30,393. Entrance to Oregon slough; \$161,897, Camas-Washougal Turning Basin; \$227,908, Hood River Small Boat Basin; \$157,470, Bingen, WA, Barge Channel; and \$140,619, The Dalles Small Boat Basin.
9. Includes \$2,033,408 under code 700 (Deferred Maintenance).
10. Includes \$802,096 for previous project. Excludes contributed funds.
11. Includes \$178,801 for previous project and \$1,444,640 under Code 700, Deferred Maintenance. Excludes \$8,387 contributed funds.
12. Includes \$340,726 for previous project. Excludes \$72,891 contributed funds. Includes \$36,000 under Code 711.
13. Includes \$41,467 for previous project and \$78,500 under Code 700, Deferred Maintenance.
14. Excludes \$9,900 contributed funds.
15. Excludes \$13,779 (other funds) contributed for additional landfill and extension of drainage lines.
16. Includes \$21,000, Wedderburn Study Funds.
17. Includes \$1,159,357 for previous project.
18. Includes \$10,611 for previous project and \$188,000 under code 700, Deferred Maintenance.
19. Includes \$77,209 for previous project and \$57,767 under Code 720 (Small Authorized Projects) Garibaldi Boat Basin. Excludes \$592,622 contributed funds and \$300,000 channel dredging by local interest.
20. Includes \$71,498 for previous project. Excludes \$6,450 expended from contributed funds.

**Footnotes (Cont'd)**

- 21. Includes \$39,242 for previous project. Excludes \$6,450 expended from contributed funds.
- 22. Excludes \$300,000 contributed funds.
- 23. Includes \$452,110 on operation and care from permanent indefinite appropriation and \$150,000 under maintenance and operation of dams and other improvements of navigable waters.
- 24. Includes \$707,313 for previous project and \$170,000 appropriated from public works acceleration program for north jetty rehabilitation.
- 25. Includes \$6,026 for previous project.
- 26. Includes \$96,000 pro rata share of site selection costs in lieu of Quartz Creek Lake.
- 27. Includes \$1,639,828 allotted and expended under Code 710, recreation facilities at completed project.
- 28. Includes \$167,878 special recreation use fees. Includes \$201,262 under maint. and operation of dams and other improvements to navigable waters.
- 29. Includes \$1,038,790 allotted and expended under Code 710, recreation facilities at completed project.
- 30. Includes \$1,026,264 allotted and expended under Code 710, recreation facilities at completed project.
- 31. Includes \$3,894,673 allotted and expended under Code 710, recreation facilities at completed project and \$136,482 allotted under 721 (small authorized project) reservoir modification. Excludes \$2,100 (other funds contributed).
- 32. Includes \$9,750 allotted under Code 700, deferred maintenance. Includes \$241,678 under maintenance and operation of dams and other improvements to navigable waters.
- 33. Excludes \$93,733 contributed funds.
- 34. Includes \$12,200,000 Public Works Administration funds, \$20,240,700 National Recover Act Funds, \$27,195,400 modification for peaking funds, \$136,457 Code 710, recreation facilities at completed project funds and \$6,000 power units funds.
- 35. Includes \$540,000 deferred maintenance funds, Code 700 and \$1,692,148 maintenance and operation of dams and other improvements of navigable waters. Excludes 96-89X4045 funds.
- 36. Includes \$96,000 pro rata share of site selection costs in lieu of Quartz Creek Lake. Includes \$1,789,988 allotted and \$1,789,954 expended for Strube Lake and Cougar Additional Unit.
- 37. Includes \$113,000 pro rata share of site selection costs in lieu of Quartz Creek Lake.
- 38. Includes \$983,934 under maintenance and operation of dams and other improvements of navigable waters. Excludes 96-89X4045 funds
- 39. Includes \$82,408 under maintenance and operation of dams and other improvements of navigable waters. Excludes 96-89X4045 funds.
- 40. Includes \$25,984 allotted and expended under 710, recreation facilities at completed projects.
- 41. Includes \$1,361,900 for O&M and fish evaluation of Spring Creek Hatchery (funds revoked and paid to USFWS at OCE level, but a cost to project); includes \$423,800 special recreation use fees. Includes \$933,438 under maintenance and operation of dams and other improvements of navigable waters. Excludes 96-89X4045 funds.
- 42. Includes \$457,611 allotted and expended under 710, recreation facilities at completed projects.
- 43. Includes \$991,562 under maintenance and operation of dams and other improvements of navigable waters. Excludes 96-89X4045 funds.
- 44. Includes \$978,478 under maintenance and operation of dams and other improvements of navigable waters. Excludes 96-89X4045 funds.
- 45. Includes \$1,140,747 allotted and expended under 710, recreation facilities at completed projects, and \$52,997,220 allotted and expended additional units 15 - 22 funds.
- 46. Includes \$721,490 under maintenance and operation of dams and other improvements of navigable waters. Excludes 96-89X4045 funds.
- 47. Includes \$936,376 under maintenance and operation of dams and other improvements of navigable waters. Excludes 96-89X4045 funds.
- 48. Includes \$66,678 under maintenance and operation of dams and other improvements of navigable waters.
- 49. Includes \$861,852 under maintenance and operation of dams and other improvements of navigable waters. Excludes 96-89X4045 funds.

**TABLE 28-B AUTHORIZING LEGISLATION**

See Section in Text	Date Authorizing Act	Project and Work Authorized	Documents
1	<b>CHETCO RIVER, OR</b>		
	Mar 02, 1945	To provide for the stabilization of the channel, by constructing jetties and dredging.	H. Doc. 817,77 <sup>th</sup> Cong., 2d Sess
	Oct 27, 1965	Modification of channel entrance and channel improvements.	S. Doc. 21, 89 <sup>th</sup> Cong., 1st Sess.
	Dec 04, 1981	Deepen channel 2 feet to 16 feet, extend the existing jetty S. system 750 feet for the North, and 1,250 feet for the South jetty.	Doc. 10, 96th Cong., 1st Sess.
	Oct 31, 1992	Assume responsibility for O&M of the approximately 200-foot-long access channel to the south commercial boat basin consistent with authorized project depths.	P.L. 102-580, 102nd Cong.
2.	<b>COLUMBIA AND LOWER WILLAMETTE RIVERS BELOW VANCOUVER, WA AND PORTLAND, OR</b>		
	Feb 27, 1911	2 pipeline dredges and accessories.	H. Doc. 1278, 61st Cong., 3d Sess. <sup>1</sup>
	Jul 25, 1912	Increasing main channel to 30 feet.	H. Doc. 1278, 61st Cong., 3d Sess. <sup>1</sup>
	Jul 27, 1916	Consolidating improvement below Portland, OR and between Vancouver, WA and mouth of Willamette.	No Prior Report
	Aug 08, 1917	For the Cathlamet channel.	H. Doc. 120, 63d Cong., 1st Sess. <sup>1</sup>
	Sep 22, 1922	Construct an additional dredge (dredge was not built) and accessories for better maintenance, and construct contraction works.	H. Doc. 1009, 66th Cong., 3d Sess.
	Mar 04, 1923 <sup>2</sup>	Channel from deep water in Willamette Slough to deep water in Columbia River.	H. Doc. 156, 67th Cong., 2d Sess.
	Mar 03, 1925	Depth of 25 feet and width of 300 feet from mouth of Willamette River to Vancouver, WA.	H. Doc 126, 68th Cong., 1st Sess.
	Mar 03, 1927	Closing east channel at Swan Island in Willamette River on condition that main channel to be opened to project dimensions on west side of island by Port of Portland.	Rivers and Harbors Committee Doc. 10 69th Cong., 2d Sess.
	Jul 03, 1930	For a 35-foot channel 500 feet wide from Portland to the sea.	H. Doc. 195, 70th Cong., 1st Sess. and Rivers and Harbors Committee Doc. 8, 71st Cong., 1st Sess. <sup>1</sup>
	Sep 06, 1933 <sup>3</sup>	A channel 28 feet deep and 300 feet wide from mouth of Willamette River to Vancouver, with 2 turning basins, each generally 28 feet deep by 800 feet wide by 2,000 feet long.	H. Doc. 249, 72d Cong., 2d Sess. <sup>1</sup>
	Aug 30, 1935	A channel in Columbia River from mouth of Willamette to interstate highway bridge at Vancouver, WA, 30 feet deep and 300 feet wide, with 2 turning basins at Vancouver.	Rivers and Harbors Committee Doc. 1, 74th Cong., 1st Sess.
	Aug 30, 1935	Maintenance of not to exceed 35 foot depth at low water in Portland Harbor and Willamette River between its mouth and Broadway Bridge at Portland.	Rivers and Harbors Committee Doc. 6, 73d Cong., 1st Sess. <sup>1</sup>

**TABLE 28-B (Cont'd) AUTHORIZING LEGISLATION**

See Section in Text	Date Authorizing Act	Project and Work Authorized	Documents
	Aug 30, 1935	Auxiliary channels, 30 feet deep, 300 feet and 500 feet at St. Helens.	H. Doc. 235, 72d Cong., 1st Sess. <sup>1</sup>
	Aug 26, 1937	Extension of lower turning basin at Vancouver, WA, 1,000 feet downstream.	Rivers and Harbors Committee, Doc. 81, 74th Cong., 2d Sess.
	Aug 26, 1937	An auxiliary channel 24 feet deep and 200 feet wide along waterfront at Rainier, OR.	H. Doc. 203, 75th Cong., 1st Sess. <sup>1</sup>
	Mar 02, 1945	Improvement of old mouth of Cowlitz River.	H. Doc. 341, 77th Cong., 1st Sess. <sup>1</sup>
	Mar 02, 1945	An auxiliary channel in vicinity of Longview, WA.	H. Doc. 630, 77th Cong., 2d Sess. <sup>1</sup>
	Jul 24, 1946	A small-boat mooring basin at Astoria, OR.	H. Doc. 692, 79th Cong., 2d Sess. <sup>1</sup>
	Oct 23, 1962	A channel 35 feet deep and 500 feet wide from mouth of Willamette River to interstate highway bridge at Vancouver, WA, with 2 turning basins of same depth.	H. Doc. 203, 87th Cong., 1st Sess.
	Oct 23, 1962	A channel 40 feet deep and 600 feet wide from at Vancouver, WA, to mouth of Columbia River; a turning basin Vancouver, WA, a turning basin at Longview, WA, and a channel 40 feet deep in Willamette River from mouth to Broadway Bridge which encompasses Portland Harbor area.	H. Doc. 452, 87th Cong., 2d Sess. <sup>1</sup>
<b>3.</b>		<b>COLUMBIA RIVER AT BAKERBAY, WA</b>	
	Dec 11, 1933	East Channel	Public Works Administration
	Aug 30, 1935	Main channel	H. Doc. 44, 73d Cong., 1st Sess.
	Mar 02, 1945	West channel 8 feet deep.	H. Doc. 443, 76th Cong., 1st Sess.
	May 17, 1950	West channel 10 feet deep and mooring basin with protecting breakwaters.	S. Doc. 95, 81st Cong., 1st Sess.
<b>4.</b>		<b>COLUMBIA RIVER BETWEEN CHINOOK, WA AND HEAD OF SAND ISLAND</b>	
	Jun 20, 1938	Channel 8 feet deep.	Rivers and Harbors Committee
	Sep 03, 1954	Channel 10 feet deep and mooring basin.	S. Doc. 8, 83d Cong., 1st Sess. <sup>1</sup>
<b>5.</b>		<b>COLUMBIA RIVER AT THE MOUTH, OR AND WA</b>	
	Mar 03, 1905	Extend South Jetty and construct North Jetty and dredging.	H. Doc. 94, 56th Cong., 1st Sess.
	Dec 22, 1944	Construction, operation, and maintenance of recreation facilities.	Sec. 4, Flood Control Act of 1944 as amended
	Sep 03, 1954	Bar channel of 48-foot depth and spur jetty on north shore. <sup>9</sup>	H. Doc. 249, 83d Cong., 2d Sess. <sup>1</sup>
	Jul 30, 1983	Deepening the northernmost 2,000 feet of the channel Cross-section to 55 feet.	P.L. 98-63
	May 24, 1995	Lower a 500' section of south jetty at river mile 7.	Sec. 1135, P.L. 99-662, As amended

**TABLE 28-B (Cont'd) AUTHORIZING LEGISLATION**

<b>See Section in Text</b>	<b>Date Authorizing Act</b>	<b>Project and Work Authorized</b>	<b>Documents</b>
<b>6.</b>		<b>COLUMBIA RIVER BETWEEN VANCOUVER, WA, AND THE DALLES, OR</b>	
	Aug 26, 1937	Construct a channel 27 feet deep by 300 feet from Vancouver, WA, to Bonneville, OR.	H. Committee Doc. 94, 74th Cong., 2d Sess. <sup>1</sup>
	Mar 02, 1945	Construct Camas-Washougal turning basin.	H. Doc. 218, 76th Cong., 1st Sess.
	Jul 24, 1946	Construct a channel 27 feet deep by 300 feet wide from Bonneville, OR, to The Dalles, OR.	H. Doc. 704, 79th Cong., 2d Sess.
	Jul 24, 1946	Construct a boat basin at Hood River, OR, 10 feet deep, 500 feet wide, by 1,300 feet long.	H. Doc. 704, 79th Cong., 2d Sess.
	Jul 24, 1946	Construct a barge channel at Bingen, WA, 10 feet deep, 200 feet wide, by 1 mile long, and an access channel 7 feet deep, 100 feet wide, by 1,000 feet long to natural Mooring basin.	H. Doc. 704, 79th Cong., 2d Sess.
	Jul 24, 1946	Construct The Dalles Harbor 8 feet deep, 400 feet wide by 800 feet long.	S. Doc. 89, 79th Cong., 1st Sess. <sup>1</sup>
<b>7.</b>		<b>COLUMBIA RIVER CHANNEL IMPROVEMENTS, OR</b>	
	Aug 17, 1999	Deepen the existing navigation channel by three feet.	P.L. 106-53
<b>8.</b>		<b>COOS BAY, OR</b>	
	Jun 25, 1910	Dredging the Ocean Bar Channel.	H. Doc. 958, 60th Cong., 1st Sess.
	Mar 02, 1919	A channel 22 feet deep to Smith's Mill.	H. Doc. 325, 65th Cong., 1st Sess.
	Sep 22, 1922	Restore North Jetty 9,600 feet long, constructs a South Jetty about 3,900 feet long, extend 22-foot bay channel from Smith's Mill to Millington.	H. Doc. 150, 67th Cong., 2d Sess.
	Jan 21, 1927	Extend jetties to such lengths as may be practicable within estimate of total cost of jetties, \$3,250,000 given in H. Doc. 150, 67th Cong.	H. Doc. 320, 69th Cong., 1st Sess.
	Jul 03, 1930	A channel 24 feet deep and 300 feet wide, through Pigeon Point Reef, following a location along westerly side of bay.	H. Doc. 110, 70th Cong., 1st Sess. <sup>1</sup>
	Aug 30, 1935	For 24-foot channel from Pigeon Point Reef to Smith's Mill and a turning basin above Marshfield.	S. Committee Print, 73d Cong., 2d Sess. <sup>1</sup>
	Jul 24, 1946	Increased dimensions of channel across bar and to Isthmus Slough and turning basin opposite Coalbank Slough and at city of North Bend; anchorage basins at mile 3.5 and near mile 7.	S. Doc. 253, 79th Cong., 2d Sess.
	Jun 30, 1948 Dec 31, 1970	A mooring basin and connecting channel at Charleston. Increase dimensions to provide for bar channel 45 feet deep, inner channel 35 feet deep to mile 15, and deepening and widening existing turning basins and anchorage area.	H. Doc 646, 80th Cong., 2nd Sess. H. Doc. 151, 91st Cong., 2d Sess.
	Nov 13, 1995	Deepening the authorized channel by 2 feet and expanding one turning basin. The entrance would be 47 feet deep to River Mile (RM) 1 and the inner channel 37 feet between RM 1 and 15.	P.L. 104-46

**TABLE 28-B (Cont'd) AUTHORIZING LEGISLATION**

<b>See Section in Text</b>	<b>Date Authorizing Act</b>	<b>Project and Work Authorized</b>	<b>Documents</b>
<b>9.</b>		<b>COQUILLE RIVER, OR</b>	
	Jun 25, 1910	Dredging shoals between mouth and Riverton, and removing obstruction between mouth of North Fork and Bandon.	H. Doc. 673, 61st Cong., 2d Sess.
	Mar 02, 1919	For a 13-foot channel from ocean to Bandon.	H. Doc. 207, 65th Cong., 1st Sess. <sup>1</sup>
	Jul 03, 1930	Deepen channel to 16 feet between sea and eastern end of North Jetty.	H. Doc. 186, 70th Cong., 1st Sess.
	Aug 30, 1935	Present project depth between sea and eastern end of North Jetty.	S. Committee Print, 74th Cong., 1st Sess.
Dec 22, 1944	Construction, operation, and maintenance of recreation facilities.	Sec. 4, Food Control Act of 1944 as amended	
Mar 02, 1945	For 13-foot depth from sea to a point 1 mile above Coquille River Lighthouse and snagging to State Highway Bridge.	H. Doc. 672, 76th Cong., 2d Sess. <sup>1</sup>	
<b>10.</b>		<b>DEPOE BAY, OR</b>	
	Aug 26, 1937	Construction of an inner basin 375 feet long, 125 feet wide and 5 feet deep, with an entrance channel of same depth and 30 feet wide.	H. Doc. 202, 75th Cong. 1st Sess.
	Mar 2, 1945	Construction of an inner basin 750 feet long, 390 feet wide and 8 feet deep, with entrance channel at same depth and 30 feet wide.	H. Doc. 350, 77th Cong. 1st Sess.
July 14, 1960	Construction of entrance channel 8 feet deep and approved 50 feet wide, concrete breakwater and stone spending beach	Sec. 107 of R&H Act 1960, Feb. 1965.	
<b>11.</b>		<b>PORT ORFORD, OR</b>	
	Oct 27, 1965	Extension of existing breakwater by 550 feet.	S. Doc. 62, 88th Cong., 2d Sess
	Dec 31, 1970	Dredging of turning basin 340 feet long, 100 feet wide, 16 feet deep.	H. Doc 151, 91st Cong., 2d Sess.
Oct 31, 1992	Maintain the authorized navigation channel including those portions of the channel within 50 feet of the port facility.	P.L. 102-580, 102nd Cong.	
<b>12.</b>	Sep 03, 1954	<b>ROGUE RIVER HARBOR AT GOLD BEACH, OR</b> Two jetties at entrance and improvement of channel.	S. Doc. 83, 83d Cong. 2d Sess.
<b>13.</b>		<b>SIUSLAW RIVER, OR</b>	
	Sep 19, 1890	Build two high-tide stone jetties.	H. Doc. 71, 51st Cong., 1st Sess.
	Jun 25, 1910	Extends North Jetty 3,700 feet from old work constructed under previous project and provides for 4,200 foot south jetty.	H. Doc. 648, 61st Cong., 2d Sess.
	Mar 03, 1925	12-foot deep channel.	S. Committee Print, Serial, 68th Cong., 1st Sess.
	Jul 03, 1958	18-foot bar channel and 16-foot river channel and a 600-foot extension of north Jetty. (600-foot extension classified deferred.)	H. Doc. 204, 85th Cong., 1st Sess. <sup>1</sup>
	Oct 22, 1976	Phase I advance engineering and design for north and south jetty extensions.	Final Report of Chief of Engineers
Oct 01, 1980	Extending north and south jetties about 2,000 and 2,500 feet, respectively.	P.L. 96-367

**TABLE 28-J** **WILLAMETTE RIVER AT WILLAMETTE FALLS, OR**  
**PRINCIPAL FEATURES OF EXISTING CANAL AND LOCKS**  
 (SEE SECTION 17 OF TEXT)

Usable Lock Dimensions .....	Series of 4 locks, each 175 feet by 37 feet <sup>1</sup>
Lift of each lock .....	Lock 1 (Lower), 22.5 feet; Lock 2, 8.7 feet; Lock 3, 10.9 feet and Lock 4 (Upper), 8.1 feet <sup>2</sup>
Depth of Miter Sills at Lower Water .....	Lower Lock, 8.4 feet; Upper Lock, 6 feet
Character of foundation .....	Rock
Kind of Dam .....	Fixed <sup>3</sup>
Type of Construction .....	Concrete
Year of Completion .....	1873; Purchased by United States Apr. 26, 1915
Cost.....	Unknown; purchase price \$375,000

**Footnotes:**

1. A guard lock 210 by 40 feet, which is used only at higher states of water, is at upper end of canal basin.
2. A concrete division wall, 1,227 feet long, extending from Lock 4 to Guard Lock, separates upper basin of canal from head race, which formerly led directly from basin and supplied water for power plants operated by Crown Zellerbach Corp., and Portland Ry., Light & Power Co., which is now being operated by Portland General Electric Co.
3. The dam is owned by private parties.

**Project**

Bonneville Lock and Dam OR and WA - Lake Bonneville (See Section 37 of Text)	<b>NAVIGATION LOCK (NEW)</b>	
	Dimensions:	
	Clear Width of Chamber	86 Feet
	Greatest Length Available for Full Width	675 Feet
	Lift (Vertical):	
	At Extreme Low Water and Normal Pool Level	66 Feet
	At Normal River Stage	59 Feet
	At Extreme High Water	About 30 Feet
	Depth Over Miter Sills at Adopted Low Water	19 Feet
	Character of Foundation	Andesite
	Open to Navigation	March 1993
	<b>SPILLWAY DAM</b>	
	Type of Construction	Concrete Gravity
	Completed	1938
	Capacity	1,600,000 CFS
	Elevation of Gate Sills on Crest of Spillway	23.3 Feet
	Height above Lowest Foundation	About 170 Feet
	Length of Dam Proper	1,090 Feet
	Length of Dam Overall	1,230 Feet
	Width at Base	200 Feet
	Gate Openings	18
	Crest Overflow (Above Mean Sea Level)	24 Feet Pool

# SEATTLE, WASHINGTON DISTRICT

This District comprises Washington State except southern and southeastern portions, northern Idaho, and northwestern Montana, embraced in drainage basins tributary to Pacific Ocean south of

international boundary to Cape Disappointment, and to the Columbia River above Yakima River, inclusively.

## IMPROVEMENTS

### Navigation

1. Anacortes Harbor, WA	29-2

## Navigation

### 1. ANACORTES HARBOR, WA

**Location.** On northern point of Fidalgo Island in Puget Sound, 17 miles south of Bellingham, WA, and 64 miles north of Seattle. The main harbor is on Guemes Channel. (See NOAA Survey Chart 18427.)

**Existing project.** Channel in Capsante Waterway, 12 feet deep and 150 to 250 feet wide, between east side of Q avenue and deep water in Fidalgo Bay, a distance of 2,850 feet; a mooring basin 12 feet deep, 570 feet wide, and 960 feet long adjacent to north side of Capsante Waterway, protected by two pile breakwaters, each 470 feet long, east and southeast of basin; and a navigation channel 18 feet deep, 150 feet wide, extending 5,180 feet from deep water in Guemes Channel to the west shore of Fidalgo Bay (construction under authority of Section 107, P.L. 86-645. Construction cost for this feature is recorded in Table 29-C). Plane of reference is mean lower low water. Range between mean lower low water and mean higher high water is 8.2 feet. Extreme range is about 15.5 feet. Project was completed in January 1977. (For further details, see Annual Report for 1977).

**Local cooperation.** Fully complied with.

**Terminal facilities.** See Port Series No. 37. Surveys are displayed at U.S. Army Corps of Engineers, Water Resources Support Center, and Navigation Data Center.

**Operations during fiscal year.** Maintenance, hired labor: Routine coordination with Port of Anacortes, city of Anacortes, and navigation users. NWS assisted the Port of Anacortes with their proposal to perform maintenance dredging in the northern reach of the Federal, Swinomish Channel navigation project. Approximately 60,000 cubic yards of dredged materials from Swinomish Channel would be placed beneficially in Fidalgo Bay at a Port-sponsored eelgrass enhancement site.

Maintenance, contract: None

### 2. BELLINGHAM HARBOR, WA

**Location.** Part of Bellingham Bay, an arm of Puget Sound, at Bellingham, in northwestern Washington. (See NOAA Survey Chart 18424.)

**Existing project.** Channel 30 feet deep in Whatcom Creek Waterway from deep water to head of harbor, 363.2 feet wide to 750 feet from inner end, thence 18 feet deep for inner 750 feet; I&J Street

Waterway, a channel 100 feet wide and 18 feet deep at mean lower low water for a distance of 3,200 feet; Squalicum Creek Waterway, including dredging an *entrance* channel 200 feet wide and 26 feet deep from deep water in the bay to main pier-head line, and maintenance of southerly half and westerly end of Squalicum Creek basin to 26 feet deep, provided that no dredging can be done within 75 feet of wharves, piers, or similar structures; and small-boat basin adjacent to Squalicum Creek Waterway by construction and maintenance of two sections of rubble-mound breakwater with combined length of 5,400 feet, including maintenance of minimum depths of 12 feet in entrance to basin. Plane of reference is mean lower low water. Range between mean lower low water and mean higher high water is 8.6 feet. Extreme range is about 16 feet. The small-boat basin expansion from 3,900 feet to 5,400 feet at Squalicum Creek Waterway and channel at I&J Street Waterway were constructed under authority of Section 107, P.L. 86-645. Construction costs for these features are recorded in Table 29-C. Project was completed in October 1980. (For further details see Annual Report for 1981. For details relating to previous project see page 797 of Annual Report for 1907.)

**Local cooperation.** Fully complied with. Requirements are described in full on page 38-2 of Annual Report for 1980.

**Terminal facilities.** See Port Series No. 37. Surveys are displayed at U.S. Army Corps of Engineers, Water Resources Support Center, and Navigation Data Center.

**Operations during fiscal year.** Maintenance, hired labor: Channel condition surveys were conducted. NWS coordinated with Port and interested parties on best use of Whatcom Waterway.

Maintenance, contract: None.

### 3. EDIZ HOOK, WA

**Location.** Ediz Hook and city of Port Angeles are on the Strait of Juan de Fuca in Clallam County, WA, about 100 miles northwest of Seattle. (See NOAA Survey Chart 18468.)

**Existing project.** Provides for about 16,400 linear feet of rock revetment, together with initial beach replenishment and periodic renourishment. Project was completed in October 1978. (For further details, see Annual Report for 1979.)

## SEATTLE, WASHINGTON DISTRICT

**Local cooperation.** Fully complied with.

**Terminal facilities.** See Port Series No. 37. Surveys are displayed at U.S. Army Corps of Engineers, Water Resources Support Center and Navigation Data Center.

**Operations during fiscal year.** Maintenance, hired labor: Nearshore hydrographic survey.

Maintenance, contract: None

### **4. EVERETT HARBOR AND SNOHOMISH RIVER, WA**

**Location.** From Port Gardner Bay, at northern end of Possession Sound, an arm of Puget Sound at Everett, in northwestern Washington; and Snohomish River for 6.3 miles upstream of mouth. (See NOAA Survey Chart 18444.)

**Existing project.** Training dike extending from a point opposite 23rd Street northward 12,550 feet to outlet of Snohomish River, with spur dike extending 400 feet to pier-head line from north end of main dike; spur dike extending 1,410 feet westward from Preston Point; removal of a section of training dike north of Snohomish River outlet; channel 150 to 425 feet wide and 15 feet deep from deep water in Port Gardner Bay to 14th Street dock; thence a settling basin 700 feet wide, 1,200 feet long, and 20 feet deep, thence a channel 150 feet wide and 8 feet deep upriver to head of Steamboat Slough, a total distance of about 6.3 miles; settling basin within upper channel reach about one mile long with a capacity of one million cubic yards and maintaining East Waterway to 30 feet deep. Plane of reference is mean lower low water. Range between mean lower low water and mean higher high water is 11.1 feet. Extreme tidal range is an estimated 19 feet. Project was completed in April 1963. (For further details, see page 1683 of Annual Report for 1963. For details relating to previous projects, see page 704 of Annual Report for 1905, page 2005 of Annual Report for 1915, and page 1883 of Annual Report for 1938.)

**Local cooperation.** Fully complied with. Requirements are described in full on page 38-3 of Annual Report for FY 1981.

**Terminal facilities.** See Port Series No. 37. Surveys are displayed at U.S. Army Corps of Engineers, Water Resources Support Center, and Navigation Data Center.

**Operations during fiscal year.** Maintenance, hired labor: hydrographic condition surveys.

Maintenance, contract: Awarded construction contract for mechanical dredging of 155,000 CY at the upstream settling basin and several shoals along river channel. Dredging and disposal were completed December 30, 2005. All material was disposed at the WA Dept. of Natural Resources Port Gardner open water site. Work had to be completed earlier in the work window because of recent designation of critical habitat for Puget Sound salmon.

### **5. FRIDAY HARBOR, WA**

**Location.** Friday Harbor is located on the eastern shore of San Juan Island on the inland waters of northwestern Washington, about 28 nautical miles east of Victoria, British Columbia, and 60 nautical miles north of Seattle, WA. San Juan Island is one of over 170 islands in the San Juan Archipelago. Friday Harbor is the San Juan Island county seat and a United States Customs Port of Entry. (See NOAA Survey Chart 18425.)

**Existing project.** Concrete floating breakwater (1,600 feet) to protect the existing port facilities and to allow the Port of Friday Harbor to provide 294 additional permanent moorage spaces and 44 additional transient spaces. Construction was completed in March 1984.

**Local cooperation.** Fully complied with. Requirements are described in full on page 38-4 of Annual Report for 1981.

**Operations during fiscal year.** Maintenance, hired labor: Routine coordination with the Port of Friday Harbor, U.S. Coast Guard, and navigation users. Port continues to upgrade bullrail and moorage cleat configuration to best accommodate moorage on the Federal breakwater.

Maintenance, contract: None.

### **6. GRAYS HARBOR AND CHEHALIS RIVER, WA**

**Location.** Grays Harbor is a coastal inlet at mouth of Chehalis River, in southwestern Washington, 45 miles north of entrance to the Columbia River. Chehalis River rises in southwestern part of Washington about 40 miles east of Pacific Ocean, flows generally northwesterly and empties into

## REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR 2005

eastern part of Grays Harbor. (See NOAA Survey Chart 18502.)

**Existing project:** (including navigation improvements to date). Provides an entrance channel across the bar and through the entrance 600 to 1,000 feet wide and 38 to 46 feet deep, secured by a south jetty 13,734 feet long and a north jetty 17,200 feet long, and by annual maintenance dredging; maintenance of channel 36 feet deep and 350 feet wide from deep water in Grays Harbor 14 miles upstream to Port of Grays Harbor terminals at Cow Point; thence 32 feet deep and 200 feet wide, suitably widened at bends, to the head of deep draft navigation at Cosmopolis, a distance of 4.1 miles; a turning basin 36 feet deep, 900 feet wide, and 1,000 feet long opposite the Port of Grays Harbor terminals at Cow Point; a turning basin 30 feet deep, 550 feet wide, and 1,000 feet long near upstream end of 32-foot channel at Junction City; three breakwaters at, and maintenance of entrance channel to Westhaven Cove; protection of Point Chehalis for an exposed length of about 7,500 feet; and removal of 350-foot southwestern extension of the breakwater, replacing it with an 865-foot northeastern extension, and adding a 200-foot spur breakwater along the southerly entrance, constructed under authority of Section 107, P.L. 86-645. Construction cost for this feature is recorded in Table 29-C. Plane of reference is mean lower low water. Tidal range between mean lower low water and mean higher high water is 8.9 feet at Point Chehalis, 10.1 feet at Aberdeen, and 8.1 feet at Montesano. Extreme range is 17.5 feet at Point Chehalis, 17.8 feet at Aberdeen, and 23.8 feet at Montesano (river flood of 1935). (For details relating to previous projects, see pages 2002-03 of Annual Report for 1915 and page 1863 of Annual Report for 1938.)

Improved project. Authorized by Section 202 of the Water Resources Development Act of 1986. Phase I of project construction was started in 1990 and completed in 2000. Final fiscal requirements remain for Phase I, and coordination with Port of Grays Harbor continues. A second project phase to deepen the improved downstream channel to the 38-foot fully authorized depth is possible in the future if project economics and environmental considerations warrant and funding is available.

**Local cooperation.** Fully complied with. Requirements for improved project are described in full on page 29-4 of Annual Report for 2001.

**Terminal facilities.** See Port Series No. 35. Surveys are displayed at U.S. Army Corps of

Engineers, Water Resources Support Center, and Navigation Data Center. The Port of Grays Harbor continues to improve operations at their new bulk agricultural commodity loading facility.

**Operations during fiscal year.** New work, hired labor: Coordinated with Port of Grays Harbor (local sponsor), resource agencies, Grays Harbor pilots and interested parties.

**Maintenance, hired labor:** Channel condition surveys were conducted throughout the year. The Corps hopper dredge Essayons dredged in the bar channel, removing 590,945 CY at a cost of \$1,702,575. The Corps hopper dredge Yaquina dredged the entrance and Point Chehalis channel reaches, removing 357,167 cy at a cost of \$1,305,000 with 102,184 cy of dredged materials being placed in Half Moon Bay and 254,983 cy at the South Jetty disposal site. Dredged material was placed beneficially at the South Beach disposal site. The Engineer Research and Development Center finalized two technical reports on Grays Harbor for Seattle District. The two reports are titled "Breach History and Susceptibility Study, South Jetty and Navigation Project, Grays Harbor" and "Half Moon Bay, Grays Harbor, Washington Moveable-Bed Physical Model Study". NWS prepared plans and specifications for inner harbor maintenance dredging. Crab mitigation sites were surveyed for juvenile crab to determine mitigation credit. Supervised contract work.

Maintenance, contract: The FY 2004/05 clamshell-dredging contract for the maintenance of the Inner Harbor was completed at a cost of \$3,143,207. A total of 1,167,037 CY were disposed into the South Jetty and Pt. Chehalis disposal sites. On January 6, 2005 South Jetty Breach Fill maintenance contract was completed at a cost of \$73,198 to rehandle 22,779 cubic yards of sand from the mitigation stockpile to the breach fill.

## **7. LAKE CROCKETT, WA**

**Location.** The basin (and harbor of refuge) is on the western shores of Whidbey Island, Island County about 35 nautical miles north of Seattle, WA. The lake lies parallel to Admiralty Bay and is separated from it by a narrow strip of gravel beach. (See NOAA Survey chart 18441.)

**Existing project.** Provides for a mooring basin (and harbor of refuge) next to Lake Crockett with an area of about 6 acres and 25 feet deep at mean lower low water, connected with Admiralty Bay by a channel of the same depth and 200 feet wide, protected by a

## SEATTLE, WASHINGTON DISTRICT

breakwater; and navigation improvement by dredging, constructed under authority of Section 107, P.L. 86-645. Construction cost for this feature is recorded in Table 29-C (Keystone Harbor, Admiralty Inlet). The diurnal tidal range in Admiralty Bay is 8.4 feet, and the extreme range is about 16.5 feet. Project deepening and widening was completed in March 1993. For further details, see Annual Report for 1993. The project is located next to a state park and with the bounds of the Ebey's Landing National Historical Reserve.

**Local cooperation.** None required.

**Terminal facilities.** The Washington State Ferry System operates one publicly owned passenger and automobile ferry landing within the dredged basin is open for public use. The basin contains two publicly owned boat ramps open for public use. The ramps are adequate for recreational craft. The Washington State Ferry system is considering a Keystone-Port Townsend Terminus Improvement Project. The state is currently reviewing the feasibility of modifications to the existing ferry facilities. The improvement project addresses a need to accommodate larger ferries, with drafts 4-feet deeper than existing vessels, at the Keystone terminal when the current ferry is retired. Construction for ferry terminal improvements is scheduled to start in 2008. Maintenance dredging by the Corps is planned during FY06.

**Operations during fiscal year.** Maintenance, hired labor: Channel condition surveys were conducted during the year.

Maintenance, contract: A construction contract is planned for either hydraulic or mechanical dredging with material disposal as renourishment to the beach adjacent to breakwater.

### **8. LAKE WASHINGTON SHIP CANAL, WA**

**Location.** Entirely within city of Seattle and extends from Puget Sound through Shilshole Bay, Salmon Bay, Lake Union, Portage Bay, and Union Bay to deep water in Lake Washington. (See NOAA Survey Chart 18447.)

**Existing project.** Provides for a double lock and fixed dam from gated spillway and necessary accessory works, including fish ladder, at the Narrows at entrance to Salmon Bay, about 1.25 miles from deep water in Puget Sound; for a channel 34 feet deep and 300 feet wide from Puget Sound to

Burlington Northern Railway bridge, about 5,500 feet, with a passing basin 34 feet deep and log basin 8 feet deep at turn below railway bridge; then 34 feet deep and 150 feet to 200 feet wide to locks, about 900 feet; and a guide pier 600 feet long; for revetment of canal banks between locks and Lake Union and between Lakes Union and Washington; and for a channel 30 feet deep with a width of 100 feet from locks to Lake Union, 200 feet thence to Portage Cut, 100 feet through Portage Cut, and thence 200 feet wide through Union Bay to Lake Washington. Section included in project is about 10 miles long. Plane of reference is mean lower low water. Extreme tidal range is 19.3 feet. Range between mean lower low water and mean higher high water is 11.3 feet, and between mean lower low water and extreme low water is 4.6 feet. Ordinary fluctuation in upper pool is 24 inches; extreme fluctuation has been 3.6 feet. Principal features of double lock and dam are set forth in Table 29-K. Project was completed in 1934. (For further details, see Annual Report for 1935. For details relating to previous projects, see page 2003 of Annual Report for 1915, and page 1880 of Annual Report for 1938.)

**Local cooperation.** Fully complied with.

**Terminal facilities.** See Port Series No. 36. Surveys are displayed at U.S. Army Corps of Engineers, Water Resources Support Center, and Navigation Data Center.

**Operations during fiscal year.** Maintenance, hired labor: Locks were operated and maintained all year, conducting 14,800 lockings, passing 24,100 commercial vessels, 44,990 pleasure vessels, and 1.4 million tons of commerce. The more than 118,180 adult fish returned and there were 1,214,962 project visitors.

Maintenance, contract: Work has been completed on the Renovate Small Lock Guard Gates project; in addition, replacement of the large locks center miter gate pintle bearings has been completed (and the project closed). Facility personnel have completed replacement of the small locks west end miter gate pintle bearings and miter bars. Construction of Critical Project Security Program (CPSP) continued through FY05 with completion anticipated in FY06.

### **9. NEAH BAY, WA**

**Location.** On south side of the Strait of Juan de Fuca, about 6 miles east of Cape Flattery, at the entrance to the Strait from the Pacific Ocean, and about 80 miles west of Port Angeles, WA. (See

**REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR 2005**

NOAA Survey Charts 18480, 18484 and 18485.) The project is located at the Makah Indian Reservation in Clallam County.

**Existing project.** Provides for a rubble-mound breakwater about 8,000 feet long between Waadah Island and the westerly shore of the bay; reinforcement of existing rock revetment extending approximately 2,200 feet west from Baada Point, and about an 800-foot extension of the revetment westward. Tidal range between mean lower low water and mean higher high water is 8.2 feet. Project was completed in July 1956. (For further details, see Annual Report for 1957.) Also provides for marina breakwater, fish gap and adjacent clamming beach, construction completed in 1997 under authority of Section 107, Public Law 86-645.

**Local cooperation.** Fully complied with.

**Terminal facilities.** There are six wharves at Neah Bay, including two owned by the United States which are used by the Coast Guard, and four privately owned wharves, three of which are open to general public use to accommodate small commercial fishing vessels. In addition to the wharves, there is a public commercial fishing marina for 200 boats and a facility for dumping and rafting logs. The marina serves a seasonal mooring for WA Spill Response tug. Facilities are considered adequate for existing commerce.

**Operations during fiscal year.** Maintenance, hired labor: Hydrographic surveys were conducted in the vicinity of the fish gap. A study is underway to review the design memorandum of 1979 and determine the stability of the existing 8,000-foot breakwater.

Maintenance contract: None.

**10. PROJECT CONDITION SURVEYS**

Hydrographic surveys and inspections to determine navigation conditions at boat basins, small navigation projects, and channels not funded on a project basis for the current fiscal year. Soundings and visual inspections in subject areas are conducted in order to evaluate shoaling conditions. Hydrographic charts are prepared and distributed. Other work performed includes preparation and updating of base maps, channel alignments, and other computations needed to accommodate changes in vertical or horizontal datums. Fiscal year costs were \$302,039. Total costs to date are \$5,781,620.

**SURVEYS CONDUCTED**

Bellingham	Oct 2004, May 2005
Blaine	Nov 2004
Ediz Hook	Mar, Sep 2005
Lake Washington Ship Canal	Oct, Nov 2004 & Feb 2005
Port Angeles	Aug 2004
Port Townsend/Oak Bay	Oct, Nov 2004
Shilshole	Nov 2004
Tacoma	Apr 2005

**11. PUGET SOUND AND ITS TRIBUTARY WATERS, WA**

**Location.** Puget Sound is in the western part of Washington. Cities of Seattle, Tacoma, Olympia, Everett, Bellingham, and many small towns are on its bays and inlets. (See NOAA Survey Charts 18440, 18441, and 18448.)

**Existing project.** Maintenance of Puget Sound and its tributary waters by snagging and dredging; and removal, in cooperation with the U.S. Coast Guard and city of Seattle, of floating debris from the Seattle Harbor area. Work consists of collecting large pieces of drift, waterlogged pilings, logs and other debris considered hazardous to navigation from Puget Sound and Federally authorized channels. (For details relating to previous projects, see page 2003 of Annual Report for 1915 and page 1869 of Annual Report for 1938.)

**Local cooperation.** None required. Cities of Seattle, Tacoma, Olympia, Everett and Bellingham and the State of Washington are cooperating in a program for control of floating debris in their harbors and setting up collection sites for our debris vessel.

**Terminal facilities.** Terminal facilities at numerous localities on Puget Sound and its tributary waters are, in general, considered adequate for existing commerce.

**Operations during fiscal year.** Maintenance, hired labor: The debris vessel Puget operated continuously throughout Puget Sound and its tributary waters and removed approximately 1,000 tons of floating debris and hazards to navigation. Debris was off-loaded aboard barges at Lake Washington Ship Canal and disposed of by contract. Snagging operations were accomplished at Blaine Harbor, Bellingham Harbor, Swinomish Channel, Skagit Bay, Everett Harbor, Lake Washington Ship Canal, Lake Washington, Tacoma Harbor, Olympia Harbor, Duwamish River, and Elliott Bay. Puget also conducted vibracore

## SEATTLE, WASHINGTON DISTRICT

sampling on Olympia Harbor in Feb and Nov 05 for future dredging. Puget removed abandoned fishing nets at Blaine, as part of Puget Sound restoration work in June 05. Puget participated with the Coast Guard and Navy in a spill clean-up response exercise in Everett Harbor in Aug 05. Puget also, provided assistance to local Harbor Police and Fire Departments in response to cars in the water, boating accidents and boat fires on numerous occasions.

Maintenance, contract: Over 1,000 tons of harbor debris was disposed of at a cost of \$173,000. Contractor continues to recycle much of the debris, reducing the cost of disposal by contract. Remainder of debris is placed in a demolition landfill or recycled through other government agencies.

### **12. QUILLAYUTE RIVER, WA**

**Location.** The river is formed by the confluence of the Soleduck and Bogachiel rivers, in northwestern Washington, and flows westerly 5 miles to the Pacific Ocean at La Push, about 30 miles south of Cape Flattery. (See NOAA Survey Chart 18480.)

**Existing project.** Provides for: jetty 15 feet high on easterly side of river mouth and a dike on westerly side, to stabilize entrance; channel 10 feet deep and 100 feet wide extending 2,000 feet upstream from deep water; basin 10 feet deep, 300 to 425 feet wide, and 2,400 feet long upstream of channel; and maintenance of an ocean spit and training walls. Plane of reference is mean lower low water. Range between mean lower low water and mean higher high water at La Push is 8.3 feet. Extreme range is about 15 feet. The spit is nourished with dredged material in conjunction with channel dredging. The spit was rehabilitated with quarry rock in 1974, in 1979-80, and in 1982; in addition, a 500-foot breakwater section paralleling the channel and extending the spit was constructed. In 1995, the revetment on the downstream end of the ocean spit was extended 200 feet. In 1996, after the river breached the natural spit, the revetment on the ocean spit was extended approximately 1,700 feet to the north, and the boat basin training wall was raised from elevation +9.0 feet to elevation +16.0 feet, all under O&M authority and completed in February 1997.

**Local cooperation.** Fully complied with.

**Terminal facilities.** There is one Quileute Tribe-owned dock at La Push, near the mouth of the Quillayute River. There is also a protected boat basin owned by the Quileute Tribe Port Authority which is

used by fishing boats, pleasure craft and the U. S. Coast Guard, which has a separate pier.

**Operations during fiscal year.** Maintenance, hired labor: Hydrographic condition surveys were conducted, additional condition survey conducted to capture any shoaling that may have occurred after severe storm of February 3 – 4, 2006.

Maintenance, contract: None.

### **13. SEATTLE HARBOR, WA**

**Location.** Harbor at Seattle, WA, includes all waterways within city limits. Chief anchorage basin is Elliott Bay, an arm of Puget Sound. (See NOAA Survey Chart 18450.)

**Existing project.** Maintenance of East and West Waterways, 34 feet deep and 750 feet wide for 6,500 and 5,200 feet, respectively, from pier-head line in Elliott Bay, the 30-foot by 200-foot-wide channel from West Waterway to 1st Avenue South Bridge, and the 20-foot by 150-foot-wide channel from 1st Avenue South Bridge to 8th Avenue; dredging Duwamish Waterway 150 feet by 15 feet from 8th Avenue to a point about 1.4 miles above 14th Avenue South Bridge, and turning basin 500 by 250 feet and 15 feet deep at the upper end of the waterway; maintenance of East Waterway between upper end of 750-foot section and Spokane Street, 34 feet deep, 700 feet long and 400 feet wide, and a turning basin, including head of East Waterway at junction of waterways south of Chicago, Milwaukee, St. Paul & Pacific Railroad bridge, to 30 feet deep, after these sections of waterway are dredged by local interests to full project dimensions. Total length of all waterways included in project is about 7.5 miles. Plane of reference is mean lower low water. Range between mean lower low water and mean higher high water is 11.3 feet. Extreme tidal range is 19.3 feet. Project was completed in 1931, excluding maintenance of East Waterway above the 750-foot section. (For further details, see Annual Report for 1932.)

**Local cooperation.** Fully complied with. Local sponsor has no maintenance responsibility.

**Terminal facilities.** See Port Series No. 36. Surveys are displayed at U.S. Army Corps of Engineers, Water Resources Support Center, Navigation Data Center.

**Operations during fiscal year.** Maintenance, hired labor: Hydrographic condition surveys of the turning basin area and entire Duwamish waterway.

Maintenance contract: none.

#### **14. SWINOMISH CHANNEL, WA**

**Location.** An inland passage, 11 miles long, between Saratoga Passage and Padilla Bay, in northwestern part of Washington, about 60 miles north of Seattle. (See NOAA Survey Charts 18400, 18427 and 18421.)

**Existing project.** A channel 100 feet wide and 12 feet deep for 11 miles from deep water in Saratoga Passage to deep water in Padilla Bay, by dredging and dike construction where necessary; and removal of projecting rocky points of McGlenn and Fidalgo Islands obstructing navigation at "Hole-in-the-Wall". Plane of reference is mean lower low water. Range between mean lower low water and mean higher high water is 11.5 feet at south end of channel, 8.4 feet at north end, and 10 feet at La Conner. Extreme tidal range is about 19.5 feet at south end of channel and about 16 feet at north end. Project was completed in March 1965. (For further details, see Annual Report for 1965.)

**Local cooperation.** Fully complied with.

**Terminal facilities.** There are 18 wharves, docks, and piers on Swinomish Channel, all but 3 of which are privately owned. Of these, one is used for handling general cargo; five are used exclusively for moorage, unloading and servicing of fishing vessels; two are used for handling petroleum products; three facilities are used for log dumps; and two for handling non-metallic minerals. Three publicly owned facilities for launching; mooring, and servicing small craft are within the limits of the town of LaConner.

**Operations during fiscal year.** Maintenance, hired labor: Maintained project coordination with Swinomish Tribal Community, Port of Skagit County, Port of Anacortes, U.S. Coast Guard, and navigation users. Channel condition surveys were conducted. NWS assisted the Port of Anacortes with their proposal to perform maintenance dredging in the northern reach of the Federal navigation channel. Approximately 60,000 cubic yards of the dredged materials from Swinomish Channel would be placed beneficially in Fidalgo Bay at a Port-sponsored eelgrass enhancement site.

Maintenance, contract: None, as Swinomish Channel is considered a low use, shallow –draft navigation project.

#### **15. WILLAPA RIVER AND HARBOR AND NASELLE RIVER, WA**

**Location.** Willapa Harbor consists of lower reaches of Willapa River and Bay, a coastal inlet of Pacific Ocean about 30 miles north of mouth of Columbia River in Washington. Willapa River rises about 30 miles east of harbor, flows generally westerly, and empties into the bay. Naselle River enters the bay near its southerly end. (See NOAA Survey Chart 18504.)

**Existing project.** Provides for: channel over bar at mouth of Willapa Bay, 26 feet deep and at least 500 feet wide; channel 24 feet deep and 200 feet wide from deep water in Willapa Bay to foot of Ferry Street at South Bend, thence 300 feet wide to westerly end of narrows, thence 250 feet wide to forks of river at Raymond, including a cutoff channel 3,100 feet long at narrows and a closing dike at Mailboat Slough; channel 24 feet deep and 150 feet wide up south fork to deep basin above Cram Lumber Mill, and up north fork to 12th Street, with a turning basin 250 feet wide, 350 feet long, and 24 feet deep at latter point; channel 10 feet deep and 40 feet wide from deep water in Palix River to Bay Center dock, with widening at shoreward end to provide a small mooring basin; mooring basin 15 feet deep, 340 feet wide, and 540 feet long adjacent to port wharf at Tokeland; entrance channel at Nahcotta 10 feet deep and 200 feet wide, and mooring basin 10 feet deep, 500 feet wide, and 1,150 feet long, protected by a rubble-mound breakwater about 1,500 feet long; and removal of snags, piles, and other obstructions in navigable channel of Naselle River between Naselle and mouth. Project includes about 26 miles of channel from entrance through Willapa River forks, 2,800 feet of Palix River-Bay Center channel, and 9 miles of Naselle River upstream of U.S. Highway 101 Bridge. Plane of reference is mean lower low water. Tidal range between mean lower low water and mean higher high water is 8.9 feet at Toke Point, 9.9 feet at Raymond, 8.9 feet at Bay Center, and 10.8 feet near Naselle. Extreme range is 18 feet at Toke Point, 19.3 feet at Raymond, 16 feet at Bay Center, and 18 feet near Naselle. Project was completed in November 1958. (For further details, see Annual Report for 1959. For details relating to previous projects, see page 968 of Annual Report for 1910, page 2001 of Annual Report for 1915, and page 1861 of Annual Report for 1938.)

SEATTLE, WASHINGTON DISTRICT

**Local cooperation.** Fully complied with.

**Terminal facilities.** There are 24 wharves on Willapa River and Harbor, including 5 in Willapa Bay, 4 in Bay Center, 12 in Raymond and South Bend, and 1 in Tokeland. Two of the wharves at Raymond and South Bend are suitable for use by ocean-going vessels. One of the wharves is publicly owned and operated as a general cargo terminal, and the other is located at a sawmill. Shallow-draft vessels use the other wharves, including three that are publicly owned and operated. These facilities are considered adequate for existing commerce.

**Operations during fiscal year.** Maintenance, hired labor: Continued frequent condition surveys on the Willapa Harbor navigation features to report conditions to users and the U.S. Coast Guard. NWS performed routine coordination with the Port of Willapa Harbor and the Port of Peninsula. The Port of Peninsula performed clamshell maintenance dredging at Nahcotta Marina removing approximately 96,000 cubic yards of shoal materials with open water disposal. NWS discussed the feasibility of six Southwest Washington Port authorities forming a dredging cooperative to conduct more frequent maintenance dredging of Port berthing areas and Federal entrances.

Maintenance, contract: None.

**Shore Protection**

**16. SHOALWATER BAY SHORELINE EROSION, WA**

**Location.** The Shoalwater Bay Indian Reservation is located on State Route 105 on the north shore of the mouth of Willapa Bay, Pacific County, WA, approximately 104 miles southwest of Seattle, WA and 28 miles north of the mouth of the Columbia River.

**Existing project.** In 2001, following a storm at extreme high tide in March 1999, the Corps constructed a 1,700-foot-long shoreline flood berm on the Shoalwater Bay Indian Reservation as an advance measure under the Public Law 84-99 authority. A plan of improvement is being formulated to provide a long term solution to coastal storm damage and shoreline erosion in Willapa Bay affecting the Shoalwater Bay Indian Tribe. Storm events at extreme high tide have caused the Shoalwater Bay Indian Tribe to lose much of its intertidal shellfish habitat and experience uplands damage due to storm-generated ocean waves. Restoration of an eroded barrier dune on Graveyard Spit, together with extension of the existing shoreline flood berm to prevent storm wave overtopping and associated flooding, appears to be the most appropriate long-term solution to flood and coastal storm damage problems affecting the Shoalwater Reservation. Tidal range at nearby Toke Point between mean lower low water and mean higher high water is 8.92 feet.

**Local cooperation.** The Shoalwater Bay Indian Tribe must provide lands, easements, rights-of-way, and dredged material disposal areas necessary for implementation of the project, in accordance with the project authorization contained in Section 545 of the Water Resources Development Act of 2000.

**Operations during fiscal year.** New work, hired labor: Completed comprehensive geologic and hydrodynamic investigations and documented historic beach and bathymetric conditions/changes. Also completed draft engineering analysis and design appendix to decision document and preliminary plan formulation. Continued close coordination with the Shoalwater Indian Bay Indian Tribe and local community, which included a community meeting to explain results of comprehensive studies and design assumptions. Began preparation of decision document and environmental assessment.

New work, contract: None.

## **Flood Control**

### **17. COEUR D'ALENE RIVER (SOUTH FORK), WALLACE, ID**

**Location.** Project is located along the left bank of the south fork of the Coeur d'Alene River in Wallace, Idaho.

**Existing project.** The retaining wall, which lines the riverbank, is collapsing in stages. Approximately 700 feet of wall will be replaced with a mix of concrete and gabion walls. Project is functionally complete, with only closeout activities remaining.

**Local cooperation.** Under current cost sharing requirements, the local sponsor (city of Wallace) will provide 35 percent of project cost. A Project Cooperation Agreement (PCA) was signed on August 02, 2002.

**Operations during fiscal year.** New work, hired labor: Administered construction contract.

### **18. HOWARD A. HANSON DAM, WA**

**Location.** Green River, in northwestern Washington, flows westerly for 40 miles to Auburn, thence northerly 32 miles to its mouth in Elliott Bay at Seattle. Dam is at river mile 64, 6 miles southeast of Kanaskat, and 1 mile downstream from mouth of north fork. (See Geological Survey topographic sheet, "Cedar Lake Quadrangle, WA".)

**Existing project.** Rock-fill dam about 235 feet high, with gated spillway having a concrete weir at elevation 1,176 feet above mean sea level and top of gates at elevation 1,206, creating a reservoir with capacity of 106,000 acre-feet. Dam along crest is about 675 feet long. Project is designed to control flooding in Green River valley to alleviate agricultural and urban flood damage, and make possible further expansion of Seattle industrial area. It also supplements Tacoma water supply, which was included as betterment. Project was completed in June 1963. (For further details, see the Annual Report for 1963.) Under the dam safety assurance program, the reservoir outlet control tower and bridge were strengthened to withstand the maximum, credible earthquake. Work was completed in FY 1998.

**Local cooperation.** Fully complied with.

**Operations during fiscal year.** Maintenance, hired labor: Operation continued all year. Routine

maintenance was accomplished on roads, gages, debris booms, ditches, power line, and other project features. Stilling basin inspection was accomplished. Work continued on water quality and sediment surveys.

Maintenance contract: None

### **19. INSPECTION OF COMPLETED FLOOD CONTROL PROJECTS**

Inspections are made of Federally constructed local flood protection projects, which are maintained by local interests, and agencies responsible for their operation and maintenance are advised of any needed repairs. During the fiscal year, inspections were made on Chehalis River at Aberdeen, Dungeness River at Dungeness, Green River at Tukwila and Kent, Lummi Shore at Bellingham, Okanogan River at Omak and Oroville, Sammamish River at Redmond, Shelton Creek at Shelton, Skykomish and Wallace Rivers at Startup, Swinomish Channel at LaConner, American Lake, Wynoochee Dam and Yakima River at Yakima in Washington State; Lightning Creek at Clark Fork, Placer Creek at Wallace, Coeur d'Alene River at Coeur d'Alene, and St. Joe River at St. Maries in Idaho; and Clark Fork River at Missoula in Montana.

### **20. MUD MOUNTAIN DAM, WA**

**Location.** On White River, principal tributary of Puyallup River, near Mud Mountain, 28 miles above its confluence with Puyallup River, and 38 miles above mouth of Puyallup River. Dam is 6 miles upstream and southeast of Enumclaw, in northwestern Washington, and 38 miles east of Tacoma. (See Geological Survey topographic sheet "Cedar Lake Quadrangle, Washington".)

**Existing project** (including dam safety assurance improvements to date). Rock-fill dam, 700 feet long at crest elevation, rises 432 feet above bedrock. Reservoir has storage capacity of about 106,000 acre-feet. Flood control outlet works are in right abutment and permit an authorized, controlled discharge of 17,600 cubic feet per second through two concrete-lined tunnels, with a maximum capacity discharge of 21,500 cfs. Uncontrolled discharge over the spillway is maximum capacity for 245,000 cubic feet per second. Project affords flood protection to White and Puyallup River valleys and protects Tacoma industrial district, in conjunction with Puyallup River project at Tacoma, against floods about 50 percent greater than maximum discharge of record. Original project was completed in June 1953. To date, the

## SEATTLE, WASHINGTON DISTRICT

Corps has constructed two vista areas, a picnic area, a wading pool, and playground adjacent to the project office, and a 1,760-foot trail leading to the lower vista area. Installation of an approximately 400-foot-deep concrete cutoff wall in the core of the dam was completed in November 1990 under the major rehabilitation program. Under dam safety assurance, spillway walls were raised, the dam crest was heightened, river diversion facilities required for excavation for the new tower were completed, the 9-foot diameter and the 23-foot diameter tunnels were refurbished, and a new reservoir outlet tower was constructed. This construction was completed in 1995.

**Local cooperation.** None required.

**Operations during fiscal year.** Maintenance, hired labor: Project features were operated all year. Maintenance was accomplished on dam facilities, intake structure, gages, debris booms, power lines, roads, ditches, hiking trails, vista observation deck, recreation area, and fish facilities. NWS continued to work jointly with Puget Sound Energy to maintain the Buckley Diversion Dam. Fish were transported from the fish collection facility to the upstream release point. To get a updated fish count by calendar year please access the Mud Mountain Dam website at [http://www.nws.usace.army.mil/PublicMenu/Doc\\_list.cfm?sitename=MM&pagename=FISHCOUNTS](http://www.nws.usace.army.mil/PublicMenu/Doc_list.cfm?sitename=MM&pagename=FISHCOUNTS). There were 87,351 project visitors.

Maintenance, contract: None

**Dam Safety Assurance.** New work, hired labor: Study to identify problem areas with the new dam safety features is complete. New studies include additional tunnel armor, modified gate cylinders, new intake stop logs, and demolition of old intakes. Supervised construction work.

New work, contract: None

## **21. SCHEDULING FLOOD CONTROL RESERVOIR OPERATIONS**

Flood control storage space was available in Hungry Horse Reservoir, MT, Flathead Lake, MT (controlled by Kerr Dam), Grand Coulee project, WA, Wynoochee Dam, WA, Upper Baker and Ross Reservoirs, WA. Issues relating to project operations were addressed. Regulation instructions were provided for flood control operations. Guidance forecasts were made during the flood control season, as required. Daily and/or hourly data were collected

and tabulated as required to check compliance with operating criteria. Coordination necessary in preparation or revision of reservoir regulation manuals was carried on during the year with agencies responsible for the operation of these projects. Fiscal year costs were \$463,746. Total costs to date have been \$8,312,379.

## **22. ST. MARIES, ID**

**Location.** Project is located on the left bank of the St. Joe River in city of St. Maries, in Benewah County, ID, in the central part of the state.

**Existing project.** The present earthen levee system and wooden floodwall, 770 feet long, have weakened to the extent that a catastrophic failure can be expected. The project replaced the existing timber floodwall with a driven sheet-pile wall and a concrete cap. Bank protection was placed 350 feet along the St. Joe River to replace riparian vegetation and to prevent future bank destabilization. Construction was completed late second quarter 04. RE crediting is underway with project close out scheduled for fourth quarter 05.

**Local cooperation.** Under current cost sharing requirements, the local sponsor (city of St. Maries) will provide 35 percent of total project cost. A Project Cooperation Agreement (PCA) was signed on April 23, 2003.

**Operations during fiscal year.** New work, hired labor: Completed construction. Project closeout underway

New work, contract: None.

## **23. STILLAGUAMISH RIVER, WA**

**Location.** Formed by confluence of its north and south forks at Arlington, in northwestern Washington, Stillaguamish River flows westerly 22 miles to Puget Sound, entering Port Susan through Hat Slough and South Pass, and Skagit Bay through West Pass. (See NOAA Survey Chart 18441, and Geological Survey Quadrangles Stanwood, Marysville, and Stillaguamish, WA.)

**Existing project.** Works to reduce bank erosion and channel changes on Stillaguamish River 15 miles between Arlington and head of Hat Slough, and on Cook Slough, 3 miles long, as follows: revetment at 26 places on river and Cook Slough; concrete weir (including a fishway) 275 feet long between steel sheet-pile piers at head of Cook Slough to limit flow

**REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR 2005**

through Slough; and two cutoff channels, each about 900 feet long, to eliminate sharp bends in Cook Slough. Tidal influence extends about 3 miles into improved section. Flood stages of 16 feet above low water at Cook Slough weir have been observed. Project was completed in July 1939. (For further details, see Annual Report for 1940.)

**Local cooperation.** None required.

**Operations during fiscal year.** Maintenance, hired labor: Utilized in-house labor to supervise removal of brush from approximately half of the Segments along bank slopes.

Maintenance, contract: Repaired 400 feet of bank erosion with equipment rental contracts on Segment 1.

**24. TACOMA, PUYALLUP RIVER, WA**

**Location.** Puyallup River has its source in glaciers on western slopes of Mount Rainier, flows northwesterly 50 miles, and empties into Commencement Bay, an arm of Puget Sound, at Tacoma, WA. Work covered by this project is on Puyallup River, within city limits of Tacoma. (See NOAA Survey Chart 18453.)

**Existing project.** A channel with a capacity of 50,000 cubic feet per second between East 11th Street Bridge and lower end of inter-county improvement, a distance of about 2.2 miles, by straightening channel, building levees, revetting channel and levees, and making necessary bridge changes. The 11th Street Bridge at lower end of project is 0.75 mile above mouth of Puyallup River. Diurnal tidal range at mouth of river is 11.8 feet and extreme range is 20 feet. Project was planned in conjunction with Mud Mountain Dam and affords protection against floods about 50 percent greater than maximum discharge of record. Project was completed in May 1950. (For further details, see Annual Report for 1950.) A real estate design memorandum, approved by Office of the Chief of Engineers on October 2, 1985, changed the project boundary to allow the Port of Tacoma to create a wetland adjacent to the project. This action resulted in the Corps acquiring approximately 2,450 linear feet of setback levee in fee simple. Maintenance funds to cover the increased length of the project have been provided by the Port of Tacoma for the project life. The Project Boundary was modified again on September 17, 2004 to include more wetland habitat on the left bank. The easement for the

setback levee was conveyed to the Corps on November 28, 2005.

**Local cooperation.** Fully complied with.

**Operations during fiscal year.** Maintenance, hired labor: Utilized in-house labor to supervise removal of brush and noxious weeds from the entire project along slopes of levee. Coordinated annual clean-up of Federal Property by removing abandoned boats, trailers and appliances as well as miscellaneous trash.

Maintenance, contract: Awarded equipment rental contracts to remove brush and noxious weeds.

---

**Multiple-Purpose Power Projects**

**25. ALBENI FALLS DAM, ID**

**Location.** On Pend Oreille River about 25 miles west of Sandpoint, in northern Idaho, and 50 miles northeast of Spokane, WA. Dam is 838 and 90 miles upstream from mouths of Columbia and Pend Oreille Rivers, respectively. (See Geological Survey topographic sheets, Sandpoint, ID, and Newport, WA.)

## SEATTLE, WASHINGTON DISTRICT

**Existing project.** Provides flood control, hydroelectric power, and related water uses on Pend Oreille River as a part of the multiple-purpose plan for development of Columbia River Basin, including recreation development. At the dam, an island and a low waterfall of about 7 feet formerly divided the river channel. Dam is a gated, gravity-structure spillway in left channel and a powerhouse having an installation of 42,600 kilowatts in right channel, creating a reservoir with a usable storage capacity of 1,153,000 acre-feet. Project was operational and essentially complete in December 1955, with miscellaneous contracts completing by June 1957. (For further details, see Annual Report for 1957.) Recreational facilities for public use have been provided at Albeni Cove, Priest River, Riley Creek, Johnson Creek, Trestle Creek, Strongs Island, and Springy Point. (Strongs Island was closed in FY 1982 to reduce O&M costs.) (Refer to Albeni Falls Master Plan dated June 1981 for further planned development.)

**Local cooperation.** None required.

**Operations during fiscal year.** Maintenance, hired labor: Reservoir was operated through its annual cycle of storage and release. Routine structural, mechanical, and electrical maintenance was performed on spillway, dam, powerhouse, and equipment. New equipment and instrumentation included data acquisition and control (GDACS), prototype hydraulic gate hoist, local annunciation infrastructure, and restroom upgrades at Riley Creek recreation area.

Maintenance, contract: Contracts awarded and continuing include update project master plan, hazardous water signage, Generic Data Acquisition and Control Systems (GDACS), Unit 1-3 auto start/stop, local annunciation, and spillway hoists..

### **26. CHIEF JOSEPH DAM - RUFUS WOODS LAKE, WA**

**Location.** On Columbia River in north central Washington, at river mile 545, just upstream from mouth of Foster Creek, 1.5 miles upstream from town of Bridgeport. (Geological Survey topographic sheet, Okanogan, WA, shows general locality.)

**Existing project.** A concrete gravity structure, which consists of a 19-gate spillway and a 27-unit powerhouse. The powerhouse has sixteen 88,274 kilowatt and eleven 95,000 kilowatt generators with nameplate capacity of 2,457,384 kilowatts. The

original 16 units were completed in 1962; additional units were completed in 1994. Recreation facilities were completed in 1972.

**Local cooperation.** None required.

**Operations during fiscal year.** Maintenance, hired labor, contract work: Routine structural, mechanical, and electrical maintenance work was performed on powerhouse, spillway, dam, equipment, recreation grounds, and wildlife mitigation areas. Prescribed testing for power system reliability continued. Contract work was completed for replacement of 11 generator circuit breakers (U17-U27). Phase II of station service transformer TO2 installation was completed by in-house workforce. Completed contract work for physical security enhancements (CISP) included new entrance gates, CCTV system, and IDS control system. Contract was awarded and on-site mobilization and construction work began for installation of gas abatement flow deflectors. Flow deflector work is expected to continue for the next 3 years. In FY05, \$1.6 million was executed in the design and award of the construction contract. Design work for the supervisory control console replacement was re-initiated. The feasibility study and economic analysis for units 1-16 turbine runner replacement was completed, and development of detailed plans and specs is expected in FY06.

Maintenance Contract: None

### **27. LIBBY DAM - LAKE KOOCANUSA, MT**

**Location.** On Kootenai River in Lincoln County, MT, about 17 miles upstream from Libby, and 219 miles upstream from confluence of Kootenai and Columbia Rivers. (See Geological Survey topographic sheet, Thompson Lakes, MT.)

**Existing project.** Provides storage for local flood control protection in Montana and Idaho, and main stem flood control in Lower Columbia River, hydroelectric power generation at site and at downstream plants through storage release. Project is operated as a unit of a comprehensive system for improvement of Columbia River basin for flood control, navigation, hydroelectric power, and other purposes. Lake Koocanusa is 90 miles long, backing water 42 miles into Canada and has a usable storage capacity of 4,965,000 acrefeet at 50 percent drawdown. Construction of dam was in accordance with a treaty between United States and Canada relating to international cooperation in water resource development of the Columbia River basin. Dam is a

straight-axis concrete gravity overflow type, 420 feet high, 3,055 feet long, with normal full pool at elevation 2,459 feet above mean sea level. Powerhouse has an initial installed capacity of 480,000 kilowatts from four hydroelectric generating units; first power went on line in 1975. A fifth generating unit (Libby Additional Units Project) was completed in 1984 with an additional capacity of 120,000 kilowatts. Fabrication of generators for units 6 through 8 is completed and parts have been stored at the site. Project is completed with units 1 through 5 operational. Units 6 through 8 have been reclassified inactive. The Libby Re-regulating Dam Project provided for construction of a re-regulating dam about 10 miles downstream of Libby Dam. Funds were allocated for a construction start in 1977; however, courts have found that Congress did not authorize construction of the dam. In FY 1982, all work was terminated due to court direction. The Libby Re-regulating Dam - Power Units Project provided for installation of three hydroelectric generating units at the re-regulating dam with 78,900 kilowatt installed capacity. (For further details, see Annual Report for 1995).

**Local cooperation.** Fully complied with.

**Operations during fiscal year.** Maintenance, hired labor: Reservoir was operated through its annual cycle of storage and release, with concurrent power production. Routine structural, mechanical, and electrical maintenance was performed on spillway, dam, powerhouse and equipment. Fish hatchery operation continued under contract with the State of Montana. Significant efforts are underway to update the 2000 Biological Opinion on sturgeon with a large being played by Libby Dam's staff biologist.

Maintenance, contract: Contracts are underway following: Turbine Oil replacement has been awarded to Castrol and intent is to install the Group 1 to match the existing turbine oil; Generic Data Acquisitions and Control System (GDACS) is currently being installed with in-house labor; control room soundproofing; Contracts awarded and continuing include design for main unit breaker replacements, design for exciter replacement, completion of buffer zone at Murray Springs Fish Hatchery; construction of Information Kiosk at left abutment; Alexander Creek cultural site protection work. Security upgrade is in progress and includes upgraded cameras, lighting sensors, and automated card key system.

## **Environmental**

### **28. CHERRY CREEK, ID**

**Location.** The project is located in northern Idaho, just west of the city of St. Maries in Benewah County.

**Existing project.** The project consists of replacing a periodically perched culvert structure and restoring Cherry Creek to a perennially free-running stream. This will allow fish to use the creek for spawning, migration and thermal refuge. Installed the culvert and completed of all project work.

**Local cooperation.** Under current cost sharing requirements, the local sponsor (Benewah County) will provide 35 percent of project cost. A Project Cooperation Agreement (PCA) was signed on March 18, 2002.

**Operations during fiscal year.** New work, hired labor: Initiated project close out.

New work, contract: None

### **29. CHIEF JOSEPH DAM DISSOLVED GAS ABATEMENT, WA**

**Location.** On Columbia River in north central Washington, at river mile 545, just upstream from mouth of Foster Creek, 1.5 miles upstream from town of Bridgeport.

**Existing project.** The ecosystem restoration project would construct flow deflectors in all 19 bays of the spillway at Chief Joseph Dam to abate total dissolved gas levels in the Columbia River downstream of the dam. Scheduled completion date is 2008.

**Local cooperation.** None required.

**Operations during fiscal year.** New work, hired labor: Completed plans and specifications and awarded contract for flow deflector installation on the spillway.

New work, contract: None.

### **30. CODIGA FARMS, TUKWILA, WA**

**Location.** Project is located in Tukwila, Washington, in King County, approximately 10 miles south of Seattle along the Duwamish River.

**Existing project.** Restores tidal and riverine hydrology to the site in the form of an off-channel

## SEATTLE, WASHINGTON DISTRICT

slough, estuarine marsh and riparian buffer.  
Construction was initiated in August 2003.

**Local cooperation.** Under current cost sharing requirements, the local sponsor (city of Tukwila and Washington Department of Natural Resources) will provide 25 percent of project restoration, 50 percent of associated recreation, and 100 percent of hazardous waste issues. A Project Cooperation Agreement (PCA) was signed on December 17, 2002.

**Operations during fiscal year.** Physical tasks to complete include installation of a permanent fence (currently there is only temporary construction fence), and park features; parking lot, trails, signage, picnic tables, etc. However, funds cannot be committed until cost-sharing and LERRD-crediting issues are resolved. The sponsor's land value is very low, thereby increasing their cash required, which they have not provided. The PDT will be working to resolve these issues, complete remaining construction, and close-out the project.

### **31. GREEN DUWAMISH RIVER ECOSYSTEM RESTORATION, WA**

**Location.** The Green Duwamish River Basin encompasses over 450 square miles in northwest Washington State. This river starts high in the Cascade Mountains and ends in enters Elliott bay in Seattle.

**Existing project.** This program provides for ecosystem restoration in the Green Duwamish River Basin and includes 45 restoration projects throughout the entire river basin. The program is estimated to take 10 years to complete.

**Local cooperation.** King County was the primary sponsor for the Feasibility Study. This effort includes the financial support of 17 cities throughout the basin and King County and as well as help from the state and federal resource agencies and tribes.

**Operations during fiscal year.** New work, hired labor. The permitting documentation for the Meridian Valley Creek was prepared and a PCA was signed between Seattle District and the City of Kent for construction of this project. Preparation of design for the Site 1 tidal marsh project and the Riverview Park habitat project continued.

New work, contract: The first of the projects, Meridian Valley Creek, was constructed, restoring 1200 linear feet of stream habitat.

### **32. HOWARD A. HANSON DAM, WA**

**Location.** Howard A. Hanson Dam is located on the Green River, in King County, about 35 miles southeast of Seattle in Western Washington State.

**Existing project.** The project will add ecosystem restoration and municipal and industrial (M&I) water supply to the existing flood control project and will meet Endangered Species Act (ESA) requirements necessitated by the listing of the Puget Sound Chinook Salmon. Phase I construction will raise the existing flood control reservoir pool 20 feet (from elevation 1,147 feet to elevation 1,167 feet) to increase storage by 20,000 ac-ft for water supply use. Water will be stored in the spring for M&I use in the summer and fall with no changes to flood control capacity. The additional storage will not require structural changes to the existing dam, but may require right abutment seepage remedies. Phase I will also include construction of a new full height fish passage facility and initiation of miscellaneous ESA and environmental restoration features (reconnection of side channels, gravel nourishment, planting of sedge meadows, and placement of large woody debris at multiple locations). Phase II construction will proceed only with the concurrence of the resource agencies, the sponsor, and the Muckleshoot Tribe. It will consist of raising the pool another 10 feet (to elevation 1,177 feet) to store an additional 2,400 ac-ft of M&I water, plus 9,600 ac-ft of low flow augmentation water, for a combined project total of 32,000 additional ac-ft of storage. Scheduled completion date is 2016.

**Local cooperation.** Under current cost sharing requirements, the local sponsor (city of Tacoma) will provide a cost share based on separable project purpose estimated to be 27 percent of total project cost. A Project Cooperation Agreement (PCA) was signed on July 19, 2003.

**Operations during fiscal year.** New work, hired labor: Continued S&A of the current Fish Passage construction contract. Continued development of design of future Fish Passage construction contracts. Prepared plans and specifications for fish habitat restoration and mitigation.

New work, contract: Awarded contract for miscellaneous fish habitat restoration and mitigation and performed S&A of the contract after award. Awarded miscellaneous A-E design contracts for fish passage plans and specs.

### **33. PUGET SOUND AND ADJACENT WATERS, WA**

**Location.** The Puget Sound and adjacent waters region encompasses over 15,000 square miles in northwest Washington State and incorporates all waters in the Puget Sound drainage basin and the Strait of Juan de Fuca.

**Existing project.** This program provides for ecosystem restoration in the Puget Sound area and to expedite construction of critical restoration projects by developing an identification and prioritization process using existing locally provided information, conducting project implementation studies, and constructing specific projects. The program will require approximately 10 years.

**Local cooperation.** Not required for the program; however, each project implemented under the program authority will be cost shared with the local sponsor providing 35 percent of project cost after a Project Cooperation Agreement is signed.

**Operations during fiscal year.** New work, hired labor. The Assistant Secretary of the Army for Civil Works submitted programmatic documents to the Office of Management and Budget. Decision document preparation continued for two more selected projects, Skokomish Estuary Restoration and Lake Washington Gravel Nourishment. The Corps participated with the Navy, NOAA, US Fish and Wildlife, Washington Dept. of Natural Resources, and the Northwest Straits Commission on a pilot exercise to establish a training school for Dept. of Defense divers to safely remove derelict fishing nets from the environment. Two consultation conferences were conducted with regional stakeholders to identify priorities for future restoration.

New work, contract: The first of the implementation projects, Seahurst Park Beach Restoration, was constructed, restoring 1200 linear feet of critical shoreline in central Puget Sound.

### **34. RURAL IDAHO**

These projects are a joint effort of Walla Walla and Seattle Districts. The Seattle District projects follow:

#### **COOLIN, ID**

**Location.** This project is located in Bonner County in the town of Coolin, Idaho. Coolin is located at the southern end of Priest Lake,

approximately 20 miles north of HW 2. The project area resides in the 1<sup>st</sup> Congressional District.

**Existing project.** The purpose of this project is to replace and update the septic system to a safe and operable level, minimizing the environmental impacts of system leakage into Priest Lake.

**Local cooperation.** Under current cost-sharing requirements, the local sponsor (Coolin Sewer District) will provide 25 percent of design and construction cost.

**Operations during fiscal year.** Final work was completed early in FY 2005 and we are currently in final close out.

#### **ST. MARIES, ID**

**Location.** St. Maries is located approximately 30 miles south of I-90 in Benewah County, Idaho. The project area resides in the 1<sup>st</sup> Congressional District.

**Existing project.** The purpose of this project is to design and fix the City of St. Maries water distribution lines reconnecting water service to 23 users by means of slip lining and/or pipe replacement to update the system to a safe and operable level.

**Local cooperation.** Under current cost-sharing requirements, the local sponsor (City of St. Maries) will provide 25 percent of design and construction cost.

**Operations during fiscal year.** Final work was completed early in FY 2005 and we are currently in final close out.

#### **Bonnors Ferry, ID**

**Location:** Bonnors Ferry is located on US 95, at the intersection with the Kootenai River, approximately 30 miles north of Sandpoint, in northern Idaho. The project area resides in the 1<sup>st</sup> Congressional District.

**Existing project,** The purpose of this project is to purchase and install water meters and incidental piping for City of Bonnors Ferry service area in order to decrease the demand for a limited water supply.

**Local cooperation.** Under current cost-sharing requirements, the local sponsor (City of Bonnors Ferry) will provide 25 percent of design and construction cost.

## SEATTLE, WASHINGTON DISTRICT

**Operations during fiscal year.** Purchasing of water meters was initiated and installation has begun.

### **35. RURAL MONTANA**

These projects are a joint effort of Omaha and Seattle Districts. The Seattle District projects follow:

#### **DRUMMOND, MT**

**Location.** Drummond is located adjacent to I-90 approximately 50 miles east of Missoula in Granite County, Montana. The project area resides in the 1<sup>st</sup> Congressional District.

**Existing project.** The purpose of this project is to design and construct an appropriate fix for Drummond's sewer lines by means of slip lining and/or pipe replacement to update the system to a safe and operable level.

**Local cooperation.** Under current cost-sharing requirements, the local sponsor (Town of Drummond) will provide 25 percent of design and construction cost.

**Operations during fiscal year.** Design was completed and construction was initiated and expected to be completed next fiscal year

#### **GRANT CREEK AT MISSOULA, MT**

**Location.** Grant Creek flows south, adjacent to Highway 93, and crosses Interstate 90 in the northern portion of the city of Missoula, MT.

**Existing project.** Provide flood damage protection to the Mullan Trail subdivision and other adjacent properties and to restore a degraded system with habitat improvement features.

**Local cooperation.** Under current cost-sharing requirements, the local sponsor (Missoula County) will provide 25 percent of design cost. A Project Cooperation Agreement (PCA) was signed on June 16, 2003.

**Operations during fiscal year.** Engineering was completed and initiated required environmental and real-estate documentation which was handed over to FEMA and the Sponsor because construction funding came from FEMA. Corps may participate in limited construction next FY.

### **36. SWEENEY CREEK, WA**

**Location.** The proposed project is located on Sweeney Creek above Howard Hanson Dam in the Green River watershed, approximately 35 miles southwest of Seattle, WA.

**Existing project.** Replace two perched culverts with a bridge and regrade the streambed to approximate the natural conditions, which existed prior to construction of the road fill and culverts. This will allow current resident fish passage into the upstream reach of the creek for immediate spawning and rearing. This restoration project is an early-action endeavor under the larger Green-Duwamish River ecosystem restoration study. Completion of project work is scheduled for 2005.

**Local cooperation.** Under current cost sharing requirements, the local sponsor (city of Tacoma) will provide 35 percent of project cost. A Project Cooperation Agreement (PCA) was signed on August 21, 2002.

**Operations during fiscal year.** New work, hired labor: Initiated final close out.

New work, contract: None.

### **37. UNION SLOUGH, WA**

**Location.** The proposed project is located on the left bank of Union Slough, Snohomish River, near Everett, WA.

**Existing project.** The restoration project will restore fish and wildlife habitat, which has been adversely affected by the past construction of the Everett Harbor and Snohomish River Navigation Project. It includes the construction of a new 6,800-foot setback levee around the entire 93-acre site, construction of about 2,800 feet of fish access channels to interior locations, filling the borrow ditches behind the abandoned levee, and construction of three breaches and a 180-foot long bridge across each breach. All new construction will be landscaped. Project is two thirds complete with final completion in 2007.

**Local cooperation.** Under current cost sharing requirements, the local sponsor (city of Everett) will provide 25 percent of project cost. A Project Cooperation Agreement (PCA) was signed on May 16, 2003.

**Operations during fiscal year.** New work, hired labor: Contract design work.

---

**Environmental activities (Section 1135, Public Law 99-662, as amended; Section 206 Public Law 104-303).**

See Table 29-M.

---

## **General Investigations**

### **38. SURVEYS**

Fiscal year costs were \$348,339 for flood damage prevention studies, \$305,772 for shoreline protection studies, \$780,134 for special studies, \$348,558 for review of authorized projects, \$133,705 for miscellaneous activities, and \$137,098 for coordination with other agencies and non-Federal interests, a total of \$2,053,606. In addition, contributed funds were expended for the following: \$135 for flood damage prevention studies, \$49,866 for review of authorized projects, and \$54,748 for coordination with other agencies and non-Federal interests, a total of \$104,749.

### **39. COLLECTION AND STUDY OF BASIC DATA**

The work programmed for collection and study of basic data covers international water studies, flood plain management services, and hydrologic studies. Work on international water studies included checking Kootenay Lake storage computations to determine compliance of Fortis BC with orders of International Joint Commission, and coordination with International Kootenay Lake and Osoyoos Lake Boards of Control in enforcement of International Joint Commission orders. Technical assistance was provided other Federal and non-Federal agencies and Indian tribes in flood hazard evaluation, flood reduction methods, and related services as requested. Fiscal year costs were \$23,523 for international water studies, \$75,366 for flood plain management services, and \$10,305 for hydrologic studies, a total of \$109,194.

### **40. PRECONSTRUCTION ENGINEERING AND DESIGN**

#### **Centralia, WA**

The city of Centralia lies in west central Washington at the confluence of the Chehalis and

Skookumchuck Rivers, about midway along the Chehalis River from its source in the Willapa Hills to its mouth at Aberdeen in Grays Harbor. Floods of record on Skookumchuck, Newaukum, and Chehalis Rivers occurred in February 1996.

The plan of improvement authorized in P.L. 99-662 would substantially reduce flooding in the Skookumchuck River valley for the 22 miles between Skookumchuck Dam and the river mouth, including a major portion of Centralia, and provide minor reductions along the Chehalis River downstream from Centralia for about 20 miles to Oakville. The improvement, as recommended in the feasibility report, consisted of structural modifications (flood control outlet tunnel and spillway gate), which would enable the existing, private water supply dam to provide flood control storage during winter months.

Preconstruction Engineering and Design (PED) was started in FY 1988 to refine the project design recommended in the feasibility report. In FY 1990, refinement of project design to a less costly, gated spillway sluice and reevaluation of hydrology, existing local levees and embankments, estimated flood damages, and potential flood reduction benefits were completed. Studies determined the Skookumchuck Dam modification no longer appeared economically justifiable and further work was suspended. In FY 1992 a wrap-up report presenting results of the technical analyses completed to date was provided to local governments.

Following the severe flooding in the Centralia-Chehalis area in 1996, there was a renewed public interest in flood damage reduction. Using state and local funding sources, Lewis County reviewed past study efforts and developed a revised flood damage reduction plan that would combine the authorized dam modification with overbank excavation and flow bypass measures. The revised project would provide substantial benefits to both Centralia and Chehalis and appeared to be economically justified. In July 1998, Lewis County requested resumption of the PED for the project with a view toward preparing a General Reevaluation Report and Environmental Impact Statement for an expanded project. Work resumed soon thereafter.

Accomplishments during the fiscal year included completion and approval of the final General Reevaluation Report (GRR) Final Environmental Impact Statement (FEIS) and Chiefs Report for the project. The Chief's Report was signed on September 27, 2004. Pre-construction, Engineering and Design (PED) has been initiated and the development of a

**SEATTLE, WASHINGTON DISTRICT**

Project Management Plan (PMP) and Design agreement has begun. Fiscal year costs were \$125,630. Total cost to date is \$8,027,072.

**Stillaguamish River Basin, WA**

Stillaguamish River Basin encompasses the area in northwestern Washington from the reaches of the river's north and south forks westerly to Port Susan and Skagit Bay about 45 miles north of Seattle.

The cumulative effects of industry, urbanization, agriculture, historic forest practices, and hydraulic modifications have significantly impaired environmental quality in the basin ecosystem. The result is noticeable fish and wildlife degradation.

Work under Preconstruction Engineering and Design (PED) commenced in late FY 2001, addressing the recommendations of the feasibility report. This proposes restoration features at ten sites within the basin, which would provide critical salmon habitat, including spawning, rearing, refugia, and estuarine habitats.

Accomplishments during the fiscal year include the continuation of discussions for possible PED cooperation with the Stillaguamish Tribe. Fiscal year costs were \$1,936. Total costs to date have been \$52,034.

**Other Activities**

**41. GENERAL REGULATORY FUNCTIONS**

Permit Evaluation	\$4,065,884
Enforcement	246,723
Appeals	1,678
Compliance	256,723
EIS	50,000
TOTAL	\$4,621,008

1. Excludes \$2,000 Coast Guard funds expended.
2. Includes \$56,582 appropriated and expended for previous project. Excludes \$13,000 Coast Guard funds expended.
3. Includes \$1,092 appropriated and expended for previous project.
4. Includes \$418,209 appropriated and expended for previous projects. Excludes \$43,000 Coast Guard funds expended.
5. Includes \$5,869 for previous project and \$120,000 for Maintenance and Operation of Dams and Other Improvements of Navigable Waters, appropriated and expended.
6. Includes \$1,180,500 expended under Productive Employment Appropriation Act of 1983 (P.L.98-8).

**SEATTLE, WASHINGTON DISTRICT**

7. Includes \$4,881,882 appropriated for former project, \$18,128,287 for current project which includes \$3,530,000 PED, \$124,945 for recreation facilities at completed project (Code 710), and \$113,134 for previous project. Excludes \$161,909 Navy funds and \$6,000 Coast Guard funds.
8. Includes \$4,881,882 expended for former project, \$18,119,430 for current project which includes \$3,530,000 PED, \$124,945 for recreation facilities at completed project (Code 710), and \$113,134 for previous project. Excludes \$161,909 Navy funds and \$6,000 Coast Guard funds.
9. Includes \$37,415 for previous projects and \$3,923,511 for Maintenance and Operation of Dams and Other Improvements of Navigable Waters, appropriated and expended. Excludes \$409,660 Emergency Relief funds and \$57,000 Public Works Administration funds expended.
10. Excludes \$111,000 Public Works Acceleration Act funds expended.
11. Excludes \$3,418,000 contributed by Port of Grays Harbor in fulfilling requirements of local cooperation.
12. Includes \$117,750 appropriated and expended for recreation facilities at completed project (Code 710).
13. Includes \$779,655 for recreation facilities at completed project (Code 710) and \$485,002 for previous projects, appropriated and expended. Excludes \$246,567 expended by State of Washington and \$742,071 expended by King County. Excludes \$192,516 Public Works Administration funds expended.
14. Includes \$1,631,195 (1916 to 1936) and \$338,163 subsequently appropriated and expended under Maintenance and Operation of Dams and Other Improvements of Navigable Waters.
15. Previous project.
16. Includes \$64,996 appropriated and expended for previous project.
17. Excludes Navy funds expended on dredging river channel in 1944 and Coast Guard funds expended for channel dredging in 1948 and 1949.
18. Includes \$3,349,600 appropriated and expended for East Waterway.
19. Includes \$2,262,975 contributed for East Waterway.
20. Includes \$2,188,536 expended for East Waterway.
21. Excludes \$1,000 Coast Guard funds expended.
22. Includes \$228,084 appropriated and expended for previous projects. Excludes \$40,000 Coast Guard funds and \$192,314 Emergency Relief funds expended.
23. Includes \$309,177 appropriated and expended for previous projects. Excludes \$78,532 Public Works Administration funds expended.
24. Includes \$6,597 expended for previous projects.
25. Includes \$37,048,061 appropriated and expended for original project and \$1,263,773 appropriated and expended for Dam Safety Assurance.
26. Includes \$66,678 appropriated and expended under Maintenance and Operation of Dams and Other Improvements of Navigable Waters.
27. Includes \$2,000,000 contributed for original project and \$9,742 for Dam Safety Assurance.
28. Includes \$13,182,063 appropriated for original project, \$87,785 appropriated for recreation facilities at completed project (Code 710) and \$83,335,227 appropriated for Dam Safety Assurance. Excludes \$26,000 Emergency Relief funds.
29. Includes \$13,182,063 expended for original project, \$87,785 expended for recreation facilities at completed project (Code 710) and \$83,296,207 expended for Dam Safety Assurance. Excludes \$26,000 Emergency Relief funds expended.
30. Includes \$198,578 appropriated and expended under Maintenance and Operation of Dams and Other Improvements of Navigable Waters.
31. Excludes \$281,000 Works Progress Administration funds and \$85,999 Emergency Relief funds expended.
32. Includes \$5,035 appropriated and expended for recreation facilities at completed project (Code 710).
33. Includes \$370,000 appropriated for current project (Riley Creek Recreation Area), \$30,769,614 for original project, and \$971,947 for recreation facilities at completed project (Code 710). Excludes \$136,736 Public Works Acceleration Act funds for recreation facilities at completed project (Code 710).
34. Includes \$207,799 expended for current project (Riley Creek Recreation Area), \$30,769,614 for original project, and \$971,947 for recreation facilities at completed project (Code 710). Excludes \$136,736 Public Works Acceleration Act funds expended for recreation facilities at completed project (Code 710).
35. Includes funds appropriated for project O&M (\$85,922,261), Special Recreation Use Fees (\$174,776), Maintenance and Operation of Dams and Other Improvements of Navigable Waters (\$1,875,446), BPA/COE Merged, CAT 390 (\$20,064,224) and BPA-4045 Large Capital Sub agreements, CAT 300 (\$2,633,164).
36. Includes funds expended for project O&M (\$85,896,005), Special Recreation Use Fees (\$174,776), Maintenance and Operation of Dams and Other Improvements of Navigable Waters (\$1,875,446), BPA/COE Merged, CAT 390 (\$18,485,286) and BPA-4045 Large Capital Sub agreements, CAT 300 (\$2,163,052).
37. Includes \$144,338,252 appropriated and expended for original project, \$395,855,000 for additional units, and \$147,983 for recreation facilities at completed project (Code 710). Excludes \$58,000 Public Works Acceleration Act funds for recreation facilities at completed project (Code 710).
38. Includes funds appropriated for project O&M (\$203,476,357), Maintenance and Operation of Dams and Other Improvements of Navigable Waters (\$774,561), BPA/COE Merged, CAT 390 (\$73,117,551), and BPA-4045 Large Capital Sub agreements, CAT 300 (\$22,419,992).
39. Includes funds expended for project O&M (\$200,320,554), Maintenance and Operation of Dams and Other Improvements of Navigable Waters (\$774,561), BPA/COE Merged, CAT 390 (\$70,508,655), and BPA-4045 Large Capital Sub agreements, CAT 300 (\$17,849,490).
40. Includes \$484,753,143 appropriated and expended for original project, \$42,221,634 for additional units, \$16,276,363 for reregulating dam, and \$475,000 for power planning.
41. Includes funds appropriated for project O&M (\$93,484,278), Maintenance and Operation of Dams and Other Improvements of Navigable Waters (\$774,561), BPA/COE Merged, CAT 390 (\$35,962,264), and BPA-4045 Large Capital Sub agreements, CAT 300 (\$3,273,690).
42. Includes funds expended for project O&M (\$93,154,571), Maintenance and Operation of Dams and Other Improvements of Navigable Waters (\$774,561), BPA/COE Merged, CAT 390 (\$33,981,169), and BPA-4045 Large Capital Sub agreements, CAT 300 (\$2,980,592).

**AUTHORIZING LEGISLATION**

<b>See Section in Text</b>	<b>Date Authorizing Act</b>	<b>Project and Work Authorized</b>	<b>Documents</b>
	Mar. 2, 1907	A north jetty 9,000 feet long.	Rivers and Harbors Committee Doc. 2, 59th Cong., 2d Sess.
	Mar. 2, 1907	The 18-foot channel.	H. Doc. 507, 59th Cong., 1st Sess.
	June 25, 1910	Extend north jetty 7,000 feet; length of south jetty fixed at 13,734 feet	Rivers and Harbors Committee Doc. 29, 61st Cong., 2d Sess.
	June 25, 1910	A 6-foot channel above Cosmopolis.	H. Doc. 1125, 60th Cong., 2d Sess.
	Aug. 8, 1917	Dredging in bar channel.	H. Doc. 1729, 64th Cong., 2d Sess.
	Jan. 21, 1927	Dredging in bar channel.	H. Doc. 582, 69th Cong., 2d Sess.
	Aug. 30, 1935	Reconstruct north and south jetties to an elevation of 16 feet above mean lower low water.	Rivers and Harbors Committee Doc. 2, 74th Cong., 1st Sess.
	Aug. 30, 1935	Maintain 26-foot channel below Aberdeen (as authorized by Public Works Administration Dec. 11, 1933) and combining projects for Grays Harbor and bar entrance and Grays Harbor, inner portion, and Chehalis River under a modified project for Grays Harbor and Chehalis River	H. Doc. 53, 73rd Cong., 1st Sess. Rivers and Harbors Committee Doc. 2, 74th Cong., 1st Sess.
	Dec. 22, 1944 as amended	Construction, operation, and maintenance of recreation facilities.	P.L. 78-534
	Mar. 2, 1945	Maintain 30-foot depth in channel from deep water in Grays Harbor to Port of Grays Harbor Commission terminal, which was deepened from 26 to 30 feet with Navy funds.	Report in Office, Chief of Engineers
	June 30, 1948	14-foot channel to Bay City; breakwater at Westhaven; and maintenance of Westhaven entrance channel.	H. Doc. 635, 80th Cong., 2d Sess.
	Sep. 3, 1954	Dredging and maintenance of a 30-foot channel and turning basin from Aberdeen to Cosmopolis.	H. Doc. 412, 83d Cong., 2d Sess.
	Sep. 3, 1954	Additional breakwater, 1,400 feet long, at Westhaven Cove.	H.Doc. 30, 84th Cong., 1st Sess.
	July 14, 1960 as amended	Westhaven Cove small boat basin.	Sec. 107, P.L. 86-645. Authorized by Chief of Engineers Feb. 7, 1979
	Nov. 17, 1986	Improve project features with accompanying fish mitigation.	P.L. 99-662
<b>7.</b>		<b>LAKE CROCKETT, WA</b>	
	Mar. 2, 1945	Small-boat basin.	H. Doc. 303, 77th Cong., 1st Sess.
	Dec. 22, 1944 as amended	Construction, operation, and maintenance of recreation facilities.	P.L. 78-534
	July 14, 1960 as amended	Change authorized channel depth from -18 mean lower low water to -25 mean lower low water by dredging.	Sec. 197, P.L. 86-645 Authorized by Chief of Engineers Nov. 7, 1988
<b>8.</b>		<b>LAKE WASHINGTON SHIP CANAL, WA</b>	
	June 25, 1910	Provides for a double lock and fixed dam with gated spillway and necessary accessory works at entrance to Salmon Bay, dredging a channel from locks to deep water in Puget Sound, and excavation by local interests of a channel from locks into Lake Washington.	H. Doc. 953, 60th Cong., 1st Sess.
	Mar. 4, 1913		
	Aug. 8, 1917	Dredging below locks and revetting canal banks.	H. Doc. 800, 64th Cong., 1st Sess.
	Sep. 22, 1922	Increased dimensions of channel between Puget Sound and locks and a 600-foot extension of lower guide pier.	H. Doc. 324, 67th Cong., 2d Sess.
	June 26, 1934 1	Operating and care of locks and dam provided for with funds from War Department appropriations for Rivers and Harbors.	
	Aug. 30, 1935 2	Enlarge channel between locks and Lake Washington.	H. Doc. 140, 72d Cong., 1st Sess.
	Dec. 22, 1944 as amended	Construction, operation, and maintenance of recreation facilities.	P.L. 78-534
	July 24, 1956	Government Locks to be known as Hiram M. Chittenden Locks.	P.L. 84-779
<b>9.</b>		<b>NEAH BAY, WA</b>	
	June 20, 1938	Rubblestone breakwater.	Rivers and Harbors Committee Doc. 51, 75th Cong., 2d Sess.
	Sep. 3, 1954	Reinforcement of existing revetment.	H. Doc. 404, 83d Cong., 2d Sess.

**REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR 2005**

**TABLE 29-B AUTHORIZING LEGISLATION**

<b>See Section in Text</b>	<b>Date Authorizing Act</b>	<b>Project and Work Authorized</b>	<b>Documents</b>
<b>11.</b>	July 13, 1892	<b>PUGET SOUND AND ITS TRIBUTARY WATERS, WA</b> Maintenance of the rivers tributary to Puget Sound by snagging and dredging, and removal of floating debris from Seattle Harbor.	Annual Report for 1893, page 3425
<b>12.</b>	July 3, 1930	<b>QUILLAYUTE RIVER, WA</b> Jetty (5 feet high) on easterly side of mouth, and a dike on westerly side, to stabilize entrance.	H. Doc. 125, 71st Cong., 1st Sess.
	Mar. 2, 1945	Maintenance dredging to provide a channel 6 feet deep and of suitable width from ocean to within river mouth.	H. Doc. 218, 78th Cong., 1st Sess.
	Sep. 3, 1954	Raising jetty to 15 feet; channel 10 by 100 feet, 2,000 feet long; moorage basin. 3	H. Doc. 579, 81st Cong., 2d Sess.
<b>13.</b>	Mar. 2, 1919	<b>SEATTLE HARBOR, WA</b> Maintenance of East and West Waterways 750 feet wide and 34 feet deep, and of Duwamish Waterway 20 feet deep and 150 feet wide as far south as Eighth Avenue South Bridge.	S. Doc. 313, 65th Cong., 3d Sess.
	Mar. 3, 1925	Enlargement of Duwamish Waterway.	H. Doc. 108, 68th Cong., 1st Sess.
	July 3, 1930		H. Doc. 126, 71st Cong., 2d Sess.
	Aug. 30, 1935	Maintenance of East Waterway between 750-foot section and Spokane Street, and turning basin at junction of East and Duwamish Waterways.	H. Doc. 211, 72d Cong., 1st Sess.
	Oct. 12, 1996	East Waterway channel deepening.	P.L. 104-303
<b>14.</b>	July 13, 1892	<b>SWINOMISH CHANNEL, WA</b> Channel 4 feet deep and 100 feet wide, and dike construction.	H. Doc. 31, 52d Cong., 1st Sess., and Annual Report for 1892, p. 2752
	Aug. 30, 1935	Enlargement of channel to present project dimensions.	S. Committee Print, 73d Cong., 1st Sess.
	Oct. 23, 1962	Removal of navigation hazards at "Hole-in-the-Wall".	H. Doc. 499, 87th Cong., 2d Sess.
<b>15.</b>	July 27, 1916	<b>WILLAPA RIVER AND HARBOR AND NASELLE RIVER, WA</b> Channel 24 feet deep, 200 feet wide in Willapa River, and 150 feet wide in the forks.	H. Doc. 706, 63d Cong., 2d Sess.
	Aug. 30, 1935 2	Maintenance of channel over bar to a depth of 26 feet and minimum width of 500 feet.	Rivers and Harbors Committee Doc. 41, 72d Cong., 1st Sess.
	Aug. 30, 1935 4	For cutoff channel at Narrows.	Rivers and Harbors Committee Doc. 37, 73d Cong., 2d Sess.
	Mar. 2, 1945	Channel from deep water in Palix River to Bay Center dock.	H. Doc. 481, 76th Cong., 2d Sess.
	Sep. 3, 1954	Widen Willapa River channel to 360 and 250 feet between South Bend and the forks; Tokeland and Nahcotta basins; and Naselle River clearance. Willapa River and Harbor re-designated as Willapa River and Harbor and Naselle River.	H. Doc. 425, 83d Cong., 2d Sess.
<b>17.</b>	Dec. 11, 2000	<b>SHOALWATER BAY, TOKELAND, WA</b> Coastal erosion reduction.	Sec. 545, WRDA 2000 P.L. 106-541
<b>18.</b>	Jul. 24, 1946	<b>COEUR D'ALENE RIVER (SOUTH FORK), WALLACE, ID</b> Replace approximately 700 feet of retaining wall.	Sec. 14, P.L. 79-526 Authorized by Chief of Engineers May 8, 2003
<b>19.</b>	May 17, 1950	<b>HOWARD A. HANSON DAM, WA</b> Eagle Gorge flood control dam on Green River.	H. Doc. 271, 81st Cong., 1st Sess.
	Aug. 6, 1958	Redesignation of project as Howard A. Hanson Dam.	P.L. 85-592
<b>21.</b>	June 22, 1936	<b>MUD MOUNTAIN DAM, WA</b> Flood control dam on White River.	S. Committee Print, Puyallup River, WA, 74th Cong., 2d Sess.

**TABLE 29-B AUTHORIZING LEGISLATION**

<b>See Section in Text</b>	<b>Date Authorizing Act</b>	<b>Project and Work Authorized</b>	<b>Documents</b>
	Dec. 22, 1944 as amended	Construction, operation, and maintenance of recreation facilities.	P.L. 78-534
<b>23.</b>	June 30, 1948 as amended	<b>ST. MARIES, ID</b> Replace existing timber floodwall with a driven sheet-pile wall with a concrete cap.	Sec. 205, P.L. 80-858 Authorized by Chief of Engineers July 14, 2003
<b>24.</b>	June 22, 1936	<b>STILLAGUAMISH RIVER, WA</b> Improvement of flood channel by clearing and bank revetment at 26 sites; concrete weir at head of Cook Slough; and 2 cutoff channels in Cook Slough.	H. Doc. 657, 71st Cong., 3d Sess.
	June 28, 1938	Maintenance of improvements.	P.L. 75-761
<b>25.</b>	June 22, 1936	<b>TACOMA, PUYALLUP RIVER, WA</b> Channel improvement to protect people and industrial section of city of Tacoma.	S. Committee Print, Puyallup River, WA, 74th Cong., 2d Sess.
	Dec. 22, 1944 as amended	Construction, operation, and maintenance of recreation facilities.	P.L. 78-534
<b>26.</b>	May 17, 1950	<b>ALBENI FALLS DAM, ID</b> Multi-purpose dam with powerhouse.	S. Doc. 9, 81st Cong., 1st Sess.
	Dec. 22, 1944 as amended	Construction, operation, and maintenance of recreation facilities.	P.L. 78-534
	Dec. 22, 1944 as amended	Modernize recreation area at Riley Creek.	P.L. 78-534
<b>27.</b>	July 24, 1946	<b>CHIEF JOSEPH DAM - RUFUS WOODS LAKE, WA</b> Multi-purpose dam and powerhouse on Columbia River at Foster Creek.	H. Doc. 693, 79th Cong., 2d Sess.
	June 30, 1948	Redesignation of the project as Chief Joseph Dam.	P.L. 858, 80th Cong., 2d Sess.
	July 9, 1952	Designation of reservoir as Rufus Woods Lake.	P.L. 469, 82d Cong., 2d Sess.
	Dec. 22, 1944 as amended	Construction, operation, and maintenance of recreation facilities.	P.L. 78-534
	Oct. 22, 1976 as amended	School facilities for education of dependents of construction personnel.	P.L. 94-587
	May 4, 1977		P.L. 95-26
<b>28.</b>	May 17, 1950	<b>LIBBY DAM - LAKE KOOCANUSA, MT</b> Multi-purpose dam and powerhouse, and reregulating facilities.	H. Doc. 531, 81st Cong., 2d Sess.
	Nov. 7, 1966	School facilities for education of dependents of construction personnel, Libby projects.	P.L. 89-789
	Jan. 2, 1968	Airport facility at Kelley Flats, MT.	P.L. 90-239 5
	Aug. 13, 1968	Design standards for relocation of Montana State Highway 37 to be those adopted by State of Montana pursuant to provisions of Highway Safety Act of 1966	P.L. 90-483 6
	June 19, 1970	Participation with State of Montana in construction, operation and maintenance of fish hatchery facilities.	P.L. 91-282 7
	Dec. 31, 1970	Designation of lake formed by the waters impounded by Libby Dam as Lake Koocanusa.	P.L. 91-625
	Dec. 31, 1970	Design and construction of sewage collection and sewage treatment facility as part of relocation of municipal facilities of Rexford, MT; and compensation for railroad employees suffering long-term economic injury through reduction of income as result of the relocation of rail transportation facilities due to the construction of Libby Dam	P.L. 91-611
	Mar. 7, 1974	Phase I design memorandum stage for installation of power generating facilities at Libby Reregulating Dam.	S.Doc. 29, 93d Cong., 1st Sess. P.L. 93-251

**TABLE 29-B AUTHORIZING LEGISLATION**

<b>See Section in Text</b>	<b>Date Authorizing Act</b>	<b>Project and Work Authorized</b>	<b>Documents</b>
	Mar. 7, 1974	Construction of fish production measures to compensate for fish losses attributed to the project, and for acquisition of necessary real estate, construction of access roads and utilities (amends P.L. 91-282 by increasing limitation from \$750,000 to \$4,000,000).	P.L. 93-251
	Mar. 7, 1974	Acquisition of land (not to exceed \$2,000,000) for prevention of wildlife grazing losses caused by the project.	P.L. 93-251
	Mar. 7, 1974	Reimbursement (not to exceed \$350,000) to Boundary County, ID, for reconstruction of Deep Creek Bridge made necessary by duration of high flows during drawdown operations at Libby Dam.	P.L. 93-251
	Mar. 7, 1974	Compensation (not to exceed \$1,500,000) to Drainage Districts and owners of leveed and unleveed lands in Kootenai Flats, Boundary County, ID, for damages caused by duration of higher flows during drawdown operations at Libby Dam.	P.L. 93-251
	Oct. 22, 1976	Amends P.L. 93-251 by increasing limitation from \$350,000 to \$380,000 for reimbursement to Boundary County, ID, for reconstruction of Deep Creek Bridge.	P.L. 94-587
	Nov. 17, 1988	Alleviate low water impact on existing facilities and protect Indian archeological sites exposed during course of operations, at an estimated cost of \$750,000.	H. Doc. 1098, 100th Cong., 2d Sess. P.L. 100-676
<b>29.</b>		<b>CHERRY CREEK, ID</b>	
	Oct. 12, 1996	Aquatic ecosystem restoration.	Sec. 206, P.L. 104-303 Authorized by Chief of Engineers Aug. 20, 2002
<b>30.</b>		<b>CHIEF JOSEPH DAM DISSOLVED GAS ABATEMENT, WA</b>	
	July 24, 1946	In conjunction with Fish and Wildlife Services, investigate operational and structural gas abatement measures.	H. Doc. 693, 79th Cong., 2d Sess.
<b>31.</b>		<b>CODIGA FARMS, WA</b>	
	Nov. 17, 1986 as amended	Environmental restoration.	Sec. 1135, P.L. 99-662 Authorized by Chief of Engineers June 23, 2003
<b>32.</b>		<b>DUWAMISH and GREEN RIVER BASIN, WA</b>	
	Dec. 11, 2000	45 Habitat restoration projects throughout the Duwamish Green River Basin. The mouth of the river empties into Elliot Bay in Seattle.	Section 101(b) WRDA 2000 PL 106-541. Chief of Engineers Report dated 29 December 2000.
<b>33.</b>		<b>HOWARD A. HANSON DAM, WA</b>	
	Aug. 17, 1999	Environmental mitigation, restoration, and protection.	Sec. 101(b) (15) WRDA 1999 P.L. 106-53
<b>34.</b>		<b>PUGET SOUND AND ADJACENT WATERS RESTORATION, WA</b>	
	Dec. 11, 2000	Environmental mitigation, restoration, and protection.	Sec. 544 WRDA 2000 P.L. 106-541
<b>35.</b>		<b>RURAL IDAHO, ID</b>	
	Aug. 17, 1999	Environmental infrastructure.	Sec. 595 WRDA 1999 P.L. 106-53
<b>36.</b>		<b>RURAL MONTANA, MT</b>	
	Aug. 17, 1999	Environmental infrastructure.	Sec. 595 WRDA 1999 P.L. 106-53
<b>37.</b>		<b>SWEENEY CREEK, WA</b>	
	Oct. 12, 1996	Aquatic ecosystem restoration.	Sec. 206, P.L. 104-303 Authorized by Chief of Engineers

Port Gamble Harbor, WA	Completed	1953	11,911	20	13,337
Port Orchard Bay, WA 5	Completed	1928	42,804		-
Port Townsend, WA	Completed	1999	480,899	21	118,656
Prototype Breakwater Test Program, WA 1	Completed	1985	1,461,590		-
Shilshole Bay, Seattle, WA 6	Completed	1962	2,575,091	22	-
Skagit River, WA	Completed	1950	102,330	23	36,258
Squalicum Small Boat Harbor, Bellingham, WA 1	Completed	1981	1,744,025	24	-
Tacoma Harbor, WA	Completed	2001	2,383,891	25	1,557,020 26
Waterway Connecting Port Townsend and Oak Bay, WA	Completed	1987	73,322		378,753
Westhaven Cove Small Boat Basin, WA 1	Completed	1981	2,000,000	27	-

1. Authorized by Chief of Engineers under authority of Section 107, Public Law 86-645.

**REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR 2005**

2. Constructed by local interests at a cost of \$415,000. Excludes \$1,000 Coast Guard funds expended for new work. Corps of Engineers is responsible for maintenance.
3. Authorized by Chief of Engineers under authority of Section 111, Public Law 90-483.
4. Maintenance by Port of Port Angeles.
5. No maintenance required.
6. Maintenance by Port of Seattle.
7. Excludes \$457,200 contributed funds expended.
8. Excludes \$2,500 Coast Guard funds expended.
9. Excludes \$1,883,278 contributed funds expended.
10. Includes \$8,005 appropriated and expended for previous project.
11. Excludes \$2,184,766 contributed funds expended.
12. Excludes \$32,373 Emergency Relief funds expended.
13. Excludes \$390,753 contributed funds and \$3,000 Coast Guard funds expended.
14. Mitigation of shore damages study.
15. Excludes \$28,288 contributed funds and \$9,000 Coast Guard funds expended.
16. Excludes \$528,188 contributed funds expended.
17. Includes \$14,418 appropriated and expended for previous project.
18. Excludes \$21,260 contributed funds expended.
19. Excludes \$92,423 contributed funds expended.
20. Excludes \$15,000 Coast Guard funds expended.
21. Includes \$2,500 appropriated and expended for previous project.
22. Excludes \$1,570,886 contributed funds expended.
23. Includes \$159,585 appropriated and expended for previous project. Excludes \$51,609 Public Works Administration funds and \$1,147,208 contributed funds expended.
24. Includes \$5,347 appropriated and expended for previous projects. Excludes \$222,500 contributed funds expended.
25. Excludes \$1,230,035 contributed funds expended.

1. Authority for project expired October 27, 1968.
2. Authority for project expired July 1964.
3. De-authorized under authority of Section 1002, P.L. 99-662 dated November 17, 1986.
4. De-authorized under authority of Section 12, P.L. 93-251 dated March 7, 1974.
5. Authority for project expired in October 1952.
6. De-authorized under authority of Section 1001 (b) (2), P.L. 99-662 dated November 17, 1986, as amended.
7. De-authorized under authority of Section 1001 (b) (1), P.L. 99-662 dated November 17, 1986.
8. 2200 linear feet of revetment at Point Chehalis.
9. 16-foot channel from Cosmopolis to Montesano.
10. Deepening shoal area near Cannery Point from 10 to 13 feet.
11. Groin feature of the project.
12. Settling basin at upper end of existing Duwamish Waterway, about 1.4 miles above 14th Avenue South Bridge.
13. 5500-foot extension of training dike.
14. Preconstruction planning only.
15. Includes \$14,300 expended for restudy, FY 1970.
16. Includes \$18,700 expended for restudy, FY 1968-1973.

# WALLA WALLA, WA, DISTRICT

This U.S. Army Corps of Engineers (Corps), Walla Walla District (District), consists of all Columbia River drainage and tributaries thereto between the head of the McNary Reservoir (Lake Wallula) (river mile 345.4) and Umatilla Bridge (river mile 290.5) below McNary Lock and Dam,

except the Yakima River Basin above the Van Giesen Street Bridge (river mile 8.4) near Richland, WA. The primary tributary drainage area is the Snake River that includes more than 107,000 square miles in six states: Washington, Oregon, Idaho, Wyoming, and small portions of Nevada and Utah.

## Flood Control

### 1. COLUMBIA RIVER BASIN, LOCAL FLOOD PROTECTION PROJECTS

**Location.** Improvements included in this project are along the Columbia River and its tributaries.

**Existing project.** The Flood Control Act of 1950 approved a general comprehensive plan for the Columbia River Basin for flood control and other purposes based on plans in H. Doc. 531, 81st Congress, 2nd Session, and authorized \$75 million to be appropriated for partial accomplishment of certain projects. From that authorization, an amount (not to exceed \$15 million) was allotted for construction of local flood protection works throughout the Columbia River Basin, subject to conditions that all work undertaken pursuant to authorization would be economically justified prior to construction, and local cooperation specified in the Flood Control Act of 1936, as amended, should be required.

**Local cooperation.** Section 3, Flood Control Act of June 22, 1936, applies.

**Operations during the fiscal year (FY).** No projects were de-authorized.

### 2. INSPECTION OF COMPLETED FLOOD CONTROL PROJECTS

Federal law requires local interests to maintain and operate completed local protection projects in accordance with regulations prescribed by the Secretary of the Army. Inspections were made to determine the extent of compliance and advise local interests, as necessary, of measures required to correct deficiencies.

The FY costs were \$45,841. Total costs through September 30, 2005, were \$3,264,339.

### 3. JACKSON HOLE, WY

**Location.** This project is located on the banks of the Snake River, Teton County, west of Jackson, WY.

**Existing project.** On the Snake River, approximately 23.5 miles of Federally-constructed levees consist of the following: (1) On the right

bank: a series of levees, off-set levees, and bank protection structures, all with full riprap protection from 10 miles upstream of the Jackson-Wilson Bridge to 3.5 miles below the bridge for a total of 13.5 miles; and (2) On the left bank: a series of Federally-constructed levees and bank protection structures, all with full riprap protection, extending from 10 miles upstream of the Jackson-Wilson Bridge to 5 miles upstream. The project resumes 1.5 miles immediately upstream of the same bridge and continues to 3.5 miles below the bridge for a total of 10 miles. In addition, a series of Federal and non-Federal constructed levees, with a total length of approximately 5 miles, most having some or full riprap protection, are interspersed along both banks of the Snake River from Highway 26 Bridge to 4 miles downstream of the Jackson-Wilson Bridge.

The project also includes riprap-protected levees on the left and right banks of the Gros Ventre River. The left bank levee begins 1.5 miles west of Cattlemen's Bridge and extends 0.5 mile east of the same bridge. The right bank levee begins 0.5 mile west of Cattlemen's Bridge and extends 0.3 mile east of the same bridge.

The Project is authorized by Public Law (PL) 81-516, Flood Control Act of 1950, for flood control protection by channel improvements consisting of channel rectification, levees, and revetments along the Snake River in the vicinity of Wilson, WY. The PL 104-303 modified the original PL 81-516 to ensure the operation, maintenance, modifications, and additions to the project become Federal responsibility.

**Local cooperation.** Non-Federal sponsors pay the initial \$35,000 in cash or materials of any such costs expended in any 1 year, plus inflation as of the date of enactment of the Water Resources Development Act of 1986.

Since 1978, \$94,447,000 (adjusted to October 2005 price index) in potential flood damages has been prevented by the levees.

**Operations during FY.** Teton County, under their Local Cooperative Agreement, worked with the Corps performing levee maintenance. The FY costs were \$330,775. (See table 30-A, Cost and Financial Statement.)

The Water Resources Development Act of 2000 authorized the Upper Snake River Restoration Project. Congress added new start funding to the FY

03 budget. The project is located in and along a 22-mile stretch of the Upper Snake River near Jackson, WY, in Teton County. It is partially in and adjacent to Grand Teton National Park, the National Elk Refuge, and in close proximity to Yellowstone National Park. The project will restore fish and wildlife habitat that was lost as a result of construction, operation, and maintenance of levees constructed by Federal and non-Federal interests. Restoration measures include eco-fences, channel capacity excavation, spur dikes, anchored rootwads, rock grade control, and secondary channels, off-channel and channel stabilization pools. The project has a 14-year phased construction schedule and includes continuing construction, adaptive management, and monitoring to provide implementation flexibility. The FY 05 effort completed the rock grade structure, a separable element of Site 9. The FY 05 Construction General costs were \$638,000. (See table 30-A, Cost and Financial Statement.)

#### 4. LUCKY PEAK LAKE, ID

**Location.** This project is located on the Boise River in southwestern Idaho about 10 miles southeast of the city of Boise, ID. (See table 30-B for Authorizing Legislation of projects in the District.)

**Existing project.** The project includes a rolled earthfill dam about 250 feet above the streambed and 1,700 feet long at the crest, with a lake providing a total storage at upper operating lake level of 306,000 acre-feet. The project provides for flood control, irrigation, and recreation.

Construction of the existing project was initiated in November 1949 and completed in June 1961. Since 1961, \$661,552,000 (adjusted to October 2005 price index) in potential flood damages has been prevented by the project.

During a detailed study of outlet capacity and potential for adding hydropower to the existing project, a need for an auxiliary outlet became apparent. Construction of an auxiliary outlet was authorized in the Water Resource Development Act of 1976. In FY 78, an *Interim Feasibility Report on Modification of Lucky Peak Dam and Lake* (power facilities) was submitted to the Board of Engineers for Rivers and Harbors and approved. States, agencies, and the Chief of Engineers commented on the report to the Secretary of the Army. The report

was forwarded to the Office of Management and Budget in February 1982.

A license to construct and operate power facilities at the project was issued by the Federal Energy Regulatory Commission (FERC) (Project #2832) to the Boise Project Board of Control on June 10, 1980, and modified on October 9, 1980, and in 1982. Construction of the auxiliary outlet facility began in May 1984 and was completed in August 1986. Construction of modifications to the existing outlet tunnel and powerhouse excavation began in August 1986 and was completed January 1987. Powerhouse general contract construction began in April 1986. The project was completed and dedicated on October 7, 1988. Power on-line for all units was initiated on August 18, 1988. A Federally-authorized second outlet was de-authorized in FY 90.

Recreation facilities at Lucky Peak Lake consist of 20 picnic/day-use areas, 4 boat launch ramps, and 3 swimming areas. The FY visitation to Lucky Peak Lake was 774,863.

**Local cooperation.** None required.

**Operations during FY.** Operation and Maintenance: Normal operation and maintenance, which included the dam structures and recreation areas, continued. The FY costs were \$2,024,084. (See table 30-A, Cost and Financial Statement.)

#### 5. MILL CREEK, BENNINGTON LAKE, WA

**Location.** This project is located in and upstream from Walla Walla, WA, on Mill Creek, a tributary of the Walla Walla River. (See table 30-B for Authorizing Legislation of projects in the District.)

**Existing project.** The project includes an off-stream earthfill storage dam, about 125 feet above the streambed and 3,200 feet long at the crest, two concrete-lined outlet channels, an earthfill diversion dam, and diversion structures. The project provides for flood control and recreation. Authorizing legislation to provide a channel through the city of Walla Walla was added to the project in 1941. Recreation was added to the project purposes through the Federal Water Project Recreation Act of 1965.

Construction of the dam and appurtenant works was completed in 1942. Paving of the channel

through the city of Walla Walla was completed in 1966. Since 1942, \$61,326,000 (adjusted to October 2005 price index) in potential flood damages has been prevented by the combined storage and channel operation.

Rehabilitation of the existing project was initiated in FY 78 and completed in FY 79. The plan of rehabilitation included action to correct the seepage and internal erosion that has occurred during each subsequent filling of the reservoir. A cutoff wall was constructed but did not alleviate the seepage problem, thus requiring limited flood control use of the project. The seepage and internal erosion create a high vulnerability for dam failure.

Mill Creek/Bennington Lake offers visitors three day-use/picnic areas and one boat launch ramp. Visitation to Mill Creek/Bennington Lake for the FY was 278,053.

**Local cooperation.** None required.

**Operations during FY.** Operation and Maintenance: Normal operation and maintenance continued, which included regulation of water control structures and care of recreation areas. The FY costs were \$836,523. (See table 30-A, Cost and Financial Statement.)

**6. SCHEDULING FLOOD CONTROL RESERVOIR OPERATIONS**

Functional regulation of non-Corps projects was accomplished under several authorities. Regulation was accomplished as authorized under Section 7, Flood Control Act of 1944, and coordinated with the Bureau of Reclamation for Palisades, Little Wood, and Anderson Ranch Reservoirs, ID; and Bully Creek, Warm Springs, Agency Valley, and Mason Reservoirs, OR.

Flood control operations at Jackson Lake, WY, Arrowrock Reservoir and Lake Lowell, ID, were in accordance with formal agreements with the Bureau of Reclamation. Flood control regulation was accomplished under informal agreements for the Owyhee Reservoir, OR; and American Falls, Magic, Mackay, Cascade, and Deadwood Reservoirs, ID. Brownlee and Oxbow Reservoirs, OR, and Hells Canyon Reservoir, OR and ID, provided flood control regulation in accordance with provisions of the Federal Power Commission license to Idaho Power Company. The FY costs were \$384,671.

**Multiple-Purpose Projects, Including Power**

**7. COLUMBIA RIVER FISH MITIGATION PROGRAM (WALLA WALLA PROJECTS), OR, WA, AND ID**

**Location.** This project is located at Ice Harbor, Lower Monumental, Little Goose, and Lower Granite Locks and Dams on the lower Snake River in the State of Washington and McNary Lock and Dam on the Columbia River in the states of Oregon and Washington. (See table 30-B for Authorizing Legislation of projects in the District.)

**Existing project.** The eight Corps hydroelectric projects on the Columbia and lower Snake Rivers have been identified as a major contributing factor in causing mortality to downstream migrating juvenile salmon and steelhead. Without adequate bypass facilities to guide these juvenile fish away from the power turbines at the dams, mortalities incurred through project passage severely impact the commercial, recreational, and Indian fisheries. The Corps has recognized the need to reduce juvenile fish mortality and has undertaken bypass measures that include mechanized fish bypass systems with barge and truck transportation. Spill as an additional bypass route over the spillways has been used to divert fish from entering turbine units, but it is a significant adverse economic factor due to lost power revenues. Congress passed, and the President signed, the FY 89 Energy and Water Development Appropriation Act (PL 100-371), which mandated the expenditure of funds for the design, testing, and construction of new or improved fish bypass facilities for the Columbia River fish mitigation projects. Completion of bypass and transportation facilities will significantly increase the survival of migrating downstream juvenile fish. The mitigation study will determine the overall scope of the fish mitigation facilities for these Columbia and lower Snake River dams. The mitigation study project was added to the President's FY 91 budget.

The plan of improvement includes the following facilities: (1) Ice Harbor Lock and Dam (Ice Harbor): screens, new gantry crane, collection bypass facility, intake gate raise, spillway deflectors, surface bypass, and fish ladder temperature control; (2) Lower Monumental Lock and Dam (Lower Monumental): hold/load and collection bypass facility, screens, passive integrated transponder tag

(PIT-Tag) facility, barge load facility modifications, barges, gate raise modifications, gantry crane, fish ladder temperature control, and surface bypass; (3) Little Goose Lock and Dam (Little Goose): screens, gantry crane modification, collection bypass facility, outfall pipe, fish ladder temperature control, fallout fences, gate raise, deck screen modifications, PIT-Tag facility, and surface bypass; (4) Lower Granite Lock and Dam (Lower Granite) : juvenile fish facility, gantry crane, gate raise, outfall pipe, fish barges, screens, additional moorage facility, fish slot closures, juvenile fish facility improvements, barge exit modifications, deck screen modifications, fish ladder temperature control, surface bypass, PIT-Tag facility, and fallout fences; and (5) McNary Lock and Dam (McNary): gantry crane, screens, hold/load facility, gate raise modifications, tilted weirs fish ladder, maintenance facility, fish ladder exits, hold/load facility, adult/juvenile collection channel stoplogs, juvenile fish facility, surface bypass, and gantry crane modifications.

In response to the 1995 *Endangered Species Act, Section 7 Consultation Biological Opinion* issued by the National Marine Fisheries Service (NMFS), the District conducted a feasibility study (Lower Snake River Juvenile Salmon Migration Feasibility Study) to evaluate salmon migration problems on the lower Snake River. The objective of the study was to improve salmon migration conditions through the four Corps-operated dams and reservoirs on the lower Snake River. The study focused on how these dams could be changed to improve survival and recovery prospects for Snake River salmon stocks under the Endangered Species Act. The total completed cost of the study was \$31.1 million.

The District is currently managing a surface bypass and collection technology development effort that focuses on improving juvenile fish passage for endangered and threatened salmon migration past all Corps hydroelectric projects on the Columbia and lower Snake Rivers. It is an aggressive, nontraditional approach to prototype development that involves fast-track design, construction, testing, and evaluation.

The fully funded Federal project cost is estimated at \$682,700,000 for District projects.

**Local cooperation.** None required.

**Operations during FY.** The following improvements and studies were accomplished during FY 05:

- Completed replacement of the bearings on the Ice Harbor auxiliary water supply pumps. It was determined that the existing bearings were not adequate for the service conditions expected. The new bearings should provide extended service life.
- Completed design of the north shore fish ladder antennas at McNary. Improvements are required to better account for the fish in the ladder. Construction to be completed in FY 06.
- Completed fourth-year prototype testing of a stand-alone removable spillway weir (RSW) at Lower Granite. Limited data was collected in the spring due to low flow conditions. Due to court ordered summer spill, RSW performance with respect to the passage of fall chinook was collected for the first time.
- Completed installation of an RSW at Ice Harbor for the 2005 fish passage season. The RSW, in combination with basin and deflector modifications should improve spillway passage conditions and efficiencies. First year post-construction biological testing was also conducted to evaluate the efficiency of the RSW during both the spring and summer.
- Continued design of the Lower Monumental RSW. Construction to be initiated in FY 06.
- Initiated preliminary engineering design for surface passage alternatives at Little Goose and McNary.
- Several mitigation analysis studies continued throughout FY 05, including the Turbine Survival Study, Fish Ladder Transition Pool Evaluation, and Juvenile Separator Evaluation. Many multi-year research studies were also conducted; including Delayed Mortality Evaluation, Temperature Impacts on Adults, and Estuary PIT Tag Recovery.

- Conducted Juvenile Salmon Survival and Passage Efficiency Studies at Lower Monumental, Little Goose, and McNary. These studies estimate the survival and passage efficiency of juvenile fish through the various passage routes. The data is used to inform decisions on configuration improvements.
- Completed construction of the Ice Harbor juvenile PIT-tag monitoring facilities on the main transportation flume. The new system will improve detection of migrating PIT-tagged juveniles.
- Completed construction of Lower Monumental Fish Barge Loading Improvements.
- Completed construction of the Lower Monumental parapet wall. The parapet wall was required to prevent fish from jumping onto the powerhouse deck.
- Continued modifications to the extended submerged bar screens at Lower Granite and Little Goose. Modifications are required due to the interaction of dissimilar metals.
- Continued the McNary forebay temperature evaluation to alleviate or minimize water temperature gradients that develop in the forebay during the summer months.
- Continued development of the reconnaissance report to investigate the Columbia River flood control operations to determine what changes, if any, could benefit endangered species (particularly salmon).
- Initiated preliminary design for improvements to the Lower Granite Juvenile Bypass System (JBS). The existing JBS was the first to be constructed on the Snake River and there are many features that do not meet current criteria for the passage of juvenile salmon.

The FY costs were \$36,080,539. Total project costs are \$520,969,539. (See table 30-A, Cost and Financial Statement.)

## 8. DWORSHAK DAM AND RESERVOIR, ID

**Location.** The dam is on the North Fork of the Clearwater River, 1.9 miles above its junction with the Clearwater River, near Orofino, ID, and about 35 miles east of Lewiston, ID. (See table 30-B for Authorizing Legislation of projects in the District.)

**Existing project.** The project includes a dam, powerplant, public parks, and appurtenant facilities. The project provides for flood control, navigation, hydroelectric power generation, recreation, and area redevelopment. The reservoir has a normal operating range between the elevations of 1,600 and 1,445 mean sea level (msl). The reservoir has a gross storage capacity of 3,468,000 acre-feet (2 million acre-feet of which are effective for both local and regional flood control and for at-site and downstream power generation). In addition, the reservoir, which extends 59 miles into rugged and relatively inaccessible timberland, provided cost-effective transportation for moving marketable logs. The reservoir provides habitat for elk, deer, and other wildlife. The dam structure is about 3,287 feet long and about 717 feet above the streambed. Fish passage is not feasible due to the height of the dam. A hatchery has been built below the dam to assure continuance of anadromous fish runs. The powerhouse has two 90,000-kilowatt (kW) and one 220,000-kW generating units in operation for a capacity of 400,000 kW. Provisions had been made for three additional 220,000-kW generating units for an ultimate installed capacity of 1,060,000 kW.

A reconnaissance report justifying the feasibility and cost benefits for the addition of a fourth 200,000-kW generating unit was completed in FY 78. However, environmental and economic studies on additional generating units have been curtailed due to public opposition. Unit 4 is undeveloped. Units 5 and 6 were de-authorized in FY 90, and Unit 4 was de-authorized in FY 95. Principal project data are set forth in table 30-C.

Construction of the project began in July 1966. It was placed in operation in 1972 and completed in 1986. Since the project became operational in June 1972, it has prevented about \$2,836,000 (adjusted to October 2005 price index) in potential flood damages. Power generation through September 2005 was 54.83 billion kW hours.

At Dworshak Reservoir, recreation facilities consist of 12 day-use/picnic areas, 6 camp areas,

6 boats launches, and 2 swim areas. Total visitation to Dworshak Reservoir for the FY was 134,497.

**Local cooperation.** None required.

**Operations during FY.** Operation and Maintenance: Management of wildlife habitat browse continued on project lands to provide winter browse for elk and deer. During the FY, 1.74 billion kW hours of electrical power were generated by the three generating units. The FY costs were \$8,605,005. (See table 30-A, Cost and Financial Statement.)

## 9. ICE HARBOR LOCK AND DAM, LAKE SACAJAWEA, WA

**Location.** This dam is located on the Snake River, 9.7 miles above the river mouth at the head of Lake Wallula (McNary Reservoir) and 12 miles east of Pasco, WA. (See table 30-B for Authorizing Legislation of projects in the District.)

**Existing project.** The project includes a dam, powerplant, navigation lock, two fish ladders, recreation areas, and appurtenant facilities. The project provides navigation, hydroelectric power generation, recreation, and incidental irrigation. The reservoir has a normal operating range between elevations 440 and 435 msl. Lake Sacajawea extends upstream about 31.9 miles and provides slack water to Lower Monumental. The dam structure is approximately 2,822 feet long and approximately 130 feet above the streambed. The fish passage facilities include two fish ladders. The powerhouse has three 90,000-kW units and three 111,000-kW generating units in operation for a capacity of 603,000 kW.

The spillway dam is 590 feet long, and the overflow crest at elevation 391 msl is surmounted by 10 tainter gates, 50 feet wide and 52.9 feet high, that provide the capacity to pass a design flood of 850,000 cubic feet per second (cfs). The deck is at elevation 453 msl and provides a service road and track for a gantry crane. The navigation lock is a single-lift type with clear plan dimensions of 86 by 675 feet and a 16-foot minimum depth over the sills. A navigation channel 250 feet wide, 14 feet deep, and 41.6 miles long is provided from the mouth of the Snake River to the dam and from the dam to Lower Monumental. Principal data are set forth in table 30-C.

Construction of the original project began in December 1955. It was placed in operation in 1961 and completed in 1971. Construction of the additional generating units was started in 1971 and completed in 1981. Power generation through September 2005 was 90.62 billion kW hours.

Recreation areas on Lake Sacajawea include 11 picnic/day-use sites, 4 camping areas, 7 areas with boat launching, and 4 swimming areas. Total visitation on Lake Sacajawea for the FY was 326,698.

**Local cooperation.** None required.

**Operations during FY.** Operation and Maintenance: During the FY, 1.34 billion kW hours of electrical power were generated by the six generating units. Traffic through the navigation lock consisted of grains, petroleum products, fertilizer, wood products, and miscellaneous cargo and amounted to 3,518,700 tons during calendar year 2005. The FY costs were \$8,674,176. (See table 30-A, Cost and Financial Statement.)

## 10. LITTLE GOOSE LOCK AND DAM, LAKE BRYAN, WA

**Location.** The dam is 70.3 miles above the mouth of the Snake River and at the head of Lake Herbert G. West (Lower Monumental Reservoir), about 40 miles northerly of Walla Walla, WA, and 50 miles westerly of Lewiston, ID. (See table 30-B for Authorizing Legislation of projects in the District.)

**Existing project.** The project includes a dam, powerplant, navigation lock, fish ladder, and appurtenant facilities. The project provides for navigation, hydroelectric power generation, recreation, and incidental irrigation. The reservoir has a normal operating range between elevations 638 and 633 msl. Lake Bryan extends upstream about 37.2 miles and provides slack water to Lower Granite. The dam structure is 2,655 feet long and approximately 165 feet above the streambed. Fish passage facilities include one ladder with entrances on both shores and a fish channel through the spillway, which connects to the powerhouse fish collection system and south shore ladder. The powerhouse has six 135,000-kW generating units in operation for a capacity of 810,000 kW. The spillway dam is 512 feet long, and the overflow crest at elevation 581 msl is surmounted by eight tainter

gates, 50 feet wide and 60 feet high, that provide the capacity to pass a design flood of 850,000 cfs. The navigation lock is a single-lift type with clear plan dimensions of 86 by 668 feet and a 15-foot minimum depth over the sills. A navigation channel 250 feet wide, 14 feet deep, and 37.2 miles long is provided from the dam to Lower Granite. Relocations along the lake included 32 miles of Camas Prairie Railroad, 6.8 miles of county roads, 2.2 miles of state highways, and the Central Ferry Bridge. Principal project data are set forth in table 30-C.

Construction of the original project began in 1963. It was placed in operation in 1970 and completed in 1976. Construction of additional generating units started in 1974 and was completed in 1984. Power generation through September 2005 was 86.42 billion kW hours.

Lake Bryan provides seven day-use sites, five campgrounds, five boat launching areas, and two swimming areas. Total FY visitation was 198,618 for Lake Bryan.

**Local cooperation.** None required.

**Operations during FY.** Operation and Maintenance: During the FY, 2.03 billion kW hours of electrical power were generated by the six generating units. Traffic through the navigation lock consisted of grains, petroleum products, fertilizer, wood products, and miscellaneous cargo and amounted to 2,723,800 tons during calendar year 2005. The FY costs were \$5,792,860. (See table 30-A, Cost and Financial Statement.)

**11. LOWER GRANITE LOCK AND DAM,  
LOWER GRANITE LAKE, WA**

**Location.** This dam is at river mile 107.5 on the Snake River at the head of Lake Bryan (Little Goose Reservoir) and about 33 miles downstream from Lewiston, ID. (See table 30-B for Authorizing Legislation of projects in the District.)

**Existing project.** The project includes a dam, powerplant, navigation lock, fish ladder, appurtenant facilities, and includes approximately 8 miles of slack water levees along the Snake and Clearwater Rivers at Lewiston, ID. The project provides for slack water navigation, hydroelectric power generation, recreation, and incidental irrigation. The reservoir has a normal operating range between elevations 738 and 733 msl in Lewiston, ID, and Clarkston, WA.

Lower Granite Lake extends upstream approximately 38 miles and provides slack water to the confluence of the Snake and Clearwater Rivers. The dam structure is approximately 3,200 feet long and approximately 146 feet above the streambed. Fish passage facilities include one ladder with entrances on both shores with a fish channel through the spillway that connects to the powerhouse fish collection system and south shore ladder. The powerhouse has six 135,000-kW generating units in operation for a capacity of 810,000 kW. The spillway dam is 512 feet long, and the overflow crest at elevation 681 msl is surmounted by eight tainter gates, 50 feet wide and 60 feet high, which provide the capacity to pass a design flood of 850,000 cfs. The navigation lock is single-lift type with clear plan dimensions of 86 by 674 feet and 15-foot minimum depth over the sills. A navigation channel 250 feet wide, 14 feet deep, and 39.3 miles long is provided from the dam to the confluence of the Snake and Clearwater Rivers. Principal data are set forth in table 30-C.

Construction of the original project started in July 1965. It was placed in operation in 1975 and completed in 1984. Construction of additional generating units was started in 1974 and completed in 1979. Power generation through September 2005 was 77.54 billion kW hours. Approximately \$19,865,000 (adjusted to October 2005 price index) in potential flood damages has been prevented since the levees became functional.

Lower Granite Lake offers visitors 16 day-use/picnic sites, 6 sites with camping, 12 boat launch ramps, and 4 swimming areas. Total recreation visitation to Lower Granite Lake for the FY was 1,410,796.

**Local cooperation.** None required.

**Operations during FY.** Operation and Maintenance: During the FY, 1.91 billion kW hours of electrical power were generated by the six generating units. Traffic through the navigation lock consisted of grains, petroleum products, fertilizer, wood products, and miscellaneous cargo and amounted to 1,661,100 tons during calendar year 2005. The FY costs were \$9,385,610. (See table 30-A, Cost and Financial Statement.)

**Juvenile Fish Transportation Program.** As the first collector dam on the Snake River, Lower Granite is a primary component of the Juvenile Fish Transportation Program. Transport began in the late

1960s as a research program on how to bypass juvenile salmon and steelhead around dams and reservoirs of the Corps' Snake and Columbia River dams. Transport became an operational program in 1981 with collection and transport from Lower Granite, Little Goose, and McNary. Transport was expanded in 1993 to include Lower Monumental. Development and improvement of collection and bypass systems continues with a new collection system completed at McNary in 1994; a new bypass system completed at Ice Harbor in 1996; and extended-length submersible bar screens installed at Lower Granite, Little Goose, and McNary in 1996 and 1997. In 2003, a new RSW was tested at Lower Granite. A second RSW was tested at Ice Harbor Lock and Dam (a non-collector dam) in 2005.

The 2005 juvenile fish transport season was marked by river flows below average, but higher than river conditions noted in 2003 and 2004. Normal spring time river operations continued in 2005, although project spills for juvenile fish were severely curtailed as anticipated average spring runoff fell below 85 kcfs as per the 2004 *Endangered Species Act Section 7 Biological Opinion* issued by NOAA Fisheries (formerly NMFS). From June 20 to August 31 a Federal court ordered summer spill at all collector projects. For most of 2005, emphasis was placed on maximizing fish collection for transportation. During the court ordered spill period, emphasis was placed on a mix of fish transportation and in-river migration.

Juvenile fish collection at Lower Granite was 13,030,967 compared with 11,787,536 in 2004 and 6,184,228 in 2003. A total of 898,235 fish were bypassed back to the river in 2005 and 12,099,019 were transported. At Little Goose, a total of 6,725,081 juvenile salmon and steelhead were collected in 2005, compared to 5,067,503 collected in 2004. A total of 1,086,103 fish were bypassed back to the river in 2005, compared to 685 fish in 2004. A total of 5,620,313 juvenile fish were transported from Little Goose in 2005. At Lower Monumental, 1,491,718 juvenile salmon and steelhead were collected, compared to 1,330,487 in 2004. A total of 312,602 fish were bypassed from Lower Monumental in 2005, compared to 15,144 in 2004. A total of 1,177,706 juvenile fish were transported from Lower Monumental in 2005. Except during the court ordered spill period, voluntary spill for juvenile fish passage was restricted at Lower Monumental during 2005 due to the low flow year.

At McNary, normal operations are to bypass fish in the spring until approximately mid-June when collection and transport of summer migrants begin. Some marked fish were transported during the spring of 2005 for research purposes. A total of 5,187,123 juvenile salmon and steelhead were collected in 2005, compared to 8,658,400 in 2004. Approximately 2,229,925 of the fish collected were bypassed back to the river to meet fishery agency requirements. A total of 2,927,613 juvenile fish were transported from McNary in 2005.

A grand total of 26,434,889 juvenile salmon and steelhead were collected at all projects in 2005, compared to 26,843,926 in 2004. A total of 21,824,651 fish were transported in 2005, 82.6 percent of those collected. Of the fish transported, 21,709,193 were transported by barge (99.5 percent) and 115,458 were trucked (0.5 percent).

## 12. LOWER MONUMENTAL LOCK AND DAM, LAKE HERBERT G. WEST, WA

**Location.** This dam is on the Snake River at the head of Lake Sacajawea (Ice Harbor Reservoir), about 45 miles northeast of Pasco, WA, and 41.6 miles above the river mouth. (See table 30-B for Authorizing Legislation of projects in the District.)

**Existing project.** The project includes a dam, powerplant, navigation lock, two fish ladders, and appurtenant facilities. The project provides for navigation, hydroelectric power generation, recreation, and incidental irrigation. The reservoir has a normal operating range between elevations 540 and 537 msl. Lake Herbert G. West extends upstream approximately 28.7 miles and provides slack water to Little Goose. The dam structure is approximately 3,791 feet long and approximately 135 feet above the streambed. The fish passage facilities include two fish ladders, one at each end of the dam. The powerhouse has six 135,000-kW generating units in operation for a capacity of 810,000 kW. The spillway dam is 572 feet long, and the overflow crest at elevation 483 msl is surmounted by eight tainter gates, 50 feet wide and 60 feet high, that provide capacity to pass a design flood of 850,000 cfs. The deck is at elevation 553 msl and provides a service road and track for a gantry crane. The navigation lock is a single-lift type with clear plan dimensions of

86 by 666 feet and a 15-foot minimum depth of the sills. A navigation channel 250 feet wide, 14 feet deep, and 28.1 miles long is provided from the dam to Little Goose. Relocations along the lake included railroads and highways. Principal data are set forth in table 30-C.

Construction of the original project started in June 1961. It was placed in operation in 1969 and completed in 1976. Construction of the additional generating units started in 1975 and was completed in 1981. Power generation through September 2005 was 101.25 billion kW hours.

Lake West offers seven day-use areas, five areas offering camping, five boat launch areas, and one designated swimming beach. Total visitation on Lake West for the FY was 132,360.

**Local cooperation.** None required.

**Operations during FY.** Operation and Maintenance: During the FY, 2.05 billion kW hours of electrical power were generated by the six generating units. Traffic through the navigation lock consisted of grains, petroleum products, fertilizer, wood products, and miscellaneous cargo and amounted to 2,990,900 tons during calendar year 2005. The FY costs were \$8,849,851. (See table 30-A, Cost and Financial Statement.)

### 13. LOWER SNAKE RIVER FISH AND WILDLIFE COMPENSATION PLAN, WA, OR, AND ID

**Location.** This project is at various locations within the Columbia and Snake River drainages in the states of Idaho, Oregon, and Washington. (See table 30-B for Authorizing Legislation of projects in the District.)

**Existing project.** The project consists of a series of fish hatcheries, wildlife development areas, and purchase of off-site project lands for fishing and hunting access, and further habitat development. The project will compensate for loss of wildlife habitat and anadromous and resident fisheries due to impacts from the construction of four multipurpose dams and reservoirs on the lower Snake River (Ice Harbor, Lower Monumental, Little Goose, and Lower Granite).

The real estate design memorandum and feature design memorandums on all hatcheries and satellites,

the off-project wildlife lands, and the site selection report have all been approved. A final Environmental Impact Statement was filed with the Council on Environmental Quality on November 2, 1977. The Dworshak National Fish Hatchery Expansion, Irrigon, Hagerman, Lyons Ferry, Lookingglass, McCall, Sawtooth, Magic Valley, and Clearwater hatcheries (including their respective satellite facilities) are all in operation. Transfer actions were completed in FY 04 for Big Canyon and Pittsburg Landing. Captain John Rapids is scheduled to be completed by the end of FY 06. Fencing is complete at all wildlife development areas. Off-project land acquisition is 100-percent complete. Habitat development continues at many of these sites. A plan for woody riparian habitat development has been initiated to compensate for habitat losses resulting from the inundation of habitat. This will result in the creation of new riparian habitat areas. The compensation project is scheduled for completion in FY 10.

Estimated Federal cost for the project is \$261,000,000. The FY costs were \$885,524. Total project costs are \$235,878,524. (See table 30-A, Cost and Financial Statement.)

**Local Cooperation.** None required.

### 14. McNARY LOCK AND DAM, LAKE WALLULA, OR AND WA

**Location.** This dam is on the Columbia River, 292 miles above the mouth, near Umatilla, OR, and 3 miles above the mouth of the Umatilla River. (See table 30-B for Authorizing Legislation of projects in the District.)

**Existing project.** The project includes a dam, powerplant, navigation lock, two fish ladders, appurtenant facilities, and a system of levees and pumping plants. The project provides for slack water navigation, hydroelectric power generation, recreation, and incidental irrigation. The reservoir has a normal operating range between elevations 340 and 335 msl. Lake Wallula extends upstream approximately 64 miles and provides slack water to Ice Harbor. The dam structure is 7,365 feet long and approximately 183 feet above the streambed. Fish passage facilities include two fish ladders. The powerhouse has fourteen 70,000-kW generating units in operation for a capacity of 980,000 kW. The spillway dam is 1,310 feet long, and the overflow crest is at elevation 291 msl and is surmounted by

22 vertical lift gates, 50 feet wide and 51 feet high, which provide the capacity to pass a design flood of 2.2 million cfs. The navigation lock is a single-lift type with clear plan dimensions of 86 by 683 feet and a 15-foot minimum depth over the sills. A navigation channel (250 feet wide, 14 feet deep, and 32 miles long) is provided from the dam to the mouth of the Snake River. Relocations along the lake included railroad bridges over the Columbia and Snake Rivers in order to eliminate hazards to navigation. Principal project data are set forth in table 30-C.

Construction began in May 1947. It was placed in operation in 1953 and was completed in 1982. Power generation through September 2005 was 323.01 billion kW hours.

**Local cooperation.** None required.

**Operations during FY.** Operation and Maintenance: During the FY, 5.31 billion kW hours of electrical power were generated by the 14 generating units. Traffic through the navigation lock consisted of grains, petroleum products, fertilizer, wood products, and miscellaneous cargo and amounted to 6,651,800 tons during calendar year 2005. The FY costs were \$15,800,378. (See table 30-A, Cost and Financial Statement.)

Recreation areas on Lake Wallula include 19 sites offering day use or picnicking, 5 campgrounds, 14 boat launching ramps, and 9 swimming areas. The Pacific Salmon Visitor Information Center at McNary, staffed by park rangers, provides a regional overview of Corps efforts in salmon recovery issues. Total visitation on Lake Wallula for the FY was 4,086,791.

**15. SNAKE RIVER DOWNSTREAM FROM JOHNSON BAR LANDING, OR, WA, AND ID**

**Location.** This project is on the Snake River, downstream from Johnson Bar Landing, river mile 230. The Snake River, which is the largest tributary of the Columbia River, rises in Yellowstone National Park in western Wyoming, flows generally in a westerly direction for approximately 1,000 miles, and empties into the Columbia River, near Pasco, WA, 324 miles from the Pacific Ocean. (See table 30-B for Authorizing Legislation of projects in the District.)

**Existing project.** The River and Harbor Act of 1945 authorized construction of dams, as necessary, for power, incidental irrigation, and open channel improvements for purposes of providing slack water navigation and irrigation between the mouth of the Snake River and Lewiston, ID. That authorization modified previous authorizations only for the portion of improvement below Lewiston, ID. Acts of June 13, 1902, and August 30, 1935, as they pertain to open river improvement from Lewiston, ID, to Johnson Bar Landing, remain part of the existing project.

Improvements included in existing projects are Ice Harbor, Lake Sacajawea; Little Goose, Lake Bryan; Lower Granite; Lower Monumental, Lake Herbert G. West; and open-river improvement, Lewiston to Johnson Bar Landing. Each of the four locks and dams is described in an individual report, and cost and financial data for the entire project are shown on tables 30-A and D.

Ice Harbor, Lower Monumental, Little Goose, and Lower Granite are in full operation.

**Local cooperation.** None required.

**Terminal facilities.** On the Snake River from the mouth to Johnson Bar Landing, there are 18 privately-owned barge terminals in use for shipping grain, petroleum products, fertilizers, wood products, cement, and other general cargo. There are also 5 marinas and 28 small-boat launching ramps, all open to the public. The facilities serve slack water navigation to river mile 140, the site of Lewiston, ID. That slack water reaches the Lewiston, ID, and Clarkston, WA, area since the lake behind Lower Granite was filled in February 1975.

**Operations during FY.** See individual reports for Ice Harbor, Lower Monumental, Little Goose, and Lower Granite. On the Snake River from Lewiston, ID, to Johnson Bar Landing, reconnaissance and condition surveys were conducted and survey markers were maintained.

**16. RURAL IDAHO, ID, ENVIRONMENTAL INFRASTRUCTURE AND RESOURCE PROTECTION AND DEVELOPMENT PROGRAM**

**Location.** Projects are at various locations within the state of Idaho.

**Existing project.** The primary objective of this program is to provide design and construction assistance to non-Federal interests for carrying out water related environmental infrastructure and resource protection and development projects. Projects may include wastewater treatment and related facilities, water supply and related facilities, environmental restoration, and surface water resource protection and development. Projects are authorized under Section 595 of the Water Resources Development Act of 1999, PL 106-53, as amended.

**Local cooperation.** Local sponsors are responsible for 25 percent of costs associated with the projects.

**Operations during FY.** The following improvements were accomplished in FY 05: (1) Sewer line improvements with the City of Burley; (2) Wasterwater treatment plant upgrade design with the City of Rupert; and (3) Developed project cooperation agreement with City of Emmett for wastewater system improvements. The FY costs were \$1,463,746. (See table 30-A, Cost and Financial Statement.)

#### **17. MISCELLANEOUS WORK UNDER SPECIAL AUTHORIZATION**

##### **Flood control activities pursuant to Section 205, PL 858, 80th Congress, as amended:**

The FY costs were \$15,000 with three continuing flood control activities: (1) Section 205 coordination (\$7,000) and (2) Coppei Creek, WA (\$8,000). There were no new flood control activities.

##### **Emergency flood control activities-repair, flood fighting, and rescue work (PL 99, 84th Congress, and antecedent legislation):**

There were no Federal costs this FY.

##### **Emergency bank protection (Section 14, Flood Control Act of 1946, PL 526, 79th Congress):**

The FY costs were \$2,924 for Section 14 Coordination.

##### **Snagging and clearing of navigable streams and tributaries in interest of flood control (Section**

##### **208, Flood Control Act of 1954, PL 780, 83rd Congress):**

There were no FY costs for Section 208 Coordination.

##### **Project modification for the improvement of the environment (Section 1135(b), PL 99-662, as amended):**

The FY costs were \$146,687 for continuation of five environmental restoration projects and coordination funds including: (1) Coordination Account (\$10,000); (2) Walla Walla River, OR (\$60,184); (3) City of Richland Ecosystem Restoration (\$17,371); (4) Boise River at Eagle Island (\$10,066); and (5) Bennington Lake Diversion Dam, WA (\$49,066). There were no new section 1135 projects.

##### **Project modification for Aquatic Ecosystem Restoration (Section 206, PL 104-303, as amended):**

The FY costs were \$424,730 for continuation of seven aquatic ecosystem restoration projects and coordination account, including: (1) Coordination Account (\$11,000); (2) Ladd Marsh, OR (\$246,466); (3) Salmon River, ID (\$10,921); (4) Indian Creek Ecosystem Restoration, ID (\$130,444); (5) Twin Falls, ID (\$3,629); (6) Fox Creek, Huntsman Reach, ID (\$11,678); and (7) Camp Creek, OR (\$10,592).

#### **General Investigations**

#### **18. COLLECTION AND STUDY OF BASIC DATA**

During the FY, flood hazard data for a number of locations in the District were collected and analyzed. Flood information was provided to several Federal agencies; the states of Idaho, Oregon, and Washington; various cities and counties in those states; and some private organizations.

Total cost of collection and study of basic data during the FY was \$71,690, which included: Flood Plain Management Services (\$24,641); Technical Services (\$37,175); Quick Responses (\$5,874); and Special Studies (\$4,000).

**19. PRECONSTRUCTION, ENGINEERING,  
AND DESIGN**

None.

**20. SURVEYS**

**Little Wood River.** Lack of sponsor.

The total FY 05 costs for surveys were \$901,829, including Boise River (\$5,066); special studies [Walla Walla River Watershed (\$781,636)]; Miscellaneous Activities [Special Investigations, FERC Licensing Activities, North American Waterfowl Management Plan, and Interagency Water Resource Development (\$83,900)]; Coordination with other Federal Agencies (\$7,600); and Planning Assistance to States (\$23,627).

**TABLE 30-C PRINCIPAL DATA CONCERNING NAVIGATION LOCK,  
SPILLWAY DAM, POWERPLANT, AND IMPOUNDMENT**

Project		
Dworshak Dam and Reservoir, ID (see Section 8 of text)	<b>SPILLWAY DAM</b>	
	Type of Construction	Concrete Gravity
	Completed	September 1974
	Maximum Capacity	150,500 cfs <sup>1</sup>
	Crest Elevation	1,545 ft <sup>2</sup>
	Control Gates:	
	Type	Tainter
	Size, Width by Height	50 by 56.4 ft
	Number	2
	<b>POWERPLANT</b>	
	Length	428 ft
	Generating Units:	
	Number Installed	3
	Rating, Each	2 @ 90,000 kW <sup>3</sup> 1 @ 220,000 kW
	Total Capacity Installed	400,000 kW
	Space for Additional	3
	Rating, Each	3 @ 220,000 kW
	Total Potential Capacity	1,060,000 kW
	Maximum Structural Height	717 ft
	First Power-On-Line	March 1973
	<b>IMPOUNDMENT</b>	
	Elevations:	
	Normal Operating Range	1,600 to 1,445 ft
	Maximum	1,605 ft
	Flood Control Storage	2,000,000 ac-ft <sup>4</sup>
	Lake Length	53.6 mi <sup>5</sup>
Lake Water Surface Area at Elevation 1,600	17,090 ac <sup>6</sup>	
Length of Shoreline	175 mi	
Ice Harbor Lock and Dam, WA (see Section 9 of Text)	<b>NAVIGATION LOCK</b>	
	Clear Width	86 ft
	Clear Length	675 ft
	Lift:	
	Minimum	97 ft
	Average	100 ft
	Maximum	105 ft
	Minimum Water Depth Over Sills	16 ft
	Open to Navigation	May 1962
	<b>SPILLWAY DAM</b>	
	Type of Construction	Concrete Gravity
	Completed	January 1962
	Maximum Capacity	850,000 cfs
	Crest Elevation	391 ft
Control Gates:		
Type	Tainter	
Size, Width by Height	50 by 52.9 ft	
Number	10

# HONOLULU ENGINEER DISTRICT

The civil works responsibilities of the Honolulu District encompass the State of Hawaii, the Territory of Guam, the Territory of American Samoa, and the Commonwealth of the Northern Mariana Islands. The

district is unique in that its area of responsibility is totally comprised of islands dispersed over an ocean environment exceeding 6 million square miles.

## Navigation

### 1. KIKIAOLA SMALL BOAT HARBOR, KAUAI, HAWAII

**Location.** Kikiaola Harbor is located on the southwest coast of the island of Kauai, approximately 1 mile southeast of Kekaha and approximately 2 miles west of Waimea (See NOAA Chart 19386)

**Existing project.** The authorized project consists of removing a 150-foot long portion from an existing outer east stub breakwater; removing and reconstructing a 71-foot long inner east stub breakwater; modifying 245-foot long portion of the existing west breakwater; modifying 820-foot long portion of the existing east breakwater; dredging a new 725-foot long entrance channel to a depth of 11-feet and varying in width from 105 to 205-feet; and dredging a 320-foot long access channel to a 7-foot depth and varying in width from 70 to 105-feet.

**Local cooperation.** The Project Cooperation Agreement (PCA) was executed in August 2005.

**Terminal facilities.** There is an existing 1,280-foot long east breakwater with two short stub breakwaters; a 600-foot long west breakwater; a 225-foot long inner breakwater; a 150-foot long by 10-foot wide wooden wharf; a 50-foot long loading dock and adjacent launch ramp, all constructed by the State of Hawaii.

**Operations during fiscal year.** Work during the Fiscal Year included completing a Limited Reevaluation Report to update the Project Cooperation agreement and reconfirm project economics; signing the PCA; advertising and opening bids for project construction. The solicitation was cancelled because the proposal costs were excessively high. Total costs incurred during the Fiscal Year were \$300,276.

### 2. MAALAEA HARBOR, MAUI, HAWAII

**Location.** Maalaea Bay is situated on the southwest coast of Maui, approximately 7 miles south of Wailuku, the county seat of Maui. (See NOAA Chart 19350)

**Existing project.** For a description of the existing project, see page 36-3 of the Fiscal Year 1989 Annual Report. (See Table 36-B for Authorizing Legislation)

**Local cooperation.** The Project Cooperation Agreement (PCA) is delayed due to concerns raised as a result of the Supplemental Environmental Impact Statement review.

**Terminal facilities.** There is an existing 1,000-foot long south breakwater, a 870-foot long east breakwater, 300-foot long wharf, 90-foot wide entrance channel,

and a single lane launch ramp, all constructed by the State of Hawaii.

**Operations during fiscal year.** Work during the Fiscal Year included preparation of the Limited Reevaluation Report, coordination with the local sponsor and various agencies on resolving controversial environmental issues and continuing development of acceptable mitigation features for impacts to environmental resources. Total costs incurred during the Fiscal Year were \$145,717.

### 3. KAUMALAPAU HARBOR, LANAI, HAWAII

**Location.** The project is located on the southwestern coast of the Island of Lanai. (See NOAA Chart 19351)

**Existing project.** The project would repair the existing breakwater built in 1925 that was previously owned by private interests. The existing breakwater will be repaired using 35-ton Core Loc concrete armor units. The length of the breakwater will be 320 feet long.

**Local cooperation.** The Project Cooperation Agreement (PCA) was executed in September 2003. Requirements are described in full on page 31-2 of the Fiscal Year 2003 Annual Report.

**Terminal Facilities.** A 200-foot long rubblemound breakwater with a crest elevation of about +10 feet protects a 400-foot long wharf which is operated and owned by the State of Hawaii Harbors Division.

**Operations during fiscal year.** The contractor completed mobilization of equipment and initiated the test casting of concrete core loc units. Total costs incurred during the Fiscal Year were \$3,202,872.

### 4. KAHULUI LIGHT DRAFT HARBOR, MAUI, HAWAII

**Location.** The Kahului Light Draft Harbor site is located within the Kahului Deep Draft Harbor on the northern coast of the Island of Maui. (See NOAA Chart 19342)

**Existing project.** The project includes removing an existing rock groin; constructing a 130-foot long rubblemound breakwater structure; dredging an entrance channel 1,030 feet long, 50 feet wide and 9.5 feet deep; and dredging a turning basin 100 feet long, 100 feet wide and 8.5 feet deep.

**Local cooperation.** The Project Cooperation Agreement (PCA) was executed in May 2003. Requirements are described in full on page 31-2 of the Fiscal Year 2004 Annual Report.

**Terminal Facilities.** A damaged rubblemound breakwater protects the harbor basin approximately 30

feet in length, with a crest elevation of about 8 feet. There is an existing single-lane boat launch ramp, a wooden dock, and an entrance channel and turning basin dredged to a depth of minus 6.0 feet mean lower low water. All existing facilities were constructed by the State of Hawaii.

**Operations during fiscal year.** The construction groundbreaking occurred in May 2005. The majority of dredging work for this project was completed during the fiscal year. Total costs incurred during the Fiscal Year were \$1,896,616.

## **5. RECONNAISSANCE AND CONDITION SURVEYS**

Condition surveys were conducted by the Portland District at Barbers Point Harbor, Haleiwa Small Boat Harbor, Honolulu Harbor, Waianae Small Boat Harbor on the island of Oahu, HI; Kahului Harbor on the island of Maui, HI; Nawiliwili Deep Draft Harbor on the island of Kauai, HI; Hilo Harbor on the island of Hawaii, HI; Aunuu Small Boat Harbor, Auasi Small Boat Harbor, Ofu Harbor and Tau Harbor, American Samoa. A condition survey was conducted by the US Army 7<sup>th</sup> Engineer Dive Detachment at Rota Harbor, Commonwealth of the Mariana Islands during Fiscal Year 2005. Total cost to conduct the surveys was \$69,623. See Table 31-H for navigation inspections performed during the Fiscal Year.

## **6. INSPECTION OF COMPLETED FLOOD CONTROL AND BEACH EROSION CONTROL PROJECTS**

Inspection of completed local flood protection projects is performed periodically in compliance with Section 208.10, of Title 33, Code of Federal Regulations, which contains regulations for operation and maintenance of local flood-protection works approved by the Secretary of the Army in accordance with authority in Section 3, Flood Control Act of June 22, 1936.

Inspection costs for completed flood control and beach erosion control projects incurred during the Fiscal Year were \$152,766. See Table 31-I for inspections performed during the Fiscal Year.

## **7. NAVIGATION WORK UNDER SPECIAL AUTHORIZATION**

**Navigation activities pursuant to Section 107, Public Law 86-645, as amended (Preauthorization).** See Table 31-J.

## **Beach Erosion Control**

### **8. LAUNIUPOKO SHORELINE PROTECTION, MAUI, HAWAII**

**Location.** The project is located on the western coast of the Island of Maui. The Island of Maui is located approximately 100 miles southeast of Honolulu, Hawaii. (See NOAA Chart 19348)

**Existing project.** The project construction consists of two reaches, totaling approximately 500 feet, of rubble mound revetments with a crest elevation of +12-feet (MLLW). The single layer revetment will be constructed of 1600-2500 pound armor stone, over a 2-foot thick underlayer of 50-150 pound stone.

**Local cooperation.** The Project Cooperation Agreement (PCA) was executed in January 2002. Requirements are described in full on Page 31-3 of the Fiscal Year 2002 Annual Report.

**Operations during fiscal year.** The construction contract for improvements was terminated for convenience by the Government on March 2005 due to significant differing site conditions. Preparation of revised plans and specifications were initiated during the Fiscal Year. Total costs incurred during the Fiscal Year were \$73,984.

### **9. BEACH EROSION WORK UNDER SPECIAL AUTHORIZATION**

**Emergency streambank and shoreline protection activities pursuant to Section 14, Public Law 79-526, as amended (Preauthorization).** See Table 31-K.

**Beach Erosion control activities pursuant to Section 103, Public Law 87-874, as amended (Preauthorization).** See Table 31-L.

**Shoreline Erosion control development and demonstration program pursuant to Section 227, Public Law 104-303, as amended.** Fiscal Year costs were \$155,731.

## **Flood Control**

### **10. FLOOD CONTROL WORK UNDER SPECIAL AUTHORIZATION**

**Flood control activities pursuant to Section 205, Public Law 80-858, as amended (Preauthorization).** See Table 31-M.

**Project Modifications for Improvements of Environment pursuant to Section 1135, Public Law 99-662, as amended (Preauthorization).**

See Table 31-N.

**Aquatic Ecosystem Restoration pursuant to Section 206, Public Law 104-303. (Preauthorization)**

Fiscal Year costs were \$26,204 for Saipan Lagoon, CNMI; \$2,916 to conduct initial appraisal reports; and \$261 for coordination with other agencies.

**Emergency flood control activities pursuant to Public Law 84-99.**

Federal cost during the Fiscal Year for Flood Control and Coastal Emergencies appropriation was \$831,910 of which \$406,890 was for disaster preparedness; and \$111,632 for emergency operations; \$313,388 for rehabilitation and inspections.

**General Investigations**

**11. SURVEYS**

Fiscal Year costs were \$936,355 of which \$288,703 was for navigation studies; \$136,422 was for flood damage prevention studies; \$412,852 for special studies; \$78,119 for miscellaneous activities; and \$20,259 for coordination with other agencies. In addition, \$106,978 in non-Federal funds for coordination with other agencies; \$99,348 for cost-shared navigation studies; and \$138,660 for cost-shared special studies.

**12. COLLECTION AND STUDY OF BASIC DATA**

**Flood plain management services.** The Flood Plain Management Services Program is authorized and

implemented under Section 206, PL 86-645, 1960 Flood Control Act, as amended. Through technical services and planning guidance, the program provides information on floods and flood related information to improve planning for the careful use of the nation's flood plains, thereby reducing the potential for losses to life and property from floods and wave actions. Non-Federal agencies are assisted with flood hazard evaluation and planning information for flood and coastal hazard areas without charge.

As of November 1991, Federal agencies and private entities were also offered these services on a cost recovery basis. This assistance is in the form of local flood plain regulations, National Flood Insurance Requirements, and Executive Order 11988 requirements for federal agencies. Such assistance may include flood information and timing, floodwater velocity, extent of flooding, duration of flooding, flood frequency and regulatory floodway limits.

**Services accomplished during fiscal year.** There were 584 site requests for technical services and planning assistance and publication responses. These services were requested and provided to Federal agencies, state and local government agencies, individuals, realtors, corporations, lending institutions, engineers, architects and other private parties. Costs for providing these services during the fiscal year were \$520,805.

**Hydrologic Studies.** Storm studies cost was \$41,300. Total costs for collection and study of basic data during the Fiscal Year were \$562,105.

## Navigation

### 1. ANCHORAGE HARBOR, AK

**Location.** Anchorage is in south-central Alaska on the southeast shore of Knik Arm, north of Turnagain Arm near its junction with Cook Inlet. (See NOAA Charts 16660 and 16664.)

**Existing project.** Authorized by the Rivers and Harbors Act, 3 July 1958, as amended, provides for a deep water harbor by dredging to a depth of -35 MLLW. The existing project accommodates three dry cargo berths and two petroleum handling facilities. It is the main supply and distribution center for the south-central and interior areas and the two large military bases that lie within the Municipality of Anchorage. The Port of Anchorage is the largest cargo port in Alaska and was designated the nation's 13<sup>th</sup> strategic port in August of 2004. The tidal range between mean lower low water and mean higher high water is 29 feet with an extreme range of 41 feet.

**Local cooperation.** Fully complied with.

**Accomplishments during fiscal year.** Maintenance dredging was performed under the optional second year of a 2-year RFP contract with Manson Construction. Dredging was conducted from June thru October with a total of 1,832,610 cubic yards removed from the project thru September 30<sup>th</sup> and 1,792,515 cubic yards removed for the season ending 1 November 2005.

### 2. COOK INLET NAVIGATION, AK

**Location.** Southern flank of Knik Arm Shoal about 6 miles southwest of Anchorage, AK.

**Existing project.** Authorized by the 1996 Water Resources Development Act and amended in Public Law 105-245; provides for a 3,330 m long by 310 m wide by -11.5 m MLLW deep shipping channel into Knik Arm. Cook Inlet Navigation Channel provides all-tide access to the Port of Anchorage. The PCA was executed on 9 Jan 98. Construction contract was awarded on 2 Dec 98 and was completed in September 2000 for a combined Federal and Contributed Cost of \$10,507,100. A total of 1,459,543 cubic yards were removed in the two seasons of dredging by Manson Construction. The sponsor reimbursed the CORPS 10% of the project and the project is now fiscally complete.

**Local cooperation.** Fully complied with.

**Terminal facilities.** This project reduces delays for the container ships that supply cargo for 80 percent of the Alaskan people.

**Accomplishments during fiscal year.** A hydrographic survey was completed to ensure navigational safety exists throughout the channel area. Reauthorization for deepening and lengthening the project and continuation of modeling studies was included in the FY05 Omnibus Bill (PL 108-447).

### 3. CHIGNIK HARBOR, AK

**Location.** The city of Chignik is located on the south side of the Alaska Peninsula about 450 miles southwest of Anchorage.

**Existing project.** The city of Chignik is situated on the south shore of Alaska Peninsula in Southwestern Alaska. It is an active and growing island port whose economy is heavily dependent on commercial fishing. The local fleet presently anchors in the ice free, but inadequately protected harbor or ties up at the exposed city dock. At present boats are subject to overcrowding and hazardous mooring conditions between fishing periods. The anchorage is exposed to all storms from the southeast clockwise to the northwest. The violent southeast and northwest storms often damage and sometimes destroy boats by forcing them ashore or on the exposed rock reefs at low tides.

**Local cooperation.** Fully complied with.

**Terminal facilities.** The authorized project will provide a protected harbor, which will produce benefits in the form of reduced boat damage, increased fish harvest, and a harbor of refuge. The average annual navigation benefits attributable to the project are currently estimated at \$1,695,400. A construction contract was awarded on 20 August 2001 with West Construction for \$6,549,270.

**Accomplishments during fiscal year.** Construction completed with a modification executed to delete most of the dredging work because of a differing site conditions claim.

### 4. DILLINGHAM HARBOR, AK

**Location.** Dillingham Harbor is located at the head of Nushagak Bay, an arm of Bristol Bay, on the right bank of Nushagak River, just below its confluence with Wood River; about 470 miles northeast of Dutch Harbor and 300 miles southwest of Anchorage. (See NOAA/NOS Chart #16660.)

**Existing project.** The Rivers and Harbors Act of 1958 provides for a 650 to 800 foot wide X 700 foot long basin utilizing a 1100 foot long entrance channel to Nushagak Bay,

Deleted: -  
Formatted: Font: Times New Roman  
Deleted: -

the harbor provides half-tide access and all-tide moorage for over 320 commercial fishing vessels. The harbor is also used as an alternate landing area for lighterage vessels. Tidal range between mean lower low water and mean higher high water is 19.8 feet. Extreme range is 30 feet.

**Local cooperation.** Fully complied with.

**Terminal facilities.** There are four docks at the city of Dillingham; three privately owned, one owned by the city. Four publicly owned small boat floats located in the Harbor basin were installed in June 1982. They are removed before fall freezeup and replaced each spring.

**Accomplishments during fiscal year.** Annual maintenance dredging was carried out by Nehalem River Dredging in June with the removal of 90,000 cubic yards using the optional 3<sup>rd</sup> year of a 3-year IFB contract.

### 5. FALSE PASS, AK

**Location.** False Pass is a small community located on the east side of Unimak Island, which is the east end of the Aleutian Island chain in Southwest Alaska. False Pass is approximately 700 air miles from Anchorage.

**Existing project .** The feasibility study was initiated in 1999 and the project authorized in the Water and Resources Development Act of 2000 to accommodate a fleet of 88 vessels in a 5.2-acre basin protected by two rubble-mound breakwaters, 1,300 feet and 600 feet in length. The project requires dredging of the inner basin and the entrance channel. The PCA was executed on 4 May 2004 and the design completed on 25 April 2005 .

**Local cooperation.** Fully complied with.

**Accomplishments during fiscal year.** A contract was awarded 11 July 2005 to Kelly Ryan for \$19,729,300 with work beginning in the summer of 2006.

### 6. HOMER HARBOR, AK

**Location.** In Kachemak Bay, on the Kenai Peninsula, 152 miles by water, southwest of Anchorage. The harbor site is near the extremity of Homer Spit, a narrow extension of land protruding southeasterly some 4.5 miles into the bay. (See NOAA/NOS Chart #16645.)

**Existing Project.** Authorized by the River and Harbors Acts of 1958 and 1964. The 50-acre project provides

sheltered moorage for over 1,525 commercial fishing and recreational vessels. The project extends the fishing season an extra four months each year and is an integral part of Homer's economy. Project depth varies from 10 feet mean lower low water in the west end of the harbor to 20 feet below mean lower low water in the entrance channel and the east end. The entrance channel is protected by a main rock breakwater 1,018 feet long and secondary rock breakwater 238 feet long. Tidal range between mean lower low and mean higher high water is 18.1 feet, with an extreme range of 30.4 feet.

**Accomplishments during fiscal year.** Annual maintenance dredging was carried out by Portable Hydraulic Dredging in September with the removal of approximately 8,500 cubic yards under the first year of a 2-year IFB contract.

### 7. KAKE HARBOR, AK

**Location.** Kake, a community of 700, is located in Southeastern Alaska about 40 miles west of Petersburg and 800 miles northwest of Seattle.

**Existing project.** Commercial fishing and logging are the primary industries in the area. A feasibility report was completed in 1968, and the recommended project was authorized for construction. A construction contract was awarded on 29 April 1998 to Kake Tribal Logging & Timber Corporation for \$14,554,257. The breakwater was physically completed in October 2000 at a total cost of \$15,825,588. The completed project includes a rubblemound breakwater at the Portage Cove site. The city of Kake is the local sponsor, with financial support from the State.

**Local cooperation.** A Project Cooperation Agreement was signed on 26 Nov 1997.

**Accomplishments during fiscal year.** None.

### 8. NINILCHIK HARBOR, AK

**Location.** Ninilchik Harbor is located at the mouth of Ninilchik River in Cook Inlet, at the village of Ninilchik. The community of Ninilchik, AK is about 40 miles upcoast from Homer and 112 miles southwest of Anchorage. (See NOAA/NOS Chart #16640.)

**Existing project.** This project is authorized by the Rivers and Harbors Act of 1958 for a basin 400 feet long by 150 feet wide and dredged to an elevation of 2 feet above mean lower low water. Also included was an approach channel 400 feet long and 50 feet wide dredged to an elevation of 9 feet above

Deleted: -  
Formatted: Font: Times New Roman  
Deleted: -

mean lower low water and protected by two rock jetties. The basin offers protected moorage with half-tide access for 32 vessels. The basin and channel also provide access for fishing boats to unload their catch and take on supplies. It is also an important harbor of refuge in the lower Cook Inlet region. Beach protection was accomplished in 1967 and 1969. The tide range between mean lower low water and mean higher high water is 19.1 feet, with an extreme range of 29.3 feet.

**Local cooperation.** Fully complied with.

**Accomplishments during fiscal year.** Annual maintenance dredging was carried out by Portable Hydraulic Dredging in May with the removal of 5,303 cubic yards under the base year of a 2-year IFB contract.

## 9. NOME HARBOR, AK

**Location.** Nome Harbor is located at the mouth of the Snake River at the city of Nome, AK, on the northerly shore of Norton Sound, an arm of the Bering Sea. It is a shallow open roadstead, 581 nautical miles north of Dutch Harbor and 545 air miles northwest of Anchorage. (See NOAA/NOS Chart #16206.)

**Existing project.** Authorized by the Rivers and Harbors Acts of 1917, 1935, and 1948. The original Federal navigation project, was constructed at 8 ft MLLW and consisted of a dogleg entrance channel 75 feet wide by 1550 feet long running from Norton Sound to a turning basin 250 feet wide by 600 feet long, located at the confluence of the Snake River with Dry and Bourbon Creeks. The entrance was flanked seaward by a 400 foot eastern jetty and a 240 foot western jetty and protected through its length by a wood sheet pile revetment on both sides. In the early 50s, the wood was refaced with steel sheet pile. Modifications to the existing harbor were authorized in the Water Resources Development Act of 1999 based on the Chief of Engineers report dated 8 June 1999 and amended on 2 August 1999. A PCA was executed 28 May 2002 and on 30 September 2003 a \$35,878,300 contract was awarded to the Kiewitt-Manson JV for improvements consisting of a 3,025 foot attached rubblemound breakwater located east of the existing causeway and a 270 foot rubblemound spur extending out from the end of the causeway. Improvements also included a new navigation channel to be constructed through the spit between the causeway and the breakwater structures along with a sediment trap and bypass system to prevent the tip shoal at the end of the causeway from becoming larger. The existing causeway two-lane bridge is to be replaced and lengthened with a simple span 130 foot steel bridge. The original project entrance channel is to be filled and the jetties removed. The eastern waterfront is protected by a 3350-foot

long seawall that extends from the eastern jetty. Range between mean lower low water and mean higher high water is 1.6 feet and extreme tidal range is 7.5 feet, but water levels are influenced more by wind than tide. Levels of 5 feet below mean lower low water have been observed during offshore winds, and a level of 14 feet above mean lower low water has been observed during a southerly storm.

**Local cooperation.** Fully complied with.

**Terminal facilities.** Cargo and passengers from ocean vessels are lightered to and from shore, a distance of about 2 miles. Traffic enters the dredged channel and is handled over revetment, where a lighterage company has transfer facilities that are open to the public. Facilities are considered inadequate for existing commerce. In July 1984, the city of Nome received Department of Army authorization (permit) to construct a 3,600-foot gravel filled causeway. Construction of the causeway began in July 1985. Due to lack of funding, the length of the causeway was shortened to 2,700 feet. Construction was completed in May 1987. Use of this causeway for off-loading petroleum products was delayed until the September 1987 arrival of a required berthing barge.

**Accomplishments during fiscal year.** Kiewit-Manson JV completed the spur breakwater, the main breakwater, all the dredging, the bridge, and filled the old entrance channel. A September storm caused major damage to the new breakwater. Investigations show the breakwater was improperly constructed and will be reconstructed and the remaining project completed in FY 2006. Annual maintenance dredging was carried out in the outer portion of the entrance channel in June with the removal of 6,500 cubic yards by Portable Hydraulic Dredging of Portland, Oregon under the optional 4<sup>th</sup> year of a 4-year IFB contract.

## 10. ST. PAUL HARBOR, AK

**Location.** St. Paul Island Harbor is located on the shore of Village Cove, the southern side of St. Paul Island, the largest and most populated island of the Pribilof group in the central southeast Bering Sea .

**Existing project.** Congress authorized improvements to the breakwater, the entrance channel, and the maneuvering area in WRDA of 1996. The construction contract for Phase I to build the three underwater reefs was awarded 19 March 1999 for \$10,411,000 and completed in August 2001. A severe scour at the toe of the main breakwater was identified in the spring of 2001. The Phase I contract was modified to repair the scour,

Deleted: -  
Formatted: Font: Times New Roman  
Deleted: -

but the contractor was able to complete a small portion of the repair at a cost of approximately \$8 million. The Phase II construction contract for dredging the harbor and completion of the scour repair was awarded to Kelly Ryan Construction on 27-June-2003 for \$26,279,960

**Local Cooperation.** A Project Cooperation Agreement was executed on November 24, 1998.

**Accomplishments during fiscal year.** Construction was completed September 2005. A small boat harbor was authorized in WRDA 99 and will be in a Phase III construction contract.

### 11. SAND POINT, AK

**Location.** Sand Point is a commercial fishing community on the Pacific coast off the southwestern Alaska Peninsula. Sand Point is about 570 air miles southwest of Anchorage and about midway between Kodiak and Dutch Harbor. The harbor provides close access to one of the State's most productive fishing areas. For the past few years, the population has been stable at around 1,000. The economy is based wholly on commercial fishing.

The harbor currently provides no permanent protected moorage for vessels larger than 80 feet. In recent years, the fleet operating in the Bering Sea/Aleutian Island area, made up primarily of vessels ranging from 80 to 160 feet, has grown significantly. Skippers fishing in the Sand Point area currently travel long distances to secure protected moorage.

**Existing project.** Project was authorized in WRDA 1999. The authorized harbor improvements at Sand Point consist of construction of a 570-foot and 370-foot breakwater from shore to form the basin and entrance channel of the new harbor. The crest height of the rubblemound breakwaters are to be +16 ft MLLW. The breakwaters are designed to withstand the forces of a 6.6 foot wave. The entrance channel is to be dredged to -18 ft MLLW, and 120 feet wide to allow one-way traffic of vessels 150 feet in length with a 34-foot beam and 10.5 foot draft. The mooring basin is to be dredged to a depth of -17 ft MLLW and would provide room for 37 vessels.

**Local cooperation.** PCA was executed 17 Nov 2004.

**Accomplishments during the fiscal year.** A construction contract was awarded to Western Marine Construction for \$10,905,240 to perform the work and is scheduled for completion in September 2006.

### 12. SEWARD HARBOR, AK

**Location.** Seward, located on the Kenai Peninsula is about 125 miles south of Anchorage, Alaska by road. The town is located at the northern end of Resurrection Bay off the Gulf of Alaska and can be reached by air, sea, rail, and road. It lies at about 60 degrees 6 minutes N Latitude and 149 degrees 2 minutes W longitude.

**Existing Project.** The current harbor is filled to capacity with a waiting list of more than 330 boats. Expansion of the harbor was authorized in WRDA of 1999. The project will expand the existing harbor eastward and accommodate 339 additional vessels and cost \$11,930,000.

**Local cooperation.** PCA was executed 13 Jun 2003.

**Accomplishments during the fiscal year.** The construction contract was awarded 3-Feb-2004 and is scheduled for completion in 2006.

### 13. SITKA HARBOR, AK

**Location.** The city of Sitka is located in southeastern Alaska, about 95 miles south-west of Juneau. It is situated on the western coast of 1,600 square mile Baranof Island. Sitka is about 20 miles from the open Pacific Ocean on the east side of Sitka Sound

**Existing project.** The project consists of three rubblemound breakwaters constructed across the northern end of the western anchorage, and inner harbor facility placed adjacent to Thomsen Harbor. This project created a large protected harbor in which moorage basins could be developed using minimal or no wave protection structures. The three breakwaters are 480 feet, 1,200 feet, and 320 feet long. Navigation openings in the breakwater 325 feet and 190 feet wide at the design depth, are located at natural channels where water depths are 50 to 55 feet at mean lower low water. Two gaps allow for vessel traffic separation, which may be particularly important when log rafts or barges are being towed through the western anchorage. The two breakwaters forming the southern opening overlap to minimize ocean swell in Thomsen Harbor. The breakwaters are placed directly on the submerged rock reefs forming the northern boundary of western anchorage. The Channel Rock Breakwaters were physically completed in 1995. During construction 192,318 cubic yards of core rock, 65,330 cubic yards of secondary rock, 52,867 cubic yards of armor stone were placed. Construction was completed in June 1996. A study of the breakwater effect on the herring population was completed in 1998 and showed no ill effects on the fish population

Deleted: -  
Formatted: Font: Times New Roman  
Deleted: -

**Local cooperation.** The Project Cooperation Agreement was executed 7 December 1993.

**Accomplishments during the fiscal year.** A project deficiency report was initiated and physical modeling was completed. A second year of wave modeling was initiated.

#### 14. WRANGELL HARBOR, AK

**Location.** Wrangell Harbor is located on the northwest side of Wrangell Island, 824 miles from Seattle and 160 miles from Juneau. (See U.S. Coast and Geodetic Survey Charts Nos. 8164, 8161, and 8201.)

**Existing project.** The project consists of a rubblemound breakwater 300 feet long to protect the southern portion of the outer harbor; a mooring basin 600 feet long, 400 feet wide, and 10 feet deep below mean lower low water within the protected area; an inner basin in the tide flat area east of Shakes Island, 325 feet wide and 550 feet long; a connecting channel 120 feet wide and approximately 530 feet long; a connecting channel 120 feet wide and approximately 530 feet long from the outer mooring basin all at a depth of 10 feet at mean lower low water; and construction of a rock mound breakwater 320 feet long on the reef north of Shakes Island. The range between mean lower low water and mean higher high water is 15.7 feet. The extreme tidal range is 26 feet. Heavy swells, dangerous to small fishing boats, are caused by the wind, which causes an additional rise of about one foot.

Construction of the breakwater north of Shakes Island was placed on inactive status as material to be used from the inner basin was unsuitable and the breakwater considered unnecessary for safe moorage of vessels. The cost of this portion was last revised in 1956 and estimated to be \$6,500. (See table 40-B for authorizing legislation.)

The Heritage Harbor was authorized to be built in the Cemetery Point site in WRDA 99 following the feasibility study that was initiated in FY 1997. This project will consist of two breakwaters and dredging an entrance channel and inner harbor area. The PCA was executed on 7-March-2003 and the construction contract awarded to Kiewit Pacific Company on 11-July-2003 for \$13,841,550.

**Local cooperation.** The Project Cooperation Agreement was executed on 7 Mar 2003.

**Terminal facilities.** There are eight wharves and floats in Wrangell Harbor. Two privately owned wharves serving general cargo and passenger terminals, one of which includes a cold storage facility, are open for public use. The remaining wharves serve various industrial purposes. One of the floats is

publicly owned and is open for public use for mooring and servicing of small craft, and two privately owned floats serve oil-handling facilities.

**Accomplishments during fiscal year.** The construction of Heritage Harbor was completed in 2005. A modification to the contract was made to add \$64,772 of O&M funds to dredge a high spot in the old original harbor with the dredged material disposed of in the new parking lot adjacent to the new Heritage Harbor. The O&M work was completed in November of 2004. The overall contract has not been closed out due to a claim for differing site conditions in the new harbor area.

#### Flood Control

#### 15. BETHEL BANK STABILIZATION, AK

**Location.** Bethel, AK is located in southwestern Alaska on the north bank of the Kuskokwim River 400 miles west of Anchorage.

**Existing project.** The project consists of rock riprap toe protection installed on the unprotected riverbank and at locations where existing city construction bulkheads are threatened by erosion. This includes 4,000 feet of unprotected riverbank and 4,200 feet of previously installed bulkheads. The construction contract was awarded on 26 May 1995. Emergency erosion protection for the Bethel Cargo Dock and completed in September 1997. The Mission Road Bulkhead began in July 1995 and continued through FY 1995 due to accelerated erosion that accumulated after spring runoff. A FY 2001 Congressional Add authorized and directed the Corps to extend the existing project an additional 1,200 feet upstream. A post authorization letter report was completed and approved in FY 2002. The total project cost was \$24,000,000 of which Bethel contributed \$6,000,000.

**Location cooperation.** A Project Cooperation Agreement was signed on 3 March 1994. An amendment was signed in December 2002 to extend the project 1200 feet upstream.

**Terminal facilities.** The POL tank farm is situated at the downstream end of the project and the city's general cargo dock is at the upstream end of the project.

**Accomplishments during fiscal year.** Real estate acquisition efforts continued on the new areas while the city requests a design change in Browns's Slough. A construction contract will be awarded as soon as the city completes real estate acquisition.

## 16. CHENA RIVER LAKES, AK

**Background.** For details, see Annual Report for FY 2000.

**Accomplishments during fiscal year.** Despite the record setting wildfires that burned over major portions of the both the Chena and Little Chena River watersheds in 2004, there were no flood or high water events during 2005 that required operation of Moose Creek Dam. The Chena River's highest flow was recorded on 29 April at 5,300. cubic feet per second, well below the usual operating threshold of the dam. Above average precipitation over the spring and summer was well distributed and also did not produce enough runoff to operate the dam at any time during the rest of the flood season.

The Chena Project welcomed new damtender, Gary Chambers to the staff. Mr. Chambers has extensive experience operating Corps locks and dams in the Tulsa District. Under his guidance, operational exercises with the Project's crane were conducted prior to the flood season. He also began preparing the dam and its engineered features for the Project's next periodic inspection scheduled for summer, 2006. The Project's operations staff utilized the crane to remove and replace the 8,000 pound viewing window in the fish ladder. This window had sustained damage from possible earthquake-related movement in the fish ladder structure.

In July, a successful internal ERGO inspection was conducted by District and Project staff. A highlight of the year was a site visit by the Chief of Engineers, Major General Strook in August of 2005.

## 17. DILLINGHAM EMERGENCY BANK STABILIZATION

**Location.** Dillingham is located 350 miles southwest of Anchorage, Alaska. The project is located along the southeastern edge of Dillingham adjacent to the Nushagak River. Erosion of the toe of the bluff in this area was endangering critical utilities and numerous buildings and homes. Erosion at the west entrance to the harbor is endangering the facilities and vessels.

**Existing project.** The authorized project consists of a 1,600-foot long steel sheet pile bulkhead along the toe of the bluff from the Dillingham City Cargo dock to Snag Point. An additional 600 feet of bulkhead with riprap revetment was constructed at the east side of the entrance to the harbor. The sheet pile wall was constructed to an elevation of 28 feet MLLW. Mitigation measures including emergency access ladders and eyebolts for anchoring set nets used for by

subsistence fishermen are included in the project. Extension of the project to the west entrance to the harbor was directed in the FY 2001 Appropriation Conference Report.

**Local cooperation.** A Project Cooperation Agreement with the City of Dillingham Alaska was signed in January 1998 and will be amended to incorporate the project extension.

**Terminal Facilities.** Dillingham has a general cargo dock and a fuel facility adjacent to the authorized project.

**Accomplishments during fiscal year.** Designs for extending the sheetpile wall are being evaluated. A decision document is being developed to identify the scope and cost of the extension prior to preparing a PCA.

## 18. GALENA EMERGENCY BANK STABILIZATION

**Location.** Galena is located on the north bank of the Yukon River, 45 miles east of Nulato and 270 air miles west of Fairbanks.

**Existing project.** The project consists of a rock revetment along the Yukon River to protect the City of Galena from river erosion. In 1987, the Corps of Engineers constructed 1300 feet of riprap revetment protection along the river. The project is currently being out-flanked at the ends of the revetment by the river erosion. Approximately 1600 feet of additional revetment protection is required. Continued erosion and yearly ice breakups along the Yukon river are causing imminent danger to local facilities. Vital facilities, including barge facilities, utilities, and roads are in potential danger of being destroyed in the next year or two. Immediate action to protect these facilities is recommended because erosion is advancing at an accelerated pace in one area.

**Local cooperation.** The sponsor, the City of Galena supports the project. A post authorization letter report was completed and approved in FY-03. The PCA was executed 6 Aug 2003.

**Accomplishments during fiscal year.** A construction contract was awarded 23 June 2004 and completed in 2005.

## 19. KAKE DAM

**Location.** The city of Kake is located in southeast Alaska on the northwest shore of Kupreanof Island and has a population of approximately 700 residents, about 95 percent of which are Alaska natives. It is a Tlingit village with a fishing, logging, and subsistence lifestyle.

Deleted: -  
Formatted: Font: Times New Roman  
Deleted: -

**Existing project.** Project is to construct a replacement dam on Gunnuk Creek in Kake, AK to provide drinking water and hydroelectricity. The recommended plan calls for construction of a gravity concrete dam approx. 53 feet upstream from the previous dam, covering an area about 4,750 ft<sup>2</sup>, and a spillway height of 23 feet.

**Local cooperation.** PCA was executed 3 September 2004. Construction, General funds will be reprogrammed within available funds into the project. A letter report is being prepared, which will include required formulation, economic, engineering, design, cost estimates, and environmental documentation. The hydroelectric segment will be evaluated and, if warranted, FERC licensing procedures initiated. Plans and specifications are being prepared. The project will be 100 percent federally funded with the Sponsor providing all of the necessary LERRD. The project will be turned over to the City of Kake for operation and maintenance after construction completion.

**Accomplishments during fiscal year.** A contract was awarded to Kiewit Pacific for \$7,219,050 on 28 January 2005 with construction to be completed in FY 2006.

## 20 TRIBAL PARTNERSHIP PROGRAM

**Location:** Studies to define erosion problems and solutions are authorized for the following communities: Kaktovik, Shishmaref, Bethel, Dillingham, Unalakleet, Kivalina, and Newtok, Alaska. A Statewide Baseline Erosion Study is also authorized

**Existing project:** Project is to determine costs to protect the listed communities, relocate the communities, or relocate them with another community, and to determine the remaining time that a community has until it is no longer functional due to erosion, perform approved general studies, and feasibility studies as approved by the ASA(CW).

**Local cooperation:** Each of the listed communities support this project and have assisted in obtaining local community input and local knowledge for the studies. The study efforts are at 100% Federal cost up to the authorized funds.

**Accomplishments during the fiscal year:** The initial analysis of the protection/relocation/collocation action has been completed, and the report will be published next year. Environmental studies are ongoing at Shishmaref, feasibility work has been initiated at Newtok and Kivalina, and community and agency input have been gathered for the Baseline Erosion Study.

## 21. FLOOD CONTROL WORK UNDER SPECIAL AUTHORIZATION

**Emergency flood control activities--repair, flood fighting, and rescue work (Public Law 99, 84th Congress, and antecedent legislation).**

Federal costs for the fiscal year were \$1,903,573 for disaster preparedness, and field investigations.

## 22. INSPECTION OF COMPLETED FLOOD CONTROL PROJECTS

Inspections were made of the following flood control works: Bethel Bank Stabilization at Bethel; Deering Streambank Protection at Deering; Metlakatla Erosion Protection at Metlakatla; Homer Spit Revetments at Homer; Tanana River Levee at Fairbanks, Talkeetna River at Talkeetna; Lowell Creek at Seward; Klutina River at Copper Center; Skagway River at Skagway; Gold Creek at Juneau; and Emmonak Streambank Protection on the Yukon River at Emmonak. An inspection was made of the shore protection works at Nome.

## GENERAL INVESTIGATION

## 23. SURVEYS

Fiscal year costs were \$2,968,586 of which \$1,619,077 was for navigation studies, \$56,527 for flood damage prevention studies, \$724,511 for shoreline protection studies, \$135,208 for special studies, \$0 for watershed comprehensive studies, \$74,862 for miscellaneous studies, and \$358,401 for coordination studies with other agencies. In addition contributed funds in the amount of \$1,188,022 were expended for General Investigation's Feasibility Studies: \$4,070 for Akutan, \$33,610 for Port Lions, \$202,127 for Valdez, \$12,867 for Haines, \$400,108 for Barrow, \$403,726 for Unalaska, \$27 for Unalakleet, \$78,660 for DeLong Mountain, and \$52,827 for PAS-Planning Assistance to States.

## 24. COLLECTION AND STUDY OF BASIC DATA

Technical assistance, information, flood plain management guidance, and other flood plain management services have been provided to military and nonmilitary Federal agencies, local communities, state agencies, Architectural Engineering firms, lending institutions, and private individuals at a fiscal year cost of \$193,322.

Fiscal year costs for Hydrologic Studies were \$7,866.

Deleted: -

Formatted: Font: Times New Roman

Deleted: -

**25. PRECONSTRUCTION ENGINEERING AND DESIGN**

Fiscal year costs were \$319,583 of which \$24,548 for Akutan, \$227,677 for Haines Harbor, and \$67,358 for Unalaska.

**26. SPECIAL PROJECTS**

Alaska Environmental – Coordination with multiple State and Federal agencies on design consideration has been provided to the City of Buckland on its water and sewer project. The design is scheduled for construction start in 2006. FY05 costs were \$88,751.

See Section in Text	Date Authorizing Act	Project and Work Authorized	Documents
1.	Jul. 3, 1958 Oct. 22, 1976	<b>ANCHORAGE HARBOR, AK</b> Deep winter harbor, adjacent to docks, dredge to 35 feet below mean lower low water, protected by two jetties. <sup>1</sup> Extension of project limits.	H.Doc. 34, 85th Cong., 1st Sess. <sup>2</sup> P.L. 94-587
3.	Oct. 12, 1996	<b>COOK INLET NAVIGATION, AK</b> Deepen the entrance channel to -30 feet. Enlarge and deepen the maneuvering basin to -29.0 feet with an area of 415 by 830 feet. Wave spending beach to +4 feet. Three offshore reefs each, 1,300 feet long, constructed to a depth of -12 feet. Wave energy channel 100 feet wide with bottom elevation of +2 feet.	Section 101(b)(2), Water Resources Development Act of 1996. Energy and Water Development Appropriations Act, 1999. P.L. 105-245.
3.	Oct. 12, 1996	<b>CHIGNIK HARBOR, AK</b> Deepen the entrance channel to -30 feet. Enlarge and deepen the maneuvering basin to -29.0 feet with an area of 415 by 830 feet. Wave spending beach to +4 feet. Three offshore reefs each, 1,300 feet long, constructed to a depth of -12 feet. Wave energy channel 100 feet wide with bottom elevation of +2 feet.	P.L. 104-303, Water Resources Development Act of 1996. FY 1999 Congressional Add
4.	Jul. 3, 1958	<b>DILLINGHAM HARBOR, AK</b> Basin 230,000 square feet in area with depth of 2 feet above MLLW along Scandinavian Creek, with entrance channel 1,100 feet long and 40 feet wide.	H. Doc. 390, 84th Cong., 2d Sess. <sup>2</sup>
5.	Oct. 31, 2000	<b>FALSE PASS HARBOR, AK</b> Dredging of the inner basin and the entrance channel to accommodate a fleet of 88 vessels in a 5.2 acre basin protected by two rubble-mound breakwaters, 1,300 feet and 600 feet in length.	House Report 106-1020, Section 101 (b)(1) (2), Water Resources Development Act of 2000, 106 <sup>th</sup> Congress
6.	Jul. 2, 1958 Aug. 19, 1964	<b>HOMER HARBOR, AK</b> Basin 2.7 acres in area with depth of 12 feet below mean lower low water, and rock breakwater 1,260 feet long. Relocation and rehabilitation of project destroyed by March 27, 1964 earthquake, by construction of basin 10 acres in area with 12-foot depth over 2.75 acres and 15-foot depth over 7.25 acres protected by rock breakwaters, 1,018 feet and 238 feet long.	H.Doc. 34, 85th Cong., 1st Sess. <sup>2</sup> P.L. 88-451
	Jul. 14, 1960	Increased width and depth of entrance channel and an enlarged staging area. Basin enlarged from 16.5 to 50 acres.	Section 107, P.L. 86-645 Authorized by Chief of Engineers, Nov. 13, 1981
7.	Aug. 13, 1968	<b>KAKE HARBOR, AK</b> Provides for a 1,580 foot long west breakwater and a 900 foot long south breakwater enclosing a 7 acre berthing area at -15 feet MLLW.	S. Doc. 249, 75th Cong., 1st Sess.
8.	Jul. 3, 1958	<b>NINILCHIK HARBOR, AK</b> Basin 320 feet long by 150 feet wide with depth of 2 feet above mean lower low water, approach channel 400 feet long and 50 feet wide with depth of 9 feet above mean lower low water, protected by 410 foot jetty.	H.Doc. 34, 85th Cong., 1st Sess. <sup>2</sup>

See Section in Text	Date Authorizing Act	Project and Work Authorized	Documents
9.	Aug. 8, 1917	<b>NOME HARBOR, AK</b> Two jetties, easterly 335 feet and westerly 460 feet long re- vetment, channel and basin 200 feet wide and 250 feet long. Extension of the jetties and enlarging basin to 250 feet wide and 600 feet long. <sup>3</sup>	H.Doc. 1932, 64th Cong., 1st Sess. <sup>2</sup>
	Aug. 30, 1935		H.Doc. 404, 71st Cong., 2d Sess., and Rivers and Harbors Committee Doc. 38, 73d Cong., 2d Sess.
	Jun. 16, 1948	Seawall	Reports of Chief of Engineers dated March 8, 1948
	Aug 17, 1999	New entrance to Nome Harbor; 3,025 feet-long breakwater; 270 feet-long causeway spur; 3,450 feet-long entrance channel with depth to 22 feet; sediment traps and causeway bridge.	Report of Chief of Engineers as amended, dated August 2, 1999. Section 101 (a) (3), P.L. 106-53 Water Resource Development Act of 1999, 106th Cong.
10.	Nov. 17, 1986	<b>ST. PAUL HARBOR, AK</b> Add 1,050 feet of breakwater at existing crest height, 37 below feet mean lower low water and 1,000 feet long with a crest height of 18 above mean lower low water.	Section 202, P.L. 99-662
	Oct. 12, 1996	Deepen the entrance channel to -30 feet. Enlarge and deepen the maneuvering basin to -29.0 feet with an area of 415 by 830 feet. Wave spending beach to +4 feet. Three offshore reefs each, 1,300 feet long, constructed to a depth of -12 feet. Wave energy channel 100 feet wide with bottom elevation of +2 feet.	Section 101(b)(3), P.L. 104-303 Water Resources Development Act of 1996.
	Aug 17, 1999	Added small boat harbor with entrance channel and maneuvering area to -20MLLW and appropriate wave protection features.	Section 302, P.L. 106-53 Water Resource Development Act of 1999, 106th Cong.
11.	Aug 17, 1999	<b>SAND POINT HARBOR, AK</b> Construct a mooring basin adjacent and south of the existing harbor. It incorporates the southern breakwater and causeway to the city dock by extending the existing breakwater.	Section 101 (a) (3), P.L. 106-53 Water Resource Development Act of 1999, 106th Cong.
12.	Aug 17, 1999	<b>SEWARD HARBOR, AK</b> Provide more moorage space. Project would accommodate 339 additional vessels.	Section 101 (a) (3), P.L. 106-53Water Resource Development Act of 1999, 106th Cong.
13.	Oct 31, 1992	<b>SITKA HARBOR, AK</b> Boat harbor consisting of 3 rubblemound breakwaters.	Water Resources Development Act of 1992, H. Doc. 103-37, 103 <sup>rd</sup> Cong., 1 <sup>st</sup> Sess.
14.	Sep. 22, 1922	<b>WRANGELL HARBOR, AK</b> Breakwater 300 feet long to protect southern portion of harbor. Mooring basin 600 feet long, 400 feet wide, and 10 feet deep. Inner basin and connecting channel from the existing mooring basin, both 10 feet deep at mean lower low water, and breakwater 320 feet long on the reef north of Snakes Island. Project for navigation, Heritage Harbor, AK	H.Doc. 161, 67th Cong., 2d Sess.
	Aug. 30, 1935		H.Doc. 202, 72nd Cong., 1st Sess.
	Mar. 2, 1945		H.Doc. 284, 76th Cong., 1st Sess.
	Aug 17, 1999		Section 101 (a) (3), P.L. 106-53 Water Resource Development Act of 1999, 106th Cong.

**(Continued)**

See Section in Text	Date Authorizing Act	Project and Work Authorized	Documents
15.	Nov. 17, 1986	<b>BETHEL BANK STABILIZATION, AK</b> Streambank protection by placing riprap along 8,500 feet of river-bank and replacing tiebacks of existing pipe pile wall.	Section 202, P.L. 99-662
16.	Aug. 13, 1968	<b>CHENA RIVER LAKES, AK</b> Provides for construction of a dam and floodway for the Chena River (17 miles east of Fairbanks) for a dam and reservoir on the Little Chena River, and for a 27 mile long levee system with interior drainage works on the north side of the Tanana River.	H. Doc. 148, 90th Cong., 2nd Sess. P.L. 90-483
17.	Dec. 19, 1985	<b>DILLINGHAM EMERGENCY BANK STABILIZATION, AK</b> Install 1,600 feet of steel sheetpile bulkhead along the toe of the bluff from the Dillingham city cargo dock to Snag Point. Extension of the sheet pile wall on the west end of the entrance channel to the small boat harbor and replacement of the existing wooden bulkhead at the city dock.	Sec. 116 P.L. 99-190 Section 1(a)(2) P.L. 106-377 Conference Report 106-988
18.	Dec. 19, 1985	<b>GALENA EMERGENCY BANK STABILIZATION, AK</b>  The project protects approximately 1,800 LF by placing 28,000 cu. Yd. of armor rock, 288,000 sq. ft. filter fabric and 9,300 cu. yd. filter stone. A 3 ft thick layer of rip rap will extend from the top of the bank about elevation 123 ft. to elevation 90 ft.	Sec 116 P.L. 99-190
19.	Oct. 27, 2000	<b>KAKE DAM, AK</b>  The project consists of a gravity concrete dam at Kake approximately 53 feet upstream from the previous dam, covering an area about 4,750 square feet, and a spillway height of 17.7 feet. It includes an intake structure, complete with fish screen and trash rack, and would house intake lines for the city and hatchery water supply.	EWDA FY2001 PL 106-377 Modified in EWDA FY2004
20.	Dec. 11, 2000 Dec. 01, 2004 Dec. 08, 2004	<b>TRIBAL PARTNERSHIP, AK</b>  The project includes performing an analysis of the costs associated with continued erosion of Bethel, Dillingham, Shishmaref, Kaktovik, Kivalina, Unalakleet, and Newtok, defining potential costs associated with moving the affected communities to new locations (including collocation with existing communities), and identifying the expected time line for a complete failure of the useable land associated with each community. In addition expedited environmental studies to document the impacts of this severe and continuing erosion are required at Shishmaref. Additional work added this year includes a Baseline Erosion Study, ongoing feasibility type studies at four communities, and general studies of Cultural Sites at Kaktovik and western Alaska wave climate definition	Section 203 WRDA FY2000 Section 112 EWDA FY2004 Section 117, Division C, Consolidated Appropriations Act 2005, (PL 108-447).
	1. Purchase of dredge and deepwater jetties deauthorized November 6, 1977 under section 12, Public Law 93-251. 2. Contains latest published map.		3. Extension of jetties classified "inactive". 4. Little Chena Dam deauthorized in 1991.

# LOS ANGELES, CA, DISTRICT

This district (total area about 230,000 square miles) comprises those drainage basins tributary to the Pacific Ocean that are in California between the Mexican boundary and Cape San Martin (about 265 miles north of the entrance to the Los Angeles Harbor). The lower Colorado River

drainage basin (below Lee Ferry, AZ) which is southeastern California, southeastern Nevada, southwestern Utah, and all of Arizona, except the northeastern corner; that part of the Great Basin that is in southern Nevada and southeastern California; and the southern Arizona that drain southward into Mexico.

## REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FISCAL YEAR 2005

### Navigation

#### 1. CHANNEL ISLANDS HARBOR, CA

**Location.** On the coast of southern California about a mile northwest of Port Hueneme, 65 miles northwest of Los Angeles Harbor, and 345 miles south of San Francisco. (See Coast and Geodetic Survey Charts 5007 and 5202.)

**Existing project.** For details see page 33-2 of Annual Report for 1981.

**Local cooperation.** Fully complied with.

**Terminal facilities.** For details see page 33-2 of Annual Report for 1989.

**Operations during fiscal year.** A six year, three-cycle dredging contract was designed and awarded in FY2000. The contract covers FY2001 through FY2007. Dredging was performed in FY2005. Total O&M, General expenditures were \$4,179,214. Project condition good.

#### 2. IMPERIAL BEACH, SILVER STRAND SHORELINE, CA

**Location:** Imperial Beach area is located in San Diego County on the southern end of the Silver Strand Peninsula, about 3.5 miles north of the United States-Mexico border. Beachfill project, providing storm damage protection and reduction

**Existing project** The authorized project consisted of a system of five stone groins, the most northern groin at the north end of the existing seawall of the U. S. Naval Radio Station, and four other groins spaced at intervals of about 1,000 feet to a point 400 feet south of Coronado Avenue (now Imperial Beach Boulevard). A General Reevaluation Report was completed in FY 2002.

**Local cooperation.** City of Imperial Beach is the local sponsor.

**Operations during fiscal year.** Chief of Engineers Report was approved in December 2003 recommending an initial sand fill with periodic beach nourishment. The new recommended project is currently awaiting authorization in WRDA 2006. Draft Plans & Specs. completed September 2005.

#### 3. LOS ANGELES – LONG BEACH HARBORS, CA

**Location.** On the coast of southern California in San Pedro bay about 25 miles south of the city of Los Angeles, about 96 miles northwest of San Diego Harbor, and about 410 miles

southeast of San Francisco Harbor.

**Existing project.** The project consists of four increments of dredging to be constructed in two stages - deepening the existing entrance channel for the Port of Los Angeles and providing new channels to existing and new port facilities. The dredge material will be used for fill to create Pier 400. Estimated cost (October 1998) for existing project is \$401,000,000 (includes an allowance for estimated inflation through the construction period), of which \$115,200,000 is Federal (\$114,900,000 Corps and \$300,000 U.S. Coast Guard) and \$285,800,000 is non-Federal.

**Local cooperation.** All items of local cooperation required under the terms of the previous authorizing acts have been fully complied with. See page 33-3 of Annual Report for 1981 for requirements under the terms of the 1976 Water Resources Development Act. The revised recommended project was changed due to the withdrawal of the Port of Long Beach on October 1, 1991. The Port of Los Angeles, the local sponsor, received credit, for advance work (Stage 1) performed per WRDA 1988. Project Cooperation Agreement executed March 18, 1997.

**Terminal Facilities.** Of the 82,553 feet of wharves in the Los Angeles Harbor, 75,729 feet are owned by the city and 6,824 feet are owned by private interests. The final report presented and recommended four project increments. Increment No. 2 would deepen the existing Los Angeles Harbor approach and entrance channels to Pier 300 to provide better access to dry bulk facilities. Increment No. 3 would further deepen the Los Angeles approach and entrance channel to Pier 300 and part of Pier 400, and deepen a south channel to provide access to the eastern side of Pier 400 and liquid bulk facilities. Increments No. 4 and 5 would extend Increment No. 3 of Los Angeles to provide access to container terminals that would be located on part of Pier 300 and Pier 400. The material obtained from the dredging was used to create new landfill within the port and shallow water habitat for the least tern.

**Operations during fiscal year.** The Long-Term Monitoring for the Pilot Contaminated Aquatic Disposal Site continued. Sampling and testing resulted in a side-casting dredging project in the L.A. River Estuary. Total O&M, General expenditures were \$961,379. Project condition is good.

#### 4. LOS ANGELES HARBOR MAIN CHANNEL DEEPENING, CA

**Location.** The project area is located at the Port of Los Angeles on the coast of southern California in San Pedro Bay, approximately 25 miles south of downtown Los Angeles.

**Existing project.** The proposed project would dredge 6.6 million cubic yards of sediment from the Los Angeles Main Channel, West Basin, East Channel, East Basin, and Cerritos

Channel with disposal at Southwest Slip, Cabrillo Shallow Water Habitat and pier 400. The plan would also create approximately 40 acres of additional terminal space at Pier 300.

**Local cooperation.** The Port of Los Angeles and the Corps of Engineers executed the Project Cooperation Agreement July 25, 2002.

**Operations during fiscal year.** Continued construction and dredging of main channel.

## 5. MARINA DEL REY, CA

**Location.** Marina del Rey is located on Santa Monica Bay, 15 miles west of downtown Los Angeles, 29 miles northwest of Los Angeles Harbor and 390 miles southeast of San Francisco Bay.

**Existing project.** For details see page 33-3 of Annual Report for 1981. Existing Federal navigation project consists of two jetties a breakwater and navigation channels. Contaminated materials, causing costly maintenance and a potential threat to navigation, complicate a severe shoaling problem in the harbor.

**Local cooperation.** County of Los Angeles Department of Beaches and Harbors requested a new study, and expressed local support by letter dated August 5, 1992. Feasibility Cost Sharing Agreement signed February 21, 1997.

**Terminal facilities.** Marina del Rey is homeport to about 15 commercial fishing boats and 50 other transit boats with an annual fish catch valued at approximately \$10 million. There are about ten charter boat and five tour boat operations used by over 100,000 people each year and over 6,000 berths servicing recreational craft within the harbor. Eight yacht clubs call the marina homeport. The marina offers sailing instruction, boat rental, repair and storage, harbor tours, sport fishing, retail facilities, coffee shops, snack bars and fine restaurants. The U.S. Coast Guard has a cutter permanently assigned to the harbor.

**Operations during fiscal year.** In-house coordination regarding future dredging project continued. Total O&M, General expenditures were -\$3,730. Project condition is poor.

## 6. MORRO BAY HARBOR, CA

**Location.** On coast of southern California 110 miles south of Monterey Bay, 120 miles northwest of Santa Barbara Harbor, and nearly midway between San Francisco and Los Angeles. (see Coast and Geodetic Survey Chart 5387).

**Existing project.** For details, see page 33-4 of Annual Report for 1980.

**Local cooperation.** Project Cooperation Agreement executed on April 7, 1995.

**Terminal facilities.** Facilities which are adequate for existing commerce, comprise 640 feet of existing piers and 150 feet of floating docks constructed by San Luis Obispo County; 263 feet of floating docks constructed by California Department of Parks and Recreation; 1,396 feet of floating docks constructed by the city of Morro Bay; 1,398 feet of privately-owned piers; and 5,435 feet of privately-owned floating docks.

**Operations during the fiscal year.** Annual maintenance dredging was performed by Corps dredge, Yaquina. Total O&M, General expenditures were \$1,111,970.

## 7. NEWPORT BAY HARBOR, CA

**Location.** Forty miles southeast of Los Angeles.

**Existing project.** Provides rubblemound entrance jetties, 920-foot deep and 500-foot wide entrance channel and main channel, inner channels, a turning basin, and anchorage areas. Upper Newport is a shallow 800-acre marine estuary. Navigation project is maintained by Corps of Engineers. Pursuant to Section 841 and subject to Section 903(b) of WRDA 1986, the project for navigation for the harbor is modified to dredge and maintain a 250-foot wide channel in Upper Newport Bay to the boundary of Upper Newport Bay State Ecological Preserve to a depth of 15 feet.

**Local cooperation.** In a resolution dated August 20, 1996, Orange County Board of Supervisors indicated strong support of feasibility study and understanding of cost sharing requirements.

**Operations during fiscal year** A hydrographic survey of the harbor was conducted under the project name "Project Condition Surveys". Project condition is poor.

## 8. OCEANSIDE HARBOR, CA

**Location.** On the coast of southern California at Oceanside, about 30 miles north of city of San Diego and 80 miles south of Los Angeles.

**Existing project.** For details, see page 33-4 of Annual Report for 1981.

**Local cooperation.** Fully complied with. Oceanside Small Harbor Craft District sent letter of support dated April 1985 and Letter of Intent in March 1989. Project Cooperation Agreement executed in January 1993.

## **REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FISCAL YEAR 2005**

**Terminal Facilities.** Berthing for 957 boats, single-tie slips, 38 double-tie slips and 136 side-ties, of which 54 are visitors' slips; 12 dry storage spaces at Oceanside Marine Center; a fuel dock; a boat hoist; a launching ramp, which can accommodate 4 launchings at the same time; parking for 1,732 cars; with temporary parking for about 141 boat trailers; a boat-repair facility; a pump-out facility; a Coast Guard cutter; restaurants; retail stores; yacht brokers; a hotel/motel; condominiums; and a sport-fishing facility. Navigation improvements include new dredging and biannual dredging of expanded entrance channel area.

**Operations during fiscal year** Annual contract maintenance dredging was performed. Total O&M, General expenditures were \$966,806. Project condition is good.

### **9. PORT HUENEME, CA**

**Location.** On the coast of southern California about 65 miles northwest of Los Angeles and Long Beach Harbors, about one mile southeast of Channel Islands Harbor, immediately west of the city of Port Hueneme, four miles southwest of the city of Oxnard, and 10 miles southeast of the city of Ventura.

**Existing Project.** Authorized in 1970 for restudy of completed project. The harbor serves both military and commercial uses with port facilities consisting of terminals, wharves, and warehouses serving a wide variety of products. The existing Federal project consists of an approach channel, entrance channel, central basin, and two rubblemound jetties. The Navy has plans to utilize the harbor more extensively for vessel berthing and repair; effectively reducing maneuverability in the harbor. Harbor District would like to use deeper draft wood pulp carrier vessels and possibly tankers.

**Local cooperation.** Requirements are described in full on page 33-3 of Annual Report for 1976. The Oxnard Harbor District reviewed and agreed to sign the Feasibility Cost Sharing Agreement on January 3, 1996.

**Operations during fiscal year.** A hydrographic survey of the harbor was conducted. Due to contaminated sediment in the channel, a bench-scale material separation study was continued from FY2004. Partial dredging of the harbor was combined with the dredging contract for Channel Islands Harbor. Total O&M, General expenditures were \$254,295. Project condition is fair.

### **10. PORT OF LONG BEACH (DEEPENING), CA**

**Location.** On the coast of southern California along the Pacific Coast in San Pedro Bay about 20 miles south of downtown Los Angeles.

**Existing Project.** The recommended plan consists of deepening the approach channel to -76 MLLW, from breakwater seaward, a

distance of about 2 miles to accommodate deep draft crude tankers. WRDA 1996 authorized project in accordance with the July 1996 Chief of Engineers Report. Dredging to -76 feet MLLW of the approach channel was completed in December 2000. Prior condition survey indicated that turning basin and navigation channel inside the harbor were not dredged by POLB to -76 feet. Anticipated cost to complete project is within project cost estimate. The estimated cost of the project (October 1998) is \$43,350,000.

**Local cooperation.** The Port of Long Beach is the local sponsor. The Project Cooperation Agreement was executed in July 1998.

**Operation during the fiscal year.** None.

### **11. REDONDO BEACH HARBOR (KING HARBOR), CA**

**Location.** On the coast of southern California on the southern portion of Santa Monica Bay, about 17 miles southwest of Los Angeles.

**Existing project.** For details, see page 33-4 of Annual Report for 1981. WRDA of 1986 (H.R. 6) Conference Bill, Title VIII - Project Modification, Section 809 - King Harbor, Redondo Beach, CA, modifies the King Harbor Project in order to carry out maintenance dredging and for breakwater construction, and authorized the Secretary to restore the breakwater to a height of 22 feet and maintain breakwater at such height to provide greater protection from heavy wave action.

**Local cooperation.** City of Redondo Beach officials are in full support of the study and have indicated desire to construct improvements to reduce continued storm related damages.

**Operations during fiscal year.** Rockwork inspections were performed under the project "Project Condition Surveys". Project condition is good.

### **12. SAN DIEGO HARBOR, CA**

**Location.** On the coast of southern California just north of the Mexican border, about 109 miles southeast of Los Angeles and Long Beach Harbors. (See Coast and Geodetic Survey Chart 5107).

**Existing project.** For details, see pages 33 and 34 of Annual Report for 1980.

**Local cooperation.** Requirements are described in full on pages 33 and 34 of Annual Report for 1980.

**Terminal facilities.** Consists of 45,070 feet of wharves, exclusive of Government-owned and 24,000 feet are privately owned. Government-owned wharves at North Island are restricted to military use only.

**Operations during fiscal year.** No operations or

maintenance activities were performed. Project condition is good.

### 13. SAN DIEGO RIVER AND MISSION BAY, CA

**Location.** The project is located at the mouth of the San Diego River about six miles northwest of the San Diego business district, San Diego County, California.

**Existing project.** For details, see page 33-3 of Annual Report for 1991. Authorized by the Flood Control Act of 1944, the existing project consists of a levee channel, entrance channel, main channel, altered railroad bridge, anchorage basins (West Anchorage and Quivira) and three jetties. Construction of a 1,200-foot-long weir restored design conveyance capacity at the mouth of the San Diego River. A sand plug in mouth of river reduced flood-carrying capability from 115,000 cfs to 35,000 cfs, equal to a 100-year flood. The temporary timber pile breakwater at Quivira Basin was replaced with a permanent rubble mound breakwater.

**Local cooperation.** The Project Cooperation Agreement was executed July 1996 with the city of San Diego.

**Operations during fiscal year.** Engineering and Design efforts were continued with sampling and testing dredge material for periodic dredging requirements and to repair the Middle Jetty. Total O&M, General expenditures were \$1,180,936. Project condition is fair.

### 14. SANTA BARBARA HARBOR, CA

**Location.** On the coast of southern California, 90 miles northwest of Los Angeles Harbor.

**Existing project.** For details on original, see page 33-4 Annual Report for 1983. For reevaluation details see WRDA, 1986. The recommended plan includes acquiring a permanent dredge for the city and they will assume the operation and maintenance of the channel.

**Local cooperation.** See page 1015 of Annual Report for 1969, for items of local cooperation under 1962 authorized modification of existing project. The city reaffirmed its support on January 23, 2002.

**Operations during fiscal year.** Annual contract maintenance dredging (two cycle) was performed. Total O&M, General expenditures were \$1,787,004. Project condition is fair.

### 15. SANTA MONICA BREAKWATER, CA

**Location.** Santa Monica Breakwater is located seaward of

the Santa Monica Pier, approximately 15 miles west of downtown Los Angeles. Existing breakwater is 2,000 feet long and lies 1,300 feet from the shoreline.

**Existing project.** The authorized project comprises reconstruction of 900 feet of the southern end of the existing breakwater to an elevation of +10 feet MLLW for storm damage prevention and constructing an offshore boulder-field for fish habitat. The local sponsor will provide 12 moorings and other boating support facilities to reestablish commercial boating opportunities. WRDA 1996 authorized the project. The estimated cost of the project is \$7,200,000 (Federal cost is \$4,700,000 which includes \$40,000 US Coast Guard; Non-Federal cost is \$2,500,000).

**Local cooperation.** City of Santa Monica, the local sponsor, indicated its support in July 1995 for the authorized project and its willingness and intent to execute the Project Cooperation Agreement.

**Operations during fiscal year.** None.

### 16. SURFSIDE, SUNSET AND NEWPORT BEACH, CA

**Location.** Project extends along Orange County coastline, 17 miles from San Gabriel River mouth downcast to Newport Bay Harbor entrance.

**Existing project.** Authorization Section 101 of Rivers and Harbors Act 1962. Modified by Chief of Engineers September 1963. Project is a periodic continuing construction project.

**Local cooperation.** State of California, Orange County, Cities of Newport and Huntington Beach, and Surfside Colony. Funding agreement with the State of California for Stage 11 was executed on August 9, 2001.

**Operations during fiscal year.** No activities this Fiscal year. Project will be moved into Operations and Maintenance Appropriation in FY 2006.

### 17. VENTURA HARBOR, CA

**Location.** Located 65 miles northwest of Los Angeles and six miles northwest of Channel Islands Harbor.

**Existing project.** For details, see page 33-5 of the Annual Report for 1981. Reevaluation under WRDA 1990 consists of modification to the existing harbor by constructing a separate South Beach groin, extending the offshore breakwater, adding a spur groin to the north jetty and detached breakwater, and deepening and extending the entrance channel and sand trap.

## **REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FISCAL YEAR 2005**

**Local cooperation.** Fully complied with.

**Operations during fiscal year.** Annual contract for maintenance dredging was performed. Rockwork inspections were conducted. Total O&M, General expenditures were \$1,406,854. Project Condition is fair.

### **18. NAVIGATION/BEACH EROSION CONTROL WORK UNDER SPECIAL AUTHORIZATION**

**Navigation activities pursuant to Section 107, Public Law 86-645.**

Fiscal year cost for Section 107 were \$1,493,127 of which \$2,345 was for Port Huenem, CA; \$1,490,131 for San Diego Harbor, CA; and \$561 for Coordination Account.

**Beach erosion control activities pursuant to Section 103, Public Law 87-874 (preauthorization).**

Fiscal year cost for Section 103 were \$71,016 of which \$130 was for Pismo Beach, CA; \$698 for Coronado Shoreline, CA; \$285 for West Beach, Santa Barbara, CA; \$9,415 for Carpinteria Sand Dunes, CA; and \$37,506 for Solano Beach, CA.

#### **Flood Control**

### **19. ALAMO DAM, AZ**

**Location.** About 70 miles southeast of Kingman, Arizona on the Bill Williams River, Arizona a tributary of the Colorado River.

**Existing project.** For details, see page 33-7 of Annual Report 1981.

**Local cooperation.** Fully complied with.

**Operations during fiscal year.** The damaged Indicator Rod was replaced. Routine operations and maintenance were performed. Total O&M, General expenditures were \$1,272,831. Project condition is good.

### **20. CLIFTON, AZ**

**Location.** Located on San Francisco River approximately 170 miles northeast of Tucson in Greenlee County, AZ.

**Existing project.** The project consists of both structural and nonstructural elements, including an earthfill levee about 3,000 feet long, with floodgates and floodwalls. Implementation will involve flood proofing of 11 businesses, flood plain evacuation plans, and recreation development. Estimated cost (October 1998) for existing project is \$24,100,000 (includes \$2,600,000 cash contribution and \$5,400,000 other costs). Construction of the levee and

floodwall was completed August 1995 and turned over to sponsor December 1996. Completed non-structural relocation in December 1998.

**Local cooperation.** The State of Arizona, Division of Emergency Services, is the local sponsor. Project Cooperation Agreement executed on July 30, 1993.

**Operations during fiscal year.** None.

### **21. HANSEN DAM, LACDA, (RECREATION DEVELOPMENT), CA**

**Location.** In the San Fernando Valley area of the city of Los Angeles about 20 miles northwest of downtown Los Angeles. Recreation lake and facilities lie within flood control basin boundaries.

**Existing project.** Original project authorized under Flood Control Act 1936, and modified by WRDA 1986, Section 847 Energy and Water Development Act 1992 (PL 102-104). Project consists of two phases. Phase 1 is the excavation of the lake, and rough grading of the roadways and building pad locations. Phase 2 is the construction of a 10.5-acre recreation lake, picnic facilities, access roads, parking lots, and landscaping.

**Local cooperation.** Project is 50/50 cost shared with the city of Los Angeles.

**Operations during fiscal year** Coordination with local interests regarding expansion of the existing recreational facilities was on-going throughout the year. Mitigation planting was initiated. Total O&M, General expenditures were \$34,505.

### **22. HOLBROOK, AZ**

**Location.** Located along the Little Colorado River in the City of Holbrook, AZ, about 150 miles northeast of Phoenix.

**Existing project.** The completed project will provide 100-year-flood protection to 696 residences and 205 commercial, industrial, and public buildings. Estimated cost (October 1996) for this project is \$14,600,000, of which \$11,000,000 is Federal and \$3,600,000 is non-Federal (includes \$1,935 cash contribution and \$1,665,000 other costs).

**Local cooperation.** The City of Holbrook signed the Project Cooperation Agreement, on August 24, 1993.

**Operations during fiscal year.** None.

### **23. LOS ANGELES COUNTY DRAINAGE AREA, CA**

**Location.** Along Los Angeles and San Gabriel Rivers, Rio Hondo, and Compton Creek, CA.

**Existing project.** Project consists of channel improvement to lower Los Angeles, Rio Hondo Rivers, Compton Creek, and modification/replacement of as many as 25 bridges necessitated by the channel improvements. A map of the rehabilitation plan is in "General Design Memorandum, Los Angeles River Rehabilitation under the Major Rehabilitation Program," dated January 1984 and revised in March 1984. Estimated cost (September 2005) for existing project is \$211,000,000 of which \$158,000,000 is Federal and \$53,000,000 is non-Federal (includes \$43,968,000 cash contribution and \$9,032,000 other costs).

**Local cooperation.** In February 1992, the Los Angeles County Department of Public Works, the local sponsor, affirmed its support and willingness to financially participate in the construction of the project at a level consistent with the current cost-sharing policy for construction. The Project Cooperation Agreement was executed August 7, 1995.

**Operations during fiscal year.** Routine operations and maintenance activities were performed. Debris removal continued at Compton Creek and Hansen Dam. Concrete removal at Hansen Dam's Large Lower Lake took place. Periodic Inspections at Santa Fe and Whittier Narrows Dams were completed and reports printed and distributed. Total O&M, General expenditures were \$4,486,983. Project condition of Dams and Channels is good. Preparation for FY 2007 audit, processing of payments and completion of HEC-RES hydraulic models for LACDA project.

## 24. LOS ANGELES RIVER, SEPULVEDA TO ARROYO SECO, (RECREATION DEVELOPMENT), CA

**Location.** Upper Los Angeles River from Sepulveda Flood Control Basin (located 25 miles northwest of the city of Los Angeles) to the confluence of the Arroyo Seco channel, a distance of 20 miles.

**Existing project.** The Upper Los Angeles River consists primarily of a rectangular channel from the Sepulveda Basin to a point approximately four miles above the Arroyo Seco as a trapezoidal channel of the Arroyo Seco.

**Local cooperation.** Project is 50/50 cost shared with City of Los Angeles Department of Transportation.

**Operations during fiscal year.** None.

## 25. MOJAVE RIVER DAM, MOJAVE RIVER BASIN, CA

**Location.** On Mojave River at the Forks site, just downstream from the mouth of Deep Creek and about 14 miles upstream from Victorville, in Mojave River Basin, CA.

**Existing project.** For details, see page 33-8 of Annual Report for 1983.

**Local cooperation.** None required.

**Operations during fiscal year.** Routine operations and maintenance activities were performed. Total O&M, General expenditures were \$281,127. Project condition is good.

## 26. MURRIETA CREEK, CA

**Location.** The project area encompasses the Santa Margarita River in Riverside and San Diego Counties, California.

**Existing project.** The project is a multi-purpose flood control, environmental restoration and recreation project along 7.5 miles of Murrieta Creek. The major project features include channel widening and deepening; an environmental corridor along the length of the project; a multi-purpose detention basin; a wetland restoration area, a recreation park, and three bridge replacements. The project is divided into four phases.

**Local cooperation.** The Riverside County Flood Control and Water Conservation District and the Corps of Engineers executed the PCA in September, 2003.

**Operations during fiscal year.** Completed Phase I construction.

## 27. NOGALES WASH, AZ

**Location.** At the Mexican Border, in extreme southern Arizona in central and northern portions of the city of Nogales, about 60 miles south of Tucson.

**Existing project.** Current plan includes a flood warning system in Mexico and United States. Estimated cost (October 2000) for existing project is \$560,000, \$420,000 of which is Federal and \$140,000 is non-Federal.

**Local cooperation.** Project Cooperation Agreement scheduled for execution in December 2005. Negotiating agreement with Mexico through U.S. International Boundary and Water Commission (IBWC).

**Operations during fiscal year.** Continued to work toward execution of PCA.

## 28. NORCO BLUFFS, SANTA ANA RIVER, CA

## **REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FISCAL YEAR 2005**

**Location.** Located approximately 40 miles southeast of Los Angeles, in the city of Norco, along a 3.75-mile stretch of the south bank of the Santa Ana River.

**Existing Project.** The project consists of a structural solution of revetted-buttress fill using existing and imported fill material one reach, a distance of one mile. The bluff stabilization protects a 65-foot-high bluff from further retreat into a residential neighborhood, which results when flood flows occur in the Santa Ana River. Estimated cost (September 2005) is \$15,000,000 of which \$11,250,000 is Federal and \$3,750,000 is non-Federal.

**Local cooperation.** Local sponsor, Riverside County Flood Control District. Project Cooperation Agreement executed in January 1999.

**Operations during fiscal year.** Preparation for repair of damages and re-establishment of hydroseeding in March 2006.

### **29. PAINTED ROCK DAM (GILA RIVER), AZ**

**Location.** About 20 miles northwest of Gila Bend, and 120 miles southwest of Phoenix, Arizona.

**Existing project.** For details, see page 33-9 of Annual Report for 1981.

**Local cooperation.** Requirements are described in full on 33-9 of Annual Report for 1981.

**Operations during fiscal year.** Routine operations and maintenance activities were performed. Total O&M, General expenditures were \$1,112,370. Project condition is good.

### **30. PINE AND MATHEWS CANYONS DAMS, COLORADO RIVER BASIN, NV**

**Location.** In Lincoln County, NV, about 100 miles north of Hoover Dam and about 17 and 20 miles, respectively, east of Caliente, NV.

**Existing project.** For details, see page 33-13 of Annual Report for 1981.

**Local cooperation.** Fully complied with.

**Operations during fiscal year.** A post-flood survey was conducted. Routine operation and maintenance activities were performed. Total O&M General expenditures were \$151,929. Project condition is good.

### **31. RILLITO RIVER, AZ**

**Location.** The project is located in Tucson metropolitan area of Pima County, AZ.

**Existing project.** Plan of improvement includes: 1) an upstream

equestrian staging area; 2) an upstream rest area; 3) a downstream rest area; 4) esthetic treatment planting; 5) construction of 16 pedestrian bridges; and 6) pending reauthorization to include extension of authorized project upstream along a portion of Tanque Verde Creek. Estimated cost (October 1998) for existing project is \$40,000,000 (includes an allowance for estimated inflation through the construction period), of which \$28,600,000 is Federal and \$11,400,000 is non-Federal. Flood control portion is \$34,215,468 and recreation is \$5,784,532.

**Local cooperation.** Pima County Transportation and Flood Control District submitted letters of assurance on February 24, 1986 and May 6, 1987. Project Cooperation Agreement (PCA) was executed in June 1994. Amendment to PCA for third increment was executed on September 16, 1998.

**Operations during fiscal year.** None. Awaiting authorization to construct Tanque Verde Reach.

### **32. RIO DE FLAG, FLAGSTAFF, AZ**

**Location.** The project is located partly within the city of Flagstaff and entirely within Coconino County, Arizona.

**Existing project.** The recommended plan would reduce the potential for significant flood damages to residential, commercial, industrial, and historical structures in the City of Flagstaff, including Northern Arizona University, and the western portion of Flagstaff along Clay Avenue Wash. The plan consists of channel modifications, construction of a detention basin with capacity of about 295 acre-feet to reduce flood flows along the wash, construction of berms and floodwalls in the Thorpe Park area, and the construction of recreation features.

**Local cooperation.** The City of Flagstaff and the Corps of Engineers executed the Project Cooperation Agreement in October 2004.

**Operations during fiscal year.** **Complete the Limited Reevaluation Report, Complete 90% Mainstem plans and specifications, advertise Clay Avenue Detention Basin contract.**

### **33. SANTA ANA RIVER MAINSTEM, CA**

**Location.** Along a 75-mile reach of the Santa Ana River in San Bernardino, Riverside, and Orange Counties, emptying into the Pacific Ocean between the cities of Newport Beach and Huntington Harbor, 50 miles south of Los Angeles, and 90 miles north of San Diego.

**Existing project.** For details, see page 33-9 of the Annual Report for 1987. Plan of improvement: Seven Oaks Dam, management of overflow area - Seven Oaks to Prado; raise Mill

Creek Levee; additional storage at Prado; improvements along: Oak Street Drain/Riverside Co., Santiago Creek/Orange Co., San Timoteo Creek/San Bernardino Co., and Lower Santa Ana River; recreation development: mitigation and preservation. The estimated cost (October 2003) for existing project is \$1,500,000,000 (includes an allowance for estimated inflation through the construction period), of which \$1,025,000,000 is Federal and \$475,000,000 is non-Federal (includes \$82,400,000 cash contribution and \$392,600,000 other cost).

**Local cooperation.** Counties of San Bernardino, Riverside, and Orange. Local Cooperation Agreement was signed on December 14, 1989.

**Operations during fiscal year.** In FY05 we continued to work on engineering and design of the Prado Dam Phase II Dikes, Lower Santa Ana River Reach 9 Phase II and the Santa Ana Regional Interceptor (SARI line). Continued construction on Prado Dam embankment and outlet works, San Timoteo Creek Reach 3B(2), Lower Santa Ana River Reach 1 Dredging and Phase IV landscaping on the lower reaches of the Lower Santa Ana River reaches 2, 3, & 4.

### 34. SANTA ANA RIVER BASIN AND ORANGE COUNTY, CA

**Location.** On the Santa Ana River and tributaries and on other streams in Orange, Riverside, and San Bernardino Counties, CA.

**Existing project.** For details on units, see Annual Report for 1968.

**Local cooperation.** Fully complied with. Orange County Water District advocated an increase in water conservation at Prado Dam up to elevation 505 feet. Prado Basin includes significant riparian wetlands, including nesting areas of the endangered least Bell's vireo. The basin is currently under review as proposed critical habitat for the vireo.

**Operations during fiscal year.** Routine operations and maintenance activities were performed. The update to the Prado Dam Master Plan continued. Total O&M General expenditures were \$3,833,633. Project condition of Dams and Channels is good.

### 35. SANTA PAULA CREEK, CA

**Location.** Santa Paula Creek is a tributary of the Santa Clara River in the vicinity of the city of Santa Paula, Ventura County, about 16 miles from the ocean and approximately 60 miles northwest of downtown Los Angeles.

**Existing project.** Authorized by Flood Control Act of 1970, Public Law 91-611 (HD 443/80/1) and for details see Annual

Report Fiscal Year 1991, page 33-10. Estimated cost (October 2000) for existing project is \$40,900,000, of which \$39,300,000 is Federal and \$1,600,000 is non-Federal (includes \$0 cash contribution and \$1,600,000 other costs).

**Local cooperation.** Ventura County Flood Control District. No authorization is required; therefore, the existing Section 221 Agreement is still binding and was amended in September 1996.

**Operations during fiscal year.** None.

### 36. SAN LUIS REY RIVER, CA

**Location.** Along the lower 7.2 miles of the San Luis Rey River, in and around the city of Oceanside, San Diego County, about 86 miles south of Los Angeles.

**Existing project.** A double levee, 5.4 miles long; stone protected channel with a soft bottom; 1,330 feet of parapet walls at the ocean on the north and south levees; six interior drainage ponds; and a five-mile bike trail. The Water Resources Development Act of 1996 reauthorized the project. Estimated cost (September, 2005) \$122,700,000 of which \$92,025,000 is Federal and \$30,675,000 is non-Federal (including \$4,100,000 cash contribution).

**Local cooperation.** Final Local Cooperation Agreement signed by city of Oceanside and Secretary of Army May 13, 1988.

**Operations during fiscal year.** Continued biological assessment for O&M plan, planned interim vegetation clearing and initiated development of Post Authorization Decision Document to establish a flood protection plan consistent with environmental requirements.

### 37. SEPULVEDA DAM, (RECREATION DEVELOPMENT), CA

**Location.** The project is located between the communities of Encino and Van Nuys and 15 miles northwest of Los Angeles.

**Existing project.** Flood Control Act 1936 and Public Law 77-387 1941, and 1989-1972. Primary project purpose is flood control. Subsequent Act of Congress authorized a secondary project purpose for park and recreation.

**Local cooperation.** Recreation project is 50/50 cost shared with the city of Los Angeles. Federal funds will complete Lake Balboa and park with comfort station, trails, fencing, irrigation, children's play area, revegetation and develop an additional wildlife area. The city will continue reclaimed water distribution and develop several park areas.

**Operations during fiscal year.** Project construction physically

## REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FISCAL YEAR 2005

completed January 1999. Beilenson Park Extension project, completed in March 2005, included an asphalt turn-around road, sidewalk and parking stalls. Total O&M, General expenditures were \$350,871. Project condition is good.

### **38. SWEETWATER RIVER, CA**

**Location.** The project empties into San Diego Bay in the city of Chula Vista and National City and unincorporated San Diego County, four miles south of the city of San Diego, and eight miles north of the Mexican Border.

**Existing project.** Construction of 3.2 miles of channel improvements along the Sweetwater River from Interstate 805 to San Diego Bay, in combination with State Route 54 and Interstate 5 construction; and construction of two railroad bridges and 188 acres of preservation and mitigation land.

**Local cooperation.** San Diego County signed 221 Agreement in December 1984.

**Operations during fiscal year.** None.

### **39. TROPICANA AND FLAMINGO WASHES, NV**

**Location.** The project area is located west of and through urbanized Las Vegas community along both Tropicana and Flamingo Washes in southern Nevada.

**Existing project.** The recommended plan will provide urban flood reduction, erosion control and wildlife enhancement for portions of Las Vegas and the surrounding areas to the west and southwest, including the rapidly developing alluvial fan immediately west of Las Vegas. The plan recommends construction of three debris basins, three detention basins, modifications to two existing detention basins, 28 miles of channels connecting these project elements, 43 miles of lateral collectors, environmental mitigation, and recreation facilities. The estimated cost for the existing project is \$350,200,000 (includes an allowance for estimated inflation), of which \$259,100,000 is Federal and \$91,100,000 is non-Federal (includes \$27,000,000 cash contribution and \$47,400,000 other costs).

**Local cooperation.** The Clark County Regional Flood Control District and the Department of Public Works are the local sponsors for flood control. The Clark County Recreation Department is the potential local sponsor for the recreation feature. The Project Cooperation Agreement (PCA) was executed on February 7, 1995. The Section 211 PCA was executed December 17, 1999. Clark County was reimbursed \$12.5 million for Section 211 work.

**Operations during fiscal year.** Continued the construction of F1/F2 Debris Basins and the Upper Flamingo Diversion Channel. Continued construction of Upper Blue Diamond Wash and Diversion Channel.

### **40. TUCSON DIVERSION CHANNEL (RECREATION DEVELOPMENT), AZ**

**Location.** The Tucson Detention Basin and Diversion Channel are located in southeast Arizona. The project area initiates within the basin and proceeds approximately five miles downstream until it meets Interstate 19.

**Existing project.** The recreational development consists of a bicycle and hiking trail; four rest areas at the basin's inlet and outlet areas, near the intersection of Park Avenue and Ajo Way, across the street from Wakefield Middle School and near Interstate 19, where the project ends; four channel under crossing areas at Ajo Way (near the basin's outlet), Interstate 10; Kino Parkway; and Benson Highway; a restroom facility and five to seven car parking area located near the end of the project area; lighting at rest areas; benches; pedestrian bridges; and landscaping. The flood control channel maintains a 30-40 foot width, with a average 30-foot right-of-way on each side of the channel. The trail system is primarily located along the north bank of the channel.

**Local cooperation.** Pima County is the local sponsor.

**Operations during fiscal year.** None.

### **41. TUCSON DRAINAGE AREA, AZ**

**Location.** Project is located along Tucson Arroyo/Arroyo Chico watershed, within the Tucson city limits in Arizona.

**Existing project.** Both the reconnaissance report and the feasibility study identified the Tucson Arroyo/Arroyo Chico watershed area (approximately 11.4 square miles) as the major drainage channel within downtown Tucson. The recommended plan has two main features consisting of two detention basin complexes - one on Arroyo Chico in the headwaters of the drainage area (referred to as Randolph Golf Course Detention Basin Complex), and one on Tucson Arroyo/Arroyo Chico in the approximate center of the watershed (referred to as Park Avenue Detention Basin Complex). The local sponsor completed the Randolph Golf Course Detention Basin Complex in May 1996 using Section 104 credit consideration.

**Local cooperation.** Pima County Flood Control District and the Corps of Engineers executed the Design Agreement on May 3, 1999.

**Operations during fiscal year.** Continue preconstruction engineering and design phase.

### **42. WHITLOW RANCH DAM, QUEENS CREEK, AZ**

**Location.** Fifty miles southeast of Phoenix, AZ in Pinal

County, on Queen Creek, Arizona a tributary of Gila River, about 10 miles west of Superior, Arizona.

**Existing project.** For details see page 33-10 of Annual Report 1981. Project element earthfill Dam, circular conduit outlet works and reservoir.

**Local cooperation.** Fully complied with.

**Operations during fiscal year.** Routine operations and maintenance activities were performed. Total O&M, General expenditures were \$54,575. Project condition is good.

#### **43. INSPECTION OF COMPLETED FLOOD CONTROL PROJECTS**

Inspection of completed local flood control projects consisting of the following: 375 miles of channels, six dams, and appurtenances, and 23 debris basins. Permit reviews were conducted. See Table 33I.

Expenditures for: Arizona - \$44,737, California - \$760,630, and Nevada - \$41,126. Total O&M, General expenditures were: \$846,493.

#### **44. SCHEDULING FLOOD CONTROL RESERVOIR OPERATIONS**

In accordance with Section VII, Flood Control Act of 1944, studies of reservoir operations for flood control were conducted; and preparation of regulations for the use of storage allocated for flood control was continued. The flood control structures were Hoover, Twitchell, and Tat Momolikot Dams. Expenditures for: Arizona - \$32,420, California - \$102,115. Total O&M, General expenditures were \$134,530.

#### **45. FLOOD CONTROL WORK UNDER SPECIAL AUTHORIZATION**

**Flood Control Activities Pursuant to Section 205 of the 1948 Flood Control Act, Public Law 858, 80th Congress, as Amended.**

Fiscal year cost for Section 205 was \$511,234 of which \$505,717 was used for studies and \$5,517 for Coordination Account. See Table 33-J for list of projects.

**Emergency Streambank Protection Activities Pursuant to Section 14 of the 1946 Flood Control Act, Public Law 526, 79th Congress, as Amended.**

Fiscal year cost for Section 14 were \$4,403 of which \$980 was for Morgan Wash, AZ and \$3,424 for the Coordination Account.

**Snagging and Clearing Navigable Streams and Tributaries in interest of Flood Control, Section 208, 1954 Flood**

**Control Act, Public Law 780, 83d Congress.**

Federal cost for Section 208 was \$0.

#### **46. EMERGENCY RESPONSE ACTIVITIES - FLOOD CONTROL AND COASTAL EMERGENCIES**

Emergency Flood Control Activities - repair, flood fighting, and rescue work (Public Law 99, 84th Cong., and antecedent legislation).

**A. Disaster:** This program encompasses all the activities associated with preparedness, which includes preparation of plans and policy documents, exercises, training, coordination with outside agencies and governments, maintaining supplies and equipment, and overall readiness.

**B. Operational Program Areas:** Fiscal Year cost for disaster preparedness was \$551,196; emergency operations cost was \$5,797,002; rehabilitation cost \$88,289.

**C. Emergency Work in Support of Other Federal Agencies.** Provided assistance to the Federal Emergency Management Agency (FEMA) in Hurricanes Dennis, Katrina, Rita and Wilma recovery effort with a total cost of approximately \$1,150,000. Provided Flood Fighting Assistance to Orange and Santa Barbara Counties in southern California and the State of Arizona; Technical Assistance to various counties in southern California, southern Nevada, southern Utah, and the State of Arizona following the 2005 spring flooding with a total cost of approximately \$9,605,000. Also provided assistance to FEMA during the 2005 Spring flooding with a total cost of \$107,000.

#### **Environmental Improvements**

#### **47. CAMBRIA SEAWATER DESALINATION, CA**

**Location:** The project area is located in San Luis Obispo County, California approximately 230 miles north of Los Angeles, CA.

**Existing project.** The Cambria Community Services District (CCSD) plans to build a desalination plant to ensure adequate water supply. Their current water sources are wells in shallow aquifers and are unable to provide a reliable water source, particularly during dry weather. The proposed work includes design refinement, permitting and Environmental Impact

## REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FISCAL YEAR 2005

Statement/Environmental Impact Report and construction.

**Local Cooperation.** Cambria Community Services District.

**Operations during fiscal year.** Project was not included in the President's budget.

### **48. CITY OF SANTA CLARITA (PERCHLORATE), CA**

**Location.** The project is located within the Santa Clarita Valley in the northern part of Los Angeles County, CA.

**Existing project.** The main objective of the study is to evaluate the existing aquifer conditions of the Santa Clarita Valley Saugus area and develop alternatives for long-term solutions to restoring the perchlorate impacted aquifer to drinking water quality. The study has identified perchlorate sources, defined the nature and extent of contamination, provided aquifer characterization, evaluation of alternative well sites, groundwater modeling, and evaluation of long-term treatment technology solutions.

**Operations during fiscal year.** Refine study area aquifer characterization, continue groundwater sampling program..

### **49. HARBOR-SOUTH BAY WATER RECYCLING, CA**

**Location.** The project area is located in the South Bay area of Los Angeles County, CA encompassing cities of Los Angeles, Compton, Carson, Gardena, Inglewood, Hawthorne, Torrance, Redondo Beach, Palos Verdes, Rolling Hills, and Ranch Verde Estates.

**Existing project.** The project is part of the West Basin Municipal Water District's recycled water distribution system expansion, which will serve recycled wastewater to numerous local cities. The project will include the design and construction of over 30 miles of recycled water pipeline and distribution facilities. The project features are classified into 12 laterals and associated distribution/operational facilities to be designed and constructed.

**Local cooperation.** The local sponsor is the West Basin Municipal Water District.

**Operations during fiscal year.** Continue construction, 3M/completion of Madrona Lateral, complete design of Lateral 10, and initiate design of Lateral 6B.

### **50. NORTH VALLEY REGIONAL WATER INFRASTRUCTURE, CA**

**Location.** The project is located in the city of Lancaster, about 50 miles northeast of Los Angeles, in Los Angeles County.

**Existing project.** The project will provide critically needed water facilities to the northern sector of the Antelope Valley region. The project will include design and construction of approximately 8.5 miles of 36-inch diameter water main and related facilities to serve this part of the city.

**Operations during fiscal year.** None.

### **51. RIO SALADO PHOENIX & TEMPE REACHES, AZ**

**Location.** Phoenix Reach is located along 5 miles of the Salt River, from Interstate 10 Bridge to 19<sup>th</sup> Avenue in Phoenix, AZ. The project area for Tempe Reach is located along 1.3 miles of Indian Bend Wash, from McKellips Road downstream to confluence with Salt River in Tempe, Arizona.

**Existing project.** The two sites, for Tempe and Phoenix, have been identified with a Federal interest in environmental restoration involving riparian habitat restoration, water quality improvement and recreation that re incidental or complimentary to the primary project purpose.

**Local cooperation.** The city of Phoenix and the Corps of Engineers executed the Project Cooperation Agreement June 4, 2001. The city of Tempe and The Corps of Engineers executed the Project Cooperation Agreement in March 2003.

**Operations during fiscal year.** Phoenix Reach: Completed construction on the Phase 1, Phase 2, and Water Supply & Maintenance Roads contracts. Construction to begin on Phase 3 and complete design work on the final phase of the project for the water treatment system. Tempe Reach: Complete construction on the Indian Bend Wash phase, initiate construction on the downstream Salt River phase, and complete design on the final feature upstream on the Salt River.

### **52. RURAL NEVADA, NV**

**Location.** Rural Nevada project includes Boulder City, Mesquite, Moapa, Virgin Valley Water District, Tonopah, and Goldfield, Nevada. Boulder City is located approximately 25 miles southeast of the city of Las Vegas, Nevada. Mesquite and Virgin Valley are located approximately 70 miles northeast of the city of Las Vegas, Nevada. The city of Moapa is located approximately 35 miles northeast of the city of Las Vegas, Nevada. Tonopah is located approximately 210 miles northwest of Las Vegas, Nevada. Goldfield is located approximately 180 miles northwest of Las Vegas, Nevada.

**Existing project.** Boulder City project is focused on renovation of three existing pump stations and several miles of force main in Hemanway Valley. This project will protect against accidental discharge of untreated wastewater into the watershed of Lake Mead National Recreation Area and Lake Mead. The Mesquite project is focused on development of a

multi-purpose water resource project, to include flood control, retention facilities, water supply, environmental restoration, and sediment control. Phase 1 will include the construction of a wastewater tertiary treatment system to enhance the existing system and include the design work on phases 2 and 3. Phase 2 will include the construction of detention facilities at Pulsipher wash. Phase 3 will include the construction of retention facilities at Abbott Wash. The Moapa project consists of design and construction of monitoring wells to determine the potential of this area to supplement current water supply. The design and construction of an inter-connect pipeline to the neighboring Coyote Springs Wash Basin is being considered with the total scope of the Project. Virgin Valley Water District project is focused on providing arsenic treatment for 5 potable water wells, design and construction of 12" water line and three treatment plants. Tonopah project is focused on design and construction of a wastewater treatment facility and a wastewater collection system. Goldfield project is focused on design and construction of utility sewer collection system.

**Local cooperation.** The sponsors for these projects are city of Boulder City, Nevada, the city of Mesquite, Nevada, Moapa Valley Water District, Nevada, Virgin Valley Water District, Nevada, Town of Tonopah, Nevada, and Esmeralda County, Nevada.

**Operations during fiscal year:** City of Mesquite: Reimbursed sponsor 75% for costs for continued construction work on Pulsipher Water Retention and Reuse Facilities. Reimbursed sponsor 75% of continued design costs on Phase 3 Abbot Water Retention and Reuse Facility, including other design work on each of the three authorized projects. City of Boulder City: Reimbursed sponsor 75% for costs to continue construction of phase I project. Virgin Valley Water District: Reimbursed sponsor 75% for costs of design for arsenic removal and treatment system. Town of Tonopah: Reimbursed sponsor 75% for costs of design for the wastewater treatment and wastewater collection system. Esmeralda County: Reimbursed sponsor 75% for costs of design for the utility sewer collection system.

### 53. SOUTH PERRIS, CA

**Location.** The project is located in Perris, Riverside County, California.

**Existing project.** The project involves the design and construction of a reverse osmosis desalination plant, wells, pipelines and brine management pipelines required for the phased implementation of the Perris Basins Desalination Program. This program would provide a reliable potable water supply and preserve existing groundwater resources.

**Local cooperation.** Local Sponsor, Eastern Municipal Water District, EMWD, signed a designed agreement on September 3, 2003. The Project Cooperation Agreement has not yet started.

**Operations during fiscal year.** Initiate and complete 30% concept design June 2006.

### 54. TRES RIOS, AZ

**Location.** Project is located within the Phoenix metropolitan area of Maricopa County and includes a nine-mile reach of the Salt and Gila Rivers beginning at 83<sup>rd</sup> Avenue and continuing downstream to the confluence with the Agua Fria River.

**Existing project.** The feasibility report was completed in May 2000. The recommended plan will address flood control protection and the use of treated effluent from a regional wastewater treatment facility to restore and sustain fish and wildlife habitat. The benefits of environmental restoration would be the potential for 1,200 acres of riparian and wetland habitats to be restored. Since 1978, the study area has been subjected to five floods in excess of 100,000 cubic feet per second. The feasibility report was completed in April 2000.

**Local cooperation.** A Project Cooperation Agreement was executed with the city of Phoenix and the Sub-Regional Operating Group in April 2004.

**Operations during fiscal year.** The first construction contract for the flood control levee began in FY05.

### 55. UPPER NEWPORT BAY HARBOR, CA

**Location.** The authorized restoration project is located about 40 miles southeast of Los Angeles and covers the upper bay ecological reserve.

**Existing project.** The project includes dredging the access channels and two sediment basins toward providing restoration measures to the degraded habitat areas and re-establishing wetland and wildlife habitat areas.

**Local cooperation.** Orange County State of California Fish and Game.

**Operations during fiscal year.** Complete design and ITR. Complete Plans & Specs. Initiate physical construction of base contract and options 1 & 2. (Sediment basin)

### 56. OTHER WORK UNDER SPECIAL AUTHORITY

**Modifications to Structures and Operations of Constructed Corps Projects to Improve the Quality of the Environment, Pursuant to Section 1135 of the 1986 Water Resources Development Act, Public Law 662, 99th**

**REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FISCAL YEAR 2005**

**Congress, as amended.**

Fiscal year cost for Section 1135 were \$306,091 of which \$303,050 was used for studies and \$3,041 for Coordination Account. See Table 33-K for list of projects.

**Aquatic Ecosystem Restoration Pursuant to Section 206 of Water Resources Development Act of 1996, Public Law 303, 104<sup>th</sup> Congress, as amended.**

Fiscal year cost for Section 206 were \$307,051 of which \$306,965 was used for studies and \$86 for Coordination Account. See Table 33-L for list of projects.

**General Investigations**

**57. SURVEYS**

Total Fiscal Year costs were \$3,752,618 of which \$381,968 was for navigation studies; \$562,408 was for flood damage prevention studies; \$940,783 was for shoreline protection studies; \$6,214,961 was for special studies; \$56 for review of completed projects; \$110,317 was for Miscellaneous Activities; and \$108,061 for Cooperation with Other Water Agencies and Non-Federal Interests.

**58. COLLECTION AND STUDY OF BASIC DATA**

Fiscal Year costs totaling \$63,098 were associated with the following tasks under the Flood Plain Management Services \$52,717 and \$10,381 for hydrologic studies.

**59. PRECONSTRUCTION ENGINEERING AND DESIGN**

Fiscal Year expenditures were \$356,661 of which \$94,887 was for projects not yet authorized for construction and \$261,774 was for fully authorized projects.

**SANTA BARBARA STREAMS, LOWER MISSION CREEK, CA**

**Location.** Located in Santa Barbara County about 100 miles

1.	Channel Islands, CA	Maint:

3.	Los Angeles and	New Work:					

northwest of Los Angeles, CA.

**Existing project.** The recommended plan includes a combination of channel improvements and bridge replacements designed to increase channel capacity and to provide approximately 20 year protection to the surrounding area.

**Local cooperation.** The city of Santa Barbara and the Santa Barbara County Flood Control and Water Conservation District, the local sponsors, expressed support for the project in September 2000.

**Operations during fiscal year.** None.

**WHITEWATER RIVER BASIN, CA**

**Location.** Project is located in Coachella Valley, and runs along cities of Palm Springs, Rancho Mirage, Palm Desert, Thousand Palms, Desert Hot Springs and other communities.

**Existing project.** The Feasibility study was completed in Oct 2000. Alternative 6 recommended project consists of constructing four levees to provide protection for the southern portion of the alluvial fan. The current design would replace the downstream levee with incised channel.

**Local cooperation.** Coachella Valley Water District and the Corps of Engineers executed the Design Agreement Aug 2001.

**Operations during fiscal year.** Completed channelized hydraulic design, Gross Real Appraisal and sediment transport study.

LOS ANGELES, CA, DISTRICT

**TABLE 33-B**

**AUTHORIZING LEGISLATION**

See Section in Text	Date of Authorizing Act	Project and Work Authorized	Documents
1.	Sep 3, 1954	<b>CHANNEL ISLANDS HARBOR, CA</b> Harbor for light-draft vessels and shore protection works.	H.Doc.362, 83d Cong., 2d sess.
2.	Jul 3, 1958	<b>IMPERIAL BEACH, CA</b> Beach erosion control.	River and Harbor Act, Sec 101; PL 85-500 IAW H.Doc.399, 84 <sup>th</sup> Cong., 2d sess.
3.	June 3, 1988	<b>LOS ANGELES AND LONG BEACH HARBORS, CA</b> A breakwater 8,500 feet long, east of Point Fermin.	S.Doc.18, 55th Cong., 1st sess.
	June 25, 1896	Extend said breakwater to shore, making a total length of 11,152 feet from Point Fermin.	H.Doc. 969, 60th Cong., 1st sess.
	July 25, 1912	Dredge Los Angeles outer harbor west of entrance channel.	Rivers and Harbors Committee Doc.8, 62d Cong., 2d sess.
	Aug. 8, 1917	For silt-diversion works.	Rivers and Harbors Committee Doc.9, 64th Cong., 2d sess.
	Sep. 22, 1922	Triangular area approach to Los Angeles inner harbor entrance channel.	H.Doc. 1013, 66th Cong., 3d sess.
	Mar 3, 1925	Dredge Los Angeles Harbor main channel and entrance 35 feet deep and 1,000 feet wide; dredge inner harbor turning basin 35 feet deep; and reclamation of Reservation Point.	H. Doc.349, 68th Cong., 1st sess.
	July 3, 1930	A detached breakwater 12,500 feet long in prolongation of existing breakwater (authorized by act of 1896).  Widen fairway on east side of entrance to Los Angeles inner harbor; dredge a channel 35 feet deep and 400 feet wide in Cerritos channel from U.S. station 406 to Long Beach turning basin; entrance channel to Long Beach Harbor 35 feet deep and 500 feet wide; and maintenance of the Long Beach breakwater south of outer end pier A. This act provides that in no case shall dredging be done within 50 feet of established pierhead lines of existing piers and wharves.	Rivers and Harbors Committee Doc.33, 71st Cong., 2d sess.  S.Doc.130, 71st Con., 2d sess.
	Aug 30, 1935	Dredge 1,000-foot wide entrance channel to Los Angeles outer harbor to 40-foot depth and a turning basin 3,500 feet long and 1,500 feet wide to same depth; and enlarge entrance to inner harbor by dredging to 35-foot depth a triangular area at its junction with turning basin.	S.Committee print, 74th Cong., 1st sess.
	Oct 17, 1940	Dredge to a depth of 40 feet area A and B adjacent to 40-foot-depth entrance channel; construct and maintain a rubble mound breakwater of composite type 21,000 feet long in eastward therefrom to Belmont pier; maintenance dredging of A and B, and at mouth of Los Angeles River diversion channel; all subject to such modifications as in discretion of the Chief of Engineers may be advisable to meet requirements of the Navy.	H.Doc.843, 76th Cong., 3d sess
	Sep 3, 1954	Dredge to a depth of 35 feet in West Basin as a modification of existing project. This act provides that the Secretary of the Army is authorized to reimburse local interests for work they have done upon this project prior to July 1, 1953, at actual cost to local interests so far as same shall be approved by Chief of Engineers and found to have been done in accordance with the project hereby adopted and that such reimbursement shall be subject to appropriations applicable thereto or funds available therefore and shall not take precedence over other pending projects of higher priority for harbor improvements; and that such payments shall not exceed \$500,000.	H. Doc. 161, 83d Cong., 1st Sess

WRDA 1992, Sec 219 (f) as amended by WRDA 1999, and amended by the Consolidated Appropriations Act, 2001 Sec 108 (d) (52).
55.	Oct 31, 2000	<b>SOUTH PERRIS, CA</b> The project will design and construct a reverse osmosis desalination plan, wells, pipelines and brine management pipelines required for the phased implementation of the Perris Basins desalination Program.	WRDA 2000, Sec 101 (b) (4).
56.	Dec 11, 2000	<b>TRES RIOS, AZ</b> The project for ecosystem restoration, Tres Rios, AZ at a total cost of \$99,320,000, with an estimated Federal cost of \$62,755,000 and an estimated non-Federal cost of \$36,565,000.	PL 99-662 (WRDA 86, Sec 841). WRDA 2000, Sec 101 (b) (9).
	Oct 31, 2000	<b>UPPER NEWPORT BAY HARBOR, CA</b> The authorized project includes dredging the access channels and two sediment basins to provide restoration measures to the degraded habitat areas and re-establishing wetland and wildlife habitat areas.	WRDA 2000, Sec 101 (b) (8).
		<b>SANTA BARBARA STREAMS, LOWER MISISON CREEK, CA</b> The project for flood damage reduction, Santa Barbara Streams, Lower Mission Creek, CA, at a total cost of \$18,300,000, with an estimated Federal cost of \$9,200,000 and an estimated non-Federal cost of \$9,100,000.	
	Oct 31, 2000	<b>WHITEWATER RIVER BASIN, CA</b> The project is for flood damage reduction, Whitewater River Basin, CA, at a total cost of \$28,900,000, with an estimated Federal cost of \$18,800,000 and an estimated non-Federal cost of \$10,100,000.	WRDA 2000 Sec101 (b) (10).

1. Contains latest published map.
2. Date approved by Chief of Engineers under provisions of section 205. Public Law 80-858, as amended.
3. Final date of approval by House of Senate Public Works Committees resolution under provisions of Section 201, Public Law 89-298.

# SAN FRANCISCO, CA, DISTRICT

This district comprises the Klamath River Basin in southern Oregon and portions of northern and western California consisting of drainage basins tributary to the Pacific Ocean from the Oregon-California State line on

the north to Cape San Martin, CA, on the south except for basins tributary to the San Francisco Bay system which lie east of the Benecia-Martinez Bridge.

### Navigation

#### 1. CRESCENT CITY HARBOR, CA

**Location.** The project is located in Crescent City, Del Norte County approximately 350 miles north of San Francisco and 17 miles south of the Oregon border.

**Existing project.** There are three existing Federally maintained navigation channels at Crescent City Harbor. The Entrance Channel begins at the outer breakwater and is -20 feet MLLW (Mean Lower Low Water), 2,600 feet long, and 320 to 200 feet wide. The Entrance Channel connects to the Inner Harbor Basin, which is 1,500 feet long and extends from the Entrance Channel along the lee side of the inner breakwater. The Inner Harbor Basin is authorized to -

## REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2005

20 feet MLLW, but since 1993 has been maintained at -15 feet MLLW due to economic justification.

The new access channel extends 1,200 feet from the Inner Harbor Basin to the entrance of the Small Boat Basin, and varies in width from 140 feet to 210 feet with a channel depth of -14 feet MLLW.

**Local cooperation.** The local sponsor is the Crescent City Harbor District. The Project Cooperation Agreement was signed in June 2000 and satisfied the requirements of the Water Resources Development Act of 1986, as amended, PL 99-662. The agreement includes the following requirements: 1) provide lands, easements, rights-of-way, and dredged material disposal areas; 2) pay 10 percent of the costs of new construction; and 3) pay an additional 10 percent plus interest of the project costs allocated to general navigation features within a period of 30 years following completion of construction.

**Terminal facilities.** The Harbor contains a commercial small boat basin with 240 permanent berths and temporary moorings for approximately 20 vessels, a 250 slip recreational mooring facility, two fish processing plants with docks, a main dock, a marine repair facility, a U.S. Coast Guard dock, and other auxiliary commercial and recreational facilities.

**Operations during fiscal year.** New Work: Construction completed in November 2000. Maintenance: None.

## 2. HUMBOLDT HARBOR, CA

**Location.** The project is located in Humboldt Bay, about 280 miles north of San Francisco.

**Existing project.** Adopted by Acts of March 3, 1881, July 5, 1884, August 5, 1886, July 3, 1892, March 3, 1889, June 25, 1910, July 3, 1930, August 30, 1935, August 26, 1937, July 16, 1952, and August 1968. The project consists of: 1) a Bar and Entrance Channel -48 feet deep, tapering from a width of 1,600 feet at seaward mile 0.9 to 500 feet at seaward mile 0.2 and then 500 feet wide to mile 0.8; 2) a North Bay Channel -38 feet deep and 400 feet wide between mile 0.75 and mile 4.29; 3) an Outer Eureka Channel 35 feet deep and 400 feet wide between mile 4.29 and mile 5.0; 4) an Inner Eureka Channel between mile 5.0 and mile 6.30 which is 26 feet deep and 400 feet wide; 5) a Samoa Channel -38 feet deep and 400 feet wide between mile 4.29 and mile 5.84; 6) a Turning Basin beyond mile 5.84 at the upper end of the Samoa Channel which is -38 feet deep and 1,000 feet wide by 1,000 feet long; 7) an Anchorage Area 35

feet deep and 1,200 feet wide by 1,200 feet long in the North Bay between the Entrance Channel and Gunther Island (the anchorage area is not maintained); 8) a Fields Landing Channel 26 feet deep and 300 feet wide and a turning basin at mile 3.16 which is 600 feet wide and 800 feet long; and 9) Arcata Channel located in the extreme North Bay (18 feet deep and 150 feet wide) is no longer used for commercial navigation and has not been maintained since 1931.

The Water Resources Development Act of 1996 authorized deepening the Bar and Entrance Channel to a depth of -48 MLLW; deepening the North Bay Channel, Samoa Channel, and Samoa Turning Basin to a depth of -38 feet MLLW; widening the north side of the Entrance Channel an additional 200 to 275 feet; moving the southern edge of the Entrance Channel away from the South Jetty and to the north by 100 feet; and widening and realigning the entrance to the Samoa Turning Basin. Project cost is \$16,689,000 of which \$12,099,000 is Federal cost (includes \$200,000 Coast Guard cost) and \$4,590,000 is non-Federal cost (includes \$1,680,000 non-Federal reimbursements).

**Local cooperation.** The local sponsor is the Humboldt Bay Harbor, Recreation and Conservation District. The Project Cooperation Agreement was signed in March 1999 and satisfied the requirements of the Water Resources Development Act of 1986, as amended, PL 99-662. The agreement includes the following requirements: 1) provide lands, easements, rights-of-way, and dredged material disposal areas; 2) pay 25 percent of the costs of construction; and 3) pay an additional 10 percent plus interest of the project costs allocated to deep draft navigation within a period of 30 years following completion of construction.

**Terminal facilities.** The harbor serves six deep water breakbulk terminals with storage space for 120,000,000 FBM of logs/lumber and 100,000 MT of woodchips and warehouse space for 1,000,000 FBM of lumber and 51,000 MT of woodpulp and particle board.

**Operations during fiscal year.** New Work: Construction completed in April 2000. Maintenance: Normal O&M dredging was performed with the Essayons and Yaquina. A combined total of 1,130,473 cubic yards were removed at a cost of \$3,586,743. All dredged material was deposited in the permanently designated, Government-furnished, Humboldt Open Ocean Disposal Site (HOODS).

## 3. OAKLAND HARBOR, CA

## SAN FRANCISCO, CA, DISTRICT

**Location.** Oakland Harbor is located in the City of Oakland, California, on the eastern shore of central San Francisco Bay immediately south of the San Francisco-Oakland Bay Bridge.

**Existing project.** Adopted by Acts of June 23, 1874, June 25, 1910, September 22, 1922, January 21, 1927, April 28, 1928, July 3, 1930, March 2, 1945 and October 23, 1962. The project was completed February 1975, except for deepening the tidal canal to -35 feet from Fortman Basin to Park Street, and to -25 feet above Park Street which was deauthorized November 1977. Reconstruction of the Fruitvale Avenue Highway Bridge was completed in December 1973 and turned over to local interests for operation and maintenance. Project consists of entrance channel to Oakland Outer Harbor, -42 feet deep, accessed from San Francisco Bay and 800 feet wide across the shoal southeast of Yerba Buena Island, narrowing to 600 feet at Oakland Mole; thence, a channel and turning basin -42 feet deep and from 600 to 950 feet wide in outer harbor to the Army Base. Project also provides entrance channel to Oakland Inner Harbor, -42 feet deep and 600 feet wide to Howard Terminal and 35 feet deep to west end of Government Island, with additional widening to within 75 feet of the pierhead line in front of Grove and Market Street (formerly municipal) piers and along the south side of the channel from Harrison Street eastward to harbor line point 119 in Brooklyn Basin; a channel 35 feet deep and 500 feet wide through Brooklyn Basin; for a triangular area 35 feet deep about 2,700 feet long and maximum width of 300 feet at western end of Brooklyn Basin; a channel along north side of Brooklyn Basin which is 35 feet deep and 300 feet wide for 1,300 feet, thence 25 feet deep and 300 feet wide for 3,700 feet to a turning basin at east end of Brooklyn Basin which is 35 feet deep, 500 feet wide, and 1,200 feet long; a channel in the tidal canal 35 feet deep and 275 feet wide from Brooklyn Basin to Park Street, thence 18 feet deep to San Leandro Bay; a total channel length of 8-1/2 miles from San Francisco Bay to San Leandro Bay. Project also includes parallel rubble mound jetties at entrance to inner harbor, north jetty 9,500 feet long and south jetty 12,000 feet long; three highway bridges across the tidal canal, two of which (at Park Street and High Street) have been replaced by local interests and the Fruitvale Avenue Highway Bridge, constructed by the Federal Government, has been transferred to Alameda County. The Federal Government also constructed the Fruitvale Railroad Bridge in 1951. The County of Alameda operates and maintains the railroad bridge; however, it is still owned by the Federal Government. The Federal Government continues to reimburse the County for the cost of operating and maintaining the railroad bridge.

Oakland Harbor is the 2<sup>nd</sup> largest port on the West Coast and the fifth largest container port in the nation. Traffic is primarily containers ships. Ports around the world are increasing channel depths and expanding throughput capacity to compete for the next generation of deep-draft container ships. The Port is proposing to deepen the federal channels of the Oakland Harbor and Port-maintained berths to depths of 50' below MLLW. In constructing this project, the Port expects to dredge up to 11.8 million cubic yards of sediment, which will require reuse and disposal. If the Port does not get down to -50', shipping companies will bypass the Port of Oakland. This will hurt not just the Port of Oakland, but the overall Bay Area economy as well. The recommended/ Locally Preferred Plan has a benefit-cost-ratio greater than 8 to 1. The estimated construction cost is \$324 million, including \$48 million of local service facilities (LSF) (berth rehabilitation & deepening). Disposal options for dredged material include the San Francisco Deep Ocean Disposal Site (SF-DODS), Middle Harbor or the Fleet and Industrial Supply, Oakland (FISCO), Hamilton Airfield, Montezuma wetland restoration project, together with upland disposal/reuse at Mare Island and Alameda Point. Water Resources Development Act (WRDA) of 1999 authorized this project for \$252.3 million.

**Local cooperation.** A draft Project Cooperation Agreement satisfying the requirements of the Water Resources Development Act of 1986, PL 99-662 was sent to Corps Headquarters for review and approval in early Feb 2001. Final PCA was executed on 24 May 2001. The agreement includes the following requirements: (1) provide lands, easements, rights-of-way, and dredged material disposal areas; (2) pay 25 percent of the costs allocated to deep draft navigation during construction to a depth in excess of 20 feet but not in excess of 45'; (3) pay 50% of the costs allocated to deep draft navigation during construction in excess of 45'; and (4) pay additional 10 percent plus interests of the costs allocated to deep draft navigation within a period of 30 years following completion of construction. Deepening to 42' MLLW was completed in July 1998. The Port of Oakland completed a feasibility study to deepen Oakland Harbor to -50' MLLW at 100% Port cost under the authority of Section 203 of WRDA 86. The estimated project cost is \$284 million with an average annual navigation benefit of \$178 million. Project was authorized in WRDA 99. Construction began in October 2001 with a demolition contract for the Inner Harbor Turning Basin.

**Terminal facilities.** The port occupies 19 miles of waterfront on the eastern shore of San Francisco Bay. There are 665 acres of marine terminal facilities, 20 deepwater berths and 35 container cranes, including 29 of the Post-Panamax type. On-dock covered storage space exceeds

## REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2005

600,000 square feet. Two major railroads, Burlington Northern-Santa Fe and Union Pacific serve the port.

**Operations during fiscal year.** New Work: Construction to a depth of -46 feet will be completed in December 2005. The next phase of dredging to a depth in excess of -50 feet will begin in January 2006. The first phase of the Inner Harbor Turning Basin was completed in September 2003 and the second phase will be completed in September 2006. The Middle Harbor Enhancement Area (MHEA) containment structure will be completed in January 2006. Maintenance: Dredging of Oakland Inner and Outer Harbors was accomplished by contract. The contractor removed 142,300 cubic yards from the Inner Harbor at a cost of \$765,000 and 162,231 cubic yards from the Outer Harbor at a cost of \$932,828. Total FY 05 volume is 304,531 cubic yards at a total of \$1,697,838. In addition, \$478,636 was expended in the first quarter of FY 05 to finish the FY04 dredging cycle. The Middle Harbor Enhancement Area (MHEA) and Montezuma Wetlands were utilized for material disposal. Operation of the Fruitvale Avenue Railroad Bridge and Miller-Sweeney Highway Bridge cost \$195,014; maintenance of the Fruitvale Avenue Railroad Bridge cost \$80,084. The Corps does not fund maintenance for the highway bridge. The FY 05 Operation and Maintenance work will be completed in November 2005.

### 4. RICHMOND HARBOR, CA

**Location.** Richmond Harbor is located in central San Francisco Bay, in Contra Costa County in the City of Richmond.

**Existing project.** The existing navigation channel extends from deep water in San Francisco Bay into the Port of Richmond. The Southampton Shoal Channel and Long Wharf Maneuvering Area, at the entrance to the harbor channels are maintained to -45 feet MLLW. The Entrance Channel, Potrero Reach Channel, Potrero Sharp Turn, Inner Harbor and about half of the Santa Fe Channel, to -38 feet and the remainder of the Santa Fe Channel from the Lauritzen Channel confluence to -30 feet. The width of the navigation channel is 600 feet for most of its length to Point Richmond with one maneuvering area: in front of the Long Wharf. At Potrero Reach, the 500 foot width flares to about 600 feet at Point Potrero with a turn at the point, 1,200 feet wide and 38 feet deep. Thence, the channel continues into the Inner Harbor at a width of 850 feet in a northerly direction to the entrance of the Santa Fe Channel. The Santa Fe Channel extends northwesterly at a width of 200 feet into the upper basin terminus. A turning basin is provided at

Point Richmond, and a rubble-mound training wall extending 10,000 feet westerly from Brooks Island is also provided in the Potrero Reach. For details, see page 1977 of Annual Report for 1915 and page 1646 of Annual Report for 1938.

Improvements consisted of a construction plan involving four and one-half miles of channel between Richmond Long Wharf and the Santa Fe Channel. The project deepened the existing -35-foot channels to -38 feet, and provided a turning basin of 1,200 feet near Point Potrero. Approximately 2,200,000 cubic yards of sediment were dredged and transported to aquatic and upland disposal sites. Construction was completed in August 1998.

The project cost was \$40,000,000 of which \$28,300,000 was Federal cost (includes \$130,000 Coast Guard costs) and \$11,700,000 is non-Federal cost (includes \$1,310,000 non-Federal reimbursements).

The existing project was authorized on October 27, 1965. Previous projects were authorized by Acts adopted in 1917, 1930, 1935, 1938, 1945 and 1954. The proposed improvements are authorized by the Water Resources Development Act of 1986, PL 99-662.

**Local cooperation.** In accordance with the cost sharing and financing concepts reflected in the Water Resources Development Act of 1986, the local sponsor complied with the following requirements: (1) pay 10 percent of the costs to 20 feet below mean lower low water and 25 percent of costs between 20 and 45 feet below mean lower low water and (2) reimburse an additional 10 percent with interest of the costs allocated to general navigation facility of the project within a period of 30 years following completion of construction; and (3) provide all lands, easements, rights-of-way, relocation and dredged material disposal areas necessary for the projects. The value of lands, easements, rights-of-way and dredge disposal areas can be credited toward the payment required under item (2) above.

**Terminal activities.** The Port of Richmond encompasses nine privately-owned terminals and seven terminals owned by the Port.

**Operations during fiscal year.** New Work: Construction project completed in May 1998. Maintenance: Operations and Maintenance dredging of Richmond Inner and Outer Harbor was performed by the U.S. Hopper dredge "Essayons." The Essayons removed a total of 132,000 cubic yards of shoal material from the Inner 62,000 cubic yards and Outer Harbor 70,000 cubic yards, at a total cost of \$1,024,545 (Note - the dredging volume quantities were uncharacteristically low in FY 05). The FY 05 Operations and Maintenance dredging was completed in June 2005.

Disposal was at the Alcatraz in-bay Disposal Site, SF-11.

## 5. SACRAMENTO RIVER DEEP WATER SHIP CHANNEL, CA

**Location.** The project is located on the Sacramento River, between Collinsville and the Port of Sacramento, a distance of approximately 43 miles, in the counties of Sacramento, Contra Costa, Solano and Yolo, CA.

**Existing project.** Existing waterways are inadequate to efficiently accommodate vessels currently using the channel. Because of the depth restriction, only 20% of the world's fleet can currently load to full design depth. Once deepened, the Port of Sacramento will be able to accommodate 70% of the world's fleet at full design draft. The project plan is to deepen the existing 30 feet Sacramento River Deep Water Ship Channel from N.Y. Slough to the Port of Sacramento, a distance of about 43 miles, to 35 feet, and widen the channel as necessary. The project provides for establishment of wetland habitat and upland habitat to mitigate for such losses. Current project estimate is \$57,340,000 and is comprised of Federal cost (Corps) of \$27,980,000; Federal cost (Coast Guard-for navigation aids) of \$300,000 and non-Federal cost of \$29,060,000.

**Local cooperation.** A Local Cooperation Agreement (LCA) was signed with the local sponsor, the Port of Sacramento, in June 1986. A modification to the LCA, necessitated by the Water Resources Development Act of 1986, was executed in December 1988. The local sponsor will provide lands, easements, rights of way and dredged material disposal areas; modify or relocate buildings, utilities, roads, bridges (except railroad bridges) and other facilities, where necessary in the construction of the project; and pay 25 percent of the costs allocated to deep draft navigation during construction.

**Terminal facilities.** All main wharves at Sacramento have rail connections. Three facilities are owned by the City of Sacramento and the rest are privately owned; all are privately operated. For full description, see "Port and Terminal Facilities at the Ports of Sacramento, Stockton, Pittsburg and Antioch, Calif., 1986". Deepwater terminal facilities are comprised of wharves, piers, administration and storage buildings and belt railroad facilities. The majority of these facilities are owned and operated by the Sacramento-Yolo Port District and the rest are privately owned and operated. The facilities are considered adequate for existing commerce.

**Historical summary.** Funds to initiate pre-construction planning were appropriated in fiscal year 1982. Project construction was authorized by the Supplemental Appropriations Act of 1985 and modified by the WRDA 1986. The General Design Memorandum was approved and the Record of Decision was signed in May 1987. The modified LCA was executed in December 1988. The first construction contract for deepening was awarded in February 1989 and completed in July 1990. A second construction contract was awarded in September 1990 and completed in August 1991. Construction from River Mile 43 to River Mile 35 has been completed. In fiscal year 1992, the sponsor requested suspension of the project due to their inability to meet their cost share requirements. Congressional direction (Conference Report 105-749, dated September 25, 1998), prompted by the sponsor's renewed interest in completing the project, the Corps began to develop a study plan to prepare a Limited Reevaluation Report (LRR). In June 2002, the project was transferred from the Sacramento District to the San Francisco District in order to capitalize on the regional dredging expertise. Existing channel designs were refined, a material sampling and testing plan was developed, available dredge material disposal sites were evaluated, and the environmental documentation revised to address changes in habitat and species impact. In 2005, the sponsor again requested suspension of the project due to their inability to meet the cost share agreements.

**Operations during fiscal year.** The Port of Sacramento has recently entered into an agreement with the Port of Oakland to jointly operate the Port. While this Operational Plan is being implemented, and until the sponsor can again financially participate in the continuation of the study, there will be minimal work performed to advance the study. Once the sponsor is able to participate, the Limited Reevaluation Report will be finalized and the Supplemental Environmental Impact Statement/Report will be prepared.

## 6. SAN FRANCISCO BAY TO STOCKTON, CA (JOHN F. BALDWIN AND STOCKTON SHIP CHANNELS)

## REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2005

**Location.** The project consists of the navigational channel system, initiating at the San Francisco Bay, and extending over 50 miles to the Port of Stockton.

**Existing project.** The existing project was adopted by 1965 River and Harbor Act (H. Doc. 208, 89th Cong., 1st sess., contains latest published map). The project consists of deepening the San Francisco Bar to 55 feet; constructing a new channel in upper San Francisco Bay through Richmond to 45 feet; deepening the Pinole Shoal Channel in San Pablo Bay to 45 feet (currently 35 feet); deepen the Suisun Bay Channel to 45 feet to Chipps Island (currently 35 feet); and deepen the Stockton Deep Water Ship Channel to 35 feet to the Port of Stockton. Several attempts have been made since the initial construction to deepen portions of the channel system; however, environmental opposition to potential impact to water quality as a result of the deeper channel has halted any attempt to construct the authorized project.

**Local cooperation.** The Port of Stockton and Contra Costa County Water Agency are the non-Federal sponsors in support of deepening the entire project. A resolution by the Committee on Public Works and Transportation of the United States House of Representatives, September 24, 1992, requested a review of the report of the Chief of Engineers to determine whether modifications of the recommendations are advisable at the present time for navigation and other purposes from Carquinez Strait to Stockton. The Energy and Water Development Appropriation Act of 1998 included an appropriation of \$100,000 for the Corps of Engineers to initiate a reconnaissance study of deepening the Port of Stockton's main ship channel to 40'. The Sacramento District (SPK) prepared the reconnaissance report in September 1998, which indicated a Federal interest in deepening the project. In June 2002, the project was transferred from the Sacramento District to the San Francisco District in order to capitalize on the regional dredging expertise. A General Reevaluation Report (GRR) was initiated in July 2002, under the existing 1965 construction authority.

**Terminal facilities.** See Port Series No. 30, revised 1991, No. 31, revised 1991, and No. 32, revised 1986, titled respectively: "The Ports of San Francisco, Redwood City, and Humboldt Bay, Calif."; "The Ports of Oakland, Alameda, Richmond, and the Ports on Carquinez Strait, Calif."; and "The Ports of Sacramento, Stockton, Pittsburg, and Antioch, Calif." Facilities are considered adequate for existing commerce and will be adequate for future commerce upon completion of new terminal facilities.

**Operations during fiscal year.** After a positive initial assessment of the project economics and environmental impacts associated with a potential channel deepening to 40 feet, the GRR was initiated in July 2004 to determine an optimal depth to deepen the existing 35-foot navigational channel system from the San Francisco Bay to the Port of Stockton. Aerial and hydrographic surveys of the project limits were conducted to develop a Digital Terrain Model (DTM) in which to evaluate levee conditions, capacity of disposal sites, and limitations to channel realignment. Water quality models are being run to assess the potential impact a deeper channel may have on salinity intrusion and dissolved oxygen content within the channel. Additional water quality issues are being addressed with the Central Valley Regional Water Quality Control Board in hopes of identifying achievable testing protocol for dredge material disposal. Final GRR and Supplemental Environmental Impact Statement/ Report are scheduled for April 2009.

### 7. SONOMA BAYLANDS WETLANDS DEMONSTRATION PROJECT, CA

**Location.** The Sonoma Baylands site is located in Sonoma County, CA, approximately 25 miles north of San Francisco near the mouth of the Petaluma River, on the northern shoreline of San Pablo Bay.

**Existing project.** Authorized by Water Resources Development Act of 1992. The project includes restoration of tidal wetlands on 348 acres of diked lands, including construction of 11,645 feet of replacement levee around the landward periphery of the site, fifteen internal peninsulas for wave protection, three weirs for the discharge of dredged material supernatant, and modification of three existing high voltage electrical towers. Project included placement of 207,000 cubic yards of maintenance-dredged material from the Petaluma River navigation channel in a pilot project area and placement of 1.7 million cubic yards of suitable dredged material from the Oakland Harbor deepening projects on the remainder of the site. Placement of material was completed on November 6, 1995.

The project cost is \$8,900,000, of which \$6,675,000 is Federal cost and \$2,225,000 is non-Federal cost. Oakland deepening to -42' MLLW was completed in July 1998.

**Local cooperation.** The California State Coastal Conservancy signed a Project Cooperation Agreement on May 6, 1994 satisfying the requirements of the Water Resources Development Act of 1992, PL 102-580 and signed an amendment on December 9, 1994 to include the

## SAN FRANCISCO, CA, DISTRICT

placement of Oakland Harbor dredged material. The local sponsor must comply with the following requirements: (1) provide lands, easement, and right of ways; (2) modify or relocate utilities, roads, bridges (except railroad bridges) and other facilities, where necessary in the construction of the project; (pay 25 percent of the total project cost in accordance with Section 106 of the Water Resources Development Act of 1992. The local sponsor has also agreed to make all required payments concurrently with project construction.

**Terminal facilities.** N/A

**Operations during fiscal year.** The project was restored to tidal action on October 25, 1996. Monitoring of the project is continuing. Project was turned over to California Coastal Conservancy in August 1998 for operation, maintenance, repair, replacement, and rehabilitation of the functional portion of the project.

### 8. SAN FRANCISCO BAY-DELTA MODEL STRUCTURE, CA

**Location.** The model, including a Class A regional visitor center, is located in Sausalito, CA, adjacent to San Francisco Bay about two miles north of the Golden Gate Bridge.

**Existing project.** The San Francisco Bay/Delta Model, which covers 17 miles of the Pacific Ocean beyond the Golden Gate, all of San Francisco Bay proper, San Pablo Bay, Suisun Bay, and all of the Sacramento-San Joaquin Delta east of Suisun Bay to the cities of Sacramento on the northeast and Stockton and Tracy on the south, was constructed in a rehabilitated warehouse at Sausalito, CA, as a part of the San Francisco Bay and Tributaries, CA, Study authorized by the River and Harbor Act of May 17, 1950 (PL 81- 516, Section 110). The model was authorized as an operation and maintenance project in the Water Resources Development Act of 1974 (PL 93-251, Section 8). The model successfully reproduces to the proper scale the rise and fall of the tide, flow and currents of water, salinity intrusion, and trends in disposition of sediments. It is a useful tool to examine forces existing in the bay and estuarine system and to predict results of proposed changes.

**Local cooperation.** None required.

**Operations during fiscal year.** Maintenance: Operations and maintenance of the model continues.

**Historical summary.** Original model construction was initiated 1956 and completed 1957. The addition of the

Sacramento-San Joaquin Delta to the original model was initiated 1966 and completed 1969. Annual visitation to the model averages between 140,000 to 150,000 people. The central exhibits were completed in December 1981. Extensive exhibit upgrade for the Visitor Center and development of Cooperative Association completed September 30, 1989. The Cooperative Association provides support to the visitor center and their programs. An active volunteer program exists at the Visitor Center providing approximately 300 hours of effort monthly. The hydraulic engineering department closed 4 January 2000. The Visitor Center operations continue to offer public information-educational services via programs, exhibits, and special events. The Visitor Center is currently developing new interpretive and exhibit plans.

Total cost of regional visitor exhibits and model as of September 30, 2005, was \$44,288,274 of which \$21,379,771 was for the regional visitor center, \$1,383,324 for exhibits, and \$21,525,180 for maintenance.

### 9. SAN FRANCISCO BAY LONG TERM MANAGEMENT STRATEGY (LTMS), CA

**Location.** The San Francisco Bay Long-Term Management Strategy (LTMS) for dredged material disposal covers deep and shallow draft navigation channels of the San Francisco Bay region including Central San Francisco Bay, South Bay, San Pablo Bay and Suisun Bay environs.

**Existing project.** The San Francisco Bay region has an annual disposal requirement of approximately 2.4 million cubic yards (mcy) to maintain navigation channels. The Bay also has a new civil works requirement of approximately 19 mcy. In January 1990, the Army Corps of Engineers, the Environmental Protection Agency, Region IX, the San Francisco Bay Regional Water Quality Control Board and the San Francisco Bay Conservation and Development Commission convened with approximately thirty interested agencies and organizations with concerns regarding dredged material disposal in San Francisco Bay. These four agencies have the responsibility for regulation of the waters of the US and California for disposal of dredged material.

The four agencies and the concerned navigation interests formed the LTMS to develop technically feasible, economically prudent, and environmentally acceptable long range solutions to the dredging and disposal needs for the San Francisco Bay region over the next fifty years. In determining acceptable dredged material disposal locations,

## REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2005

the LTMS is evaluating a broad array of potential ocean, in-Bay and non-aquatic beneficial uses disposal alternatives.

**Local cooperation.** Pursuant to their regulatory responsibilities, the Division Commander of the South Pacific Division, Corps of Engineers; the Regional Administrator of the Environmental Protection Agency, Region IX; the Chair of the San Francisco Bay Regional Water Quality Control Board and the Chair of the San Francisco Bay Conservation and Development Commission agreed to jointly undertake the development and implementation of a Long Term Management Strategy (LTMS) for dredging and disposal of dredged materials from the region. Based on the outputs from the LTMS, the Regional Water Quality Control Board (RWQCB) and the Bay Conservation and Development Commission (BCDC) will consider modifications to the dredging elements of their respective Basin and Bay Plans for San Francisco Bay.

**Regulatory Streamlining:** Besides identifying implementable disposal options, the LTMS will: (1) develop coordinated regional disposal policies between federal and state agencies; (2) provide a required decision-making framework for dredging and disposal projects; (3) streamline existing permit and testing procedures; and (4) provide a long term site monitoring apparatus and feedback mechanism.

**Operations during fiscal year.** In 1994, the Environmental Protection Agency (EPA) designated a deep ocean disposal site. In 1996, the Corps, EPA, and the State of California implemented a joint agency Dredged Material Management Office (DMMO) for dredging permit processing.

The Final LTMS EIS was finalized in October 1998 and the Record of Decision was signed in July 1999. The EIS identified Alternative 3 as the preferred alternative which would limit future dredged material disposal to 20% in the San Francisco Bay, 40% in the ocean, and 40% for upland beneficial reuse. ROD initiated implementation for Federal agencies.

In December 2001, the South Pacific Division Commander, EPA's Region IX Administrator, Chairmen of the San Francisco Bay Regional Water Quality Control Board, Chairwoman of the San Francisco Bay Conservation and Development Commission and the Executive Committee of the State Water Resources Control Board, as the members of the LTMS Executive Committee, approved the final LTMS Management Plan, directing implementation of the program. Adoption of the management plan will require amending the Bay and Basin Plans. BCDC amended the San Francisco Bay Plan in December 2000 and the

RWQCB amended the San Francisco Basin Plan in June 2001.

In general, the first phase of implementation will focus on the completion of the Corps Regional Dredge Material Management Plan for San Francisco Bay, with a future project-by-project analysis for "practicability" in terms of fiscal and environmental impacts that would then be assembled as a regional composite EIS. This effort was initiated in October 2001. Activities in FY 05 consisted of: continuing the methyl mercury study effort to delineate means and formation of methyl mercury at the Hamilton Wetlands Restoration Project (HWRP) site; continuing development of the Regional Dredge Material Management Plan; development of a detailed work plan to assess science data needs for all sensitive fish species for which there are environmental dredging windows in San Francisco Bay; and initiate a fish distribution study in the Bay.

### 10. RECONNAISSANCE AND CONDITION SURVEYS

Reconnaissance and condition surveys of channels dredged in Fiscal Year 2005 and jetty structures were conducted on the following projects: Berkeley Breakwater, Bodega Bay, Bullshead Channel, Crescent City Harbor, Islais Creek, Larkspur Ferry, Mare Island Strait, Moss Landing, Northship Channel, Napa River, Noyo River, NY Slough, Petaluma River; Pillar Point, Pinole Shoal, Redwood City, Richardson Bay, Richmond Harbor, San Bruno Shoal, San Leandro Breakwater, San Rafael, and Suisun Slough, all in California. Fiscal year costs were \$1,092,283.

### 11. NAVIGATION WORK UNDER SPECIAL AUTHORIZATION

**Navigation activities pursuant to Section 107, Public Law 86-645 (preauthorization).**

Fiscal Year total costs were \$61,663 for Oyster Point Harbor, CA.

**Mitigation of shore damages activities pursuant to Section 111, Public Law 90-483 (preauthorization).**

None.

**12. BEACH EROSION CONTROL WORK UNDER SPECIAL AUTHORIZATION**

**Beach erosion control activities pursuant to Section 103, Public Law 87-874 (preauthorization).**

None.

**Shoreline Erosion Control Development & Demo PGM activities pursuant to Section 227, Public Law 104-303 (preauthorization).**

Fiscal year total costs were \$42,077.

**Flood Control**

**13. CORTE MADERA CREEK, CA**

**Location.** Creek and tributaries drain an area of 28 square miles in Marin County, CA, and flow into west side of San Francisco Bay about 9 miles north of Golden Gate.

**Existing Project.** Provided for about 11 miles of channel improvements, including realignment, enlargement, levees, riprap, rectangular concrete sections, interior drainage facilities, bridge relocations, and debris removal on Corte Madera Creek and lower reaches of its tributaries, and a continuous channel rights-of-way to deep water in San Francisco Bay reserved to assure channel outlet in the event of future tideland reclamation. Water Resources Development Act of 1986 modified existing project to direct construction of Unit 4 from Lagunitas Road Bridge to Sir Francis Drake Boulevard, and to include construction of - flood proofing measures as necessary to individual properties and other necessary structural measures in vicinity of Lagunitas Road Bridge to ensure proper functioning of completed portions of authorized project. Portion of project upstream of Sir Francis Drake Boulevard previously classified inactive was modified on November 17, 1986 to eliminate any channel modification. Current project has 3 miles of channel enlargement and levees, about 1.8 miles of rectangular concrete channel improvements, and 450,000 cubic yards of redredging on lower Corte Madera Creek.

**Local Cooperation.** Local interests must provide lands and rights-of-way, including suitable areas for disposal of waste material, modify or relocate all bridges and utilities necessary for construction and maintenance; hold and save the United States free from damages due to the construction works; maintain and operate the project after completion in accordance with the regulations prescribed by the Secretary of the Army, and prevent encroachment on flood channels that would result in decreasing the effectiveness of project for flood control; adjust all claims regarding water rights that might be affected by the project; and contribute in cash 1.5 percent of Federal construction cost of Ross Valley units 1-4 and tidal areas. Marin County Flood Control and Water Conservation District previously furnished resolution of local assurances dated March 29, 1966, March 28, 1967, August 15, 1967, and July 8, 1969, and Marin County Board of Supervisors reaffirmed by letter dated September 28, 1978. Project was authorized by the State of California by 1965 Statute, Chapter 1388. Board of Supervisors of Marin County Flood Control and Water Conservation District furnished assurances of willingness and ability to meet requirements for portion of project below Sir Francis Drake Boulevard.

On December 13, 1983, Marin County Board of Supervisors reconfirmed assurances of local cooperation because a Superior Court judgment ordered that county to take all steps required by law to complete channel downstream of Sir Francis Drake Boulevard (Unit 4) and maintain entire project as agreed. A Local Cooperation Agreement for redredging the lower reach of Corte Madera Creek was executed on June 29, 1985. Marin County also provided support for Ross Valley Unit 4 by resolution on March 24, 1987 and by the resolution on September 13, 1988.

The General Reevaluation Report (GRR) was initiated in February 1999. As long as the originally authorized project remains the recommended project, the 1966 authorized cost sharing and financing requirements will be applicable. A community-based Design Advisory Committee has been created with representatives from Ross, Kentfield, Corte Madera, and Larkspur to provide community input on the conceptual plan. The conceptual plan is based on the Marin County Board of Supervisors' Design Guidelines for a consensus plan which was approved in 1996.

The GRR will be developed in two phases. Phase I will develop alternatives based on the design guidelines and determine if the project benefits exceed the costs. Phase II will complete the GRR and environmental documentation. Design and construction of Unit 4 and attendant features in the downstream units will be determined by the GRR. The

## REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2005

communities of Corte Madera, Larkspur, Kentfield, and Ross reviewed the alternatives screening conference report summarizing Phase I during 2000. The non-Federal sponsor, Marin County Flood Control District 9, collected community resolutions passed in 2000 and 2001, and in April 2001 made a consolidated recommendation on the locally preferred plan. The Town of Ross reviewed Corps analyses of impacts of the recommended plan and changed their endorsement in 2003, which was followed by a new consolidated recommendation in May 2003.

**Operations during fiscal year.** New Work: The flood control project has been built in separate units. The current project focuses on the design and construction of unit 4 with modifications to units 2 and 3. Unit 4 includes a natural flood control channel and a sedimentation basin located at the town of Ross.

Work restarted on GRR Phase II in accordance with the official notice of changes to the preferred plan.

**Historical summary.** Project responsibility was transferred to Sacramento District on April 1, 1982. The Marin County Board of Supervisors passed Resolution 96-26 on February 1, 1996 to support a 40-year project. Project responsibility was transferred back to San Francisco District on October 1, 1996.

Project is about 77 percent complete, not including the portion removed from the project upstream of Sir Francis Drake Boulevard. Work remaining: Design construction of the remaining 800 feet of channel downstream of Sir Francis Drake Boulevard and Ross Creek and minor improvements to the 2,200 feet of channel already constructed below Ross. The portion of Corte Madera Creek upstream of intersection of Sir Francis Drake Boulevard and Corte Madera Creek in Ross, near the city of San Anselmo, was classified inactive on July 11, 1984, due to lack of local support, and removed from the project by WRDA 1986.

A Local Cooperation Agreement for redredging lower reach of Corte Madera Creek was executed June 29, 1985. Construction on Lower Corte Madera Creek Channel was completed and transferred to Marin County Flood Control and Water Conservation District by letter of May 28, 1987; San Francisco District monitors maintenance and operation of the project. The project was transferred from Sacramento District in October 1996. Design process began in the San Francisco District to complete Unit 4.

### 14. LLAGAS CREEK, CA

**Location.** The Llagas Creek Flood Control Project is located in southern Santa Clara County, California, in the vicinity of the communities of Morgan Hill, San Martin, and Gilroy.

**Existing project.** Llagas Creek is a conduit to the Pajaro River and the Monterey Bay for a 104-square mile watershed around Morgan Hill and Gilroy. The creek system is especially prone to flooding, having recorded floods in 1937, 1955, 1962, 1963, 1969, 1982, and in 1997. Primarily, the project consists of channel improvements and a diversion channel providing a 100-year level of protection to urban areas and 10-year protection to agricultural areas.

The Llagas Creek Flood Control Project is separated into 14 reaches. Of these, the Natural Resources Conservation Service (NRCS) completed Reaches 1, 2, 3, 9, 10, 11, 12 and 13 and prepared preliminary designs for the remaining reaches (1967). The Water Resources and Development Act (WRDA) of 1999 authorized the U.S. Army Corps of Engineers to complete the remaining reaches of the project "substantially in accordance with the NRCS plans".

The total project cost is \$95,000,000 of which \$58,000,000 is Federal cost and \$37,000,000 is non-Federal cost.

**Local cooperation.** Per the original NRCS authority, the project sponsor, Santa Clara Valley Water District is required to pay the cost of the lands only. The City of Morgan Hill remains an active stakeholder.

**Operations during fiscal year.** A supplemental Environmental Impact Statement (EIS) is necessary due to the changes in the environmental habitat within these reaches, overall watershed use, and Federal and State law. Preliminary designs of the remaining reaches have been prepared and the supplemental EIS/R has been initiated. In March of 2005, as requested by the "project pause", the Corps updated the Remaining Benefit to Remaining Cost Ratio (RBRCR) for the project. As a result this project is no longer economically justified because the remaining benefit to cost ratio is 0.23. Completion of final designs and the supplemental EIS is on hold, pending further authorization. The without project hydrology and hydraulics was finalized, and the project cost estimate was updated.

### 15. PETALUMA RIVER, CA

**Location.** The Petaluma River Basin is situated in the Sonoma and Marin Counties, California, on the northwestern shore of San Pablo Bay. The project site

## SAN FRANCISCO, CA, DISTRICT

extends upstream approximately 500 feet from Lynch Creek to the spur line Railroad Bridge located approximately 600 feet downstream of the Lakeville Street Bridge.

**Existing project.** The project was re-authorized under Section 112 of the Water Resources Development Act of 2000. The scope of the project consists of constructing the U-shaped channel, an earthen trapezoidal channel including the channel excavation and widening, the two hundred (200) feet concrete constriction weir, an approximately one – mile – long sheet pile flood / retaining wall along both sides of the main channel, two (2) storm drain pump stations, twelve (12) storm drain outlet structures in various locations of the channel, two (2) large mitigation areas including planting in the embankment slope throughout the project site, two hundred (200 ) feet long transition channel work, replacing two (2) vehicular bridges and two (2) railroad bridges, and demolishing the existing railroad wood trestle.

Present estimated cost of the project is \$39,660,000 of which \$25,780,000 is Federal cost and \$13,880,000 is non-Federal cost.

**Local cooperation.** The project was executed based on the original Petaluma River Project Cooperation Agreement in July 1996 under the Continuing Authorities Program, Section 205 – Small Flood Control Projects. The project costs have exceeded the Continuing Authorities Program cost limits and were specifically authorized in WRDA 2000, Section 112. Further, Congressional direction in the House Report 106-693 accompanying the Energy and Water Development Appropriations Bill 2001 provides guidance to the Corps to utilize the available federal funds to continue project construction.

**Operations during fiscal year.** New work: The construction of Contract #1 for the U-shaped channel portion was completed in December 1998. The construction of the Payran Bridge was completed under the local sponsor's contract in 1996 and 1998, respectively. The construction contract #2 for the trapezoidal channel was awarded in May 1999. The features of work in contract #2 completed in September 2000 included the floodwall\retaining wall in both sides of the channel, the channel widening and excavation, the constriction weir, the flood control features including the two (2) Storm Drain Pump Stations and the storm drain outlets and the mitigation planting throughout the project site. Contract #2 was completed in May 2001. The remainder of the work to be completed, including the resolution of problems with the Holmberg mitigation site will be included in Contract #3. The mainline Railroad Bridge, one of the two railroad

bridges under construction by the local sponsor's contract, was completed early April 2001. Contract #3 for the Channel Transition completed in April 2002, Contract #4 for the mainline railroad approach, including the demolition of the existing railroad wood trestle was completed in February 2005. Contract 5A, channel excavation under the Payran and Lakeville bridges and installation of emergency generator at the Payran Pump Station was completed in May 03. Contract 5B, slide repair to trapezoidal channel was completed in September 2003. Design, Independent Technical Review (ITR) and Biddability Constructability Operation Environmental (BCOE) of Industrial Spur Line and Sheet Pile Wall were completed in FY05. Project completion currently suspended pending re-programming authorization for \$3.1 million. Maintenance: Operations and maintenance of Petaluma River Channel including engineering and design. Condition survey was performed in February 2002. Operations and maintenance dredging of the Petaluma River Channel was completed in October 2003.

## 16. RUSSIAN RIVER BASIN, CA

**Location.** Russian River rises in Coast Range in northwestern California, flows southerly for 87 miles, and then turns westerly to flow for 23 miles to Pacific Ocean at Jenner, 60 miles northwest of San Francisco, CA. (For general location see Geological Survey map for California.)

**Existing project.** Active authorized project provides for construction of a dam on East Fork of Russian River at Coyote Valley to a height of 160 feet; a dam on Dry Creek at Warm Springs to a height of 319 feet; and channel stabilization works on Russian River between mouth and mile 98, on lower reaches of several tributaries, and on Dry Creek downstream from dam. Project also provides for expansion of fish hatchery capacity at Dry Creek, Warm Springs, to compensate for fish losses on Russian River attributed to operation of Coyote Dam component of project. Coyote Valley Dam (Lake Mendocino), completed in 1959, and Warm Springs Dam (Lake Sonoma), completed in 1983, are operated and maintained by the United States with fisheries facilities operated and maintained under contract to the California Department of Fish and Game. (See tables 34-I and 34-J for latest approved estimated costs).

**Local cooperation.** Fully complied with for Coyote Valley Dam and channel improvements accomplished to date. For the Dry Creek portion, local interests are required by the authorizing act to comply with the usual a., b., c. requirements for channel improvements and, in addition, prevent any encroachment in the channel of Dry Creek which would interfere with proper functioning of

## REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2005

the channel improvement works; adjust all claims concerning water rights arising from the construction and operation of the improvements, including acquisition of water rights needed for preservation of fish and wildlife resources affected by the project; and reimburse the United States in accordance with the Water Supply Act of 1958, as amended, for that part of the joint-use construction cost, (30.2 percent currently estimated at \$103,760,000) and an ultimate 32.5 percent of the annual operation, maintenance, and replacement joint-use costs allocated to municipal and industrial water supply. The estimated annual cost to local interests for maintenance of channel improvement works is \$80,000. Sonoma County Water Agency (formerly Sonoma County Flood Control and Water Conservation District) provided assurances of willingness and ability to meet requirements by Resolutions No. DR 00793-1, September 25, 1961, No. DR 4770-1, December 17, 1962 and No. DR 45759, August 5, 1974, for Dry Creek (Warm Springs) Lake and Channel. By letter dated March 7, 1967, Sonoma County Flood Control and Water Conservation District further indicated their interest in optimization of the Dry Creek (Warm Springs) damsite to provide additional water supply storage. Reimbursement to the United States for Dry Creek (Warm Springs) Lake and Channel costs allocated to 212,000 acre-feet of water supply storage is specified in a water supply contract with the local sponsor approved in October 1982. Local interests have expended approximately \$1,000,000 to provide partial flood protection in project area and have constructed facilities at an approximate cost of \$20,000,000 to distribute water from the completed Coyote Valley reservoir.

**Operations and results during fiscal year.** New work: Coyote Valley Dam: Replaced SST toilets with new vault toilets and ordered two more CXT prefabricated restrooms for FY 04. Other work included modifying existing sewer system to reduce the number of confined space entry areas, completing wooden water tanks with steel at Kyen & Bushay campgrounds and Overlook day-use area; repaving roads at Overlook, Mendocino Drive Road, and Southboat Ramp Parking lot; and repairing the emergency slide gate in the control tower. New playground equipment was installed in the Cha-Ka-Ka Campground. Dry Creek (Warm Springs) Lake and Channel: Engineering activities continued. Major work includes initiating a new Coho salmon recovery program which included adding new rearing facilities for the endangered Coho. Installation of the Critical Project Security Program improvements was completed in July 2005. Maintenance: Coyote Valley Dam: Operation and maintenance continued. Structures were maintained in serviceable condition. Runoff of East Fork Russian River at Coyote Dam was normal for the year. Maximum storage of 93,026 acre-feet occurred on May 19,

2005. Maximum hourly inflow to reservoir was 4,117 cubic feet per second on December 30, 2004. Maximum release of 2,480 cubic feet per second occurred on January 13, 2005. Dry Creek (Warm Springs) Lake and Channel: Operation and maintenance continued. Structures were maintained in serviceable condition. Runoff of Dry Creek at Warm Springs Dam was normal for the year. Maximum storage of 255,995 acre-feet occurred March 23, 2005. Maximum hourly inflow to reservoir was 6,749 cubic feet per second on December 8, 2004. Maximum release of 2,131 cubic feet per second occurred March 23, 2005.

**Historical summary.** Entire project, exclusive of recreation facilities at completed project (Lake Mendocino), is about 99 percent complete. Coyote Valley Dam, initiated November 1958, was completed April 1959 (cost \$17,550,000, of which \$11,952,000 was Federal; and \$5,598,000 contributed). Work, including removal of slides resulting from storms in 1958, was completed April 1959. Bank stabilization work on Russian River near Geyserville was completed in 1957 and channel improvements in remaining reaches on Russian River and East Fork of Russian River were completed in 1974 (cost \$2,483,900). In April 1982, responsibility was transferred to the Sacramento District. Responsibility for civil works operations & maintenance functions for the two projects was transferred back to San Francisco District October 1, 1996.

Warm Spring construction completion include fish hatchery in December 1980, project overlook in May 1981, reservoir clearing in July 1981, downstream stabilization sills in October 1981, dam closure in October 1982, spillway repair at Warm Springs Dam in September 1985, boat launching facilities, Phase I, in September 1985, Rockpile Road Upgrade, Yorty Creek Beach, and remedial work at Liberty Glen camping area in September 1990, fish hatchery expansion in September 1992, final control tower grouting, dam access road repair, spillway stabilization, fish hatchery emergency water supply in September 1993, and Liberty Glen wastewater system and contaminated soil remediation. Initial filing of Warm Springs' reservoir was commenced on November 1, 1984. Responsibility for construction was transferred to Sacramento District in August 1983. Dam safety assurance studies were initiated at Coyote Valley Dam in fiscal year 1984. Responsibility for civil works operations and maintenance functions for the two projects was transferred back to San Francisco District October 1, 1996.

## 17. INSPECTION OF COMPLETED FLOOD CONTROL PROJECTS

## SAN FRANCISCO, CA, DISTRICT

Section 3, Flood Control Act of June 22, 1936, as amended and supplemented, included a requirement that local interests maintain and operate completed flood control works in accordance with regulations prescribed by the Secretary of War. Inspections made throughout the year to determine effectiveness of operation and maintenance by local interests of completed local protection projects and works constructed under emergency and special authorities of Sections 205 and 208 of the 1948 Flood Control Act, Section 14 of the 1946 Flood Control Act, and Public Law 99, 84th Congress. In addition, encroachments to Federal Projects such as new bridges, etc. must be reviewed and approved prior to construction by the local sponsor, as well as in compliance with the Clean Water Act permit and endangered species concerns regarding their operations and maintenance activities. Fiscal year cost was \$241,582. Total cost to September 30, 2005 was \$4,360,789. See Table 34-H for inspections made this fiscal year.

### 18. FLOOD CONTROL WORK UNDER SPECIAL AUTHORIZATION

**Flood Control activities pursuant to Section 205, Public Law 858, 80th Congress, as amended (preauthorization).**

Fiscal year costs were \$357,302 for preauthorization studies of which \$86,685 for San Pedro Creek, Pacifica, CA; \$11,079 for Contra Costa (Rock Slough), CA; \$262,098 for White Slough, Solano County, CA; \$9,962 for Howell Mountain Flood Protection, CA; and -\$12,522 for Coyote Creek at Rock Springs, CA.

**Emergency flood control activities-repair, flood fighting and rescue work (Public Law 99, 84th Congress, and antecedent legislation).**

Fiscal year cost incurred for emergency flood control activities were \$601,216 of which \$579,373 were for the Disaster Preparedness Program; \$21,843 for Rehabilitation Inspection Program.

**Emergency bank protection (Section 14, 1946 Flood Control Act, Public Law 526, 79th Congress).**

None.

### 19. SCHEDULING FLOOD CONTROL RESERVOIR OPERATIONS

In accordance with sec. 7, Flood Control Act of 1944, summaries of monthly reservoir operations at Del Valle, CA were prepared. No water control manual revisions were completed due to environmental issues. Corps personnel provided advice as requested during flood control operations at the reservoir. Fiscal year cost was \$35,990.

### 20. MISCELLANEOUS WORK UNDER SPECIAL AUTHORIZATION

**Project Modification for Improvement of Environment (Section 1135, PL 99-662).**

Fiscal year total costs were -\$2,800 for Wildcat Creek Restoration, CA.

**Aquatic Ecosystem Restoration (Section 206, PL 104-303).**

Fiscal year total costs were \$761,139; -\$41,393 for American Canyon Creek, CA; \$53,444 for Arroyo Las Positas; \$205,797 for Santa Clara Valley Aquatic Restoration, CA; -\$36,000 for San Pedro Creek, Aquatic Restoration, CA; \$14,717 for Salt River Restoration, CA; \$314,484 for Upper York Creed Dam Removal, CA; and \$250,090 for St. Helen-Napa River Restoration, CA.

### Environmental Improvement

### 21. HAMILTON AIRFIELD WETLANDS RESTORATION, CA

**Location.** The Hamilton Wetland Restoration project is located at the former Hamilton Army Airfield south of the city of Novato, California.

**Existing project.** The project calls for restoration of approximately 1,000 acres of habitat that includes coastal salt marsh, seasonal wetlands, tidal channels and intertidal habitats. The project will provide habitat for endangered species such as Chinook salmon, California clapper rail, brown pelican, California black rail and salt marsh harvest mouse. The wetlands will also support shorebirds and waterfowl migrating along the Pacific Flyway. The wetlands and associated habitats that will be restored are especially valuable due to the scarcity and declining amount of this habitat type in California and the dependence of

## REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2005

listed threatened and endangered species on this unique resource.

More than 10 million cubic yards of dredged material is needed for the project. About 2.5 million cubic yards of material will come from the Port of Oakland's -50-foot harbor deepening project. The remaining seven and a half million cubic yards of material will come, primarily, from other local and federal operation and maintenance projects around San Francisco Bay. Dredged material will be tested to ensure that it is suitable for wetlands construction.

Use of the material for wetlands restoration also avoids the necessity of disposing of it elsewhere in the bay or in the ocean, consequently wasting a resource that can be better used for habitat restoration. This concept is part of the Long Term Management Strategy for the disposal of material dredged from San Francisco Bay. This strategy was created in partnership with federal and state agencies, navigation interests, fishermen, environmental organizations and the general public in 1990, to develop long-term solutions and policies for dredged material disposal that favor reuse. The project will be built using a phased approach that coincides with the availability of real estate parcels and dredged material. Initial geotechnical investigations to characterize soil properties began in late October 2001, as part of the Pre-construction Engineering and Design Phase of the project. In January, construction was completed on the first 1,700 feet of pipeline that will eventually stretch some 34,000 feet and carry the dredged material to various locations at the wetlands restoration site.

The project is currently building levees to bound the wetlands that will be created with dredge material. Subsequent phases of the project will develop seasonal and tidal Wetland features including the final removal of all buildings in the wetland area, as well as further site preparation. In addition a dredge material off-loader is planned for construction. The planned off-loader will receive dredged material and move it to the Hamilton Restoration site. This procedure will utilize a dedicated loader to pump dredged material from an off-shore platform to the restoration site. Internal berms and levees will be constructed on the airfield parcel to contain the slurrified sediment. Once all the sediment has been placed on the site and the residual water drained from the site, the bayward levee will be breached and the waters of San Francisco Bay will be allowed once again to flow across the land.

The project cost is \$63,900,000 of which \$47,900,000 is Federal cost and \$16,000,000 is non-Federal cost (includes \$5,200,000 Port of Oakland costs according to Oakland Project Cooperation Agreement).

The existing project was authorized in the Water Resources Development Act of 1999. Public Law 106-53 authorizes the Secretary of the Army to implement an ecosystem and wetland restoration project at the Hamilton Army Airfield and adjacent properties, City of Novato, Marin County, California.

**Local cooperation.** In accordance with the cost sharing and financing concepts reflected in the Water Resources Development Act of 1986, the local sponsor must comply with the following requirements: (1) pay 25 percent of the total project cost and (2) provide all lands and easements, rights-of-way, and relocations necessary for the project. The value of lands, easements, rights-of-way, and relocations can be credited toward the payment required under item (1) above.

**Operations during fiscal year.** The Port of Oakland has completed initial construction of 1700 feet of the off loader pipeline, which will be extend another 30,000 feet onto the project site. Site preparation and construction of the off loader facility began in September 2003 after the transfer of the Army BRAC parcel to the State of California has been completed. Project is expected to receive first dredge material in August 2006.

## 22. SAN RAMON VALLEY RECYCLED WATER, CA

**Location.** The project is located in the San Ramon Valley, Contra Costa and Alameda Counties, approximately 25 miles east of San Francisco, California.

**Existing project.** The project runs from Danville south to Dublin. The project will include design and construction of 8 pump stations, 8 storage reservoirs, and 135 miles of pipeline. The total project cost is \$150,000,000 of which \$15,000,000 is Federal cost and \$135,000,000 is non-Federal cost. The district is currently involved in the design of one pump station and 6,500 feet of pipeline. The current project estimate for this design is \$560,000 and is comprised of Federal cost (Corps) of \$420,000 and non-Federal cost of \$140,000. The existing project was authorized in the Water Resources Development Act of 1999, Section 502, b (42).

**Local cooperation.** A Design Agreement was signed with the local sponsor, East Bay Municipal Utilities District, in November 2002.

## SAN FRANCISCO, CA, DISTRICT

**Operations during fiscal year.** Investigations were conducted in FY 2003 to identify property that could be purchased by the sponsor as a site for the pump station. A contract was awarded in August 2003 for the preliminary design of the pump station. The Preliminary Design was completed in September 2004.

### General Investigations

#### 23. SURVEYS

Fiscal year costs for surveys were \$1,973,556 of which \$349,452 were for navigation studies; \$401,698 for flood damage prevention; \$127,920 for shoreline protection studies; \$1,065,557 for special studies; \$19,454 for miscellaneous activities; and \$9,475 for coordination studies with other agencies.

#### 24. COLLECTION AND STUDY OF BASIC DATA

Fiscal year total costs of \$10,859 were incurred, of which \$7,245 was for Flood Plain Management Service Program and, \$3,614 for Hydrologic Studies.

#### 25. PRECONSTRUCTION ENGINEERING AND DESIGN

##### LLAGAS CREEK, CA

See Llagas Creek under Flood Control on pg 34-10 for project location and description. PED activities during the fiscal year include initiating geotechnical study for final design.

##### NOYO RIVER AND HARBOR, CA

Noyo River rises in the Coast Range, flows westerly, and empties into Noyo Harbor. Noyo Harbor is a cove on the California Coast about 87 miles south of Humboldt Bay and 135 miles northwest of San Francisco. The 1962 Rivers and Harbors Act, modified by the 1976 Water Resources Development Act, authorized up to two breakwaters as necessary to provide protection. The 1976 Water Resources Development Act, as modified by the Water Resources Development Act of 1986, authorized construction of additional channel improvements. Recommended plans of improvement for the breakwater and channel improvement

were previously considered as a single project. Due to significant differences in the time required for planning and construction, each part is now reported separately.

The plan of improvement for Noyo River and Harbor (Breakwater), CA provides for one detached offshore 400-foot breakwater aligned in a north-south direction along the southern portion of Noyo Cove, west of the entrance channel in Noyo Harbor. The plan also provides for a 60-foot wide channel, 7 feet deep, for a distance of about 3,000 feet upstream from the end of the existing Federal project to the Dolphin Isle Marina. The June 1995 draft General Design Memorandum (GDM) estimated the breakwater cost at \$23,312,000 of which \$18,712,000 is Federal cost and \$4,600,000 is non-Federal cost. Subsequent to the draft GDM, the Conference Report on H.R. 1905, Energy and Water Development Appropriation Act of 1996 directs the Corps to investigate the viability of a pre-fabricated steel structure in lieu of a rubble mound breakwater, including modeling. A special report, which documented this evaluation, was completed in January 1997.

A meeting with the Local Sponsor, PG&E and the City of Fort Bragg was held 5 February 1997 to discuss the Corps' findings. Integrating wave power generation to the breakwater does not decrease the Sponsor's annualized cost because the Sponsor is required to pay all costs associated with power generation. Two letters from the Noyo Harbor District, dated 26 February 1997, requested the Corps finalize the GDM and discontinue study of integrating wave power generation into the breakwater. Due to sponsor's inability to fulfill its cost-sharing requirements, preparation of a final GDM was terminated.

This project has been put in an inactive category at the request of the sponsor.

##### PAJARO RIVER AT WATSONVILLE, CA

The Pajaro River is the dividing line between Santa Cruz and Monterey County located approximately 100 miles south of San Francisco on Monterey Bay. Flooding in the city of Watsonville, the town of Pajaro, and surrounding agricultural lands prompted a re-examination of flood damage prevention in the Pajaro basin.

The project provides for modification of the existing levee system built by the Corps in 1949 and includes 2.5 miles of flood control levees and/or floodwalls on Salsipuedes Creek and Corralitos Creek, tributaries of the Pajaro River, as well as pump systems located outside of existing levees on the Pajaro River. The tributaries are

located 6 miles from the river mouth. Since the only alternative with Federal interest was within the existing 1966 Rivers and Harbor Act construction authority, the reconnaissance study was certified in August 1994 with the recommendation to proceed directly to a General Re-evaluation Report (GRR) on raising levees along a portion of Corralitos and Salsipuedes Creeks. Flooding along the main stem of the Pajaro River in January and March 1995 caused in excess of \$65,000,000 in damages. Additional damages were incurred during the floods of January 1997 and February 1998. The main-stem was, therefore, incorporated into the ongoing GRR for the creeks.

The Corps has identified NED plans for both the main-stem and the creeks. The non-Federal sponsors, the counties of Santa Cruz and Monterey, have carried out a public consensus building process to develop locally preferred plan (LPP) which is acceptable to both agricultural and environmental interest. The Corps of Engineers supports this process by providing technical expertise and, when the process concludes, will incorporate the LPP with the NED as the recommended plan that will go forward into detailed design in the GRR. Contingent on funding, the GRR would be completed in FY 06 and construction could begin in the summer of FY 08.

### **SAN RAFAEL CANAL, CA**

San Rafael Canal, also known as San Rafael Creek, is located on the northwestern shoreline of San Francisco Bay in the city of San Rafael, about 17 miles north of the city of San Francisco. The Canal is a shallow-draft, mainly light commercial and recreational, channel consisting of two distinct sections, the Inner Canal channel and the Across-the-Flats channel. San Rafael's central business district and dense residential areas surround the Inner Canal section while the Across-the-Flats portion traverses San Francisco Bay to reach deepwater.

A study was authorized by a resolution adopted by the Committee on Public Works and Transportation of the United States House of Representatives on August 8, 1984, Section 142 of the Water Resources Development Act (WRDA) of 1976 (Public Law 94-587), as subsequently amended in Section 705 of WRDA of 1986 (Public Law 99-662) to examine alternatives to prevent damage caused by storm and tidal flooding in the central San Rafael area. The project was authorized for construction in Section 101 of WRDA of 1996.

The Feasibility Study recommended the South Floodwall Plan. This plan consists of approximately 9,500

linear feet of floodwall constructed along the south bank of the canal and 1,600 feet of sheet-pile floodwall along the crest of the Bayfront levee on the east side of the canal ways tract. The South Floodwall Plan has a benefit-to-cost ratio of 2.0 to 1. The estimated project cost is \$32,200,000 of which \$20,930,000 is Federal cost and \$11,270,000 is non-Federal cost. Preconstruction Engineering and Design was initiated in October 1992. The Corps proposed a continuous floodwall design to replace the South Floodwall Plan, which was estimated to save between \$11.6 to \$14.1 million compared to the South Floodwall Plan, as recommended in the Feasibility Study. A letter was sent to the City of San Rafael in December 1996 requested Sponsor's agreement with the Corps proposal to finalize the project design based on the continuous floodwall concept. A District Engineer letter to the Mayor, City of San Rafael, dated 25 September 1997, informed the City that the project has been placed in a suspended status.

**Operations during fiscal year.** The operations and maintenance schedule provides for a 4-year maintenance dredging cycle for the Inner Canal channel and a 7-year cycle for the Across-the-Flats channel. Depths are -6 feet Mean Lower Low Water (MLLW) and -8 feet MLLW respectively. Maintenance dredging of the Inner Canal portion had been scheduled for FY 02 but was delayed to October 2002 because the dredge material was discovered to be unsuitable for aquatic disposal. An upland site, Winter Island, was later identified near Antioch, California. Cost sharing is in accordance with the Water Resources Development Act of 1996. Dredging of the Inner Canal was completed in April 2003. Quantities removed during this latest cycle were 78,000 cy; of which 44,500 cy was disposed in-by while 33,500 cy was disposed upland at Winter Island.

### **UPPER GUADALUPE RIVER, CA**

The Upper Guadalupe River Project area is located in the City of San Jose, Santa Clara County, California. The reach of the river proposed for improvement begins at interstate Highway 280 at the edge of downtown San Jose and extends south for about 6.2 miles.

The feasibility study evaluated a variety of non-structural and structural plans of improvement for flood protection in the Upper Guadalupe basin. The final feasibility study report and Environmental Impact Statement/Report was submitted to South Pacific Division on January 30, 1998. This report recommended Federal participation in a project providing a 50-year level of flood protection. The locally preferred plan provides a 100-year

SAN FRANCISCO, CA, DISTRICT

level of protection. The Division Engineer's Public Notice was issued on February 27, 1998 and a Chief of Engineer's Report was signed August 19, 1998. The project has been authorized for construction in the 1999 Water Resources Development Act.

The Design Agreement for the follow-on Pre-construction Engineering and Design (PED) phase was signed on February 25, 1999. PED was initiated in April 1999. PED is scheduled to complete by the end of September 2006.

A Final Limited Re-evaluation Report (LRR) was submitted to the ASA (CW) office for approval on May

27, 2005. The report identifies a NED plan that provides 50-year level of protection but is fully mitigated for environmental impacts and endangered species. The LRR recommends the implementation of the LPP as the authorized plan and recommends an exemption by the ASA (CW) for full Federal participation. The total project cost is \$238 million.

**Operations during fiscal year.** Activities include completion of 100% design of the Reach 10B plans, completion of the LRR, and participation in the Guadalupe Watershed Integration Working Group (GWIWG). Water Certification under the CWA issued for the LPP plan.

1. Includes \$641,800 for jetties, bulkheads, main Bodega Bay Channel and turning basin completed in 1943.

2. Includes \$585,000 for Preconstruction Planning (\$456,000 Construction, General funds and \$129,000 General Investigation funds).

3. Includes \$585,000 Preconstruction Planning costs (\$456,000 Construction General costs and \$129,000 General Investigation costs).

4. Includes \$1,053,756 for reconnaissance and condition surveys, FY 1956-2005. Excludes contributed funds of \$385,134.

5. Excludes contribution funds of \$2,000.

6. Excludes contributed funds of \$271,116 and \$2,138 surplus material from Corps military activities.

7. Excludes contributed funds of \$44,340. Includes \$1,246,082 for reconnaissance and condition surveys, FY 1956-2005.

8. Excludes \$2,000 contributed funds in lieu of royalty-free rock.

9. Includes \$2,261,371 for previous project. Excludes \$95,000 contributed funds for existing project.

10. Includes \$98,206 for previous project and \$85,603 for reconnaissance and condition surveys, FY 1956-2005.

11. Excludes \$5,337 previous project costs.

12. Excludes \$8,539 surplus material from Corps' military activities. Includes \$525,580 for reconnaissance and condition surveys, FY 1956-2005. Excludes contributed funds of \$290,653.

13. Excludes previous project costs.

14. Includes \$1,160,726 for reconnaissance and condition surveys, FY 1956-2005. Excludes \$496,307 contributed funds.

15. Includes \$11,985 for previous project. Excludes \$7,180 contributed funds for previous project.

16. Includes \$4,120,600 for Pre-construction Planning (\$3,540,600 for Breakwater of which \$500,000 allocated under Construction, General and \$3,040,600 under General Investigations); (\$580,000 for Channel Extension of which \$165,000 allocated under

Construction, General and \$415,000 under General Investigations).

17. Includes \$4,120,596 Preconstruction cost (\$3,540,596 for Breakwater of which \$500,000 was under Construction, General and \$3,040,596 under General Investigations); (\$580,000 for Channel Extension of which \$165,000 was under Construction, General and \$415,000 under General Investigations).

18. Includes \$37,810 for previous project and \$530,187 for reconnaissance and condition surveys, FY 1956-2005. Excludes contributed funds of \$820 for previous project.

19. Excludes contributed funds of \$4,000 in lieu of providing dike disposal areas on existing project.

20. Excludes contributed funds of \$1,700.

21. Includes \$2,899,232 for previous projects.

Excludes \$397,266 contributed funds on previous projects.

22. Includes \$684,028 for previous projects and \$245,165 for reconnaissance and condition surveys, FY 1956-2005. Excludes contributed funds of \$45,853.

23. Includes \$212,083 for previous project and \$4,929,999 under Section 205 and \$17,232,000 under Construction, General. Excludes contributed funds of \$15,559 for previous project.

24. Includes \$314,692 for previous project and \$969,775 for reconnaissance and condition surveys, FY 1956-2005. Excludes contributed funds of \$192,424.

25. Includes previous project costs \$31,443.

Excludes \$119,572 contributed funds for existing project.

26. Includes \$1,186,618 for reconnaissance and condition surveys, FY 1956-2005.

27. Excludes contributed funds of \$524,778.

Includes \$105,000 Public Works Administration funds.

28. Excludes modification authorized October 27, 1965, under project "San Francisco Bay to Stockton, CA (John F. Baldwin and Stockton Ship Channels)."

29. Excludes \$115,536 contributed funds. Includes \$535,456 for reconnaissance and condition surveys, FY 1956-2005.

REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2005

30. Includes \$1,030,399 for previous projects. Excludes \$134,591 contributed funds for existing project. Includes \$193,000 Public Works Administration funds.
31. Includes \$475,321 for previous projects and \$813,611 for reconnaissance and condition surveys, FY 1956-2005.
32. Authorized by FC Act of 1965 (Sec. 201); Maintenance R&H Act of 1970 (Sec. 103). Includes \$446,473 for reconnaissance and condition surveys FY 1979-2005. See FY 1977 Annual Report for last full report. Excludes contributed funds of \$885,712.
33. Includes \$1,086,703 for previous projects.
34. Includes \$1,359,380 for previous projects and \$517,924 for reconnaissance and condition surveys, FY 1956-2005.
35. Excludes \$810,046 contributed funds on previous project.
36. See Sacramento District FY 1974 Annual Report for detail.
37. Project maintenance responsibility to Point Edith was transferred to San Francisco District January 1, 1974. Excludes Sacramento District's portion. Includes \$271,945 for reconnaissance and project condition surveys, FY 1976-2005.
38. Project maintenance assigned to San Francisco District from Sacramento District January 1, 1974. See Sacramento District 1972 Annual Report for full report.
39. Includes \$755,318 for reconnaissance and condition surveys, FY 1978-2005. Includes \$727,510 for previous project. Excludes \$121,386 contributed funds.
40. See FY 1981 Annual Report for last full report.
41. Excludes Contributed Funds of \$709,624.
42. See Sacramento District FY 1985 Annual Report for full report. Includes \$39,170,200 under San Francisco District's Construction, General. Excludes Sacramento District's funding of \$27,766,800.
43. Excludes \$100,000 contributed funds and \$105,000 contributed in lieu of royalty-free rock.
44. See FY 1979 Annual Report for last full report.
45. Includes \$400,847 for reconnaissance and condition surveys, FY 1970-2005.
46. Includes \$734,834 for reconnaissance and condition surveys, FY 1970-2005. Excludes \$93,500 contributed funds.
47. Excludes \$41,094 contributed funds.
48. Includes \$9,199,000 funds of which \$8,499,000 was under Construction, General and \$700,000 under General Investigations.
49. Includes \$9,199,000 costs of which \$8,499,000 was under Construction, General and \$700,000 under General Investigations.
50. See FY 1987 Annual Report for last full report.
51. Includes \$105,448 for reconnaissance and condition surveys, FY 1989-2005.
52. See FY 1988 Annual Report for last full report.
53. Includes \$269,218 for reconnaissance and condition surveys, FY 1993-2005.
54. Excludes \$5,598,000 contributed funds: \$400,000 for recreation facilities at completed projects funded under Public Works Acceleration Program; and \$1,628,411 for recreation facilities at completed projects funded under Code 711 at Coyote Valley Dam, Lake Mendocino.
55. Includes \$94,459 special recreation use fees and costs (FY 1982-1983), but excludes prior special recreation fees and cost for Coyote Valley Dam, Lake Mendocino.
