56. Includes \$251,911 contributed funds, other from City of Ukiah for Coyote Valley Dam, Lake Mendocino, hydropower studies; and \$338,000 from California Department of Boating and Waterways for launching facility at Lake Mendocino.
57. Includes \$250,117 contributed funds, other costs for Coyote Valley Dam, Lake Mendocino, hydropower studies; and \$320,657 for California Department of Boating and Waterways for launching facility at Lake Mendocino.
58. Includes \$253,421,793 previous San Francisco construction funds and costs through August 1983 for Dry Creek, Warm Springs Dam.
59. Includes \$964,114 previous San Francisco maintenance funds and costs through April 1982 for Dry Creek, Warm Springs Dam.
60. Includes \$208,074 contributed funds, other, from Sonoma County for Dry Creek, Warm Springs, hydropower studies; and \$22,500 from City of Ukiah for hatchery pump design at Lake Mendocino.
61. Includes \$208,074 contributed funds, other, costs for Dry Creek, Warm Springs hydropower studies; and \$20,658 costs for hatchery pump design.
62. Includes \$7,303,725 San Francisco District construction funds and costs for Corte Madera Creek.
63. \$8,695 contributed funds transferred to Sacramento District in FY 1983. Includes \$97,400 San Francisco District required contributed funds and costs.
64. Contributed funds, other, and costs, from Marin County including \$536,921 for miscellaneous bridge and road relocations and \$267,840 for additional expenses for disposal sites at Corte Madera Creek.
65. See FY 1998 Annual Report for last full report.
66. Includes \$212,083 for previous project and \$4,929,823 under Section 205 and \$17,199,024 under Construction, General.
67. Includes unobligated carryover for continuation of planning and engineering (CP&E) funds as of September 30, 1985 (\$33,474) for Sacramento River Deep Water Ship Channel to be included in project cost (for cost sharing) per TWX of September 9, 1985. Includes Sacramento District's FY 02 approp of \$2,000 and San Francisco District's FY 02 approp of 117,000.
68. Includes Sacramento District's FY 02 cost of \$27,983 and San Francisco District's FY 02 cost of 99,152.

<b>1.</b>			
<b>CRESCENT CITY HARBOR, CA</b>			
	Jul. 18, 1918	A breakwater bearing S. 26-1/4 E. from Battery Point to Fauntleroy Rock and breakwater from the shore to Whaler Island.	H. Doc. 434, 64th Cong., 1st sess.
	Sep. 22, 1922	Modified condition of local cooperation which required that local interests construct a railroad from Grants Pass, Oregon to Crescent City so that a State Highway to Grants Pass would be an acceptable alternate.	Rivers & Harbors Committee Doc. 4, 67th Congress, 2nd sess.
	Jan. 21, 1927	Extension of the breakwater to a length of 3,000 feet and a reduced cash contribution required of local interests.	H. Doc. 595, 69th Cong., 2nd sess.
	Aug. 30, 1935	Maintaining by dredging of an outer harbor basin, 1,800 feet long, 1,400 feet wide and 20 feet deep, except in rock.	Rivers & Harbors Committee Doc. 40, 74th Cong.
	Aug. 26, 1937	Construction of a sand barrier from Whaler Island to the mainland and for maintenance dredging in the vicinity of the seaward end of the sand barrier.	Senate Committee Print, 75th Cong., 1st sess.
	Mar. 2, 1945	Extension of existing breakwater 2,700 feet to Round Rock (modified by Chief of Engineers, 1952).	H. Doc. 688, 76th Cong., 3rd sess.
	Mar. 2, 1945	Construction of inner breakwater and removal of pinnacle rock and other material from the harbor to a depth of 12 feet and a harbor basin with a project depth of 10 feet.	Report on file in office, Chief of Engineers.
	Oct. 27, 1965	Extension of inner breakwater and dredging of T-shaped harbor basin to depth of 20 feet.	H. Doc. 264, 89th Cong., 1st sess.
<b>2.</b>			
<b>HUMBOLDT HARBOR, CA</b>			
	Mar. 3, 1881	Channel 10 feet deep by 350 feet wide to be dredged along Eureka waterfront, thence 8 feet deep by 200 feet wide west to natural channel; dredging Mad River Shoal to 8 feet deep.	H. Doc. 59 Cong., 3rd sess.
	Jul. 5, 1884	Construct South Jetty and continue channel improvements.	River & Harbor Approp Act of 1884
	Aug. 5, 1886	\$75,000 continued improvement of Harbor with provision for title to 12 acres of land to be conveyed to the U.S.	River & Harbor Approp Act of 1886
	Jul. 3, 1892	Map and cost estimates for continuing Harbor improvements with provision for two parallel jetties.	Chief of Engrs Annual Report (p.3120) Annual River & Harbor, Approp Acts 1892-1899
	Mar. 3, 1899	Continuing Harbor improvements with provision for two parallel jetties.	H. Doc. 528, 55th Cong., 2nd sess.
	Jun. 25, 1910	Rebuilding the jetties and channel improvements to Arcata and Hookton.	H. Doc. 950, 60th Cong., 1st sess.,
			H. Doc. 204, 61st, Cong., 2nd sess.,
			H. Doc. 326, 61st Cong., 2nd sess.
	Jul. 3, 1930	Eureka Channel 20 feet deep and 300 feet wide; Samoa Channel 20 feet deep and 250 feet wide; Arcata Channel 18 feet deep and 150 feet wide; Fields Landing Channel 20 feet deep and 250 feet wide.	H. Doc. 755, 69th Cong., 2nd sess.
	Aug. 30, 1935	Entrance Channel 30 feet deep and 500 feet wide.	Rivers and Harbors Committee Doc. 14
			74th Cong., 1st sess
	Aug. 26, 1937	Eureka Channel 26 feet deep and 400 feet wide; Samoa Channel 26 feet deep and 300 feet wide;	Rivers & Harbors Committee, Doc.

**TABLE 34-B (Cont'd) AUTHORIZING LEGISLATION**

		Fields Landing Channel 26 feet deep and 300 feet wide; Turning Basin (off Fields Landing wharf) channel 26 feet deep, 600 feet wide and 800 feet long.	11, 75th Cong., 1st sess.
	Jul. 16, 1952	Bar & Entrance Channel 40 feet deep, tapered from 1,600 feet to 500 feet wide; North Bay Channel 30 feet deep and 400 feet wide; Eureka Channel 30 feet deep to mile 5.0; Samoa Channel 30 feet deep.	Rivers & Harbors Committee, Doc. 143, 82nd Cong., 1st sess.
	August 1968	North Bay Channel 35 feet deep; Samoa Channel 35 feet deep; widen turns at mile 0.75 and 2.6; provide a 1,200 by 1,200 foot anchorage in North Bay.	H. Doc. 330, 90th Cong., 2nd sess.
	Oct. 12, 1996	Bar and Entrance Channel 48 feet deep; North Bay Channel, Samoa Channel and Samoa Turning Basin 38 feet deep; widen the north side of the Entrance Channel an additional 200 to 275 feet; relocate the southern edge of the Entrance Channel away from the South Jetty and to the north by 100 feet; and widen and realign the entrance to the Samoa Turning Basin.	Section 10, Public Law 104-303, 1996 WRDA
<b>3.</b>		<b>OAKLAND HARBOR, CA</b>	
	June 23, 1874	Jetties.	Annual Report, Part II, 1874, P. 378.
	June 25, 1910	North channel in Brooklyn Basin, 25 feet deep, and tidal canal to 18 feet.	H. Doc. 647, 61st Cong., 2d sess.
	Sep. 22, 1922	Channel across shoal southeast of Yerba Buena Island and thence to Webster St.; South channel in Brooklyn Basin; Turning Basin at east end of Brooklyn Basin; and channel in Tidal Canal from Brooklyn Basin to Park St., 30 feet deep.	H. Doc. 144, 67th Cong., 2d sess.
	Jan. 21, 1927 <sup>2</sup>	Channel from Webster St. to Brooklyn Basin, maintain area to within 75 feet of pierhead line south of channel from Harrison St. to Harbor Line Point 119 in Brooklyn Basin; dredge a triangular strip about 2,700 feet long and maximum width of 300 feet at western end of Brooklyn Basin, 30 feet deep.	H. Doc. 407, 69th Cong., 1st sess. <sup>1</sup>
	Apr. 28, 1928	Local cooperation requirements modified to provide alteration or replacement of bridges by local interests shall apply only to that feature of project covering deepening tidal canal to 25 feet. Drawbridges across Tidal Canal were required by 1882 Decree of Court in condemnation proceedings whereby title was obtained to right-of-way for tidal canal.	Public Res. 28, 70th Cong.
	July 3, 1930	Entrance channel to outer harbor, 800 to 600 feet wide.	Rivers and Harbors Committee Doc. 43, 71st Cong., 2nd sess.
	Mar. 2, 1945	Eliminated requirement that local interests contribute 10 cents per cubic yard toward deepening tidal canal.	Doc. 466, 77d Cong., 1st sess.
	Mar. 2, 1945	Maintenance of 35-foot depth in channel to outer harbor and in outer harbor channel and turning basin.	Report on File in Office, Chief of Engineers
	Oct. 23, 1962 <sup>3</sup>	Deepen inner harbor 35-foot channels and lower 1,300 feet of north channel in Brooklyn Basin to 35 feet.	H. Doc. 353, 87th Cong., 2d sess. <sup>1</sup>

SAN FRANCISCO, CA, DISTRICT

TABLE 34-B (Cont'd)

AUTHORIZING LEGISLATION

See Section in Text	Date of Authorizing Act	Project and Work Authorized	Documents
	Nov. 17, 1986	Deepen Inner and Outer Harbor channels to 42 feet. Widen entrance channel to 1,000 feet; relocate Outer Harbor turning basin 3,000 feet westward and widen turning basin to 1800 feet. Construct 1,200 foot turning basin in Inner Harbor.	Public Law 99-662, 1986 WRDA
	Aug. 17, 1999	Deepen Inner and Outer Harbor channels to 50 feet. Widen Outer Harbor turning basin diameter to 1650 feet and widen Inner Harbor turning basin diameter to 1500 feet.	Public Law 106-53, 106 <sup>th</sup> Cong., 1999 WRDA
<b>4.</b>		<b>RICHMOND HARBOR, CA</b>	
	Aug. 8, 1917	Channel 24 feet deep and 600 feet wide from San Francisco Bay to Ellis Slough (Santa Fe Channel); a turning basin at Point Potrero; a training wall.	H. Doc. 515, 63rd Cong., 2d sess.
	July 3, 1930	A 30-foot channel with lessened widths; a turning basin at head of navigation.	Rivers and Harbors Committee Doc. 16, 70th Cong., 1st sess.
	Aug. 30, 1935 <sup>4</sup>	Increase project widths in inner harbor, maintenance of Santa Fe channel to 30 feet; approach areas in outer harbor to 32 feet.	Rivers and Harbors Committee Doc. 7, 73rd Cong., 1st sess., and 10, 74th Cong., 1st sess.
	June 20, 1938	Widen channel at Point Potrero and north thereof; enlarge and maintain to 30-foot depth turning basin at Terminal No. 1.	H. Doc 598, 75th Cong., 3rd. sess.
	Mar. 2, 1945	Channel 20 feet deep, 150 feet wide, in San Pablo Bay north of Point San Pablo.	H. Doc. 715, 76th Cong., 3rd. sess.
	Sep. 3, 1954	Channel 35 feet deep and 600 feet wide adjacent to Southampton Shoal; enlarge and deepen to 35 feet approach area to Richmond Long Wharf; widen and deepen inner harbor and entrance channels; deepen turning basin at Point Richmond and southerly 2,000 feet of Santa Fe Channel. Eliminate restriction that widening north of Point Potrero will not be undertaken until local interests furnish assurances industries will avail themselves of improved navigation facilities and reclamation of Reservation Point.	H. Doc. 395, 83rd <sup>1</sup> Cong., 2nd sess.
	Oct. 27, 1965	West Richmond channel 45 feet deep, 600 feet wide; enlarge and deepen to 45 feet maneuvering area at Richmond Long Wharf (Sacramento Dist. "San Francisco Bay to Stockton, Calif. (John F. Baldwin and Stockton Ship Channels)").	H. Doc. 208, 89th Cong., 1st sess. <sup>1</sup>
	Nov. 17, 1986	Deepen channel to 38 feet between Richmond Long Wharf and Santa Fe Channel. Construct 1,200 feet turning basin.	Public Law 99-662, 1986 WRDA

**TABLE 34-B (Cont'd) AUTHORIZING LEGISLATION**

<b>See Section in Text</b>	<b>Date of Authorizing Act</b>	<b>Project and Work Authorized</b>	<b>Documents</b>
<b>5.</b>	Mar 3, 1899	A depth of 7 feet below Sacramento works.	H. Doc. 186, 55 <sup>th</sup> Cong., 2d sess., and 48, 55th Cong., 3d sess. (Annual Report 1898, p. 2844 and 1899, p. 3171).
	Jan 21, 1927	The 10-foot channel up to Sacramento	H. Doc. 123, 69th cong., 1st sess.
	July 24, 1946	Modified existing navigation project for Sacramento River, CA, to provide for construction of a ship channel 30 feet deep and 200 to 300 feet wide from deep water in Suisun Bay to Washington Lake, including such works as may be necessary to compensate for or alleviate any detrimental salinity conditions resulting from ship channel; a triangular basin of equal depth, 2,400 by 2,000 by 3,400 feet at Washington Lake; and connecting channel 13 feet deep and 120 feet wide, with lock and drawbridge, thence to Sacramento River.	S. Doc. 142, 79th Cong., 2d sess.
	Nov 17, 1987	Deauthorization of shallow-draft channel, Colusa to Red Bluff, feature of project for navigation, Sacramento River, California.	Sec. 1002, 1986 WRDA
	Dec 11, 2000	Reiteration of Public Law 99-08 (Aug 15, 1985), which authorized construction of 35 ft channel Reauthorization of Sacramento River, Major and Minor Tributaries and Chico Landing to Red Bluff, CA	Sec 202(a), 1986 WRDA Sec 305 (a) (1-2), WRDA - 2000
<b>6.</b>		<b>SAN FRANCISCO BAY TO STOCKTON, CA (JOHN F. BALDWIN AND STOCKTON SHIP CHANNELS)</b>	
	Oct. 27, 1965	i) Deepen the channel across San Francisco Bar to 55 feet without widening; ii) construct a new channel in upper S.F. Bay leading through the west navigation opening of the Richmond-San Rafael Bridge to 45' depth and 600' width and deepen the maneuvering area adjacent to the Richmond Long Wharf to 45'; (iii) Deepen the Pinole Shoal Channel in San Pablo Bay within its existing 600' width and the maneuvering Area at Oleum to 45'; (iv) deepen the Suisun Bay Channel to 45' as far upstream as Chipps Island and to 35' beyond, with widening to 600' upstream to Middle Point and 400' beyond, and widening and deepening to comparable depths of maneuvering areas at refinery terminals; and (v) deepen the Stockton Deep Water Channel to 35' and realign the channel through False River and across the northern portions of Fanks Tract and Mandeville Island, all to its existing widths of 400' in open water and 225' through levee-confined reaches.	H. Doc. 208, 89th Cong., 1 <sup>st</sup> sess.

SAN FRANCISCO, CA, DISTRICT

7.	<b>SONOMA BAYLANDS WETLANDS DEMONSTRATION PROJECT, CA</b>		
	Oct. 5, 1992	Restoration of tidal wetland on a 348-acre site using dredged material and construction of a replacement levee around the landward periphery of the site.	Section 106, Public Law 102-580, 1992 WRDA
13.	<b>CORTE MADERA CREEK, CA</b>		
	Oct. 23, 1962	Levees and channel improvements, lower 11 miles of Corte Madera Creek and tributaries, as modified by Chief of Engineers.	H. Doc. 545, 87th Cong., 2nd sess.
	Nov. 7, 1966	Local cooperation requirements modified to provide 1.5 percent cash contribution toward cost of Ross Valley unit.	Sec. 204, 1966 Flood Control Act
	Nov. 17, 1986	Modify existing project to direct construction of Unit 4 from Lagunitas Road Bridge to Sir Francis Drake Boulevard, and to include construction of floodproofing measures in vicinity of Lagunitas Road Bridge to insure proper functioning of completed portions of authorized project. Further modify project to eliminate any channel modifications upstream of Sir Francis Drake Boulevard.	Sec. 823, 1986 WRDA
15.	<b>PETALUMA RIVER, CA</b>		
	Jun. 30, 1948	Floodwalls and channel improvements along 3,600 feet of the Petaluma River and tributaries.	Flood Control Act of 1948, Public Law 80-858, 80th Cong., 2nd sess.
	Jan. 24, 2000	Provide a 100-year level of flood protection to the city of Petaluma.	Public Law 106-541, 106 <sup>th</sup> Cong., 2d sess., 2000 WRDA
16.	<b>RUSSIAN RIVER BASIN, CA</b>		
	May 17, 1950	Coyote Valley Dam (Lake Mendocino): Channel improvements on lower 98 miles of Russian River and lower reaches of tributaries.	H. Doc. 585, 81st Cong., 2d sess.
	Feb. 10, 1956	Increased appropriation authorization for initial stage of project development.	PL 404, 84th Cong., 2d sess.
	Oct. 23, 1962	Dry Creek (Warm Springs) Lake; Channel Improvements on Dry Creek below dam.	H. Doc. 547, 87th Cong., 2d sess.
	Mar. 7, 1974	Dry Creek (Warm Springs) Lake and channel; compensate for fish losses on the Russian River which may be attributed to the operation of the Coyote Dam component of the project through measures such as possible expansion of the capacity of the fish hatchery at the Warm Springs Dam component of the project.	Sec. 95, 1974 WRDA
21.	<b>HAMILTON AIRFIELD WETLANDS RESTORATION, CA</b>		
	Aug 17, 1999	Implement an ecosystem and wetland restoration project at the Hamilton Army Airfield and adjacent properties and lower reaches of tributaries.	Public Law 106-53, 106 <sup>th</sup> Cong., 1999 WRDA

REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2005

22.

**SAN RAMON VALLEY RECYCLED  
WATER, CA**

Oct 31, 1992 Provide assistance to non-Federal interests for carrying out water-related environmental infrastructure and resource protection and development projects described in subsection (c), including wastewater treatment and related facilities and water supply, storage, treatment, and distribution facilities.

Public Law 102-580,  
Appendix A, Sec. 219  
WRDA

Aug 17, 1999 Provide assistance for construction for recycled water.

Public Law 106-53,  
106<sup>th</sup> Cong., 1999  
WRDA

---

1. Contains latest published map.  
2. Included deepening of tidal canal above Park Street Bridge to 25 feet, which was deauthorized November 6, 1977.

3. Reconstruction of Fruitvale Avenue Highway Bridge (S. Doc. 75, 87th Cong., 2d sess.) which was deauthorized November 6, 1977.  
4. Included in part in Public Works Administration Program, September 6, 1933.

SAN FRANCISCO, CA, DISTRICT

**Navigation**

**1. SACRAMENTO RIVER, CA**

**Location** Rises in Trinity Mountains in north-central California, flows generally southerly about 374 miles and empties into Suisun Bay, an arm of San Francisco Bay, at Collinsville, CA. (See Geological Survey topographic map of Sacramento Valley, CA.)

**Previous projects** For details see page 1985 of Annual Report for 1915 and page 1708 of Annual Report for 1938.

**Existing project** For description of Sacramento Deep Water Ship Channel, see Annual Report for 1969. Total first cost for completed portion was \$43,932,558 (\$39,560,558 Federal (Corps), \$300,000 (Coast Guard), and \$4,072,000 non-Federal for lands and damages, including relocations) and excludes local interests cost \$10,741,000 (June 1963) for 30-foot deep connecting canal basic terminal facilities required under terms of project authorization. Project also provided for a shallow-draft channel 10 feet deep at mean lower low water 150 to 200 feet bottom width, from Suisun Bay to Sacramento, CA, 60 miles; a depth of 6 feet at low water between Sacramento and Colusa, 85 miles; a depth of 5 feet at low water between Colusa and Chico Landing, 50 miles; and such depths as practicable between Chico Landing and Red Bluff, 53 miles, a total distance of

248 miles. However, shallow-draft channel feature Colusa to Red Bluff (including Colusa to Chico

Landing, 50 miles and Chico Landing to Red Bluff, 53 miles) was deauthorized by 1986 Water Resources Development Act on November 17, 1986 (Public

Law 99-662). (See table 35-H on tidal and flood conditions prevailing.)

**Local cooperation** Fully complied with for deep water ship channel project. None required on shallow-draft feature.

**Terminal facilities** Piers, wharves, and docks at Port of Sacramento for shallow-draft navigation are open-pile structures with timber decks, some of which are designed to meet extreme high waters of flood stages. All main wharves at Sacramento have rail connections. Three of above facilities are owned by city of Sacramento and remainder by private interests; all are privately operated. For full description see "Port and Terminal Facilities at the Ports of Sacramento, Stockton, Pittsburg and Antioch, Calif., 1986." Deep water terminal facilities comprise wharves and piers, administration and storage buildings, and belt railroad facilities. Majority of these facilities are owned and operated by Sacramento-Yolo Port District; remainder are privately owned and operated. Facilities are considered adequate for existing commerce.

**Operations during fiscal year** New work, Deep

Water Ship Channel: None. Maintenance: Shallow Draft Channel: Maintenance and operation activities continued. Deep Water Ship Channel: Maintenance and operation activities continued.

**Historical summary** Construction of 7-foot shallow-draft channel below Sacramento was initiated in September 1899 and completed in 1904. Modified 10-foot shallow-draft channel up to Sacramento was initiated in FY 1928 and completed in 1931. Shallow-draft channel above Sacramento was begun in April 1946 but new work was discontinued when about 48 percent complete. In February 1974, remaining work for shallow-draft portion of project, provision of a 5-foot depth between Colusa and Chico Landing (50 miles), was reclassified as "deferred." Channel is navigable all year; however, there is no regular navigation above Colusa, 145 miles above river mouth. On November 17, 1986, remaining shallow-draft feature, Colusa to Red Bluff (including Colusa to Chico Landing, 50 miles and Chico Landing to Red Bluff, 53 miles) was deauthorized by 1986 Water Resources Development Act (Public Law 99-662). Construction of 30-foot deep water ship channel was initiated in July 1949; improvement dredging by continuing contracts resulted in provision of an operational facility for oceangoing vessels during June 1963. Bascule bridge was completed in April 1960, barge lock in August 1961, barge canal in November 1961, and entire deep water ship channel in June 1970.

## 2. SACRAMENTO RIVER DEEP WATER SHIP CHANNEL, CA

**Location** The project is located on the Sacramento River, between Collinsville and the Port of Sacramento, a distance of approximately 43 miles, in the counties of Sacramento, Contract Costa, Solano and Yolo, CA.

**Existing project** Existing waterways are inadequate to efficiently accommodate vessels currently using the channel. Because of the depth restriction, only 20% of the world's fleet can currently load to full design depth. Once deepened, the Port of Sacramento will be able to accommodate 70% of the world's fleet at full design draft. The project plan is to deepen the existing 30 feet Sacramento River Deep Water Ship Channel from N.Y. Slough to the Port of Sacramento, a distance of about 43 miles, to 35 feet, and widen the channel as necessary. The project provides for establishment of wetland habitat and upland habitat to mitigate for such losses. Recreation was also authorized although

no local sponsor has been identified. Current project estimate is \$50,000,000 and is comprised of Federal cost (Corps) of \$24,900,000; Federal cost (Coast Guard-for navigation aids) of \$300,000 and non-Federal cost of \$24,800,000.

**Local cooperation** A Local Cooperation Agreement (LCA) was signed with the local sponsor, the Port of Sacramento, in June 1986. A modification to the LCA, necessitated by the Water Resources Development Act of 1986, was executed in December 1988. The local sponsor will provide lands, easements, rights of way and dredged material disposal areas; modify or relocate buildings, utilities, roads, bridges (except railroad bridges) and other facilities, where necessary in the construction of the project; and pay 25 percent of the costs allocated to deep draft navigation during construction.

**Terminal facilities** All main wharves at Sacramento have rail connections. Three facilities are owned by the City of Sacramento and the rest are privately owned; all are privately operated. For full description, see "Port and Terminal Facilities at the Ports of Sacramento, Stockton, Pittsburg and Antioch, Calif., 1986". Deepwater terminal facilities are comprised of wharves, piers, administration and storage buildings and belt railroad facilities. The majority of these facilities are owned and operated by the Sacramento-Yolo Port District and the rest are privately owned and operated. The facilities are considered adequate for existing commerce.

**Historical summary** Funds to initiate pre-construction planning were appropriated in fiscal year 1982. Project construction was authorized by the Supplemental Appropriations Act of 1985 and modified by the WRDA 1986. The General Design Memorandum was approved and the Record of Decision was signed in May 1987. The modified LCA was executed in December 1988. The first construction contract for deepening was awarded in February 1989 and completed in July 1990. A second construction contract was awarded in September 1990 and completed in August 1991. Construction from River Mile 43 to River Mile 35 has been completed. In fiscal year 1996, the sponsor requested indefinite suspension of the project due to their inability to meet their cost share requirements. Based on Congressional direction in Conference Report 105-749, dated September 25, 1998, the Corps has developed a study plan outlining the scope, schedule and costs to prepare a Engineering Documentation Report (EDR). This preliminary assessment has been submitted to the sponsor for their review and a determination will be made as to

proceeding with the EDR. This plan, together with the sponsor's financing plan, will serve as the basis for requesting additional Federal funds for costs associated with the EDR. Section 305 of WRIA 2000 "authorized credit toward the non-Federal share of the cost of the project the dredged material from the project that is purchased by public agencies or nonprofit entities..."

**Operations during fiscal year.** Completed the study plan and continued project coordination. Dredging was initiated and completed at a contract cost of \$1,277,000.

The sponsor requested San Francisco District take the lead in the LRR based on SPN's navigation expertise. South Pacific Division memo dated 12 Aug 2002 directed San Francisco District to take the study's regional management responsibilities.

### **3. SAN FRANCISCO BAY TO STOCK-TON, CA (JOHN F. BALDWIN AND STOCKTON SHIP CHANNELS)**

Reported on by the San Francisco District. Refer to Report of the Secretary of the Army on Civil Works Activities for FY 1995.

### **4. SAN JOAQUIN RIVER, CA**

**Location** Rises in east central California and flows westerly and northwesterly about 340 miles to its confluence with Sacramento River at head of Suisun Bay, 48 miles northeast of San Francisco. Deep water channel in San Joaquin River extends 41 miles from its mouth in Suisun Bay at Pittsburg to city of Stockton. Waterborne access to city provided by Stockton Channel, an artificial cut extending from river about 2 miles into city. (See Coast and Geodetic Survey Sheet 5527.)

**Existing project** For description of completed improvement, modifications, and authorizing acts, see Annual Report for 1967. (See table 35-I for total cost of new work for project completed in May 1960.)

Projects units (1950 modification) reclassified and excluded from project cost are set forth in table 35-J.

Modification of existing project is included as one unit of San Francisco Bay to Stockton, CA, (John F. Baldwin and Stockton Ship Channels) project, authorized by 1965 River and Harbor Act (H. Doc. 209, 89th Cong., 1st sess.); this modification is

reported in detail under Sacramento District, improvement No. 3 and San Francisco District, Improvement No. 3.

**Local cooperation** Fully complied with for completed portion of project; for details of required cash contributions on completed, inactive and deferred portions of project see Existing project paragraph, Annual Report for 1967.

**Terminal facilities** For description of harbor facilities at Port of Stockton, CA, see Port Series 32, "The Ports of Sacramento, Stockton, Pittsburgh and Antioch, Calif.," revised 1986. Downstream from Stockton, traffic is accommodated by bank landings and sheds except at Antioch and near Pittsburgh, where there are wharves for shallow- and deep-draft vessels. Terminal transfer facilities at public ocean terminal of Port of Stockton are adequate for present and immediate future.

**Operations and results during fiscal year.** Maintenance: Condition studies and miscellaneous inspections and reports were accomplished by hired labor. Dredging was initiated and completed at contract cost of \$1,726,000. (Repair or restoration of wavewash protection is required by legislation authorized by Improvement No. 3.)

**Historical summary** Active portion of existing project was completed in May 1960. Construction of project was initiated in December 1877.

### **Flood Control**

## **5. AMERICAN RIVER WATERSHED, (Common Features)**

**Location** The project is located in Placer, El Dorado, and Sacramento Counties on the North, Middle and South Forks of the American River and along the lower American River and Sacramento Rivers.

**Existing project** Recent evaluations indicate that the level of flood protection along much of the American River and in the Natomas area is less than the 100-year level. The project consists of levee improvements including a slurry wall along 21 miles of the lower American River, levee modifications along 12 miles of the Sacramento River, telemetered gages above Folsom Dam, improving the flood warning system for the lower American River, installing a closure structure at Mayhew Drain, 3 miles of levee modifications along lower American River, and levee modifications along 10 miles of the Natomas Cross Canal. Cost estimate (October 2004)

is \$214,600,000 (includes an allowance for estimated inflation through the construction period), of which \$161,300,000 is Federal cost and \$53,500,000 is non-Federal cost (which includes \$47,700,000 cash contribution).

**Local cooperation** In accordance with cost sharing requirements specified in Water Resources Development Act (WRDA) of 1986, local interests are required to provide lands, easements, rights-of-way, and borrow and excavated or dredged material disposal areas; modify or relocate utilities, roads, bridges (except railroad bridges), and other facilities, and pay 18 percent of the costs allocated to flood control to bring the total non-Federal share of flood control costs to 25 percent, and bear all costs of operation, maintenance, repair, rehabilitation and replacement of flood control facilities. The non-Federal sponsor has also agreed to make all required payments concurrently with project construction. Project cooperation agreement (PCA) was signed July 13, 1998.

**Operations and results during fiscal year.** Construction contract for levee improvements along the right bank of the lower American River continued with a fiscal year cost of \$3,040,000. Remaining fiscal year cost of \$2,614,211 was for associated engineering and design and construction management costs.

**Historical summary** A Supplemental Information Report (SIR) for the American River was completed in March 1996. The report included three candidate plans to reduce the risk of flooding to Sacramento. None of the three plans was recommended for construction but elements common to all plans was recommended and authorized for construction in WRDA 1996. These features would function with whatever plan was ultimately authorized for the American River. Sec. 366 of WRDA 99 authorized additional levee improvements as part of the overall project. EWDA of 2004 increased the authorized cost to current level of \$212,000,000

## **6. AMERICAN RIVER WATERSHED, (Folsom Dam Modifications)**

**Location** Folsom Dam and Reservoir, located on the American River, is about 29 miles upstream of the City of Sacramento, California. The American River watershed drains about 2,100 square miles northeast of Sacramento and includes portions of

Placer, El Dorado, and Sacramento Counties. Runoff from this basin flows through Folsom Reservoir and passes through Sacramento to the confluence with the Sacramento River.

**Existing project** The existing Folsom Dam has an objective release of 115,000 cubic feet per second (cfs) during flood operations. However, the existing eight outlets limit releases to about 36,000 cfs until approximately one half of the reservoir's flood control space is filled. At this level, the pool elevation is sufficient for spillways to release the full 115,000 cfs. The project will modify the existing outlets and constructing additional outlets to allow releases of roughly 115,000 cfs much earlier. The project features consist of: enlarging the eight existing river outlets; constructing two new river outlets, modifying a stilling basin downstream from the emergency spillway; and modifying the emergency spillway gates and dikes at Folsom Dam to normalize the use of surcharge storage. Authorization of the Folsom Dam Raise project obviates the need for the surcharge component of this project. With the increased release capacity, it will be possible to make significant release in advance of a flood event. This "advance release" would allow the reservoir storage level to be reduced, thus creating additional space to store incoming flood volume. Cost estimate is \$199,100,000 of which \$129,415,000 (65%) is Federal cost and \$69,685,000 (35%) is non-Federal cost.

**Local cooperation** The California State Reclamation Board and the Sacramento Area Flood Control Agency (SAFCA) are the non-Federal sponsors. The Project Cooperation Agreement (PCA) was executed in March 2004. The non-Federal sponsor is financially capable and willing to contribute the non-Federal share. State of California legislation (AB 1147), enacted 31 August 2000, authorizes the State Reclamation Board to participate in the project to modify Folsom Dam adopted and authorized by Congress in Section 101 (a) (6) of WRDA 99.

**Historical summary** The American River Watershed Feasibility Report was completed in December 1991. The Supplemental Information Report, completed in March 1996, identified three candidate plans which would help reduce the flood risk facing Sacramento: modifying Folsom Dam and increasing the dedicated flood space; modifying Folsom Dam and the downstream system to allow increased objective releases; and constructing a detention dam upstream of Folsom Dam. In June 1996, the Chief of Engineers deferred a decision on a

comprehensive flood control plan, but recommended that features common to all three plans be authorized as the first component of a comprehensive plan. These elements are being constructed within the American River Watershed (Common Features) Project. SAFCA prepared the Folsom Dam Modification Report New Outlets Plan dated March 1998 (SAFCA Outlet Report), which identified proposed changes to the Folsom Modification Plan described in the 1996 Supplemental Information Report. The 1996 Supplemental Information Report as modified by the SAFCA Outlet Report was the basis for the project authorized under WRDA 1999. Funds used to initiate pre-construction engineering and design of the Folsom Modifications were allocated in Fiscal Year 2000 under the American River Watershed Project. Funds to initiate construction were appropriated in Fiscal Year 2001. The LRR was approved in January 2004 and serves as the document to support the PCA. Due to new technologies being developed which produce a more accurate inventory of residential structures and changes in without-project conditions, benefits included in the LRR have changed since the 1992 Feasibility Report and the 1996 Supplemental Information Report (SIR). Construction contract for Stilling Basin and Elevator Upgrade/Emergency Generator Building continued with fiscal year cost of \$3,691,685. Construction contract for staging area has awarded with fiscal year cost of \$2,850,717. Remaining fiscal year cost of \$7,367,140 was for emergency design and construction management.

## 7. AMERICAN RIVER WATERSHED, (Folsom Dam Raise)

**Location** Folsom Dam and Reservoir, located on the American River, is about 29 miles upstream of the City of Sacramento, California. The American River watershed drains about 2,100 square miles northeast of Sacramento and includes portions of Placer, El Dorado, and Sacramento Counties. Runoff from this basin flows through Folsom Reservoir and passes through Sacramento to the confluence with the Sacramento River. L. L. Anderson Dam is located on the Middle Fork of the American River above Folsom Dam.

**Existing project** The Folsom Dam Raise is the final component of the overall American River Watershed project, which includes the Common Features project and the Folsom Dam Modifications project. Although the Common Features and Dam Modifications projects will reduce the risk of

flooding along the American River, the risk will remain higher than is acceptable to the people of the Sacramento area. Raising Folsom Dam, along with the other American River Watershed project components, will reduce the flood risk to greater than a 1-in-200 chance of flooding in any given year. The authorized project to raise Folsom Dam includes raising the main dam, raising the related dikes and auxiliary dam, modifications to the temperature shutters, widening the spillway of L. L. Anderson Dam, construction of a bridge downstream of Folsom Dam, and ecosystem restoration projects. The project features consist of: raising the concrete section of the dam, raising the earth embankments on each side of the dam, adding larger spillway gates, extending the spillway stilling basin and sidewalls approximately 60 feet, and raising the Mormon Island auxiliary dam and eight dikes approximately seven feet. These improvements will add 95,000 acre-feet of floodwater storage capacity to the lake's current 977,000 acre-foot capacity. In addition, L. L. Anderson Dam's spillway will be widened and new spillway gates will be constructed, two ecosystem restoration sites will be constructed at Woodlake and Bushy Lake, and a bridge will be constructed downstream of Folsom Dam. Cost estimate is \$358,100,000 of which \$259,900,000 is Federal and \$98,200,000 is non-Federal.

**Local Cooperation** The California State Reclamation Board, the Sacramento Area Flood Control Agency (SAFCA), Placer County Water Agency (PCWA), and the City of Folsom are the non-Federal sponsors. The Project Cooperation Agreement (PCA) for the bridge is scheduled for execution in September 2006. The non-Federal sponsors are financially capable and willing to contribute the non-Federal share.

**Historical Summary** The Feasibility Report for the American River Watershed Investigation was completed in December 1991 and the Division Engineer's Report was issued in February 1992. Funds were appropriated in FY 1992 to initiate preconstruction engineering and design (PED) for the combined American River Watershed and Sacramento Metropolitan studies. The two projects were separated when WRDA 92 authorized the American River Watershed Project independently of the West Sacramento Project (Sacramento Metropolitan). Sec. 566 of WRDA 99 directed additional flood control studies for: (a) increasing surcharge flood control storage at Folsom Dam and Reservoir, and (b) increased flood protection through levee modifications on the American and Sacramento Rivers, and directed the Corps to submit a report to

Congress by March 2000 documenting results of the studies. The interim report, completed in January 2000, provided additional information on two flood damage reduction plans: The Folsom Enlargement Plan and the Modified Stepped Release Plan. A result of the public scoping process was the addition of the Folsom Dam advance releases in anticipation of high flood flows as a flood control alternative, and the inclusion of ecosystem restoration as a project purpose. The Long Term Study (Feasibility Report) for the American River Watershed was completed in February 2002. The Chief's Report, dated 5 November 2002, was followed by the Division Engineer's Public Notice issued on 22 March 2003. Funds to initiate construction were appropriated in FY 2004. The Folsom Dam Raise project was authorized for construction by the Energy and Water Development Appropriations Act, 2004 at a total cost of \$257,300,000.

## **8. AMERICAN RIVER WATERSHED, (Natomas Reimbursement)**

**Location** The project is located in the metropolitan area of Sacramento, California. The 1991 Feasibility Report identified a project including levee improvements around the perimeter of the Natomas Basin, a 300-acre detention area in North Natomas, and recreation trails.

**Existing project** The local sponsor, SAFCA, has constructed Natomas flood control features. The Natomas Federal Plan dated Mar 99 identified portions of the project eligible for reimbursement under the Memorandum of Agreement (MOA) signed Sep 99. Based on the MOA and the Federal Plan, initial reimbursement of \$15M for Phase I was made to SAFCA Sep 99. The subsequent payments have since been made - \$1.115M in September 03 and \$510K in June 05. Estimated final reimbursement for Phase I of \$4.1M is unscheduled and will require reprogramming of funds. The sponsor has requested that the Corps design and construct the recreation features of the authorized project. Design of the recreation features has been completed. Construction of recreation features is currently unscheduled.

**Local cooperation** SAFCA is seeking reimbursement for construction of local project features in addition to that eligible under Natomas Federal Plan (initial reimbursement in FY 02 estimated at \$5 million). The current MOA allows for reimbursement to SAFCA for the Federal share of the plan identified in the Natomas Federal Plan dated

March 1999. The SAFCA flood control project (North Area Local Project, or NALP) was larger in scope than the plan in the Natomas Federal Plan. ASA (CW) agreed, by letter to SAFCA dated 13 Sep 99, that the Corps would reevaluate our conclusions on what part of SAFCA's NALP could be considered for reimbursement consistent with the authorization. SPK will reevaluate the previous conclusions, giving consideration to SAFCA's information, and prepare a report describing our conclusions and any recommendations. The scope and schedule of this effort are being developed. Additional reimbursement could range from \$8M-18M (Phase II).

**Historical summary** The Defense Appropriations Act for FY 1993 authorized construction of the Natomas flood control project (including recreation features), as defined in the feasibility report. The Act also authorized the sponsor to construct and receive reimbursement for the Federal share of project costs.

## **9. BUCHANAN DAM-H.V. EASTMAN LAKE, CHOWCHILLA RIVER, CA**

**Location** On Chowchilla River about 36 miles above its mouth and about 16 miles northeast of city of Chowchilla, CA. (See Geological Survey quadrangles for area.)

**Existing project** Provides for construction of a 205-foot high rockfill dam to create a reservoir with gross storage capacity of 150,000 acre-feet for flood control, irrigation, recreation, and fish and wildlife. In conjunction with dam, project plan provides for about 12 miles of downstream levee and channel construction on Ash Slough to accommodate a project design flow of 5,000 cubic feet per second within slough and 7 miles of levee and channel improvement on Berenda Slough. Operation and maintenance of dam and reservoir is the responsibility of the Federal Government. Total first cost for existing project is \$28,919,597, of which \$27,369,597 is Federal cost, including \$4,580,000 for basic recreation facilities, and \$1,550,000 non-Federal costs for lands and damages, including relocations for downstream levee and channel improvements. Local interests have contracted with the Bureau of Reclamation for irrigation service. For future non-Federal reimbursement, see Local cooperation paragraph. Local interests have also, over a period of years expended about \$500,000 for construction of low levees and clearing downstream channels to provide some local flood protection in project area. This work is inadequate during major floods. Existing project was adopted by 1962 Flood Control Act (S. Doc. 98, 87th Cong., 2d sess., contains latest published map). Lake formed by

Buchanan Dam on Chowchilla River was designated "H.V. Eastman Lake" by Public Law 93-217.

**Local cooperation** Fully complied with.

**Operations and results during fiscal year.** New work: None. Maintenance: Maintenance and operation activities were continued. Runoff of Chowchilla River above Buchanan Dam was above normal for the year. Maximum storage of 32,946 acre-feet occurred April 26, 2004. Maximum hourly inflow to reservoir was 3,063 cubic feet per second on February 26, 2004. Maximum release of 251 cubic feet per second on July 23, 2004, was above maximum permissible flood release. During the year, a total of 20,496 acre-feet of water was released for irrigation and other purposes. Releases for flood control purposes totaled 0 acre-feet.

**Historical summary** Construction began in July 1971 and was completed in May 1979. Construction of Buchanan and Hidden dam and appurtenances was combined under one contract. Project was completed in September 1983, except for installation of piezometers (now deferred indefinitely). Dam closure was in March 1975; dam was completed in January 1976. Reservoir clearing and boundary marking were completed May 1975. Bifurcation structure was completed in February 1976. Channel improvement, Ash and Berenda Sloughs, was completed in March 1976. Recreation areas: Phase I was completed in January 1976; Phase II was completed in February 1978. Residences, administration building, and visitors center contract was completed in May 1978. Landscaping was completed in May 1979 and erosion control was completed in April 1979. A resources interpretive display and road relocation were completed in FY 1982. Dam safety assurance studies were initiated in FY 1981. Solar heating was installed at Chowchilla recreation area in FY 1984. An hydrilla eradication (spraying) program was initiated in FY 1989. Final land audit was approved on December 3, 1985.

## **10. CACHE CREEK BASIN, CA (Cache Creek Settling Basin)**

**Location** At the mouth of Cache Creek in Yolo County where it enters the Yolo Bypass about 2 miles east of city of Woodland and about 15 miles northwest of city of Sacramento, CA.

**Existing project** Provides for raising the perimeter levees of the existing settling basin an average of 12 feet, extending the levees upstream to County Road 102 to provide 50-year sediment

storage capacity, enlarging and reconstructing the cobble weir, and degrading existing training levees and rebuilding them adjacent to western perimeter levee to provide 50 years of sediment storage capacity (340 acre-feet annually). Estimated cost (October 2004) for existing project is \$27,000,000 (includes an allowance for estimated inflation through the construction period), of which \$16,900,000 is Federal and \$10,100,000 is non-Federal (which includes \$1,350,000 cash contribution). For future non-Federal reimbursement, see Local cooperation paragraph. Existing project was adopted by Water Resources Development Act of 1986, Public Law 99-662, November 17, 1986 (HD 98-134, 98th Cong., 1st secs, contains published map.) Project as authorized included development of a national wildlife refuge within the settling basin; however, the Department of the Army determined that such refuge would be more appropriately funded and developed by the U.S. Fish and Wildlife Service. Refuge feature was reclassified to deferred category on April 11, 1988.

**Local cooperation** Local interests are required to provide lands, easements, rights-of-way, and dredged material disposal areas; modify or relocate buildings, utilities, roads, bridges (except railroad bridges) and other facilities where necessary in construction of the project; pay 5 percent of cost allocated to flood control, and bear all costs of operation, maintenance and replacement of flood control facilities. Local interests have agreed to make all required payments concurrently with project construction. Local Cooperation Agreement was executed March 12, 1990.

**Operations and results during fiscal year.** Review of LERRD's complete.

**Historical summary** Local Cooperation Agreement was executed March 12, 1990. Cache Creek Settling Basin enlargement (multicomponent) construction contract was awarded August 5, 1991, completed in September 1993, and work was transferred to local interests for operation and maintenance on December 2, 1993.

## **11. CALAVERAS RIVER AND LITTLEJOHN CREEK AND TRIBUTARIES, INCLUDING NEW HOGAN LAKE AND FARMINGTON DAM, CA**

**Location** Streams comprising Calaveras River and Littlejohn Creek groups rise in Sierra Nevada and its

foothills, flow easterly across flatlands of San Joaquin Valley and empty into San Joaquin River directly, or through various sloughs, in vicinity of Stockton, CA. Littlejohn Creek is in Calaveras, Stanislaus, and San Joaquin Counties. The three principal stream systems of the group are, from south to north, Lone Tree Creek, Littlejohn Creek, and Duck Creek. Calaveras River group is in Calaveras and San Joaquin Counties. The two principal streams of the groups are, from south to north, Calaveras River and Bear Creek. (See Geological Survey Valley Springs quadrangle for New Hogan reservoir area and Trigo and Bachelor Valley quadrangles for Farmington reservoir area.)

**Existing project** For description of completed improvements consisting of Farmington Dam, New Hogan Lake, and Bear Creek levee and channel improvement, and authorizing act, see Annual Report for 1967. (a) Farmington: Total first cost (July 1955) for project was \$3,995,684, of which \$3,676,384 was Federal and \$319,300 non-Federal for lands and damages including relocations. (b) New Hogan: Federal cost for project is \$15,906,150, including \$543,514 for basic recreation facilities. For future non-Federal reimbursement, see Local cooperation paragraph. Federal cost for recreation facilities funded from Code 710 appropriations is \$897,742. (c) Bear Creek: Project cost is \$6,485,734, of which \$3,242,867 is Federal, including reimbursement (\$488,096) to local interests of one-half of excess local interest cost of lands, rights-of-way, and relocations over estimated Federal construction cost in accordance with section 3, Public Law 738, 74th Congress. Non-Federal cost included in above amount is \$3,242,867 for relocations and lands and damages, exclusive of above Federal reimbursement.

**Local cooperation** Fully complied with. New Hogan: Local interests must pay portion of first cost and annual operation and maintenance costs allocated to conservation functions of project. These costs are estimated at 36.2 percent of first cost and 38 percent of annual costs. In addition, local interests contributed land, the (July 1964) market value of which was \$556,000. For years 1961 through 1970, an interim contract between the Bureau of Reclamation and local water users provided for storage and payment of irrigation water; a long-term contract between that agency and local water users was executed August 25, 1970. Local interests paid \$5,540,991 through December 31, 2003. A concessionaire at New Hogan Marina provided public use facilities in accordance with lease

agreement with the Secretary of the Army at an estimated cost to date of \$234,000.

**Operations and results during fiscal year.** New work: New Hogan Lake, regular funds: None. Code 710 funds: None. Bear Creek, San Joaquin County: None. Maintenance: Farmington Dam Maintenance and operation activities continued; structures were maintained in serviceable condition. During rain flood season, maximum flow of Duck Creek Diversion was 207 cubic feet per second on February 26, 2004. Maximum flow of Littlejohn Creek at Farmington was 562 cubic feet per second on February 27, 2003. Maximum flow of Duck Creek near Farmington was 557 cubic feet per second on January 1, 2004. Maximum storage in reservoir was 2,250 acre-feet on February 28, 2004, and maximum estimated inflow to reservoir was 1,992 cubic feet per second on February 26, 2004. Maximum release of 628 cubic feet per second on February 28, 2004, was above maximum permissible flood release. During the year, 26,524 acre-feet was released for flood control. Release for irrigation purposes amounted to 51,738 acre-feet. New Hogan Lake Maintenance and operation activities continued. Structures were maintained in serviceable condition. Runoff of Calaveras River above New Hogan was above normal for the year. Maximum storage of 146,555 acre-feet occurred April 1, 2004. Maximum hourly inflow to reservoir was 5,423 cubic feet per second on January 1, 2004. During the year, 80,586 acre-feet was released for irrigation and other purposes. Release for flood control purposes amounted to 0 acre-feet.

**Historical summary** Farmington Dam: Construction of Farmington project was initiated in July 1949 and completed for beneficial flood control operation in 1952. Duck Creek channel improvement was completed in November 1951; and channel improvement on south Littlejohn Creek was completed in May 1955. There are no recreation facilities or public-use areas. All work completed. Dam safety assurance studies were initiated in FY 1982. New Hogan Lake: Construction was initiated May 1960, main dam closure November, 1963, project completed for operational use in June 1964, and all work completed October 1973. Recreation facilities have been provided from Code 710 appropriations. See page measurement weir constructed in June 1980. Dam safety assurance studies were initiated in FY 1980. Bear Creek, San Joaquin County: Construction began in June 1963 and was completed in June 1967.

Final cash contribution was made to local interests

December 23, 1970. Solar heating was installed at recreation facilities in FY 1984. A cultural resources survey was completed in FY 1984.

## **12. COLORADO RIVER AT GRAND JUNCTION, CO**

**Location** On north bank of Colorado River from 9th Street west to the Denver Rio Grande Western Railroad Bridge at city of Grand Junction, CO, in Mesa County.

**Existing project:** See Annual Report for 2004.

## **13. CORTE MADERA CREEK, CA**

Reported on by San Francisco District. Refer to Report of the Secretary of the Army on Civil Works Activities for FY 1996.

## **14. COYOTE CREEK, CA (Known As Coyote And Berryessa Creeks)**

**Location** Project is located in the cities of San Jose and Milpitas immediately south of San Francisco Bay in Santa Clara County, CA.

**Existing project** Plan of improvement on Coyote Creek consists of overflow channels and offset levees. Improvement on Berryessa Creek elements consists of approximately 4 miles of channel improvements and upgrading existing berms. Combined plan would provide flood protection from Coyote and Berryessa Creeks to cities of San Jose and Milpitas, which include large industrial complexes and some residential development. Estimated cost (October 1998) for the Coyote Creek element of the existing project is \$61,750,000 (includes an allowance for estimated inflation through the construction period), of which \$30,890,000 is Federal and \$30,860,000 is non-Federal (which includes \$3,100,000 cash contribution). For future non-Federal reimbursement, see Local cooperation paragraph. Estimated cost (October 1998) for the Berryessa Creek element of the existing project is \$16,525,000 (includes an allowance for estimated inflation through the construction period), of which \$12,425,000 is Federal and \$4,100,000 is non-Federal (which includes \$1,830,000 cash contribution). Existing project was authorized under Section 101(a)(5) of WRDA 1990, Public Law 101-640 (HD 101-126, 101st Cong., 2d sess.).

**Local cooperation** (Coyote Creek) Local interests

are required to provide lands, easements, rights-of-way, and borrow and excavated or dredged material disposal areas, which may be reduced for credit allowed based on prior work (Sec. 104 of WRDA 86 (\$8,633,000), Sec. 26 of WRDA 88 (not to exceed \$3,000,000) and Sec. 215 of the Flood Control Act of 1968 (not to exceed \$3,000,000) after reductions for such credit have been made in the required cash payments; modify or relocate utilities, roads, bridges (except railroad bridges), and other facilities, and perform prior work under Sec. 104 of WRDA 86, Sec. 26 of WRDA 88, and Sec. 215 of the Flood Control Act of 1968, where necessary for the construction of the project; and pay 5 percent of the costs allocated to flood control, and bear all costs of operation, maintenance, repair, rehabilitation and replacement of flood control facilities. Local interests will receive an estimated Federal reimbursement of \$8,280,000 for one-half of non-Federal costs allocated to flood control in excess of Federal costs (Sec. 103 of WRDA 86). (Berryessa Creek) Local interests are required to provide lands, easements, rights-of-way, and borrow and excavated or dredged material disposal areas; modify or relocate utilities, roads, bridges (except railroad bridges), and other facilities, where necessary in the construction of the project; and pay 11 percent of the costs allocated to flood control to bring the total non-Federal share of flood control costs to 25 percent, and bear all costs of operation, maintenance, repair, rehabilitation and replacement of flood control facilities. The non-Federal sponsor has also agreed to make all required payments concurrently with project construction.

**Operations and results during fiscal year.** Berryessa Creek – Continue General Reevaluation Report (GRR).

**Historical summary** Separate General Design Memorandums were prepared for Coyote and Berryessa Creeks. General Design Memorandum for Coyote was submitted in May 1993. Local interests have completed construction of Reach 1 (Sec 104, Water Resources Development Act (WRDA), Reach 2 (Sec 26, WRDA) and Reach 3A (Sec 215, WRDA). National Defense Authorization Act for FY 1994 directed the Secretary of the Army to construct project notwithstanding sec 902, WRDA. Project Cooperation Agreement was executed in September 1994. Coyote Creek Reach 3B construction contract was completed at a final cost of \$5,308,925. Preconstruction engineering and design cost is \$4,410,000. Total reimbursement of \$7,400,000 for

costs in excess of 50% maximum requirement and credit payments of \$14,633,000 for prior integral work, have been made to the local sponsor as of September 30, 1997.

### **15. FAIRFIELD VICINITY STREAMS, CA**

**Location** On five streams in vicinity of cities of Fairfield and Suisun, Solano County, CA.

**Existing project** See Annual Report for 1996, p35-8.

### **16. GUADALUPE RIVER, CA**

**Location** On Guadalupe River in downtown area of city of San Jose, Santa Clara County, CA.

**Existing project** Authorized plan provides for widening and deepening one or more sides of Guadalupe River for 2.5 miles from Interstate Highway 280 to Interstate Highway 880 in downtown San Jose, CA, and channel modifications with provisions for fish and wildlife mitigation, as necessary. Non-Federal sponsor must pay 100 percent of incremental construction cost of locally preferred plan. Project is an integral component of a much larger regional park plan being undertaken by the San Jose Redevelopment Agency.

Estimated cost (October 2005) is \$260,700,000 (which includes an allowance for estimated inflation through the construction period) of which \$147,600,000 is Federal and \$113,100,000 is non-Federal including reimbursement, see Local cooperation paragraph. Existing project was adopted by Water Resources Development Act of 1986, Energy and Water Development Appropriation Act of 1990 which directed the Secretary of the Army to construct the project notwithstanding Sec. 902 of the Water Resources Development Act of 1986 regarding project cost limitations, and Energy and Water Development Appropriations Act of 1992 which directed the Secretary of the Army to modify and construct the project in accordance with the January 1991 GDM; it is consistent with the Guadalupe River Park plan requested by the local sponsor and with cost sharing policy.

A General Reevaluation Report (GRR) has been prepared to address impacts to endangered species and water quality. In lieu of widening the natural channel for Reach 3, a bypass channel was recommended to minimize the effects on water

quality, endangered species and riparian vegetation. The originally authorized plan could not fully mitigate these impacts. Updated benefits and added costs for required mitigation, lands and relocation were documented in the GRR approved in November 2001. Based on findings of the GRR, Section 106 of the Energy and Water Development Appropriations Act for 2002 re-authorized the project at a total cost of \$226,800,000.

**Local cooperation** Local interests, through a public body legally authorized and financially capable, must give assurances they will furnish lands, easements, rights-of-way, and dredged material disposal areas, which are partially offset by a credit (\$5,701,000) allowed for prior work (Sec. 104, Water Resources Development Act of 1986); credit was approved by the Assistant Secretary of the Army; modify or relocate buildings, utilities, roads, bridges (except railroad bridges), and other facilities, where necessary in the construction of the project; pay 5 percent of the costs allocated to flood control; and bear all costs of operation, maintenance, and replacement of flood control facilities. Federal reimbursement will be made to non-Federal sponsor for one-half of non-Federal costs allocated to flood control in excess of Federal costs. Local interests have agreed to make all required payments concurrently with project construction.

On June 2, 1989, the local sponsor, the Santa Clara Valley Water District, expressed intent to provide all needed cost sharing funds. On September 21, 1990, the San Jose Redevelopment Agency requested modification of project to include recreation facilities and confirmed that they intend to participate as local sponsor for recreation. Local Cooperation Agreements for both flood control and recreation were executed March 30, 1992.

#### **Operations and results during fiscal year.**

Construction contracts 3B (Santa Clara Street to Park Avenue) and 3A, Phase 1 (Existing UPRR track #4 to Santa Clara Street) were continued in FY 2005.

Contract 3A, Phase 2 (North of Coleman Avenue to existing UPRR track #4) was completed in June 2005. Contract 3C, Phase 3 (Flood Training Walls near I-280) was completed in March 2005.

**Historical summary** Final General Design Memorandum (GDM) reflecting locally preferred plan, was approved by the Assistant Secretary of the Army on March 26, 1992, with comments. Revision of GDM to address comments was completed in July 1993. Local Cooperation Agreements for both flood

control and recreation were executed March 30, 1992. Construction contract No. 1 for channel improvement (Highway 880 to Hedding Street) was awarded August 10, 1992; and was essentially completed and transferred to local interests for maintenance and operation on August 11, 1994. Construction contract No. 2 (Hedding Street to Coleman Avenue) was awarded July 8, 1994, and was essentially completed and transferred to local interests for maintenance and operation on October 25, 1996.

### **17. HIDDEN DAM-HENSLEY LAKE, FRESNO RIVER, CA**

**Location** On Fresno River about 50 miles above its mouth and about 15 miles northeast of Madera, CA (See Geological Survey quadrangles for area.)

**Existing project** Provides for construction of a 163-foot high earthfill dam to create a reservoir with gross storage capacity of 90,000 acre-feet for flood control, irrigation, recreation and other purposes. In conjunction with the dam, the project provides for about 13 miles of downstream levee and channel improvements on Fresno River immediately upstream of Chowchilla Canal crossing to accommodate project design flow of 5,000 cubic feet per second. Operation and maintenance of dam and reservoir is the responsibility of the Federal Government. Total first cost for existing project is \$31,785,426, of which \$30,555,426 is Federal cost, including \$3,564,168 for basic recreation facilities, and estimated \$1,230,000 non-Federal cost for lands and damages including relocations for downstream levee and channel improvements. Local interests have contracted with the Bureau of Reclamation for irrigation service. For future non-Federal reimbursement, see Local cooperation paragraph. Local interests have also, over a period of years, expended about \$300,000 for construction of low levees and clearing downstream channels to provide some local flood protection in the project area. This work is inadequate during major floods. Existing project was adopted by 1962 Flood Control Act (S. Doc. 37, 87th Cong., 1st sess., contains latest published map). Lake created by Hidden Reservoir project on Fresno River was designated "Hensley Lake" by Public Law 93-603.

**Local cooperation** Fully complied with.

**Operations and results during fiscal year.** New work. None. Maintenance: Maintenance and operation activities were continued. Runoff of Fresno

River below Hidden Dam was above normal for the year. Maximum storage of 27,437 acre-feet occurred May 17, 2004. Maximum hourly inflow to the reservoir was 811 cubic feet per second on February 26, 2004. Maximum release of 140 cubic feet per second on June 18, 2004, was above maximum permissible flood release. During the year, 24,663 acre-feet was released for irrigation and other purposes and 0 acre-feet was released for flood control.

**Historical summary** Construction began in July 1971 and was completed in January 1979. Dam closure was in March 1975; dam was completed November 1975. Instrumentation was completed in January 1976. Downstream channel improvement, Fresno River, was completed April 1976. Recreation areas: Phase I was completed in March 1976; Phase II was completed in June 1978. Residences, administration building, grounds, and utilities contract was completed in February 1978. Landscaping was completed in December 1978 and erosion control was completed in January 1979. Project was completed in September 1980. Final land audit was approved February 5, 1980. Dam safety assurance studies were initiated in FY 1980. Piezometer installation was completed in September 1982. Solar heating was installed at County relinquished all administration of recreation and development and maintenance of public use areas at the recreation areas in FY 1984.

### **18. ISABELLA LAKE, KERN RIVER, CA**

**Location** About 35 miles northeast of city of Bakersfield, CA, near confluence of north and south forks of Kern River; auxiliary dam is about one-half mile east of main dam. (See Geological Survey quadrangles of area.) In 1991, Isabella Lake and 16,000 acres of surrounding land was transferred to the Forest Service in exchange for about 2,500 acres of Forest Service land near Pine Flat Lake.

**Existing project** For description of completed improvement and authorizing act, see Annual Report for 1967. Federal cost for new work is \$22,027,452. For future non-Federal reimbursement see Local cooperation and Licenses paragraphs. Federal cost funded from Code 710 appropriations is \$2,199,085. Operation and maintenance of dam and reservoir is Federal responsibility.

**Local cooperation** California officially adopted project by chapter 1514 of statutes of 1945, State of

California. Local interests, represented by North Kern, Buena Vista, and Tulare Lake Basin Water Storage Districts and La Hacienda Water District, were required to reimburse the Federal Government the portion of first cost and annual operation and maintenance costs allocated to irrigation functions of project. These costs, based on a cost allocation study completed in December 1955, are \$4,573,000 of first cost and 21.7 percent of annual operation and maintenance cost. For the years 1956 through 1964, an interim contract between the Bureau of Reclamation and local water users provided for storage and payment of irrigation water. Under provisions of this interim contract, local interests paid \$1,936,229 through December 31, 1964. A long-term contract between the Bureau and local water users was executed October 23, 1964. Balance due on allocated first cost of \$4,573,000 was paid by the water users on March 31, 1965. Kern County assumed administration of recreation and development and maintenance of public use areas at project in accordance with a 25-year license February 15, 1955. The agreement with Kern County provided for joint operation and development by the Corps and Kern County including permits granted to concessionaires by the county to provide certain services. As of September 30, 1971, Kern project. A State law permitting the Department of Boating and Waterways (known as the Department of Navigation and Ocean Development prior to January 1979) to participate in inland water development with Federal agencies was signed by the Governor on August 11, 1972. Isabella Lake and surrounding land, 16,000 acres around the lake currently being used for park and recreation purposes, was turned over to the Forest Service by the Corps on May 15, 1991, in exchange for approximately 2,500 acres of Forest Service recreation land near Pine Flat Lake. This was accomplished by using a memorandum of understanding (MOU) between the Secretary of the Army and the Secretary of Agriculture (Forest Service). The MOU requires an exchange of land between departments. Three Corps maintenance employees, under supervision of the Success Lake park manager, will stay at Isabella to operate the dam for flood control and water conservation purposes. Authority for new concessionaire operating permits to be issued, as well as those previously granted by the Corps, will be transferred to the Forest Service.

Total cost to date of present recreation facilities developed by the county and the marina concessionaires is about \$965,000; \$235,000 of this was a grant from the California Wildlife Conservation Board and about \$534,000 is

investment by marina concessionaires.

**Licenses.** In accordance with Federal Power Commission Docket No. E-6578, issued April 1, 1963, payment of \$377,426 was made to the Federal Government by Pacific Gas and Electric Co. (\$108,352) and Southern California Edison Co. (\$269,074) for headwater benefits to downstream existing plants from Isabella Dam to cover benefits from April 15, 1954, to December 31, 1962. Between 1962 and 1982, the power companies have in the aggregate made annual payments of \$44,650 for headwater benefits. That amount was to be paid each year until changes in operation, development, or costs indicated some modification to be advisable. Federal Power Commission Docket No. E-6578 was revised by Docket No. HB07-75-4-000 (order issued July 11, 1983 under 24 FERC, paragraph 62052) which modified cumulative use charges after 1974, effective retroactively. Such charges will now vary each year. An adjustment (years 1974 through 1984) was included in 1984 payment of \$244,790. The 1985 payment was \$52,747; 1986 payment was \$51,905. No payment was received in 1987. The 1988 payment was \$58,187. No payment was received in 1989. Two payments (\$60,894 and \$55,443) were received in 1990; \$60,983 was received in 1991; \$65,975 in October 1991 (FY 1992) \$77,577 in October 1992 (FY 1993), and \$62,231 in October 1993 (FY 1994). Cumulative use charges collected by the Federal Power Commission (known as the Federal Energy Regulatory Commission since January 9, 1978) and returned to the U. S. Treasury through period ending September 30, 1995, amounted to \$2,150,458.

**Operations and results during fiscal year.** New work, regular funds: None. Code 710 funds: None. Maintenance: Maintenance and operation continued. Structures were maintained in good condition. Runoff of Kern River above Isabella Dam was above normal for the year. Maximum storage of 228,162 acre-feet occurred May 30, 2004. Maximum hourly inflow to the reservoir was 2,432 cubic feet per second on May 5, 2004 and maximum outflow of 1,661 cubic feet per second occurred June 7, 2004. During the year, 434,752 acre-feet was released for irrigation and 0 acre-feet was released for flood control.

**Historical summary** Construction began in March 1948 and was completed in June 1968. Main dam, Borel Canal outlet works and appurtenances, and auxiliary dam were completed in April 1953. Storage impoundment began December 1952. Piezometer was installed in August 1982. Project is operating to provide flood protection and irrigation

benefits for which it was designed. Recreation facilities were provided by Code 710 funds. Dam safety assurance studies were initiated in FY 1979. A cultural resources survey was completed in FY 1984. On May 15, 1991, Isabella Lake and surrounding land, 16,000 acres around the lake currently being used for park and recreational purposes, was turned over to the Forest Service by the Corps in exchange for approximately 2,500 acres of Forest Service recreation land near Pine Flat Lake. A memorandum of understanding (MOU) between the Secretary of the Army and the Secretary of Agriculture (Forest Service) was used. The MOU requires an exchange of land between departments. Three Corps maintenance employees, under supervision of the Success Lake park manager, are located at Isabella to operate the dam for flood control and water conservation purposes.

### **19. KAWEAH AND TULE RIVERS, INCLUDING TERMINUS DAM AND SUCCESS LAKE, CA**

**Location** Terminus Dam is on Kaweah River about 20 miles east of Visalia, CA. Success Lake is on Tule River about 5 miles east of Porterville, CA. (See Geological Survey quadrangles of area.)

**Existing project** Terminus Dam: For description of completed improvement and authorizing act, see Annual Report for 1975. Federal cost of new work is \$19,302,957, including \$242,605 for basic recreation facilities and excluding spreading works constructed by local interests at an estimated (July 1957) cost of about \$750,000. Spreading works portion of project has been deauthorized. The 90-day Congressional project review period, required by sec. 12, Public Law 93-251, as amended, ended August 5, 1977, and resulted in deauthorization of that portion of project. Federal cost of recreation facilities funded from Code 710 appropriations is \$700,004. Success Lake: For description of completion improvement and authorizing act, see Annual Report for 1975. Federal cost of new work for Success Lake is \$14,247,221, including \$253,697 for basic recreation facilities. Federal cost of recreation facilities funded from Code 710 appropriations is \$747,048. For future non-Federal reimbursements, see Local cooperation paragraph. Operation and maintenance of reservoirs is Federal responsibility.

**Local cooperation** California officially adopted projects by chapter 1514 of statutes of 1945, State of California. Local interests for Terminus Dam are represented by Kaweah Delta Water Conservation District. Local interests for Success Lake are

considered to be represented by the Vandalia, Porterville, and Lower Tule River Irrigation Districts, the Tulare Lake Basin Water Storage District, and Pioneer Water Co., which represent over 90 percent of irrigated land and water-right holders along Tule River below damsite. Local interests must reimburse the Federal Government the portion of first cost and annual operation and maintenance costs allocated to irrigation functions of projects. These costs are estimated at 14.1 percent of first and annual costs for Terminus and 9.5 percent of first and annual costs for Success. Local interests for Terminus stated they will continue to operate and maintain spreading works and downstream channel systems to provide required capacity for disposal of floodwaters. Local interests for Success stated they will continue to maintain downstream channel systems to provide required capacity for disposal of floodwaters. Repayment contracts between the Bureau of Reclamation and local water users for irrigation supply from Terminus and Success reservoirs were executed January 11, 1965, and April 30, 1965, respectively. Reservoirs are being operated for irrigation storage as well as flood control and incidental recreation use. Tulare County acquired water for recreation pools at the projects. Local interests paid the following total amounts for irrigation services from the reservoirs through December 31, 2003: Terminus, \$2,686,711 and Success, \$1,338,408. Tulare County was granted a 25-year license for planning, development, and management of public recreation areas at Success, July 10, 1960, and at Terminus, June 5, 1961. Basic public-use facilities constructed by Corps at the Success reservoir were transferred to jurisdiction of Tulare County on January 18, 1962; facilities at Terminus were transferred June 20, 1962. In March 1967, an amendment to the license agreements was approved by the Assistant Secretary of the Army. Under these amended licenses, Tulare County retained administration of only specified land areas and operation and maintenance of recreation facilities in these areas. In addition, they continued their program of water safety, boat inspection, and law enforcement at both reservoirs. The Corps took over the administration of the remainder of the project land areas and the operation and maintenance of recreation facilities in these areas. Calif. Department of Fish and Game expended funds to improve fishery resources of the Terminus reservoir. As of April 1, 1972, Tulare County relinquished all planning, development, and management of public recreation areas at Terminus Dam. Tulare County by expenditure of county funds and by a lease to a marina concessionaire has aided in the development of recreation facilities at an estimated cost of \$199,000. Calif. Department of Fish and Game

expended funds in conjunction with Tulare Sportsman's Council and developed a habitat for upland game birds at Success Lake. As of April 1, 1972, Tulare County relinquished all planning, development, and management of public recreation areas at Success Lake, except for the Bartlett Park recreation area. Tulare County has aided in development of recreation facilities. Total cost to date of present recreation facilities developed by the county (\$360,000) and the marina concessionaires (\$373,000) is about \$733,000.

**Operations and results during fiscal year.** New work: Terminus Dam, regular funds: None. Code 710 funds: None

Success Lake, regular funds: None. Code 710 funds: None.

Maintenance: Terminus Dam: Maintenance and operation continued. Structures were maintained in serviceable condition. Runoff of Kaweah River above Terminus Dam was above normal for the year. Maximum storage of 147,489 acre-feet occurred on June 4, 2004. Maximum hourly inflow to the reservoir on February 26, 2004, was about 2,852 cubic feet per second. Maximum outflow of 1,737 cubic feet per second occurred June 10, 2004. Irrigation and spreading releases totaled 215,507 acre-feet. Releases for flood control totaled 14,157 acre-feet. Success Lake: Maintenance and operation continued. Structures were maintained in serviceable condition. Runoff of Tule River above Success Dam was above normal during the year. Maximum storage of 73,964 acre-feet occurred on June 10, 2003. Maximum hourly inflow to the reservoir was 20,458 cubic feet per second on November 8, 2003, and maximum outflow of 720 feet per second occurred on November 10, 2003. Irrigation and spreading releases amounted to 18,110 acre-feet. Releases for flood control amounted to 106,895 acre-feet.

**Historical summary** Terminus Dam: Construction of project began in July 1957 and was completed in June 1968. Final land audit was approved on April 20, 1987. Construction of main dam and appurtenances, initiated in February 1959, was completed in June 1962. Dam has been operating since November 1961 to provide flood protection for which it was designed; conservation impoundment was commenced May 1962. Appurtenances are in good condition. Recreation facilities were provided by Code 710 funds. Dam safety assurance studies were initiated in FY 1979 and completed in FY 1989. Piezometer installation and a cultural resources

survey were completed in FY 1984. Success Lake: Construction of project began in November 1956, was completed in June 1968, and final audit of historical land record was approved December 17, 1979. Construction of main dam and appurtenances, initiated in October 1958, was completed in May 1961. Dam has been operating since October 1960 to provide flood protection for which it was designed; conservation impoundment was commenced March 1962. Recreation facilities were survey was completed in FY 1984.

## 20. LITTLE DELL LAKE, UT

**Location** On Dell Creek, a tributary of Parleys Creek, about 8 miles east of Salt Lake City upstream of Mountain Dell Reservoir in Salt Lake County, UT.

**Existing project** Project providing for construction of a dam about 253 feet high to create a reservoir with a gross capacity of 30,000 acre-feet for flood control, municipal and industrial water supply, recreation and fish and wildlife was authorized by the 1968 Flood Control Act (S. Doc. 53, 90th Cong., 1st sess., contains published map) as modified by sec. 170, Water Resources Development Act of 1976, Public Law 94-587, October 22, 1976. Facility would be operated in conjunction with existing downstream 3,200 acre-foot Mountain Dell Reservoir on Parleys Creek for flood control and water supply.

Authorized project had been reexamined and scaled down to reflect local interests' ability to pay. Recreation was deferred as of May 30, 1986, and Emigration Creek Diversion was deleted and placed in an inactive status. Recreation was reactivated in 1995 and the Recreation DM approved in 1996. The project includes an earthfill dam 224 feet high, a 20,500 acre-foot reservoir, and 10,035 feet of pipeline to divert water from Parleys Creek. Estimated project cost (September 2003) is \$64,100,000 (includes an allowance for estimated inflation through the construction period) of which \$40,600,000 is Federal and \$23,500,000 is non-Federal for lands and damages and includes a cash contribution of \$17,000,000. Project is included in FY 1985 Supplemental Appropriations Act (Public Law 99-88) August 15, 1985.

**Local cooperation** Local interests are required to provide lands, easements, rights-of-way, and dredged material disposal areas; modify or relocate buildings, utilities, roads, bridges (except railroad bridges), and other facilities where necessary in the construction of the project; pay all costs allocated to municipal and industrial water supply; pay 20 percent of costs

allocated to flood control to bring total non-Federal share of flood control costs to 25 percent, pay 50% of joint recreation costs, and bear all costs of operation, maintenance, and replacement of flood control facilities.

**Operations and results during fiscal year.** Mitigation establishment continued.

**Historical summary** A Local Cooperation Agreement (Sec. 221) was executed June 10, 1986. Construction was initiated in April 1988. Construction of core trench and test fill was completed in February 1989. Main dam and appurtenances contract was awarded May 12, 1989 and completed in September 1993. Project was transferred to the local sponsor for maintenance and operation on March 26, 1993. Dam was dedicated on August 5, 1993.

## 21. MARTIS CREEK LAKE, MARTISS CREEK, NV AND CA

**Location** Reservoir is on Martis Creek a tributary of Truckee River, near Truckee, CA; intermittent channel improvements are on Truckee River in Reno, NV. (See Geological Survey quadrangles for areas.)

**Existing project** For description of completed improvement and authorizing act, see Annual Report for 1975. Federal cost for project was \$8,503,789 including \$289,506 for basic recreation facilities. Federal cost of recreation facilities funded from Code 710 appropriations was \$1,200. Construction of recreation facilities under Code 710 was determined to be infeasible. Operation and maintenance of reservoir is Federal responsibility.

**Local cooperation** Fully complied with.

**Operations and results during fiscal year.** New work: None. Maintenance: Maintenance and operation of project, including recreation facilities, was continued. Structures were maintained in serviceable condition. Runoff above Martis Creek Dam was above normal for the year. Maximum storage of 1,110 acre-feet occurred on March 26, 2004. Maximum inflow to the reservoir was 172 cubic feet per second on February 25, 2004, and maximum outflow of 84 cubic feet per second occurred March 30, 2004. During the year, 14,741 acre-feet was released for irrigation purposes. Releases for flood control amounted to 0 acre-feet.

**Historical summary** Project construction began in August 1967; dam closure was in October 1971; dam completed in August 1972; basic recreation facilities were completed in December 1972; and project was completed in June 1974. Recreation facilities under Code 710 funding were considered infeasible. Dam safety assurance studies were initiated in FY 1981.

## 22. MERCED COUNTY STREAMS, CA

**Location** In vicinity of city of Merced, CA, on streams draining from Mariposa County foothills of the Sierra Nevada into Merced County. Streams lie easterly of and drain into the San Joaquin River between Chowchilla River on the south and Merced River on the north. Drainage area represents about 1,000 square miles; nearly 700 square miles of foothills and mountains in Mariposa County and about 300 square miles of flood plain in Merced County. (See Geological Survey quadrangles for area.)

**Existing project** Project is a modification of Merced County Stream Group, Calif., Improvement No. 18, authorized by 1944 Flood Control Act (H. Doc. 473, 78th Cong., 2d sess.) and completed in FY 1957. Existing project provides for enlargement of four existing reservoirs Bums, Bear, Owens, and Mariposa, providing a total capacity of 117,900 acre-feet for multipurpose storage; channel improvements in reaches of Bear, Black Rascal, and Deadman Creeks, thereby tying the existing project channels into the USFWS grasslands and into Eastside Bypass of San Joaquin River flood control system. Bear, Bums, and Owens projects would provide flood control only; Castle and Bums projects, flood control and recreation; Marguerite project, flood control and irrigation; and Mariposa project, all three purposes. Existing project was adopted by 1970 Flood Control Act.

Current plan of improvement would defer enlargement of existing Mariposa reservoir and the irrigation function associated with the latter two facilities, enlargement of existing Owens reservoir and about 32 miles of levee and channel improvement on Owens, Mariposa, and Deadman-Dutchman Creeks. Estimated total project cost (October 1996) is \$132,700,000 (includes an allowance for estimated inflation through the construction period), of which \$91,800,000 is Federal and \$40,900,000 is non-Federal (which includes a \$6,855,000 cash contribution).

**Local cooperation** Local interests are required to provide lands, easements, and rights-of-way and dredged material disposal areas; modify or relocate buildings, utilities, roads, and other facilities, where necessary in the construction of the project; pay one-half of the separable and joint costs allocated to recreation, presently estimated at \$282,000, of which \$240,000 is a cash contribution and \$42,000 is for lands; and bear all costs of operation, maintenance, and replacement of flood control facilities. Total non-Federal share of Castle Dam first cost is \$5,230,000 and includes cash contribution of \$595,000.

The California Reclamation Board and the City of Merced are the local sponsors of the authorized project. The Reclamation Board will serve as sole sponsor for the Castle Dam Unit. Merced County Board of Supervisors reaffirmed their support for the project by letter of April 4, 1986. City of Merced by letter of March 13, 1986, reaffirmed its support for and intent to furnish assurances for recreation aspects of the project. California Reclamation Board reaffirmed its support for total project by letter of April 9, 1986. A Local Cooperation Agreement (Sec. 221) was executed for Castle Dam Unit on June 27, 1986. State of California legislation (AB3369) was enacted on September 14, 1986 which enabled the Reclamation Board to financially participate in the project. A new Local Cooperation Agreement (LCA) was signed by the Assistant Secretary of the Army November 30, 1988, in accordance with the Water Resources Development Act of 1986. The California Reclamation Board, the Merced County Board of Supervisors and the city of Merced have indicated support for balance of the project by letters of intent dated August 29, 1991 and August 20, 1991, respectively. This support was again reaffirmed in letters of support as provided by the California Reclamation Board on January 9, 1996.

**Operations and results during fiscal year.** Engineering activities continued for Bear Creek Dam Unit. Castle was transferred to sponsor for maintenance and operation in April 1995.

**Historical summary** Castle Dam multicomponent construction contract was awarded February 26, 1991, and construction was completed in March 1993. Castle Dam check structure contract was initiated in April 1993 and completed in January 1994. Castle Dam was transferred to the sponsor on April 12, 1995, and accepted by the sponsor in FY 2000.

## 23. MERCED COUNTY STREAM GROUP, CA

**Location** Reservoirs and channel improvements are on Bear, Burns, Mariposa, and Owens Creeks, in foothills of Sierra Nevada about 15 to 20 miles east of city of Merced, CA. (See Geological Survey Haystack Mountain quadrangle for Burns and Indian Gulch quadrangle for Bear, Owens, and Mariposa areas.)

**Existing project** For description of completed improvements and authorizing act, see Annual Report for 1962. Improvements consist of reservoirs at Mariposa, Owens, Burns and Bear Creeks and diversions from Black Rascal Creek to Bear Creek and from Creek to Mariposa Creek. Total first cost for project was \$3,899,259, of which \$2,751,259 was Federal and \$1,148,000 non-Federal for lands including relocations and channel improvement.

**Local cooperation** Fully complied with.

**Operations and results during fiscal year.** Maintenance: Ordinary maintenance and operation of the four completed reservoirs continued. Structures were maintained in a serviceable condition. Runoff from drainage areas below Merced County stream group reservoirs was above normal for the year. See Table 35-K for maximum inflow storage and outflow for the projects. Outflows were less than channel capacity rates in the project streams.

**Historical summary** Construction was initiated March 1948, with construction of Mariposa project, which was completed in November 1948. Construction of Owens project, initiated in March, was completed in October 1949; Burns project, initiated in July 1949, was completed in January 1950; and Bear project initiated in April, was completed in December 1954. Black Rascal and Owens Creek diversion channels and stream-gaging stations were completed in April 1956. Local interests completed channel enlargement and restoration of channel capacities of Miles, Burns, Owens, and Mariposa Creeks in 1956 at their expense. Improvement of Bear Creek and Black Rascal Slough, below their confluence, was deferred pending possible improvements downstream, outside limits of project.

## 24. NAPA RIVER, CA

**Location** The project is located in the city and county of Napa, California. The Napa River drainage

basin, comprising 426 square miles, is just north of San Pablo Bay and approximately 40 miles northeast of San Francisco, California.

**Existing project** A major portion of the presently developed area of the city is located in a high flood hazard area and is subject to flooding. The project consists of modifications to provide the project area with 100-year level of flood protection from Napa River and Napa Creek. Channel modifications include overbank excavation, vertical walls, floodwalls, levees, bridge modifications, pumping stations and flowage easements. The project also includes recreation trails and incidental ecosystem restoration. Current total project cost estimate is \$255,000,000 and is to be cost shared 75% Federal and 25% local sponsor.

**Local cooperation** In March 1998, the Napa County electorate passed "Measure A" to fund the non-Federal share of the project. In February 2000, Napa County Flood Control and Water Conservation District, the local sponsor, signed a Project Cooperation Agreement for the project. The sponsor will furnish lands, easements, rights of way and borrow and excavated or dredged material disposal areas; modify or relocate utilities, roads, bridges (except railroad bridges) and other facilities where necessary for the construction of the project; provide 5 percent of the costs allocated to flood control and bear all costs of operation, maintenance, repair, rehabilitation and replacement for flood control facilities; and pay one-half of the separable costs allocated to recreation (except recreational navigation) and bear all costs of operation, maintenance, repair, rehabilitation and replacement or recreation facilities.

**Operations during fiscal year.** Completed contract 2E, Initialed 2West (Hall to First) and Continue development of P&S. Fiscal year expenditure totaled \$8,621,585.

**Historical summary** The project was authorized by the Flood Control Act of 1965 for flood control and recreation and was modified by the Flood Control Act of 1976 to include modifications to Napa Creek. The project was placed in inactive status in 1978. Following severe flooding in February 1986, the sponsor requested reactivation of the project. Funds to resume pre-construction engineering and design (PED) were appropriated in fiscal year 1989. A revised Final SGDM was completed in October 1998 and approved in May 1999. The ROD for the revised SEIS/EIR was issued in June 1999. The PED phase of the project was completed in fiscal year

2000 at a total cost of \$15,587,000. Project was approved as new start construction for fiscal year 2000. Construction Contract 1A, estimated at \$2,550,000, was completed in October 2000. Demolition contract was completed in October 2002 and Phase 1 HTRW Remediation was completed in December 2002 and Phase 2 remediation was completed February 2004. Contract 1B was completed in May 2004. Planning, engineering and design, construction management and non-Federal lands certification efforts continue.

## **25. PAJARO RIVER, CA**

**Location** In the Uvas-Carnadero and Llagas Creeks watersheds of the upper Pajaro River Basin in south Santa Clara County in vicinity of the city of Gilroy about 75 miles south of San Francisco, CA.

**Existing project** See Annual Report for 1996, pg. 35-15.

**Local cooperation** Fully complied with. Local Cooperation Agreement (LCA) for flood control was executed with the Santa Clara Valley Water District on June 25, 1987, and LCA for recreation was executed with the City of Gilroy on July 27, 1987.

**Operations and results during fiscal year.** The project is fiscally completed.

**Historical summary** Responsibility for remaining portions of advance engineering and design, plans and specifications, and construction was transferred to Sacramento District in April 1982. Construction began in October 1987. Construction for the first contract (levee work and bike path upstream of Thomas Road Bridge), second contract (levee work and hiking trails), and third and final contract (landscaping) has been transferred to local interests for operation and maintenance. Total reimbursement of \$5,583,369 has been made to the local sponsor.

## **26. PINE FLAT LAKE AND KINGS RIVER, CA**

**Location** Reservoir is on Kings River, about 25 miles east of Fresno, CA, and channel improvements are on Kings River downstream from Lemoore weir, about 25 miles south of Fresno. (See Geological Survey quadrangles of area.) Project also includes 2,500 acres of Forest Service recreation land near Pine Flat Lake.

**Existing project** Improvement is a unit in

comprehensive plan for flood control and other related purposes for Sacramento-San Joaquin Basins. Project consists of a 429-foot high concrete gravity darn, including a gated overflow section with a maximum discharge capacity of 391,000 cubic feet per second, creating a reservoir with gross storage capacity of 1 million acre-feet, for flood control, irrigation, and related purposes. Outlet provisions for future power development are included in dam, but Federal construction of power-generating facilities is not authorized. Improvement also includes levee and channel work on Kings River and its tributaries on valley floor about 25 miles south of Fresno. Channel improvement work will enlarge channel capacities and regulate flows in lower branches of the Kings River. There are nine public-use and recreation areas: One maintained by the Corps, four by the Forest Service, three jointly by the Corps and concession, and one by Fresno County. Also, five boat access-only areas are maintained by the Corps on the south side of the reservoir. Project cost is \$42,072,330, of which \$41,502,330 is Federal (including \$13,700 for basic recreation facilities) and \$570,000 non-Federal for rights-of-way for downstream channel improvements. For future non-Federal reimbursement, see Local cooperation paragraph. Federal cost of recreation facilities for Pine Flat Lake, funded from Code 710 appropriations is \$1,595,100 exclusive of recreation facilities previously provided at a cost of \$13,700. In addition, Federal cost of recreation facilities for Pine Flat Lake, funded from Public Works Acceleration Executive Act of 1962 appropriations, was \$239,235 (July 1963). Operation and maintenance of dam and reservoir is Federal responsibility. Existing project was adopted by 1944 Flood Control Act (H. Doc. 630, 76th Cong., 3d sess., contains latest published map).

**Local cooperation** Local interests must reimburse the Federal Government for first costs allocated to irrigation functions of reservoir portion of project in accordance with reclamation law. Under provision of War Department Civil Appropriations Act of 1947, the Secretary of War, with concurrence of the Secretary of the Interior, determined allocation of cost to irrigation should be set at an amount not to exceed \$14,250,000. In addition, local interests must pay 37.4 percent of annual maintenance, operation, and replacement costs of dam and reservoir allocated to irrigation function. Repayment contracts between the Bureau of Reclamation and the local water users for the irrigation use of the reservoir were executed December 23, 1963. The Bureau is administering the contracts in accordance with reclamation law as amended by the Reclamation Reform Act of October

12, 1982. That act generally exempts the limitations under the early reclamation laws as being applicable to projects constructed by the Corps with two exceptions; however, all existing contracts to share construction and maintenance costs remain in effect. Prior to execution of the final contracts, the Bureau provided conservation water to local interests under an interim contract. Irrigation interests paid \$15,154,593 for irrigation services through December 31, 2003. With respect to the downstream channel improvements, sec. 3, Flood Control Act of June 22, 1936, applies. King River Conservation District represents local interests; assurances were accepted November 20, 1959. Local interests have furnished all requirements for construction rights-of-way for construction of channel improvements required to date. Three concessionaires each at Lakeridge Marina (Deer Creek), Pine Flat Marina and Trimmer Marina provided public-use facilities in accordance with lease agreements with the Secretary of the Army. Estimated cost to date of facilities installed by these concessionaires is \$1,727,000. Fresno County developed public-use facilities on an 85-acre tract immediately downstream from dam for picnicking, camping, swimming, and playground activities, at an estimated cost of \$476,000 under provisions of a license agreement. The U.S. Forest Service developed and operates a picnic area at the upper end of reservoir. Cost of site development is about \$37,500. Installation of a hydroelectric power plant, located at the downstream toe of the Corps Pine Flat Dam, was completed in January 1984 by Kings River Conservation District. Project consists of an outdoor-type powerhouse containing three generating units with capacities of 55 megawatts each for a total of 165 megawatts. Conservation District would make use of the three existing 13.5-foot diameter penstocks that were installed in Pine Flat Dam when constructed in 1954.

**Licenses.** License No. 1988, effective April 1, 1955, was issued by Federal Power Commission to Pacific Gas and Electric Co. for hydroelectric power development of North Fork Kings River by the company upstream from the Pine Flat reservoir. Under interim Contract No. DA-04-167-eng-1182 with the Department of the Army, Pacific Gas and Electric Co. paid for storage of power water in the Pine Flat reservoir May 15, 1954, through March 31, 1955. Current Contract No. DA-04-167-eng-1328 with the Department of the Army provides for storage of power water at the rate of 0.1375 per acre-foot; the contract covers April 1, 1955, through March 31, 2005. By an agreement of January 1972, supplementing the December 1954 contract, Pacific Gas and Electric Co. transferred ownership of most

of its Kings River system water to the Kings River Water Association. Accordingly, no further significant storage service to Pacific Gas and Electric Co. by the reservoir at Pine Flat is anticipated. Total payment under these contracts through June 30, 1972, (last year of payment), amounts to \$2,478,798; these funds were paid to Sacramento District and deposited for return to the Treasury. License No. 2741, effective September 25, 1979, was issued by the Federal Energy Regulatory Commission to the Kings River Conservation District for hydropower development at the downstream toe of the Corps Pine Flat Dam. Payment to the Department of the Army for construction and installation of the penstocks in the amount of \$1,044,685 was made to Sacramento District and deposited for return to the Treasury in November 1985.

**Operations and results during fiscal year.** New work, regular funds: None. Code 710 funds: None. Maintenance: Maintenance and operation activities continued. Structures were maintained in serviceable condition. Runoff of Kings River above Pine Flat Dam was above normal for the year. Maximum storage of 612,582 acre-feet occurred on June 1, 2004. Maximum hourly inflow to the reservoir was 8,207 cubic feet per second on May 5, 2004, and maximum outflow of 6,706 cubic feet per second occurred on June 11, 2004. During the year, 1,156,541 acre-feet was released for irrigation and spreading. There was no release for flood control.

**Historical summary** Construction began in April 1947 and project, including channel improvement, was completed in September 1977. Main dam was initiated in January 1950, completed in June 1954, and has been operating since February 1954 to provide flood protection for which it was designed. Total of 35.2 miles of new and reconstructed levees and 13.2 miles of channel clearing have been transferred to the Kings River Conservation District for maintenance. Recreation facilities for various recreation areas under Code 710 appropriation are complete. Completed preliminary design and cost estimates for Pine Flat fish barrier were reviewed by the State, but the State was unable to provide necessary assurances of local cooperation. Dam safety assurance studies were initiated in FY 1982. A cultural resources survey was completed in FY 1984. On May 15, 1991, Pine Flat Lake acquired additional acreage as part of a memorandum of understanding (MOU) between the Secretary of the Army and Secretary of Agriculture (Forest Service). The Corps exchanged Isabella Lake and the 16,000 acres around that lake currently being used for park and recreational purposes for approximately 2,500 acres of Forest Service recreation land near Pine Flat Lake.

## 27. REDBANK AND FANCHER CREEKS, CA

**Location** Northeast and adjacent to the Fresno-Clovis Metropolitan Area in Fresno County about 170 miles southeast of Sacramento, CA.

**Existing project** Provides for flood control detention basins on Redbank Creek, Pup Creek, and Alluvial Drain; construction of a dam 45.5 feet high to create a reservoir with gross capacity of 10,300 acre-feet for flood control on Fancher Creek; and enlargement of Big Dry Creek project to provide increased flood protection and recreational development. Since the local sponsor does not support recreational development at this time, the recreation feature of the project is considered to be inactive. The Authorization Act states "measures determined appropriate by the Secretary of the Army to minimize benefits to groundwater recharge" shall be included in the project. Estimated cost (October 1997) for existing project is \$73,710,000 (includes an allowance for estimated inflation through the construction period), of which \$47,460,000 is Federal and \$26,250,000 is non-Federal (which includes \$3,670,000 cash contribution). For future non-Federal reimbursement, see Local cooperation paragraph. Existing project was adopted by Sec. 401, Water Resources Development Act of 1986, Public Law 99-662, November 17, 1986. (HD 98-147, 98th Cong., 2d sess., contains published map.)

**Local cooperation** Local interests are required to provide lands, easements, rights-of-way, and dredged material disposal areas; modify or relocate buildings, utilities, roads, bridges (except railroad bridges) and other facilities where necessary in construction of the project; pay 5 percent of cost allocated to flood control to bring total non-Federal share of flood control costs to 25 percent, of which \$3,680,000 is cash contribution, and bear all costs of operation, maintenance and replacement of flood control facilities. Local interests have agreed to make all required payments concurrently with project construction.

**Operations and results during fiscal year.** Project closeout to formally conclude the project including real estate crediting was completed.

**Historical summary** Local Cooperation Agreement was executed on August 1, 1987. Project construction was begun in September 1987 with initiation of archaeological work on Cultural Resources Preservation. Construction contract for Dry Creek Crossing was completed and transferred to local interests for operation and maintenance on

January 10, 1989. Construction at Redbank Creek Detention Basin was completed and transferred to local interests for operation and maintenance on August 23, 1990. Construction contract for Fancher Creek Dam awarded May 23, 1990, was completed and transferred to local interests for operation and maintenance on March 13, 1992. Construction contract for Big Dry Dam, Pup and Alluvial detention basins was awarded March 18, 1992. Big Dry Creek Dam and Pup Creek Detention Basin were transferred to local interests on June 22, 1994. Last piece of completed work, Alluvial Drain Detention Basin, was transferred to local interests for maintenance and operation on July 18, 1994.

## **28. REGIONAL CONJUNCTIVE USE, CA**

**Location.** The project is located in Placer and El Dorado Counties and the San Juan Water District, California.

**Existing Project.** This region participated in a Water Forum to provide a safe and reliable water supply while preserving the fishery, wildlife, and recreational values of the lower American River. Regional efforts have developed a master plan including conservation and recycling measures to meet water needs while protecting environmental and aesthetic resources. The project would identify water conservation and recycling opportunities, identify opportunities to improve the efficiency and use of existing water supplies through water and wastewater projects, programs, and infrastructures. Cost-sharing agreements would be executed to provide technical, design and construction assistance.

**Local Cooperation.** Project Cooperation Agreements executed for Placer County Water Agency, San Juan Water District, Regional Water Authority, City of Roseville, City of Auburn, and El Dorado Irrigation District.

**Historical Summary.** Placer County Water Agency meter installation to commenced March 2005. San Juan Water District hydraulic design started October 2004. Regional Water Authority study contract being awarded January 2005. City of Roseville water meters purchased and delivered October 2004.

## **29. RUSSIAN RIVER BASIN, CA** Reported on by the San Francisco District.

## **30. SACRAMENTO RIVER AND TRIBUTARIES, CA, FROM COLLINSVILLE TO SHASTA DAM**

**Location** Rises in Trinity Mountains in north-central California, flows generally southerly about 374 miles and empties into Suisun Bay, an arm of San Francisco Bay at Collinsville, CA. Works covered by this improvement are on Sacramento River and tributaries from Collinsville to Shasta Dam, about mile 312. Drainage area above Rio Vista is 26,500 square miles (See Geological Survey quadrangles of area for Sacramento River and Upper Butte Basin; Flounoy and Fruto quadrangles for Black Butte Lake; and Tuscan Buttes, Tehama, Redding, and Hooker quadrangles for Table Mountain Lake.)

**Existing project** Improvement of Sacramento River and tributaries, from Collinsville to Shasta Dam was authorized as a unit of a comprehensive plan for flood control and other related purposes in Sacramento River Basin. (a) Sacramento River and major and minor tributaries, for flood control purposes: Enlargement of existing levees on Sacramento River between vicinity of Moulton weir and Ord Bend; construction of new levees from present levee terminus to vicinity of Chico Landing; construction of a weir near Chico Landing, extension of Moulton weir, and construction of a bypass through Upper Butte Basin; construction of new levees in Lower Butte Basin; enlargement of existing levees in Sutter, Tisdale, Sacramento, and Yolo Bypasses; and levee construction and/or channel enlargement on following minor tributaries of Sacramento River: Antelope Creek; Chico and Mud Creeks and Sandy Gulch; Butte and Little Chico Creeks; Cherokee Canal; Elder Creek; Deer Creek (Tehama County); Thomes Creek; and Willow Creek. Improvement provides for about 155 miles of channel improvement and about 294 miles of levees with an average height of 12 feet and a freeboard of 3 feet. Improvement also provides for revetment as required for protection of bypass levee slopes against erosion. Total first cost for project is \$18,300,000 (October 1988), of which \$11,900,000 is Federal, and \$6,400,000 non-Federal for lands and damages, including relocations. (See table 35-N on project units classified and excluded from cost estimate.) (b) Sacramento River, Chico Landing to Red Bluff, CA: An extension of the existing Sacramento River Flood Control project which provides for construction of bank protection works and minor channel improvements as required on Sacramento River between Chico Landing and Red Bluff for flood

control purposes. Estimated first cost (October 1987) for project work in Tehama, Butte, and Glenn Counties is \$31,000,000, of which \$25,700,000 is Federal cost and \$5,300,000 non-Federal cost for lands and damages including relocations and cash contribution of \$3,435,000. (c) Sacramento River, CA, Bank Protection Project: Includes initial phase covering 430,000 lineal feet of bank protection and a second phase covering 405,000 lineal feet of bank protection under a long range program of bank protection, erosion control works, and setback levees at critical locations within limits of authorized or existing levees included in the Sacramento River Flood Control project to protect integrity of levee system for flood control purposes. Total estimated (October 1997) first cost for project is \$249,400,000, (includes an allowance for estimated inflation through the construction period) of which \$179,900,000 is Federal and \$69,500,000 non-Federal comprised of lands and damages including relocations \$26,671,000 and required cash contribution \$42,829,000 toward first cost. Total estimated cost for recreation facilities, \$2,874,000 (includes both Federal and non-Federal). (March 2005) There remains 36,400 lineal feet of bank protection under second phase authority and a first cost of \$109,000,000 (including environmental mitigation and aforementioned allowances). [Includes Federal and non-Federal] Construction in (a), (b), and as accomplished pursuant to 1917 Flood Control Act, as amended by subsequent acts, including 1941 Flood Control Act, and which are reported on page 35-3A under Sacramento River, CA, flood control. (d) Authorization also provided for Black Butte Lake. For description of completed project see Annual Report for 1975. Federal first cost for project is \$14,508,820, including \$475,507 for basic recreation facilities. For future non-Federal reimbursement, see Local cooperation paragraph. Federal cost for recreation facilities funded from Code 710 appropriations is \$1,000,162. A concessionaire at Black Butte Marina provided public use facilities in accordance with lease agreement with the Secretary of the Army at an estimated cost to date of \$87,000. (e) Authorization also provided for construction of Table Mountain (Iron Canyon) project, an earthfill dam on Sacramento River about 3 miles north of Red Bluff, CA. For details, see Annual Report for 1978.

**Local cooperation** (a) Sacramento River and major and minor tributaries: Sec. 3, Flood Control Act of June 22, 1936, applies. Fully complied with for all work completed or under contract, and local interests indicated they will be able to fulfill requirements for remaining work as scheduled. Levee

construction (107 miles) total requirement for the "active" project has been completed, transferred to, and accepted by the State. (b) Sacramento River, Chico Landing to Red Bluff: Sec. 3, Flood Control Act of June 22, 1936, applies; local interests must also assume responsibility for flood plain zoning. Fully complied with for portions completed in Tehama, Butte, and Glenn Counties; completed work, bank protection at 36 sites, was transferred to and accepted by the State. (c) Sacramento River Bank Protection Project: Sec. 3, Flood Control Act of June 22, 1936, applies. Local interests must also contribute an amount in cash that, when added to costs of lands, easements, rights-of-way and utility modifications, equals one-third of cost of each unit of remedial work; this contribution is estimated (March 2005) at \$36,340,000. Water Resources Development Act of 1986 applies. Local interests must also contribute an amount in cash that, when added to the cost of lands easement, rights-of-way and utility modifications, equal one-quarter of each unit of remedial work; this contribution is estimated (March 2005) at \$27,250,000. In addition, for reaches where local interests request bank stabilization in lieu of more feasible levee setbacks, local interests will contribute costs over and above costs of setbacks, and provide local contribution. Completed units transferred to and accepted by the State. (d) Black Butte Lake: None required for construction. Local interests must pay the portion of first cost and annual operation and maintenance costs allocated to the conservation functions of the project; these costs are estimated at 39.9 percent of first cost and 40.2 percent of annual costs. From March 2, 1960, to October 22, 1970, contract between the Bureau of Reclamation and the State of California provided for repayment of irrigation storage costs; Bureau administered contract in accordance with reclamation law. Local interests paid a total of \$77,205 for irrigation services during this period. Public Law 502, 91st Cong., 2d sess., October 23, 1970, provided that Black Butte project be financially integrated with the Central Valley project, coordinated operationally with other Central Valley project storage units by the Bureau under the Secretary of the Interior, and that dam and reservoir at Black Butte be physically operated and maintained by the Corps in a manner compatible with recreational use of the reservoir.

**Operations and results during fiscal year.** New work: (a) Sacramento River and major and minor tributaries None. (b) Sacramento River Bank Protection will complete construction of 40E River mile 149 in November 2002. Design and negotiations continue. Fiscal Year costs total \$3,596,270. (c) Sacramento River, Chico Landing to Red Bluff.

None. (d) Black Butte Lake, regular funds: None. Code 710 funds: None. Maintenance: Maintenance and operation activities continued. Structures were maintained in serviceable condition. Runoff above Black Butte Dam was above normal for the year. Maximum storage of 115,548 acre-feet occurred April 17, 2004. Maximum hourly inflow to Black Butte reservoir was 22,888 cubic feet per second on February 18, 2004, and maximum outflow of 14,963 cubic feet per second occurred on February 18, 2004. During the year, 396,348 acre-feet was released for flood control and 125,760 acre-feet was released for irrigation and other purposes. (e) Table Mountain (Iron Canyon) Lake: None.

**Historical summary** (a) Sacramento River and major and minor tributaries (active portions): Construction was initiated in May 1949 on Deer Creek and Butte Creek units; Cherokee Canal, Elder Creek, Chico and Mud Creeks, and Sandy Gulch units have been completed. Active portion of this improvement is about 99 percent complete. Work remaining is bypass levee revetment as required, which will accomplish under Sacramento River Bank Protection project. (b) Sacramento River Bank Protection Project: First phase (pre-Separable Element 38B and second phase (SE 38B-SE42) have 767,000 linear feet complete. SE 40,41,42 and 43 have 68,000 linear feet remaining. LCAs were executed for SE 41 in August 1988, for SE38B, 40 and 42 in December 1988 and for first phase mitigation in June 1990. Contract LAR 1A1, Site 3 was awarded in August 1996 and completed in December 1996. Contract LAR 1A2, Site 3 (River Park) was awarded in June 1997 and completed in February 1998. Steamboat Slough contract was awarded in September 1997 and completed in November 1997. Contract LAR 1A3, Site (River Park) was awarded in November 1997 and completed in May 1999. Contract for LAR1B, Sites 1, 2, and 4 was awarded July 1998 and completed in December 1999. Contract LAR 2, Site 5, Phase 1 was awarded in January 1999 and completed in March 1999. Contract LAR 2, Site 5, Phase 2 was awarded on August and completed in December 1999. Contract 41D, RD108 was awarded August 2000 and completed in December 2001. Contract 40E, River mile 149 was awarded September 2001 and will be completed November 2002. A total of 357,800 linear feet of erosion protection for Phase II has been installed. Overall project is about 94 percent complete. (c) Sacramento River, Chico Landing to Red Bluff: Active portion of project, bank protection in Tehama County, was initiated in June 1963 and completed in March 1964. Project was reopened in June 1968 to place additional necessary bank

protection. Work at 36 sites was completed in Tehama, Butte, and Glenn Counties as of September 1985 and transferred to State for maintenance. Bank protection on Sacramento River, Tehama County one site, mile 215, (Unit 5), was completed November 1982, two sites, mile 209.5 and mile 217.5, (Unit 6), were completed in November 1983, and four sites, 241.0, 237.9, 237.7, and 237.5 (Unit 7) were completed in February 1985. (d) Black Butte Lake: Construction began in March 1960 and project is complete. Final land acquisition was completed in December 1966. Construction of main dam was initiated in June 1960 and completed in December 1963. Dam has been operating since November 1962 to provide the flood protection for which it was designed. Final cost allocation approved May 3, 1977. Dam safety assurance studies were initiated in FY 1980 and completed in FY 1986. Piezometer installation and slope for protection at dam were completed in FY 1983. A cultural resources survey was completed in FY 1984. (e) Table Mountain (Iron Canyon) Lake: Project unit deauthorized as of August 5, 1977.

### 31. SAN LORENZO, CA

**Location** Project is located within the city limits of Santa Cruz, CA, in Santa Cruz County, about 70 miles south of city of San Francisco and includes the lower 2.5 miles of San Lorenzo River which terminates at the Pacific Ocean.

**Existing project** Flood control features of the authorized project consist of construction of 13,000 l.f. of levee embankment raise or floodwalls on top of various portions of the existing project levees on both sides of San Lorenzo River from the Southern Pacific Railroad bridge to Highway 1. Habitat restoration measures include re-vegetating the land-side slopes of the levees. The maximum flood of record occurred in 1955 which inundated 410 acres and caused damages of approximately \$7.6 million. Project was authorized by the Water Resources Development Act of 1996 for flood control and habitat restoration purposes. Streambank erosion control was added to the project under the Water Resources Development Act of 1999. Cost estimate (October 2004) is \$32,000,000 (includes an allowance for estimated inflation through the construction period), of which \$23,230,000 is Federal cost and \$8,770,000 is non-Federal cost.

**Local cooperation** Local interests are required to provide lands, easements, rights-of-way, and dredged material disposal areas; modify or relocate utilities,

roads, bridges (except railroad bridges), and other facilities where necessary in construction of project; pay 11 percent of cost allocated to flood control to bring the total non-Federal share of costs to 25 percent, as determined under Section 103(m) of the Water Resources Development Act of 1986 to reflect the non-Federal sponsor's ability to pay as reduced for credit allowed based on prior work (\$534,000 authorized under Section 215 of the Flood Control Act of 1968); pay 9 percent of the costs allocated to fish and wildlife habitat restoration to bring the total non-Federal share of habitat restoration costs to 25 percent, as determined under Section 103 (m) of the Water Resources Development Act of 1986 to reflect the non-Federal sponsor's ability to pay as reduced for credit allowed based on prior work (\$32,000 authorized under Section 215 of the Flood Control Act of 1968), and bear all costs of operations, maintenance, repair, rehabilitation, and replacement of fish and wildlife facilities. Pay 35 percent of the costs allocated to stream bank erosion control, and bear all costs of operation, maintenance, repair, rehabilitation and replacement of stream bank erosion control features of the project, and bear all costs of operation, maintenance, repair, rehabilitation, and replacement. Local sponsor, City of Santa Cruz, expressed their continued support for project by letter dated October 8, 1997. The Project Cooperation Agreement (PCA) for flood control was executed October 15, 1998. Streambank erosion control requires an amendment to the PCA. A limited Re-evaluation Report was completed October 2003. The amendment to the PCA was executed in March 2004.

**Operations and results during fiscal year.** Contract 3 for bank erosion control was completed. Continue P&S for dredging. Construction General funds were used for fiscal year costs of \$1,080,040 and sponsor funds of \$1,055,980.

**Historical summary** A flood control project, consisting of levee and channel improvements, was completed in 1959 by the Corps of Engineers. The project was to provide a standard project flood level of protection (about a 200-year event). Since that time, excessive sediment deposition in the streambed has reduced the flood carrying capacity of the existing project. Sediment accumulation and the resultant peak flows during a flood event in January 1982 caused the river to flow near design capacity, even though the storm had a recurrence level of only approximately 25-years. As a result of the flood threat, the City of Santa Cruz and the Corps of Engineers initiated a feasibility study of the San Lorenzo River with the signing of a final Feasibility Cost Sharing Agreement (FCSA) on August 18,

1989. Chief's Report was signed June 30, 1994. Preconstruction engineering and design phase was initiated in March 1994 and completed at a cost of \$934,000. Streambank erosion control required an amendment to the PCA. A Limited Re-evaluation Report was completed in FY 2003.

## 32. SOUTH SACRAMENTO COUNTY STREAMS

**Location** The project is located in the southeastern portion of Sacramento County, CA. The project consists of the Morrison Creek Stream Group Basin, approximately 180 square miles in size.

**Existing project** The flood control features of the project consist of raising and extending the ring levee around the Sacramento Regional Water Treatment Plant; raising the Beach Stone Lakes and Morrison Creek levees; installing floodwalls, using sheet pile, on Morrison, Elder, Florin and Unionhouse Creeks, and retrofitting bridges to lower the risk of failure due to flooding. Recreation features include a bicycle and pedestrian trail. Restoration of ecosystem at five sites would increase water quality to open water environments and enhance and expand wetlands, riparian vegetation, grasslands, and woodlands. Significant flooding occurred in 1952, 1955, 1962, 1963, 1967, 1969, 1973, 1982, 1995, and 1997. In January 1995, intense rainfall resulted in record flows on Morrison Creek near or exceeding the 1 in 100 annual event. Significant development has occurred in the upper basin, which is increasing the runoff and potential for flooding. The levees currently provide less than a 100-year level of protection. The selected plan would provide a high level of protection (1 in 500 annual event) to all areas of the basin. Cost estimate (October 2004) is \$91,900,000 (includes an allowance for estimated inflation through the construction period), of which \$59,700,000 is Federal cost and \$32,200,000 is non-Federal cost.

**Local cooperation** Local interests are required to provided lands, easements, rights-of-way, and borrow, excavated or dredged material disposal areas; modify or relocate utilities, roads, bridges (except railroad bridges), and other facilities where necessary for the construction of the project; pay 20 percent of the costs allocated to flood control and environmental restoration to bring the total non-Federal share to 35 percent for flood control and environmental restoration as reduced for credit allowed based on prior work (\$7.2m as authorized under Section 104 of WRDA 86), and bear all costs of operation, maintenance, repair, rehabilitation and replacement

of recreation facilities. Currently, the local sponsor has \$7,000,000 in funds reserved for the project.

**Operations and results during fiscal year.** A contract for construction of the ecosystem restoration portion of the project was awarded in December 03 and is currently ongoing. The Division Commander approved the completed Limited Reevaluation Report in February 05. The PCA was executed in May 05 and the initial construction contract for the project was awarded June 05. This contract will be completed by June 06 with the final cost being 10% below original government estimate for the work. The PCA for the construction was approved in February 05 and executed in April 05. The first phase of construction began in May 05.

**Historical summary** Construction General funds were appropriated in FY 2002 by Congressional action. PED agreement was executed May 1998. The Chief's Report was signed October 1998. Ecosystem restoration construction contract awarded Dec 2003.

### **33. STOCKTON, FARMINGTON RECHARGE, CA**

**Location** The project area includes Stockton metropolitan & surrounding rural areas.

**Existing project** Groundwater is San Joaquin County's primary water source. Levels have dropped as much as 100 ft. the past 40 years & saline intrusion from the San Joaquin/Sacramento Delta worsens. A significant threat to the San Joaquin County economy exists if saline intrusion continues. Problems involve groundwater overdraft & resulting saline intrusion in the San Joaquin County area. The Corps/SEWD technical investigation concluded the aquifer is overdrafted and that a saline front is moving toward the aquifer. Field flooding within the recharge corridor was found to be the most cost effective method to recharge and reverse saline intrusion.

**Local cooperation** Stockton East Water District (SEWD)

#### **Operations and Results During Fiscal Year.**

Construction General funds were added in FY 2003. Contracted with Engineering firm in June 2003 to develop site investigation manual. Developed and tested one recharge site in August 2003 monitoring is ongoing.

**Historical summary** Section 502 of the WRDA 1999 (amended Section 219 of WRDA 1992) authorized construction of a ground water recharge

and conjunctive use project WRDA 1999 Section 502, Environmental Infrastructure, authorized the Corps to provide technical, planning, design and construction assistance to SEWD associated with groundwater recharge and conjunctive use projects in the SEWD, CA. The conjunctive use study completed in Dec 97 concluded that modifications to Farmington Dam could not provide sufficient replacement water supplies to fully meet the groundwater overdraft problem. In addition, it did not appear to be in the Federal interest at the time, to transfer Farmington Dam to either SEWD or another local entity. With these findings, a feasibility study was initiated to investigate multi-purpose groundwater recharge and wetland habitat features and resources.

Construction funds were added in FY 02 to execute a PCA in February 2003, implement a groundwater recharge site selection process and initiate construction.

### **34. SUCCESS RIVER, DSAP CALIFORNIA**

**Location.** Success Dam and Reservoir are located on the Tule River within Tulare Lake Basin about 5 miles east and upstream of the town of Porterville, Tulare County, and about 60 miles north of Bakersfield, CA.

**Existing Project.** Tule River drains about 390 square miles into Success Lake, flowing from the lake through Porterville, and continuing 25 miles through agricultural areas. Construction of the dam was completed in May 1961. Recent studies concluded that a Maximum Credible Earthquake would cause extensive loss of strength, slope instability and deformation over a section of the embankment. Similar damage levels may also result from lesser earthquake events. A Dam Safety Assurance Program Evaluation Report recommends remediation to prevent a catastrophic failure of the dam resulting in loss of life and damages estimated at \$941M.

**Local Cooperation.** The Success Dam, Success Lake, Tule River, California Dam Safety Assurance Program (DSAP) Evaluation Report dated Apr 1998 was resubmitted for review and approval 1 Feb 99; approved 7 May 99.

**Historical Summary.** Engineering and Design was initiated in FY 99 with O&M funding. The Success Dam, Success Lake, Tule River, California Dam Safety Assurance Program (DSAP) Evaluation

Report dated Apr 1998 was approved 7 May 99. Funds were appropriated for a new construction start in FY 00. A new RCC dam has been selected as the recommended solution to the seismic problem at the dam. PED will be completed FY 07. In October 2004, a new Roller Compacted Concrete (RCC) dam was selected as the preferred alternative for remediation of the seismic problems at Success Dam. Ongoing foundation explorations will determine viability of this alternative. For safety reasons, the reservoir level will be lowered until the new dam is completed, resulting in negative impacts to the area.

### 35. TULE RIVER, CALIFORNIA

**Location.** The project area is located within the 12,500 square-mile Tulare Lake Basin located in the southeast portion of the San Joaquin Valley.

**Existing Project.** Tule River drains about 390 square miles into Success Lake and flows from the lake on to the valley through the city of Porterville, 5 miles downstream, and continues another 25 miles through agricultural areas, culminating in Tulare Lakebed. Serious flood problems occur in the Tule River Basin generally as a result of inadequate channel capacities.

Due to remediation work at Success Dam associated with seismic deficiencies, the Non-Federal Sponsors have requested that work on the project be postponed in FY05 and FY06.

**Local Cooperation.** The Project Cooperation Agreement (PCA) was executed April 2003. The first construction contract to extend the upper level boat ramp and parking area at the Tule Recreation Area was completed in January 2004.

**Historical Summary.** Flooding occurred in 1966 and 1983. 1983 flood damages downstream in the Tulare Lakebed were extremely severe and widespread; damages attributed to the Tule River were approx \$8 million @ 2000 price levels. The authorized project is to raise the gross pool elevation of Success Lake for flood control and irrigation water supply by raising the spillway 10 ft and widening the spillway from the existing 200 ft to 280.

### 36. UPPER JORDAN RIVER, UT

**Location** Project is located in Salt Lake County, Utah just south of Salt Lake City corporate limit.

**Existing project** The project includes construction of a flood control diversion and sediment control structure on Mill Creek, a 1.4 mile underground conduit from the diversion structure to a detention basin, and construction of a 100 acre foot Hillview Detention Basin. The project will divert flood flows from Mill Creek to the detention basin and ultimately into Big Cottonwood Creek. The project will provide 100 year flood protection on Mill Creek above State Street.

**Local cooperation** Local interests are required to provide lands, easements, rights of way, and borrow and excavated or dredged material disposal areas. Modify or relocate utilities, roads, bridges (except railroad bridges), and other facilities where necessary in the construction of the project. Pay 6 percent of the costs allocated to flood control and bear all costs of operation, maintenance, repair, rehabilitation and replacement of flood control facilities. The non-Federal sponsor has also agreed to make all required payments concurrently with project construction. Salt Lake County will act as the local sponsor for the project. A Project Cooperation Agreement is pending completion of a limited reevaluation report (LRR) and required funding.

**Operations and results during fiscal year.** At the request of Salt Lake County, the design is being reevaluated to address potential downsizing of the diversion structure and other project features. Results of the reevaluation will be presented in the LRR.

**Historical summary** A feasibility report was completed in 1987 and PED was completed in December 1994. Funds were added in FY 1997 to initiate construction. There has been a long history of flooding which is most commonly associated with snowmelt. The most recent flooding occurred in 1982, 1983, and 1984. A General Design Memorandum (GDM) was approved in December 1994. A project Authorization Change (PAC) report was submitted in January 1996 to obtain Congressional reauthorization on a Section 902 (WRDA 86) new cost limit. The project was reauthorized in WRDA 96.

### 37. WALNUT CREEK, CA

**Location** Project is on Walnut Creek and lower reaches of its principal tributaries, Pacheco, Grayson, San Ramon, Las Trampas, Galindo, and Pine Creeks in Contra Costa County, CA. Improvement will extend from Suisun Bay to head of project about 1 mile above southern limits of city of Walnut Creek. City of Walnut Creek is about 10 miles south of

Suisun Bay. (See Geological Survey quadrangles for area.)

**Existing project** Comprises extension of existing levees, construction of new levees and concrete channels, channel rectification and enlargement, and utilization of improvements constructed or planned by local interests. Improvements include about 18 miles of channel improvement, two reinforced-concrete drop structures, two stilling basins, and 10 miles of levees. Cost estimate (October 2003) is \$99,285,000 (includes an allowance for estimated inflation through the construction period), of which \$73,027,000 is Federal cost and \$26,285,000 is non-Federal cost (includes \$19,360,000 for lands and damages and relocations except railroad facilities, and \$5,840,000 required cash contribution for land enhancement benefits provided by the project). Local interests have expended about \$3 million for flood control in the project area during the period 1955-1965, including the concrete conduits constructed through the city of Walnut Creek at an estimated cost of \$1,000,000 considered a pre-project condition to be incorporated in the Corps project. In addition, local developers have made channel improvements for Upper Pine Creek valued at \$5,050,000. The cost thereof is not included in above costs of local cooperation. Improvement adopted by 1960 Flood Control Act (H. Doc. 76, 86th Cong., 1st sess., contains latest published map).

**Local cooperation** Section 3, Flood Control Act of June 22, 1936, applies, except that relocation of railroad facilities is a Federal responsibility. In addition, local interests must make a cash contribution to the United States, in amount of 7.4 percent of cost of construction for land enhancement benefits provided by project. Cash contribution is estimated (October 1992) at \$5,840,000. Local interests are represented by Contra Costa County Flood Control and Water Conservation District; formal assurances, including evidence of financial and legal ability to fulfill requirement for the cash contribution, were accepted by the Sacramento District Engineer on November 15, 1963. The Flood Control District furnished all rights-of-way required to date and indicated that it will furnish all requirements as needed for future construction. The Flood Control District arranged for highway bridge modifications and utility relocations before start of work by the Corps contractor. Payment of required contributed funds will be made in installments in amounts equal to 7.4 percent of the estimated construction expenditure for each fiscal year.

**Operations and results during fiscal year.** Construction associated with repair of the San Ramon Bypass Channel Cover was completed in November 2001 representing completion of scheduled construction. House Report 107-112 included request for a General Re-evaluation of the project to incorporate ecosystem restoration goals, with existing flood damage reduction objectives. A Feasibility Cost Sharing Agreement was executed in June 2003 to initiate the study. House report 107-112 also included funds to initiate a Reconnaissance Study on Grayson/Murderer's Creeks. The Reconnaissance Study was approved in November 2002 and recommended initiation of a Feasibility Study. A FCSA was executed with Contra Costa County Flood Control and Water Conservation District (CCCFCWCD) in June 2003. Both studies are continuing.

**Historical summary** Construction was initiated June 1964; project is about 98 percent complete. Total of 17.7 miles of channel improvement, 9.2 miles of levee construction, part of channel improvement landscaping, Drop Structures No. 1 and 2 and construction under San Ramon Bypass Contract No. 1, Contract No. 2 and Contract No. 3 and Upper Pine Creek Channel contract have been transferred to local interests for operation and maintenance. Due to difficulties with Contract No. 1 part of the contract work was completed under Contract No. IA with a different contractor. A contract for remedial work on San Ramon Bypass Contract No. 2 channel cover was completed in August 1993. The 9-acre mitigation contract was completed in June 1993. Work remaining consists of completion of erosion control mitigation (8-acre Construction responsibility was transferred from San Francisco District on April 1, 1982.

### 38. WEST SACRAMENTO, CA

**Location** Project is located in West Sacramento, Yolo County, in north-central California.

**Existing project** Project consists of raising 4.9 miles of levees up to 5.0 feet along the Sacramento and Yolo Bypasses; constructing 0.9 miles of slurry cut-off wall approximately 50 feet deep at the waterside toe along the east levee of the Yolo Bypass extending into the south levee of the Sacramento Bypass; constructing concrete wing walls with stop logs at the Union Pacific Railroad; constructing a concrete wing wall and flow cut-off wall on each side of Interstate 80; and developing approximately 40 acres of mitigation lands for riparian and upland habitat loss. Project was authorized by the Water

Resources Development Act (WRDA) of 1992. Project was reauthorized by the Energy and Water Development Appropriations Act, 1999 (P.L. 105-245) Estimated cost (October 2004) is \$33,000,000 with a Federal cost of \$24,800,000 and a non-Federal cost of \$8,200,000 which includes a cash contribution.

**Local cooperation** Local interests are required to provide lands, easements, rights-of-way, and dredged material disposal areas; modify or relocate utilities, roads, bridges (except railroad bridges), and other facilities where necessary in construction of project; pay 14 percent of cost allocated to flood control to bring the total non-Federal share of costs to 25 percent, and bear all costs of operation, maintenance, repair, rehabilitation, and replacement of flood control facilities. The non-Federal sponsor has also agreed to make all required payments concurrently with project construction. A Project Cooperation Agreement (PCA) with the local sponsor, the California State Reclamation Board, was executed in May 1996.

**Operations and results during fiscal year.** Fiscal year costs were \$1,813,985 (Federal) and \$638,790 (non-Federal contributed funds).

**Historical summary** Funds were appropriated in FY 1992 to initiate preconstruction engineering and design (PED) for the combined American River Watershed and Sacramento Metropolitan studies. The two projects were separated when WRDA 92 authorized the West Sacramento Project (Sacramento Metropolitan) independently of the American River Watershed Project. Funds to initiate construction for the West Sacramento Project were appropriated in FY 1995. Design Memorandum was approved in March 1996. PED was completed at a cost of \$1,847,000. First construction contract in the amount of \$5,217,225 was awarded June 19, 1998. Second construction contract was awarded September 30, 1999 and completed December 2001. First slump repair contract awarded September 2002 and completed November 2003. Second slump repair contract was completed November 2004.

### **39. WILDCAT AND SAN PABLO CREEKS, CA**

Reported on by the San Francisco District.

### **40. INSPECTION OF COMPLETED FLOOD CONTROL PROJECTS**

Approved regulations for operation and maintenance of flood control works, part 208, title 33, Code of Federal Regulations, provide for inspection of completed projects transferred to local interests for operation and maintenance to determine status of project and insure compliance with regulations. During fiscal year, inspections were made of: Completed units of Fairfield Vicinity Streams; completed units of Sacramento River and major and minor tributaries; completed units of Sacramento River, Chico Landing to Red Bluff; completed units of Sacramento River flood control project, Kings River Channel Improvement (Pine Flat Lake project), and Walnut Creek project; American River levees; Merced County Stream group; Middle Creek (Lake County); Chester, North Fork Feather River; levee and channel improvements on Chowchilla River (Buchanan project) and Fresno River (Hidden project); Duck Creek diversion, Green Valley Creek, Littlejohn Creek, Mormon Slough, Bear Creek, Kern River-California Aqueduct Interne, and North Fork, Pit River at Alturas, all in California; Truckee River, CA and NV; completed units of lower San Joaquin River and tributaries, CA; completed units of Red Bank and Fancher Creeks including Big Dry Creek Dam and diversion, and Fancher Dam and Redbank, Alluvial Drain and Pup Creek detention basins, CA; Reese River, Battle Mountain, NV; Sevier River, Redmond and vicinity, Jordan River, Big Wash near Milford, and Kays Creek, all in Utah; various emergency flood control works under authority of Sec. 208, Flood Control Act of June 30, 1948, and September 3, 1954; Public Law 99, June 28, 1955, and antecedent legislation; and Sec. 14 of Flood Control Act of July 24, 1946. Maintenance inspections conducted indicate that existing agreements and regulations are being complied with on completed flood control works. Continuing effort is required to improve maintenance practices and active steps are being taken by responsible State and local agencies to achieve desired results. Local agencies were advised, as necessary, of measures required to maintain these projects in accordance with standards prescribed by regulations. Total cost of inspections for fiscal year was \$358,968.

### **41. FLOOD CONTROL WORK UNDER SPECIAL AUTHORIZATION**

**Flood control activities pursuant to sec. 205, Public Law 858, 80th Congress, as amended (Preauthorization).**

Costs for preauthorization studies for fiscal year were \$1,362,795. See Table 35-P for list of studies.

**Emergency flood control activities-repair, flood fighting, and rescue work (Public Law 99, 84th Cong., and antecedent legislation).**

Federal cost for fiscal year was \$2,250,603. \$507,966 was for disaster preparedness, \$247,563 for emergency flood repairs, \$266,994 for Emergency Operations, \$204,327 for Rehabilitation and Inspection, \$23,752 for Advance Measures.

**Emergency bank protection (Sec. 14, 1946 Flood Control Act, Public Law 526, 79th Cong.).**

Federal cost for fiscal year was \$674,996. \$1,195 was for Coordination Account and \$673,801 for Sand Cove. None was spent for Emergency Operations. n.

**Snagging and clearing navigable streams and tributaries in interest of flood control (Sec. 208, 1954 Flood Control Act, Public Law 780, 83d Cong.).**

Federal cost for fiscal year was \$0.

**Flood insurance activities (Sec. 1301-1377, 1968 Housing and Urban Development Act, Public Law 90-448 as amended).**

In coordination with flood control activities, four flood insurance studies were continued. Inter-Agency Agreements EMW-96-1A-0294, EMW-96-1A-0195-FEMA, EMW-96-1A-0195, and EMW-97-1A-0140, at a fiscal year cost of \$126,300 under Federal Emergency Management Agency reimbursable order.

**42. SCHEDULING FLOOD CONTROL RESERVOIR OPERATIONS**

In accordance with sec. 7, Flood Control Act of 1944, summaries of monthly reservoir operations at Big Dry Creek, Boca, Comanche, Del Valle, Folsom, Friant (Millerton Lake), Indian Valley, Los Banos Detention, New Bullards Bar, New Don Pedro, New Exchequer (Lake McClure), New Melones, Oroville, Prosser, Shasta, and Stampede, CA; East Canyon, Echo, Jordanelle, Little Dell, Lost Creek, Pineview, Red Fleet, Starvation, and Wanship, UT; and Blue Mesa, Lemon, Paonia, Ridgway, and Vallecito, CO, were prepared. No water control manual revisions were completed due to environmental issues. Corps personnel provided advice Sec. 7 as requested during flood control operations at all c. 7 reservoirs. Fiscal year cost was \$1,847,587.

**Environmental Improvement**

**43. RAMS — RESTORATION OF ABANDONED MINES**

**Location** Presently, there are 94 funded sites and 88 potential sites located in eleven states in the Western Region. The states are Nevada, California, Colorado, Montana, New Mexico, Arizona, Minnesota, Alaska, Utah, Hawaii and Idaho.

**Existing project** RAMS was authorized in Sec. 560 of WRDA 1999 to provide assistance to non-Fed and nonprofit entities to develop, manage, and maintain a database of conventional and innovative, cost effective technologies for reclamation of abandoned & inactive non-coal mine sites. Consolidated Appropriations Act, 2001 (P.L. 106-554) provided \$5M of previously appropriated funds may be used for this activity. S.R. 108-105 increased authorized amount to \$7.5M. Restoration of Abandoned Mine Sites (RAMS) is a region of four Division's Program established by the Corps in 1999. The participating Divisions are Southwest, South Pacific, Pacific Ocean and Northwest. Technical, planning and design assistance have been scoped within available funds. Funds are also being used to continue program management and support the technology database.

**Local cooperation** Authorized in Section 560 of WRDA 99 for technical, planning and design assistance; authorized \$7.5m to be appropriated for this purpose; S.R. 108-105 increased amount to \$7.5M.

**Historical summary** In Dec 98 a MOU was signed w/NWD, POD, SPD. PMP signed Aug 01 w/SPD & NWD. To date, \$5,754,000 has been allocated to RAMS Program of which \$5,214,000 has allocated to the Sacramento District.

**44. RURAL NEVADA, SECTION 595, NV**

**Location.** Rural Nevada (the counties of Lincoln, White Pine, Nye, Eureka, Elko, Humboldt, Pershing, Churchill, Storey, Lyon, Carson, Douglas, Mineral, Esmeralda, and Lander, Nevada; the position of Clarke County, Nevada, that are located outside the cities of Las Vegas, North Las Vegas, and Henderson and the unincorporated portion of the county in Las Vegas Valley.

**Existing project.** WRDA 1999, SEC. 595 authority provides for design and construction assistance for water-related environmental infrastructure and resource protection and development projects in Rural Nevada for water supply and related facilities; wastewater treatment and related facilities; environmental restoration; and surface water resource protection and development. Projects are to be cost shared 75% Federal and 25% non-Federal; the total program is limited to \$100 million. The Federal share may be in the form of grants or reimbursements of projects costs; the Corps currently manages the program funds using reimbursements. Including FY 2005, \$51 million has been received in appropriations. At the close of FY 2005, 15 Project Cooperation Agreements (PCAs) have been signed for a total federal cost of \$64.2 million. The projects are: Boulder City, Goldfield, Mesquite, Moapa, Tonopah, Virgin Valley, Carlin, Churchill, Douglas County, Incline Valley, Lawton-Verdi, McGill-Ruth, Round Hill, Silver Springs, and Spanish Springs. Total federal expenditures are \$21.4 million.

#### **45. RURAL UTAH, SECTION 595, UT**

**Location.** Rural Utah (All counties and cities with the exception of Salt Lake, Davis, Utah, and Weber Counties and St George City in Washington County).

**Existing project** WRDA 1999, Section 595 as amended provides funding assistance for the design and construction of water supply, wastewater treatment, environmental restoration, and surface water protection projects. Projects are to be cost shared 75% Federal and 25% Non-Federal with the total program limit set at \$25 million. The Federal share may be in the form of grants or reimbursements; the Corps currently manages the program funds using reimbursements. In FY05, after working closely with the existing state and Federal water funding agencies and the Utah Congressional delegation, SPK signed the first four project PCAs for Kane, Moroni, Richmond, and Uintah (based on the then new model agreements). Kane and Uintah are water supply storage projects and Moroni and Richmond are wastewater treatment plant improvement projects. The FY05 Congressional appropriation was \$1.0 million.

#### **46. STOCKTON METROPOLITAN AREA REIMBURSEMENT, CA**

**Location** The primary project area is in the city of Stockton, California, approximately 40 miles south of Sacramento and 85 miles east of San Francisco. The

approximately 200 square mile area extends from Bear Creek on the north, Mormon Slough on the south, the confluence with the Sacramento/San Joaquin Delta on the west and Jack Tone Road on the east.

**Existing project** Project will reimburse the sponsor for locally constructed improvements made to the existing levee system along the Bear Creek System and the Calaveras River System. After flooding in northern CA in 1986, FEMA initiated a flood zone restudy of the Stockton area. Draft Flood Insurance Rate Maps were released delineating a larger 100-year flood plain than previously recorded, affecting approximately 251,000 residents. Section 211 crediting report concluded that the San Joaquin Area Flood Control Agency's improvements to the Lower Mosher Slough area, with a non-Federal cost of \$4.3 million, are not eligible for reimbursement. In addition, improvements to approximately 12,000 feet of the Upper Calaveras River Levee System with a non-Federal cost of \$3.28 million, 3,300 feet of Upper Mosher Creek with a non-Federal cost of \$812,000 and permitting costs of \$773,000 were determined to be ineligible for reimbursement. These areas did not meet the Corps of Engineers minimum flow criteria for participation in urban flood control projects.

**Local cooperation** San Joaquin Area Flood Control Agency (SJAFCA)

**Operations and Results During Fiscal Year.** FY 2003 reimbursement \$3M for a total of \$13M.

**Historical summary** SJAFCA, the local sponsor, completed the construction of a flood control project in March 1999 at 100% local cost. SJAFCA, under authority of WRDA of 1996, Sec 211 (i), entered into a FCSA w/Corps to study the credit/reimbursement of local project costs. Draft 211 report completed Nov 99; HQ reviewed and sent to ASA (CW) Sep 00; ASA sent to OMB Jan 01; OMB sent to ASA Feb 01. ASA approved the report Jul 01. MOA was signed 2 Mar 02. The first reimbursement of \$7M was made 21 Mar 02 and a second of \$3M was made 23 Sep 02 for a total of \$10M.

#### **47. TRIBAL PARTNERSHIP, CALIFORNIA AND NEVADA**

**Location.** The 500 square mile study area is the Lake Tahoe Basin watershed in the Sierra Nevada Mountains straddling the border of California and Nevada. The basin is approximately 100 miles northeast of Sacramento, California and 50 miles

southwest of Reno, Nevada.

**Existing Project.** The Lake Tahoe Basin is land traditionally occupied by the Washoe Tribe. Habitats and pre-Columbian conditions have been substantially altered through construction and development activities. While an extensive physical watershed restoration effort funded by private local, state and Federal entities is currently underway, little attention has been paid to cultural watershed restoration outside of individual project mitigation. The principal purpose of this study is to initiate a watershed style report detailing specific prioritized activities that contribute to cultural restoration.

**Local Cooperation.** Local interests, Washoe Tribe of California and Nevada, who lobbied for this appropriation strongly desire a Tahoe Basin cultural resource restoration effort.

**Historical Summary.** Reconnaissance failed to identify viable project

#### **48. OTHER WORK UNDER SPECIAL AUTHORITY**

**Aquatic Ecosystem Restoration activities pursuant to sec 206, Public Law 303,104<sup>th</sup> Congress.**

Cost for studies for fiscal year were \$123,759. See Table Q for list of studies.

**Project Modification to Improve Projects Section 1135, Water Resource Development Act of 1986, Public Law 99-662)**

Cost for project for fiscal year were \$195,493. See Table R for list of projects.

#### **Multiple-Purpose Projects including Power**

#### **49. NEW MELONES LAKE, CA**

**Location** On Stanislaus River about three-quarters mile downstream from existing Melones Dam and about 35 miles northeast of city of Modesto. (See Geological Survey quadrangles of the area.).

**Existing project** Provides for construction of (a) an earth and rockfill dam about 625 feet high to create a reservoir with gross storage capacity of about 2,400,000 acre-feet for flood control, irrigation, power,

general recreation, fish and wildlife, and other purposes, and (b) a power plant below the dam with an installed capacity of 300,000 kilowatts. Upon completion of construction of dam and power plant by the Corps, the project became an integral part of Central Valley project and is being operated and maintained by the Secretary of the Interior pursuant to Federal reclamation laws, except that the flood control operation of the project shall be in accordance with rules and regulations prescribed by the Secretary of the Army. Maintenance of Stanislaus River channel from Goodwin Dam to San Joaquin River to a capacity of at least 8,000 cubic feet per second will also be Corps responsibility. Estimated (October 1996 price level) Federal cost is \$402,000,000. For future non-Federal reimbursement, see Local cooperation paragraph. In addition, local interests expended \$300,000 for levees along lower reaches of Stanislaus River. Existing project was adopted by 1962 Flood Control Act (H. Doc. 453, 87th Cong., 2d sess., contains latest published map). This act modified original authorization adopted by 1944 Flood Control Act. (H. Flood Control Committee Doc. 2, 78th Cong., 2d sess., contains latest published map.) The 1944 Flood Control act established \$8 million monetary limitation for partial accomplishment of project. Further monetary authorizations of \$2.5 million, \$5 million, \$13 million, \$2 million, \$17 million, \$18 million, \$44 million, \$83 million, \$46 million, \$6 million, and \$61 million were provided for this project by Public Laws 235 and 780, 83d Cong., and 85-500, 90-17, 90-483, 91-282, 92-222, 93-251, 94-397, 95-104, and 95-189, making a total monetary authorization of \$305,500,000 available for the basin plan comprising Lower San Joaquin River and tributaries, including Tuolumne and Stanislaus Rivers, CA. Since FY 1979, appropriations have not been subject to the river basin monetary limitation.

**Local cooperation** Based on approved preliminary cost allocation studies (July 1965) local interests will be required to pay 35.2 percent of first cost and 12.7 percent of annual operation and maintenance costs allocated to irrigation. In addition, 31.1 percent of first cost and 62.5 percent of annual cost would be allocated to power. Local interests must also maintain existing private levees along Stanislaus River from Goodwin Dam to San Joaquin River and prevent encroachment on channel and floodway between levees to preserve safe carrying capacity throughout the reach of at least 8,000 cubic feet per second. Recovery of costs allocated to irrigation and power will be the responsibility of the Bureau of Reclamation. Reimbursement of costs will be in accordance with Bureau policies and procedures for the Central Valley project. State of California officially

adopted project by chapter 918 of statutes of 1963, and by chapter 1438 of those statutes authorized State Reclamation Board to furnish required assurances. The Board, by letter dated December 13, 1963, stated it would furnish required assurances when formally requested to do so. Assurances were requested by letter of December 30, 1977. On October 2, 1979, the Board reaffirmed its intent to furnish the required assurances. On January 6, 1983, the Board provided formal assurances of local cooperation.

**Operations and results during fiscal year.** New work: Project close-out and flowage easement acquisition along the Lower Stanislaus River were continued. Maintenance: Maintenance and operation activities continued on Lower Stanislaus River.

**Historical summary** Construction was initiated in August 1966. Main dam contract which was awarded in March 1974 has been completed; dam dedication ceremonies were held July 14, 1979. Cultural resources preservation, water intake facilities, flood control and irrigation tailrace modification, reservoir area clearing, Tuttle town Phase I recreation area, Oakdale recreation, Glory Hole Phase I and Phase II recreation area, and operations access road contracts have all been completed. Glory Hole minimal recreation facilities contract has been completed. Boundary fencing, Lower Stanislaus Phase I and Phase II minimal recreation facilities, Lower Stanislaus Corporation Yard, and Lower Stanislaus Administration Building contracts have been completed. Tuttle town minimal recreation facilities, McHenry recreation area, Tuttle town wastewater treatment, Knights Ferry recreation area, Knights Ferry Covered Bridge, Glory Hole recreation area sanitary system, Two-Mile Bar recreation, administration building, and Glory Hole recreation area force main contracts have been completed. Parrotts Ferry Bridge modification, (Nov, 93), Widening Highway 49 Intersection, (Aug, 94); Tuttle town Recreation Campgrounds, and Tuttle town and Glory Hole Improvement (Jan 94) have been completed. Remaining recreation facilities were unscheduled pending development of cost sharing agreements and/or specific Congressional appropriation of funds. A Memorandum of Understanding between the Department of the Interior and the Department of the Army transferring the New Melones dam and reservoir from the Corps of Engineers to the Bureau of Reclamation was executed on November 20, 1979. Agreement provides that the Corps complete land acquisition actions and retain budgeting, design, and construction responsibility for reservoir clearing and recreation development; completion of cultural resources

mitigation in project area was vested in the Department of the Interior. The California State Water Resources Control Board's Decision 1422 of April 1973 established conditions which impacted on the planned filling and operation of the project by the Department of the Interior. As a result, the Department of Interior brought suit against the State of California claiming State limitations on project operation were contrary to Congressional intent and authority. The case was heard before the U.S. District Court in Fresno, CA, and in early March 1981, a Federal judge ruled that the Federal Government could fill the New Melones reservoir for purpose of generating electrical power, but not for agricultural or other purposes. Both the Government and the California State Resources Control Board appealed this decision to the 9th Circuit Court of Appeals in San Francisco, CA.

On December 20, 1982, the Court upheld all 25 requirements placed on the Federal Government by the State Water Resources Control Board. The decision reversed the lower court's decision to permit filling of the reservoir for generating electrical power. The Bureau of Reclamation subsequently filed for a permit from the State Water Resources Control Board to fill the reservoir. Permit was approved. The Bureau had originally started generating power on a limited basis on July 1, 1979; however, after the filling of the reservoir in spring of 1983, full power generating benefits have been attained.

## **General Investigations**

### **50. SURVEYS**

See Table 35-S.

### **51. COLLECTION AND STUDY OF BASIC DATA**

Technical assistance was performed for other Federal agencies as well as non-Federal agencies in connection with Flood Plain Management Services Program at fiscal year costs of \$101,656 federal funds and \$0 contributed funds. No Flood Plain Information Studies were prepared after FY 1980.

Fiscal year costs for hydrologic studies were \$234.

### **52. RESEARCH AND DEVELOPMENT**

The Hydrologic Engineering Center was

designated as a separate Field Operating Agency as of January 1, 1979, in accordance with OCE permanent orders 1-1, January 10, 1979. In the reorganization of CEIWR, beginning in FY 2001 appropriations and costs will be reported in CEIWR's database not Sacramento District. Sacramento District will continue to provide advisory and administrative support services to HEC as specified in local support agreement DACW05-79-A-0038 of March 1979.

### **53. PRECONSTRUCTION ENGINEERING AND DESIGN**

#### **AMERICAN RIVER WATERSHED, CA (COMPREHENSIVE PLAN)**

The projects are located in Placer, El Dorado, and Sacramento Counties on the North, Middle and South Forks of the American River and along the lower American River and Sacramento Rivers.

Recent evaluations indicate that the level of flood protection along much of the American River and in the Natomas area is less than the 100-year level. The Supplemental Information Report (SIR) was completed in March 1996 as directed by the Defense Appropriations act for FY 1993. The Chief of Engineer's Report recommended implementation of elements common to the final candidate plans presented in the SIR. These "common elements", were authorized for construction in the Water Resources Development Act (WRDA) of 1996. Other alternatives addressed in the SIR include: Folsom outlet modifications, Folsom Dam raising, downstream levee raising along the American and Sacramento Rivers, and upstream storage. Efforts are being continued to define plans for alternatives leading to higher levels of flood protection for the Sacramento area and vicinity.

The Feasibility Report for the American River Watershed Investigation was completed in December 1991 and the Division Engineer's Report was issued in February 1992. Funds were appropriated in FY 1992 to initiate preconstruction engineering and design (PED) for the combined American River Watershed and Sacramento Metropolitan studies. The two projects were separated when WRDA 92 authorized the American River Watershed Project independently of the West Sacramento Project (Sacramento Metropolitan).

Sec. 566 of WRDA 99 directed additional flood control studies for: (a) increasing surcharge flood control storage at Folsom Dam and Reservoir, and (b)

increased flood protection through levee modifications on the American and Sacramento Rivers, and directed the Corps to submit a report to Congress by March 2000 documenting results of the studies. The interim report, completed in January 2000, provides additional information on two flood damage reduction plans: The Folsom Enlargement Plan and the Modified Stepped Release Plan. Both of these plans, in addition to the already authorized plans, will further reduce the flood risk to Sacramento. A result of the public scoping process is the addition of the Folsom Dam advance releases in anticipation of high flood flows as a flood control alternative, and the inclusion of ecosystem restoration as a project purpose. A draft supplemental report describing the alternative plans was completed in September 2001. The non-Federal sponsors have selected the Federally supportable 7-foot Folsom Dam raise and ecosystem restoration plan as their preferred plan.

Sec. 101 of WRDA 99 authorized the Folsom Dam Modifications project as described in the Supplemental Information Report dated March 1996, as modified by the report entitled "Folsom Dam Modification Report, New Outlets Plan," dated March 1998, prepared by the Sacramento Area Flood Control Agency, at an estimated cost of \$150,000,000, with an estimated Federal cost of \$97,500,000 and an estimated non-Federal cost of \$52,500,000.

Estimated preconstruction planning cost is \$24,500,000.

#### **HAMILTON CITY, CA**

The project area is in Glenn County along the west bank of the Sacramento River about 10 miles west of Chico and 85 miles north of Sacramento. The project area includes Hamilton City and the surrounding rural area. The boundaries are the Sacramento River to the east, the Glenn Colusa Canal to the west and extends about two miles north and six miles south of Hamilton City. The project area lies just north of the existing Sacramento River Flood Control Project levees and within the area of extent of the Chico Landing to Red Bluff bank protection project. The feasibility study was accomplished as part of the Sacramento and San Joaquin River Basins Comprehensive Study with the non-Federal sponsor as the Reclamation Board of California. The project includes construction of 6.8 miles of setback levee to provide a more reliable form of flood protection to the community and surrounding area, (2) degradation of the existing "J" levee to allow for reconnection of

the river to the floodplain, and (3) restoration of about 1,500 acres of native habitat between the new setback levee and the Sacramento River. The levee would perform at 3 distinct levels of protection that are associated with three different average levee heights: from north to south, four and two-fifths mile of levee averaging 7.5 feet would provide a 90 percent confidence of passing a 75-year event; 1,000 feet of levee averaging 6 feet in height would provide a 90 percent confidence of passing a 35-year event; and 1.6 miles of levee averaging 3 feet in height would provide a 90 percent confidence of passing an 11-year event.

Current Preconstruction Engineering and Design phase cost is \$3,123,000.

### **MIDDLE CREEK, CA**

Middle Creek is located in Lake County, approximately 80 miles north of San Francisco. It is the main tributary that flows into Clear Lake, the largest natural lake entirely within the borders of California. Prior to channelization of Middle Creek by the Corps in 1958 and by others, flows spread out over a wide floodplain upstream of Clear Lake. This area was a significant wetland that provided natural biologic values including waterfowl habitat, water quality through filtering and trapping of sediments, and natural flood attenuation. The Middle Creek Ecosystem Restoration Study will develop a plan to restore the natural functions of the Middle Creek/Clear Lake ecosystem.

Current Preconstruction Engineering and Design phase cost is \$2,720,000.

### **SOUTH SACRAMENTO, CA**

South Sacramento County Streams drainage basin is located in the southeastern portion of Sacramento County, California. The study consists of the Morrison Creek Stream Group Basin, approximately 180 square miles in size. The basin includes Morrison, Elder, Florin, Unionhouse and Laguna Creeks. Significant flooding occurred in 1952, 1955, 1962, 1963, 1967, 1969, 1973, 1982, 1986, 1995, and 1997.

Approximately 41,000 structures are within the 500-yr floodplain with an estimated value of \$5.9 billion. Levees along Morrison Creek and tributaries provide less than a 100-yr level of flood protection. Results of the feasibility study, completed in March

98, indicate the project would include channel and levee improvements and detention facilities.

PED agreement executed May 1998. Chiefs Report was signed October 1998. PED phase was completed in May 01; however, during a final design review, the hydraulic design team discovered a flaw in the initial hydrology basis for the design triggering the formulation of a limited reevaluation report (LRR) to assess the impact of this discovery. The team reached a solution, documented in the LRR, which was approved by the Division Commander in Feb 05. The PCA was executed in May 05 and the initial construction contract was awarded in June 05. This contract reach is scheduled to complete June 06.

### **TAHOE BASIN, CA & NV**

Study area is in the Lake Tahoe Basin watershed in the Sierra Nevada Mountains, in both California and Nevada, approximately 100 miles northeast of Sacramento, CA and 50 miles southwest of Reno, NV, and covers an area of over 500 square miles. Lake Tahoe is a valuable environmental resource which provides the foundation for nearly all of the economic development in the Tahoe Basin. Habitats have been substantially altered through construction activities resulting in significant losses in water quality and ecosystem diversity. The principal purposes of this study are to examine implementing activities to improve environmental quality at Lake Tahoe, especially water quality, wetlands habitat and other environmental restoration opportunities.

Completion of the Tahoe Framework Study, initiated in FY02, was scheduled for completion in 2004, but is delayed pending final HQ approval. PED initiated in FY04 (Congressional Add) and is scheduled for completion in FY08. PED is very active with significant local participation, with initial products complete and next products in progress.

Current Preconstruction Engineering and Design phase cost is \$4,667,000.

### **TRUCKEE MEADOWS, NV**

The project is located along the Truckee River from the Nevada - California Stateline through the metropolitan areas of Reno and Sparks in Washoe County, downstream to Pyramid Lake, NV. The project will provide flood protection from the Truckee River to the cities of Reno, Sparks, the Truckee Meadows, Rainbow Bend, Painted Rock and Wadsworth while re-connecting the floodplain, removing exotic species and restoring the riparian

forest along the Truckee River.

The Truckee Meadows project was authorized for construction in the Water Resources Development Act (WRDA) of 1988 based on a 1985 Feasibility Report. During pre-construction, engineering and design (PED), a re-evaluation of project benefits and costs determined that the project, as then formulated, was no longer feasible due primarily to significant increases in land costs. In 1991 the project was deferred. In 1996, Congress appropriated funding for the Corps to prepare a General Reevaluation Report and evaluate the potential of ecosystem restoration. A re-analysis was completed in a reconnaissance study completed in August 1997. The Corps reactivated the PED phase of the project in March 1998 with the first step to conduct a General Reevaluation Report and Environmental Impact Statement (GRR/EIS). At the request of the local sponsors, a Community Coalition process was initiated in April 2000 to assist in the formulation and selection of project alternatives.

Numerous studies have been completed that relate to environmental restoration, water use, hydrology, hydraulics, flooding, and urban development within the Truckee Meadows area and the Truckee River watershed. Downtown Reno is hydraulically separate from the rest of the downstream project. Six alternatives were proposed for this area, that included variations on bridges and floodwall placement and had estimated costs between \$30 and \$50M. The economic analysis on damages associated with the 100-yr floodplain indicate there are not enough damages to warrant a federal project in this reach therefore, the Corps is proposing only non-structural remedies like enhancing the Reno Flood Warning System as part of the combined NED/NER plan. The City of Reno has made great progress to reduce flood impacts since the 1997 flood by removing structures out of the 100-yr floodplain, floodproofing new buildings along the river, placing a white water course near Arlington which lowered surface water levels and utilizing a Reno Flood Warning System.

The current preliminary alternatives for flood damage reduction and ecosystem restoration in the Truckee Meadows Reach include two bridge and one roadway modifications, channel modification (i.e. channel benching, re-alignment of the North Truckee Drain, extension of the Airport Culvert on Boynton Slough), containment features ranging from 12.5 miles to 21 miles of floodwalls, levees and seepage remediation, floodplain management by floodproofing single family residences near Boynton Slough and detention basins at the University of Nevada, Reno Farms, and Huffaker Hills.

These preliminary plans also include recreation facilities with bicycle and pedestrian paths, river overlooks, and picnic sites through Reno and Sparks and are not proposed past Vista. Low, medium, high and maximum restoration plans are being evaluated for the Truckee Meadows and Downstream Reaches towards Wadsworth. These measures include removing rip rap, restoring riparian forest, removing exotic species and providing geomorphic restoration. A draft GRR/EIS is scheduled for public review in the fall of 2005, and it is planned that a Chiefs Report will be submitted by June 2006.

Estimated preconstruction planning cost is 23,440,000.

### **TULE RIVER, CA**

The project area is located within the 12,500 square-mi Tulare Lake Basin located in the southeast portion of the San Joaquin Valley. Tule River drains about 390 square mi into Success Lake and flows from the lake on to the valley through the city of Porterville, 5 miles downstream, and continues another 25 miles through agricultural areas, culminating in Tulare Lakebed. Serious flood problems occur in the Tule River Basin generally as a result of inadequate channel capacities. Flooding occurred in 1966 and 1983. 1983 Flood damages downstream in the Tulare Lakebed were extremely severe and widespread; damages attributed to the Tulle River were approximately \$8 million.

The authorized project is to raise the gross pool elevation of Success Lake for flood control and irrigation water supply by raising the spillway 10 feet and widening the spillway from the existing 200 feet to 365 feet.

The feasibility report was completed. and Division Engineer's notice was issued in September 1999. The project was authorized for construction in WRDA 1999. Funds to initiate pre-construction engineering and design (PED) were appropriated in FY 1999 and funds to initiate construction were appropriated in FY 2002. The Project Cooperation Agreement was approved by the Assistant Secretary of the Army (ASA(CW)) in April 2003. The first construction contract consisting of recreation modifications for the raised pool condition was awarded in late 2003.

No additional work is scheduled pending resolution of seismic problems at the dam.

Total estimated project cost is \$26,600,000.

**REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2005**

**YUBA RIVER, CA**

The Yuba River lies between the Feather and American Rivers in northern California. The study is located in Sutter and Yuba Counties approximately 50 miles north of Sacramento. The principal urban centers within the study area include Marysville, Yuba City, Linda and Olivehurst.

1998; Chief's Report - Nov 1998; PED Agreement — June 2000. Project authorized for construction WRDA 1999. GRR being prepared to modify project features due to underseepage issues. Completion scheduled for June 2006.

Recommended project, which lies downstream of Daguerre Point and goldfields, would include levee improvements including installation of slurry walls, constructing landside berms, toe drains, and levee raising along the Yuba and Feather Rivers. Area has experienced 7 major floods. Despite modifications for flood protection over past years, the area is still vulnerable to catastrophic flooding as demonstrated by floods of February 1986 and January 1997. Damages were estimated at \$95 million and \$82.4 million, respectively.

Section 104 - Sponsor has been approved to proceed with advance work in conjunction with the Marysville Yuba City project to assure at least a 200-year level of flood protection is obtained. In October 1996, ASA(CW) approved the advance work for possible Section 104 credit/reimbursement. Current milestones for the project include: DE Notice - April

1. Includes the following amounts for new work: Regular Funds: Previous project, \$185,198; existing project, \$585,436 for shallow-draft and \$39,650,558 for deep-draft.

2. Includes the following funds for maintenance: Regular Funds: Previous project, \$553,720; existing project, \$17,224,432 for shallow-draft and \$41,383,526 for deep-draft; and deferred maintenance funds, \$70,000 for shallow-draft.

3. Includes the following costs for maintenance: Regular Funds: Previous project, \$553,720; existing

project, \$17,224,432 for shallow-draft and \$41,194,611 for deep-draft; and deferred maintenance funds, \$70,000 for shallow draft.

4. Includes \$85,000 contributed funds, other, from Sacramento-Yolo Port District for clearing and grubbing on dredged material deposit areas to be used on ship channel maintenance dredging work.

5. Includes unobligated carryover for continuation of planning and engineering (CP&E) funds as of September 30, 1985 (\$33,474) for Sacramento River Deep Water Ship Channel to be

**TABLE 35-A (Cont'd) COST AND FINANCIAL STATEMENT**

---

6. included in project cost (for cost sharing) per TWX of September 9, 1985.

7. Includes \$28,326,800 funds for Sacramento District.

8. Includes \$28,298,863 costs for Sacramento District.

9. Includes \$1,158,348 public work funds, of which \$207,198 was for work done along 30-foot channel in Suisun Bay Channel; excludes \$19,000 expended for engineering for inactive portion of 1950 modification. In addition, \$1,342,500 was expended from required contributed funds

10. In addition, \$1,250 was expended from required contributed funds for maintenance.

11. Contributed funds, other, from State of California for design and construction of downstream channel improvements on Ash and Berenda Sloughs below Buchanan Dam.

12. Includes \$724,000 contributed funds, other, from State of California for relocation activities including demolition or salvage of various pipes and facilities, constriction of ramps, turnouts, pipe gates and bank protection at Cache Creek Settling Basin.

13. Includes \$676,755 contributed funds, other, costs for relocation activities for State of California.

14. Includes code 710 funds and costs for recreation facilities at New Hogan lake: total to date \$897,742.

15. Includes \$99,000 special recreation use fees and costs at New Hogan Lake, and \$826,600 maintenance and operation of dam funds and costs (96X5125) at New Hogan Lake beginning in FY 1988.

16. For miscellaneous construction under local cooperation requirements, primarily for Bear Creek, San Joaquin County; includes \$108,056 as related to Duck and Littlejohn Creeks channel improvements as part of Farmington Dam project unit.

17. Includes \$393,195 contributed funds, other from California Department of Boating and Waterways for design and construction of boat launching and related facilities, and \$30,000 for design and construction of a boarding float at North Shore recreation area at New Hogan Lake.

18. Includes \$104,000 contributed funds, other, and costs from Calaveras County Water District for

New Hogan hydropower studies.

19. Includes \$6,999,725 San Francisco District construction funds and costs for Corte Madera Creek.

20. \$8,695 contributed funds transferred to Sacramento District in FY 1983. Includes \$97,400 San Francisco District required contributed funds and costs.

21. Contributed funds, other, and costs, from Mahn County including \$536,921 for miscellaneous bridge and road relocations and \$267,840 for additional expenses for disposal sites at Corte Madera Creek.

22. Includes \$3,643,000 contributed funds, other, from the State of California for relocation (automotive type bridge) at Laurel Creek Diversion near Fairfield, \$113,000 from City of Fairfield for Phase III contract for channel development on Laurel Creek, and \$23,000 from City of Suisun for Phase IIA contract for widening of Railroad Avenue

23. Includes \$3,638,022 contributed funds, other costs for relocations at Laurel Creek Diversion, \$19,537 contributed funds, other costs for Phase III contract, and \$112,939 for Phase IIA contract.

24. Includes contributed funds, other: \$2,905,630 for recreation betterment, \$2,195,591 for NED relocation and \$70,000 for incremental relocations at Guadalupe River.

25. Includes contributed funds, other costs: \$2,624,578 for recreation betterment, \$1,496,809 for NED relocations and \$0 for incremental relocations at Guadalupe River, and \$1,175,848 for flood control betterments.

25. Contributed funds, other from the State of California for miscellaneous design and construction at Hidden Dam.

26. Includes \$2,199,085 code 710 funds and costs for recreation facilities at Isabella lake and \$224,000 Code 713 funds and costs for improvement at Tillie Creek and Live Oak campgrounds.

27. Includes \$407,640 special recreation use fees and costs at Isabella Lake.

28. Includes \$131,900 maintenance and operation of dam funds and costs (96X5125) at Isabella Lake beginning in FY 1985.

29. Includes \$438,000 contributed funds, other, from California Department of Boating and Waterways for design and construction of boat

**TABLE 35-A (Cont'd) COST AND FINANCIAL STATEMENT**

---

30. launching and related facilities at Old Isabella Road and Isabella Peninsula and \$337,500 for Isabella Dam hydropower studies.

31. Includes \$438,000 contributed funds, other, costs for boat launching and related facilities at Old Isabella Road and Isabella Peninsula, and \$309,808 costs for Isabella Dam hydropower studies.

32. Includes code 710 funds and costs for recreation facilities: Success Lake: Total to date \$747,048. Terminus Dam: Total to date: \$704,000.

33. Includes \$165,000 special recreation use fees and costs at Success Lake.

34. Includes contributed funds, other, from State of California Department of Boating and Waterways and costs for acquisition of a boarding float at Success Lake, \$30,000 and at Terminus Dam, \$12,420.

35. Includes contributed funds, other, from Kaweah River Power Authority, Visalia, California for Terminus Dam hydropower studies, \$423,000; and from DITT, Inc., Paris, France, for Success Lake hydropower studies, \$168,000.

36. Includes contributed funds, other, costs for Terminus Dam hydropower studies, \$422,697, and for Success Lake hydropower studies, \$167,579.

37. Includes \$4,300,147 contributed funds, other from the Metropolitan Water District of Salt Lake City for relocation of State Highway 65 at Little Dell Lake.

38. Includes \$4,300,147 contributed funds, other, costs for relocation of State Highway 65 at Little Dell Lake.

39. Includes \$1,200 initiation of plans for specifications for Code 710 recreation facilities, for FY 1978. Construction of recreation facilities at Martis Creek Lake under Code 720 was determined to be infeasible.

40. Includes contributed funds, other \$4,572,938, for lands, easements and rights-of-way for Castle Dam from State of California and contributed funds, other costs for lands, easements and rights-of-way for Castle Dam.

41. Includes \$274,000 contributed funds, other, relocation and \$227,968 costs.

42. In addition, \$66,532 expended for new work from contributed funds, other, miscellaneous construction under local cooperation requirements as related to acquisition of right-of-way and utility alterations for Merced County Stream Group.

43. Includes \$1,949,968 San Francisco construction funds and costs and \$260,000 Sacramento general investigation funds and costs for Pajaro River.

44. Includes \$37,250 contributed funds, other,

from Santa Clara Valley Water District for bridge relocation at Pajaro River.

45. Includes \$37,250 contributed funds, other, costs for bridge relocation at Pajaro River.

46. Includes code 710 funds and costs for recreation facilities at Pine Flat Lake: Total to date: \$1,595,100. Includes Public Work Acceleration, Executive (PL 87-68) (Transfer to Corps of Engineers, Civil) 1963 funds and costs (\$239,235) for recreation facilities and \$19,600 Code 713 funds and costs for Pine Flat fish barrier.

47. Includes \$158,300 special recreation fees and costs at Pine Flat Lake and \$799,785 maintenance and operation of dam funds and costs at Pine Flat Dam.

48. Miscellaneous construction and engineering and design services (non-project) accomplished at expense of State of California under local cooperation requirements in connection with acquisition of rights-of-way and utility alterations at Pine Flat Lake.

49. Includes unobligated carryover for continuation of planning and engineering (CP&E) funds as of September 30, 1985 (\$29,065) and FY 1986 allocation for Redbank and Fancher Creeks to be included in project cost (for cost sharing) per TWX of September 9, 1985.

50. Includes contributed funds, \$759,580 other, from Fresno Metropolitan Flood Control District for road relocation and betterments (Nees Avenue) at Fancher Dam and includes \$701,546 contributed funds, other costs for road relocation (Nees Avenue) and betterments at Fancher Dam.

50. Excludes \$5,598,000 contributed funds: \$400,000 for recreation facilities at completed projects funded under Public Works Acceleration Program; and \$1,628,411 for recreation facilities at completed projects funded under Code 711 at Coyote Valley Dam, Lake Mendocino.

51. Includes \$94,459 special recreation use fees and costs (FY 1982-1983), but excludes prior special recreation fees and cost for Coyote Valley Dam, Lake Mendocino.

52. Includes \$1,625,280 maintenance and operation of dam funds and costs at Coyote Valley Dam, Lake Mendocino for FY 1985 through FY 1996.

53. Includes \$251,911 contributed funds, other from City of Ukiah for Coyote Valley Dam, Lake Mendocino, hydropower studies; and \$338,000 from California department of Boating and Waterways for launching facility at Lake Mendocino.

54. Includes \$250,117 contributed funds, other, costs for Coyote Valley Dam, Lake

**TABLE 35-A (Cont'd) COST AND FINANCIAL STATEMENT**

---

55. Mendocino, hydropower studies; and \$331,657 for California Department of Boating and Waterways for launching facility at Lake Mendocino.

56. Includes \$253,421,793 San Francisco construction funds and costs through August 1983 for Dry Creek, Warm Springs Dam.

57. Includes \$964,114 San Francisco maintenance funds and costs through April 1982 for Dry Creek, Warm Springs Dam.

58. Includes \$75,400 maintenance and operations of darn funds and costs at Dry Creek, Warm Springs Dam.

59. Includes \$208,074 contributed funds, other, from Sonoma county for Dry Creek, Warm Springs, hydropower studies; and \$22,500 from City of Ukiah for hatchery pump design at Lake Mendocino.

60. Includes \$208,074 contributed funds, other, costs for Dry Creek, Warm Springs hydropower studies; and \$20,658 costs for hatchery pump design.

61. Excludes \$614,608 for Table Mountain (Iron Canyon) project, deauthorized August 5, 1977, and \$531,000 for Sacramento River and Major and Minor Tributaries portions which are considered inactive and deferred.

62. Includes Code 710 funds and cost for recreation facilities at Black Butte lake: Total to date \$1,000,162.

63. Includes \$104,100 special recreation use fees and costs at Black Butte Lake.

64. Miscellaneous construction and engineering and design services (non-project) accomplished at expense of State of California under local cooperation requirements in connection with acquisition of rights-of-way and utility alterations (primarily for Sacramento River and Major and Minor Tributaries project). Includes State Highway Commission payment, \$789,008, for use of excess excavation from Chico and Mud Creeks and Sandy Gulch (Sacramento River and Major and Minor Tributaries) for freeway embankment through the city of Chico.

65. Includes \$41,984 contributed funds, other, from State of California for required modification of existing private facilities and salmon

rearing habitat, Sacramento River, Chico Landing to Red Bluff; \$15,977 contributed funds, other, from State of California Department of Boating and Waterways for replacing a boarding float at Orland Buttes boat launching ramp at Black Butte Lake; \$392,000 contributed funds, other, from the City of Santa Clara for hydropower studies at Black Butte Lake; and \$59,334 contributed funds, other from State of California for relocation.

66. Includes \$389,335 contributed funds, other, costs for Black Butte hydropower studies; and \$59,334 costs for relocations.

67. Includes \$8,849,825 San Francisco construction funds for Walnut Creek.

68. Includes \$9,049,609 San Francisco construction costs for Walnut Creek.

69. Includes \$450,268 San Francisco required funds for Walnut Creek.

70. Includes \$525,846 San Francisco required costs for Walnut Creek.

71. Includes \$400,348 San Francisco contributed funds, other, and contributed funds costs for Walnut Creek.

72. Includes \$1,937,000 contributed funds, other, from Contra Costa Flood Control and Water Conservation District for replacement of sewer line in Richmond for Wildcat and San Pablo Creeks project.

73. Includes \$1,906,943 contributed funds, other, costs for replacement of sewer line in Richmond for Wildcat and San Pablo Creeks project.

74. Excludes funds applicable to other units of this basin authorization (Lower San Joaquin River and Tributaries, and Tuolumne River Basin, California). (See Table 35-E). Includes \$110,000 utilized for preparation of 1957 Economic Feasibility Report and of Revised Feasibility Report (FY 1960, 1961, and 1962) applicable to 1962 reauthorization of prefect.

75. Includes \$110,000 utilized for preparation of 1957 Economic Feasibility Report and of Revised Feasibility Report (FY 1960, 1961, and 1962) applicable to 1962 reauthorization of project.

76. Includes \$80,000 contributed funds, other, and costs, from the Bureau of Reclamation for visitors center at Mark Twain area, New Melones Lake.

**AUTHORIZING LEGISLATION**

See Section In Text	Date Authorizing Act	Project and Work Authorized	Documents
	Dec 22, 1944	Modify Sacramento River Flood Control Project to provide for extensions in levees and other structures along Sacramento River and major and minor tributaries; construct Black Butte Dam and Reservoir; construct low-level Table Mountain Dam and Reservoir with power facilities; and provision of monetary authorization of \$15 million for initiation of modification.	H. Doc. 649, 78 <sup>th</sup> Cong., 2d sess. <sup>2</sup>
	May 17, 1950	Improvements for protection of Upper Butte Basin (included full monetary authorization).	H. Doc. 3667, 81st cong., 1st sess. <sup>2</sup>
	Jul 3, 1958	Extend existing Sacramento River Flood Control Project to Keswick Dam for purposes of zoning area below dam and modification of project by construction of bank protection and incidental channel improvements between Chico Landing and Red Bluff (included full monetary authorization).	H. Doc. 272, 84th Cong., 2d sess. <sup>2</sup>
	Jul 3, 1958	Additional authorization of \$17 million for comprehensive plan approved in act of December 22, 1944.	
	Jul 14, 1960	Further modification of Sacramento River Flood Control Project by construction of initial 10- year phase of bank erosion control works and setback levees on Sacramento River and authorization of \$14,240,000 for prosecution of modification.	S. Doc. 103, 80th Cong.,
	May 12, 1967	Additional authorization of \$7 million for bank approved in act of July 14, 1960.	PL 90-17
	Mar 7, 1974	Initiation of construction of second phase of bank control works and setback levees on Sacramento River as approved in act of July 14, 1960, and additional authorization of \$16 million for such purpose. <sup>3</sup>	PL 93-251
	Jun 19, 1975	Deauthorization of Table Mountain Dam and Reservoir. <sup>4</sup>	H. Doc. 94-192, 94th Cong., 1st sess

**TABLE 35-C OTHER AUTHORIZED NAVIGATION PROJECTS**

Project	Status	For Last	Construction	Cost to Sep. 30, 2005
		Full Report See Annual Report For		Operation and Maintenance
Feather River, CA	Completed	1951	\$ 8,354 <sub>3</sub>	\$ 5,752 <sup>1 2</sup>
Middle River and Connecting Channels, CA		1974	8,500	93,494
Mokelumne River, CA	Completed	1974	2,132 <sub>5 6</sub>	189,152
Navajo Reservoir, NM	Completed	-	23,185 <sub>7</sub>	-
Old River, CA	Completed	1970	-	-
Stockton and Mormon Channels, CA	Completed	1970	253,151 <sub>8</sub>	9,631,128
Suisun Bay Channel, CA	Completed	1974	200,928 <sub>9 10 11</sub>	218,854

Suisun Point Channel, CA	Completed	1965	191,728 <sub>5 15</sub>	733,489

1. Maintenance project, channels adequate for commerce.
2. Includes \$10 for maintenance for previous project. Excludes \$6,160 for previous project and \$3,840 for existing project for maintenance expended from contributed funds.
3. Includes \$1,600 for previous project.
4. Includes \$790 for previous project.
5. Authorized by Chief of Engineers under authority of sec. 107, Public Law 86-64.5, as amended.
6. All costs transferred from Los Angeles District in FY 1968.
7. Estimated cost to local interests was \$3,6000 for lands, damages and public landings. Remaining portion of project, consisting of side channel at Orwood and completion of project channels from mouth of Old River to Lammers Ferry road and from Crocker Cut to Holly Sugar Factory was deauthorized November 17, 1986, by WRDA of 1986.
8. Upon completion of Mormon Slough, Calaveras River, CA in February 1970, local interests accepted

- maintenance responsibility for Mormon Slough as well as for Stockton and Mormon Channels CA, and Federal maintenance was discontinued. No Federal maintenance costs have been incurred since FY 1969.
9. Includes \$58, 901 for previous project.
10. Excludes \$59,551 expended from required contributed funds for previous project.
11. Excludes work accomplished under existing project at a cost of \$207,198 from Public Works Administration funds allotted to San Joaquin River, CA.
12. Includes \$59,817 for previous projects. Excludes \$5,449 expended from required contributed funds for previous project.
13. Maintenance responsibility transferred to San Francisco District, January 1, 1974.
14. Includes reconnaissance and condition surveys of \$5,496 and \$483 for fiscal year 1963 and 1964, respectively.
15. Estimated cost (July 1964) to local interests was \$12,000 for lands, damages, and spoil retention dikes.

**TABLE 35-E (Cont'd) OTHER AUTHORIZED FLOOD CONTROL PROJECTS**

1. Project responsibility transferred from San Francisco District to Sacramento District April 1, 1982.
2. Scheduling of reservoir operations costs.
3. Excludes \$54,919 other contributed funds for miscellaneous construction for local interests pursuant to requirements of local cooperation were \$951,000 (1959) for lands and relocations.
4. Excludes \$44,008 other contributed funds for construction in connection with bridge construction pursuant to requirements of local cooperation. Total cost to local interests for all requirements of local cooperation was \$370,000 (9159) for lands and relocations.
5. Authorized by Chief of Engineers under authority of sec. 205, Public Law 80-858, as amended.
6. Excludes \$22,000 for preauthorization studies.
7. Project not economically feasible; preconstruction planning was terminated in FY 1993.
8. Excludes \$69,262 other contributed funds from State of California for two low water crossings and appurtenances at Chester. A fish ladder modification project was continued under sec. 1135 in FY 2001 at fiscal year cost of \$38,765.
9. Excludes \$50,000 for preauthorization studies. Estimated costs to local interests were \$665,000 for lands and damages including relocations.
10. Includes \$174,938 Public Works Acceleration Program Funds.
11. Transferred to Bureau of Reclamation in May 1956 for operation and maintenance by that agency in conjunction with other units of Central Valley project.
12. Excludes \$20,000 for preauthorization studies.
13. Includes \$30,000 for preauthorization studies. Estimated costs (FY 1973) to local interest for all requirements of local cooperation were \$150,117 for lands and damages including relocation.
14. Includes \$73,000 for preauthorization studies. Non-Federal (Kern County Water Agency) cost for road relocation was \$18,260 (required contributed funds).
15. Constructed by East Bay Municipal Utility District. Final Federal contribution of \$51,202 made July 18, 1978 (total \$10,111,684). Non-Federal costs \$34,988,53616.
16. Constructed by State of California. Final Federal contribution of \$64,186 was made on February 9, 1981 (total \$69,994,105) for flood control reservation.
17. Cherry Valley and New don Pedro Reservoirs constructed by local interests. Federal contribution of \$9,000,000 and \$5,464,000, respectively, for flood control reservation. Final
18. Federal contribution of \$308,898 was made on January 18, 1972, for New don Pedro. Excludes \$3,004,946, contributed funds, other, for miscellaneous engineering and construction (non-project) at local interest expense under local
19. cooperation requirements for acquisition of rights-of-way for levee and channel improvement on Lower San Joaquin River and Tributaries. Unconstructed portion of snagging and clearing project modification of Lower San Joaquin River and Tributaries) was classified as "deferred" on April 9, 1993. For full report see Annual Report for FY 1993.
20. Planning and any future development is uncertain awaiting State of California's position on support of Marysville project.
21. Constructed by Merced Irrigation District, Final Federal contribution of \$839 was made December 2, 1975 (total \$10,818,638) for flood control reservation.
22. Estimated costs (FY 1967) to local interests for all requirements of local cooperation were \$1,340,000 for lands and damages including relocation.
23. Non-Federal cost \$2,965,402 (FY1976) for lands and relocations. Federal contribution of \$599,336 made to State Reclamation Board.
24. This project was reclassified as "active" on August 3, 1987.
25. Constructed by Yuba County Water Agency. Final Federal contribution of \$33,470 was made in FY 1972 (total \$12,759,127) for flood control reservation.
26. Includes \$41,800 for preauthorization studies.
27. Excludes \$146,000 other contributed funds for miscellaneous construction and engineering and design services under local cooperation requirements in connection with acquisition of rights-of-way, relocation and utility alterations.
28. Includes \$107,000 costs for remedial work to drainage system completed in FY 1977.
29. Includes \$52,549 contributed funds.
29. Cost includes engineering and design prior to June 30, 1952 and costs of \$4,288 (FY 1962-1963) to determine if project classification to an active category was justified.
30. Estimated cost to local interest for all requirements of local cooperation were \$463,000 (July 1962) for lands and damages including relocations. Project prevented \$4,544,000 in damages from the April-May 1994 snowmelt runoff.
31. Excludes \$285,329 contributed funds.
32. Excludes \$200,000 estimated value of work performed in lieu of cash contribution.
33. Excludes \$421,182 contributed funds.
34. Excludes \$48,000 required contributed funds toward first cost. Costs to local interests for all requirements of local cooperation, including required contributions, were \$118,000 (1951). Project prevented \$9,000 in damages from the April-May 1994 snowmelt runoff.
35. Place inactive 1974.

# SACRAMENTO, CA DISTRICT

## PROJECTS SPECIFICALLY AUTHORIZED UNDER THE FORMER CALIFORNIA DEBRIS COMMISSION

The California Debris Commission, consisting of three Corps officers appointed by the President with the consent of the Senate, created by act of March 1, 1893 (27 Stat. L., p. 507), was organized in San Francisco, CA, on June 8, 1893, and has jurisdiction and duties extending over drainage area of Sacramento and San Joaquin Rivers, comprising great central valley of California and extending from crest of the Sierra Nevada on the east to that of the Coast Range on the west, and from Mount Shasta and Pit River Basin on the north to Tehachapi Mountains on the south. These rivers empty into head of Suisun Bay ultimately discharging into the Pacific Ocean through connecting bays and straits and the Golden Gate. Duties of the Commission comprise regulation of

hydraulic mining in drainage area of Sacramento and San Joaquin Rivers, CA, so that debris will not be carried into navigable waters or otherwise cause damage; jurisdiction over construction and control of water storage facilities for domestic, irrigation, and power development purposes; and direction of improvements for control of floods on Sacramento River. On November 19, 1986, the Commission was abolished by the Water Resources Development Act of 1986 (PL 99-662) and all authorities, powers, functions, and duties were transferred to the Secretary of the Army. All acquired lands and other interests presently under jurisdiction of the Commission were authorized to be retained and administered under direction of the Secretary.

#### Navigation

### 1. REGULATION OF HYDRAULIC MINING AND PREPARATION OF PLANS

**Location.** Operations largely limited to territory between Mount Lassen on the north and Yosemite Valley on the south, on western watershed of Sierra Nevada. (See Geological Survey sheets for the area, 2:5 in number.)

**Existing project.** Provided for regulating hydraulic mining operations, planning improvement of conditions upon Sacramento and San Joaquin Rivers and their tributaries affected by such operations, and preparation of plans to enable

hydraulic mining to be resumed in their drainage areas. In addition, the Secretary of the Army is authorized to enter into contracts to supply storage for water and use of outlet facilities from debris-storage reservoirs for domestic and irrigation purposes and power development upon such conditions of delivery, use, and payment as he may approve. Applications of prospective miners were fully investigated by the former California Debris Commission and permits to operate were issued to those who provide satisfactory debris-restraining basins by construction of suitable dams where necessary or agree to make payment for storage in Government-constructed debris-restraining reservoirs constructed under act of June 19, 1934, as set forth below. For location and description of Government-constructed, debris-restraining reservoirs for general hydraulic mining, see

Improvement 2.

**Local cooperation.** Mine owners bore all expenses incurred in complying with orders of the former Commission for regulation of mining and restraint of debris.

**Operations and results during fiscal year.** Minor administrative duties were accomplished. Administrative work overlaps that of improvements 2, 3, and 4, hereunder, and that of Sacramento District.

**Historical summary.** The former Commission received 1,292 applications for hydraulic mining licenses; 1 mine is licensed, but does not use storage behind Government debris dams. Work remaining is, in general, continuation of above or similar operations.

## 2. SACRAMENTO RIVER AND TRIBUTARIES, CA (DEBRIS CONTROL)

**Location.** Project reservoirs are to be constructed in watersheds of Yuba, Bear, and American Rivers, CA (See Geological Survey sheets for basin areas, seven in number.)

**Existing project.** For description of completed North Fork and Harry L. Englebright projects and authorizing act, see Annual Report for 1975. Initial recreation facilities were provided in FY 1959. Recreation areas at Harry L. Englebright Dam are maintained by the Corps. Recreation areas at North Fork Dam are no longer maintained and operated by Auburn Recreation Park and Parkway District, but have been turned over to the Bureau of Reclamation (known as the Water and Power Resources Service between November 6, 1979, and May 18, 1981) on a permit basis. Total Federal cost of new work for construction of these reservoirs was \$4,646,872, including \$40,000 and \$25,000, respectively, for basic recreation facilities at Englebright Dam and North Fork Dam. Reservoir project sites on Middle Fork of American River and on Bear River have been deauthorized and excluded from foregoing cost. The 90-day Congressional project review period, required by Sec. 12, Public Law 93-251, as amended, ended August 5, 1977, and resulted in deauthorization of that portion of the project. Estimated cost of that portion is \$1,820,000 (1935).

**Local cooperation.** Fully complied with. Improvements made to facilities at North Fork Dam by

Auburn Recreation Park and Parkway District under a lease agreement with the Secretary of the Army and Auburn Boat Clubs (concessionaire) at an estimated cost of \$46,000 since September 1953. On March 1, 1979, lands and waters at North Fork Dam were turned over to the Bureau of Reclamation on a 5-year renewable basis. Permit No. DACW05-4-79-527 was renewed for 5 years on March 1, 1984, March 1, 1989, and on March 1, 1994. Bureau will operate and maintain such use until Auburn project is completed, then a fee transfer will be made. Actual operation and maintenance of the recreation resource is being done by State of California by contract with the Bureau.

**Licenses.** Under provisions of Contract No. W-1105-eng-2998 with Pacific Gas and Electric Co., (PG&E) (a 1941 contract which expired July 31, 1991) payment was made to Federal Government of \$18,000 per year for first 30 years and \$48,000 per year for the next 20 years in return for use of head at Englebright Dam and generation of hydroelectric power. Total payment through September 30, 1999, amounts to \$1,767,109; these funds are now paid to the Secretary of the Army and deposited for return to the Treasury. PG&E has obtained a new license, Federal Energy Regulatory Commission License No. 1403-004, issued February 11, 1993, for continued operation of Narrows No. 1 Hydroelectric Project and has entered into a new storage agreement and an operation agreement with the Federal Government (Corps). Total payment of \$66,070 was received in FY 1994, but only \$48,000 was reallocated to the District. In FY 1995, \$18,070 was reallocated to the District. Payments under new agreement are effective as of Fiscal Year 1993 and will be 8.2 percent of previous fiscal year's total costs for operation and maintenance. License No. 2246, effective April 9, 1970 (date New Narrows power plant was put in operation) was issued by Federal Power Commission (known as the Federal Energy Regulatory Commission since January 9, 1978) to Yuba County Water Agency for hydroelectric power development of Yuba River by the company upstream from Englebright Dam. Under provisions of Contract No. DA-04-167-CIV-ENG-66-95 with Yuba County Water Agency, payment is to be made to the Federal Government of \$100,000 per year for no more than 50 years. First payment (partial) of \$73,151 was made April 1, 1971; total payment through September 30, 1997, amounts to \$2,509,066. These funds were paid to Sacramento District and deposited for return to the Treasury.

**Operations and results during fiscal year.**  
New work: Maintenance: Maintenance and operation

activities continued at Harry L. Englebright Dam at a cost of \$1,271,000, including recreation facilities. Dam safety assurance studies at Englebright Dam have been completed.

**Historical summary.** Construction of dams was initiated in 1937; North Fork project was completed and in use at end of FY 1939, and Harry L. Englebright project was completed in January 1941. The two debris-control structures are in good condition. Public use of these reservoir recreation areas greatly overtaxes present capacities. Dam safety assurance studies were initiated at Englebright Dam in FY 1981 and were completed in FY 1987.

### 3. TREATMENT OF YUBA RIVER DEBRIS SITUATION-RESTRAINING BARRIERS, CA

**Location.** Works are on Yuba River between Marysville and where the river emerges from the foothills, near Hammonton, some 10 miles easterly from Marysville, or about 9 miles below the Narrows. (See Geological Survey Topographic map of Sacramento Valley, CA.)

**Existing project.** For description of completed project and authorizing act, see Annual Report for 1975. Total cost of new work was \$723,259, of which \$361,482 was U.S. funds and \$361,777 required contributed funds by State of California. (For details of project in its original form, see Annual Report, 1917, p. 1810.) In February 1963, center section of dam failed and major rehabilitation of structure was completed in December 1964. Total cost for required rehabilitation was \$1,660,000, of which \$830,000 was Federal cost and \$830,000 required contribution by State of California toward rehabilitation cost. During the December 24, 1964, floodflows on the Yuba River, the rehabilitated Daguerre Point Dam sustained considerable damage. (See 1965 Annual Report, p. 1647 "Operations and results during fiscal year.") The reconstructed portion of the dam completed earlier in

December 1964 was undamaged by the flood. Permanent repair of Daguerre Point Dam abutment and fish facilities was completed in October 1965 at a cost of \$447,808 with Federal and required State contributed funds on a matching basis.

**Local cooperation.** Fully complied with for new work and major rehabilitation work. Total first cost to local interests for new work was \$361,777 (required

contribution by State of California). In addition, training walls were built on each bank below Daguerre Point for 11,250 feet and just above Daguerre Point, on the south bank, for 11,000 linear feet by two gold-dredging companies in connection with their dredging operations. To build these training walls would have cost the United States \$450,000 (1902 estimate). Flood channels were also built by gold-dredging companies within confines of project works. Cost to the United States of equally effective works to restrain debris movement would have been more than \$776,000 (1926 estimate). Total costs to local interests for initial and permanent major rehabilitation works were \$830,000 and \$223,904, respectively, (required contribution by State of California). State of California must contribute annually an amount equal to the Federal allotment for maintenance.

**Operations and results during fiscal year.** Maintenance: Operations consisted of condition and operation studies by hired labor on Yuba River.

**Historical summary.** Construction of project works was initiated in November 1902. Construction of Daguerre Point Dam was completed in May 1906; diversion of river over dam was completed in 1910; training walls and dikes were completed in 1935. About 149 million cubic yards of debris are held in lower 7 miles of Yuba River between Marysville and downstream end of training walls. About 20 million cubic feet, are confined in river channel by Daguerre Point Dam. Additional millions of yards of loose material are in mine tailing fields adjacent to project training walls in upper 7-mile reach of project. Initial rehabilitation of Daguerre Point Dam begun in Jul) 1963 was completed in December 1964. Contract for permanent rehabilitation of structure was initiated in July and completed in October 1965.

#### Flood Control

### 4. SACRAMENTO RIVER, CA

**Location.** Works covered by this improvement are on Sacramento River and tributaries in north-central California from River Mile (RM) 0.0 to at Collinsville to RM 194.0 above Red Bluff.

**Previous project.** For details see page 1815 of Annual Report for 1917, page 1995 of Annual Report for 1938, and page 2262 of Annual Report for 1907.

**Existing project.** Sacramento River flood

control project is a comprehensive plan of flood control for Sacramento River and lower reaches of its principal tributaries. The long range program provides bank protection to the water-side levees, tributaries and by-passes within the system. The project solves and prevents levee erosion problems while providing fish and wildlife mitigation features. As a part of this project, some recreational facilities have been provided along the river. The existing Sacramento River levees are seriously threatened by erosion and unless continued corrective measures are taken, levee failures may occur with resultant catastrophic damage and possible loss of many lives. Areas protected by the levees are comprised of over 1 million acres, 50 communities, \$38 billion worth of improvements and approximately 2.3 million people.

Estimated (October 1987) cost for original project (exclusive of supplemental levee improvements), including new work and maintenance, is \$163,925,000 of which \$68,925,000 is Federal cost and \$95 million non-Federal (\$90,050,562 for lands and damages and relocations and \$4,949,438 required contributed funds for levee construction, bank protection works, and levee setbacks). Of this amount, \$4,939,752 was for new work and \$9,686 for maintenance. Estimated October 2004 total project cost is \$266,600,000, of which \$193,200,000 is Federal and \$73,300,000 is non-Federal. Total estimate includes remedial levee work for Yolo Bypass and Cache Slough (Unit 109) and land acquisition for Little Holland Tract as hydraulic and environmental mitigation in potential projects impacting stages of the Sacramento River, but excludes Sacramento Urban Area; Marysville/Yuba City Area; Mid-Valley Area; Lower Sacramento Area; and Upper Sacramento Area Levee Reconstruction Projects. Colusa Basin Drain and Knights Landing (West Levee) are not incrementally economically feasible, but these sites have been transferred to Upper Sacramento Area. Knights Landing (East Levee) has been included with Mid-Valley Area. In addition to project requirements, local interests constructed several pumping plants for drainage of agricultural and urban land protected by project levees. Some channel clearing work was accomplished by State of California and other local interests to supplement project levee construction. Dredging below Cache Slough and reconstruction of Cache Creek settling basin weir are considered deferred and excluded from foregoing cost estimate. Operation and maintenance of completed project will be responsibility of local interests; as units of project are completed, they are transferred to agencies of

State of California for operation and maintenance. Existing project was adopted by 1917 Flood Control Act (H. Doc 81, 62d Cong., 1st sess., as modified by Rivers and Harbors Committee Doc. 5, 63d Cong., 1st sess.), 1928 Flood Control Act (S. Doc. 23, 69th Cong., 1st sess.), River and Harbor Act of 1937 (S. Committee print 75th Cong., 1st sess.), and 1941 Flood Control Act (H. Doc. 205, 77th Cong., 1st sess.).

Phase I - Sacramento River Flood Control System Evaluation recommended reconstruction of 32 miles of Sacramento area levees. Report was approved and in March 1989, Sacramento Urban Area Levee Reconstruction project was established under authority of Sacramento River Flood Control Project. New project is located within boundaries of Sacramento River Flood Control System in highly urbanized area around city of Sacramento, near confluence of Sacramento and American Rivers. It includes reconstructing the Left Bank levees of the Sacramento River from the Natomas Cross Canal to the Freeport Bridge by installing 17.1 miles of slurry wall, 5.7 miles of stability berm and drainage blanket, and reconstructing 2.0 miles of flood walls. It also includes reconstructing the Right Bank levees of the Sacramento River from the Barge Canal to Riverview b) constructing 2.7 miles of stability berm and drain blanket, restoring levee cross-section for 1.0 mile, and developing about 123 acres of fish and wildlife mitigation. Estimated (October 2004) cost for Sacramento Urban project is \$43,810,000 of which \$28,024,000 is Federal and \$15,786,000 is non-Federal (including a cash contribution of \$2,135,000).

Sacramento River Flood Control Project (Glenn-Colusa Irrigation District) (G.C.I.D.) is part of the fishery/irrigation enhancement project being developed by G.C.I.D. The project is located between RM 202 and 206 on the Sacramento River near the Glenn-Tehama county line. The need for additional work near River Mile 208 was also reviewed. Since 1970, flood flows in the Sacramento River have altered the river channel and lowered the water surface at the Glenn-Colusa Irrigation Hamilton City pumping plant. Changing conditions cause significant adverse impacts to river stability, water supply and anadromous fishery resources in the area. The gradient facility (GF) includes use of multiple sheet piles coupled with stone to replicate a natural riffle in the river to restore river hydraulic gradient to approximate pre-1970 conditions. Concurrently,

## SACRAMENTO, CA DISTRICT

---

GCID, the Bureau of Reclamation and the State of California built new screens at the pumping plant. Estimated (October 2004) project cost is \$31,130,000, of which \$23,330,000 is Federal and \$7,800,000 is non-Federal. Project was established under authority of the 1917 Sacramento River Flood Control Project (see Energy and Water Development Appropriations Act of 1990 and Water Resources Development Act of 1996 and 1999).

Phase II - Marysville/Yuba City Area Levee Reconstruction. Project is located within boundaries of the Sacramento River Flood Control System in Butte, Sutter and Yuba counties in north-central California. Area includes Feather and Yuba Rivers and their tributaries, Sutter Bypass, cities of Marysville and Yuba City and communities of Linda and Olivehurst. An evaluation of about 134 miles of Sacramento River Flood Control Project levees in Marysville/Yuba City area identified about 30 miles of levees as being structurally unstable. Project consists of reconstructing those levees by installing a combination of slurry cut-off wall, toe drain, stability berm, seepage blanket, relief wells, levee freeboard restoration, irrigation ditch relocation, relocation of drainage pump station, and fish and wildlife mitigation. Estimated (October 2005) project cost is \$50,900,000, of which \$38,150,000 is Federal and \$12,400,000 is non-Federal (including a cash contribution of \$4,717,500). Project was established under authority of Sacramento River Flood Control Project.

Phase III - Mid-Valley Area Levee Reconstruction. Project is located within the boundaries of the Sacramento River Flood Control System in Placer, Solano, Sutter, Yolo and Yuba Counties in north-central California. Area includes the Sacramento and Feather Rivers, Knights Landing Ridge Cut, Sutter and Yolo Bypasses and portions of the Bear River including Yankee Slough, Dry, Cache, Putah Creeks and the Natomas Cross Canal. Communities in the area include Knights Landing, Robbins, Davis and Woodland. An evaluation of about 240 miles of the Sacramento River Flood Control Project levees in the Mid-Valley area identified about 18 miles of levees that are structurally deficient. Project consists of reconstructing about 18 miles of levees by installing about 15.1 miles of slurry walls, replacement of 1.2 miles of unsuitable levee embankment on landside, relocation of drainage ditches, restoration of levee height, and developing about 17 acres of fish and wildlife mitigation. Estimated (December 2004) project cost

is \$37,200,000, of which \$27,950,000 is Federal and \$9,250,000 is non-Federal (including a cash contribution of \$4,826,000). Project was established under authority of the Sacramento River Flood Control Project.

Phase IV - Lower Sacramento Area Levee Reconstruction. Project is located within the boundaries of the Sacramento River Flood Control System in Sacramento, Solano, and Yolo Counties in north-central California. Area includes the lower Sacramento River and its distributary sloughs and the city of Clarksburg. An evaluation of about 295 miles of the Sacramento River Flood Control Project levees in the Lower Sacramento area identified about 47 miles of levees that are structurally deficient. Project consists of reconstructing about 2.6 miles of levees by installing landside berms with toe drains, backfilling of existing drainage collector systems, slurry cut-off walls, the restoration of levee height, and fish and wildlife mitigation. Estimated (October 2004) project cost is \$5,000,000, of which \$3,800,000 is Federal and \$1,200,000 is non-Federal (including a cash contribution of \$620,000). Project was established under authority of Sacramento River Flood Control Project.

Phase V - Upper Sacramento Area Levee Reconstruction. Project is located within the boundaries of the Sacramento River Flood System in Colusa, Glenn, Sutter, and Yolo Counties in north-central California. Area includes the upper Sacramento River and its tributaries and the city of Colusa. An evaluation of about 350 miles of the Sacramento River Flood Control Project levees in the Upper Sacramento area identified about 12 miles of levees that are structurally deficient. Project consists of reconstruction of about 3.7 miles of levees by installing landside berms with toe drains, slurry cut-off walls, the restoration of levee height, and fish and wildlife mitigation. Estimated October 2004 project cost is \$11,930,000 of which \$8,950,000 is Federal and \$2,980,000 is non-Federal (including a cash contribution of \$1,510,000). Project was established under authority of Sacramento River Flood Control Project.

**Operations and results during fiscal year.**  
**New work:** (a) Sacramento Urban Area Levee Reconstruction: Construction is complete, however, final payment and contract close-out activities remain. (b) Sacramento River Flood Control Project (Glenn Colusa Irrigation District (G.C.I.D.)): Construction was complete on riffle restoration on Sacramento

River including building of multiple sheet piles coupled with stone to replicate natural riffle and bank protection to restore river hydraulic gradient to approximate pre-1970 conditions. Concurrently, GCID, The Bureau of Reclamation and the State of California are designing a project to build new screens near GCID pumping facilities. Subsequent to original authority in FY90 EWDA, sponsor selected a flat screen design and determined that a larger gradient facility was required for proper operation of the fish screens. As a result, an LRR and ROD for the larger facility was approved in April 1998. Plans and specs were initiated in January 1999. The Project Cooperation Agreement was executed in December 1999. The Gradient Facility construction contract was awarded in February 2000. The mitigation contract was awarded August 2002. West Bank mitigation installation completed November 2003. O&M work for West Bank mitigation to continue. (c) Marysville/Yuba City Area Levee Reconstruction: Scheduled construction activities are 100% complete. Construction activities associated with extension of Site 7 were completed in November, 2004. Mitigation site monitoring and project closeout activities remain. (d) Mid-Valley Area Levee Reconstruction: Construction for Area 1 is essentially complete. Engineering continued for the second Project Cooperation Agreement for Areas 2, 3 and 4. (e) Lower Sacramento Area Levee Reconstruction: LRR updating the economic justification for Sites 2 and 3 was completed in November 2002. Construction of Site 2 was completed in October 2003. Additional reconstruction is not currently anticipated due to a lack of non-Federal interest. (f) Upper Sacramento Area Levee Reconstruction: In accordance with Section 215 agreement signed September 22, 1997, local sponsor constructed 1,000 lineal feet of seepage/stability berm along the Sacramento River (Site E). LRR updating the economic justification for the project was completed in September 2002. Construction of Site D was completed in December, 2002. Construction of first

phase at Site E was completed in December 2003. The final reconstruction contract at Site E was awarded in September 2004.

**Historical summary.** Construction of existing project began in FY 1918 and is about 99 percent complete. Channel improvement to date has produced a channel with a capacity of 579,000 cubic feet per second in Sacramento River below Cache Slough. In addition, discharges up to 21,000 cubic feet per second can be diverted from Sacramento River through Georgiana Slough. Completed major project items include about 977 miles of levees; five weirs with a combined discharge capacity of 602,000 cubic feet per second; two cutoff channels; two sets of outfall gates; channel improvement and clearing in Sacramento River, Butte Creek, Putah Creek, and Sutter and Tisdale Bypasses; construction of two main bypasses or floodways and secondary bypasses at Tisdale and Sacramento weirs and at Wadsworth Canal; construction of Knights Landing ridge cut and of Cache Creek settling basin; installation of gauging stations; and enlargement of Sacramento River below Cache Slough. Cutoffs at Collins Eddy and between Wild Irishman and Kinneys Bends were made in 1918 and 1919, respectively. Sacramento weir was completed in 1917, Fremont weir in 1924, Tisdale and Moulton weirs in 1932, and Colusa weir in 1933. Outfall gates at Knights Landing were constructed in 1930 and at mouth of Butte Slough in 1936. Pumping plants on Sutter Bypass were completed in 1944. Work items with reference to clearing, snagging, rectification of channels, and bank protection on Sacramento River and tributaries in Tehama County and from Red Bluff southerly, provided for by 1941 Flood Control Act were accomplished in fiscal years 1947, 1948, 1949, and 1951. Yolo Bypass and Cache Slough (Unit 109) was completed in 1990. Work remaining comprises completion of levee stage construction Mid-Valley Area; Lower Sacramento Area; and Upper Sacramento Area Levees.

(Federal Funds)						

1. Exclusive of \$644,503 appropriation and cost on inactive portion of project.

2. Includes \$477,127 for recreational facilities at North Fork (\$32,473) and Harry L. Englebright (\$414,654), Code 710 appropriations and costs.

3. Includes \$17,348,051 from regular funds and \$1,989,336 from Hydraulic Mining in California funds.

4. Includes \$17,339,858 from regular costs and \$1,957,614 from Hydraulic Mining in California costs.

5. Includes \$12,420 contributed funds, other, from State of California Department of Navigation and Ocean Development for acquisition of a boarding float; and \$311,000 funds from State of California Department of Boating and Waterways for refurbishing restrooms and launching facilities at Englebright Dam.

6. Includes \$12,420 costs for acquisition of boarding float and \$280,317 costs for refurbishing restrooms and launching facilities at Englebright Dam.

7. Includes deferred maintenance funds in amount of \$207,500.

8. Miscellaneous engineering and construction accomplished at expense of local interests in connection with rehabilitation of Daguerre Point Dam necessitated by December 1964 floodflows. Includes \$2,000 from Yuba County Water Agency in May 1994.

9. Includes appropriation and cost of \$680,000 for new work for previous project and \$1,486,469 public works funds for new work for existing project.

10. Includes \$680,000 required contribution for previous project; \$4,939,752 required contributed funds for existing project; and \$310,801 voluntary contribution for bank protection for existing project.

11. Includes \$9,686 required contributed funds for existing project.

12. Includes contributed funds, other, from the State of California for relocation of utilities, irrigation ditch, access ramps, and miscellaneous small structures in the Natomas, Greenhaven Pocket and West Sacramento areas. (Sacramento Urban Area).

13. Includes \$1,328,842 contributed funds, other cost for relocations of utilities, irrigation ditch, access ramps, and miscellaneous small structures in the Natomas, Greenhaven Pocket, and West Sacramento areas.

14. G.C.I.D. construction funds received in FY 1991, but no costs were incurred. Includes \$493,000 total funds and costs under General Investigations for Preconstruction Engineering and Design.

15. Not reflected in actual annual accounting records for Marysville/Yuba City are \$1,710,000 costs for FY 91 and FY 92 incurred under Sacramento River Flood Control Project for design effort. These costs are considered part of Marysville/Yuba City cost-shared project.

**TABLE 35-BB AUTHORIZATION LEGISLATION**

See Section in Text	Date of Authorization Act	Project and Work Authorized	Documents
1.	<b>REGULATION OF HYDRAULIC MINING AND PREPARATION OF PLANS</b>		
Mar. 1, 1893	Created California Debris Commission and authorized:(a) Hydraulic mining under its regulation in drainage areas of Sacramento and San Joaquin Rivers, if possible without injury to navigability of these river systems or to lands adjacent thereto; and (b) preparation of plans by Commission for improvement of navigability of these river systems, and flood and debris-control therein.	Ex. Doc. 267, 51st Cong., 2d sess., Ex. Doc. 98, 47 <sup>th</sup> Cong., 1 <sup>st</sup> sess. i	
Feb 27, 1907	Authorized California Debris Commission to permit hydraulic mining without construction of impounding works, provided there is no injury to navigability of above river systems or :lands adjacent thereto.	(Amendment of sec. 13, Act of Mar. 1, 1893.) i	
June 19, 1934	Amended act of Mar. 1, 1893, which provides for construction of debris dams or other restraining works by California Debris Commission and collection of a3-percent tax on gross proceeds of each mine using such facilities, so as to eliminate this tax and substitute an annual tax per cubic yard mined, obtained by dividing total capital cost of each dam, reservoir, and rights-of-way, by total capacity of reservoir for restraint of debris; and authorized revocation of Commission orders permitting such mining, for failure to pay this annual tax within 30 days after its due date; and also authorized receipt of money advances, from mine owners to aid such construction, to be refunded later from annual payments of yardage taxes on material mined.		
June 25, 1938	Added at end of sec. 23 of above act, a provision that the Secretary of the Army is authorized to enter into contracts to supply storage for water and use of outlet facilities from debris-storage reservoirs for domestic and irrigation purposes and power development, upon such conditions of delivery, use, and payment as he may approve, these payments are to be deposited to credit of such reservoir project, reducing its capital cost to be repaid by tax on mining operations.		
Nov. 17, 1986	Abolished the California Debris Commission and transferred all authorities, powers, functions, and duties to the Secretary of the Army. Authorized all acquired land and other interests presently under jurisdiction of the Commission to be retained and administered under direction of the Secretary.	Sec. 1001, 1986 WRDA	

SACRAMENTO, CA DISTRICT

<b>SACRAMENTO RIVER, CA</b>			
	Dec. 22, 1944 and May 17, 1950	Additional levee construction and reconstruction, including levee protection of Upper Butte Basin, and multipurpose reservoirs. 2	H. Doc. 649, 78 <sup>th</sup> Cong., 2d sess., and 367, 81 <sup>st</sup> Cong., 1 <sup>st</sup> sess.
	July 3, 1958	Bank protection and incidental channel improvements, Sacramento River from Chico Landing to Red Bluff, and local interests flood plain zoning above Chico Landing. 2	H. Doc. 272, 84 <sup>th</sup> Cong., 2d sess.
	July 14, 1960	Bank protection works at critical locations, Sacramento River. 2	S. Doc. 103, 86 <sup>th</sup> Cong., 2d sess.
	May 24, 1994	Acquiring and permanently restoring Little Holland Tract to tidal lands with seasonal and emergent marshlands would not only have substantial environmental benefits, but measurable flood control benefits as well.	H. Doc. 533, we Cong., 2d sess.

1. For latest published map, see Annual Report for 1913, p. 3170, and Rivers and Harbors Committee Document 50, 74<sup>th</sup> Cong., 1<sup>st</sup> sess.      2. This supplemental work is reported in detail under Sacramento District, Improvement No. 23.

# Albuquerque, NM, District\*

The district comprises the watershed of the Canadian River and its tributaries in New Mexico; the watershed of the Arkansas River and its tributaries in Colorado; the watershed of the Rio Grande and its tributaries, including the Pecos River and its tributaries upstream of Amistad Lake; and the San

Juan River Basin in New Mexico; and the watershed of the Gila, San Francisco, and Mimbres Rivers and its tributaries in New Mexico. Note: The district watershed boundaries were revised in June 1986 to include the portion of New Mexico west of the Continental Divide.

### Flood Control

#### 1. ACEQUIAS IRRIGATION SYSTEM, NM

**Location.** There are about one thousand Acequias throughout the state of New Mexico, most of which are located in north-central New Mexico.

**Proposed project.** Authorized by the Water Resources Development Act of 1986, Section 1113, the project consists of about one thousand acequias throughout the state of New Mexico. These community ditch systems provide irrigation water to about 160,000 acres on an estimated 12,000 farms.

Acequias have been in existence since the early Spanish Colonization period of the 17<sup>th</sup> and 18<sup>th</sup> Centuries, and represent one of the oldest forms of cooperative institutions in the United States. They are an integral part of the culture and heritage of New

Mexico. Diversion structures, many of which are constructed of available materials such as rock and brush, are frequently destroyed by flows greater than normal resulting from spring runoff or summer thunderstorms. Disruption of the ditches usually occurs during peak irrigation season and severely impacts crop production. The Water Resources Development Act of 1986 directs the U.S. Army Corps of Engineers to undertake measures, without regard to economic analysis, as are necessary to protect and restore the river diversion structures and associated canals.

**Local cooperation.** The local sponsor, the State of New Mexico, has a law whereby the State of New Mexico provides 17.5% of the project costs, and low interest loans to the local Acequias for the remaining 7.5%. The State of New Mexico has appropriated, and will appropriate, on an annual basis, the funds

## REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES IN FY 2005

necessary to meet the requirements of local sponsorship.

**Operations and results during fiscal year.** Funds to initiate construction were received in Fiscal Year 1988. Construction contracts have been awarded every year since FY 1988.

**Condition at end of fiscal year.** There are several projects in various stages of design and construction. Under the Section 215 Program Tierra Amarilla, Tularosa, West Puerto de Luna and Gonzales Gurule were completed. Los Gonzales Acequia construction was completed under the 1113 program.

### 2. ALAMOGORDO, NM

**Location.** The project is located in south-central New Mexico in Otero County, in and near Alamogordo, NM. The city is situated at the foot of the Sacramento Mountains near the eastern edge of the Tularosa Basin.

**Proposed project.** The authorized project consists of two concrete and riprap-lined diversion channels with 100-year flow capacity and a flood detention structure, which will intercept flows from the Sacramento Mountains east of the city. For a description of the complete improvement and authorizing legislation, see page 694 of Annual Report for 1966.

**Local cooperation.** The Water Resources Development Act of 1986 applies.

**Condition at end of the fiscal year.** Construction of Phase I of the South Diversion Channel was completed in June 2002. Construction of Phase II was completed in May 2005. Phase III was awarded in Sept 2005 and Phase III Construction continued through FY 2005. A re-evaluation of the North Diversion Channel was initiated at the request of local interest concerned with potential induced flooding along Red Arroyo. The study determined a detention dam was economically feasible and comparative in cost to the proposed channel.

### 3. CONCHAS DAM, NM

**Location.** The dam is located in San Miguel County, NM, on the Canadian River, just below the confluence of the Canadian and Conchas Rivers. (See Geological Survey State Map of New Mexico, scale 1:500,000, and Geological Survey topographic map, Tucumcari quadrangle, scale 1:250,000).

**Existing project.** The dam consists of a concrete gravity main section 1,250 feet long with a maximum height of 200 feet above streambed, located in the Canadian River canyon together with earth dikes on each side, having an overall length of about 3.7 miles. The main section contains conduits in its base for the release of water from the reservoir, and an overflow ungated spillway 300 feet long. The earth dikes vary in height up to 100 feet and the north dike contains a concrete ogee-type emergency spillway 3,000 feet long. The reservoir has a gross storage capacity of 513,900 acre-feet (198,170 for flood control; 254,200 for water conservation and irrigation; and 61,530 dead storage). The dam controls 7,409 square miles of drainage area. (See pages 17-16 of Annual Report of 1973 for authorizing legislation).

**Local cooperation.** None needed.

**Operations and results during fiscal year.** The reservoir was operated for storage of floodwater and releases for irrigation purposes. Sediment damages of \$156,600 were prevented during FY 2005. There were no flood damages prevented in FY 2005. Estimated total accumulated flood and sediment damages prevented by the project through FY 2005 are \$5,104,600. Estimated irrigation benefits for FY 2005 are \$92,300. Estimated total accumulated irrigation benefits through FY 2005 are \$11,994,000. The pool elevation at the start of FY 2005 was 4,171.80 feet with corresponding storage of 120,646 acre-feet. Total releases for this reporting period were 45,383 acre-feet. Releases of 44,684 acre-feet were made to Arch Hurley Conservancy District, 699 acre-feet to Bell Ranch. Sediment deposition during the fiscal year was 1,398 acre-feet.

### 4. EL PASO, TX

**Location.** The project is located at El Paso, El Paso County, TX, which is on the left bank of the Rio Grande in the reach that forms part of the international boundary between the United States and the Republic of Mexico. (Geological Survey Map for El Paso, TX; New Mexico quadrangle, scale 1:250,000).

**Existing project.** This project consists of a single-purpose flood control system of detention dams, diversion dikes, conduits, and channels to collect, regulate and discharge arroyo runoff into the Rio Grande. Runoff from the tributary arroyos on the eastern, southern, and western slopes of the adjacent

## ALBUQUERQUE, NM, DISTRICT

Franklin Mountains often inundates sections of the city and its outlying suburban developments. The project is divided up into three independent elements: Northwest area, Central area, and Southeast area. The project plan satisfies the 1933 U.S. and Mexico agreement on limited tributary discharge into the Rio Grande in El Paso, Texas. (See Table 36-B for authorizing legislation).

**Local cooperation.** Section 2 of the Flood Control Act of June 28, 1938 applied to the Northwest and Central areas. The Local Cooperation Agreement for the Southeast area reflects the cost sharing requirements contained in the Water Resources Development Act of 1986.

**Operations and results during fiscal year.** Flood control dams in operation during FY 1998 and dates of completion of construction are as follows: Northgate and Range Dams (February 1970; Sunrise and Mountain Park Dams (October 1974); and Pershing Dam (March 1977); Fort Bliss Diversion Channel (November 1978); Oxidation Pond Outlet Conduit (November 1980); Mulberry and Thorn Drive Dams (June 1982); Mesa Dam (September 1982); McKelligon Canyon Dam (October 1982); Keystone Dam (September 1983); Keystone Outlet Conduit (March 1984); Highway Diversion Channel (May 1985); Dam Safety Assurance Program to the existing Range and Northgate Dams (September 1986); Borderland Diversion Channel (September 1986); and Phelps Dodge Basin (January 1990); and Americas Basin (March 1993).

**Condition at end of fiscal year.** At the end of 2002, all construction work in Central and Northwest areas were complete. The Southeast system construction was completed on the Phelps Dodge system in June 1992; Americas Basin, March 1993; Bluff Channel in October 1998; and the Lomaland system in November 2004.

### 5. JOHN MARTIN RESERVOIR, CO

**Location.** The project is located on the Arkansas River in Bent County, 1,159 miles upstream from its mouth, 300 miles downstream from its source and about 18 miles upstream from the city of Lamar, CO. (See Geological Survey maps for Lamar and Las Animas, CO quadrangle, scale 1:125,000).

**Existing project.** The project consists of a concrete and earth fill structure about 2.6 miles long with a maximum height of 106 feet above streambed, and an overflow, gated spillway 1,174 feet long. Total

capacity of the reservoir at the top of flood control is 605,115 acre-feet (259,417 for flood control and 345,698 for conservation and recreation storage). This reservoir controls a contributing drainage area of 18,130 square miles and is operated as a unit of a coordinated reservoir system for flood control in the Arkansas River Basin. Public Law 89-298 modified the act of June 22, 1936 (49 Stat. 1570) to authorize 10,000 acre-feet of reservoir flood control storage space for fish and wildlife and recreation purposes. For details of the complete improvement and authorizing legislation, see page 17-16 of Annual Report for FY 1973.

**Local cooperation.** Section 3 of the Flood Control Act of June 22, 1936 applies.

**Operations and results during fiscal year.** Operation of the dam and reservoir continued. Regulation of conservation storage continued under rules and regulations of the Arkansas River Compact. Sediment damages of \$139,300 were prevented during FY 2005. Estimated total flood and sediment damages prevented by this project through FY 2005 are \$139,782,200. Estimated irrigation benefits for FY 2005 are \$290,500. Estimated total accumulated irrigation benefits are \$30,378,100. Maximum pool elevation of 3,819.08 feet with corresponding storage of 82,167 acre-feet occurred on April 20, 2005. Total releases for FY 2005 were 178,170 acre-feet. Releases attributed to irrigation benefits amounted to 73,923 acre-feet. Sediment deposition was 1,244 acre-feet in FY 2005.

## 6. RIO GRANDE BASIN, NM

**Location.** Improvements are located on the Rio Grande and tributaries in New Mexico. More definitive locations and descriptions of individual projects are in the following paragraphs, and individual reports by projects.

**Existing project.** The Flood Control Act of 1948 authorized the flood control phase of the comprehensive plan of development of water resources of the Rio Grande Basin in New Mexico (H. Doc 243, 81<sup>st</sup> Cong., 1<sup>st</sup> sess.) with the exception of Chiflo Dam and Reservoir and spillway gate structure at Chamita Dam. Although recommended, Chiflo Dam and Reservoir was deleted from the authorized plan. Congress excluded it without prejudice from future consideration. It was requested at that time, by the States of Colorado and Texas, that the project be deferred for re-study regarding required storage and methods of operation. By the

## REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES IN FY 2005

same Act, Congress also authorized for the construction irrigation phase of the comprehensive plan as recommended by the Bureau of Reclamation (H. Doc. 653, 81<sup>st</sup> Cong., 2<sup>nd</sup> sess.). The Act also stipulated that work should be prosecuted in accordance with a joint agreement approved by the Secretary of the Army and Acting Secretary of the Interior on November 21, 1957. In addition, under that agreement, the Bureau of Reclamation was given responsibility for construction, operation, and maintenance of channel rectification, and drainage rehabilitation and extension phases of the unified plan of improvement. Authority for the Chamita Dam and Reservoir was abrogated when Cochiti Dam and Reservoir was authorized. (See Table 36-B for authorizing legislation and Table 36-F for existing projects).

All operations and costs for projects contained in the authorized plan are reflected in individual reports on the following pages.

### 6A. ABIQUIU DAM, NM

**Location.** The project is one unit of the flood control plan for the Rio Grande and tributaries, New Mexico. Abiquiu Dam is located on the Rio Chama near the town of Abiquiu, NM, about 32 miles upstream from the confluence of the Rio Chama and the Rio Grande. (See Geological Survey map for plan and profile of Rio Chama, NM, from mouth to mile 103, sheet 1, and Army Map Service, Aztec, NM; Colorado NJ 13-1, scale 1:250,000).

**Existing project.** The project consists of an earth fill dam 1,450 feet long, 325 feet high, with a 12-foot diameter controlled outlet, and an uncontrolled spillway in a natural saddle about 1 mile north of the left abutment. The reservoir provides 545,784 acre-feet of flood control and sediment storage. Total capacity at the spillway crest is 1,192,801 acre-feet. For a detailed description of the completed improvements and authorizing legislation, see Annual Report of 1973. A major rehabilitation project was completed in September 1980 and the recreation facilities were completed in FY 1981. The County of Los Alamos completed a non-Federal hydropower plant in 1990. The capacity of this plant is 13.2 MW. Drainage adits were completed in 1990 to alleviate seepage problems in the north and south abutments. In 2001 repairs were initiated to the downstream north abutment of the dam where rock movement had been observed. Work continued through 2005. Removal of rock, cutback, rock

bolting and some netting has taken place. A study will determine current slope conditions.

**Local cooperation.** None required.

#### **Operations and results during fiscal year.**

Operation of the dam and reservoir continued. Storage and flows were regulated in accordance with Section 203, Flood Control Act of 1960. On October 1, 2004, the pool elevation was 6,200.95 feet. The maximum pool (6,222.32 feet) and storage (193,409 acre-feet) occurred on May 21, 2005. On September 30, 2005, the pool elevation was 6,200.17 feet with a corresponding storage of 112,298 acre-feet. There were 988 acre-feet of sediment deposition during FY 2005. There was \$89,542,800 in flood damages prevented during FY 2005. Sediment damages prevented were \$110,700. Accumulated flood and sediment damages prevented by the project since completion are \$481,449,700 through FY 2005.

**Condition at end of fiscal year.** The project was placed in operation in February 1963. The project structures are in good condition and operational.

### 6B. ALBUQUERQUE LEVEES, NM

**Location.** The project is located in the City of Albuquerque, NM and surrounding communities. The project study area includes the east side and west side levee areas within the Albuquerque reach of the Middle Rio Grande from the North Diversion Channel southward to the Isleta Pueblo.

**Proposed project.** Funds were provided to inspect condition of the levees.

**Local Cooperation.** None required

**Condition at end of fiscal year.** None required

### 6C. COCHITI DAM AND LAKE, NM

**Location.** The dam is located at river mile 340 on the Rio Grande (river mile 0 being at the intersection of the New Mexico-Texas state line with international boundary at El Paso, TX), near Pueblo de Cochiti, which is about 50 miles upstream from Albuquerque, NM. (See Geological Survey Map, Cochiti Dam, NM quadrangle and Santo Domingo Pueblo, NM quadrangle, scale 1:24,000).

**Existing project.** This project consists of an earth fill dam about 5.4 miles long with a maximum height

## ALBUQUERQUE, NM, DISTRICT

of 251 feet above streambed. The project extends generally in an east-west line across the Rio Grande to a point about 2 miles east of the Rio Grande, and then southward across the Santa Fe River. An uncontrolled spillway with a 460 foot-long ogee-weir and a 160-foot notch 10.6 feet deep in the center is part of the embankment on the south side of the Santa Fe River. Operational releases for flood control and irrigation are made through a 3-barrel gated conduit in the left abutment on the Rio Grande. The reservoir has a storage capacity of 582,019 acre-feet at the spillway crest, of which 78,640 acre-feet is dedicated for recreation and sediment control. The project controls flood waters from an 11,695 square-mile drainage area. For more improvement details, see page 17-7 of Annual Report for 1980. See page 17-15 of fiscal year 1981 Annual Report for authorizing legislation.)

**Local cooperation.** None required.

### **Operations and results during fiscal year.**

Operation of the dam and reservoir continued. The project was completed in June 1975. On October 1, 2004, the pool elevation was 5,340.24 feet with a corresponding storage of 49,430 acre-feet. The maximum pool elevation was 5,364.64 feet with a storage of 95,369 acre-feet on June 01, 2005. On September 30, 2005, the pool elevation was 5,340.52 feet with a corresponding storage of 49,767 acre-feet. There were 1,185 acre-feet of sediment deposition during FY 2005. There were \$89,332,300 flood damages prevented during FY 2005. Sediment damages prevented were \$132,700. Accumulated total damages prevented are \$540,633,500.

**Condition at end of fiscal year.** The dam and appurtenances were placed in operation in 1975. The Cochiti recreation area was completed in 1976, with the Visitors' Center completed in 1977. The Tetilla Peak recreation area was completed in 1981. Project structures are in good condition and in operation.

## **6D. GALISTEO DAM, NM**

**Location.** The dam is located at river mile 12 on Galisteo Creek, a tributary of the Rio Grande. The reservoir extends upstream from the dam for about 4 miles, near the village of Waldo, NM (see Geological Survey map, San Pedro 1, NM, quadrangle, scale 1:24,000).

**Existing project.** This project consists of an earth fill dam 2,820 feet long with a maximum height of 158 feet above streambed. The outlet works consist

of a 10-foot diameter uncontrolled outlet with maximum discharge capacity of 4,980 cubic-feet-per-second with a pool at the spillway crest elevation. The dam was raised 7 feet and the spillway was widened 575 feet to provide adequate discharge capacity to accommodate the revised probable maximum flood. The dam safety modification was complete in October 1998. The project has 79,600 acre-feet of sediment space. For more details of completed improvements and authorizing legislation, see page 17-17 of Annual Report for 1973).

**Local cooperation.** None required.

### **Operations and results during fiscal year.**

Operation of the dam and reservoir continued. Operation of the project began on October 11, 1970. The reservoir was empty on October 1, 2004. No storage occurred during FY 2005. Peak inflow was 1,350 cfs and maximum outflow was 1,350 cfs. There were 45 acre-feet of sediment deposition during the year, and the reservoir was empty on September 30, 2005. Sediment damages prevented during FY 2005 were \$5,000 and now total \$183,300 through FY 2005.

**Condition at end of fiscal year.** The project was placed in operation in October 1970. The project structures are in good condition and in operation.

## **6E. JEMEZ CANYON DAM, NM**

**Location.** The project is located in Sandoval County, NM, on the Jemez River, about 2 miles upstream from the confluence of the Jemez River and the Rio Grande, about 5 miles northwest of Bernalillo, NM. (See Geological Survey map for Bernalillo, quadrangle scale 1:125,000).

**Existing project.** This project consists of an earth fill dam 780 feet-long with maximum height of 146.6 feet above streambed, an off-channel uncontrolled saddle spillway 400 feet wide, and a 13-foot diameter gated outlet in the left abutment with discharge capacity of 8,340 cubic-feet-per-second, with a pool at spillway crest elevation. The dam was raised 14.1 feet and the spillway widened 28 feet in 1986 and 1987 to provide adequate discharge capability to accommodate the revised probable maximum flood. The reservoir has a capacity of 97,425 acre-feet at spillway crest (73,000 acre-feet for flood control and 24,425 acre-feet for sediment control). For more detailed description of completed improvements and authorizing legislation, see page 17-17 of Annual Report for 1973).

## REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES IN FY 2005

**Local cooperation.** None required.

**Operations and results during fiscal year.** Jemez Canyon is operated as a dry reservoir, with occasional flood storage. On October 1, 2004, the pool elevation was 5,155.0 feet with a corresponding storage of 0 acre-feet. The maximum pool elevation was 5,155.0 feet with a storage of 0 acre-feet on October 1, 2004. On September 30, 2005, the pool elevation was 5,155.0 feet with a corresponding storage of 0 acre-feet. The reservoir was emptied during FY 2002. There was no sediment deposition during FY 2005. There were no flood damages prevented during FY 2005. Sediment benefits during FY 2005 were \$0. Estimated total accumulated flood and sediment damages prevented by the project through FY 2005 are \$25,184,500.

**Condition at end of fiscal year.** The project was placed in operation in October 1953. Project structures are in good condition and all structures are in operation.

### **6F. MIDDLE RIO GRANDE FLOOD PROTECTION, BERNALILLO TO BELEN, NM**

**Location.** The project area is composed of 45 square miles of floodplain lying along the Rio Grande from the vicinity of Corrales to Belen, NM.

**Proposed project.** The project was authorized by the Water Resources Development Act of 1986. The project consists of raising and rehabilitating 49.6 miles of levees to provide the 270-year level of protection, and the creation of 75 acres of wetlands from borrow areas within the bosque, and acquisition of 200 acres to satisfy fish and wildlife mitigation requirements. The proposed project will be constructed at an estimated total cost of \$62,400,000 (\$46,800,00 Federal and \$15,600,000 non-Federal) 1 Oct 03 price levels. (See Table 36-B for authorizing legislation).

**Local cooperation.** Water Resources Development Act of 1986 applies. The Middle Rio Grande Conservancy District is the local sponsor.

**Operations and results during fiscal year.** Construction of the Corrales Unit was completed in July 1997. A General Reevaluation Report study for the remaining units (Mountainview, Isleta, and Belen), is currently underway. The study will update costs, benefits, and environmental impacts of the

1986 authorized project. The General Reevaluation Report is scheduled for completion in 2008.

### **6G. RIO GRANDE BOSQUE REHABILITATION/ BOSQUE WILDFIRES, NM**

**Location.** The authorized project is located within the city of Albuquerque, New Mexico and surrounding communities. The project area includes the east and west bank of the bosque (forest) along the Rio Grande from Bernalillo to Belen.

**Proposed project.** The project was authorized by the FY04 Energy and Water Appropriations bill, following severe wildfires that occurred in 2003 in the Rio Grande bosque in and near Albuquerque. The project consists of management measures to reduce the potential for fires in the future and to restore fire damage that occurred in 2003. These measures include, but are not limited to: fuel reduction of dead wood; removal of non-native and invasive species; planting of native species; removal of unnecessary jetty jacks; and improvement of emergency vehicle access points and roads into the bosque.

**Local Cooperation.** Funding for the implementation effort of this project is 100 percent Federal. The City of Albuquerque and the Middle Rio Grande Conservancy District will assume all operation and maintenance costs of the project following implementation.

**Condition at end of fiscal year.** Design and implementation of management measures continued through FY05. Completion of construction is projected for FY08.

### **6H. RIO GRANDE FLOODWAY, NM**

**Location.** The project is one unit of the flood control phase of the comprehensive plan of improvement for the Rio Grande Basin in New Mexico. It is located on the Rio Grande and covers a section of the river extending from approximately Velarde, New Mexico to Elephant Butte, New Mexico, a distance of approximately 213 miles.

**Existing project.** The project consists of flood protection and major drainage improvements by channel rectification, levee enlargement and construction, and bank stabilization work where needed to protect the levees. Construction of the

## ALBUQUERQUE, NM, DISTRICT

project is a joint undertaking by the Bureau of Reclamation and the Corps. Portions to be done by the Corps will consist of levee enlargement,

construction of bank protection work, with channel rectification and drainage rehabilitation work being the responsibility of the Bureau of Reclamation. Levees constructed by local interests exist throughout the reach of the river involved, but are not uniform as to grade, section, or standard of construction, and in many places are threatened by the meandering river. (See Table 36-F on existing project and Table 36-B for authorizing legislation).

**Local cooperation.** In addition to the usual requirements, local interests are responsible for all highway, bridge, and public utility relocations or replacements required in construction of the project. Local interests will also be required to comply with requirements of Section 221, 1970 Flood Control Act, Section 401, 1986 Water Resources Development Act, and PL 91-646 Uniform Relocation Assistance Act of 1970. Total costs for all requirements for the completed Albuquerque unit under terms of project authorization were \$75,000. There were no non-Federal costs in connection with the construction of the Cochiti to Rio Puerco unit of the floodway. The Española Valley unit is in the deferred category. However, by letter dated 10 December 2003 Santa Clara Pueblo expressed their willingness to participate in a feasibility study to address tributary flooding in Española.

**Operations and results during fiscal year.** There were \$10,425,800 flood damages prevented by the completed floodway project during FY 2005. Estimated total accumulated flood damages prevented by the floodway project through FY 2005 amounted to \$59,185,000. The peak flow of the Rio Grande through the middle valley was 6,500 cfs at Albuquerque on May 24, 2005. The peak at San Acacia was 7,640 cfs on June 10, 2005.

**Condition at end of fiscal year.** Construction of the Albuquerque unit of the Rio Grande Floodway project is complete. Construction was completed on the Truth or Consequences unit in FY 1991.

### 6I. SAN ACACIA TO BOSQUE DEL APACHE UNIT, NM

**Location.** The authorized project is located along the middle Rio Grande's west bank, extending from the upper end of the Rio Grande low-flow

conveyance channel at the San Acacia diversion works to the head of Elephant Butte Reservoir.

**Proposed project.** The project was authorized by the Flood Control Act of 1948 and consists of the reconstruction of 42 miles of existing spoil bank levee that separates the Rio Grande low-flow conveyance channel from the river floodway and replacing the San Marcial railroad bridge. The proposed project's estimated total cost is \$71,200,000 (\$62,300,000 Federal and \$8,900,000 non-Federal) 1 Oct 93 price levels. (See Table 36-B for authorizing legislation).

**Local cooperation.** The Water Resources Development Act of 1986 and the Water Resources Development Act of 1992 apply. The Water Resources Development Act of 1992 modified the local sponsor's required contribution.

**Condition at end of fiscal year.** The draft LRR/SEIS (dated May 99) was sent forward to higher authority for review and approval. Responses to headquarters review comments and action items concerning the draft LRR/SEIS were completed in May 2003. Pending headquarters approval, the final report will be completed in September 2007 with construction starting in September 2008 on the San Marcial railroad bridge.

### 7. SANTA ROSA DAM AND LAKE, NM

**Location.** The project is located in Guadalupe County on the Pecos River, at river mile 766.4, approximately 7 miles north of Santa Rosa, NM (see Geological Survey map, Corazon, NM, sheet, scale 1:125,000).

**Existing project.** Operation of the project began in November 1979. It consists of an earth and rock fill dam 1,950 feet long and 212 feet maximum height above the streambed. The purposes of this project are flood control, irrigation, and sediment retention. An unlined, open rock cut about 1,000 feet back from the left abutment serves as an uncontrolled spillway. The outlet works, located in the left abutment, consists of a control tower, intake structure with gates, and a 10-foot diameter concrete-lined tunnel with a terminal flip bucket energy dissipater. Storage capacity at the spillway crest is 439,860 acre-feet, which includes 82,860 acre-feet sediment reserve, 200,000 acre-feet irrigation, and 167,000 acre-feet flood control storage. The surface area of the reservoir at the spillway crest is 10,594 acres. The

## REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES IN FY 2005

contributing drainage area at the dam site is 2,434 square miles.

For a more detailed report of the authorized project, including the modification to existing Sumner Lake, see page 17-8 of FY 1981 Annual Report. For authorizing legislation, see page 17-14 of FY 1981 Annual Report.

**Local cooperation.** In addition to first costs, operation and maintenance of both reservoirs is the responsibility of the Federal Government; however, the Carlsbad Irrigation District is required to contribute to operation and maintenance costs an amount equal to what they now pay toward Sumner Lake. The Carlsbad Irrigation District (CID) also agreed to use Sumner Lake for flood control. Because the CID realizes equivalent benefits from storage capacity in Santa Rosa Lake, they will continue to fulfill their repayment obligation. The New Mexico Division of State Parks manages the recreation facilities. Activities include camping, picnicking, boating, and hiking.

For more requirements and details on final approval in 1974 for transfer of irrigation storage from Sumner Lake to Santa Rosa Dam and Lake (formerly Los Esteros Lake), see page 17-5 of Annual Report for 1980.

### **Operations and results during fiscal year.**

Operation of the dam and reservoir continued. Pool elevation at the start of the fiscal year was 4,712.83 feet with storage of 21,278 acre-feet. Total releases for the fiscal year were 47,834 acre-feet. Pool elevation on September 30, 2005 was 4,744.65 feet with storage of 95,797 acre-feet. The maximum elevation was 4,745.26 feet with storage of 98,026 acre-feet on August 15, 2005. There were 705 acre-feet of sediment deposition during the fiscal year. Sediment damages prevented during the fiscal year were \$79,000. Accumulated flood and sediment damages prevented by the project since completion are \$5,633,800 through FY 2005. Releases attributed to irrigation benefits were \$25,400 with an accumulative total of \$4,242,000 through FY 2005.

**Condition at end of fiscal year.** The project was complete in late 1979 and reservoir operation for irrigation was started in March 1980. Construction of the recreation area was completed in October 1980. Design studies for spillway modification were initiated in FY 1970, and construction was completed in FY 1982. The project structures are in good condition and in operation.

## 8. TRINIDAD LAKE, CO

**Location.** This project is located on the Purgatorie River about 161 miles above its junction with the Arkansas River. The project is about 4 miles upstream from the city of Trinidad, CO. (See Geological Survey map, Trinidad, CO, quadrangle, scale 1:24,000).

**Existing project.** The project consists of an earth fill dam 6,620 feet long with a maximum height of 200 feet above streambed, an uncontrolled spillway 1,000 feet wide in the left abutment, and a 10-foot diameter gate-controlled conduit in the right abutment with discharge capability of 5,800 cubic-feet-per-second with a water surface at top of the flood control pool. In 1985, a 3-foot high parapet wall on top of the upstream face of the dam and a supplemental 700 foot-wide rock cut emergency spillway located on the right abutment were constructed to provide adequate discharge capability and freeboard allowance to accommodate the revised probable maximum flood. In 1989, the recreation pool was increased from 4,500 to 15,967 acre-feet, utilizing some originally unallocated space in the project. The reservoir provides for storage of 51,000 acre-feet for flood control, 35,045 acre-feet for sediment, 20,000 acre-feet for irrigation, and 17,179 acre-feet for recreation, a total of 123,224 acre-feet. The reservoir controls a drainage area of 671 square miles and is operated for flood and sediment control, irrigation, and recreation purposes. For authorizing legislation, see page 17-14 of FY 1981 Annual Report.

**Local cooperation.** Assurances of local cooperation received from the City of Trinidad and Purgatorie River Water Conservancy District were formally accepted May 11, 1967, after execution of an irrigation repayment contract. For complete details of requirements and costs pertaining to the execution of the irrigation repayment contract and the addition of permanent storage for recreation facilities, see page 17-9 of Fiscal Year 1980 Annual Report.

### **Operations and results during fiscal year.**

Operation of the dam and reservoir continued. On October 1, 2004, the pool elevation was 6,176.45 feet with a corresponding storage of 17,583 acre-feet. The maximum pool elevation was 6,195.86 feet with a corresponding storage of 32,130 acre-feet on April 13, 2005. On September 30, 2005, the pool elevation was 6,173.03 feet with a corresponding storage of 15,547 acre-feet. Sediment deposition during FY

## ALBUQUERQUE, NM, DISTRICT

2005 was 253 acre-feet. Sediment damages prevented during FY 2005 was \$28,300. Accrued sediment benefits are \$2,978,300. Irrigation benefits for FY 2005 were \$77,500. Accrued irrigation benefits through FY 2005 are \$2,629,400. Irrigation benefit releases for the year were 19,725 acre-feet.

**Conditions at end of fiscal year.** The project was placed in operation in 1977. The recreation facilities were completed in 1980. The Dam Safety Assurance contract was completed in May 1983. The project structures are good and in operation.

### 9. TWO RIVERS DAM, NM

**Location.** The project is located about 14 miles southwest of Roswell, NM on the Rio Hondo and the Rocky Arroyo. The Rio Hondo is formed at the confluence of the Rio Ruidoso and the Rio Bonito, near the village of Hondo, NM, in the foothill region east of Sierra Blanca in the southeastern part of Lincoln County, NM, and flows generally easterly to its confluence with the Pecos River near Roswell, NM. (See Geological Survey map, Hondo Reservoir quadrangle, scale 1:24,000).

**Existing project.** The Two Rivers project consists of two dams: Diamond "A" and Rocky. The Diamond "A" Dam is an earth fill structure, 4,885 feet long and 98 feet high, with a gated outlet. The Rocky Dam is an earth fill structure 2,940 feet long and 118 feet high with an uncontrolled outlet. No provision is made for water storage, except for flood control. Flood releases are controlled so that flows through Roswell will not exceed the Rio Hondo channel capacity, which are about 600 cubic-feet-per-second. A Dam Safety Reconnaissance Report, approved in June 1996, identified the need to increase the size of the spillway on the left abutment of the Rocky Dam by 1,170 feet in order to accommodate the revised Probable Maximum Flood flows for the Dam. The spillway was widened 1,170 feet in 1998 to provide adequate discharge capability to accommodate the revised probable maximum flood. The capacity of the Two Rivers Reservoir at its spillway crest is 163,773 acre-feet of which 13,775 acre-feet are provided for sediment reserve. Together, these dams regulate runoff from 1,027 square miles of drainage area. For details of completed improvement and authorizing legislation, see page 17-18 of Annual Report for 1973.

**Local cooperation.** Section 2 Flood Control Act of 1938 applies and compliance is satisfactory.

### **Operations and results during fiscal year.**

Operation of the dam and reservoir continued. The reservoir was empty on October 1, 2004. There were no flood damages prevented during FY 2005. There was \$1,300 in sediment damages prevented during FY 2005. Estimated total accumulated flood and sediment damages prevented through FY 2005 are \$190,609,100. There were 12 acre-feet of sediment deposition during FY 2005. The accrued sediment benefits through FY 2005 are \$1,112,000.

### 10. INSPECTION OF COMPLETED FLOOD CONTROL PROJECTS

Included under this heading is inspection of completed flood control projects transferred to local interests for operation and maintenance. Projects in Texas, Colorado, and New Mexico were inspected. Federal costs for FY 2005 were \$196,749.

### 11. SCHEDULING FLOOD CONTROL RESERVOIR OPERATIONS.

Pursuant to Section 7, Flood Control Act of 1944, five projects are operated by others for flood control. These projects are Platoro, Pueblo, Sumner, Navajo, and Brantley Dams.

Platoro Dam on the Conejos River above the town of Platoro, Conejos County, CO, controls runoff from 40 square miles of high mountain area. The authorized purposes are irrigation storage and flood control. The Conejos Water Conservancy District operates Platoro. Total storage is 59,571 acre-feet with the top 6,000 acre-feet solely for flood control. The 53,571 acre-feet is joint-use storage with flood control on a forecast basis during spring runoff. Platoro Dam was authorized by the Interior Appropriation Act of 1941. (See H. Doc. 693, 76<sup>th</sup> Cong. 3<sup>rd</sup> Sess.). The Bureau of Reclamation completed construction of this project in 1952.

On October 1, 2004, storage in Platoro Reservoir was 9,497 acre-feet at elevation 9,961.67 feet. Maximum storage of 31,745 acre-feet at elevation 10,001.10 occurred on July 02, 2005. On September 30, 2005, storage was 17,331 acre-feet at elevation 9,978.13 feet. There were \$1,119,600 of flood damages prevented by this project during FY 2005. Total flood damages prevented to date are \$7,213,800.

Pueblo Dam is part of the Fryingpan-Arkansas project that was authorized under Public Law 98-590, 87<sup>th</sup> Congress, HR 2206 on August 16, 1962. The

## REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES IN FY 2005

project was completed in August 1975. Pueblo is operated by the Bureau of Reclamation and is located at river mile 1,293.7 on the Arkansas River in Pueblo County, CO. Pueblo Reservoir has a total capacity of 349,940 acre-feet at the top of the flood pool with 27,000 acre-feet exclusive flood space and 66,000 acre-feet joint use space.

Operation of Pueblo Reservoir began on February 10, 1974. Storage on October 1, 2004 was 101,800 acre-feet, elevation 4,836.08 feet. Maximum storage during the year was 145,139 acre-feet at elevation 4,851.20 on March 09, 2005. Storage on September 30, 2005 was 91,008 acre-feet at elevation 4,831.82 feet. There were no flood damages prevented in FY 2005. Total flood damages prevented to date are \$11,316,700.

Sumner Dam is located on the Pecos River at river mile 710.8 in De Baca County, New Mexico. Sumner Dam was authorized as Alamogordo Dam by the Secretary of the Interior under a Finding of Feasibility approved by the President of the United States on November 6, 1935, under the Federal Reclamation laws. The original project was completed in 1937. Modification work of raising the dam 16 feet, adding a spillway and limiting the service spillway floor to 56,000 cubic-feet-per-second, was completed in 1957. A twenty-four inch bypass line was installed in 1977 to pass flows less than 100 cfs.

The Carlsbad Irrigation District operates Sumner Dam. Storage on October 1, 2004 was 4,903 acre-feet at elevation 4,237.20 feet. Maximum storage for FY 2005 was 43,182 acre-feet at elevation 4,262.97 on May 29, 2005. Storage on September 30, 2005 was 39,255 acre-feet at elevation 4,261.54 feet.

Navajo Dam and Reservoir is located on the San Juan River at river mile 298.6 in San Juan County, New Mexico. Navajo Dam was authorized as part of a Colorado River Storage Project by an act of the 84<sup>th</sup> Congress, 11 April 1956 (PL 485). The Bureau of Reclamation constructed and is responsible for operation of the project. Construction was initiated in June 1958, and the project was completed and placed in operation in March 1963. Total capacity at spillway crest is 1,708,600 acre-feet. The project controls a drainage area of 3,230 square miles.

Storage on October 1, 2004 was 935,094 acre-feet, elevation 6,022.48 feet. Maximum storage for FY 2005 was 1,576,700 acre-feet, elevation 6,076.75 feet

on July 08, 2005. Storage on September 30, 2005 was 1,516,400 acre-feet, elevation 6,072.56 feet.

Brantley Dam, on the Pecos River, above the town of Carlsbad in Eddy County, NM, controls runoff from 13,208 square miles of uncontrolled area. The authorized purposes are irrigation, flood control, fish and wildlife, recreation, and the elimination of the hazards of failure of the McMillan and the Avalon Dams. The total storage is 348,544 acre-feet with 189,700 acre-feet for flood control. Public Law 92-514 authorized Brantley Dam for construction on 20 October 1972, with the cost ceiling raised for the project in October 1980 by Public Law 96-375. On September 6, 1988, the conduits were closed and Brantley Dam started its initial filling. On September 30, 2005 the storage was 14,326 acre-feet at elevation 3,243.54 feet.

## 12. OTHER AUTHORIZED FLOOD CONTROL PROJECTS

See Table 36-D

## 13. FLOOD CONTROL WORK UNDER SPECIAL AUTHORIZATION

### **Flood control activities pursuant to Section 205, Public Law 858, 80<sup>th</sup> Congress, as amended (pre-authorization)**

Total Federal costs for Section 205 projects during FY 2005 were \$2,962,156. Individual costs per project were: Little Puerco River, Gallup, NM \$2,857,596; Section 205 Coordination Account \$11,584; Hobbs, NM \$8,671; Oak Creek, Florence, CO \$14,854; Hatch, NM \$28,451; Sun Valley, El Paso, TX \$62; Flume at Willow Creek, Creede, CO \$50 and Vado, Del Cerro, Berino, Mesquite, Dona Ana County, NM \$40,888.

### **Emergency flood control activities; repair, flood fighting, and rescue work. (Public Law 99, 84<sup>th</sup> Cong., and antecedent legislation.)**

Total Federal costs in FY 2005 were \$507,702. The breakdown is as follows: \$390,320 for disaster preparation, \$96,480 for flood emergency operations, and \$20,902 for rehabilitation and inspection.

**Emergency bank protection (Sec. 14, 1946 Flood Control Act, Public Law 526, 79<sup>th</sup> Cong.)**

Total Federal costs for Section 14 projects for FY 2005 were \$76,057. Individually, the costs were as follows: Section 14 Coordination Account \$10,510; Rio Puerco River, I-40 Bridge, Gallup, NM \$60,989; Powers Blvd., Colorado Springs, CO \$3,643; Chelton Road Bridge over Sand Creek, Colorado Springs, CO \$145; 27<sup>th</sup> Street Bridge, Glenwood Springs, CO \$501; Elephant Mountain, TX \$120; Avondale Water Supply, CO \$50; San Felipe Erosion Protection, NM \$100.

**Snagging and Clearing for Flood Control (Section 208 of the 1954 Flood Control Act, 83<sup>rd</sup> Cong.)**

There were no costs in FY 2005.

**ENVIRONMENTAL INFRASTRUCTURE**

**14. CENTRAL, NM**

**Location.** Central, NM is defined as Bernalillo, Sandoval, and Valencia counties in central New Mexico.

**Proposed project.** Section 593 of the Water Resources Development Act of 1999 authorized the Corps of Engineers to provide assistance to non-Federal sponsors in the form of design and construction for water-related environmental infrastructure and resource protection and development of publicly-owned projects, including projects for wastewater treatment and related facilities, water supply, conservation and related facilities, stormwater retention and remediation, environmental restoration, and surface water resource protection and development.

**Local cooperation.** Local sponsors of the projects are responsible for 25% of the costs associated with each project. The Federal share is 75%.

**Condition at the end of the fiscal year.** To date, ten Project Cooperation Agreements (PCA) have been signed. Of those ten, eight projects have been completed and the remaining projects are in various stages of design.

**15. NM ENVIRONMENTAL INFRASTRUCTURE**

**Location.** New Mexico Environmental Infrastructure includes the entire state of New Mexico.

**Proposed project.** Section 595 of the Water Resources Development Act of 1999 as amended authorized the Corps of Engineers to provide assistance to non-Federal sponsors in the form of design and construction for water-related environmental infrastructure and resource protection and development of publicly-owned projects, including projects for wastewater treatment and related facilities, water supply, conservation and related facilities, stormwater retention and remediation, environmental restoration, and surface water resource protection and development. Initial funding was received in FY05.

**Local cooperation.** Local sponsors of the projects are responsible for 25% of the costs associated with each project. The Federal share is 75%.

**Condition at the end of the fiscal year.** One Project Cooperation Agreement (PCA) was executed during FY05, and negotiations were underway for PCA's for four additional projects.

**16. TRIBAL PARTNERSHIP PROGRAM, NM**

**Location.** Tribal Partnership Program, NM includes all Indian lands within the state of New Mexico.

**Proposed project.** Section 203 is a broad mandate wherein the Corps may determine the feasibility of water and other resource development projects that substantially benefit Indian Tribes and are primarily located in Indian country. Such studies may address flood damage reduction, environmental restoration and protection, and the preservation of cultural and natural resources. The Pueblos have numerous water, natural and cultural resource challenges, including persistent flooding within their historic and culturally significant ancestral village, management and operational problems with several aging dams and reservoirs, degradation of significant cultural and environmentally sensitive areas, drought planning and management.

## REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES IN FY 2005

**Local cooperation.** Feasibility studies are currently cost-shared as 50% Federal and 50% non Federal. An issue remains to be resolved regarding guidance for use of ability to pay provisions for Section 203.

**Condition at the end of the fiscal year.**

Coordination was initiated with the Zuni, Santa Ana, and San Ildefonso Pueblos regarding cost-share agreements for studies under this authority.

### **17. OTHER WORK UNDER SPECIAL AUTHORITY**

**Modifications to Structures and Operations of Constructed Corps Projects to Improve the Quality of the Environment, Pursuant to Section 1135 of the 1986 Water Resources Development Act, Public Law 662, 99<sup>th</sup> Congress, as amended.**

Federal cost for Section 1135 was \$5,240,515 of which \$3,433 was for coordination account funds; \$1,365,886 for Riparian/Wetland Restoration, Pueblo of Santa Ana, NM; \$3,760,246 for Albuquerque Biological Park Wetland Restoration; \$32,898 for Pecos River Restoration, Chaves County; \$4,320 for Aquatic Habitat Restoration at Pueblo of Santa Ana; \$56,328 for Ecosystem Revitalization at Route 66, Albuquerque, NM; \$151 for Santa Fe, Pojoaque, Rio Grande, NM; \$556 for Coronado, Rio Grande, NM; \$1,152. for Valencia, Rio Grande, NM; \$423 for Ciudad, Rio Grande, NM; \$50 for Pecos Ecosystem Restoration, NM; \$105 for Lamar Ecosystem, NM; and \$ 14,967 for Las Cruces Dam, Environmental Restoration, NM.

**Aquatic Ecosystem Restoration pursuant to Section 206 of the Water Resources Development Act of 1996, Public Law 303, 104<sup>th</sup> Congress, as amended.**

Federal cost for Section 206 was \$2,534,688 of which \$2,498 was for Coordination Account funds; \$127 was for Preliminary Restoration Plans; \$2,342,815 for Arkansas River Fisheries Habitat

Restoration; \$34,661 for Jemez River Aquatic and Riparian Habitat Restoration; \$50,346 for Las Cruces Wetland Restoration; \$79,081 for Bottomless Lakes State Park; \$9,915 for Janes Wallace Memorial Dam, NM; \$7,942 for Blue Hole Lake, NM; and \$7,302 for Tamarisk Eradication, CO.

### **General Investigations**

#### **18. SURVEYS**

Costs for the fiscal year were \$1,906,611 of which \$1,139,723 was for flood damage prevention studies, \$225,004 for special studies; \$99,909 for watershed/comprehensive studies; \$34,394 for miscellaneous activities; \$407,581 for coordination with other Federal agencies and non-Federal interests.

#### **19. COLLECTION AND STUDY OF BASIC DATA**

Fiscal year costs were \$136,952 for floodplain management and technical services.

Hydrological studies involving collection and study of basic data, such as stream flow data, collection of suspended sediment samples, recording rain gage data, special studies, hydro-meteorological studies, sedimentation studies, and environmental data studies continued. Costs during the fiscal year were \$4,302.

#### **20. PRECONSTRUCTION ENGINEERING AND DESIGN**

Fiscal year costs were \$402,470 on Southwest Valley Flood Damage Reduction Study, NM for Preconstruction Engineering and Design Costs in FY 2005.

**ALBUQUERQUE, NM, DISTRICT**

1.	Nov 17, 1986	<b>ACEQUIAS IRRIGATION SYSTEM</b> An irrigation system dating back to the eighteenth century with significant engineering work in the settlement and development of the western portion of the United States. Restoration and of this system has a cultural and historical value to the region. Measures are necessary to restore and protect the river division structures and associated costs.	Public Law 662, 99 <sup>th</sup> Cong., 2 <sup>nd</sup> sess. (Sec.1113)
	Oct 12, 1996	Except that the Federal share of reconnaissance studies carried out by the Secretary under this section shall be 100%.	Public Law 104-30 104 <sup>th</sup> Cong., (Sec. 101)
4.	Oct 27, 1965	<b>EL PASO, TEXAS</b> A single-purpose flood control system of detention dams, diversion dikes and channels to collect, regulate, and discharge arroyo runoff in the Rio Grande. Consists of four independent units (NW Area, Central Area, and two units, Copper system and Bluff Channel of the SE Area).	H. Doc. 207, 89 <sup>th</sup> Cong. 1 <sup>st</sup> sess. <sup>1</sup>
6.	Jun 30, 1948	<b>RIO GRANDE BASIN, NEW MEXICO</b> Authorized to be appropriated \$3,500,000 to be expended by the Dept. of the Army for partial accomplishment of approved general comprehensive plan for the Rio Grande Basin in NM and Colorado.	H. Doc. 243, 81 <sup>st</sup> Cong., 1 <sup>st</sup> sess.
	May 17, 1950	Authorized to be appropriated and additional \$39,000,000 for Department of the Army for prosecution of comprehensive for the Rio Grande Basin.	Public Law 516, 81 <sup>st</sup> Cong., 2 <sup>nd</sup> Sess.
	Jul 14, 1960	Authorized Cochiti Dam on Rio Grande and Galisteo Dam on Galisteo Creek as additions to authorized comprehensive plan for Rio Grande Basin (Cochiti Dam was authorized in lieu of Low Chamita Dam of Chamita Dam Reservoir Project on Rio Chama under "substitute plan"). Also authorized to be appropriated an additional \$58,300,000 for Dept. of the Army for an addition to comprehensive plan for the Rio Grande Basin.	S. Doc. 94, 86 <sup>th</sup> Cong.
	Nov 17, 1986	Authorized legislation of the Abiquiu Dam Emergency Gates by the Water Resources Development Act of 1986 (PL 99-662).	Public Law 662, 99 <sup>th</sup> Cong., 2 <sup>nd</sup> sess.
	Sep 30, 1997	The emergency gate construction project for Abiquiu Dam, NM, Authorized by Section 1112 of the Water Resources Development Act of 1986 (PL 99-662, 100 Stat. 4232) is modified to authorize the Secretary of the Army, acting through the Chief of Engineers, to Construct the project at an estimated cost of \$7,000,000. The non-Federal share of the project shall be 25 percent of those costs of the project attributable to an increase in flood protection as a result of the installation of such gates.	
6B.	Nov 20, 2004	<b>ALBUQUERQUE LEVEES, NM</b> The Secretary of the Army, acting through the Chief of Engineers, is authorized to undertake, at full federal expense, a detailed evaluation of the Albuquerque levees for purposes of determining structural integrity, impacts of vegetative growth, and performance under current hydrological conditions.	Public Law 108-447 108 <sup>th</sup> Cong (Title I)

ALBUQUERQUE, NM, DISTRICT

**AUTHORIZING LEGISLATION**

See Section In Text	Date Authorizing Act	Project and Work Authorized	Documents
6F.	Nov 17, 1986	<b>MIDDLE RIO GRANDE FLOOD PROTECTION, BERNALILLO TO BELEN, NM</b> Authorized project for flood control, Middle Rio Grande Flood Protection, Bernalillo to Belen, NM. Authorized increase of flood protection through the dredging of the bed of the Rio Grande in the vicinity of Albuquerque, NM, to an elevation lower than existed on the date of enactment of this Act. The project shall include the establishment of 75 acres of wetlands for fish and wildlife habitat and the acquisition of 200 acres of land for mitigation of fish and wildlife losses.	Public Law 662, 99 <sup>th</sup> Cong., 2 <sup>nd</sup> sess.
6G.	Nov 07, 2003	<b>RIO GRANDE BOSQUE REHABILITATION, (BOSQUE WILDFIRES), NM</b> The Secretary of the Army, acting through the Chief of Engineers, is authorized to undertake appropriate planning, design, and construction measures for wildfire prevention and restoration in the Middle Rio Grande bosque in and around the City of Albuquerque. Work shall be directed toward those portions of the bosque which have been damaged by wildfire or are in imminent danger of damage from wildfire due to heavy fuel loads and impediments to emergency vehicle access.	Public Law 108-137 108 <sup>th</sup> Cong
6H.	Jun 30, 1948 and May 17, 1950	<b>RIO GRANDE FLOODWAY, NM</b> Channel rectification, levee enlargement and construction, and bank stabilization on Rio Grande between river mile 123 and 394 (San Acacia to Bosque del Apache Unit).	Con., 1 <sup>st</sup> Sess. <sup>1</sup> and Public Law 516, 81 <sup>st</sup> Cong., 2 <sup>nd</sup> sess.
6I.	Oct 31, 1992	<b>RIO GRANDE FLOODWAY, SAN ACACIA TO BOSQUE DEL APACHE UNIT, NM</b> Modified the cost sharing to more equitably reflect the non-Federal contribution for the project by that percentage of benefits which is attributable to the Federal properties; except that, for purposes of this subsection, Federal property benefits may not exceed 50 percent of the total project benefits.	Public Law 102-580 102d Cong., (Sec. 102(e)).
14.	Aug 17, 1999	<b>CENTRAL, NM</b> For the counties of Bernalillo, Sandoval and Valencia, New Mexico design and construction assistance for water-related environmental infrastructure and resource protection and development projects to include wastewater treatment and related facilities, water supply, conservation and related facilities, stormwater retention and remediation, environmental restoration, and surface water resource protection and development. Federal costs under each local cooperation agreement shall be 75 percent in the form of grants or reimbursements. The non-Federal share of operation and maintenance costs shall be 100 percent. Authorized appropriation is \$25,000,000 available in FY 2000 and remain available until expended.	Public Law 106-53, 106 <sup>th</sup> Cong., (Sec. 593)
15.	Aug 17, 1999 and Nov 07, 2003	<b>NM ENVIRONMENTAL INFRASTRUCTURE</b> For the state of New Mexico, design and construction assistance for water-related environmental infrastructure and resource protection and development projects, including projects for wastewater treatment and related facilities; water supply and related facilities; environmental restoration; and surface water resource protection and development. The Federal share of project costs under each local cooperation agreement shall be 75 percent and may be in the form of grants or reimbursements. The non-Federal share of operation and maintenance costs shall be 100 percent. Authorized appropriation is \$25,000,000 available in FY 2004 and to remain available until expended.	Public Law 108-137, 108 <sup>th</sup> Cong (Sec 117) and Public Law 106-53 106 <sup>th</sup> Cong (Sec 595)
16.	Dec 11, 2000	<b>TRIBAL PARTNERSHIP PROGRAM</b> In cooperation with Indian tribes and the heads of other Federal agencies, the Secretary may study and determine the feasibility of carrying out water resources development projects that will substantially benefit Indian tribes and are located primarily within Indian country. Studies may address projects for flood damage reduction, environmental restoration and protection, and preservation of cultural and natural resources; and such other projects as the Secretary, in cooperation with Indian tribes and the heads of other Federal agencies, determines to be appropriate.	Public Law 106-541 106 <sup>th</sup> Cong (Title II)

<sup>1</sup> River mile 0 is at intersection of New Mexico-Texas state line with international boundary at El Paso, Texas.  
<sup>2</sup> Does not include non-Federal costs.  
<sup>3</sup> Includes \$5,383,000 major rehabilitation, \$138,900 for recreation facilities, and \$3,600,000 for emergency gates.

# LITTLE ROCK, ARKANSAS

The civil works portion of this District covers an area of approximately 36,414 square miles in northern, western, and southwestern Arkansas and a portion of Missouri. This area is within the Arkansas River, Little River, and White River basins. In the Arkansas River Basin, the District is responsible for planning, design, construction, operation, and maintenance of the navigation portion of the McClellan-Kerr Arkansas River Navigation System (MCKARNS). The District is also responsible for the areas included in the Arkansas River drainage basin from above Pine Bluff, AR, to below the mouth of the Poteau River, near Fort Smith, AR. In Little River Basin, the

District is responsible for the portion of the Little River and its tributaries that are in the state of Arkansas above its mouth near Fulton, AR. In the White River Basin, the District is responsible for those portions in southern Missouri and northern and eastern Arkansas in the White River drainage basin and its tributaries above Peach Orchard Bluff, AR. The Memphis District is responsible for navigation maintenance on the White River below Newport, AR, to the mouth of Wild Goose Bayou, in Arkansas County, AR. The White River downstream from the mouth of Wild Goose Bayou is part of MCKARNS.

## FLOOD CONTROL

### 1. FOURCHE BAYOU BASIN, LITTLE ROCK, AR

**Location:** On Fourche, Rock and Grassy Flat Creeks, Little Rock, AR. Fourche Creek enters the Arkansas River at mile 113.5.

**Existing Project:** This flood control project, consisting of 11.6 miles of channel improvement with railroad and road bridge widening (cost of \$30.7 million, non-Federal share \$9.6 million), had its operation and maintenance manual provided to the city of Little Rock in April 1998. The project authorization includes the acquisition of 1,750 acres of bottomlands (for flood storage and environmental preservation) with nature appreciation facilities; this work is remaining.

**Local Cooperation:** The city of Little Rock, the project sponsor, signed the local cooperation agreement in Aug 1987 according to the requirements of WRDA 1986. A new agreement is required for the remaining work. The estimated total project cost is \$35,914,000 with a Federal share of \$24,509,000 and a non-Federal share of \$11,405,000. The estimated cost of the remaining construction work is \$4,664,000.

**Operations During Current Year:** Work continued on the Limited Reevaluation Report (estimated cost \$520,000) scheduled to be completed in 2006. In FY 2005, \$23,182.94 of CG funds were expended.

## GENERAL INVESTIGATIONS

### 2. ARKANSAS RIVER NAVIGATION STUDY, AR AND OK

**Location:** The study area includes the entire 445 miles of the McClellan-Kerr Arkansas River Navigation System in Arkansas and Oklahoma.

**Existing Project:** The existing McClellan-Kerr Arkansas River Navigation System begins at the mouth of the White River at the Mississippi River; runs up the White River for approximately 10 miles and then enters the Arkansas Post Canal. The Arkansas Post Canal is approximately 9 miles long and connects the White River and the Arkansas River. The system proceeds up the Arkansas River to approximate navigation mile 395 where it enters the Verdigris River. The system continues up the Verdigris River to the Head of Navigation at

navigation mile 444.8 at the Port of Catoosa. There are 18 existing locks and dams on the system. This Feasibility Report and Environmental Impact Statement (EIS) are looking at increasing the minimum depth of the system from 9 feet up to 12 feet and making changes to the flow management plan. After coordination and review of the EIS a Record of Decision was signed on 27 September 2005.

**Local Cooperation:** Because this project is part of the inland navigation system, study costs are 100 percent Federal costs.

**Operations During the Fiscal Year:** Work was completed on the feasibility report and EIS in FY 2005. In FY 05, \$728,161.76 of G.I. funds were expended and \$1,161,998.41 of O&M funds were expended.

### 3. MAY BRANCH, FORT SMITH, AR

May Branch, Fort Smith, Arkansas, enters the Arkansas River at mile 307.5. A Feasibility Cost Sharing Agreement between the Corps and the City of Fort Smith was signed on November 13, 1998 to determine the measures and cost of a flood reduction project. The estimated project cost is \$304 million including an upstream betterment. The non-Federal cost is estimated to be \$17.8 million based on WRDA 1986, as amended. The ASA approved that the locally preferred plan be recommended in Oct 2005. The \$1.67 million, 50-50 cost-shared study is scheduled to be completed in 2006. In FY 2005, GI funds of \$29,182.06 and Contributed funds of \$35,061.48 were expended.

### 4. NORTH LITTLE ROCK (DARK HOLLOW), AR

**Location:** North Little Rock, AR bounded by I-40 to the north, I-30 to the east, and the Arkansas River to the south.

**Existing Project:** The proposed project is a flood tunnel project including replacement of the existing tunnel under Redwood Street. Section 576 of the Water Resources Development Act of 1999 directed the Corps to review the plans and determine if the project is economically justified, technically sound, and environmentally acceptable and if so, construct the project.

**Local Cooperation:** The design cost-sharing agreement was executed with the City of North Little Rock on 30 May 2000. The Limited Reevaluation Study was initiated 26 June 2000.

**Operations During Fiscal Year:** Currently studying 12' tunnel design and construction technique. Upon completion of the Limited Reevaluation Study necessary benefit to cost ratio will not exceed one, therefore study effort will be concluded.

## 5. PINE MOUNTAIN LAKE, AR

**Location:** The project was authorized in the Flood Control Act of 1965, for a dam site at mile 35.7 on Lee Creek 12 miles north of Van Buren, Arkansas, in Crawford County.

**Existing Project:** Existing authorization provides for construction of a lake for flood control, water supply, recreation and fish and wildlife enhancement. The lake would control runoff from 168 square miles with a capacity of 261,000 acre-feet. A General Reevaluation Report is being prepared to comply with NEPA requirements and to update the project economic analysis.

Height of Dam: 204.5 feet above streambed  
Type of Structure: Rockfill Embankment  
Capacity: 261,000 acre-feet  
Estimated Cost: \$81,700,000

**Local Cooperation:** The River Valley Regional Water District has opted to proceed at 100 percent federal financing of Preconstruction Engineering and Design (PED) activities in accordance with SWD guidance provided on September 26, 2003. The sponsor will pay their share of PED costs during the first year of construction.

## 6. SPRINGFIELD, MISSOURI

Jordan Creek, Springfield, MO, had a \$3,000,000 urban flood control and ecosystem restoration feasibility study initiated May 12, 2004, with the signing of the feasibility study agreement with the City of Springfield, the sponsor, under the authority of WRDA 1986, as amended. The study is scheduled to be completed in 2009. GI funds of \$260,799.42 and Contributed funds of \$85,688.82 were expended in FY 2005.

## 7. SOUTHWEST ARKANSAS STUDY

**Location:** The study area includes parts or all of four counties in Southwest Arkansas in the Red River and Little River basins.

**Existing Project:** Construction of the four projects resulted in the loss of 25,000 acres of bottomland wildlife habitat. About 9,000 acres of wetlands were lost due to

reservoir operations. There is a significant opportunity to reallocate storage to increase flood reduction benefits and to restore fish and wildlife habitat. Water releases from the four lakes could aid navigation on the Red River, which has been extended to Shreveport/Bossier City. Important economic factors are agriculture, poultry, and livestock operations. Accelerated runoff, sedimentation, and possible water quality problems need to be addressed.

Water supply storage could be used to make releases, especially out of Dierks and Gillham lakes, for kayaking with a resulting growth in recreational businesses. The watershed study would evaluate flooding, irrigation, restoration of fish and wildlife habitat, water quality, recreation and water releases for navigation.

**Local Cooperation:** The Reconnaissance study identified Federal interest. Next steps in the study are to initiate the Project Management Plan (PMP), establish project scope, identify potential project sponsors, and negotiate the feasibility cost sharing agreement (FCSA).

**Operations and Results During Fiscal Year:** The Congressional Add of \$99,000 will be used to identify local sponsors, prepare a Project Management Plan, and negotiate a feasibility cost sharing agreement.

## 8. WHITE RIVER MINIMUM FLOWS, AR

**Location:** The area involved is the cold water trout fisheries on the White River, the North Fork River, below the Corps' high head dams at Bull Shoals and Norfolk Lakes. Bull Shoals Dam is on the White River 7 miles upstream of Cotter, AR. Norfolk Dam is located on the North Fork River 4.8 miles northeast of Norfolk, AR.

**Existing Project:** The Water Resources Development Act of 1999 (WRDA 99), Section 374, and WRDA 00, Section 304, modifies the operation of the White River lakes to include specific amounts of project storage for the tail water trout fisheries; before this, water management decisions affecting lake levels and downstream flows were based primarily on flood control and hydro-power needs. The act directs the Corps to reallocate the following amounts of storage: Beaver Lake, 1.5 feet; Table Rock Lake, 2 feet; Bull Shoals Lake, 5 feet; Norfolk Lake, 3.5 feet; and Greers Ferry Lake, 3 feet. A reallocation study was completed in FY05, but did not recommend a project for construction. Section 132 of the FY 2006 Energy and Water Resources Development Act (P.L. 109-103) authorizes the implementation of plans

BS-3 at Bull Shoals and NF-7 at Norfolk lakes at full Federal expense in accordance with section 906(e) of WRDA 86. Section 132 also repealed the previous project authorities in WRDA 99 and WRDA 00, resulting in a new project.

**Local Cooperation:** None required, fully Federally funded. Section 132 of the FY 2006 Energy and Water Resources Development Act (P.L. 109-103) authorizes the implementation of plans BS-3 at Bull Shoals and NF-7 at Norfolk lakes at full Federal expense in accordance with section 906(e) of WRDA 86.

**Terminal Facilities:** BS-3, Bull Shoals option 3, will require a 5-foot increase in conservation pool, and modification of the SCADA remote operating language for minimum flows implementation. BS-3 minimum flows releases will be through the existing main turbines. NF-7, Norfolk Lake option 7, will require a 1.75-foot increase in conservation pool, modification to bulk heads, modification of SCADA remote operating language, connection of the existing station service units to the power grid, and design and construction of a siphon and valve system. NF-7 minimum flows releases will be through the existing station service units and the new siphon system.

**Operations During Fiscal Year:** Environmental Impact Statement ready for public review Spring 2006, completing Feasibility portion of the project. No PED or Construction until necessary funds are appropriated.

## CONSTRUCTION GENERAL

### 9. CLEARWATER MAJOR REHABILITATION PROJECT, CLEARWATER LAKE, MO

**Location:** Clearwater Dam, in Southeast Missouri on the Black River is an earthen dam 4,225 feet long and 154 feet high. The project was built for flood control and recreation.

**Existing Project:** Authorization for the Clearwater Dam project is the Flood Control Act of 1938 (Public Law 761, 75<sup>th</sup> Congress, 3<sup>rd</sup> Session); Authorization for the current project is a Major Rehabilitation Evaluation Report Approved by the ASA(CW) in August 2004. A Major Rehabilitation Study concluded that a new seepage cutoff wall is necessary to solve the seepage problem at Clearwater Dam. The Major Rehabilitation Report estimated the total cost of the project to be approximately \$90.3M. A sinkhole developed in January 2003 on the upstream face of the dam, and investiga-

tions indicate seepage is the likely cause. Seasonal pool deviation requests have been denied because of the sinkhole. Until the dam is rehabilitated, the pool deviations will have to be reviewed on a yearly basis and are likely to be denied. Results from a limited seismic analysis conducted during FY05 indicate that the dam passes the operating basis earthquake criteria, but more detailed seismic analysis will be necessary in the upcoming fiscal years. Additional studies on the spillway capacity and erosive potential may also be conducted in the future.

**Local Cooperation:** This is a 100 percent Federally funded project. No cost sharing is applicable, however there is extensive public interest.

**Operations During Fiscal Year:** FY05 activities consisted primarily of preparation of plans and specifications for Phase I of the project. Phase I consists of a close-spaced investigative drilling and grouting program to find and treat subsurface features that would impact the Phase II cutoff wall construction. Phase I will help define the parameters of the cutoff wall to be constructed in Phase II. A limited seismic analysis was conducted as part of the design process for Phase I of the major rehabilitation project, which concluded the dam passes the Operating Basis Earthquake Criteria. However, further analysis for the Maximum Credible Earthquake was recommended.

The contract for Phase I was awarded in January 2006. Phase II is expected to be awarded in mid-FY07. Both phases are expected to be completed in approximately four years.

### 10. ARKANSAS-WHITE CUTOFF CONTAINMENT STRUCTURE, AR, GENERAL REEVALUATION STUDY

**Location:** The Arkansas/White Cutoff is an element of the MKARNS project. The project is located in Arkansas County, Arkansas, from RM 0.0 to approximately RM 10.0 on the White River.

**Existing Project:** Authorization for the project is the 1946 River and Harbor Act. A natural cutoff between the lower White and Arkansas Rivers was closed during the development of the McClellan-Kerr Arkansas River Navigation System (MKARNS). During the 1970's and 1980's, a new cutoff began to develop upstream in the Melinda Channel-Owens Lake corridor and in 1989, construction of a more extensive set of structures, known as the Arkansas/White Cutoff Containment Structure, was initiated in an attempt to prevent contin-

ued development of the cutoff. However, cutoff development has continued and threatens to breach the land between the two rivers. Since the headcut containment structure was completed in 1992, the Corps has continued to expend construction funds to reduce the possibility of a cutoff.

**Local Cooperation:** This is a 100 percent Federally funded study, under the authorization for the MKARNS. No cost sharing is involved. However, close coordination with and active participation by environmental and private landowner interests is critical to successful completion of the project.

**Operations During Fiscal Year:** The multi-year general reevaluation study is complicated by the fact that there are three rivers influencing conditions, the White, Arkansas, and Mississippi Rivers. Extensive hydraulic modeling and analysis is necessary to select the best alternative. Activities during FY05 consisted primarily of hydraulic and sediment modeling, concept design and cost estimating for alternatives, and without project condition definition. Funding for FY05 activities was obtained through a Congressional Add. The district also conducted design and preliminary environmental coordination for a limited bank stabilization project on the lower Arkansas River, to attempt to prevent the Arkansas River from migrating closer to the White River, to decrease the risk of a cutoff between the two rivers.

Additionally, high flows in January 2005 damaged structures in the Jim Smith Lake area that were completed during FY04. The district developed a design for repairs to the structures, estimated to cost approximately \$3-3.5M. The district decided to re-prioritize O&M funds to make repairs to one of the structures, at a cost of \$1.5-1.7M, early in FY06. Repairs to the other structure are contingent upon a risk analysis and available funding.

No funding was appropriated for this project in FY06, and it is not in the President's FY07 budget.

## 11. GREERS FERRY LAKE WATER LINE

**Location:** Greers Ferry Lake is a multiple purpose project located in Cleburne and Van Buren Counties, Arkansas

**Existing project:** Subject to HQ's approval, a study will be initiated to determine the feasibility of constructing water intake facilities on Greers Ferry Lake, Arkansas, for the Community Water System. The Community

Water System (CWS) is a major water supply user for central Arkansas and is currently paying for 8,284 acre-feet of storage in Greers Ferry Lake. Their desire is for the Corps to provide funds to help pay for construction of the water intake structure. This project consists of constructing a water intake structure and appurtenant works to relieve the long-term reliance on the rapidly diminishing ground water supply.

Section 117, PL 106-554, directs the Corps to "...construct intake facilities for the benefit of Lonoke and White Counties, Arkansas". HDR Engineering Inc. was awarded a task order on a contract out of Tulsa District for work requested to review the initial designs provided by Community Water System, conduct engineering feasibility analysis of the site, and prepare a report detailing possible future involvement by the Little Rock District..

**Operations and Results During Fiscal Year:** The draft report was completed in August 2002. The final report was completed in November 2002. Copies of the final report were sent to HQ in May 2003. Although the final report does indicate some Federal interest (i.e. the intake structure would be located on Federal lands adjacent to the Greers Ferry reservoir), this project does not meet Corps priorities for funding. No further work is expected from Little Rock District.

## 12. MONTGOMERY POINT LOCK AND DAM, AR

**Location:** MPLD is being constructed one-half mile upstream from the Mississippi River, in the White River Entrance Channel (WREC), the first reach in the McClellan-Kerr Arkansas River Navigation System.

**Existing Project:** Construction of MPLD will allow control of the water level in the entrance channel, which will maintain the reliability of the navigation system during periods of low water. This is an ongoing construction project. The construction contract is complete and the lock and dam is operable in June 2005. The overall project is 95% complete, lacking completion of the remaining support contracts for the barge and crane, tow haulage, and wharf facilities. These items are required for operation and maintenance of the project. FY 2006 funds are being used to fully fund several remaining support contracts. The project will be completed in FY 2007.

**Local Cooperation:** None required, fully Federally funded.

**Terminal Facilities:** The Montgomery Point project includes a lock, dam, diversion channel, channel revetments, dikes, 14 miles of access road, power supply, control tower and mooring. The structure will consist of a single chamber, 110-foot-wide by 600-foot-long (usable dimension) miter-gated U-frame lock, 522-foot concrete floating guide walls, a 300-foot-wide bottom lift hinged-crest gated navigable pass concrete spillway (ten 30-foot-wide gates), and a 200-foot-wide fixed crest concrete overflow spillway. The navigable pass dam has a sill elevation (el) of 102.0, and the submersible hinged-crest gates raise to el 115.0. When Mississippi River stages are equal to or greater than el 115.0, the gates will be down, allowing vessels to pass over the dam. As Mississippi River stages fall, the gates will be raised to maintain minimum navigable depths upstream and vessels will pass through the lock. The navigable pass will be used 82 percent of the time under present conditions. The lower miter gate sill is at el 79.5 to provide navigation clearance for a projected future Mississippi River el of 95.0, which is the minimum stage projected at the waterway entrance by the year 2036. Under these future conditions the navigable pass would be used 73 percent of the time, and lockage would be required at all other times. The 18-foot hinged-crest gates for the navigable pass are unique, because in the raised position, the gates will be overtopped by a minimum of approximately 2 feet of flowing water. The gates are of a torque-tube design operated by a hydraulic cylinder connected to the center of the torque-tube within an operating gallery of the concrete sill. These gates are designed with a quick release lowering mechanism to minimize damage to the gate in the case of a vessel impact. A 25.5-foot-high portable dam gate maintenance dewatering structure is designed to be set under flowing river conditions and will be used to maintain the dam gates.

### **13. OZARK POWERHOUSE MAJOR REHABILITATION PROJECT, ARKANSAS RIVER, AR**

**Location:** The project is located on the Arkansas River at River Mile 256.8 near Ozark, Arkansas.

**Existing Project:** A Major Rehabilitation Study was completed in 1999, which recommended replacement of the existing turbines with modern, state-of-the-art units. Funds were appropriated in FY 2003, FY 2004, and 2005. This project consists of redesigning and replacing the turbines, rehabilitation of the powerhouse cranes, and replacement and rehabilitation of supporting systems and equipment. The project restores the Ozark Powerhouse output capacity and power output to the

original as-built conditions. Allocations through FY05 were \$5,395,000. The Current Project Estimate is \$84,371,000.

**Local Cooperation:** None Required in FY 2005. For 2006, the Southwest Power Pool hydropower customers have agreed to supply supplemental funding through a Memorandum of Agreement between the Corps of Engineers, Southwestern Power Administration and the City of Jonesboro (representing the Federal power customers) which was signed in 1999. This supplemental funding is required to prevent contract shutdown due to shortage of appropriate funds.

**Operations During Fiscal Year:** Efforts in FY 2005 included award of a turbine replacement contract in May 2005, and continuation of work on the rehab of Powerhouse cranes, supply of new draft tube gates, and work to prepare the plant for onsite construction activities. Estimated Completion date is August 2012. Project is approximately 7% complete.

## **CONTINUING AUTHORITY PROGRAM NAVIGATION ACTIVITIES**

### **14. SLACK WATER HARBOR, RUSSELLVILLE, AR**

**Location:** The project area is located along the McClellan-Kerr Navigation System approximately 75 miles northwest of Little Rock. The local sponsor is the River Valley Regional Inter-modal Facility Authority.

**Fiscal Year Cost:** The plans and specifications were initiated in October 2002 and were put on hold in September 2003 at the 50% design per the sponsor's request. The Corps was sued by environmental groups in the spring of 2004 with the major complaint being an EIS should have been done on the whole intermodal facility. FHA, the lead agency for the intermodal facility's EIS, plans to complete the EIS in April 2006. The Corps is a cooperating agency in the preparation of the EIS. Tentative work allowances indicate FY06 funds of \$200,000 will be provided to complete the plans and specs.

The total cost to implement the harbor was estimated at \$5,827,000, and the benefit-to-cost ratio was 1.2 to 1. The total federal share was estimated at \$3,350,000 and the total non-federal share was estimated at \$2,477,000. Congressional adds in the amount of \$1 million for FY01, \$1 million for FY02, \$500K in FY03, \$851K in FY04, and \$150k in FY06, have been included in the

LITTLE ROCK, AR DISTRICT

appropriations bills. Administration policy is total federal project costs are limited to the total amount named, \$3.5M.

Funds Spent Thru FY04: \$206,000  
Funds Spent in FY05: \$ 38,000

**EMERGENCY BANK PROTECTION**

**15. BATESVILLE WASTEWATER TREATMENT PLANT, BATESVILLE, AR**

**Location:** Batesville, Arkansas is located approximately 90 miles northeast of Little Rock, Arkansas.

**Fiscal Year Cost:**  
Funds spent through FY04: \$ 124,000  
Funds spent in FY05: \$ 0

**16. HIGHWAY 71 @ RED RIVER, OGDEN, AR**

**Location:** Ogden, Arkansas is located approximately 150 miles southwest of Little Rock, Arkansas.

**Fiscal Year Cost:**  
Funds spent through FY04: \$ 71,000  
Funds spent in FY05: \$ 1,000

**17. I-40 @ SPADRA CREEK**

**Location:** Clarksville, Arkansas is located approximately 100 miles west of Little Rock, Arkansas.

**Fiscal Year Cost:**  
Funds spent through FY04: \$ 10,000  
Funds spent in FY05: \$ 0

**18. LITTLE PINEY CREEK, HIGHWAY 164**

**Location:** The project is located at the bridge over Little Piney Creek on State Highway 164 near Hagarville, Johnson County, Arkansas.

**Fiscal Year Cost:**  
Funds spent thru FY 04: \$20,000  
Funds spend in FY 05: \$0

**FLOOD CONTROL ACTIVITIES**

**19. ARCHEY FORK CREEK, CLINTON,**

**AR**

**Location:** Archey Fork Creek is located in Clinton, Arkansas, approximately 75 miles north of Little Rock, Arkansas.

**Fiscal Year Cost:**  
Funds spent through FY04: \$ 42,000  
Funds spent in FY05: \$ 0

**20. GREENWOOD, AR**

**Location:** Greenwood, Arkansas is located approximately 20 miles south of Ft. Smith in western Arkansas.

**Fiscal Year Cost:**  
Funds spent through FY04: \$ 15,000  
Funds spent in FY05: \$ 9,000

**21. HIDDEN VALLEY, NEEDMORE BRANCH, GREENE CO, MO**

**Location:** Needmore Branch, Hidden Valley, Greene Co, MO, is adjacent to Springfield, MO.

**Fiscal Year Cost:**  
Funds spent through FY04: \$ 77,995  
Funds spent in FY05: \$ 1,942

**22. HIGH SCHOOL BRANCH, NEOSHO, MO**

**Location:** High School Branch is located in Neosho, Missouri, approximately 17 miles south of Joplin, Missouri.

**Fiscal Year Cost:**  
Funds spent through FY04: \$ 65,000  
Funds spent in FY05: \$ 4,000

**23. JAM UP CREEK, MOUNTAIN VIEW, MO**

**Location:** Mountain View is located in south central Missouri in Howell County approximately 100 miles east of Springfield.

**Fiscal Year Costs:**  
Funds spent through FY04: \$136,000  
Funds spent in FY05: \$14,300

**24. POLK BAYOU, MILLER AND  
PFEIFER CREEKS, INDEPENDENCE  
CO, AR**

**Location:** The project is in the vicinity of Batesville, which is about 95 miles northeast of Little Rock.

**Fiscal Year Costs:**

Funds spent through FY04: \$28,700

Funds spent in FY05: \$21,300

**25. PRAIRIE CREEK, RUSSELLVILLE,  
AR**

**Location:** Prairie Creek is located in Russellville, Arkansas, approximately 70 miles west of Little Rock, Arkansas.

**Fiscal Year Cost:**

Funds spent through FY04: \$ 35,000

Funds spent in FY05: \$ 10,000

**26. SULPHUR CREEK, TRIBUTARY 10,  
HEBER SPRINGS, AR**

**Location:** Heber Springs is located about 65 miles north of Little Rock.

**Fiscal Year Costs:**

Funds spent through FY04: \$12,800

Funds spent in FY05: \$10,800

1. Federal operation and maintenance terminated June 30, 1952 due to lack of commerce. Facilities at Locks and Dams Nos. 1, 2, and 3 disposed of in accordance with authority in Public Law 996, 84<sup>th</sup> Congress.

2. Responsibility for maintenance of project downstream from Newport, AR, transferred to Memphis District in FY62.

3. Lock & Dams 1 to 9 were constructed for the McClellan-Kerr Arkansas River Navigation System, which total cost was approx. \$120,000,000.

4. O&M for Lock & Dams 1 to 9 were constructed for the MKARNS, which FY05 cost was approx. \$25,700,000.

# TULSA, OKLAHOMA, DISTRICT

The civil works boundary of the Tulsa District includes an area of approximately 160,000 square miles covering Oklahoma and parts of Kansas and Texas within the Arkansas and Red River Basins. The District's responsibilities within the Arkansas River Basin cover southern Kansas, northern Oklahoma, and the Texas Panhandle. These areas are included in the drainage basin of the Arkansas River and its tributaries above the mouth of the Poteau

River, extending to the Kansas-Colorado State line, exclusive of that portion of the South Canadian River Basin and its tributaries west of the Texas-New Mexico State line. The District's responsibilities within the Red River Basin cover the northern portion of Texas, and the southern portion of Oklahoma. These areas are embraced in the drainage basin of the Red River and its tributaries above Index Arkansas.

**Navigation**

**1. McCLELLAN-KERR ARKANSAS RIVER NAVIGATION SYSTEM (Tulsa District Portion), OK**

**Location.** The Tulsa District portion of the McClellan-Kerr Arkansas River Navigation System provides a navigation route up the Arkansas River from the Oklahoma-Arkansas State line to the head of navigation at Catoosa, OK, near Tulsa, OK. The total length of the Tulsa District portion of the system is 137 navigation miles. Descriptions and costs for the entire navigation system can be found in Little Rock District's entry in this Annual Report.

**Existing projects.** The McClellan-Kerr Arkansas River navigation project is a component of the multiple-purpose plan for the Arkansas River Basin, which provides for the improvement of the basin through the construction of coordinated developments for navigation, hydroelectric power, flood control, water supply, water quality control, sediment control, recreation, and fish and wildlife propagation. The McClellan-Kerr project also includes bank stabilization, channel straighten-

ing, and cutoffs as required. The navigation channel has a minimum depth of 9 feet and minimum widths of 250 feet on the Arkansas River and 150 feet on the Verdigris River. The Tulsa District portion of the navigation system consists of Arkansas River Bank Stabilization and Channel Rectification, Chouteau Lock and Dam, Newt Graham Lock and Dam, Robert S. Kerr Lock and Dam and Reservoir, Robert S. Kerr Marine Terminal, Sans Bois Navigation Channel, W.D. Mayo Lock and Dam, Webbers Falls Lock and Dam, and the pool in Oklahoma which was created by Lock and Dam 13 in Arkansas. The other parts of the multiple-purpose plan for the Arkansas River Basin are listed in Table 29-H. Public Law 108-137 authorized a 12-foot channel on the McClellan-Kerr Arkansas River Navigation System. The Corps is now positioning itself to operate and maintain the system as a 12-foot channel. Deepening the remainder of the channel to 12 feet will allow carriers to place 43% more cargo on barges, which will reduce the amount of fuel consumed and emissions released. Funds in the amount of \$7M were allocated in FY05 for this deepening project with \$1.5M used to complete the feasibility study and

Environmental Impact Statement with the other \$5.5M used on engineering, design and construction activities in Tulsa and Little Rock Districts. In conjunction with the deepening project, the Corps is preparing a Basin Wide Master Plan that will include an integrated major maintenance construction and operation maintenance prioritized list for investment opportunities. Other environmental benefits include the creation of new aquatic habitat through new dike construction and the construction of Least Tern islands through beneficial use of dredged material.

**Local cooperation.** Fully complied with.

**Terminal facilities.** Public port facilities are in operation at Muskogee and Catoosa, OK, and Fort Smith, AR. Other private commercial port facilities are complete and in operation at eight Oklahoma locations.

**Operations and results during fiscal year.** Completed repair work on the first two tainter gate plate seals on WD Mayo. This work will continue over the next several fiscal years awarding two gates per FY or as funding allows. Completed repairs and painting of stop logs and tainter gates at Newt Graham and Chouteau Lock and Dams. Remoted the Chouteau Lock as well modified the remoting equipment at Newt Graham Lock and Dam which will aid in remote control operations in the future. Replaced pole lighting at McClellan Kerr, R.S. Kerr, and Webbers Falls. Continued replacing riprap to stabilize the channel bank and prevent further erosion in pool 14. Routine operation and maintenance continued.

## 2. OTHER AUTHORIZED NAVIGATION PROJECTS

See Table 38-C.

### Flood Control

## 3. ARCADIA LAKE, OK

**Location.** On the Deep Fork River, at river mile 218.3, in the metropolitan area of Oklahoma City and Edmond, OK, about 1.5 miles west of Arcadia, in Oklahoma County, OK. (See Arcadia, OK, Geological Survey map, scale 1:24,000.)

**Existing project.** The plan of improvement provides for flood control, water supply, and recreation by construction of an earth fill dam approximately 102 feet high and 5,250 feet long with a high-level uncontrolled spillway. Outlet works consist of a gated tower and conduit. The lake has a total capacity of 92,000 acre-feet (27,380 for conservation, 64,430 for flood control, and 190 for sedimentation reserve), and controls a 105-square-mile drainage area. Construction began in October 1980, and the project became operational for flood control in November 1986.

**Local cooperation.** The city of Edmond, Oklahoma and the Edmond Public Works Authority has not met the repayment obligations in its water storage agreement as required by the Water Supply Act of 1958 and the Consent Decree between the city of Edmond, Edmond Public Works Authority and the United States Government. PL 87-88, Section 10 which amended Section 301 (b) of the Water Supply Act of 1958, required the city of Edmond to enter into an agreement to repay 100 percent of the water storage costs before the Arcadia Lake project was constructed. Issues relating to the water supply storage were litigated in United States of America v. City of Edmond and Edmond Public Works Authority. Edmond entered into a Consent Decree with the United States Government on February 10, 1992 agreeing to repay all costs associated with present and future use water storage costs as required in the water storage agreement and Consent Decree. The agreement was developed under the Water Supply Act of 1958 that states that no payment need be made on future water supply storage until such supply is first used, but in no case shall the interest-free period exceed 10 years. The City of Edmond activated the future use storage in 1999; however, the 10-year interest free period expired on November 30, 1996. The City of Edmond disagrees with payment of accrued interest from the end of the 10-year interest free period, November 30, 1996 to the date it placed the future use storage into an active status, September 1999. The draft Water Resources Development Act of 2005 contained language that would have forgiven the city of Edmond this repayment

obligation; however, WRDA was not approved by Congress. The United States Government will continue to work with the city of Edmond and the Congressional delegation to resolve this issue.

**Operations and results during fiscal year.** Routine operation and maintenance continued.

#### 4. ARKANSAS CITY, KS

**Location.** Arkansas City is located approximately 4 miles north of the Kansas-Oklahoma state line at the crossroads of U.S. Highway's 77 and 166, in Cowley County, KS, immediately northwest of the confluence of the Arkansas and Walnut Rivers.

**Existing project.** The project consists of raising and extending approximately 6 miles of levee along the Arkansas and Walnut Rivers, and rechanneling approximately 2-1/2 miles of the Walnut River. Structural steel gates will be constructed at two railroad/river crossings and stop log structures will be constructed at two U.S. Highway/river crossings.

**Local cooperation.** A Project Cooperation Agreement was signed on September 4, 1996. The city of Arkansas City, the local sponsor, is currently fulfilling their requirements.

**Operations and results during fiscal year.** Continued Phase III construction.

#### 5. ARKANSAS-RED RIVER BASINS CHLORIDE CONTROL PROJECTS, KS, OK, AND TX

**Location.** On certain tributary streams of the Arkansas and Red Rivers in the western half of the Tulsa District.

**Existing project.** The project was initiated as a result of studies involving the control of water pollution caused by 15 natural salt sources identified in 1957 by the U.S. Public Health Service. The Arkansas and Red Rivers are major national and regional water resources, which are severely limited due to poor water quality primarily caused by the natural pollutant, sodium chloride. The Arkansas River is polluted by five naturally occurring salt sources located in northwestern Oklahoma and southwestern Kansas. The Red River Basin is polluted by 10

naturally occurring salt sources located in northwestern Texas and southwestern Oklahoma. Preliminary Feasibility Studies included the construction and subsequent maintenance of an injection well and a ring dike used for data collection. Preauthorization studies completed in 1966 and 1970 recommended construction of project features at 13 of the 15 chloride emission areas. For a detailed discussion of the chloride control projects, see page 19-4 of the Annual Report for 1983. The Water Resources Development Act (WRDA) of 1986 (PL 99-662) authorized the Red River Basin and the Arkansas River Basin as separate projects with separate authority under Section 203 of the Flood Control Act of 1966. The Arkansas River portion of the project was deferred in 1982 (not economically justified).

#### 5a. AREA V, ESTELLINE SPRINGS, TX

**Location.** Chloride Control Area V is located about 0.5 miles east of Estelline, TX, on the Prairie Dog Town Fork of the Red River.

**Existing project.** For a description of the completed improvement, see the Annual Report for 1987. Construction started in 1963, and the structure was completed in 1964.

**Local cooperation.** Descriptive text concerning local cooperation requirements is given on page 19-5 of the Annual Report for 1983.

**Operations and results during fiscal year.** Routine operation and maintenance continued.

#### 5b. AREA VIII, TX

**Location.** Chloride Control Area VIII is located at river mile 74.9, of the South Fork of the Wichita River, in King County, TX, about 5 miles east of Guthrie, TX.

**Existing project.** The plan of improvement consists of a low-flow brine collection dam (the Bateman Low-Flow Dam) with attendant

pumping station and pipeline facilities. The collected brine is pumped to the storage reservoir behind the Truscott Brine Dam. This brine dam, located at river mile 3.6 on Bluff Creek (a tributary of the North Fork of the Wichita River) about 3 miles northwest of Truscott, TX, contains collected brine from Area VIII and will contain brine collected in the future from Areas X and VII. Construction was initiated at Area VIII and Truscott Brine Dam in 1976. The Bateman Low-Flow Dam was completed and put into full operation in May 1987.

**Local cooperation.** Descriptive text concerning local cooperation requirements is given on page 19-5 of the Annual Report for 1983.

**Operations and results during fiscal year.** Routine operation and maintenance continued.

### 5c. RED RIVER BASIN CHLORIDE CONTROL, TX & OK

**Location.** The project is located in Cottle, Hall, and King Counties, TX, and Harmon County, OK, along the Wichita and Red Rivers. Area VI is located on the Elm Fork of the Red River in Harmon County, OK; Area VII is on the North Fork of the Wichita River, Cottle County, TX; Crowell Brine Dam is on Canal Creek, a tributary of the Pease River; Area IX is on the Middle Pease River, Cottle County, TX; Area X is on the Middle Fork of the Wichita River, King County, TX; and Areas XIII-XIV are on the Jonah and Salt Creeks of Prairie Dog Town Fork of the Red River, Hall County, TX.

**Existing project.** The plan of improvement consists of one deep-well injection system, three brine storage reservoirs, four low-flow brine collection dams, two well collection facilities, six pumping plants, and 56.3 miles of pipeline. Construction was completed at Estelline Springs, Area VIII (low-flow dam, pump station and pipeline), Area X (low-flow dam and pump station) and Truscott Lake. In 1987, Area VIII began operation, pumping brines to Truscott Lake.

**Local Cooperation.** Section 1107 of the Water Resources Development Act of 1986 authorized the project at full Federal expense. The Red

River Authority of Texas has signed a 221 Agreement as the non-Federal sponsor.

**Operation and results during fiscal year.** A draft Supplement to the Final Environmental Impact Study (SFEIS) was submitted for public review in May 1995. Finalization of the SFEIS has been put on hold indefinitely and the Assistant Secretary of the Army for Civil Works directed that a reevaluation of the Wichita River Basin be performed with available funding. The Wichita Basin Reevaluation effort was completed and a Record of Decision (ROD) was executed in March 2004. Efforts are underway to complete the Wichita Basin portion of the project. Reevaluation efforts have been initiated for Area VI, Elm Fork Basin, OK.

### 6. BIRCH LAKE, OK

**Location.** On Birch Creek at river mile 0.8, about 1.5 miles south of Barnsdall, in Osage County, OK. (See Barnsdall, OK, Geological Survey map, scale 1:24,000.)

**Existing project.** For a description of the completed improvement, see the Annual Report for 1979. Construction began in November 1973, and the project was placed in useful operation in March 1977.

**Local cooperation.** Fully complied with.

**Operations and results during fiscal year.** Routine operation and maintenance continued.

### 7. BOWIE COUNTY LEVEE, TX

**Location.** Bowie County is located in northeastern Texas, along the Red River, near Texarkana, Texas. The Bowie County Levee is situated on the south side of the Red River and extends almost 9 miles from the Kansas City Southern Railroad embankment westward to an area near Wamba, Texas. (See Wamba, TX, Geological Survey map, scale 1:24,000.)

**Existing project.** The project, as authorized under the Flood Control Act of 1946, provides for the rehabilitation of the existing Bowie County, Texas, Levee. The levee was

constructed in 1913 by the Bowie County Levee District No. 1. The Bowie County Levee is part of a levee system, which includes the Miller County Levee that extends downstream approximately 35 miles. The existing Bowie County Levee does not meet current design standards and has not received proper maintenance. Studies completed in 1994 indicated that no economically feasible flood control alternative was identified and Federal interest in pursuing detailed design and project construction was not warranted. Legislation passed in FY 01 re-authorized the project to include rehabilitation of approximately 6 miles of the existing levee and construction of approximately 4 miles of new levee. This project will be constructed at an estimated cost of \$14,143,000.

**Local cooperation.** The Government has determined that this project will be cost-shared in accordance with the Flood Control Act of 1936.

**Operations and results during fiscal year.** Continued NEPA coordination, including extensive archaeological investigation. Updating of the Decision Document was initiated.

## 8. CANDY LAKE, OK

**Location.** On Candy Creek, a tributary of Bird Creek in the Verdigris River Basin, at river mile 1.9. The damsite is about 1.5 miles northeast of Avant in Osage County, OK. (See Avant, OK, Geological Survey map, scale 1:24,000.)

**Existing project.** The plan of improvement provides for an earthfill dam about 4,200 feet long, including an uncontrolled concrete spillway, with a maximum height of 103 feet above the streambed. Outlet works will consist of a gated intake structure, a 10x11.25-foot conduit, and a stilling basin. An 18x24-inch low-flow pipe and an 18-inch water supply pipe will be provided. The lake will have a total capacity of 75,420 acre-feet (44,160 for conservation and sediment reserve and 31,260 for flood control). The drainage area above the damsite is 43 square miles. Candy Lake will be operated as a unit of a seven-lake system for flood control in the Verdigris River Basin in Oklahoma. Funds were not provided to complete construction and in 1996 deauthorization of

Candy Lake was published in the Federal Register.

**Local cooperation.** Section 2 of the Flood Control Act of 1938, the Water Supply Act of 1958, and Section 221 of the Flood Control Act of 1970, apply.

**Operations and results during fiscal year.** WRDA 99 mandated selling deauthorized project lands back to the former owners or their descendants. With funds of \$360,000 provided in FY 03, the sale of land will be completed. Transfers have begun on 11 of the 27 tracts have been sent to ASA(CW) for signature. The remaining tracts will stay in Corps ownership until further investigation and possibly mitigation are complete.

Deleted: transfer

## 9. CANTON LAKE, OK

**Location.** On the North Canadian River at river mile 394, about 2 miles north of Canton in Blaine County, OK. (See Canton, OK, Geological Survey map, scale 1:24,000.)

**Existing project.** For a description of the completed improvement, see page 590 of the Annual Report for 1969. Construction began in December 1940, and the project was placed in useful operation in April 1948. A Dam Safety Report was submitted to HQUSACE in March 2001. The purpose of the report was to evaluate and select an alternative to address the inability of the project to safely pass the Probable Maximum Flood (PMF). In 2005, Canton was included in a HQ's Screening Portfolio Risk Assessment on the 10% highest risk dams within the Corps.

**Local cooperation.** The Canton Lake Committee was established to improve coordination and communication between the multi-purpose users of Canton Lake. The committee coordinates Oklahoma City's water supply release schedule with interested parties to minimize impacts.

**Operations and results during fiscal year.** Continued Dam Safety construction activities. Completed the repair and rehabilitation of the Tainter Gates from the previous fiscal year. Performed a Dam

Safety Trunion Anchor Study. Routine operation and maintenance continued.

### 10. COPAN LAKE, OK

**Location.** On the Little Caney River, a tributary of the Caney River, in the Verdigris River Basin, at river mile 7.4, about 2 miles west of Copan in Washington County, OK. (See Copan, KS, Geological Survey map, scale 1:24,000.)

**Existing project.** For a description of the completed improvement, see page 19-7 of the Annual Report for 1983. Copan Lake is operated as a unit of a seven-lake system for flood control in the Verdigris River Basin in Oklahoma. Construction began in November 1972, and the project was placed in useful operation in April 1983.

**Local cooperation.** Fully complied with.

**Operations and results during fiscal year.** The reallocation study to identify water supply for the city of Bartlesville continues. Completion is anticipated in April 2006. Approval of the plan by HQ could take up to a year. Routine operation and maintenance continued.

### 11. COUNCIL GROVE LAKE, KS

**Location.** On the Grand (Neosho) River at river mile 450, about 1.5 miles northwest of Council Grove, in Morris County, KS. (See Council Grove Lake, KS, Geological Survey map, scale 1:24,000.)

**Existing project.** For a description of the completed improvement, see page 519 of the Annual Report for 1969. Construction began in June 1959, and the project was placed in useful operation in July 1964.

**Local cooperation.** Fully complied with.

**Operations and results during fiscal year.** The Kansas-Oklahoma Conference of the United Church of Christ requested a land exchange involving property they currently lease. A Congressional Add in 2004 provided \$80,000 to the Corps for administrative costs associated with the land exchange. All preliminary real estate actions for the exchange were completed in 2004. The exchange of property was delayed

in the late 2004 due to the discovery of an archaeological National Historic Preservation Act of 1966, the site must be investigated to determine if it is eligible for listing on the National Register. The investigation is scheduled for the first quarter of calendar year 2005. Congressional add funding was utilized to repair roads in Ritchie Cove and Santa Fe parks. Routine operation and maintenance continued.

### 12. EL DORADO LAKE, KS

**Location.** On the Walnut River, a tributary of the Arkansas River, at river mile 100.2, about 4 miles northeast of El Dorado in Butler County, KS. (See El Dorado, KS, Geological Survey map, scale 1:24,000.)

**Existing project.** For a description of the completed improvement, see page 19-7 of the Annual Report for 1983. El Dorado Lake was authorized as a unit of a three-lake system for flood control in the Walnut River Basin. Construction began in October 1973, and impoundment began in June 1981. Project is complete.

**Local cooperation.** By payment of \$8.17 million on May 18, 1997, the Kansas Department of Wildlife and Parks has fully complied with the Recreation Local Cooperation Agreement.

**Operations and results during fiscal year.** WRDA 99 mandated the transfer without consideration of 51.98 acres of land to the state of Kansas for use as Honor Camps. The state of Kansas must pay for the administrative costs of the land transfers. A letter was sent to the state of Kansas informing the state of the administrative costs. The state of Kansas is not interested in paying the administrative costs and is not pursuing the land transfer. Routine operation and maintenance continued.

### 13. ELK CITY LAKE, KS

**Location.** On the Elk River at river mile 8.7, about 7 miles northwest of Independence, in Montgomery County, KS.

Deleted: July

{See Table Mound, KS, Geological Survey map, scale 1:24,000.)

**Existing project.** For a description of the completed improvement, see page 593 of the Annual Report for 1969. Construction began in February 1962, and the project was placed in useful operation in March 1966.

**Local cooperation.** Fully complied with.

**Operations and results during fiscal year.** Routine operation and maintenance continued.

**14. FALL RIVER LAKE, KS**

**Location.** On the Fall River at river mile 54.2, about 4 miles northwest of Fall River, in Greenwood County, KS. (See Severy, KS, Geological Survey map, scale 1:24,000.)

**Existing project.** For a description of the completed improvement, see page 953 of the Annual Report for 1969. Construction began in May 1946, and the project was placed in full operation in April 1949.

**Local cooperation.** Fully complied with.

**Operations and results during fiscal year.** The sluice gates and liners were painted as well as an upgrade of the project office sewage system. Performed a Dam Safety Trunion Anchor Study. Routine operation and maintenance continued.

**15. FORT SUPPLY LAKE, OK**

**Location.** On Wolf Creek, a tributary of the North Canadian River, at river mile 5.5, about 12 miles northwest of Woodward, in Woodward County, OK. (See Fort Supply, OK, Geological Survey Map, scale 1:24,000.)

**Existing project.** For a description of the completed improvement, see page 594 of the Annual Report for 1969. Construction began in October 1938, and the project was placed in full flood control operation in May 1942.

**Local cooperation.** Fully complied with.

**Operations and results during fiscal year.** Routine operation and maintenance continued.

**16. FRY CREEKS, BIXBY, OK**

**Location.** In the northern part of the city of Bixby, in Tulsa County, OK.

Deleted: ¶

**Existing project.** The project consists of enlarging both Fry Creeks, diverting Fry Creek 1 into Fry Creek 2 and then diverting the combined creeks into the Arkansas River. The total length of the modified channels would total 4.3 miles, with bottom widths of 30 to 225 feet and depths of 6 to 12 feet. Three bridges were replaced and 20 acres of land acquired for mitigation of fish and wildlife losses. Estimated total cost of the project is \$14,513,000.

**Local Cooperation.** The Project Cooperation Agreement was signed with the city of Bixby, OK, in January 1995.

**Operations and results during fiscal year.** Construction efforts were completed in FY00.

**17. GREAT BEND, KS**

**Location.** In Barton County, KS, on the north bank of the Arkansas River about 4.5 miles above its confluence with Walnut Creek. (See Great Bend, KS, Geological Survey map, scale 1:24,000.)

**Existing project.** The plan, authorized by the Flood Control Act of 1965, provides for 6.2 miles of leveed channel to divert Walnut Creek flood flow around Great Bend into the Arkansas River upstream from the city; a 1.5-mile leveed channel to divert Little Walnut Creek flood flow into the Walnut Creek diversion levees along the Arkansas River; a tie-back levee 4.3 miles long on the Arkansas River left bank upstream from the junction of the Walnut diversion channel; and appurtenant facilities.

Deleted:

**Local cooperation.** Fully complied with.

**Operations and results during fiscal year.** Financial closeout on this project was completed during FY 97. This project has been fully operational since June 1994. Estimated total cost of the project is \$36,350,000 (October 1994 price level base).

**18. GREAT SALT PLAINS LAKE, OK**

**Location.** On the Salt Fork of the Arkansas River at river mile 103.3, about 12 miles east of Cherokee, in Alfalfa County, OK. (See Jet, OK, Geological Survey map, scale 1:24,000.)

**Existing project.** For a description of the completed improvement, see page 594 of the Annual Report for 1969. Construction of the project began in September 1938, and was completed in July 1941. The project was placed in full flood control operation in May 1941.

**Local cooperation.** Fully complied with.

**Operations and results during fiscal year.** Routine operation and maintenance continued.

## 19. HALSTEAD, KS

**Location.** In the city of Halstead, in Harvey County, KS, along the Arkansas River. (See Halstead, KS, Geological Survey Map, scale 1:24,000.)

**Existing project.** Provides for channel modification and construction of about 4 miles of levee in combination with straightening and widening approximately 3.6 miles of the Little Arkansas River channel to a 50-foot-bottom width in the vicinity of Halstead. Channel modification will be restricted to one side of the channel except in transition areas. Tree planting and re-vegetation will be done and ten pool riffle areas will be established to minimize environmental impacts.

**Local cooperation.** Fully complied with.

**Operations and results during fiscal year.** The construction contract claim was resolved. Financial closeout was completed.

## 20. HEYBURN LAKE AND POLECAT CREEK, OK

**Location.** On Polecat Creek, a minor tributary of the Arkansas River, at river mile 48.6, about 11 miles west of Sapulpa, in Creek County, OK. (See Lake Heyburn, OK, Geological Survey map, scale 1:24,000.)

**Existing project.** For a description of the completed improvement, see page 599 of the

Annual Report for 1969. Construction started in March 1948, and the project was placed in useful operation in October 1950. Channel improvements below the lake were completed in September 1952.

**Local cooperation.** The channel improvement project below the lake was never maintained by the sponsor, Joint Drainage District No. 1, Tulsa and Creek Counties, OK. For this reason, the channel returned to its pre-project condition and does not provide flood protection for the affected area. The Corps of Engineers discontinued maintenance inspections of the channel project in 1982, due to the condition of the project and lack of cooperation on the part of the sponsor. Stakeholders have identified a need for a reallocation study.

**Operations and results during fiscal year.** Replace To Drain and Contrcut Bulkhead were completed. Routine operation and maintenance continued.

## 21. HUGO LAKE, OK

**Location.** On the Kiamichi River at river mile 17.6, about 7 miles east of Hugo, in Choctaw County, OK. (See Hugo Dam, OK, Geological Survey map, scale 1:24,000.)

**Existing project.** For a description of the completed improvement, see page 19-12 of the Annual Report for 1977. Construction began in October 1967, and the project was placed in useful operation in January 1974.

**Local cooperation.** Fully complied with.

**Operations and results during fiscal year.** WRDA 99 mandated the sale of approximately 250 acres of project lands at Hugo Lake to the Choctaw County Industrial Authority at fair market value. Tulsa District completed NEPA documentation, surveys and other activities needed for the land transfer. The Deed of Transfer was submitted and signed by the Secretary of the Army execution. Continued the repair and painting of the project's 6 tainter gates. Routine operation and maintenance continued.

**22. HULAH LAKE, OK**

**Location.** On the Caney River at river mile 96.2, about 15 miles northwest of Bartlesville, near Hulah, in Osage County, OK. (See Bowring, OK, Geological Survey map, scale 1:24,000.)

**Existing project.** For a description of the completed improvement, see page 595 of the Annual Report for 1969. Construction began in May 1946, and was completed in June 1950. The project was placed in full flood control operation in September 1951.

**Local cooperation.** Fully complied with.

**Operations and results during fiscal year.** A T1 telephone line was installed to connect the Homeland Security upgrade electronic security systems that were previously installed. The reallocation study to identify water supply for the city of Bartlesville continues. Completion is anticipated in April 2006. Initiated repair of the spillway hatch covers and construction of a spreader lifting beam. Routine operation and maintenance continued.

**23. JOHN REDMOND DAM AND RESERVOIR, KS**

**Location.** The dam is located on the Grand (Neosho) River at river mile 343.7, about 2 miles northwest of Burlington, in Coffey County, KS. (See John Redmond Dam, KS, Geological Survey map, scale 1:24,000.)

**Existing project.** For a description of the completed improvement, see page 581 of the Annual Report for 1970. Construction was initiated in July 1959, and was completed in December 1965. The project was placed in flood control operation in July 1964.

**Local cooperation.** Fully complied with.

**Operations and results during fiscal year.** Completed the previous years Homeland Security upgrade work. Mitigation features for the reallocation study were negotiated. Study to raise impoundment 2 will be completed in 2005. Structural changes and mitigation will need to occur with implementation. Performed Dam

Safety Trunion Anchor Study. Routine operation and maintenance continued.

**24. KAW LAKE, OK**

**Location.** On the Arkansas River at river mile 653.7, about 8 miles east of Ponca City, in Kay County, OK. (See Charley Creek West, OK, Geological Survey map, scale 1:24,000.)

**Existing project.** For a description of the completed improvement, see page 19-13 of the Annual Report for 1977. Construction began in June 1966, and the project was placed in operation in May 1976.

**Local cooperation.** Fully complied with.

**Operations and results during fiscal year.** Initiated the major repair of four tainter gates with work continuing in the future based on available funding. Routine operation and maintenance continued.

Deleted: July

**25. LAKE KEMP, TX**

**Location.** On the Wichita River at river mile 126.7, about 40 miles southwest of Wichita Falls, TX. (See Northeast Lake Kemp, TX, Geological Survey Map, scale 1:24,000.)

**Existing project.** For a description of the completed improvement, see page 19-14 of the Annual Report for 1977. Construction began in May 1970, and the project was placed in useful operation in October 1972.

**Local cooperation.** Fully complied with. Stakeholders have identified a need for a reallocation study.

**Operations and results during fiscal year.** Continued rehabbing a service gate from the previous year. Routine operation and maintenance continued.

**26. LAKE WICHITA, HOLLIDAY CREEK, TX**

**Location.** The project is located in Wichita and Archer Counties, TX. The Lake Wichita dam and the Holliday Creek channel are

located in the city of Wichita Falls, TX. (See Wichita Falls, TX, Geological Survey Map, scale 1:24,000.)

**Existing project.** The existing Lake Wichita dam was replaced with an earthen dam approximately 16,000 feet long with a concrete spillway, an auxiliary spillway, and low-flow outlet works. Channel improvements along Holliday Creek from the new spillway to the Wichita River, a distance of 9.3 miles, were also constructed.

**Local cooperation.** Fully compiled with.

**Operations and results during fiscal year.** The project was completed October 1, 1996, and is fully operational. Estimated total project cost is \$48,789,000 (October 1995 price level base).

**27. MARION RESERVOIR, KS**

**Location.** On the Cottonwood River at river mile 126.7, about 3 miles northwest of Marion, in Marion County, KS. (See Pilson, KS, Geological Survey map, scale 1:24,000.)

**Existing project.** For a description of the completed improvement, see page 597 of the Annual Report for 1969. Construction began in June 1964, and the project was placed in flood control operation in February 1968.

**Local cooperation.** Fully complied with.

**Operations and results during fiscal year.** Initiated repairs of tainter gates and the Cottonwood Point Public Use Area. Routine operation and maintenance continued.

**28. MCGRATH CREEK, WICHITA FALLS, TX**

**Location.** The project is located in the northern central portion of Texas, in the city of Wichita Falls.

**Existing project.** McGrath Creek is approximately 3,900 feet long and connects Sikes Lake and the recently constructed Holliday Creek project. The project involves realigning and concrete lining the McGrath Creek Channel, and constructing a new spillway to pass flows through Sikes Lake.

**Local cooperation.** The city of Wichita Falls, TX, is the non-Federal sponsor. The Project Cooperation Agreement was executed in November 1994.

**Operations and results during fiscal year.** Project construction is completed. Estimated total project cost is \$14,500,000.

**29. MINGO CREEK, OK**

**Location.** On the right-bank tributary of Bird Creek in the city of Tulsa, in Tulsa County, OK. (See Tulsa, OK, Geological Survey Map, scale 1:24,000.)

**Existing project.** The project consists of 23 detention sites to capture peak flows and hold them temporarily until downstream flows subside. There are approximately 9.4 miles of channelization in selected locations on the tributaries and main stem of Mingo Creek. Estimated total project cost is \$123,960,725.

**Local cooperation.** The local sponsor is the city of Tulsa, OK, and has been fully complied with. The city has constructed 4.75 miles of channel and placed two excavated detention facilities into flood control operation prior to initiation of Federal construction in September 1988. Reimbursement for work completed by the city of Tulsa is \$19,000,000.

**Operations and results during fiscal year.** Construction efforts were complete in FY01.

**30. OOLOGAH LAKE, OK**

**Location.** On the Verdigris River at river mile 90.2, about 2 miles southeast of Oologah, in Rogers County, OK. (See Oologah, OK, Geological Survey map, scale 1:24,000.)

**Existing project.** For a description of the completed improvement, see page 19-15 of the Annual Report for 1972. Construction began in July 1950, but the project was placed in standby status in October 1951. Construction resumed in December 1955, and was completed in May 1963 for initial development. Construction for ultimate

Deleted: ¶

Deleted: Financial closeout is ongoing and scheduled to be complete during FY 01

Deleted: Financial closeout occurred in FY 00.

Deleted: Financial closeout is ongoing and scheduled to be complete during FY04.

(second stage) development was initiated in July 1967, and was completed in 1974.

**Local cooperation.** Fully complied with.

**Operations and results during fiscal year.** Completed the service bridge and the gantry crane painting from the previous fiscal year. A General Investigation study for watershed ecosystem restoration continues. Routine operation and maintenance continued.

**31. OPTIMA LAKE, OK**

**Location.** On the North Canadian River at river mile 623.2, about 4.5 miles northeast of Hardesty, in Texas County, OK. (See Optima Dam, OK, Geological Survey map, scale 1:24,000.)

**Existing project.** For a description of the existing improvement, see page 19-16 of the Annual Report for 1979. Construction began in March 1966, and impoundment began in October 1978. Construction was completed in 1981.

**Local cooperation.** Fully complied with.

**Operations and results during fiscal year.** Routine operation and maintenance continued.

**32. PARKER LAKE, OK**

**Location.** On Muddy Boggy Creek, a tributary of the Red River, about 23 miles east of Ada, in Coal County, OK. (See Parker, OK, Geological Survey map, scale 1:24,000.)

**Existing project.** Parker Lake, if constructed, would be a multipurpose element in a plan of improvement for the Upper Muddy Boggy Creek Basin, OK. The project would consist of an earth fill dam about 2,200 feet long, a gated outlet works for flood control and water supply, and a 100-foot-wide spillway. The lake created would have a total storage capacity of 220,240 acre-feet and would yield 42 million gallons per day for municipal and industrial water supply. The project was authorized by WRDA of 1986, however the project has not been funded for construction. Federal accomplishment of single purpose municipal and industrial water supply projects is not a current Administration priorities.

**Local cooperation.** The Oklahoma Water Resources Board, the sponsor, has agreed to cost share in the flood control portion of the project and the water supply provided enough interested users for the water supply can be identified.

Deleted: ¶

**Operation and results during fiscal year.** Estimated total project cost is \$71,400,000 (October 1992 price level base).

**33. PAT MAYSE LAKE, TX**

**Location.** On Sanders Creek, a tributary of the Red River, at river mile 4.6, about 12 miles north of Paris, in Lamar County, TX. (See Grant, TX, Geological Survey map, scale 1:24,000.)

**Existing project.** For a description of the completed improvement, see page 584 of the Annual Report for 1970. Construction began in March 1965, and the project was placed in full flood control operation in September 1967.

**Local cooperation.** Fully complied with.

**Operations and results during fiscal year.** Routine operation and maintenance continued.

**34. PEARSON-SKUBITZ BIG HILL LAKE, KS**

**Location.** On Big Hill Creek at river mile 33.3, about 4.5 miles east of Cherryvale, KS. (See Dennis, KS, Geological Survey map, scale 1:24,000.)

**Existing project.** For a description of the completed improvement, see page 19-11 of the Annual Report for 1983. Construction began in April 1974, and impoundment began in March 1981.

**Local cooperation.** Fully complied with.

~~**Operations and results during fiscal year.** Routine operation and maintenance continued.~~

Deleted: T

Deleted: , however a Limited Project Review of the project is scheduled to be completed in March 1998

**35. PINE CREEK LAKE, OK**

Deleted: in accord with

**Location.** On the Little River at river mile 145.3, about 5 miles northwest of Wright City, in McCurtain County, OK. (See Wright City, OK, Geological Survey map, scale 1:24,000.)

**Existing project.** For a description of the completed improvement, see page 584 of the Annual Report for 1970. Construction began in February 1963, and the project was placed in useful operation in June 1969.

**Local cooperation.** Fully complied with.

**Operations and results during fiscal year.** Routine operation and maintenance continued.

### 36. SARDIS LAKE, OK

**Location.** On Jackfork Creek, a tributary of the Kiamichi River, at river mile 2.8, about 2.5 miles north of Clayton, in Pushmataha County, OK. (See Yanush, OK, Geological Survey map, scale 1:24,000.)

**Existing project.** For a description of the completed improvement, see page 19-11 of the Annual Report for 1983. Sardis Lake is operated as a unit of a two-lake system for flood control in the Kiamichi River Basin. (The other lake in the system is Hugo Lake). Construction began in August 1975, and the project became operational in January 1983.

**Local cooperation.** The Oklahoma Water Resources Board (OWRB) failed to make satisfactory arrangements to pay for the Sardis Lake water supply storage as agreed to in a letter exchange of September 1997. On July 2, 1998, the state of Oklahoma was declared in default under the contract. On July 14, 1998, the Department of Justice (DOJ) filed suit in the Northern District Court of Oklahoma. The litigation has not moved forward because of a taxpayer "qui tam" (Fent case) suit filed in January 1998 in the Western District Court of Oklahoma against the OWRB and the United States. The suit between OWRB and the United States was postponed until a decision was reached on the taxpayer "qui tam" suit. On March 4, 1999, the Western District Court dismissed OWRB and the United States from the suit. The Fent case was appealed to the Tenth Circuit U.S. Court of Appeals. The dismissal was upheld and the case was remanded. The Fent case was appealed to the Oklahoma

Supreme Court (OSC) and the OSC accepted the case for review. The qui tam lawsuit was settled when the OSC ruled that the water storage contract between the State of Oklahoma and the United States Government is a legally binding contract. Since that decision, the Federal government has reopened its lawsuit and it is now in litigation in the U.S. District Court for the Northern District of Oklahoma. The United States filed a motion for summary judgment on December 14, 2003. The State of Oklahoma filed its response on January 23, 2004. The United States filed their Reply on February 20, 2004. On November 9, 2004, the United States filed a Memorandum of Law pursuant to the Order of the Court dated October 22, 2004. The Memorandum addressed issues related to the validity of the Sardis Lake contract No. DACW56-74-C-0134 under state law and the preemption of state law by Federal law. The state of Oklahoma was also directed to file a Memorandum of Law on these issues. On May 19, 2005, the Court entered an order granting the Summary Judgment Motion of the United States. The state of Oklahoma appealed to the U.S. Court of Appeals for the Tenth Circuit. Briefs have been filed by the state of Oklahoma and the United States. The U.S. Court of Appeals will review the Briefs and issue a ruling. The parties are now waiting for the Court to rule on the matter. Work is ongoing.

**Operations and results during fiscal year.** Routine operation and maintenance continued.

### 37. SKIATOOK LAKE, OK

**Location.** On Hominy Creek, a tributary of Bird Creek in the Verdigris River Basin, at river mile 14.3, about 5 miles west of Skiatook, in Osage County, OK. (See Avant S.E., OK, Geological Survey map, scale 1:24,000.)

**Existing project.** For a description of the completed improvement, see Page 19-8 of the Annual Report for 1987. Construction began in January 1974, impoundment began in October 1984, and the project became operational in November 1984.

**Local cooperation.** Fully complied with. Stakeholders have identified a need for a reallocation study.

**Operations and results during fiscal year.** A major recreation lease was signed with the Skiatook Economic Development Authority for the provision of additional recreation facilities. This was Tulsa District's first action under the National Recreation Lakes Demonstration Program. Completed work on the seepage collection system from the previous fiscal year as well as replaced the existing relief wells with a new system. Routine operation and maintenance continued.

### 38. TORONTO LAKE, KS

**Location.** On the Verdigris River at river mile 271.5, about 4 miles southeast of Toronto, in Woodson County, KS. (See Fredonia, KS, Geological Survey map, scale 1:24,000.)

**Existing project.** For a description of the completed improvement, see page 600 of the Annual Report for 1969. Construction began in November 1954, and the project was placed in full operation in March 1960.

**Local cooperation.** Fully complied with.

**Operations and results during fiscal year.** WRDA 99 mandated the transfer, without consideration, of 31.98 acres of project lands to the state of Kansas for use as an Honor Camp. The state of Kansas must pay for the administration costs of the land transfer. A letter was sent to the state of Kansas informing the state of the administrative costs, however, the state is not interested in paying the costs and is not pursuing the land transfer. Routine operation and maintenance continued.

### 39. TULSA AND WEST TULSA LEVEES, OK

**Location.** On the banks of the Arkansas River near Tulsa, OK. On the left bank, the levee extends from river mile 531.0 near Sand Springs, OK, downstream to river mile 521.4 at Tulsa. On the right bank, the levee extends from near river mile 526.7 downstream to river mile 521.3 and is adjacent to the major portion of the business and residential districts in West Tulsa, Tulsa County, OK.

**Existing project.** The Tulsa and West Tulsa Levees were completed by the Tulsa District in 1945. The project was turned over to the Tulsa County Drainage District No. 12 for operations and maintenance. The project consists of 3 levees with a total length of about 20 miles and an average height of 10 feet. The levees provide protection from flooding to property valued at approximately \$1 billion dollars. Rehabilitation of the drainage pipes thru the existing levee were completed in FY02.

**Local cooperation.** Fully complied with.

**Operations and results during fiscal year.** Routine operation and maintenance continued.

### 40. WAURIKA LAKE, OK

**Location.** On Beaver Creek, a tributary of the Red River, at river mile 27.0, about 6 miles northwest of Waurika, in Jefferson County, OK. (See Hastings, OK-TX, Geological Survey map, scale 1:24,000.)

**Existing project.** For a description of the completed improvement, see page 19-12 of the Annual Report for 1983. Waurika Lake is operated as a unit of a coordinated lake system for flood control in the Red River Basin. Construction began in July 1971, and impoundment began in August 1977.

**Local cooperation.** Fully complied with.

**Operations and results during fiscal year.** Routine operations and maintenance continued.

### 41. WINFIELD, KS

**Location.** Winfield is located approximately 15 miles north of the Kansas-Oklahoma state line on U.S. Highway 77 in Cowley County, KS. The city is located immediately southeast of the confluence of the Walnut River and Timber Creek.

**Existing project.** The project consists of raising and extending approximately 4 miles of levee along Timber Creek and the Walnut River. Road ramps will be constructed at

**Deleted:** The Local Cooperation Agreement (LCA) was executed in March 1992, with Tulsa County and Levee District No. 12, the non-Federal sponsors

**Deleted:** Phase III rehabilitation efforts were initiated in FY 01 and completed in FY 02.

two locations where city streets cross the Walnut River.

**Local cooperation.** A Project Cooperation Agreement (PCA) was signed on September 4, 1996. The city of Winfield, the local sponsor, is currently fulfilling its requirements.

**Operations and results during fiscal year.** A construction contract was awarded in FY 98. Construction was completed in FY 99. The Project was transferred in FY 00.

#### **42. WISTER LAKE, OK**

**Location.** On the Poteau River at river mile 60.9, about 2 miles south of Wister, in LeFlore County, OK. (See Wister, OK, Geological Survey map, scale 1:24,000.)

**Existing project.** For a description of the completed improvement, see page 601 of the Annual Report for 1969. Construction began in April 1946, and was completed in May 1949. The project was placed in full flood control operation in October 1949.

**Local cooperation.** Fully complied with.

**Operations and results during fiscal year.** Repairs to the gate system and equipment was initiated in FY05. Routine operation and maintenance continued. A General Investigation study continues for aquatic ecosystem restoration within the lake.

#### **43. OTHER AUTHORIZED FLOOD CONTROL PROJECTS**

See Table 38-E.

#### **44. INSPECTION OF COMPLETED LOCAL FLOOD PROTECTION PROJECTS**

Inspections of completed, Federally constructed local flood protection projects which are owned, operated, and maintained by local interests are made to determine the extent of compliance with approved regulations for operations and maintenance. The inspections assist the Corps of Engineers in determining if the project provides the flood protection for which it was

constructed. See Table 38-I for a list of projects inspected in FY 05. Fiscal year cost was \$278,136.

#### **45. SCHEDULING FLOOD CONTROL RESERVOIR OPERATIONS**

The Tulsa District Corps of Engineers is responsible for flood control operations at 12 non-Corps projects. These include nine Bureau of Reclamation lakes, two Grand River Dam Authority lakes, and one city-county owned lake. All of these projects were constructed wholly or in part with Federal funds. Routine flood control releases were required at several of the projects. Fiscal year costs for scheduling flood control reservoir operations totaled \$864,001.

#### **46. EMERGENCY RESPONSE ACTIVITIES - FLOOD CONTROL AND COASTAL EMERGENCIES**

**a. Disasters.** The Emergency Operations Center (EOC) was activated a total of 3 times during FY 05. Two of these were in support of 24-hour dam safety surveillance periods that occurred in the Kansas Area following intense regional rainfall events in South-Central Kansas in June and in August 2005. Work involved preparation of daily situation reports and providing a central Command and Control hub for the District during these events. Impacts were primarily to the reservoir operations with only isolated localized flooding occurring in the region that was handled by local and State of Kansas responders. The 3<sup>rd</sup> EOC operational period began with Hurricane Katrina and continued thru Hurricane Rita. Tulsa District was assigned certain missions during these events and the EOC provided daily situation reports on deployed navigation fleet assets and personnel, and also provided administrative support to the over 150 District employees who deployed in response to FEMA-issued mission assignments to USACE under these events. This EOC operational period continues to date.

**b. Operational Program Areas.** Fiscal year cost for catastrophic disaster

preparedness was \$27,219; \$-82 for Nationwide Civil Works Activities; \$-41,031 for anti-terrorism force protection; \$259,859 for disaster preparedness; \$48,569 for the emergency operations.

**c. Emergency Work in Support of Other Federal Agencies.** The Tulsa District Power PRT deployed to San Antonio, TX for Hurricane Emily and later to Beaumont, TX for Hurricane Rita emergency power mission assignments issued to SWD. Emergency Management Unit personnel also deployed in support of ESF #3 missions for Hurricanes Dennis (Jackson, MS), Katrina (Baton Rouge, LA), Ophelia (Orlando, FL), and Rita (Baton Rouge, LA). Over 175 other District employees deployed in support of emergency power, temporary roofing, debris removal missions, and also for logistical support for the emergency water and ice missions for Hurricanes Katrina and Rita. To date approximately over 175 District employees have deployed in support of these missions. These deployments continue to be supported by District personnel, primarily in the Emergency Field Office-West location in Lake Charles, LA. Management of this office was tasked to Tulsa District via USACE in support of Hurricane Rita to assist MVD who was all ready heavily engaged in Hurricane Katrina mission assignments.

**47. FLOOD CONTROL WORK UNDER SPECIAL AUTHORIZATION**

See Table 38-J for FY 04 expenditures for Small Flood Control Projects Not Specifically Authorized by Congress (Section 205); Emergency Streambank and Shoreline Projects (Section 14).

**Multiple-Purpose Projects Including Power**

**48. BROKEN BOW LAKE, OK**

**Location.** On the Mountain Fork River at river mile 20.3, about 9 miles northeast of Broken Bow, in McCurtain County, OK. (See Broken Bow, OK, Geological Survey map, scale 1:24,000.)

**Existing project.** For a description of the completed improvements, see page 29-17 of the Annual Report for 1971. Construction began in

November 1961, and the project was placed in useful operation in October 1969. Power units 1 and 2 were placed in operation in January and June 1970, respectively.

**Local cooperation.** The development of a trout fishery in the Mountain Fork River below Broken Bow Lake was implemented in 1989, in cooperation with the Corps of Engineers (Corps), Southwestern Power Administration, Oklahoma Department of Wildlife Conservation, and OWRB. The operation of the trout stream has been cooperatively managed by a Memorandum of Understanding. WRDA of 1996, Sec. 338, modified the project to provide for the reallocation of sufficient quantity of water supply storage space to support the Mountain Fork trout fishery at no expense to the state of Oklahoma. WRDA 1999 allowed for a 3-foot seasonal pool to offset losses to hydropower caused by the trout fishery. The study to determine the impacts of these actions identified 16 cultural resource sites that would be adversely impacted due to the 3-foot seasonal pool raise. The State Historic Preservation Office (SHPO) wanted every site mitigated, which would have cost about \$2.4M. After a trip to the project in October 2005 by Tulsa District and SHPO personnel, SHPO identified 8 sites it wants mitigated. Also, a Memorandum of Agreement will have to be developed between the two agencies outlining the resolution of the adverse effects on the sites which are eligible for listing in the National Register for Historic Places. The reallocation study cannot be completed until all cultural resource issues are worked out. Work is on-going.

Deleted: 4

**Operations and results during fiscal year.** Modified the draft tube gates to ensure proper operation. Routine operation and maintenance continued.

**49. EUFAULA LAKE, OK**

**Location.** On the Canadian River at river mile 27.0, about 12 miles east of Eufaula, in McIntosh County, OK. (See Porum, OK, Geological Survey map, scale 1:24,000.)

**Existing project.** For a description of the completed improvement, see page 588 of the

Annual Report for 1970. Construction began in December 1956, and the project was placed in full flood control operation in February 1964. There are numerous areas along the shoreline where private property is subject to flooding and erosion as a result of the construction and operation. Erosion problems in numerous subdivisions bordering the lake were studied in 1989 and 1993. At this time, it is estimated that there are approximately 22 miles of shoreline in need of attention. Estimated costs for repair is approximately \$15 million.

**Local cooperation.** Fully complied with.

**Operations and results during fiscal year.** Installed two CST toilets at a public use area, constructed a boat ramp at Porum Landing and constructed a gate shack and resurfaced road at highway 9. Routine operation and maintenance continued.

**50. FORT GIBSON LAKE, OK**

**Location.** On the Grand (Neosho) River at river mile 7.7, about 5 miles north of Fort Gibson, in Muskogee County, OK. (See Fort Gibson Dam, OK, Geological Survey map, scale 1:24,000.)

**Existing project.** For a description of the completed improvement, see page 604 of the Annual Report for 1969. Construction began in March 1942, but was held in abeyance during World War II. Construction resumed in May 1946, and was completed in June 1950. The fourth generator was installed and the project placed in full operation in September 1953.

**Local cooperation.** Fully complied with.

**Operations and results during fiscal year.** Modified the sluice gates and replaced the bulkhead recess hatch covers. In addition, installed Homeland Security upgrades to meet BSP level 1 requirements. Customer-funded hydropower repairs were also made on the exciter system. Routine operation and maintenance continued.

**51. KEYSTONE LAKE, OK**

**Location.** On the Arkansas River at river mile 538.8, near Sand Springs, OK, and about 15 miles west of Tulsa, OK. (See Keystone Dam, OK, Geological Survey map, scale 1:24,000.)

**Existing project.** For a description of the completed improvement, see page 589 of the Annual Report for 1970. Construction began in January 1957, and the project was placed in flood control operation in September 1964.

Deleted: ¶

**Local cooperation.** Fully complied with.

**Operations and results during fiscal year.** Customer-funded hydropower repairs were made on the 480v system as well as replacement of the storage batteries. Routine operation and maintenance continued.

**52. LAKE TEXOMA (DENISON DAM), OK AND TX**

**Location.** On the Red River at river mile 725.9, about 5 miles northwest of Denison, TX. (See Denison Dam, OK, Geological Survey map, scale 1:24,000.)

Deleted: resurfaced

**Existing project.** For a description of the completed improvement, see page 603 of the Annual Report for 1969. Lake Texoma is operated as a unit of a coordinated lake system for flood control in the Red River Basin. Construction started in August 1939, and was completed in February 1944. Commercial power generation was started in March 1945. Authorized work is complete except for installation of the third, fourth, and fifth power units.

**Local cooperation.** Fully complied with.

**Operations and results during fiscal year.** WRDA 99 mandated the sale, at fair market value, of approximately 1,580 acres of project lands to the State of Oklahoma. The administrative costs of the land transfer must be paid by the state of Oklahoma. An estimate of administrative costs, \$187,000, was provided by Oklahoma Commissioners. Transfer of + 525 acres completed. A reallocation report resulting from WRDA 99 legislation is expected to be completed in May 2006 with water storage contracts in place by 2007. The Burns Run West Public Use Area was rehabilitated. The generator rewind project, which was customer funded was started. Routine operation and maintenance continued.

### 53. ROBERT S. KERR LOCK AND DAM AND RESERVOIR, OK

**Location.** On the Arkansas River at navigation mile 336.2, about 8 miles south of Sallisaw, in LeFlore County, OK. (See Robert S. Kerr, OK, Geological Survey map, scale 1:24,000.)

**Existing project.** For a description of the completed improvement, see page 19-21 of the Annual Report for 1972. The Robert S. Kerr Lock and Dam and Reservoir is a unit of the McClellan-Kerr Arkansas River Navigation System. Construction began in April 1964, and closure was completed in October 1970. The lock and dam became operational for navigation in December 1970. Generating units 1, 2, 3, and 4 were placed in operation in October, July, September, and November 1971, respectively.

**Local cooperation.** See section 1 of this report.

**Terminal facilities.** Five sites have been developed for handling coal, grain, construction aggregates, and miscellaneous cargo. The facilities are considered adequate for present traffic.

**Operations and results during fiscal year.** Replaced pole lighting and performed routine operation and maintenance.

### 54. TENKILLER FERRY LAKE, OK

**Location.** On the Illinois River at river mile 12.8, 7 miles northeast of Gore, in Sequoyah County, OK. (See Gore, OK, Geological Survey map, scale 1:24,000.)

**Existing project.** For a description of the completed improvement, see page 606 of the Annual Report for 1969. Construction began in June 1947, and was completed in July 1953.

**Local cooperation.** Fully complied with. Stakeholders have identified a need for a reallocation study.

**Operations and results during fiscal year.** Initiated and completed Homeland Security upgrades to meet BSP level 1 requirements. Routine operation and maintenance continued. A project to build an auxiliary spillway and to modify the existing spillway was authorized

February 22, 1994, by the Acting Assistant Secretary of the Army, under the Dam Safety Assurance Program. Phase I was awarded in FY 00. Phase II was awarded in FY 04. Project completion is scheduled for FY 06.

### 55. WEBBERS FALLS LOCK AND DAM, OK

**Location.** On the Arkansas River at navigation mile 366.6, about 5 miles northwest of Webbers Falls, in Muskogee County, OK. (See Webbers Falls, OK, Geological Survey map, scale 1:24,000.)

**Existing project.** For a description of the completed improvement, see page 19-23 of the Annual Report for 1977. The Webbers Falls Lock and Dam is a unit of the McClellan-Kerr Arkansas River Navigation System. In January 1965, construction began and the project was placed in useful operation in November 1970. The lock and dam became operational for navigation in December 1970. Generating units 1, 2, and 3 were placed in operation in August, September, and November 1973, respectively.

**Local cooperation.** See section 1 of this report.

**Terminal facilities.** Facilities at the Port of Muskogee include: a cargo pier, mooring dolphins, warehouse, terminal building, and fuel facility built by the Muskogee City-County Port Authority; a liquid cargo loading facility and a steel unloading facility built by Frontier Steel Company; grain holding facilities built by Conagra, Inc.; and a general-purpose private dock built by the Fort Howard Paper Company. The facilities are considered adequate for present traffic.

**Operations and results during fiscal year.** Replaced the pole lighting and repaired and repainted the stoplogs. Customer-funded hydropower repairs were made on the cold water piping as well as the replacement of 13.8 KV breaker systems. Routine operation and maintenance continued.

### Environmental Infrastructure

**56. LAWTON, OK**

**Location.** Lawton is located approximately 80 miles southwest of Oklahoma City on Highway 44.

**Existing project.** The project consists of demolition of an existing, but abandoned, wastewater treatment facility.

**Local cooperation.** Cost sharing on this project will be 75% Federal and 25% non-Federal. The city will be responsible for provision of LERRD and cash as necessary.

**Operations and results during fiscal year.** In FY04, this project design was initiated. The letter report for the project was approved. NEPA approval process is underway.

**57. TAR CREEK CLEANUP, OK**

**Location.** Tar Creek is located in northeast Oklahoma, in Ottawa County.

**Existing project.** The project consists of technical planning, design and construction assistance to non-Federal interests to remedy adverse environmental and human health impacts. Projects demonstrate practicable alternatives and activities which include measures to address lead exposure and other environmental problems related to historical mining activities in the area. Projects include capping of areas where surface materials containing high levels of lead are easily wind-dispersed in local communities, plugging of open mineshafts, and a subsidence potential evaluation.

**Local cooperation.** Cooperating non-federal interests are responsible for LERRD.

**Operations and results during fiscal year.** In FY05, establishment of a grass cover was completed on the Boys and Girls Club Project in Picher, OK, and open mineshafts were plugged. The draft subsidence evaluation was completed, and additional mine shaft planning work began.

**58. YUKON, OK**

**Location.** Yukon is located immediately adjacent to Oklahoma City's western boundary on Highway 66.

**Existing project.** The project consists of constructing approximately 9 miles of domestic water line connecting the city's well field to the city water system. Also to be constructed is a one million gallon storage facility.

**Local cooperation.** Cost sharing on this project will be 75% Federal and 25% non-Federal. The city will be responsible for provision of LERRD and cash as necessary.

**Operations and results during fiscal year.** In FY04, this project was scoped and design undertaken. The project letter report was approved. NEPA approval process is underway.

**General Investigations**

**59. SURVEYS**

Fiscal year cost was \$911,081, which included one flood damage prevention reconnaissance study, five special studies, one watershed comprehensive study; miscellaneous activities - special investigations, and Interagency Water Resources Development; North American Waterfowl Management Plan, Coordination with other Agencies, and two planning assistance to states studies. Table 38-K provides a specific list and respective fiscal year expenditures.

**60. COLLECTION AND STUDY OF BASIC DATA**

Fiscal year cost was \$160,000, which includes floodplain management services. Table 38-K provides a specific list and respective fiscal year expenditures.

1. Includes \$2,077,900 expended by the Jobs Act (P.L. 98-8 dated, March 24, 1983) for projects listed in Tables 29-M of the FY 85 Annual Report.
2. Includes \$12,700,038 for Bank Stabilization and Channel Rectification.
3. Excludes \$81,460 contributed funds and \$1,348,816 special funds.
4. Excludes \$299,803 contributed funds and \$13,211,728 special funds.
5. Excludes \$134,919 contributed funds. Includes \$49,581 Public Works acceleration funds; and \$1,058,500 Hydropower.
6. Excludes \$5,366,231 special funds.
7. Includes \$433,549 Emergency Relief funds. Exchange \$1,256,068 from special contributed funds.
8. Excludes \$946 contributed funds. Includes \$39,999 Public Works acceleration funds. Includes an appropriation of \$21,527,500 for Dam Safety and \$21,257,054 in Dam Safety expenditures.
9. The cost for Grand Lake O' the Cherokees has been added to the amount reported in paragraph 45, Scheduling Flood Control Reservoir Operations.
10. Includes an appropriation for Dam Safety of \$7,413,000, and Dam Safety expenditures of \$7,302,050.
11. Includes an appropriation for Dam Safety of \$750,000, and Dam Safety expenditures of \$40,304.
12. Contributed funds for Muddy Creek bridge replacement.

**Navigation**

**1. TRINITY RIVER PROJECT, TX**

The project authorized by the River and Harbor Act of 1965 (H. Doc 276,89th Cong., 1st Sess.) consists of five major components: Multiple-Purpose Channel, Tennessee Colony Lake, Dallas Floodway Extension, West Fork Floodway and Water Conveyance Facilities. For the last full report on the project as authorized, see Annual Report of 1978. The project information present herein is based on the tentatively selected project plan presented in the Draft General Design Memorandum. The plan consists of three structural components: Dallas Floodway Extension, Tennessee Colony Lake, and Channel to Liberty in the lower basin.

**Operations during fiscal year.** See Galveston, Texas, District Annual Report for Channel to Liberty. Tennessee Colony Lake has been dormant for several years due to lack of local support, and is proposed for deauthorization. The Dallas Floodway Extension continues in the construction phase, and is described in the Flood Control section.

**CHANNEL TO LIBERTY:**

**Location.** The Channel to Liberty begins at the Houston Ship Channel, crosses the bay area in an easterly direction to intersect the existing Double Bayou Channel, turns northward along the coastline to Wallisville Lake and then continues northward through the lake area along the course of the Trinity River to River Mile 45 above Liberty, Texas.

**Existing project.** See Galveston, Texas District Annual Report for existing project.

**Proposed project.** The navigation portion of the channel will have a width of 200 feet with a depth of 12 feet and will extend from the Houston Ship Channel in Galveston Bay to the port of Liberty, Texas. The flood control portion of the channel will have a bottom width of 200 feet with a depth of 30 feet, and will extend from Wallisville Lake to River Mile 45 above Liberty, Texas.

**Local cooperation.** Local interests are required to: (a) provide, without cost to the Federal Government, all lands, easements and rights-of-way required for construction, operation and maintenance of the project, (b) accomplish, without cost to the Federal Government, all relocations and alterations to

existing improvements, other than highway bridges over new land cuts and railroad bridges required for the construction of the project; (c) maintain and operate the flood control portion of the channel upstream of Liberty, Texas, and (d) reimburse the Federal Government for one-half of the separable costs allocated to recreation and fish and wildlife enhancement.

**TENNESSEE COLONY LAKE:**

**Location.** The Tennessee Colony dam site is located at River Mile 341.7 on the Trinity River about 22 miles west of Palestine, Texas. The lake would extend into Freestone, Anderson, Henderson, and Navarro Counties, and would control a drainage area of 12,302 square miles.

**Existing project.** The plan of improvement provides for the construction of an earthfilled dam with a maximum height of 123 feet above the streambed and a total embankment length of 42,350 feet with a gated concrete spillway. The lake will have a total controlled storage of 3,455,000 acre-feet and a water surface area of 114,400 acres at the top of the flood control pool and 68,100 acres at the top of the conservation pool. The total storage includes 2,269,500 acre-feet for flood control, 1,040,000 acre-feet for conservation, and 145,500 acre-feet for sediment reserve. The project will be proposed for deauthorization in FY 2006.

**Local cooperation.** Local interests are required to reimburse the Federal Government for costs allocated to water supply storage and one-half of the separable cost allocated to recreation and fish and wildlife enhancement.

**Flood Control**

**2. AQUILLA LAKE, TX**

**Location.** On Aquilla Creek in Hill County, Texas, with the dam at River Mile 23.3, about 6.8 miles southwest of Hillsboro, Texas, and about 24.0 miles north of Waco, Texas.

**Existing project.** For description of completed improvements and authorizing acts see Annual Report of 1984. Construction was started March 1977, and project was ready for beneficial use April 29, 1983. Estimated cost is \$46,100,000.

**Local cooperation.** The Water Supply Act of 1958, as amended, and the Federal Water Project

Recreation Act of 1965 and Section 221, Flood Control Act of 1970 apply. A contract with the Brazos River Authority for water supply storage was approved by the Secretary of the Army, June 29, 1976. To date, the Authority has paid \$1,516,370 toward principal and \$482,415 to operation and maintenance.

**Operations during fiscal year.** Continued routine operation and maintenance activities.

Benefits accrued to Aquilla Lake project: Accumulated flood damages prevented through FY 2005 were \$31,743,500.

**3. BARDWELL LAKE, TX.**

**Location.** Dam is on Waxahachie Creek 5-river miles upstream from its confluence with Chambers Creek, a tributary of the Trinity River, and about 5 miles south of Ennis, Ellis County, Texas.

**Existing project** For a description of completed improvement and authorizing act see Annual Report of 1969. Construction of project was started August 1963 and completed for beneficial use in November 1965. Estimated cost of project is \$12,941,000.

**Local cooperation.** Local interests must reimburse the Federal Government for costs allocated to increased water supply storage under the terms of the Water Supply Act of 1958. A contract was approved by the Secretary of the Army on June 24, 1963, and the Trinity River Authority, a State agency, agreed to fulfill all requirements of local cooperation. To date the authority has paid \$2,424,923 toward principal and \$3,640,298 toward annual cost of operation and maintenance of project, including cost of operating 10-foot conduit.

**Operations during fiscal year.** Partnered with Texas Equestrian Trail Riders Association and Rotary Club to construct equestrian bridge over Waxahachie Creek and additional eight miles of multi-use trail; partnered with Ellis County to repair channel bridge foundation and provide bank stabilization at bridge site downstream from dam. Continued routine operation and maintenance activities.

Benefits accrued to Bardwell Lake project: Accumulated flood damages prevented through FY 2005 were \$41,234,200.

**4. BELTON LAKE, TX**

**Location.** Dam is on Leon River about 16.7 miles above confluence of Leon and Lampasas Rivers and about 3 miles north of Belton, Texas.

**Existing project.** For a description of completed improvement and authorizing acts see Annual Report of 1962. Construction started June 1949 and project was ready for beneficial use in March 1954. Raising water supply pool: Construction started in July 1970 and the pool raise is complete. Estimated cost of project is \$18,410,000.

**Local cooperation.** Section 2, Flood Control Act of 1938, applies. A contract with Brazos River Authority, a State agency, for remaining water supply storage in reservoir was approved by Secretary of the Army on January 15, 1958, at an estimated cost of \$5,125,003. To date \$2,391,307 has been paid. Under the contract Brazos River Authority must also pay annually 11.2 percent of actual annual cost of operation and maintenance. To date \$4,347,901 has been paid. An interim contract with Brazos River Authority for emergency use of water supply storage in project was approved by Secretary of the Army on January 2, 1957. Amount of \$433,083 paid by authority on March 21, 1957 for use of these facilities was credited to interest and principal payable under formal water supply contract.

**Operations during fiscal year.** Completed renovation of recreation facilities in White Flint Park, funded by FY 2004 congressional add; completed installation of physical security upgrades of prime facilities (including installation of emergency generator and security cameras, hardened gates and new security monitoring contract). Continued routine operation and maintenance activities.

Benefits accrued to Belton Lake project: Accumulated flood damages prevented through FY 2005 were \$723,018,100.

**5. BENBROOK LAKE, TX**

**Location.** Dam is in Tarrant County, Texas, on Clear Fork of Trinity River 15 river miles upstream from its confluence with West Fork of Trinity River about 10 miles southwest of downtown Fort Worth, Texas.

**Existing project.** For description of completed improvement and authorizing acts see Annual Report of 1962. Construction of project was started May 1947 and ready for beneficial use in September 1952. Estimated cost of project is \$14,544,000.

**Local cooperation.** Section 2, Flood Control Act of 1938, applies. No water supply storage is included in project. In 1956, Congress passed legislation enabling the city of Fort Worth to purchase conservation storage space in Benbrook Lake. Contracts have been negotiated with the city of Fort Worth and the Benbrook Water and Sewer Authority for the use of portions of the navigation storage for water supply purposes until such storage is required for Trinity River Navigation. To date, \$2,392,180 has been paid by the city of Fort Worth and \$278,625 by Benbrook Water and Sewer Authority. A cost-sharing contract with the city of Benbrook for Recreation Development was approved by the Secretary of the Army May 20, 1977. To date, \$27,315 has been paid.

**Operations during fiscal year.** Replaced sewer system service dump station in Holiday Park, with aeration system; remodeled and modernized lake office, visitor reception area and visitor parking. Continued routine operation and maintenance activities.

Benefits accrued to system consisting of Benbrook Lake, Clear Fork and West Fork Floodways: Accumulated flood damages prevented through FY 2005 are estimated at \$5,786,736,100.

**6. CANYON LAKE, TX**

**Location.** Dam is on Guadalupe River, 303 miles above its mouth, and about 12 miles northwest of New Braunfels, Comal County, Texas.

**Existing project.** For a description of completed improvement and authorizing act see Annual Report of 1969. Construction started April 1958 and project completed for beneficial use June 1964. Estimated cost of project is \$21,732,000, including \$1,400,000 contributed by local interests.

**Hydropower:** The Guadalupe-Blanco River Authority (GBRA) was licensed by the Federal Energy Regulatory Commission to construct a 6,070-kilowatt plant, which is located adjacent to the existing outlet channel. The project operates utilizing

conservation releases, i.e., no change from the present operating regimen is anticipated. GBRA has an agreement with the Pedernales Electric Cooperative for sale of power. Construction of the hydropower was completed in 1989 with non-Federal funds.

**Local cooperation.** Local interests (Guadalupe Blanco River Authority) will utilize water impounded for water supply and streamflow regulation for development of electric power. In a formal contract approved by Chief of Engineers on October 24, 1957, Guadalupe-Blanco River Authority agreed to fulfill all requirements of local cooperation. Required contribution of \$1,400,000 was made in full by Guadalupe-Blanco River Authority. The estimated cost of the water storage contract is about \$9,000,000. To date, \$4,202,413 has been paid. In addition \$22,848 was contributed for installation and operation of reservoir leakage gages. Under the contract the authority must pay 34.8 percent of actual annual cost of operation and maintenance. To date, \$4,138,147 has been paid.

**Operations during fiscal year.** Completed physical security upgrades of prime facilities (including installation of emergency generator, security cameras, hardened gates, metal beam guardrail along downstream toe of dam and new security monitoring contract); constructed three courtesy dock bulkheads in park areas; completed construction of lift stations and on-site sewage facility in Potters Creek Park, which enabled all recreation facilities in this park to be fully functional for the first time since the Flood of 2002. Continued routine operation and maintenance activities.

Benefits accrued to Canyon Lake project: Accumulated flood damages prevented through FY 2005 were \$493,856,200.

**7. DALLAS FLOODWAY EXTENSION**

**Location.** The Dallas Floodway Extension is in the metropolitan city of Dallas, Dallas County, Texas.

**Project.** The project consists of a 3.7 mile long Chain of Wetlands with an average width of 600 feet, with the alignment being placed on the west Trinity River overbank; and Standard Project levee protecting the Lamar Street, Rochester Park, and the

Cadillac Heights area; a levee providing 500-year level of protection to the Central Waste Water Treatment Plant, plus 31 miles of linear recreation. During flooding, the upper and lower wetlands would convey floodwaters to outfalls east of IH-45 and north of Loop 12, respectively. Additionally, the wetlands would provide 123 acres of ecosystem restoration. The River and Harbor Act of 1965 authorized the flood control portion of the project. Credits for flood protection works constructed by the non-Federal interest were authorized by the Water Resources Development Act of 1996, Section 351, where the Secretary of the Army determined that such work was compatible with the project and was required for its construction. The ecosystem restoration and recreation portions were authorized by the Water Resources Development Act of 1999, Section 356. Estimated Federal cost of this project is \$98,086,000 (October 2005 price levels), and estimated cost to local interests is \$45,787,000, a total for the project of \$143,873,000. The River and Harbor Act of 1965 authorized the flood control portion of the project. Credits for flood protection works constructed by the non-Federal interest were authorized by the Water Resources Development Act of 1996, Section 351.

Project affords substantial flood protection of Cypress Creek Valley from dam site to confluence with Red River and, together with operation of other reservoirs proposed in Red River Basin, will provide flood protection along main stem of Red River below Denison Dam. Construction commenced in January 1955 and was completed June 1960. Estimated Federal cost of project is \$17,231,700, including \$4,349,200 for Code 711 and \$399,739 accelerated Public Works fund. This project transferred to the Fort Worth District as of the end of FY 1979.

### 9. GRAPEVINE LAKE, TX

Location. Dam is in Tarrant County, Texas, on Denton Creek, 11.7 river miles upstream from its confluence with Elm Fork of Trinity River and about 20 miles northwest of city of Dallas, Texas.

Existing project. For description of completed improvement and authorizing act, see Annual Report of 1962. Construction of project was started December 1947 and ready for beneficial use in July 1952. Estimated cost of project is \$18,896,000, including \$2,040,000 contributed by local interests. A contract for modification of Embankment and Spillway was awarded September 30, 1983 and completed Fiscal Year 1990. The improvements provided for spillway modification by construction of spillway chute and stilling basin and a berm on the downstream side of the main embankment.

Deleted: 2003

Deleted: complete the supplement to the EIS,

Deleted: 5

Deleted: 2010

Local cooperation. On May 2, 1996, the citizens passed a bond election to pay for the non-Federal portion of the project. The Project Cooperation Agreement was signed by the city of Dallas in December 2001.

Operations during fiscal year. FY 2005 funds were used to continue construction, plans and specifications development and reimburse the city of Dallas. The project is 20 percent complete, and is scheduled for completion in September 2013.

### 8. FERRELLS BRIDGE DAM - LAKE O' THE PINES, TX

Location. Dam is on Cypress Creek in Marion, Harrison, Upshur, Morris, Camp, and Titus Counties, Texas, 8 miles west of Jefferson, Texas.

Existing project. An earthfill dam 10,600 feet long and 77 feet high includes a 200-foot spillway with a capacity of 68,200 cubic feet per second. Reservoir controls runoff from 850 square miles of drainage area, and has a gross storage capacity of 842,100 acre-feet including 587,200 acre-feet flood control storage, 3,800 acre-feet conservation storage, and 251,000 acre-feet for municipal and industrial water supply. Reservoir extends 28 miles upstream.

Formatted: Font: 10 pt

September 14, 1953, at an estimated cost of \$22,654. A contract for Interim Use of Navigation Storage with city of Grapevine, approved by Secretary of the Army on February 27, 1981, at an estimated cost of \$684,000, has been paid in full. Above contracts include payment of operation and maintenance costs as follows: Dallas County Park Cities Water Control and Improvement District No. 2, a pro rata part of the actual annual cost, which part is to be not less than \$2,000 nor more than \$3,000; Dallas, 9.2 percent of actual annual cost; and Grapevine, its pro rata part of actual annual cost (estimated at \$79.55 annually and included in total annual payment). Following operation and maintenance payments have been made: Park Cities, \$157,231; Dallas, \$1,115,773; and Grapevine, \$667,636.

**Operations during fiscal year.** Repaired guardrail at dam; repaired slide at dam and installed PVC sleeves at Murrell Park. Continued routine operation and maintenance activities.

Benefits accrued to system comprised of Grapevine Lake and Dallas Floodway: Accumulated flood damages prevented through FY 2005 were \$10,139,092,200.

**10. HORDS CREEK LAKE, TX**

**Location.** On Hords Creek, a tributary of Pecan Bayou, about 13.5 miles west of Coleman, Texas, and about 27.8 miles upstream from mouth of Hords Creek.

**Existing project.** For description of completed improvement and authorizing acts see Annual Report of 1962. Construction of project was started January 1947 and completed for beneficial use in April 1948. Estimated cost of project is \$4,337,000 including \$105,000 contributed by local interests.

**Local cooperation.** Completed as required.

**Operations during fiscal year.** Relocated Friendship Park to south side of lake; stabilized rip-rap on the stilling basin. Upgraded the weir reading for the south abutment and constructed an overhead crane on the upper deck of the outlet structure. Continued routine operation and maintenance activities.

Benefits accrued to Hords Creek project: Accumulated flood damages prevented through FY 2005 were \$1,068,800.

**11. JIM CHAPMAN LAKE, TX**

**Location.** Jim Chapman Lake is located in northeast Texas about 4 miles southeast of Cooper, 13.0 miles north of Sulphur Springs, and is at river mile 23.3 on the South Sulphur River. The South Sulphur River rises in Fannin County, Texas, and flows generally east for about 80 miles to its confluence with the North Sulphur River to form the Sulphur River.

**Existing project.** For description of completed improvement and authorizing acts, see Annual Report of 1997. Construction of project was started in July 1958 and completed for beneficial use in May 1994. The Energy and Water Development Appropriations Act of 1997, Public Law 104-206, H.R. 3816, 104<sup>th</sup> Congress, H.R. 3816, effective September 30, 1996, changed the name of Cooper Lake and Channels, TX, to Jim Chapman Lake, TX. Estimated cost of project is \$146,200,000, including \$227,000 non-Federal cost for land for the levees.

**Local cooperation.** Local interests (North Texas Municipal Water District, Sulphur River Municipal Water District, city of Irving) will utilize water impounded for present and future water supply. The total cost allocated to water supply to be reimbursed is \$54,600,000. North Texas Municipal Water District, NTMWD, has contracted for 36.859 percent of the water supply storage for future use with deferred payments for ten years. To date, \$237,090 has been paid. Under the contract NTMWD must pay 13.803 percent of actual annual cost of operation and maintenance. To date, \$287,711 has been paid. Sulphur River Municipal Water District, SRMWD, has contracted for 6.5 percent of the water supply storage for initial use and 19.78 percent for future use for a total of 26.282 percent of the water supply storage. To date, \$676,401 has been paid. Under the contract, SRMWD must pay 2.435 percent of actual annual operation and maintenance. To date, \$404,403 has been paid. The city of Irving has contracted for 16.923 percent of the water supply storage for initial use and 19.936 for future use for a total of 36.859 of the water supply storage. To date, \$1,469,687 has been paid. Under the contract Irving must pay 6.337

The Texas Parks and Wildlife Department and the Corps of Engineers have entered into or have agreed to formal Operation and Maintenance contracts for recreation facilities and wildlife conservation and management. Under the contracts for recreation facilities dated 7 November 1988 and 11 September 1990, Texas Parks and Wildlife will be responsible for 100 percent of the operations and maintenance of two state parks that are being constructed with Federal funds. Under the contracts for wildlife conservation and management the state will be responsible for 24.14 percent of the operation, maintenance and replacement annual costs for areas totaling approximately 35,500 acres. The remaining balance will be the responsibility of the Project Sponsors and the Government.

executed September 29, 1976. Final capital cost for water storage space is \$60,828,657, including Interest During Construction and contractor claims. The TRA has paid \$29,228,658 to date for water supply. FY 2005 payment of \$68,392 was received from TRA for annual operation and maintenance costs. Recreation development contract with the TRA Joe Pool Lake was executed August 2, 1976. Under this original recreation contract, as amended, TRA had difficulty meeting its long-term capital debt repayment obligation to the Government. As a result, H.R. 4733, Title I, Section 102(b), 106<sup>th</sup> Congress, 2<sup>nd</sup> Session, authorized the city of Grand Prairie, TX, to pay the Government a total of \$4,290,000 in two installments in exchange for the local sponsorship of the recreation program, relieving TRA of any and all obligations. The city of Grand Prairie made its first installment in the amount of \$2,150,000 on December 1, 2000, and the second and final installment, in the amount of \$2,140,000, on December 1, 2003.

**Operations during fiscal year.** The Northeast Texas Cultural Center was physically and financially closed out in FY 2005. Continued routine operation and maintenance activities.

**Operations during fiscal year.** Removed woody vegetation from upstream rip-rap slopes and outlet works and spillway channels; worked with interagency task force and volunteers to plan for equestrian trail around the lake. Continued routine operation and maintenance activities.

Benefits accrued to Jim Chapman Lake project: Accumulated flood damages prevented through FY ~~2005~~ are estimated at \$~~18,161,200~~.

## 12. JOE POOL LAKE, TX

**Location.** Dam is located at River Mile 11.2 on Mountain Creek, a right bank tributary of the West Fork of the Trinity River, and is adjacent to the city limits of Grand Prairie, Dallas County, Texas, which is one of the rapidly growing cities in the Dallas-Fort Worth Metropolitan area.

Benefits accrued to Joe Pool Lake project: Accumulated flood damages prevented through FY ~~2005~~ were \$~~1,970,322,400~~.

## 13. JOHNSON CREEK, ARLINGTON, TX

**Location.** The project is located in the city of Arlington, Tarrant County, Texas.

**Existing project.** For description of completed improvement and authorizing acts see Annual Report of 1996. Construction of project was started in 1975 and completed for beneficial use in September 1994. Public Law 97-400, H.R. 7377, 97<sup>th</sup> Congress, effective December 31, 1982, changed the name of Lakeview Lake to Joe Pool Lake. Estimated cost of project is \$226,890,000 including \$11,350,000 contributed by local interests.

**Existing project.** The Johnson Creek Watershed, which has a drainage area of 21 square miles, lies principally in Tarrant County, with a small portion lying in Dallas County. The Johnson Creek project includes a buy-out of 140 structures for flood damage reduction, 155 acres of ecosystem restoration, and 2.25 miles of hard surface trail, picnic facilities and a pavilion. The buy-out would prevent damages during a 25-year flood event. Estimated Federal cost is \$19,670,000 (October ~~2005~~ price levels), and estimated cost to local interests is \$8,146,000. The total project cost is estimated at \$27,816,000. The project was authorized by the Water Resources Development Act of 1999, Section 101 (b)(14). Construction was started in 1997 by the

Formatted: Font: 10 pt

city of Arlington, after a Section 104 request was granted by the ASA (CW).

**Local cooperation.** The city of Arlington, Texas, signed the Project Cooperation Agreement on December 1, 2000. To date, \$7,600,000 has been contributed by the city of Arlington.

**Operations during fiscal year.** During FY 2005, funds were used to continue plans and specifications, buyouts, and continue project construction. The project is 55 percent complete overall and is scheduled for completion in September 2010.

### 14. LAVON LAKE, TX

**Location.** Dam is in Collin County, Texas, on East Fork of Trinity River 55.9 miles above its confluence with Trinity River and about 22 miles northeast of Dallas, Texas.

**Existing project.** For description of completed improvement and authorizing acts see Annual Report of 1962. Construction of project was started January 1948 and ready for beneficial use in September 1953. Project is complete. See following section for Lavon Lake Modification and East Fork Channel Improvement authorized by Flood Control Act of 1962. Estimated cost of project is \$15,470,000.

**Local cooperation.** Section 2, Flood Control Act of 1938, applies. A contract with North Texas Municipal Water District, NTMWD, for water supply storage, including cost of intake structure, was approved by Secretary of the Army July 8, 1954, at an estimated cost of \$1,405,753. Contract was revised in 1973 and final revised contract amount is \$1,445,262. To date, NTMWD has paid \$48,185,092. Under the contract, NTMWD must pay annually 13.6 percent of actual annual cost of operation and maintenance, and to date has paid \$2,038,148.

**Operations during fiscal year.** Completed road repairs in East Fork Park; improved entrance to Ticky Creek Park; repaved entrance to Lavonia Park; removed waste water treatment tanks in Culleoka and Cottonwood Parks; installed landscape pavers and sidewalks at East Fork Park gate attendant complex; installed pipe rail at Old Little Ridge Park entrance complex. Continued routine operation and maintenance activities.

Benefits accrued to Lavon Lake project: Accumulated flood damages prevented through FY 2005 were \$556,976,600.

### 15. LAVON LAKE MODIFICATION AND EAST FORK CHANNEL IMPROVEMENT, TX

**Location.** Existing dam is in Collin County Texas, on East Fork of Trinity River, 55.9 miles above its confluence with Trinity River and about 22.0 miles northeast of Dallas, Texas. Channel improvement of East Fork extends from its mouth to River Mile 31.8.

**Existing project.** For description of completed improvement and authorizing acts see Annual Report of 1988. Construction of project was initiated in May 1970 and ready for beneficial use in December 1975. Estimated Federal cost of the modification and improvement is \$70,200,000, of which approximately \$2,200,000 is non-Federal contribution for lands, damages and relocations. Project is complete.

**Local cooperation.** Local interests must reimburse the Federal Government for costs allocated to increased water supply storage under the terms of the Water Supply Act of 1958. The North Texas Municipal Water District, NTMWD, has contracted for 43 percent of the water supply (approved September 22, 1967, by the Secretary of the Army) and to date \$985,433 has been paid. NTMWD has submitted assurance to contract for 57 percent of future water supply. Reimbursement is currently estimated at \$39,933,278.

Levee Districts 4 and 5, which comprise the lower 10 miles of the East Fork Channel, entered into agreements as required by Section 221 of the Flood Control Act of 1970 on January 28, 1972 and have furnished all necessary construction easements.

Levee Districts 6, 8, 10, 13, and 15, which comprise the upper 15 miles of the East Fork Channel, have declined to provide the necessary assurances. On December 8, 1972, this portion of the project was reclassified from "active" to "inactive" category.

**Operations during fiscal year.** Continued routine operation and maintenance activities.

### 16. LEWISVILLE DAM, TX

Deleted: ). The project was modified by Public Law 109-103, Section 134.

Deleted: 2004

Formatted: English (U.S.)

**Location.** Dam is in Denton County, Texas, on Elm Fork of Trinity River 30 river miles above its confluence with Trinity River and about 22 miles northwest of city of Dallas, Texas at a site downstream from old Garza Dam.

**Existing project.** For description of completed improvement and authorizing acts see Annual Report of 1962. Construction of project was started November 1948 and ready for beneficial use in November 1954. Estimated cost of project is \$25,902,000, including \$3,677,000 contributed by local interests.

**Hydropower:** The city of Denton, Texas, COD, was licensed by the Federal Energy Regulatory Commission to construct a 2,000-kilowatt plant, which is located adjacent to the existing outlet channel. The project operates utilizing conservation releases, i.e., no change from the present operating regimen is anticipated. COD Utilities Department utilizes this power for its local customers. Construction of the hydropower was completed in 1991 with non-Federal funds.

**Local cooperation.** A contract with city of Dallas for 415,000 acre-feet of water supply storage land rights and interests to Garza Dam and Reservoir was approved by the Secretary of the Army on July 16, 1953. Local contributions have been made in full. A contract with city of Denton, Texas, for remaining 21,000 acre-feet of water supply storage was approved by the Secretary of the Army on May 20, 1954, with an estimated cost of \$250,064. Local contributions have been paid in full. Under above contracts, cities of Dallas and Denton must pay annually 21.9 and 1 percent, respectively, of actual annual cost of operation and maintenance. To date Dallas has paid \$5 929,109 and Denton \$265,456.

**Operations during fiscal year.** Cleared underbrush at Hickory Creek Park; installed recirculation system at Hickory Creek Park and repaired slide at dam. Continued routine operation and maintenance activities.

Benefits accrued to system comprised of Lewisville Lake; this includes Ray Roberts Lake and Dallas Floodway Systems. Accumulated flood damages prevented through FY 2005 were \$35,603,266.

**17. NAVARRO MILLS LAKE, TX**

**Location.** Dam is in Navarro County, Texas, at River Mile 63.9 on Richland Creek, a tributary of Trinity River, about 16.0 miles southwest of Corsicana, Texas.

**Existing project.** For description of completed improvement and authorization acts see Annual Report of 1965. Construction started December 1959 and project completed for beneficial use March 1963. Estimated cost of project \$13,154,000 including \$300,000 contributed by local interests.

**Local cooperation.** The Water Supply Act of 1958, as amended, applies. A formal contract with the Trinity River Authority was approved March 3, 1966, by the Secretary of the Army at an estimated cost of \$2,260,800. To date the Authority has paid \$1 833,161 for water supply and \$2 266,932 for operation and maintenance.

**Operations during fiscal year.** Constructed metal awning and installed emergency generator at project office; rehabilitated five campsites with new impact zones in Oak Park; installed boat dock in Wolf Creek Park; partnered with Texas Department of Transportation to provide a mitigation site for replanting trees lost to highway construction; installed sprinkler system to water 350 trees; partnered with Texas Forest Service to construct fire lanes in wildlife management areas. Continued routine operation and maintenance activities.

Benefits accrued to Navarro Mills Lake project: Accumulated flood damages prevented through FY 2005 were \$44,127,400.

**18. O.C. FISHER DAM AND LAKE, TX**

**Location.** Dam is on North Concho River, a tributary of Concho River, about 6.6 miles above mouth of North Concho River near city of San Angelo, Texas.

**Existing project.** For description of completed improvement and authorizing acts see Annual Report of 1962. Name was changed from San Angelo Dam and Reservoir to O.C. Fisher Dam and Lake January 3, 1975 by Public Law 93-634. Construction of project was started May 1947 and ready for beneficial use February 1952. Estimated cost of project is \$17,111,000.

**Local cooperation.** Section 2, Flood Control Act of 1938, applies. A water supply contract with Upper Colorado River Authority for water supply storage in reservoir was approved by Secretary of the Army on October 11, 1948. The Authority has contributed \$860,444 toward cost of project and \$169,996 toward operation and maintenance for a 50-year period. The Authority must pay additional contributions of \$1 a year for useful life of project, beginning January 1, 1965.

**Operations during fiscal year.** Added security gate on the backside of the dam. Continued routine operation and maintenance activities.

Benefits accrued to O.C. Fisher Dam and Lake project: Accumulated flood damages prevented through FY 2005 were \$21,140,800.

**19. PROCTOR LAKE, TX**

**Location.** Dam is at River Mile 238.9 on Leon River, a tributary of Brazos River, about 8.0 miles northeast of Comanche in Comanche County, Texas.

**Existing project.** For description of completed improvement and authorization act see Annual Report of 1969. Construction of project was started July 1960 and completed for beneficial use 1963. Estimated cost of project is \$16,249,000.

**Local cooperation.** The Water Supply Act of 1958 applies. A formal contract with the Brazos River Authority, a State agency, was approved by Secretary of the Army, July 1, 1960, and was modified and approved May 9, 1966, at an estimated cost of \$1,707,900. To date the Authority has paid \$698,178 for water supply and \$1,011,841 for operation and maintenance.

**Operations during fiscal year.** Repaired and galvanized bulk heads. Continued routine operation and maintenance activities.

Benefits accrued to Proctor Lake project: Accumulated flood damages prevented through FY 2005 were \$78,328,300.

**20. RAY ROBERTS LAKE, TX**

**Location.** Dam site is located at River Mile 60.0 on the Elm Fork of the Trinity River, Denton

County, between Sanger and Aubrey, Texas and 30 miles upstream from Lewisville Dam.

**Existing project.** The plan of improvement provides for construction of an earthfilled dam with a maximum height of 141 feet above the streambed, a length of 15,250 feet including an uncontrolled broadcrested spillway 100 feet long, controlling 682 square miles of drainage area. The lake has total controlled storage of 1,064,600 acre-feet, with a water surface area of 36,900 acres. The total storage includes 260,800 acre-feet for flood control, 749,200 acre-feet for water supply, and 54,600 acre-feet for sediment reserve. The Water Resources Development Act of 1990 authorized the Greenbelt Corridor between Lewisville and Ray Roberts Lakes. Estimated Federal cost of the project is \$317,300,000 (Oct. 1, 1995 base price). Public Law 96-384, effective January 4, 1981, changed the name of Aubrey Lake to Ray Roberts Lake.

**Hydropower:** At the request of the city of Denton and the approval of the Secretary of the Army the penstock was added to the embankment as a minimum facility for future hydropower. The city of Denton, Texas, COD, was licensed by the Federal Energy Regulatory Commission to construct a 1,000-kilowatt plant, which is located adjacent to the existing outlet channel. The project operates utilizing conservation releases, i.e., no change from the present operating regimen is anticipated. COD Utilities Department utilizes this power for its local customers. Construction of the hydropower was completed in 1991 with non-Federal funds.

**Local cooperation.** The Water Supply Act of 1958, as amended, and the Federal Water Project Recreation Act of 1965 and Section 221, Flood Control Act of 1970 apply. Contracts with the cities of Dallas and Denton, Texas, for water supply storage and recreation were approved by the Secretary of the Army, September 16, 1980. To date the city of Dallas has paid \$173,145,337. The city of Denton has paid in full their share of the water supply storage. Dallas has paid \$1 202,044 and Denton has paid \$422,328 toward annual cost of operation and maintenance.

**Operations during fiscal year.** Prep work accomplished for de-watering of the stilling basin. Installed CCTV security system. Continued routine operation and maintenance activities.

**21. SAN ANTONIO CHANNEL IMPROVEMENT, TX**

**Location.** Floodway is in city of San Antonio, Bexar County, Texas, on San Antonio River and San Pedro, Apache, Alazan, Martinez, and Six Mile Creeks.

**Existing project.** The project consists of 30.7 miles of channel and associated improvements on six separate streams including two tunnels 120 feet below the surface each having an inside diameter of 24 feet and vertical intake, outlet and access shafts. The San Pedro Creek tunnel is 6,040 feet in length and the San Antonio River tunnel is 16,360 feet in length. Estimated Federal cost of these modifications is \$160,500,000 (Oct. 1, 2005, base price), and estimated cost to local interests is \$69,500,000, which includes \$5,000,000 cash contributions and \$64,500,000 for lands, damages, and construction, a total of \$230,000,000. The existing project was authorized by the Flood Control Act of 1954. Construction was started in October 1957. The Water Resources Development Act of 1976 added authorization to the existing project for construction of flood control measures needed to preserve and protect the Espada Aqueduct located in the vicinity of Six Mile Creek. The Water Resources Development Act of 1996 added a Section 215 reimbursement limitation. The Water Resources Development Act of 2000 added ecosystem restoration and recreation as project purposes. FY 2005 activities included continuation of preconstruction, engineering and design activities for ecosystem restoration and recreation in the Mission Reach, a General Reevaluation of the Woodlawn Lake area, continuation of floodplain mapping of the tributaries to the San Antonio River within the SACIP, and continuation of the ecosystem restoration PED.

**Local cooperation.** Local interests must furnish lands and rights-of-way for construction, including purchase and removal of buildings, relocation or reconstruction of bridges (exclusive of railway bridges), channel dams where applicable, and utility lines; hold the United States free from damages; maintain and operate all works after completion; and provide a cash contribution for enhancement benefits of 2.65 percent of actual Federal construction cost.

San Antonio River Authority furnished assurances that it will comply with all requirements of local cooperation. These assurances were accepted by the District Engineer on April 15, 1957. To date \$4,088,579 has been contributed by San Antonio River Authority.

**Operations during fiscal year.** During FY ~~2005~~, funds were used to continue PED activities for ecosystem restoration and recreation in the Mission Reach. General Reevaluation studies for the Woodlawn Lake area, and floodplain mapping of the tributaries to the San Antonio River within the defined project area.

Benefits accrued to San Antonio project: Accumulated damages prevented through FY ~~2005~~ were \$500,792,212.

**22. SAN GABRIEL RIVER, TX**

**Location.** Project is a system of three reservoirs in Williamson County in the central portion of Brazos River Basin, which consists of Granger Dam at River Mile 31.9 on San Gabriel River, about 7.0 miles east of Granger, Texas; North San Gabriel Dam at River Mile 4.3 on North Fork of San Gabriel River, about 3.5 miles northwest of Georgetown, Texas; and South Fork Dam at River Mile 4.7 on South Fork of San Gabriel River, about 3.0 miles southwest of Georgetown, Texas.

**Existing project.** For description of completed improvements and authorizing acts, see the Annual Report of 2001. Construction of Granger Lake started in October 1972 and the project was ready for beneficial use in January 1980. Estimated cost of project is approximately \$62 million. Construction of North San Gabriel Dam and Lake Georgetown started in October 1972 and the project was ready for beneficial use in March 1980. Estimated cost of project is approximately \$38.8 million. The South Fork Lake project was proposed for deauthorization in FY 2005.

**Local cooperation.** Construction is subject to condition that local interests reimburse the Federal Government for costs allocated to water supply at Granger, Georgetown, and South Fork Lakes. Reimbursement currently estimated at \$13,315,000 for Granger, \$6,295,000 for Georgetown, and \$50,563,000 for South Fork, for a total of \$70,172,000, exclusive of interest. Brazos River

Authority, a State agency, is the local interests' sponsor of project, and by letter dated April 18, 1966, indicated its acceptance of the proposed plan of development and its willingness to pay for the costs allocated to water supply in each reservoir in the ultimate plan. Such water supply assurances for Granger and Georgetown Lakes were approved May 24, 1968 as satisfactory in accordance with requirements of the Water Supply Act of 1958, as amended.

**Operations during fiscal year.** Granger and Georgetown: routine operation and maintenance continued at both projects.

Benefits accrued to project consisting of Granger and Georgetown: Accumulated flood damages prevented through FY 2005 were \$71,884,400.

**23. SOMERVILLE LAKE, TX**

**Location.** Dam is on Yegua Creek 20 miles upstream from its confluence with Brazos River and about 2 miles south of Somerville, Texas.

**Existing project.** For description of completed improvements and authorizing act see Annual Report of 1969. Construction started in June 1962 and the project was ready for beneficial use in January 1967. Estimated cost of project is \$30,227,000.

**Local cooperation.** The Water Supply Act of 1958, as amended, applies. A contract with the Brazos River Authority, a State agency, for water supply storage approved May 10, 1962, by the Secretary of the Army, has paid \$3,248,173 to date. Also under the contract, the Authority must pay annually 28.655 percent of the actual annual cost of operation and maintenance. FY 2005 payment of \$237,894 was received from the Authority.

**Operations during fiscal year.** Continued routine operation and maintenance activities.

Benefits accrued to Somerville Lake project: Accumulated flood damages prevented through FY 2005 were \$177,810,300.

**24. STILLHOUSE HOLLOW DAM, TX**

**Location.** Dam is on Lampasas River 16 miles upstream from its confluence with Little River, a tributary of the Brazos River, and about 5 miles southwest of Belton, Texas.

**Existing project.** For description of completed improvements and authorizing act see Annual Report of 1969. Construction was initiated in July 1962 and the project was ready for beneficial use in February 1968. Estimated cost of project is \$23,670,000.

**Local cooperation.** The Water Supply Act of 1958 applies. A contract with the Brazos River Authority, a State agency, for water supply storage was approved April 13, 1962, by the Secretary of the Army, at an estimated cost of \$6,912,430. To date the Authority has paid \$4,222,689. Also under the contract the Authority must pay annually 27.748 percent of the actual annual cost of operation and maintenance. To date the Authority has paid \$2,714,677.

**Operations during fiscal year.** Completed renovation of recreation facilities in Union Grove Park, funded by FY 2004 congressional add. Continued routine operation and maintenance activities.

Benefits accrued to Stillhouse Hollow Dam Project: Accumulated estimate of flood damages prevented through FY 2005 is \$99,889,700.

**25. WACO LAKE, TX**

**Location.** Dam is on Bosque River, 4.6 river miles above its confluence with Brazos River, at city of Waco, McLennan County, Texas.

**Existing project.** For description of completed improvements and authorizing act see Annual Report of 1969. Estimated cost of project is \$50,853,000 including \$250,000 contributed by local interests and \$2,500,000 other non-Federal cost. Construction was started in July 1958, and project was ready for beneficial use in February 1965.

**Local cooperation.** Section G of the Flood Control Act of December 1944 applies. A contract with the Brazos River Authority, a State agency, for water supply storage and the contract with the city of Waco transferring the existing Lake Waco to the Government for their water storage, was approved by the Secretary of the Army on April 15, 1958. To date, the Authority for their portion of the water

### 26. WRIGHT PATMAN DAM AND LAKE, TX

**Location.** Dam is on Sulphur River in Cass and Bowie Counties, Texas. Dam is 45 miles above mouth of Sulphur River, and about 8 miles southwest of Texarkana, Texas.

### 28. SCHEDULING FLOOD CONTROL RESERVOIR OPERATIONS

In accordance with Flood Control Act of 1944, expenditures were made for scheduling flood control reservoir operations and preparation of reservoir regulation manual for Marshall Ford Dam, on the Colorado River, near city of Austin, Texas, and for preparation of reservoir regulation manual for Twin Buttes Dam, on Middle and South Concho Rivers near city of San Angelo, Texas. Marshall Ford Dam was authorized by 1937 River and Harbor Act. Project was constructed jointly by Bureau of Reclamation and Lower Colorado River Authority and was completed during FY 1942. Twin Buttes Reservoir was authorized for construction by Department of Interior by Public Law 152, 85th Congress. Construction was initiated in June 1960; closure of dam started in June 1962; deliberate impoundment was started January 23, 1963.

**Existing project.** For description of completed improvements and authorizing act see Annual Report of 1984. Estimated cost of project is \$51,945,000, which includes \$5,449,100 Code 711, \$399,939 accelerated public works funds, and \$13,138,004 to be reimbursed by local interests, over a period not to exceed 50 years, for water supply storage, and including \$2,092,040 for pro rata share of original reservoir cost. Construction was initiated in August 1948 and completed in March 1962, except real estate activities, construction under Code 711, and conversion of 120,000 acre-feet to water supply storage after completion of Cooper Reservoir (now Jim Chapman Lake). This project transferred to the Fort Worth District as of the end of FY 1979.

Accumulated damages prevented by Marshall Ford Reservoir through FY ~~2005~~ were \$378,854,300 and by Twin Buttes through FY ~~2005~~ were \$1,179,850. Twin Buttes Reservoir consists of two separate pools, one on South Concho River and the other on Middle Concho River and Spring Creek. Equalizing channel between these two pools is at elevation 1925.0.

Deleted: Completed extensive repairs to outlet works structure and roof; replaced lift cables on the outlet works gates.

**Local cooperation.** A contract with the city of Texarkana, Texas, for reserving water supply storage space was approved by the Secretary of the Army December 17, 1968. To date, the city has paid \$1,039,519. The city has paid \$858,107 toward operation and maintenance costs of the project.

Total expenditures for scheduling reservoir operations in FY ~~2005~~ were \$121,968.

Deleted: 2004 from regular funds for operation of both reservoirs

Deleted: 57,072

Formatted: Font: 10 pt

**Operations during fiscal year.** Continued routine operation and maintenance activities.

**29. OTHER AUTHORIZED FLOOD CONTROL PROJECTS**

(See Table 39-C.)

**30. WORK UNDER SPECIAL AUTHORIZATION**

(See Table 39-E.)

Flood control activities pursuant to Section 205, Public Law 585, 80th Congress, as amended (preauthorization); Emergency stream bank protection under Section 14, Public Law 526, 79th Congress, as amended; Snagging and Clearing of navigable streams and tributaries in interest of flood control Section 208, Public Law 780, 83rd Congress, as amended. Emergency flood control, hurricane-flood, and shore protection activities, Public Law 99, 84th Congress, and antecedent legislation, Environmental restoration under Section 1135, Public Law 662, 99th Congress, as amended; Aquatic ecosystem restoration under Section 206, Public Law 303, 104<sup>th</sup> Congress.

Fiscal year costs were \$28,208 for Operations & Maintenance funded catastrophic disaster preparedness program; \$631,753 for nationwide civil works activities, recreation; \$953 for anti-terrorism/force protection, including training; \$359,953 for Flood Control and Coastal Emergencies funded disaster preparedness program; \$146,979 for levee repairs.

**Multi-Purpose Projects Including Power**

**31. ROBERT DOUGLAS WILLIS HYDROPOWER, TX**

**Location.** For location of completed dam see Town Bluff Dam-B.A. Steinhagen Lake, Texas in this chapter.

**Existing project.** Installation of hydroelectric power generating facilities at Town Bluff Dam was authorized by the River and Harbor Act of 1945 (Public Law 79-14), March 2, 1945, but deferred in the original construction. Town Bluff Dam was completed and placed in operation in 1951. A Design Analysis Report completed in April 1982 and a Feasibility Report approved September 9, 1983 indicated that installing hydropower at this project was economically feasible. The hydropower facilities include a 7,400-kilowatt power plant (two units at 3,700 kilowatts each), intake and outlet

facilities, and necessary switchgear equipment is located in the main embankment at the old diversion channel. The plant is operated remotely from the Sam Rayburn project. The project produces an estimated 35,900 megawatt hours of energy per year. There is no Federal cost on this project, it is completely funded by non-Federal funds. The estimated non-Federal cost is \$18,643,000. 101st Congress House Report 923, effective February 7, 1989, changed the name of Town Bluff Hydropower to Robert Douglas Willis Hydropower.

**Local cooperation.** A contract with the Sam Rayburn Municipal Power Authority was approved by Secretary of the Army, June 28, 1985, relative to financing, escrow agreement, and power sales agreement.

**Operations during fiscal year.** Continued routine operation and maintenance activities.

**32. SAM RAYBURN DAM AND RESERVOIR, TX**

**Location.** Dam is on Angelina River 25.2 miles upstream from its confluence with Neches River and about 10.0 miles northwest of Jasper, Texas.

**Existing project.** For description of completed improvements and authorizing act see Annual Report of 1969. Construction was started August 1956 and project was ready for beneficial use in March 1965. Estimated cost of project is \$68,683,000 including \$3,000,000 contributed by local interests.

**Local cooperation.** A contract with the Lower Neches Valley Authority, a State agency, to contribute \$3,000,000 toward the first cost and an additional \$200,000 annually for 50 years after completion of the project was approved by the Secretary of the Army on January 22, 1957. Contribution of \$3,000,000 was made in full and annual payments to date of \$5,600,000 have been made by the Authority.

A contract with the city of Lufkin for water supply storage was approved May 27, 1969, by the Secretary of the Army at an estimated cost of \$525,600. To date, the city has paid \$1,724,507. Also under the contract the city of Lufkin must pay annually 0.692 percent of the annual cost of operation and maintenance. To date, the city has paid \$283,981.

### 33. TOWN BLUFF DAM - B. A. STEINHAGEN LAKE, TX

### General Investigations 35. SURVEYS

**Location.** Dam is on Neches River about 12.4 miles below mouth of Angelina River, one-half mile north of Town Bluff, Texas, and 93.0 river miles north of Beaumont, Texas.

Fiscal year costs for reconnaissance and feasibility studies were \$1,659,912 for flood damage prevention studies and \$2,558,053 for ecosystem restoration studies. Miscellaneous activities include \$5,923 for Coordination with Other Agencies; \$47,339 for Special Investigations; \$35,723 for Planning Assistance to States; \$12,881 for Inter-agency Water Resource Development; \$1,561 for North American Waterfowl Management.

**Existing project.** For description of completed improvement and authorizing acts see Annual Report of 1962. Construction started March 1947 and project was ready for beneficial use in April 1951. Estimated cost of project is \$9,888,000, including \$2,000,000 contribution by local interests.

**Local cooperation.** Completed as required.

### 36. PRECONSTRUCTION ENGINEERING AND DESIGN

**Operations during fiscal year.** ~~Completed new restroom at Campers Cove Park.~~ Continued routine operation and maintenance activities.

#### RIVERSIDE OXBOW, TX

~~The Riverside Oxbow project is an ecosystem restoration and associated recreation project located on the West Fork of the Trinity River in Fort Worth, Texas. The recommended plan consists of reestablishing low flows through the old West Fork of the Trinity River oxbow including replacement of the Beach Street bridge; creation of 57 acres of emergent wetlands, open water, and vegetative fringe habitat; habitat improvement of 179.7 acres of existing forested tracts, including establishment of a 150 foot wide riparian buffer along the West Fork from Riverside Drive to East 1<sup>st</sup> Street; establishment of native grasses and forbs buffer on approximately 365 acres of land; reforestation of roughly 66.9 acres of land using a variety of native hard and soft mast trees and shrubs; and preservation and habitat improvements to approximately 206.9 acres of native floodplain grassland prairie. Additionally, the project would include reestablishing native species and protecting creek beds on 112 acres and eradicating invasive species on 80 of the 112 acres all contained within the Tandy Hills Nature Preserve, which is located on the south side of IH-30. The plan also~~

Deleted: Repaired and painted six tainter gates; improved the drainage system and road shoulders in Campers Cove Park; park road repair and paving

Deleted: Sandy Creek Park and Campers Cove Park; installed new wastewater treatment system in

Deleted: 69.6

### 34. WHITNEY LAKE, TX

**Location.** Dam is on Brazos River, about 442 miles above mouth of river, 5.5 miles southwest of Whitney, Texas, and about 38 miles upstream from city of Waco, Texas.

**Existing project.** For description of completed improvement and authorizing acts see Annual Report of 1962. Construction of project was started May 1947 and ready for flood control use in December 1951. First power was placed on the line in June 1953. Raise power pool is complete. Estimated cost of project is \$46,306,000.

Deleted: 45.6

**Local cooperation.** Section 2, Flood Control Act of 1938, applies. A contract with the Brazos River Authority, a State agency, for water supply storage was approved by the Secretary of the Army

Formatted: Font: 10 pt

includes associated linear recreation along a 9,000 feet by 10 feet wide concrete trail including one vehicular bridge, 9,100 feet of crushed aggregate trail, 7,600 feet of wood mulch equestrian trail, associated facilities (access points, parking lot, and restroom facilities), and a new Gateway Park entrance road and bridge. The estimated first cost of the plan in \$24,662,000, with a Federal cost of \$10,219,000 and a non-Federal cost of \$14,443,000. The Chief's Report was signed on 29 May 2003 and is awaiting authorization by Congress.

hydrographic surveys, initiation of a survey of existing springs in Texas, continuation of work on reallocation assessments, initiation of work on a desalination concentrate model, and assistance rendered to the state in coordination of national hydrographic data. FY 2005 expenditures for these activities totaled \$414,449.

- Deleted: candidate watersheds for environmental restoration, and the rural issues study. In addition, two new studies were undertaken; completion

#### Construction, General

##### WHITNEY LAKE (POWERHOUSE), TX (MAJOR REHAB)

The project area is described in Paragraph 36, Whitney Lake, TX. Rehabilitation measures include replacement of the two turbines, rewinding and uprating the two generators, and replacement of necessary peripheral items and equipment within the powerhouse. The total increase in power output of the plant will be from 30 megawatts to 42 megawatts. This major rehabilitation project is authorized by the Flood Control Act of 1970, Section 216. FY 2005 expenditures for this project were \$922,836.

Deleted: BOSQUE AND LEON RIVER BASINS, TX¶  
The project area is located on the Bosque and Leon River Watersheds in central Texas. The McGregor Naval Weapons Industrial Reserve Plant (NWIRP) is being closed under special legislation, and is hydrogeologically upgradient from both Lake Waco and Lake Belton. Perchlorate from the plant migrated from contaminated sites on NWIRP property and threatened sole-source water supplies for Waco, Temple, Killeen and surrounding towns. The project assessed the extent of perchlorate pollution to existing surface and groundwater supplies, as well as the wildlife habitat. FY 2004 activities completed remediation activities of identified problem areas. FY 2004 expenditures for this project were \$1,096,221. The project was physically and financially closed out in FY 2004.¶

#### Operations and Maintenance, General

##### TEXAS WATER ALLOCATION ASSESSMENT

The study area includes the entire state of Texas. Work included review of the water supply proposals identified in the sixteen State of Texas Regional Plans. The purpose of the study is to identify potential opportunities for the Corps to assist the state in meeting future water needs through immediate technical assistance, and/or through initiation of studies leading to possible implementation of cost-shared water resource projects. Authority to conduct this study is contained in the Flood Control Act of 1970, Section 216. Activities in FY 2005 included performance of

**TABLE 39-B - Authorizing Legislation**

<sup>1</sup> Excludes \$47,309 receipts from reconveyance of land deposited to miscellaneous receipts.  
<sup>2</sup> Excludes \$322,346 receipts from reconveyance of land deposited to miscellaneous receipts.  
<sup>3</sup> Excludes \$1,422,848 expended for new work from contributed funds, including \$22,848 "Contributed Funds Other" for installation and operation of gages for leakage study.  
<sup>4</sup> Includes \$1,378,486 for Code 711, \$52,808 for Code 713, and \$399,739 accelerated Public Works Act funds. Excludes \$1,711,200 contributed funds.  
<sup>5</sup> Includes \$1,376,322 for Code 711, \$52,808 for Code 713, and 399 accelerated Public Works Act funds. Excludes \$4,137 reimbursed in Fiscal Year 1973.  
<sup>6</sup> Claim Northeast Texas Municipal Water District \$16,546. Three payments of \$12,410 less real charges of \$1,325, making a total of \$2,811 reimbursed in Fiscal Year 1972, Fiscal Year 1973, and Fiscal Year 1974.  
<sup>7</sup> Excludes \$146,795 receipts from reconveyance of land deposited to miscellaneous receipts, and \$2,040,026 for new work expended from contributed funds.  
<sup>8</sup> Excludes \$105,079 expended from contributed funds.  
<sup>9</sup> Excludes receipts from reconveyance of land of \$426,606 that were deposited to miscellaneous receipts, and \$3,676,661 for new work expended from contributed funds.

<sup>10</sup> Includes \$130,000 under appropriation 96X5125.  
<sup>11</sup> Excludes \$300,000 expended from contributed funds.  
<sup>12</sup> Excludes \$3,000,000 expended from contributed funds.  
<sup>13</sup> Includes receipts from disposals and revocation of funds related hereto.  
<sup>14</sup> Excludes \$2,000,000 contributed funds expended.  
<sup>15</sup> Excludes \$2,750,000 expended for contributed funds.  
<sup>16</sup> Excludes \$188,282 receipts from reconveyance of lands deposited to miscellaneous accounts.  
<sup>17</sup> Includes funds provided by the Jobs Act (PL 98-8, dated march 24, 1983).  
<sup>18</sup> Beginning Fiscal Year 1985 data shown on Table A includes Special Recreational Use Fees. Data for previous fiscal years have changed to conform to the new procedure.

12	Oct. 27, 1965	Construction of a dam on Mountain Creek, adjacent to the city limits of Grand Prairie, Texas, about 3 miles above the existing Mountain Creek Dam.	H. Doc. 276, 89th Cong., 1st Sess.
		<b>JOHNSON CREEK, ARLINGTON, TX</b>	
13	Aug. 17, 1999	Project includes a buy-out of 140 structures for flood damage reduction, 155 acres of ecosystem restoration, and 2.25 miles of hard surface trail, picnic facilities and a pavilion.	PL 106-53, Sec. 101(b)(14)
		<b>LAVON LAKE, TX</b>	
14	Mar. 2, 1945	Construction of a dam on the East Fork of the Trinity River, about 22 miles northeast of Dallas, Texas	H. Doc. 533, 78th Cong., 2nd Sess.
		<b>LAVON LAKE MODIFICATION AND EAST FORK CHANNELS IMPROVEMENT, TX</b>	
15	Oct. 23, 1962	Enlarge Lavon Dam and enlargement and realignment of the lower 25 miles of the East Fork of the Trinity River, including rehabilitation of existing levees.	H. Doc. 554, 87th Cong., 2nd Sess.
	Mar. 7, 1974	Improvement of Collin County Road 115.	
		<b>LEWISVILLE DAM, TX</b>	
16	Mar. 2, 1945	Construction of a dam on the Elm Fork of the Trinity River near the city of Lewisville, Texas.	H. Doc. 403, 77th Cong., 1st Sess.
		<b>NAVARRO MILLS LAKE, TX</b>	
17	Sep. 3, 1954	Construction of a dam on Richland Creek, a tributary of the Trinity River, about 16 miles southwest of Corsican Texas.	H. Doc. 498, 83rd Cong., 2nd Sess.
	Dec. 31, 1970	Alteration of FM Highway 3164 in Wolf Creek Park.	
		<b>O.C. FISHER DAM AND LAKE, TX.</b>	
18	Aug. 18, 1941	Construction of a dam on the North Concho River just above San Angelo, Texas.	H. Doc. 315, 76th Cong., 1st Sess.

**TABLE 39-B - Authorizing Legislation**

<b>See Section in Text</b>	<b>Date Authorizing Act</b>	<b>Project and Work Authorized</b>	<b>Documents</b>
		<b>PROCTOR LAKE</b>	
19	Sep. 3, 1954	Construction of a dam on the Leon River about 8 miles northeast of Comanche, Texas.	H. Doc. 535, 81st Cong., 2nd Sess.
		<b>RAY ROBERTS LAKE, TX</b>	
20	Oct. 27, 1965	Construction of a dam on the Elm Fork of the Trinity River between Sanger and Aubrey Texas, about 30 miles upstream from the existing Lewisville Dam.	H.Doc. 276, 89th Cong., 1st Sess.
		<b>SAM RAYBURN DAM AND RESERVOIR</b>	
32	Mar. 2, 1945	Construction of a dam on the Angelina River about 10 miles northwest of Jasper, Texas.	S. Doc. 98, 76th Cong., 1st Sess.
		<b>SAN ANTONIO CHANNEL IMPROVEMENT, TX</b>	
21	Sep. 3, 1954	Channel improvement of the San Antonio River and tributaries in and near the city of San Antonio, Texas.	H. Doc. 344, 83rd Cong., 2nd Sess.
		<b>SAN GABRIEL RIVER PROJECT, TX</b>	
22	Sep. 3, 1954 Jan. 3, 1975	Construction of: (1) a dam (Granger Dam and Lake) on the San Gabriel River about 7 miles east of Granger, Texas, (2) a dam (North Fork Lake) on the north Fork of the San Gabriel River about 3.5 miles northwest of Georgetown, Texas and (3) a dam (South Fork Lake) on the South Fork of the San Gabriel River about 3 miles southwest of Georgetown, Texas.	H. Doc. 535, 81st Cong., 2nd Sess. H.Doc. 591, 87th Cong., 2nd Sess.
		<b>SOMERVILLE LAKE, TX</b>	
23	Sep 3, 1954	Construction of a dam on Yegua Creek about 5 miles south of Somerville, Texas.	H. Doc. 535, 81 <sup>st</sup> Cong, 2 <sup>nd</sup> Sess
		<b>STILLHOUSE HOLLOW DAM, TX</b>	
24	Sep. 3, 1954	Construction of a dam on the Lampasas River about 5 miles southwest of Belton, Texas.	H. Doc. 535, 81st Cong., 2nd Sess.
		<b>TOWN BLUFF DAM-B.A. STEINHAGEN LAKE, TX</b>	
31	Mar. 2, 1945	Construction of a dam on the Neches River near Jasper, Texas.	S. Doc. 98, 76th Cong., 1st Sess.

**TABLE 39-B - Authorizing Legislation**

See Section in Text	Date Authorizing Act	Project and Work Authorized	Documents
		<b>ROBERT DOUGLAS WILLIS HYDROPOWER, TX</b>	
34	Mar. 2, 1945	Construction of two units at 3,000 kilowatts each of hydroelectric power generating facilities connected with Town Bluff-B.A. Steinhagen Lake, Texas.	S. Doc. 98, 76th Cong., 1st Sess.
		<b>TRINITY RIVER PROJECT, TX</b>	
1	Oct. 27, 1965	Construction of Tennessee Colony Dam located at river mile 339.2 on the Trinity River about 16 miles west of Palestine, Texas; a multiple purpose channel from the Houston, Texas ship channel to Fort Worth, Texas; a distance of approximately 363 miles, an extension of the existing Dallas, Texas, Floodway downstream approximately 9.0 miles; a realignment and enlargement of the West Fork of the Trinity River from the mouth of the West Fork to the existing Texas, Floodway, a distance of approximately 31 miles; and water conveyance facilities involving construction of about 98 miles of pipeline from Tennessee Colony Lake to the existing Benbrook Lake.	H. Doc. 276, 89th Cong., 1st Sess. H. Doc. 364, 90th Cong., 2nd Sess.
		<b>WACO LAKE, TX</b>	
25	Sep. 3, 1954	Construction of a dam on the northwest edge of Waco, Texas, below the confluence of the North, South and Middle Bosque Rivers	H. Doc. 535, 81st, Cong., 2nd Sess.
		<b>WHITNEY LAKE, TX</b>	
34	Aug. 18, 1941	Construction of a dam on the Brazos River about 19 miles southwest of Hillsboro, Texas. Raise the power pool 13.0 feet.	H. Doc. 390, 76th Cong., 1st Sess.
		<b>WRIGHT PATMAN DAM AND LAKE, TX</b>	
26	Jul.24, 1946	Construction of an earth-filled dam and reservoir.	H. Doc. 602, 79th Cong. 2nd Sess.

# GALVESTON, TX, DISTRICT

Galveston District comprises drainage basins of all short streams arising in coastal plain of Texas and flowing into the Gulf of Mexico, including the entire basin of Buffalo Bayou, San Jacinto, San Bernard, Lavaca, Navidad, Mission, and Aransas Rivers. It embraces Agua Dulce, San Fernando, and Olmos Creek Basins draining into Baffin Bay, and coastal area south thereof to the Rio Grande and east of western boundary of Starr County, Texas. It includes lower basins of major streams flowing into the Gulf of Mexico: Sabine River, Texas and Louisiana, downstream from U.S. Highway 190 crossing at Bon Wier, Texas; Neches River downstream from Town Bluff gaging station; Trinity River downstream from Texas State Highway 19 crossing at Riverside, Texas; Brazos River downstream from confluence with Navasota River; Colorado River downstream from northern boundary of Fayette County; Guadalupe River downstream from confluence with San Marcos River; San Antonio River downstream from confluence with Escondido Creek; Nueces River downstream from confluence with Frio and Atascosa River.

Navigation

1. AQUATIC PLANT CONTROL, TX (SOUTHWESTERN DIVISION) 1965 ACT

Location. Navigable waters, tributary streams, connecting channels, and other allied waters in Texas.

Previous project. For details see page 699 of Annual Report for 1963.

Existing project. A comprehensive project to provide for control and progressive eradication of water-hyacinth, alligator weed, Eurasian watermilfoil, hydrilla, and other obnoxious aquatic plant growths, from navigable waters, tributary streams, connecting channels, and other allied waters in Texas in the combined interest of navigation, flood control, drainage, agriculture, fish and wildlife conservation, public health, and related purposes, including continued research for development of the most effective and economic control measures.

Control of water-hyacinth and alligator weed has been approved for the Nueces River Basin, North Coastal Area, Guadalupe River Basin, Sabine River Basin, Trinity River Basin, Cypress Creek Basin, Neches River Basin, South Coastal Area, San Jacinto River Basin, Rio Grande Basin, Colorado River Basin and Brazos River Basin.

Control of hydrilla and watermilfoil is on a site by site basis after analysis and issuance of National Environmental Policy Act documentation

Local cooperation. Sec. 302, 1965 River and Harbor Act, amended by Water Resources Development Act of 1986, applies.

Operations during fiscal year. A cost-sharing, cost-reimbursable contract, with the State of Texas ended in FY 2005.

Work on an Environmental Assessment is being completed to add control of hydrilla, giant salvinia, and giant reed to the list of invasive aquatic plants to be treated, as well as all invasive aquatic plants included on the Texas Parks and Wildlife Department's list, which are torpedo grass, water spinach, giant duckweed, paper bark and water trumpet.

The State of Texas received no aquatic plant funding in fiscal year 2005.

2. BRAZOS ISLAND HARBOR, TX

Location. At extreme south end of coast of Texas, about 7 miles north of mouth of Rio Grande and about 5 miles east of Brownsville, Texas. (See National Ocean Survey Chart 11301.)

Previous project. For details see page 1017 of Annual Report for 1932.

Existing project. Provides for channel dimensions in various sections of the waterway as shown in Table 40-H.

Project also provides for dual jetties at the gulf entrance, a north jetty 6,330 feet long, a south jetty 5,092 feet long, and 1,000-foot extension to existing north jetty and for maintenance of 3rd fishing harbor constructed by local interests. Under ordinary conditions, mean tidal range is about 1.5 feet, and extreme range is about 2 feet. All depths refer to mean low tide. To some extent, height of tides is dependent on the wind, and during strong "northers" in winter season, water surface in southern end of Laguna Madre may be raised 4 feet or more above mean low tide in the gulf.

Widening Brownsville Channel from Goose Island to Brownsville turning basin and deepening southeast corner of Brownsville turning basin to 36 feet was completed in April 1980. The 1,000-foot extension to existing north jetty was de-authorized under Section 1001 of the Water Resources Development Act of 1986. The entrance channel was enlarged from 38 feet by 300 feet to 44 feet by 300 feet in FY 1992. Construction of an environmental mitigation site consisting of the creation of a 16-acre tidal wetland which included shoal grass and black mangroves, was completed in 1997. (See Table 40-G for total cost of existing project to September 30, 2005.)

Local cooperation. Fully complied with.

Terminal facilities. Numerous terminal facilities for bulk and liquid cargo are available. (See Port Series No. 26, revised 1991.) Facilities are adequate for existing commerce.

Operations during fiscal year. Maintenance: Routine maintenance.

3. CEDAR BAYOU, TX.

Location. The bayou is about 30 miles long. It flows to the south and empties into northwest corner of upper Galveston Bay, about 1.5 miles below mouth of San Jacinto River and about 28.5 miles north of Galveston, Texas. (See National Ocean Survey Chart 11326.)

Previous project. For details see Annual Report for 1938.

Existing project. Project provides for a channel 10 feet by 100 feet from Houston Ship Channel to Bayou Mile 11.0. Channel was completed from Houston Ship Channel to first bend in Cedar Bayou above the mouth in 1931. Channel from Mile -0.1 to Mile 3.0 was completed in March 1975. Channel from 3.0 to Mile

Deleted: 2004

Deleted: ends

Deleted: A contract to rehabilitate placement area 4 of the levee was physically completed in FY04 at a cost of \$383,958. (See Table 40-J for dredging operations.)

Deleted: to the Rio Grande Basin. In addition, the assessment adds

Deleted: Cost incurred for

Deleted: 2004 was \$262,949

Deleted: 2004

11.0 was de-authorized under Sec. 12 of Public Law 93-251 and re-authorized in December 2000 under Sec. 349 (a)(2) of Public Law 106-541, the Water Resources Development Act of 2000. Project also includes jetties at mouth of bayou provided for under previous project.

Under ordinary conditions, mean tidal range is about 0.6 feet and extreme range 1.2 feet. Height of tides is dependent largely on the wind, and during strong "northers" in the winter season water surface may be depressed 2 feet below mean low tide. (See Table 40-G for total cost of existing project to September 30, 2004.)

**Local cooperation.** Fully complied with.

**Terminal facilities.** U.S. Steel Company has a barge dock at bayou mile 2.8, and there are a few small wharves, privately owned, for local use at various places along Cedar Bayou. Facilities are considered adequate for existing commerce.

**Operations during fiscal year.** Maintenance: No maintenance performed during this fiscal year.

**4. CHANNEL TO PORT BOLIVAR, TX**

**Location.** Port Bolivar is at end of Bolivar Peninsula and 4 miles north of city of Galveston. Channel connects the port with channel in Galveston Harbor. (See National Ocean Survey Chart 11324.)

**Previous project.** For details see page 1856 of Appendix to Annual Report for 1915.

**Existing project.** Existing project dimensions for channel are shown in Table 40-H. (Also see Table 40-B for authorizing legislation.)

Under ordinary conditions, mean tidal range is about 1.3 feet and extreme range 2 feet. Height of tides is dependent largely on the wind, and during strong "northers" in the winter season water surface may be depressed 2 feet below mean low tide. Enlargement of turning basin from 1,000 to 1,600 feet is inactive. A channel 14 feet deep, 200 feet wide, and approximately 950 feet long is maintained across the east end of the turning basin to accommodate the Galveston-Port Bolivar ferry. Project is complete except for inactive portion. Project dimensions have not been maintained in the completed part since lesser dimensions are adequate for existing commerce. (See Table 40-G for total cost of existing project to September 30, 2005.)

**Local cooperation.** None required.

**Terminal facilities.** Terminals are privately owned and consist of 2 slips and 2 piers. The piers, 400 feet wide by 1,200 feet long and 210 feet wide by 1,200 feet long, are badly deteriorated and not in use. The slips are used as anchorage by shallow-draft vessels. A highway ferry landing owned by the State of Texas is located at south end of turning basin. Facilities are considered adequate for existing commerce.

Operations during fiscal year. Maintenance: No maintenance performed during this fiscal year.

**5. CHOCOLATE BAYOU DREDGED MATERIAL MANAGEMENT PLAN (DMMP), TX**

**Location.** The Chocolate Bayou Channel is a navigation project located about 40 miles southwest of Houston in Chocolate Bay in Brazoria County, along the upper coast of Texas.

**Existing project.** The Chocolate Bayou Channel is federally authorized and currently maintained at 12-foot deep (MLT) by 125-foot wide. The channel traverses Chocolate Bay connecting industries at the northwest end of the bay within Chocolate Bayou with the Gulf Intracoastal Waterway (GIWW) between GIWW mile markers 374.7 and 376.7. The authorized channel is 8.2 miles long (13.2 miles to the turning basin) and used primarily for transport of crude petroleum and petrochemical products.

**Local cooperation.** The local sponsor for the project is Brazoria County Conservation and Reclamation District number 3. The Project Cooperation Agreement (PCA) was executed September 13, 2005.

**Operations during fiscal year.** Awarded contract for the FY 2006 construction of Placement Areas 1A and 4A.

**6. CORPUS CHRISTI SHIP CHANNEL, TX**

**Location.** This project, formerly known as Port Aransas-Corpus Christi Waterway, Texas, was changed to Corpus Christi Ship Channel, Texas, by 1968 River and Harbor Act. This is a consolidation of old improvements of Port Aransas, Texas, and channel from Aransas Pass to Corpus Christi, Texas. Aransas Pass is on southern portion of Texas Coast, 180 miles southwest of Galveston and 132 miles north of mouth of Rio Grande. Aransas Pass connects Corpus Christi Bay with the gulf. Waterway extends from deep water in the gulf through Aransas Pass jettied entrance, thence westerly 20.75 miles to and including a turning basin at Corpus Christi, thence westerly 1.75 miles through Industrial Canal to and including turning basin at Avery Point, thence westerly 4.25 miles to and including a turning basin near Tule Lake, thence northwesterly 1.8 miles to and including a turning basin at Viola, Texas. (See National Ocean Survey Charts 11308, 11309, 11311, and 11314.)

**Previous project.** For details see page 1861 of Annual Report for 1915.

Deleted: Operations during fiscal year. Maintenance: Routine maintenance. (See Table 40-J for dredging operations.)¶

**5. CLEAR CREEK AND CLEAR LAKE, TX¶**

**Location.** Clear Creek has its source about 18 miles south of Houston, Texas, and flows southeast for about 25 miles, emptying into west side of upper Galveston Bay at a point 24 miles north west of Galveston, Texas. (See National Ocean Survey Chart 11326.)¶

**Existing project.** Project provides for 1.5 miles of channel 7 feet by 75 feet from Galveston Bay to mouth of Clear Creek; 0.7 miles of channel 7 feet by 60 feet, known as North Fork Channel; and 7.7 miles of channel 7 feet by 60 feet through Clear Creek and Clear Lake. The project was completed in June 1950.¶ Under ordinary conditions, mean tidal range is about 0.8 foot and extreme range 1.4 feet. Height of tides is dependent largely on the wind, and during strong "northers" in the winter season water surface may be depressed 2 feet below mean low tide. ¶

**Local cooperation.** Fully complied with. ¶

**Terminal facilities.** Consist of small privately owned wharves, several ship repair yards and marinas which accommodate light commercial vessels and pleasure yachts. These are along lake shore and at towns of Seabrook and Kemah at mouth of creek. A commercial shell loading dock, located near League City at the head of NASA-Manned Spacecraft Center, has a barge dock along lake shore near their property. ¶

**Operations during fiscal year.** Maintenance: No maintenance required for fiscal year.¶

Deleted: required

Deleted: 2004

Deleted: 40-

**Existing project.** (See Table 40-H for existing project dimensions provided for in various channels and basins comprising this waterway.)

Project also provides for two rubblestone jetties at Aransas Pass entrance, extending into the gulf from St. Joseph and Mustang Islands, project lengths of which are 11,190 and 8,610 feet, respectively. Project further provides for a stone dike on St. Joseph Island about 20,991 feet long, connecting with north jetty and extending up this island to prevent a channel being cut around jetty. Project also provides for a breakwater at the entrance to the harbor area at Port Aransas, and for the realignment of the existing 12-foot by 100-foot project channel to Port Aransas. The breakwater consists of two overlapping sections. The one on the east side of the realigned entrance channel has a length of 830 feet and the second, located on the west side of the entrance channel, has a length of 1,290 feet. The channel to Port Aransas was relocated in the 300-foot clear distance between the overlapping sections. The portion of the channel remaining inside the breakwaters was widened to 150 feet. Under ordinary conditions, mean tidal range at Aransas Pass is about 1.1 feet and extreme range about 2 feet, and at Corpus Christi mean range about 1 foot and extreme about 1.5 feet. Heights of tides are dependent largely on strength and directions of winds, and during strong "northers" in the winter season water surface may be depressed as much as 3 feet below mean low tide. Estimated cost for new work is: Federal (Corps) \$74,938,515, including \$456,515 for Port Aransas Breakwaters and exclusive of amount expended on previous projects: and non-Federal \$18,977,431 (includes \$768 for Port Aransas Breakwaters) including \$7,644,435 contributed funds and value of useful work performed, \$3,320,228 lands, \$6,027,000 relocations and \$1,985,000 other cost. (October 1, 1992 base price.)

The Port Aransas-Corpus Christi 40-foot project was completed in 1966. The Jewel Fulton Canal was completed in 1963. The Port Aransas Breakwaters were completed in July 1973. Deepening deep-draft channels to 45 feet from Tule Lake Turning Basin through Viola Turning Basin was completed in 1989, and constructing a mooring area at Port Ingleside with dolphins has been deferred. Entrance and jetty channels have been dredged to project depth and width, and dredging of channel from Harbor Island to and through the Chemical Turning Basin at 45-foot depth has been completed. Initial mooring dolphins were completed in May 1979. Disposal area levees, Area 1 and Rincon were completed in August 1984. First stage disposal area levees, South Shore, were completed in September 1984. Construction contract for mitigation terracing was completed in 1997. (See Table 40-G for total cost of existing project to September 30, 2005.)

**Local cooperation.** Fully complied with.

**Terminal facilities.** Terminal facilities on Harbor Island at head of Aransas Pass, Ingleside, Corpus Christi, La Quinta, Avery Point, and Viola, are considered adequate for existing commerce. (See Port Series, No. 25, revised 1993, Corps of Engineers.)

**Operations during fiscal year.** New Work: See Section 39, Preconstruction Engineering and Design. Maintenance: A contract was awarded in October 2004 for dredging the Lower Bay reach of the Main Channel and dredging of La Quinta Channel. A second contract was awarded in Jun 05 for dredging the Main Channel from La Quinta Channel junction to the Main Turning Basin. (See Table 40-J for dredging operations.)

Deleted: July 2003 and

Deleted: notice to proceed was issued in October 2003 to repair

Deleted: Corpus Christi Ship

Deleted: South Jetty. FY04 cost was \$981,000.

## 7. DOUBLE BAYOU, TX

**Location.** Enters Trinity Bay on the east side about 30 miles north of Galveston and about 8.25 miles south of Anahuac, Texas.

**Existing Project.** Project provides for a channel 7 feet by 125 feet from the mouth of Double Bayou to the 7-foot contour in Trinity Bay, a length of 3.9 miles; and a channel, know as West Fork, 7 feet by 100 feet for a length of 2.0 miles. The project was completed in 1971.

Under ordinary conditions mean tidal range is about 0.5 feet and extreme range is about 1.2 feet. Height of tides is dependent largely on winds, and during strong north winds in the winter season, water surfaces may be depressed 1.5 feet below mean low tide. (See National Ocean Survey Chart 11326.)

**Local cooperation.** Fully Complied with.

**Terminal facilities.** Facilities are privately owned. At the mouth of the bayou is a timber wharf for loading oil barges. Between miles 1 and 1.5 above the mouth is a timber wharf, a boat slip, and a marine railway owned by the Brown and Root Corporation. At mile 3 above the mouth is a small depot for handling oyster shell. The facility consists of a timber bulkhead and hoppers for loading trucks. One-half mile above the mouth are several fishing vessel docks.

**Operations during fiscal year.** Maintenance: No maintenance performed during this fiscal year.

Deleted: required

## 8. FREEPORT HARBOR, TX

**Location.** Formed by improvement of Brazos River, Texas, from mouth to about 6 miles upstream to Freeport, Texas. (See National Ocean Survey Charts 11321 and 11322.)

**Previous projects.** For details see page 1860 of Annual Report for 1915, and page 872 of Annual Report for 1938.

Deleted: 2004

**Existing project.** Existing project dimensions for various channels and basins are shown in Table 40-H on channel dimensions at end of chapter.

Existing project also provides for dual jetties and a diversion canal for the Brazos River, including a dam, a lock in the dam and necessary auxiliary equipment. Also provides for rehabilitation of southwest jetty and the relocation of the northeast jetty (about 640 feet to the northeast); realignment of the channel between the Jetty Channel and Brazosport Turning Basin; realignment of the channel between Brazosport Turning Basin and Upper Turning Basin; relocation of Upper Turning Basin; and public use facilities adjacent to the Freeport Jetties. The 30-foot channel from Upper Turning Basin to Stauffer Chemical Plant, including the turning basin, was deauthorized by Sec. 12 of PL 93-251. Construction of lock in diversion dam at local expense is considered inactive.

The 38-36 foot project was completed in 1962. The 45-foot channel was completed in 1993 as follows: Relocation of the U. S. Coast Guard station was completed in May 1990; dredging the channel and turning basin to 36-feet and the Upper Turning Basin to 46-feet was completed in July 1990; dredging the jetty channel and the Lower Turning Basin was completed in November 1990; Construction of 3,700 feet of the North Jetty, was completed in March 1991; dredging the entrance channel was completed in April 1992; dredging the Main channel, Brazosport turning basin and jetty channel was completed in June 1992; construction of public use facilities, and grading and stone protection was completed in August 1992; and rehabilitation of the south jetty and addition of 500-feet to the north jetty was completed in May 1993. Channel adjustments to a bend near the project's main turning basin was completed in 1998 to provide full utilization of the 45-foot channel. Project is essentially complete. Construction of additional recreation features at Surfside by the Sponsor has been completed in 2005. (See Table 40-G for total cost of existing project to September 30, 2005.)

Under ordinary conditions mean tidal range is about 1.5 feet and extreme range is about 2.5 feet. Except under extreme conditions, rises on river and in diversion channel do not cause greater variations in water surface than those caused by tidal action. Estimated cost of new work is: \$63,707,000 Federal (Corps) and \$470,000 Federal (USCG); and \$32,313,000 non-Federal, including \$21,302,000 contributed funds, \$300,000 contributed work, \$6,967,000 lands, \$3,174,000 levees and spillways, and \$570,000 relocations. (October 1, 1997 base price.)

**Local cooperation.** Fully complied with except for Section 101 of River and Harbor Act of 1970, under cost-sharing tenets of the Water Resources

Development Act of 1986 and the Water Resources Development Act of 1996. Local Cooperation Agreement, executed June 26, 1986, along with Amendments 1, 2, 3, and 4 executed March 19, 1987; July 19, 1991; July 19, 1991; and July 15, 1997; respectively, require that local interest provide lands, easements, rights-of-way, including land for recreation, and dredged material disposal areas, presently estimated at \$10,141,000, modify or relocate utilities, roads, and other facilities, except railroad bridges, where necessary for construction of the project, presently estimated at \$570,000, contribute in cash one-half of the separable and joint costs allocated to recreation, presently estimated at \$530,000; and, during construction, pay 25 percent of the construction costs allocated to deep-draft navigation, including disposal facility construction, presently estimated at \$21,302,000.

**Terminal facilities.** Small privately owned wharves, two oil docks, one acid dock, two shell unloading docks and one caustic dock. Brazos River Navigation District has one large dock with four transit sheds over rail facilities permitting all-weather work. Facilities considered adequate for existing commerce. (See Port Series No. 26, revised 1991, for additional facilities.)

**Operations during fiscal year.** New Work: Construction of Surfside Recreation Area was completed in 2005 by the sponsor, Brazos River Harbor Navigation District. Reimbursement will be made in 2006 after audit is completed. Maintenance: Routine maintenance. (See Table 40-J for dredging operations.)

## 9. GALVESTON HARBOR AND CHANNEL, TX

**Location.** A consolidation of authorized improvements at Galveston, Texas, which includes projects formerly identified as Galveston Harbor, Texas; Galveston Channel, Texas; and Galveston seawall extension. Entrance to Galveston Harbor is on the Gulf of Mexico on the northern portion of the Texas Coast. Galveston Channel extends from a point in Galveston Harbor between Bolivar Peninsula and Fort Point to and along wharf front Galveston, Texas, and is about 5 miles long and 1,200 feet wide. (See National Ocean Survey Chart 11324/5.)

**Previous projects.** For details see page 1854 of Annual Report for 1915.

**Existing project.** Provides for channel dimensions in sections of the waterway shown in Table 40-H.

Also provided are: two rubble-mound jetties, the south one extending from Galveston Island and the north one extending from Bolivar Peninsula, for distances of 35,900 feet and 25,907 feet, respectively,

Deleted: Local

Deleted: is the last remaining item

Deleted: 2004

Deleted: 40-

into the Gulf of Mexico; a concrete seawall from the angle at Sixth Street and Broadway, in the city of Galveston, to the south jetty, and a 16,300-foot extension of the concrete seawall in a southwesterly direction from 61st Street; for 11 groins along the gulf shore between 12th Street and 61st Street; and for maintenance of seawall from the angle at 6th Street and Broadway to the south jetty. Under ordinary conditions, mean tidal range in Galveston Harbor is 1.6 feet on outer bar and 1.4 feet on inner bar with extreme ranges of 2.3 and 2.1 feet, respectively. Mean range in Galveston channel is about 1.3 feet and extreme range about 2 feet under ordinary conditions. Height of tides in both Galveston harbor and channel is dependent largely on the wind, and during strong "northers" water surface may be depressed 2 feet below mean low tide.

Existing project is complete. Dredging of Galveston channel to 36-foot depth was completed in November 1966. Dredging of the realigned entrance and Outer Bar Channel was completed in October 1967. Rehabilitation of the Beach Front Groins was completed June 1970. Dredging of Galveston channel to 40 feet was completed in March 1976. See Section 16. TEXAS CITY CHANNEL, TX regarding work authorized by Water Resources Development Act of 1986, Section 11, HOUSTON-GALVESTON NAVIGATION CHANNELS, TX, for work authorized by the Water Resources Development Act of 1996. (See Table 40-G for total cost of existing project to September 30, 2005.)

**Local cooperation.** Complied with.

**Terminal facilities.** None on Galveston Harbor, which is entrance channel leading to terminal facilities on Galveston, Texas City, and Houston Ship Channels. Galveston Channel terminal facilities are mostly on south side of channel. Principal wharves, owned by the city of Galveston, extend from 10th to 41st Street (see Port Series No. 23, revised 1996). A container ship terminal equipped with a crane capable of stacking containers three units high on the deck of any normal container ship has been completed and placed into operation by the city of Galveston at Piers 10 and 11, on the south side of Galveston Channel. The city of Galveston has also placed into operation a barge terminal equipped with two 35-ton and one 5-ton cranes for loading and unloading barges on Lash and Seabee ships at Pier 35 and a docking and holding area for Lash and Seabee barges on Pelican Island, directly across the channel from Piers 35 and 36. Present facilities are considered adequate for existing commerce.

**Operations during fiscal year.** Maintenance: Routine Maintenance. Also see Section 11, HOUSTON-GALVESTON NAVIGATION CHANNELS, TX. (See Table 40-J for dredging operations.)

## 10. GULF INTRACOASTAL WATERWAY BETWEEN APALACHEE BAY, FL, AND THE MEXICAN BORDER

**Location.** Extends from a point on Sabine River about 3 miles below Orange, Texas, to Brownsville, Texas, about 421 miles; a navigation channel, about 7 miles long, in Colorado River, extending from Matagorda, Texas, to Gulf of Mexico; a tributary channel in San Bernard River, extending from Intracoastal Waterway crossing to State highway bridge some 30 miles above crossing; a tributary channel in Colorado River extending from Intracoastal Waterway upstream 15.5 miles; a tributary channel extending about 14 miles from Intracoastal Waterway to Palacios, Texas; a tributary channel extending about 2 miles from Intracoastal Waterway to Rockport, Texas; a tributary channel extending about 6 miles from Intracoastal Waterway near Port Aransas, Texas, to town of Aransas Pass, Texas; a tributary channel about one-fourth mile long extending from Intracoastal Waterway near Port O'Connor, Texas, into Barroom Bay; a tributary channel extending about 38.8 miles from Intracoastal Waterway via Seadrift to a point in Guadalupe River 5.5 miles below Victoria, Texas; a harbor of refuge for small craft at Seadrift; a channel extending from gulf to Port Mansfield, Texas, about 11 miles; and a tributary channel in Arroyo, Colorado extending from Intracoastal Waterway to a point near Harlingen, Texas, about 31 miles; side channels in vicinity of Port Isabel, Texas, and a small boat basin at Port Isabel, Texas, and a tributary channel extending from Intracoastal Waterway main channel at a point in West Galveston Bay into Offatts Bayou about 2.2 miles with a west turnout (wye connection) 12 feet deep and 125 feet wide between Offatts Bayou Channel and the Gulf Intracoastal Waterway. (See National Ocean Survey Charts 11302, 11303, 11305, 11306, 11308, 11309, 11314, 11315, 11317, 11319, 11322, 11326, and 11331.)

**Previous project.** For details see page 1859 of Annual Report for 1915. (West Galveston Bay and Brazos River Canal, Texas.)

**Existing project.** Existing project dimensions provided for in main channel of waterway: A channel 12 feet deep (below mean low tide) and 125 feet wide from the Sabine River to Brownsville, Texas. Relocation of channel 12 feet deep by 125 feet wide in Matagorda Bay, miles 454.3 to 471.3, relocation of channel 12 feet deep by 125 feet wide in Corpus Christi Bay, miles 539.4 to 549.7 (mileage is west of Harvey Lock, Louisiana); and alternate channel, 12 feet deep (below mean low tide) and 125 feet wide via Galveston Channel and Galveston Bay to the Galveston causeway; maintenance of existing channel 12 feet deep by 125

Deleted: 2004

feet wide through Lydia Ann Channel, between Aransas Bay and Aransas Pass; provisions of such passing places, widening of bends, locks and guard locks, railway bridges over artificial cuts as are necessary, and the tributary channels shown in tabulation. The authorized channel 16 feet deep and 125 feet wide from Sabine River to Houston Ship Channel is inactive. (See Table 40-I on existing project dimensions provided for in tributary channels.)

Removal of the railroad bridge across the canal at Mud Bayou was completed and operation and care of the facility was discontinued on April 14, 1969. Deepening the existing 6 foot by 60 foot side channels at Port Isabel to 12 feet was completed February 22, 1972. Offatts Bayou channel was completed January 1974. Relocation of main channel across Corpus Christi Bay was completed in September 1976. The 14-foot by 175 foot Channel to Aransas Pass was completed in April 1979. Dredging Chocolate Bayou Channel was completed in January 1981. Construction of a saltwater barrier in Chocolate Bayou was completed in February 1981. The 12-foot by 125-foot channel relocation route in Matagorda Bay has been de-authorized. The Harbor of Refuge at Seadrift, Texas, has been placed in the inactive category.

Mean tidal variation is 0.5 foot at Orange, 1 foot at Port Arthur, 1.3 feet in Galveston Bay, 1.5 feet at Freeport, 1 foot in Matagorda Bay, 1 foot in San Antonio Bay, 1 foot at Corpus Christi, 1.5 feet at Port Isabel, and 1.5 feet at Brownsville. Extreme ranges of tide under ordinary conditions are 1 foot at Orange, 1.5 feet at Port Arthur, 2 feet in Galveston Bay, 2 feet at Freeport, 1.5 feet in Matagorda and San Antonio Bays, 1.5 feet at Corpus Christi, 2 feet at Port Isabel, and 1.5 feet at Brownsville. Height of tides is dependent largely on wind. Strong north winds have depressed water surface as much as 2 feet below mean low tide.

**Mouth of Colorado River:** Construction of jetties at mouth of Colorado River was completed in 1986. Construction of a navigation channel from the Gulf to the GIWW and an impoundment basin were completed in 1991. Construction of Tiger Island Dam and recreation facilities were also completed in 1991. Construction of the recreation facilities at Jetty Park was completed in 1992. Construction of the diversion dam and connecting channel was completed in 1993. Construction of the oyster cultch was completed in 1995.

**Brazos River Floodgates- Major Rehabilitation:** Major rehabilitation of the East Floodgate Guidewalls was completed in 1997. The cost of rehabilitation was \$2,750,000 Federal (Corps) and \$2,750,000 Federal (Inland Waterways Trust Fund).

**Sargent Beach:** Work authorized by the Water Resources Development Act of 1992 for construction of a concrete-pile and concrete block revetment structure, which extends 8 miles to protect the Gulf Intracoastal Waterway was completed in 1998. Construction cost was \$29,460,000 Federal (Corps) and \$29,460,000 Federal (Inland Waterways Trust Fund).

**Aransas National Wildlife Refuge:** Work authorized by the Water Resources Development Act of 1996 provides for erosion protection and limited spill containment for the existing alignment of the Gulf Intracoastal Waterway and includes marsh creation with beneficial uses of dredged material along a 31-mile reach of the waterway which crosses the critical wintering habitat of the rare and endangered whooping crane, including a 13.25 mile reach within the boundary of the Aransas National Wildlife Refuge. This area is located approximately 35 miles northeast of Corpus Christi, Texas in Aransas and Calhoun Counties. The project was completed in 2001. Construction costs were \$14,123,500 Federal (Corps).

#### **Work remaining:**

Active authorized work remaining consists of the work authorized by the Water Resources Development Act of 1988 for enlarging the existing Channel to Victoria from a depth of 9 feet and width of 100 feet to a depth of 12 feet and width of 125 feet. (See Table 40-G for total cost of existing project to September 30, 2005.)

Deleted: 2004

#### **Estimated cost for new work is:**

**Channel to Victoria** - \$31,686,000 Federal (Corps), \$422,000 Federal (Department of Transportation), \$62,000 Federal (U.S. Coast Guard), and \$6,530,000 non-Federal consisting of \$3,521,000 cash, \$1,646,000 lands, and \$1,363,000 levees and other associated costs. (October 1, 2002 base prices.)

**Local cooperation.** Fully complied with except for provisions of Section 101, 1968 River and Harbor Act and Water Resources Development Act of 1988. The Project Cooperation Agreement for Channel to Victoria was executed November 17, 1994.

**Terminal facilities.** There are terminal facilities at Aransas Pass, Port Arthur, Galveston, Port Isabel, and Brownsville. See Port Series No. 22 (revised 2001), Port Series No. 23 (revised 1996), Port Series No. 25 (revised 1993) and Port Series No. 26 (revised 1991), Corps of Engineers. Local interests constructed terminal facilities at Port Mansfield and Port Harlingen. There are numerous privately owned piers and wharves along the waterway. A 330-foot navigation district owned general cargo dock, a 770-foot private dock and a 760-foot private timber trestle have recently been completed

Deleted: 40-

at the upper end of the Channel to Victoria. Facilities are adequate for existing commerce.

**Operations during fiscal year.**

**New Work: -**

**Channel to Victoria** - Prehistoric archeological site 41VT98 on the Channel to Victoria has produced artifacts dating from 1,000 to 12,000 years old, and a large Early Archaic cemetery dating from 5,000 to 7,000 years old. Analysis of the 41VT98 artifacts and mortuary remains is ongoing in accordance with the approved treatment plan.

**Maintenance: -**

**Main Channel and Tributaries -**

(See Table 40-J for dredging operations.)

**Aransas National Wildlife Refuge** - No maintenance required during the fiscal year.

**Brazos River Floodgates** - The Brazos River Floodgates were operated and maintained at a cost of \$1,285,048.

**Channel to Victoria** - Routine maintenance. (See Table 40-J for dredging operations.)

**Colorado River Locks** - The Colorado River Locks were operated and maintained at a cost of \$1,475,308.

**Channel to Port Mansfield** - No maintenance performed during the fiscal year.

**Chocolate Bayou** - No maintenance performed during the fiscal year.

**Mouth of Colorado River** - No maintenance required during the fiscal year.

enlarging the Houston Ship Channel to a depth of 45 feet and a width of 530 feet. The Galveston Channel will be enlarged to a depth of 45 feet over a width which varies between 650 and 1,112 feet, and deepening the Galveston Harbor Channel to 47 feet (45-feet authorized and 2 feet for dredging inaccuracies and wind impact) over its original 800-foot width and 10.5 mile length; and extending the channel an additional 3.9 miles to the 47-foot bottom contour in the Gulf of Mexico along existing alignment. A dredged-material disposal plan, which would utilize confined or beneficial uses of dredged material in the bay and/or offshore disposal and 118 acres of Oyster mitigation is also provided in the project.

Energy and Water Development Appropriations Act of 2001, Section 1(a)(2) of Public Law 106-377 authorized construction of barge lanes. Barge lanes will be constructed on the sides of the Houston Ship Channel to a depth of 12 feet and a distance of 500 feet from the centerline of the channel from Bolivar Roads to Morgan's Point, a distance of approximately 26 miles. Fifty-four acres of oyster reef will be impacted and will be mitigated.

Estimated cost for new work is: \$448,867,000 Federal (Corps) which includes \$258,413,000 for general navigation features and \$190,454,000 for environmental restoration of which \$98,953,000 is for deferred environmental construction; \$7,191,000 Federal (U.S. Coast Guard); and \$158,814,000 non-Federal consisting of \$83,817,000 cash, \$1,068,000 lands, and \$62,000 relocations for general navigation features; \$10,363,000 for berthing areas; and \$63,484,000 cash for environmental restoration which includes \$32,984,000 for deferred environmental construction. (October 1, 2005 base price.)

The first construction contract to dredge the Entrance Channel Extension, awarded August 7, 1998, was completed in 1999. The contract for dredging the entrance channel and jetty area was completed in March 2000. The Oyster Reef Mitigation for the main channel was completed in July 2000. Construction of the Lower Bay reach was completed in March 2001. A contract for Mid Bay was awarded September 8, 2001 and work was completed on December 22, 2004. The construction contract for Redfish Island was awarded March 29, 2002 and construction was completed October 1, 2002. A contract for Mid Bayou (Goat Island) was awarded September 20, 2002, and work was completed July 29, 2005. The Lower Bayou contract work was completed on December 13, 2003. The Upper Bay & Barge Lane contract was completed in June, 2005. The Barge Lane Mitigation contract was completed on July 25, 2005. The Houston Ship Channel and entrance channel was opened to allow vessels drawing 45-foot of water on June 14, 2005.

**11. HOUSTON-GALVESTON NAVIGATION CHANNELS, TX**

**Location.** Houston Ship Channel connects Galveston Harbor, at a point opposite Port Bolivar, with city of Houston, Texas, extending 50 miles northwesterly across Galveston Bay through San Jacinto River and Buffalo Bayou to a turning basin at head of Long Reach with light-draft channel 5 miles long from turning basin to Jensen Drive, Houston. The entrance to Galveston Harbor and Channel is on Gulf of Mexico on the northern portion of the Texas Coast. Galveston Channel extends from a point in Galveston Harbor between Bolivar Peninsula and Fort Point to and along wharf from Galveston, Texas and is about 5 miles long and 1,200 feet wide. (See National Ocean Survey Charts 11324/5, 11327, 11328, and 11329.)

**Existing project.** See Section 9, GALVESTON HARBOR AND CHANNEL, TX and Section 12, HOUSTON SHIP CHANNEL, TX for project prior to October 1998. New authorized project provides for

**Deleted:** Construction contract to construct a new mitigation feature and repair an existing one, awarded September 2002 completed in FY04 at a cost of \$11,751.¶

**Deleted:** A contract was issued in FY04 to repair levees from the causeway to Bastrop. It was completed in FY at a cost of \$2,949,251. Erosion protection for levees along the Gulf Intracoastal Waterway was performed during FY 04 for the following reaches:

**Deleted:** Bastrop to Matagorda Bay - \$425,544¶  
Port O'Connor to San Antonio Bay - \$101,458¶

**Deleted:** 378,086. West Gate Guidewall Emergency Scour Repair contract was awarded October 2003 and completed in FY04 at a cost of \$421,361.¶

Also, the Project Cooperation Agreement and an evaluation of the Economic Benefits for the Galveston Channel remain to be accomplished.

**Local cooperation.** Complied for the completed work. For the Houston-Galveston Navigation Channels project, authorized by the Water Resources Development Act of 1996, the cost-sharing and financing concepts reflected in the Water Resources Development Act of 1986, as amended, apply. Local interests are required to provide lands, easements, rights-of-way, roads and other facilities, except railroad bridges; pay one-half of the separable and joint costs allocated to recreation; and pay 25 percent of the costs allocated to deep-draft navigation, during construction including in-kind work in connection with construction; and pay an additional 10 percent of the costs allocated to navigation within a period of 30 years following completion if not offset by credit allowed for lands, easements, rights-of-way, and relocations.

The Port of Houston Authority and the City of Galveston are the sponsors for the project. A Project Cooperation Agreement with the Port of Houston Authority was executed on June 10, 1998. The Project Cooperation Agreement with the City of Galveston is pending.

**Terminal facilities.** See Section 9, GALVESTON HARBOR AND CHANNEL, TX and Section 12, HOUSTON SHIP CHANNEL, TX.

**Operations during fiscal year.** New Work: The contract to dredge Lower Bayou, awarded April 21, 2000, was stopped in October 2001, resumed in FY 2003, and was financially completed in December 2004 at a fiscal year cost of \$663,892. The Mid Bay construction contract, awarded September 28, 2001, completed in March 2005 at a cost of \$4,830,483. The Mid Bayou (Goat Island) contract, awarded September 20, 2002 continued through FY05. Cost incurred for FY05 was \$11,730,886. The contract to perform the first maintenance cycle for the Upper Bay and construct the Barge Lanes awarded June 2004 was physically completed in June 2005. The FY05 fiscal year cost was \$6,930,623. The Offshore Maintenance contract was financially completed in FY05 for a final cost of \$23,769. A contract to construct the Oyster reef pads mitigation at the Barge lanes, awarded September 2004, was completed in July 2005 for a FY05 fiscal year cost of \$44,108,215.

**Maintenance:** See Section 9, GALVESTON HARBOR AND CHANNEL, TX and Section 12, HOUSTON SHIP CHANNEL, TX for maintenance of existing channels. (See Table 40-J for dredging operations.)

**12. HOUSTON SHIP CHANNEL, TX**

**Location.** Connects Galveston Harbor, at a point opposite Port Bolivar, with city of Houston, Texas, extending 50 miles northwesterly across Galveston Bay through San Jacinto River and Buffalo Bayou to a turning basin at head of Long Reach with light-draft channel 5 miles long from turning basin to Jensen Drive, Houston. (See National Ocean Survey Charts 11324/5, 11327, 11328, and 11329.)

**Previous project.** For details see page 1856 of Annual Report for 1915.

**Existing project.** Provides for channel dimensions in sections of the waterway shown in Table 40-H.

Also provides for certain cut-offs, for easing sharp bends, an earthen dam across the upper end of Turkey Bend, and for off-channel silting basins as deemed necessary by the Chief of Engineers. Construction of 26,000 linear feet of pile dike to protect the channel in upper Galveston Bay was de-authorized by Sec. 12 of PL 93-251. The 40-foot project was completed in March 1966. Dredging a channel in Greens Bayou to Mile 1.57 was completed in 1970. Dredging Greens Bayou, Mile 1.57 to Mile 2.73, has been de-authorized. See Section 11, HOUSTON-GALVESTON NAVIGATION CHANNELS, TX for work authorized by the Water Resources Development Act of 1996. (See Table 40-G for total cost of existing project to September 30, 2003.)

Mean tidal range under ordinary conditions is 0.6 foot to 1.3 feet in lower part of Galveston Bay; 0.6 foot to 1.3 feet in upper bay; and 0.5 to 1 foot in San Jacinto River and Buffalo Bayou. Extreme ranges under ordinary conditions are about 2 feet, 1.2 feet and 1 foot, respectively. Freshets caused rises of over 12 feet in Buffalo Bayou; however, this condition has not occurred since completion of Addicks and Barker Dams for flood control on upper watershed of Buffalo Bayou. Height of tides is dependent largely on the wind, and during strong "northers" in winter season, the water surface may be depressed 2 feet below mean low tide.

**Local cooperation.** Fully complied with for Houston Ship Channel. Local Cooperation Agreement for assumption of maintenance on Bayport Ship Channel was executed April 6, 1993. Local Cooperation Agreements for assumption of maintenance on Barbour Terminal Channel and Greens Bayou Channel were both executed on February 8, 1994.

**Terminal facilities.** City of Houston and Port of Houston Authority operate modern terminals which supplement privately owned wharves, piers, and docks, as described in Port Series No. 24 (revised 1999), Corps of Engineers. Facilities are considered adequate for existing commerce.

**Operations during fiscal year.** New Work: See Section 11, HOUSTON-GALVESTON NAVIGATION CHANNELS, TX.

- Deleted: ,
- Deleted: continued through 2004 for a
- Deleted: ,121,275
- Deleted: continued through FY 2004 at a cost of \$23,118,233

### 13. MATAGORDA SHIP CHANNEL, TX

**Location.** This is a consolidation of shallow draft channel improvements of "Channel from Pass Cavallo to Port Lavaca, Texas," and deep draft channel improvements authorized under "Matagorda Ship Channel, Texas." Bar at Pass Cavallo is 125 miles southwest of Galveston entrance and 54 miles north of Aransas Pass. It connects Matagorda Bay with the gulf. Project extends across Matagorda Bay and Lavaca Bay to towns of Port Lavaca and Point Comfort. These two towns are on opposite sides of Lavaca Bay and both are about 26 miles northwest from Pass Cavallo. (See National Ocean Survey Chart 11316.)

**Existing project.** Existing project dimensions provided for in various channels and basins are listed in Table 40-H on channel dimensions.

Project also provides for dual jetties at entrance, south jetty extending 6,000 feet to 24-foot depth in the gulf and north jetty extending 5,900 feet to 24-foot depth. Under ordinary conditions mean tidal range is about 1 foot and extreme range about 2 feet. Height of tide is dependent largely on the wind, and during strong "northers" in the winter season, the water surface may be depressed 2 feet below mean low tide. (See Table 40-G for total cost of existing project to September 30, 2005.)

**Local cooperation.** Fully complied with.

**Terminal facilities.** Privately owned facilities at Port Lavaca, municipally owned facilities at mouth of Lynn bayou, privately owned and publicly owned facilities at Point Comfort, Texas. These facilities are considered adequate for present commerce. Facilities at Point Comfort consist of a channel, turning basin with wharfs, oil dock and loading equipment, all owned by Aluminum Company of America; and a wharf built by local interest at Point Comfort turning basin.

**Operations during fiscal year.** Maintenance: Routine maintenance. (See Table 40-J for dredging operations.)

**Existing project.** The project will provide for an overflow dam in the Neches River, a gated salt water barrier consisting of five 56 feet by 24.5 feet tainter gates; a gated navigation bypass channel with a clear opening of 56 feet and a depth of 16 feet; an access road and levee; and an auxiliary dam across a canal which drains an adjacent bayou. Estimated cost for new work is \$43,064,000 Federal (Corps) and \$14,355,000 non-Federal consisting of \$8,435,000 contributed funds, \$1,800,000 for lands, \$4,120,000 for relocations. (October 1, 2002 base price.)

The project was authorized for construction in the Water Resources Development Act of 1976 (Sec. 102, PL 94-587). The construction contract was awarded September 18, 2000 and completed in 2004.

**Local cooperation.** Local Sponsor for the project is the Lower Neches Valley Authority. Report of the Chief of Engineers for the Water Resources Development Act of 1976 authorization cited a 1974 Waterways Experiment Station report, which concluded that 75 percent of the salinity in the Neches River at Beaumont was due to the Federal deep draft navigation project to Beaumont and 25 percent was due to withdrawals by water users. From 1994 to 1996, the Corps reevaluated the project which resulted in a May 1997 decision by the Assistant Secretary of the Army (Civil Works), to direct that the project go forward with 75 percent Federal / 25 percent non-Federal cost-sharing as a navigation mitigation project. In October 1999, the Assistant Secretary of the Army (Civil Works) issued a decision stating that operations and maintenance will also be cost-shared as 75 percent Federal and 25 percent non-Federal. A Project Cooperation Agreement was executed on May 22, 2000.

Deleted: 2004

**Terminal facilities.** None.

Operations during fiscal year. See # 15, Sabine Neches Waterway, TX, Operations during the fiscal year for the reimbursement to Lower Neches Valley Authority for the Federal share of the operations cost.

Deleted: Operations during fiscal year. New Work: The contract to construct the saltwater barrier and the other project features, awarded September 18, 2000, completed in FY 04. Cost incurred for the fiscal year was \$1,348,715. Financial adjustments in FY 04 for utility contracts were as follows:  
 . Dixie Pipeline Co. - (-)\$14,557¶  
 . Dow/Cayouse - (-)\$72,100¶

### 15. SABINE-NECHES WATERWAY, TX

**Location.** This is a consolidation of old improvements of "Harbor at Sabine Pass and Port Arthur Canal" and "Sabine-Neches Canal, including Sabine River to Orange and Neches River to Beaumont, Texas." Sabine Pass is on Gulf of Mexico about 58 miles east of Galveston and 280 miles west of Southwest Pass, Mississippi River. It connects Sabine Lake with gulf. Port Arthur canal extends 7 miles from near upper end of Sabine Pass to Port Arthur docks at mouth of Taylors Bayou. Near its upper end, Sabine-

### 14. NECHES RIVER AND TRIBUTARIES, SALT WATER BARRIER AT BEAUMONT TX

**Location.** The project is located just below the Big Thicket National Preserve and the confluence of

Neches canal joins and extends to mouths of Neches and Sabine Rivers. Waterway next extends up Neches River to Beaumont and up Sabine River to Orange. (See National Ocean Survey Charts 11341, 11342, and 11343.)

**Previous projects.** For details see page 1863 of Annual Report for 1915, page 985 of Annual Report for 1916, and page 873 of Annual Report for 1926.

**Existing project.** Existing project dimensions provided for in various channels and basins are set forth in Table 40-H on channel dimensions. Project also provides for two stone jetties at Sabine Pass entrance from the gulf, western jetty to be 21,905 feet long and eastern jetty 25,310 feet long. Project further provides for removal of guard lock in Sabine-Neches Canal, construction of suitable permanent protective works along Sabine Lake frontage owned by city of Port Arthur to prevent dredged material from entering Sabine Lake and to prevent erosion of material deposited, reconstruction of Port Arthur Bridge, and relocation of Port Arthur field office. Mean tidal variation at entrance is about 1.5 feet, at Port Arthur about 1 foot, and at Orange and Beaumont about 0.5 foot. Prolonged north winds during winter season have depressed water surface as much as 3.4 feet below mean low tide while tropical disturbances have caused heights as much as 8 feet above mean low tide.

Existing project is complete. Removal of obstructive bridge at Port Arthur was completed May 1969. The high level fixed bridge across Sabine-Neches Canal was completed October 1970. Deepening project to 40 feet was completed April 1972. (See Table 40-G for total cost of existing project to September 30, 2005.)

**Local cooperation.** Complied with.

**Terminal facilities.** See volume 2, Port Series No. 22 (revised 2001), Corps of Engineers. Facilities are considered adequate for present commerce.

**Operations during fiscal year. Maintenance:** The contract for repair to the Sabine Neches East Jetty was completed in FY05 at a cost of \$2,778,843. The Lower Neches Valley Authority was reimbursed \$477,885 in Fiscal Year 05 for the Federal share of the operations cost for the Neches River and Tributaries, Saltwater Barrier at Beaumont. (See Table 40-J for dredging operations.)

## 16. TEXAS CITY CHANNEL, TX

**Location.** Texas City is on the mainland of Texas on west side of Galveston Bay, about 10 miles northwest of city of Galveston. (See National Ocean Survey Charts 11324/5.)

**Previous projects.** For details see page 1856 of Annual Report for 1915.

**Existing project.** Provides for channel 40 feet deep, 400 feet wide and about 6.75 miles long, from Bolivar Roads to a turning basin at Texas City, 40 feet deep, 1,000 feet to 1,200 feet wide and 4,253 feet long; and an Industrial Canal, 40 feet deep and 300-400 feet wide extending a distance of 1.7 miles southwestward from the south end of Texas City Turning Basin, and a turning basin, 40 feet deep, 1,000 feet wide and 1,150 feet long.

Project also provides for easing the approach to the turning basin; a pile dike 28,200 feet long, parallel to and north of the channel; and a rubble-mound dike, 27,600 feet long, along the southerly side of the pile dike.

The 40-foot channel was completed in June 1967. Widening the Texas City Turning Basin; realigning the Texas City Turning Basin to a location 85 feet easterly from its present position; and enlargement through widening and deepening of the Industrial Canal and basins was initiated in July 1980 and completed in June 1982. The only work remaining is deferred construction consisting of widening the Industrial Canal from 250 feet to 300 feet at 40 foot depth.

Work authorized by Water Resources Development Act of 1986 would modify the project by providing for deepening the Texas City Turning Basin to 50 feet, enlarging the 6.7-mile long Texas City Channel to 50 feet by 600 feet, deepening the existing 800-foot wide Bolivar Roads Channel and Inner Bar Channel to 50 feet, deepening the existing 800-foot wide Outer Bar and Galveston Entrance Channel to a 52-foot depth for 4.1 miles at a width of 800 feet and an additional reach at a width of 600 feet to the 52 foot contour in the Gulf of Mexico. Establishment of 600 acres of wetland and development of water-oriented recreational facilities on a 90-acre enlargement of the Texas City Dike are also proposed. The project is currently under reevaluation. (See Table 40-G for total cost of existing project to September 30, 2005.)

Under ordinary conditions mean tidal range is about 1.3 feet and extreme range is about 2 feet. Height of tide is dependent largely on the wind and during strong "northers" water surface may be depressed 2 feet below mean low tide. Estimated cost for new work is \$123,300,000 Federal (Corps), excluding expenditures on previous projects, and \$74,393,700 non-Federal, including \$62,027,741 contributed funds, \$248,000 work contribution, \$427,959 lands, \$10,737,000 levees and spillways, \$6,000 for removal of barge mooring facilities from Shoal Point (formerly known as Snake Island), \$561,000 for berthing areas, and \$386,000 relocations. (October 1, 1988 base price.)

Deleted: 2004

**Deleted: Operations during fiscal year. Maintenance:** A contract was awarded for repairs to placement areas #25 and #27. Total cost for FY04 was \$718,663. The contract for repair of PA #11 was continued in FY04 at a cost of \$1,059,202. The contract for repair of the Sabine Neches Jetty was continued in FY04 at a cost of \$1,554,054. (See Table 40-J for dredging operations.)

Deleted: 2004

Deleted: 40-

**Local cooperation.** Fully complied with for completed work. For work authorized by the Water Resources Development Act of 1986, as amended, local interests are required to provide lands, easements, rights-of-way, and disposal areas; relocate utilities, roads, and other facilities, except railroad bridges; provide berthing areas; pay one-half of the separable and joint costs allocated to recreation; and bear all costs of operation, maintenance and replacement of recreation facilities, and, during construction, pay 25 percent of the costs allocated to deep-draft navigation to a depth of 45 feet plus 50 percent of the costs allocated to deep-draft navigation deeper than 45 feet; pay an additional 10 percent of the costs allocated to deep-draft navigation within a period of 30 years following completion if not offset by credit allowed for lands, easements, rights-of-way, relocations and disposal areas; and pay 50 percent of the costs incurred for operation and maintenance below the 45-foot depth.

**Terminal facilities.** Privately owned terminal facilities are on the mainland at inner end of this channel and are considered adequate for existing commerce. A deep-draft channel and turning basin extend about 1.9 miles southwestward from south end of Texas City Turning Basin have been constructed by local interests. See Port Series No. 23 (revised 1996), Corps of Engineers.

**Operations during fiscal year.** New Work: See Section 39, Pre-construction Engineering and Design. Maintenance: The contract awarded for emergency repair of the Texas City Levee in FY 04 was completed in FY 05 at a fiscal year cost of \$15,452. No dredging maintenance was performed in FY 05.

**17. TRINITY RIVER AND TRIBUTARIES, TX**

**Location.** The main stem of the Trinity River is formed at Dallas by the confluence of the West Fork and the Elm Fork at river mile 505.5. The mouth of the Trinity is about one-half mile west of Anahuac, Texas. (See Geological Survey base map, Texas, scale 1:500,000.)

**Previous project.** For details of abandoned locks and dam construction see page 986 of Annual Report for 1933.

**Existing project.** See individual detailed reports on Anahuac Channel, Channel to Liberty and Wallisville Lake. Project includes the existing Federal project designated as "Mouth of Trinity River, Texas," which was completed in 1907 at a cost of \$80,000 (no cost to local interest). Project is not being maintained. (See Table 40-G for total cost of existing project to September 30, 2005.)

**Local cooperation.** See individual detailed reports on Channel to Liberty and Wallisville Lake. There is no local cooperation required for Anahuac Channel.

**Terminal facilities.** Privately owned wharves and piers at Anahuac, Moss Bluff, Wallisville, and Liberty, Texas, are adequate for existing commerce.

**17A. ANAHUAC CHANNEL, TX**

**Location:** Extends from 6-foot depth in Galveston Bay to Anahuac, Texas, opposite mouth of Trinity River 38 miles north of Galveston, Texas. (See National Ocean Survey Chart 11323.)

**Existing project.** No project dimensions authorized by 1905 River and Harbor Act. A 6- by 80-foot channel, 16,000 feet long was dredged in 1905. At present a 6- by 100-foot channel is maintained. Under ordinary conditions tidal range is 0.6 to 1.2 feet. Height of tide is dependent largely on wind. Strong north winds depress water surface 1.5 feet below mean sea level. Latest published map is in House Document 440, 56th Congress, 1st Session. Project was completed in 1911.

**Local cooperation.** None required.

**Terminal facilities.** Privately owned wharves and piers are the only terminal facilities at Anahuac.

**Operations during fiscal year.** Maintenance: No maintenance was performed during the fiscal year.

**17B. CHANNEL TO LIBERTY, TX**

~~**Location:** Improvement is located in Galveston Bay and tidal reach of lower Trinity River. (See Geological Survey Maps for Anahuac, Cove, Moss Bluff, and Liberty, Texas.)~~

**Previous projects.** For details see page 986 of Annual Report for 1932.

**Existing project.** Provides for a 6-foot channel from Anahuac to Liberty, which was completed in 1925. A navigable channel from the Houston Ship Channel near Red Fish Bar in Galveston Bay to Liberty, Texas, with depth of 9 feet and width of 150 feet, extending along the east shore of Trinity Bay to the mouth of the Trinity River at Anahuac, thence in the river channel to a turning basin at Liberty, Texas, and a protective embankment along the west side of the channel in Trinity Bay.

The 6-foot Channel to Liberty was completed in 1925. The 9-foot Channel to Liberty has been dredged from junction with Houston Ship Channel to a point one mile below Anahuac, Texas. Work remaining consists of dredging a 9- by 150-foot channel from one mile below Anahuac, Texas to Liberty, Texas.

**Local cooperation.** Fully complied with for portion of "Channel to Liberty" between Houston Ship Channel and 1 mile below Anahuac, Texas, as required by 1946

- Deleted: work
- Deleted: incurred
- Deleted: A
- Deleted: was
- Deleted: . FY04
- Deleted: \$172,075

- Deleted: 2004

River and Harbor Act (H. Doc. 634, 79th Cong., 2nd Sess.), but not complied with for remaining portion of "Channel to Liberty" as required by River and Harbor Act of 1945 (H. Doc. 403, 77th Cong., 1st Sess.).

**Terminal facilities.** Privately owned wharves and docks at Anahuac, Wallisville, Texas Gulf Sulphur Co.'s slip, Moss Bluff and Liberty, Texas, are adequate for existing commerce.

**Operations during fiscal year.** Maintenance: No maintenance performed during the fiscal year.

### 17C. WALLISVILLE LAKE, TX

**Location.** Dam is at river mile 3.9, about 4 miles northwest of Anahuac, Texas. (See National Ocean Survey Chart 11323.)

**Existing project.** Provides for construction of a dam and overflow spillway approximately 8 miles long to prevent salinity intrusion and create a 3,800 acre reservoir. The maximum pool elevation will be 2 feet above National Geodetic Vertical Datum. (The reservoir was reduced from 5600 acres with a maximum pool elevation of 4 feet N.G.V.D. by agreement to protect the endangered bald eagle.) Project provides for an 84 foot by 600-foot navigation lock to facilitate navigation on Channel to Liberty. The sill has a depth of minus 16 feet below National Geodetic Vertical Datum. Project also provides for two recreational areas; and three water control structures to control salinity intrusion and regulate freshwater flows to the saltwater marsh west of the river. Dam controls a drainage area of 1,262 square miles below Livingston Dam (non-Federal project at channel mile 99.2) and has a storage capacity of 14,000 acre-feet. Under ordinary conditions mean tidal range in bay is from 0.6 foot to 1.2 feet. Height of tide is dependent largely on wind. Strong northerly winds depress water surface 1.5 feet below mean sea level. Total estimated cost of authorized project is \$81,200,000 Federal (Corps). (October 1, 2000 base price.)

A contract for construction of access road, Big Hog intake structure, intake canal and access bridge was completed in October 1968. Work started in July 1970 on construction of the lock and dam, roads, diversion channel, and navigation channel. Work was suspended in February 1973 because of an injunction halting construction. Protective work on the lock and dam was permitted and was completed in April 1973. An exception to the injunction was granted for plugging oil wells, which was completed in August 1973. Notice of appeal to the Court of Appeals for the Fifth Circuit was filed in April 1973. In August 1974, the Court of Appeals reversed the judgment and remanded the case with directions that a revised or supplemental statement be prepared and judged anew. Final supplement to the Environmental Impact Statement for the modified

project authorized in the Supplemental Appropriations Act, 1983 (PL 98-63) was submitted to the Environmental Protection Agency on September 21, 1983.

In March 1986, the Court rendered its Memorandum of order continuing the injunction and directing the Corps to recommence the administrative process at the time when the first departure from standard NEPA procedures occurred prior to the 1983 legislative action. The Corps and Local Sponsors perfected an appeal to the U.S. Court of Appeals and on May 11, 1987, the Court of Appeals ruled in favor of the Corps and dismissed the suit in its entirety.

The Energy and Water Development Appropriation Act of 1991 provided \$9,200,000 for the project and directive language for continuation of construction.

In the fall of 1989, a pair of bald eagles was discovered nesting at the project site, which led to additional consultation under the Endangered Species Act. Solicitation of the contract for the non-overflow dam was postponed to allow for environmental coordination. An Environmental Assessment was prepared with a Finding of No Significant Impact (FONSI), which was signed in September 1991. Environmental documents were approved and construction was resumed.

A contract to rehabilitate and complete the navigation lock, complete the North and South navigation channels, construct a new administrative/resident office building, and electrical and mechanical equipment controls for the controlled spillway structure was awarded in December 1995 and completed in FY 99. A dedication ceremony for the Wallisville Lake Project was held on November 1, 1999.

Construction of Control Structure A was completed in February 2000 and Cedar Hill Park was completed in October 2000. In 2001 remediation of the abandoned dam, removal of skimmers, repairs to the West-Non-Overflow dam and construction of public-use facilities were completed.

Site improvements consisting of replacement of timbers, construction of a boat ramp and dock, new fencing, walkways and improvements to parking lots were completed in 2003.

The Wallisville Lake Project was turned over for permanent operations at the beginning of FY 00. The project's construction was completed in 2003.

**Local cooperation.** Local interest must contribute an amount equal to cost allocated to water supply, one-half of cost allocated to salinity control and cost allocated to recreation less cost of basic facilities and less 15 percent of total project cost. Local interest reimbursement is estimated at \$12,200,000.

Deleted: required

Deleted: 40-

**Operations during fiscal year.** New Work: Construction phase was financially closed out in FY 05. Cost incurred was \$7,710.

**Maintenance:** The project was operated and maintained at a cost of \$1,187,947 in FY05.

**18. RECONNAISSANCE AND PROJECT CONDITION SURVEYS**

Reconnaissance and condition surveys were conducted in FY 2005 at a total cost of \$4,963.

**19. NAVIGATION WORK UNDER SPECIAL AUTHORIZATION**

Navigation activities pursuant to Section 107, Public Law 86-645 (preauthorization):

Initial coordination for Section 107 navigation activities was performed in FY 05 at a cost of \$2,888.

A Milestone Report was completed in June 2002 on Galveston Island Channel for the extension of a shallow draft channel on the west end of Galveston Channel. Project estimated cost is \$6.5 million which exceeds the Continuing Authorities Programs' limit by \$2.5 million. Project is on hold due to lack of federal funding. Fiscal year 05 cost of \$1,596.

Mitigation of shore damages attributable to navigation projects pursuant to Section 111, Public Law 90-483:

No mitigation of shore damages studies was performed in FY 2005.

**Shore Protection**

**20. NATIONAL EROSION CONTROL DEVELOPMENT AND DEMONSTRATION PROGRAM, JEFFERSON COUNTY, TX**

**Location.** The project location fronts the McFadden National Wildlife Refuge in the vicinity of Sea Rim State Park in Jefferson County, Texas. Beaches at the demonstration consist of a thin veneer of sand over mud and the average long-term annual erosion rate is approximately 5 feet.

**Existing Project.** The primary objectives of the project are to minimize erosion of the cohesive sediment and to minimize sand overwash. These objectives will be accomplished by constructing experimental low-volume beach nourishment templates contained by geotextile tube groin cells and dune construction. The 2,500 ft-long dune is designed to withstand a 5-year return period storm. Fronting half of

the engineered dune corridor is a beach nourishment divided into four experimental cells of varying fill volumes and grain sizes. A geotextile tube groin separates each experimental cell.

**Local Cooperation.** A Memorandum of Agreement (MOA) has been executed with the Texas General Land Office (GLO).

**Operation During Fiscal Year.** Construction was completed in August, 2004 with new work cost of \$1,250,864. Baseline project monitoring continued through FY05 at a cost of \$96,451.

**Flood Control**

**21. BUFFALO BAYOU AND TRIBUTARIES, TX**

**Location.** Improvements are on Buffalo Bayou watershed, a part of San Jacinto River watershed, in Harris County, west and northwest of city of Houston, Texas. (See Geological Survey quadrangle sheets for Harris County.)

**Existing project.** Provides for improvements of Buffalo Bayou and its tributaries above turning basin of Houston Ship Channel to control floods for protection of city of Houston, and prevent deposition of silt in turning basin of ship channel by construction of detention reservoirs, enlargement and rectification of channels and construction of control works.

Channel rectification on Brays Bayou with an improved channel length 25.4 miles was completed in March 1971. Channel rectification on White Oak Bayou was completed in 1976. Work remaining consists of rectification of approximately 22 miles of main stem of Buffalo Bayou.

See individual detailed reports on Addicks and Barker Reservoirs; and Brays, Greens, Halls, Hunting, Little White Oak, and Carpenters Bayous.

**Local cooperation.** Section 203, 1954 Flood Control Act applies. Local interests have accomplished all required local cooperation on Brays Bayou and White Oak Bayou. On Buffalo Bayou, local interests purchased interests that the United States had in 7 miles of rectified channel below Barker and Addicks Dams for \$256,651. Of the remaining required rights-of-way on Buffalo Bayou, local interests have acquired about 40 percent. About 53 percent of required bridge relocations and 3 percent of the required bridge relocations have been accomplished. Advance of \$4,400,000 by the Harris County Flood Control District was refunded in September 1956. Public Law 86-53 authorized reimbursement of \$38,726 to Galveston, Houston and Henderson Railroad Company for bridge alterations at Brays Bayou. Non-Federal contributions totaled \$63,661 for project betterment. Recreation

development is subject to conditions of non-Federal cost sharing under Federal Water Project Recreation Act of 1965.

See individual detailed reports on Addicks and Barker Reservoirs; and Brays, Greens, Halls, Hunting, Little White Oak, and Carpenters Bayous.

**21A. ADDICKS AND BARKER RESERVOIRS, TX**

**Location.** Reservoirs are located in and west of the City of Houston in Harris and Fort Bend Counties, Texas.

**Existing project.** Construction of Barker Dam was complete in February 1945. Construction of Addicks Dam and 7.4 miles of channel rectification downstream from Addicks and Barker Dams was completed in October 1948. Modification of Barker and Addicks Dams consisting of gating the final two uncontrolled conduits in each dam, was complete in 1963. Major rehabilitation of Addicks and Barker Dams to prevent seepage through the embankment was completed in 1982.

Work under the Dam Safety Assurance program was initiated in Fiscal Year 1986. Work accomplished included raising approximately 32,400 feet of Addicks Dam 1 to 3 feet and raising approximately 57,600 feet of Barker Dam 3 to 5 feet and armor-plating low ends of both dams. A contract with the city of Houston for cost sharing in the construction of recreation facilities was entered into in November 1981. The lease for approximately 10,534 acres of land and water areas was approved in February 1983.

**Local cooperation.** None required.

**Operations during fiscal year.** Recreation: Community Park West (Phase IB) and the velodrome were completed in 1986 and remain in use. Community Park West (Phase 4) and the development of Community Park 2 (soccer fields, ball fields, and parking lots) were completed by the City of Houston in 1992. Harris County Precinct 3 completed building additional soccer fields in Community Park 2 in George Bush Park. The Fort Bend County YMCA pavilion, archery range, and nature trails in Barker Reservoir are being heavily used along with the City of Houston's Cullen Park, Harris County's George Bush Park, and Fort Bend County's Cinco Ranch Park. Maintenance and improvements of these recreation areas continue by all agencies.

**Maintenance:** Continued operations with project personnel.

The project is estimated to have prevented damages of \$371,953,000 for FY 2005.

**21B. BRAYS BAYOU**

**Location.** The project is located in the south-central portion of Buffalo Bayou, Harris County, TX.

**Existing project.** The authorized plan of improvement consists of 3 miles of stream improvements, 3 flood detention basins, and 7 miles of stream diversion channels. Aesthetic vegetation is included. Recreation facilities include trails, picnic facilities, sports fields, comfort stations and parking areas. The estimated cost for new work is \$307,599,000 Federal (Corps) and \$170,329,000 non-Federal consisting of \$26,380,000 cash contributions, and \$143,949,000 for lands and relocations (October 2005 base price).

The project was authorized for construction in the Water Resources Development Act of 1990 (PL 101-640). In 1995, the project was divided into two separable elements, an Upstream (detention) Element (stream improvements and detention basins) and a Downstream (diversion) Element. The Local Sponsor was authorized to develop the project and design and construct an alternative to the diversion component and be reimbursed for the Federal share by the Water Resources Development Act of 1996 (PL 104-303). Construction funds were received in 1998.

**Location cooperation.** Local Sponsor for the project is Harris County Flood Control District. Local Sponsor is required to provide lands, easements, and rights-of-way; modify or relocate buildings, pipelines, utilities, roads and other facilities, except for railroad bridges; pay five percent of the total costs allocated to flood control presently estimated at \$25,175,000 and bear all costs of operation, maintenance, and replacement of flood control and recreation facilities. A Project Cooperation Agreement for the Upstream (detention) element was executed March 3, 2000.

**Operations during fiscal year.** New Work: Construction of the Detention Element by the Local Sponsor continued in Westheimer, Eldridge, and Sam Houston Detention Basins. Final reimbursement was made for segment 7 of the Sam Houston Detention Basin in the amount of \$727,953.36; segment 8 located in the Sam Houston Detention Basin in the amount of \$2,165,433.64; and segment 11 located in the Eldridge Detention Basin in the amount of \$1,558,121.58. In accordance with Section 211 of the Water Resources Development Act of 1996, the sponsor is investigating the Downstream (diversion) Element in an effort to find an alternative to the authorized project.

Deleted: 40-

**Location.** Greens Bayou is a tributary of Buffalo Bayou, and is located in the north-central portion of Harris County, TX, and does not include the Halls Bayou tributary.

**Existing project.** The project was authorized for construction in the Water Resources Development Act of 1990 (PL 101-640). The authorized project provides for 25 miles of stream enlargement, 14 miles of stream cleaning and 4 flood detention basins. Aesthetic vegetation and mitigation is included. Recreation facilities include trails, picnic facilities, sports fields, launches, ramps, comfort stations and parking areas. The project is currently being reformulated and a new project has been identified in a General Reevaluation Study. The new project will consist of approximately 3.7 miles of stream enlargement in the upper reaches of the bayou between Veterans Memorial Drive and Cutten Road. A flood detention basin will be located near the downstream terminus of the stream enlargement. Aesthetic vegetation is included. Recreation facilities are not currently included in the project as a local sponsor has not been confirmed. The estimated cost for new work is \$29,662,000 Federal (Corps) and \$9,472,000 non-Federal consisting of \$1,956,000 cash contributions, and \$7,516,000 for lands and relocations (October 2005 base price).

**Local cooperation.** Local Sponsor for the project is Harris County Flood Control District. Local Sponsor is required to provide lands, easements, and rights-of-way; modify or relocate buildings, pipelines, utilities, roads and other facilities, except for railroad bridges; provide a cash contribution presently estimated at \$2,022,000 and bear all costs of operation, maintenance, and replacement of flood control and recreation facilities.

**Operations during fiscal year.** New Work: See Section 39, PRE-CONSTRUCTION ENGINEERING AND DESIGN.

**21D. HALLS BAYOU**

**Location.** Halls Bayou is a major tributary of Greens Bayou, located in the north-central portion of Buffalo Bayou, Harris County, TX.

**Existing project.** The authorized plan of improvement consists of 18 miles of stream improvements. Recreation facilities include trails, picnic facilities, boat ramps, a comfort station and parking areas. The estimated cost for new work is \$82,310,000 Federal (Corps) and \$58,8968,000 non-Federal consisting of \$9,084,000 cash contributions, and \$49,812,000 for lands and relocations (October 2005 base price).

The project was authorized for construction in the Water Resources Development Act of 1990 (PL 101-640).

**Local cooperation.** Local Sponsor for the project is Harris County Flood Control District. Local Sponsor is required to provide lands, easements, and rights-of-way; modify or relocate buildings, pipelines, utilities, roads and other facilities, except for railroad bridges; provide a cash contribution presently estimated at \$9,084,000 and bear all costs of operation, maintenance, and replacement of flood control and recreation facilities.

**Operations during fiscal year.** New Work: See Section 39, Preconstruction Engineering and Design.

**21E. HUNTING BAYOU**

**Location.** Hunting Bayou is located in Houston, approximately 4 to 5 miles from the central business district.

**Existing project.** The authorized plan of improvement consists of 14.3 miles of stream improvements. Recreation facilities include trails, picnic facilities, a comfort station and parking areas. The estimated cost for new work is \$81,027,000 Federal (Corps) and \$70,123,000 non-Federal consisting of \$8,110,000 cash contributions, and \$62,013,000 for lands and relocations (October 2005 base price).

The project was authorized for construction in the Water Resources Development Act of 1990 (PL 101-640). The Local Sponsor was authorized to design and construct an alternative to the project and be reimbursed for the Federal share by the Water Resources Development Act of 1996 (PL 104-303).

**Local cooperation.** Local Sponsor for the project is Harris County Flood Control District. Local Sponsor is required to provide lands, easements, and rights-of-way; modify or relocate buildings, pipelines, utilities, roads and other facilities, except for railroad bridges; provide a cash contribution presently estimated at \$8,110,000 and bear all costs of operation, maintenance, and replacement of flood control and recreation facilities.

**Operations during fiscal year.** New Work: Construction funds were received in 2003 to begin construction of the project. See Section 39, PRE-CONSTRUCTION ENGINEERING AND DESIGN.

**21F. LITTLE WHITE OAK BAYOU, TX**

**Location.** Little White Oak Bayou is a tributary of White Oak Bayou in north-central Houston.

**Existing project.** The authorized plan of improvement consists of 6.0 miles of stream enlargements. Recreation facilities include trails and picnic facilities. The estimated cost for new work is \$17,958,000 Federal (Corps) and \$17,957,000 non-Federal consisting of \$1,996,000 cash contributions, and \$15,961,000 for lands and relocations (October 1990 base price).

The project was authorized for construction in the Water Resources Development Act of 1990 (PL 101-640).

**Local cooperation.** Local Sponsor for the project is Harris County Flood Control District. Local Sponsor is required to provide lands, easements, and rights-of-way; modify or relocate buildings, pipelines, utilities, roads and other facilities, except for railroad bridges; provide a cash contribution presently estimated at \$1,996,000 and bear all costs of operation, maintenance, and replacement of flood control and recreation facilities.

**Operations during fiscal year.** New Work: Project is awaiting Pre-construction Engineering and Design funds.

The project includes repairs to the ferry landing, realignment of the roadway, moving a pipeline, wetland excavation and marsh grass planting.

**Local cooperation.** The Coastal Water Authority, owned by the City of Houston, is the Local Sponsor of the project. The Project Cooperation Agreement was executed June 26, 2002.

**Operation during the fiscal year.** A final cost of \$6,351 for FY 05 was to financially close the project.

**23. CLEAR CREEK, TX**

**Location.** The project is located about midway between the two metropolitan centers of Houston, Texas, on the north and Galveston-Texas City on the south in Harris and Galveston Counties above and below existing Clear Lake.

**Existing project.** The authorized plan of improvement consists of an improved channel from Mile 3.8 to Mile 34.8 to contain within its banks all flood flows up to and including that of a 100-year flood. The selected plan provides channel enlargement and easing of bends within the existing stream from Mile 3.8 to Mile 26.05 to contain at least the 10-year frequency storm, and additional outlet with gated structure from Clear Lake to Galveston Bay, restriction of development in the residual 100-year flood plain and measures to mitigate environmental effects. In 1986, at the request of Brazoria County Drainage District No. 4, that portion of the project upstream of the Brazoria/Galveston County line, approximate improved Mile 19.1, was placed in the "inactive" category. Estimated cost for new work, excluding "inactive" portion, is \$91,112,000 Federal (Corps) and \$58,491,000 non-Federal consisting of \$7,480,000 cash contributions, \$22,600,000 for lands, and \$28,411,000 for relocations (October 1, 2005 base price).

Deleted: 84,970

Deleted: 27,707

Deleted: 2003

Environmental interest groups and agencies, private citizens, and some local communities located near or adjacent to Clear Lake expressed opposition to the Clear Creek Flood Control Project as currently authorized and planned for upstream reaches. In general, the opposition to the project has been focused on environmental concerns in the upstream reaches and on induced flooding concerns downstream in Clear Lake. Construction has been delayed at the request of the Local Sponsor so that an alternative to the authorized project can be developed that will reduce above concerns and still provide flood protection to those that are critically affected by flood waters in the watershed.

**Local cooperation.** Local Sponsors for the project are Galveston and Harris counties. The Local Cooperation Agreement, executed June 30, 1986, requires local interests to provide lands, easements, rights-of-way, and material disposal areas; modify or

Deleted: 40-

**21G. CARPENTERS BAYOU, TX**

**Location.** Carpenters Bayou is a tributary of Buffalo Bayou in northeastern Houston.

**Existing project.** The authorized plan of improvement consists of 9.7 miles of stream enlargements. Recreation facilities include trails and picnic facilities. The estimated cost for new work is \$3,900,000 Federal (Corps) and \$1,950,000 non-Federal consisting of \$370,000 cash contributions, and \$2,320,000 for lands and relocations (October 1990 base price).

The project was authorized for construction in the Water Resources Development Act of 1990 (PL 101-640).

**Local cooperation.** Local Sponsor for the project is Harris County Flood Control District. Local Sponsor is required to provide lands, easements, and rights-of-way; modify or relocate buildings, pipelines, utilities, roads and other facilities, except for railroad bridges; provide a cash contribution presently estimated at \$370,000 and bear all costs of operation, maintenance, and replacement of flood control and recreation facilities.

**Operations during fiscal year.** New Work: Project is awaiting Pre-construction Engineering and Design funds.

**22. BUFFALO BAYOU, TX (LYNCHBURG PUMP STATION)**

**Location.** The project is located 10 miles east of Houston, Texas near the entrance to the Houston Ship Channel.

**Existing project.** The project provides flood damage reduction caused by hurricane generated storm surges for the freshwater pumping facility at Lynchburg, near the City of Houston. The Lynchburg Pump Station will be protected by a flood barrier encircling the facility. The plan of improvement consists of an earthen levee along the south border of the pumping station and concrete walls along the north, east and west borders.

relocate building, pipelines, utilities, roads and other facilities, except railroad bridges, where necessary in the construction of the project; make a cash contribution for mitigation measures consistent with the non-Federal share of total project costs without mitigation measures; pay five percent of the total costs allocated to flood control; and bear all costs of operation and maintenance of flood control facilities. By letter of June 9, 1999, Brazoria County Drainage District No. 4 indicated its intent to be a project sponsor again beginning with participation in the General Reevaluation Report.

**Operations during fiscal year.** Preparation of the General Reevaluation Report (GRR) continued. Work on plan formulation, engineering analysis, socioeconomic analysis, real estate analysis, and environmental studies continued.

## 24. CYPRESS CREEK, TX

**Location.** The project is located north of Houston, Texas in Harris County.

**Existing project.** The authorized plan of improvement consists of enlargement of the lower 29.4 miles of the Cypress Creek Channel, incorporating grassed side slopes and channel bottom and appropriate erosion control measures; application of floodplain management techniques in the residual floodplain; construction of project-oriented recreation features, including 11.5 miles of hike-and-bike trails and related facilities for health, safety, and public access; and habitat management measures on 844 acres of Harris County Parkway land, creation of wooded and brush habitat along 100 acres of the project right-of-way, acquisition of 329 acres of wildlife habitat along the creek, and creation of 35 acres of ponds and marshes. The authorized plan is no longer under consideration. The revised project consists of removing the 34 homes where inhabitants are at or below the five-year flood level. A Section 215 Agreement was executed January 5, 2000 enabling the Harris County Flood Control to implement the project as quickly as possible and once the Project Cooperation Agreement (PCA) was executed and funds appropriated for construction. The sponsor began acquiring homes in June 1999 and began demolition of the structures in February 2000. Harris County Flood Control District completed the non-structural buy-out in September 2001. Final cost for the new plan was \$4,256,184 Federal (Corps) and \$1,418,728 non-Federal contribution.

**Local cooperation.** Local Sponsor for the project is Harris County. The non-Federal share of the cost of non-structural flood control measures shall be 25 percent of the cost of such measures. The non-Federal interests for any such measures shall be required to provide all lands, easements, rights-of-way, and

relocations necessary for the project, but shall not be required to contribute any amount in cash during construction of the project. The Project Cooperation Agreement was executed on January 18, 2001.

**Operations during fiscal year.** None.

## 25. LOWER RIO GRANDE BASIN, TX

**Location.** The project is located in Willacy, Hidalgo, and Cameron Counties. The basin is bounded on the east by the Gulf of Mexico, on the south by the Rio Grande, which forms the international boundary between the United States and Mexico, on the west by Starr County, and on the north by Brooks and Kenedy Counties.

**Existing project.** See individual detailed reports on Arroyo Colorado, South Main Channel, and Raymondville Drain.

**Local cooperation.** See individual detailed reports on Arroyo Colorado, South Main Channel, and Raymondville Drain.

## 25A. ARROYO COLORADO, TX

**Location.** The project is located in Hidalgo and Cameron Counties, Texas.

**Existing project.** The authorized project will provide flood protection along Highway 83 and erosion protection for the banks of the Arroyo Colorado in the city of Harlingen. The project consists of a gated water control structure, 1.4 miles of channel improvements, and stone armoring of selected reaches in Harlingen. The estimated cost for new work is \$5,851,000 Federal (Corps) and \$1,951,000 non-Federal consisting of \$1,848,000 cash and \$103,000 for lands and relocations (October 1, 1993 base prices).

The project has reached a stalemate as the Local Sponsor, the Hidalgo County Drainage District #1, cannot provide required guarantee to hold and save the Government free from all damages arising from the construction, operation, maintenance, repair and replacement for the project, nor are they able to operate and maintain the project when completed. The International Boundary and Water Commission has complete jurisdiction over the project, as it is one of the elements of the Rio Grande Floodway System. The Commission is interested in the project but only if additional funds to do operations and maintenance are provided. Legislative approval will be required to alter the current status.

**Local cooperation.** Local Sponsor, the Hidalgo County Drainage District #1, is required to provide lands, easements, and rights-of-way; modify or relocate buildings, pipelines, utilities, roads and other facilities,

Deleted: 2004

except for railroad bridges; provide a cash contribution presently estimated at \$1,848,000 and bear all costs of operation, maintenance, and replacement of flood control facilities.

**Operations during fiscal year.** None.

**25B. SOUTH MAIN CHANNEL, TX**

**Location.** The project is located in Hidalgo and Willacy Counties, Texas.

**Existing project.** The authorized project consists of channel improvements that will provide flood protection to the city of Lyford, as well as the rural area of Willacy County north of U.S. Highway 83. The authorized plan is currently being revised to reflect a smaller project and will include construction of new channels only in Willacy County, and a local protection project for Lyford.

The estimated cost for new work is \$153,164,000 Federal (Corps) and \$78,317,000 non-Federal consisting of \$11,574,000 cash and \$28,107,000 lands and \$38,636,000 relocations (October 1, 2005 base prices).

**Local cooperation.** Originally the Local Sponsors for the project were Hidalgo County Drainage District #1 and Willacy County Drainage District #1. Late in Fiscal Year 1999, Hidalgo County Drainage District #1 withdrew support of the project. In August 1999, Willacy County Drainage District #1 restated their intent to cost-share in project construction.

Local Sponsor is required to provide lands, easements, and rights-of-way; modify or relocate buildings, pipelines, utilities, roads and other facilities, except for railroad bridges; provide a cash contribution presently estimated at \$11,574,000 and bear all costs of operation, maintenance, and replacement of flood control facilities.

**Operations during fiscal year.** New Work: See Section 39, PRE-CONSTRUCTION ENGINEERING AND DESIGN.

**25C. RAYMONDVILLE DRAIN, TX**

**Location.** The project is located in northern Hidalgo and Willacy Counties, Texas.

**Existing project.** The authorized project will provide a drainage outlet to the Laguna Madre for northern Hidalgo and Willacy Counties. The project consists of 43.8 miles of channel work, including enlargement of existing channels and construction of new channels, a 3.88-mile long levee, and diversion ditches along the west side of Raymondville. The estimated cost for new work is \$69,141,000 Federal (Corps) and \$23,047,000 non-Federal consisting of \$8,095,000 cash and \$8,810,000 lands and \$8,270,000 relocations (October 1, 2005 base prices).

**Local cooperation.** Local Sponsor for the project is Hidalgo County Drainage District #1. Local Sponsor is required to provide lands, easements, and rights-of-way; modify or relocate buildings, pipelines, utilities, roads and other facilities, except for railroad bridges; provide a cash contribution presently estimated at \$8,095,000 and bear all costs of operation, maintenance, and replacement of flood control facilities.

**Operations during fiscal year.** New Work: See Section 39, PRE-CONSTRUCTION ENGINEERING AND DESIGN.

**26. SIMS BAYOU, TX**

**Location.** The project is located in Harris County, in the southern portion of Houston, Texas.

**Existing project.** The authorized plan of improvement provides for enlargement and rectification, with appropriate erosion control measures, of 19.3 miles of Sims Bayou to provide 25-year flood protection; environmental measures and riparian habitat improvement along the entire alignment; and recreational development to include 14 miles of hike-and-bike trails connecting to existing public parks, together with picnic, playground, and other leisure facilities. Estimated cost for new work is \$244,078,000 Federal (Corps) and \$121,366,000 non-Federal consisting of \$21,592,000 cash contributions, \$44,620,000 for lands, \$54,833,000 for relocations and \$322,000 for channels (October 1, 2005 base price).

**Local cooperation.** Local Sponsor for the project is Harris County Flood Control District. In accordance with the cost-sharing and financing concepts reflected in the Water Resources Development Act of 1986, local interests are required to provide lands, easements, and rights-of-way; modify or relocate buildings, pipelines, utilities, roads, and other facilities, except railroad bridges, where necessary for the construction of the project; pay one-half of the separable and joint costs allocated to recreation; and bear all costs of operation, maintenance and replacement of recreation facilities; and pay 5 percent of the costs allocated to flood control; and bear all costs of operation, maintenance and replacement of flood control facilities. The Local Cooperation Agreement for flood control was executed on October 19, 1990. The recreation Local Project Agreement is currently under review by the City of Houston.

**Operations during fiscal year.** New Work: Channel rectification contract from J-45 to Reveille was amended in FY05. Cost incurred was \$505,156. A construction contract for Channel rectification at Mouth to Port Terminal Railroad, Station 9+00 to 52+52, awarded June 30, 2000, completed in FY05 at a fiscal year cost of \$131,159. A construction contract for channel rectification downstream of Cullen to State

Highway 288, awarded September 13, 2002, continued through FY05 at a cost of \$5,965,774.

Reimbursement was made to the Local Sponsor, Harris County Flood Control District, for their work on the reach from Port Terminal Railroad to Interstate Highway 45, in the amount of \$300,000. Construction contract for repairs from Swallow to I-45, awarded April 11, 2003, continued through FY05 at a cost of \$825,235.

A contract to construct relief wells at Telephone Road to I-45 was awarded March 13, 2005 and continued through FY05 at a cost of \$685,374. Channel rectification contract for the Robin Boulevard to State Highway 288 reach was awarded May 31, 2005. Cost expended in FY05 was \$106,398.

**27. INSPECTION OF COMPLETED FLOOD CONTROL WORKS**

Inspections of completed projects operated and maintained by local interests were made on the following projects. Fiscal year cost was \$61,433.

Project	Date of Inspection
<u>Texas City Hurricane Flood Protection, TX</u>	<u>November 2004</u>
<u>Three Rivers, TX Flood Control</u>	<u>November 2004</u>
<u>Clear Creek, TX - Second Outlet Gated Structure</u>	<u>April 2005</u>
<u>Guadalupe Removal of Log Jam</u>	<u>May 2005</u>
<u>Port Arthur Hurricane, Flood Protection, TX</u>	<u>May 2005</u>
<u>Sims Bayou, TX - Channel Rectification</u>	<u>May 2005</u>

**28. FLOOD CONTROL WORK UNDER SPECIAL AUTHORIZATION**

Flood control activities pursuant to section 205 of 1970 Flood Control Act, Public Law 858, 80th Congress, as amended:

Initial coordination for Section 205 Flood Control activities was performed in FY 05 at a fiscal year cost of \$1,974. Construction of the flood protection project for Buffalo Bayou, Texas (Lynchburg Pump Station) is discussed in Section 22.

During alternative analysis, the Pearland flood damage prevention study was terminated in March 2004 as the study area is included in the Clear Creek General Reevaluation Report. Continuing Authority Program studies should not be conducted in the same study area as another ongoing study, FY04 cost incurred through March 2004 was \$11,390.

Milestone report for flood protection was completed for Spring Branch. Cost incurred for FY04 was \$18,202. Study was terminated as project was not feasible.

Emergency flood control – repair, flood fighting, and rescue work (Public Law 99, 84th Congress and antecedent legislation):

Disaster Preparedness cost for fiscal year 2005 was \$306,711 for planning, equipping, training, exercising, and coordination of emergency management plans and procedures with local, state, and other Federal agencies. Catastrophic disaster Preparedness Program fiscal year 2005 cost was \$33,292. Anti-terrorism/Force protection cost for FY 2005 was \$80,646 for security assessments and upgrades to the Fort Point Reservation.

Emergency Operations cost for fiscal year 2005 was \$181,232 for the District’s response to three events. In July, operations were conducted in response to Hurricane Emily’s threat to the Texas coast. In August, operations were conducted in support of the USACE response to Hurricane Katrina. Later in September, Galveston District activated its Emergency Operations Plan in response to Hurricane Rita. The Hurricane Rita response involved deployment to the District’s Alternate EOC and the evacuation of the District’s non-emergency staff. The focus of Rita operations in FY05 was in support of reconstitution of District staff and restoration of navigation on Federal channels in southeast Texas.

Rehabilitation of Flood Control Works Fiscal Year 2005 cost was \$24,485 for management of continuing eligibility inspections and closing out post-Hurricane Claudette repairs to the Texas City Hurricane Flood Protection Project.

FEMA mission expenditures for FY05 were \$243,445 with authorization of \$53,875,000. Support to Other Corps allowance was \$3,828,878 with expenditures of \$1,756,088.

**29. EMERGENCY STREAM BANK AND SHORELINE EROSION WORK AND SNAGGING AND CLEARING ACTIVITIES UNDER SPECIAL AUTHORIZATION**

Stream bank and shoreline erosion activities pursuant to Section 14 of the 1946 Flood Control Act, Public Law 525, as amended:

continued through FY04. In FY 05 the study has been placed on hold awaiting Federal funding.

Deleted: at a cost of \$155,085

Initial coordination for Section 14 Emergency Stream Bank and Shoreline Erosion activities was performed in FY 05 for a cost of \$1,880.

A Preliminary Restoration Plan was initiated in 2003 for Port Aransas Nature Preserve (Piper Channel) for the protection and restoration of the ecosystem at the Port Aransas Nature Preserve. It was determined the project was the same area as the ongoing Corpus Christi Ship Channel (50') feasibility study and was terminated in 2004.

Deleted: 2004

Deleted: and work is awaiting development

Deleted: a Project Design Agreement. FY04 cost incurred was \$7,004.¶

Studies in FY 2005 are as follows:

**Brazos River Bank Stabilization** - A study was initiated to pursue erosion protection of flood protection levee. The Eligibility Determination Report was completed in May 02. The Formulation Letter Report was completed in May of 2004. The portion of the recommended plan addressing erosion protection of the current levee system does not meet the eligibility criteria therefore the project was terminated.

**31. AQUATIC ECOSYSTEM RESTORATION**

Coordination of Aquatic Ecosystem Restoration to improve the quality of the environment pursuant to section 206 of the Water Resources Development Act of 1996, Public Law 104-303, as amended:

**State Highway 82 Erosion Along the Sabine-Neches Waterway** - A study was initiated for erosion protection of State Highway 82. The Eligibility Determination Report was completed in June 2003.

Fiscal year costs for coordination were \$5,235.

Deleted: 12,964

The majority of erosion caused on State Highway 82 has been determined to be wave action caused by vessel traffic. It was originally thought to be natural wind and wave action. Section 14 Authority does not permit a study on erosion caused by private industries, therefore the project was terminated.

Construction for the University of Texas Wetlands Education Center for the restoration of wetlands and dunes in support of the Education Center began in 2004. See Section 33-UNIVERSITY OF TEXAS MARINE SCIENCE INSTITUTE (UTMSI), TX.

Deleted: The project is

Deleted: ¶ In FY 04 Planning and Design Analysis, and environmental assessment were completed

Deleted: March

Snagging and clearing activities for flood control pursuant to Section 208 of the Flood Control Act of 1954, Public Law 780, as amended:

The feasibility study for the Gulf Intracoastal Waterway, Mad Island Marsh to protect the habitat at the Wildlife Management Area from further erosion continued through FY 05 at a cost of \$97,224.

Deleted: Partial construction began and was completed in June 04. The remaining construction is scheduled to begin in 2005. Cost incurred for FY 04 was \$119,179

The feasibility study for snagging and clearing activities for flood control improvements along Clear Creek was terminated because the Clear Creek construction project is exactly the same channel portion for this study, therefore the project was terminated.

A Preliminary Restoration Plan to prevent further erosion of ecosystem at the Galveston Bay Prairie Preserve at Moses Lake was completed in FY04. The project has been placed on hold awaiting Federal funds. Cost incurred for FY04 was \$60,382.

Deleted: was completed in May 2003. Funds in the amount of \$88,523.

Deleted: continued in fiscal year 2004 at a cost of \$15,199

**Environmental Restoration**

**30. PROJECT MODIFICATIONS FOR IMPROVEMENT OF ENVIRONMENT**

Project modifications for improvement of environment activities pursuant to Section 1135 of the Water Resources Development Act of 1986, Public Law 99-662, as amended:

A Preliminary Restoration Plan for Aquatic ecosystem restoration of Galveston County MUD (Municipal Utility District) 12 was approved July 2004. Alternative formulation began in FY04 but has been placed on hold awaiting Federal funds. Cost incurred for FY04 was \$42, 313.

**32. NORTH PADRE ISLAND, TX**

**Location.** The project is located along the south central Texas coast on the northern portion of Padre Island, City of Corpus Christi, Nueces County, Texas. The project cuts through Mustang Island joining the Gulf of Mexico with the Gulf Intracoastal Waterway at mile 553.0

Coordination activities were performed in FY 04 for a fiscal year cost of \$9,964.

A feasibility study was initiated in 2003 on Taylor's Bayou for the replacement of a saltwater barrier to protect the bayou and marsh from saltwater intrusion. In FY 05 the study has been placed on hold awaiting Federal funding.

**Existing project.** The project was authorized by the Water Resources Development Act of 1999. The authorized plan of improvement provides for an opening between the Gulf of Mexico and Corpus Christi Bay, which consists of a jettied entrance and channel, extending from the Gulf of Mexico through Mustang Island along the existing Packery Channel; storm damage reduction measures on the south side of the

Deleted: Funds in

Deleted: amount of \$239,915 were expended in FY04.¶

Deleted:

Deleted: 40-

area; and ecosystem restoration measures at various locations adjacent to the project area. Tidal surges caused by Hurricane Emily in June 2005 and Hurricane Rita in September 2005 caused damages to both the south and north jetties and to areas of the concrete cellular mats. Cost to repair these damages have increased the Federal cost by an additional \$2.5 million and the non-Federal share by an additional \$1.346 million. The estimated cost for new work is \$22,121,000 Federal (Corps) and \$12,928,000 non-Federal consisting of \$11,401,000 cash contributions, \$510,000 for lands, easements, rights-of-way, relocations, and 1,017,000 for betterments. Tidal surges caused by Hurricane Emily in June 2005 and Hurricane Rita in September 2005 caused damages to both the south and north jetties and to areas of the concrete cellular mats. Cost of repair of these damages will increase the Federal cost by an additional \$2.5 million and the non-Federal share by an additional \$1,346,000.

**Local cooperation.** Local Sponsor for the project is City of Corpus Christi, Texas. In accordance with the cost-sharing and financing concepts reflected in the Water Resources Development Act of 1986, local interests are required to provide lands, easements, and rights-of-way; modify or relocate buildings, pipelines, utilities, roads, and other facilities, except for railroad bridges; provide a cash contribution presently estimate at \$10,000,000 and bear all costs of operation and maintenance.

**Operations during fiscal year.** New Work: The construction contract awarded July 30, 2003, continued through FY05. (See Table 40-J for dredging operations.) An agreement was entered February 12, 2004 with the Texas General Land Office to perform the required mitigation to the Coastal Bend Bays and Estuaries Program (CBBEP), in the amount of \$1,250,000 for the exclusive use of protecting and enhancing Shamrock Island and adjacent state owned submerged land, including the creation of 15.6 acres of submerged aquatic vegetation (SAV).

### 33. UNIVERSITY OF TEXAS MARINE SCIENCE INSTITUTE (UTMSI) SECTION 206, TX

**Location.** The project is located on the UTMSI Campus in Port Aransas, Nueces County, Texas. Port Aransas is located on the northern most portion of Mustang Island. Mustang Island is a barrier island that separates Corpus Christi Bay from the Gulf of Mexico. The proposed wetland restoration will be performed

immediately adjacent to the Corpus Christi Ship Channel.

**Existing project.** The project consists of wetland restoration features which will be constructed on 2.6 acres located on the UTMSI campus. In addition, approximately 1600 feet of dunes will be created. A broad range of estuarine habitat types will be constructed by removing several feet of the existing surface materials to achieve the target elevation contours necessary to support target communities. The creation of a number of diverse habitats, including open water, submerged aquatic vegetated shallows, low and high marsh, sand flats and upland islands and dunes, will allow for use of the area by several fish and wildlife species, including fishes, invertebrates, reptiles, small mammals and birds. Open water and marsh surface habitats will be constructed to resemble natural marsh systems in the area with undulating surfaces, high and lows, and main channel with tributaries. The marsh system will be connected to the surrounding tidal waters to provide daily tidal exchange by installing two 36-inch culverts that will be completely submerged. The total project cost is an estimated \$2,100,000. Partial construction began and was completed in June 04. The remaining construction is scheduled to begin in 2006.

**Local cooperation.** The project sponsor is The University of Texas Board of Regents, and the U.T. Marine Science Institute. A project cooperation agreement was executed March 2004.

**Operations during fiscal year.** Project awaiting Federal funding.

### 34. BENEFICIAL USES OF DREDGED MATERIAL

Projects for beneficial uses of dredged material pursuant to Section 204 of the Water Resources Development Act of 1992, Public Law 102-560 are as follows:

Initial coordination activities for FY 05 were performed at a fiscal year cost of \$1,851.

~~Construction was completed on~~ Sabine-Neches Waterway, Bessie Heights Marsh to raise the marsh elevation by using dredged material. See Section 35.

### 35. SABINE-NECHES WATERWAY BESSIE HEIGHTS, TX

**Location.** The project site is located within the Bessie Heights Marsh area, approximately 2 miles east of the Neches River in Orange County, Texas. The project is within the Nelda Stark Unit, owned by the Texas Parks and Wildlife Department.

**Existing Project.** The project consists of the

**Deleted:** The estimated cost for new work is \$19,500,000 Federal (Corps) and \$10,500,000 non-Federal consisting of \$10,000,000 cash contributions

**Deleted:** WATERWAY – TEXAS POINT NATIONAL WILDLIFE REFUGE, TX

**Location.** The project is located on the Texas Gulf Coast at the intersection of the Gulf shoreline and the West Jetty of the Sabine-Neches Waterway. The project is within the Texas Point National Wildlife Refuge, managed by the U.S. Fish and Wildlife Service in Jefferson County, Texas.

**Existing project.** The project consist of pumping dredged material from the maintenance dredging of the Sabine Pass Channel onto the beach ridges adjacent to the West Jetty and within the Texas Point National Wildlife Refuge. Material placed in the marsh will fill subsided and eroded areas and enhance the restoration of the marsh. The material would also be available for transport into the marshes by storm-driven tidal surges. On ... [68]

Deleted: 2004

beneficial use of dredged material by pumping approximately 651,000 cubic yards of maintenance-dredged material into an approximate 71-acre tract within the Nelda Stark Unit of the Bessie Heights Marsh area, the remainder of the maintenance material placed in existing SNWW placement areas (PA 18, 23, and 25B.)

Bessie Heights marsh, once an immense, freshwater marsh ecosystem providing crucial protection and forage for waterfowl, invertebrates and juvenile fish, is now primarily saline and experiencing a dramatic decline in all characteristics of plants and animals. It is considered a critically reduced habitat by the Texas Commission on Environmental Quality formerly the Texas Natural Resource Conservation Commission.

The plan of improvement consists of placing maintenance dredged material from the Sabine-Neches Waterway into the existing open water areas of the Bessie Heights Marsh in an effort to restore the historical wetland habitat. By utilizing the maintenance material to mitigate the effects of subsidence and erosion, the restored wetlands will continue to provide feeding, nesting, and nursery habitat for a variety of waterfowl and mammals that use these marshes.

**Local cooperation.** Fully complied with. The Sponsor is the Jefferson County Waterway and Navigation District. A Project Cooperation Agreement was executed in January 2003.

**Operations during fiscal year.** New Work: Placement of the dredged material and planting of the perimeter to prevent erosion was completed in FY03. Consolidation, which completes the planting of wetland vegetation, was initiated in 2004 and completed in 2005 for a fiscal year cost of \$54,126.

**General Investigations**

**36. SURVEYS**

Fiscal year costs for reconnaissance and feasibility studies were \$1,778,442 for navigation and \$66,070 for flood damage prevention. Reconnaissance and feasibility studies on watershed and ecosystems projects incurred costs of \$612,509. No cost was incurred for a reconnaissance study for shoreline protection in FY 05. Reconnaissance and feasibility studies on review of authorized projects incurred costs of \$328,195 for FY 2005. Miscellaneous Activities for FY 05 include the following: Special Investigations at a cost of \$25,905; Interagency Water Resources Development at \$15,391; National Estuary Program at \$3,733; and North American Waterfowl Management Plan at a cost of \$1,401.

**37. COORDINATION WITH OTHER**

**AGENCIES**

Cost for Coordination With Other Agencies was \$6,808 for FY 2005.

Deleted: 131,391

Deleted: 2004

**38. COLLECTION AND STUDY OF BASIC DATA**

Floodplain management and technical services were performed at a cost of \$12,500 and \$12,473 respectively. No cost was incurred in FY05 for quick responses to collection and study of basic data, and hydrologic studies.

**39. PRE-CONSTRUCTION ENGINEERING AND DESIGN**

**Greens Bayou, Texas** - The project was authorized for construction in the Water Resources Development Act of 1990 (PL 101-640). The authorized project provides for 25 miles of stream enlargement, 14 miles of stream clearing and 4 flood detention basins. Aesthetic vegetation and mitigation is included. Recreation facilities include trails, picnic facilities, sports fields, launches, ramps, comfort stations and parking areas. The project is currently being reformulated and a new project has been identified in a General Reevaluation Study. The new project will consist of approximately 3.2 miles of stream enlargement in the upper reaches of the bayou between Veterans Memorial Drive and Cutten Road. A flood detention basin will be located near the downstream terminus of the stream enlargement. Aesthetic vegetation is included. Recreation facilities are not currently included in the project as a local sponsor has not been confirmed. Estimated planning and engineering cost is \$8,970,000. Planning and engineering studies were initiated in FY 1990. Fiscal year costs were \$574,249.

Deleted: performed

Deleted: FY04. Final

Deleted: incurred is \$14,000 Federal (Corps) and \$26,147 Non-Federal

Deleted: 660

**South Main Channel, Texas** - The authorized project consists of channel improvements, which will provide flood protection to the cities of McAllen, Edinburg, Edcouch, La Villa and Lyford, as well as the rural areas of Hidalgo and Willacy Counties north of U.S. Highway 83. The authorized plan is currently being revised to reflect a smaller project and will include construction of new channels only in Willacy County, and a local protection project for Lyford, Texas. Estimated planning and engineering cost estimate is \$8,780,000. Planning and Engineering studies were initiated in FY 1990. Fiscal year costs were \$254,589.

**Raymondville Drain, Texas** - The project consists of 43.8 miles of channel work, including enlargement of existing channels, and construction of new channels, a 3.88-mile long levee, and diversion ditches along the west side of Raymondville, Texas. Estimated planning

Deleted: 40-

GALVESTON, TX, DISTRICT

and engineering estimate is \$6,723,000. Planning and engineering studies were initiated in FY 1997. Fiscal year costs were \$534,267.

**Hunting Bayou, Texas** - The project was authorized for construction in the Water Resources Development Act of 1990 (PL 101-640). The authorized project provides for 14.3 miles of stream improvements, recreation trails, picnic facilities, a comfort station, access and parking areas. The Local Sponsor was authorized to design and construct an alternative to the project and be reimbursed for the Federal share by the Water Resources Development Act of 1996 (PL 104-303). The project is currently being reformulated and will be identified by the General Reevaluation Study. Estimated planning and engineering estimate is \$2,070,000. Planning and engineering studies were initiated in FY 1998. Fiscal year costs were \$37,821.

**Colonias Along U.S. and Mexico Border, Texas** - The project was authorized in accordance with the Water Resources Development Act of 1992, Section 219 (PL 102-580). Assistance is to be provided to non-Federal interests for carrying out water related environmental infrastructure and resource protection and development projects for selected areas along the Texas/Mexico borders. Estimated planning and engineering cost estimate is \$1,550,000. Planning and engineering studies were initiated in FY 2001. Preliminary design began in FY 04 on Villa Nueva Colonia, Rose Acres Colonia, and LaPresa Colonia. All three design projects will be cost shared 75% Corps and 25% Sponsor. The cost sharing Sponsors are as follows: Villa Nueva-City of Brownsville; Rose Acres – Nueces County; and LaPresa – Webb County. Fiscal year costs were \$103,705.

**GIWW, Matagorda Bay, Texas** - The project consist of realigning the navigation channel from mile 460 to mile 472 with a channel approximately 6,000 feet north of and paralleling the existing route. Channel dimensions are 12 feet deep by 125 feet wide for most of the channel, with a widening to 300 feet where it crosses the Matagorda Ship Channel, and flares at each of the places where the channel changes direction. Material dredged from the channel will be used to create marshes in Matagorda Bay and to combat erosion along Matagorda Peninsula. The existing channel from mile 460 to 473 would be abandoned. . Estimated planning and engineering cost estimate is \$1,086,000. Planning and engineering studies were initiated in FY 2002. Fiscal year costs were \$180,051.

**Texas City Channel, Texas** - The project was authorized in accordance with the Water Resources Development Act of 1986. Planning, engineering and design has been on hold since 1990 at the request of the Local Sponsor, the City of Texas City. Planning, engineering and design was resumed in FY 02. A

reconnaissance level study was performed and it was determined that the authorized project is in the Federal interest and meets current needs. Estimated planning and engineering cost estimate is \$7,150,000. Planning and engineering studies were initiated in FY 2002. Fiscal year costs were \$516,782.

**Corpus Christi Ship Channel, Texas** - The Corpus Christi Ship Channel (45-foot) project, 40 miles long, is a Federally constructed deep-draft navigation project serving the ports at Harbor Island, Ingleside, and Corpus Christi in Nueces County. The recommended plan of improvement will deepen the channel to 52 feet, widen to 530 feet, add barge lanes on both sides o the channel across Corpus Christi Bay, and extend the La Quinta channel one and one-half miles at a dept of 39 feet. Estimated planning and engineering cost estimate is \$1,628,000. Planning and engineering studies were initiated in FY 2003. Fiscal year costs were \$212,300.

**GIWW, High Island to Brazos River, Texas** - The project covers the reach of the Gulf Intracoastal Waterway from Rollover Pass at Mile 330 to West Bay at Mile 373, approximately 43 miles of channel in Galveston and Brazoria Counties. The recommended project includes a sediment basin at Rollover Pass, widening the channel area to 75 feet for a length of 1400 feet at Sievers Cove, widening the channel at the Texas City Wye, setting back existing mooring facilities by 80 feet at Pelican Island, protecting existing open channels from wave action at Greens Lake, and establishing a mooring basin at the West Bay washout. Estimated planning and engineering cost estimate is \$1,117,000. Planning and engineering studies were initiated in FY 2004. Fiscal year costs were \$26,612.

**Halls Bayou, Texas** - The project was authorized for construction in the Water Resources Development Act of 1990 (PL 101-640). The authorized plan of improvement consists of 18 miles of stream improvements. Recreation facilities include trails, picnic facilities, boat ramps, a comfort station and parking areas. The estimated cost for new work is \$82,310,000 Federal (Corps) and \$58,8968,000 non-Federal consisting of \$9,084,000 cash contributions, and \$49,812,000 for lands and relocations (October 2005 base price). The project was on hold for several years at the request of the Sponsor, Harris County Flood Control District. -In FY-05-\$13,673-was expended to update the project's economics and cost estimate.

Deleted: 495

Deleted: 11,375

Deleted: 580

**Deleted: North Padre Island, Texas** - The project was authorized for ecosystem restoration and storm damage reduction at North Padre Island, Corpus Christi Bay, by the Water Resources Development Act of 1999 (PL 106-53). The project will consist of a jettied channel from the Gulf of Mexico through Padre Island connecting with the Gulf Intracoastal Waterway at approximately mile 553; storm damage reduction measures on the south side of the area; and ecosystem restoration measures at various locations adjacent to the project area. Estimated planning and engineering estimate is \$1,754,000. Planning and engineering studies were initiated in FY 2000 and completed in FY 2003. ¶

<sup>1</sup> Excludes \$1,637,270 credit for contributed work.

<sup>2</sup> Includes \$675,855 for previous projects. In addition, \$10,571,509 expended from contributed funds, of which \$123,361 was for previous projects. Excludes \$874,258 expended from contributed funds for dock removal for the local sponsor.

<sup>3</sup> In addition, \$1,681,103 expended from contributed funds and \$34,000 expended from contributed funds for Port Isabel; \$1,208,789 expended from contributed funds from the City of South Padre Island for beneficial placement of dredged material on the South Padre Island Beach; \$1,001,370 expended from contributed funds from Texas General Land Office; \$383,958 expended from contributed funds from the Brownsville Navigation District for rehabilitation of levees at Placement Area #4.

<sup>4</sup> Includes \$39,087 for previous projects. In addition \$25,000 expended from contributed funds.

<sup>5</sup> Includes \$69,784 for previous projects.

<sup>6</sup> Includes \$48,711 for previous projects.

<sup>7</sup> Includes \$46,101 for previous projects.

<sup>8</sup> Includes \$1,372,534 for previous projects. Includes \$456,515 for Sec. 107 project for Port Aransas Breakwaters. In addition \$768 expended from contributed funds for Port Aransas Breakwaters.

<sup>9</sup> Includes \$62,452 for previous projects. In addition, \$1,791,175 expended from contributed funds.

<sup>10</sup> Includes \$147,098 for previous projects. In addition, \$21,007,011 expended from contributed funds. (\$581,615 on 45-foot project.)

<sup>11</sup> In addition, \$229,311 expended from contributed funds.

<sup>12</sup> Includes \$8,421,996 for previous projects. In addition, \$3,648,932 expended from contributed funds.

<sup>13</sup> Includes \$86,126 for previous projects. In addition, \$3,276,588 expended from contributed funds.

<sup>14</sup> Includes \$706,709 for previous projects. Includes Sec. 107 projects for Port Isabel Small Boat Basin (\$46,559); Port Isabel Side Channel (\$8,414); Offatts Bayou (\$356,466); and Channel to Aransas Pass (\$658,573). In addition contributed funds expended for Port Isabel Small Boat Basin (\$46,559); Offatts Bayou (\$49,665); Channel to Aransas Pass (\$347,950); Chocolate Bayou (\$658,310); Mouth of Colorado River (\$3,397,080); (\$2,854,952) Channel to Victoria; (\$862,716) expended for the local sponsor's levee requirement on Channel to Victoria; and \$1,456,964 expended for expanding the turning basin

<sup>15</sup> Includes \$1,526,564 for previous projects. In addition \$22,672 contributed funds for main channel, \$919,195 contributed funds for Rollover Pass (beginning 1997), and \$218,500 contributed funds for marsh restoration in an area between Bastrop Bayou and Galveston. Includes following amounts for tributary channels separately funded starting in fiscal year 1987: Channel to Victoria \$23,009,191. Channel to Aransas Pass \$2,600; Chocolate Bayou Channel \$5,452,823. In addition \$1,515,574 was contributed for Chocolate Bayou Channel. Includes following amounts for tributary channels separately funded starting in fiscal

GALVESTON, TX, DISTRICT

year 1989: Channel to Harlingen \$10,715,504. Channel to Port Mansfield \$11,265,798. Also includes \$23,056,533 for Mouth of Colorado River, separately funded beginning in fiscal year 1992 and \$28,140 contributed funds for Channel to Harlingen beginning in fiscal year 1998.

<sup>16</sup> Includes \$1,526,564 for previous projects. In addition \$22,672 expended from contributed funds for main channel, \$769,195 contributed funds for Rollover Pass (beginning 1997) for the beneficial placement of dredge material at Rollover Pass., and \$168,325 contributed funds for marsh restoration in an area between Bastrop Bayou and Galveston. Includes following amounts for tributary channels separately funded starting in fiscal year 1987: Channel to Victoria \$22,994,822, Channel to Aransas Pass \$2,600, Chocolate Bayou Channel \$5,449,338. In addition \$1,515,574 was expended from contributed funds for Chocolate Bayou Channel. Also includes amounts for tributary channels separately funded starting in fiscal year 1989: Channel to Harlingen \$10,710,497. Channel to Port Mansfield \$11,213,113. Also includes an expended amount of \$22,969,846 for Mouth of Colorado River, separately funded in fiscal year 1992. In addition, includes \$28,140 contributed funds expended beginning in fiscal year 1998 for Channel to Harlingen.

<sup>17</sup> Includes \$4,105,157 for previous projects. In addition, \$2,591,939 expended from contributed funds, of which \$1,209,179 was for previous projects.

<sup>18</sup> Includes \$1,213,142 for previous projects. In addition, \$534,641 expended from contributed funds for Houston Ship Channel, of which \$200,000 was for previous projects and \$125,000 expended from contributed funds for Greens Bayou Channel. Includes appropriated funds for tributary channels separately funded starting in fiscal year 1992: Greens Bayou Channel \$1,930,952. Barbour Terminal Channel \$4,068,137. Bayport Ship Channel \$19,115,372. Also, includes \$91,942 contributed funds for Bayport Ship Channel beginning in FY 1998. Expenditures for tributary channels separately funded starting in fiscal year 1992: Greens Bayou Channel \$1,914,486. Barbour Terminal Channel \$4,068,037. Bayport Ship Channel \$19,113,147. In addition \$91,942 expended from contributed funds for Bayport Ship Channel beginning in FY 1998.

<sup>19</sup> In addition, \$12,259,619 expended from contributed funds and \$182,800 for contributed lands.

<sup>20</sup> In addition, \$280,854 expended from contributed funds. Starting in fiscal year 1990 includes an appropriation of \$2,303,797 and expenditures of \$2,299,798 for Channel to Red Bluff.

<sup>21</sup> Includes \$5,180,832 for previous projects. In addition, \$2,680,942 expended from contributed funds, of which \$577,507 was for previous projects.

<sup>22</sup> Includes \$2,379,677 for previous projects. In addition, \$7,713,770 expended from contributed funds and \$7,944 expended from contributed funds for real estate acquisition for the local sponsor. Also includes \$140,724 contributed funds expended from the Port of Beaumont for dredging their slip areas between Sections 9 and 11. In addition \$547,230 contributed funds from the Port of Port Arthur of which \$546,724 have been expended.

<sup>23</sup> Includes \$366,823 for previous projects. In addition, \$1,443,819 expended from contributed funds, of which \$99,000 was for mitigation measures.

<sup>24</sup> Includes \$195,083 for previous projects.

<sup>25</sup> Includes \$1,966,306 for previous projects. In addition, \$66,000 expended from contributed funds.

<sup>26</sup> Includes \$543,662 for previous projects. Includes \$12,595,323 appropriated (and \$12,582,358 expended) for Wallisville Lake project beginning in FY 1983.

<sup>27</sup> Includes \$4,400,000 of advanced funds repaid to Harris County Flood Control District. In addition, \$63,661 contributed funds expended for Brays Bayou and \$12,900 Federal funds and \$19,104 contributed funds expended for enlargement of Clodine Ditch.

<sup>28</sup> Excludes \$2,001,622 expended from contributed funds for real estate acquisition for the local sponsor.

<sup>29</sup> Includes \$508, 812 contributed funds for Utility Casing (100% Non-Federal Betterment).

<sup>30</sup> Includes funds (\$12,544,400) provided by the Jobs Act (P.L. 98-8, dated March 24, 1983) for projects listed in Table 15-I of Annual Report for 1985.

<b>CORPUS CHRISTI SHIP CHANNEL, TX (Continued)</b>			
	Sep. 3, 1954	An anchorage basin 12 feet deep, from 300 to 400 feet wide, and 900 feet long in Turtle Cove at Port Aransas, Texas.	H. Doc. 654, 81st Cong., 1st Sess.
	Sep. 3, 1954 <sup>s</sup>	Branch channel 32 feet by 150 feet, extending northerly from main channel in vicinity of Port Ingleside, along north shore of Corpus Christi Bay to Reynolds Metals Co. plant and turning basin 32 feet deep and 800 feet square near plant in general vicinity of LaQuinta, Texas.	H. Doc. 89, 83 <sup>rd</sup> Cong., 1st Sess.
	Sep. 3, 1954	An entrance channel 36 by 400 feet on a tangent alignment from 400-foot channel in Corpus Christi Bay, near Corpus Christi breakwater to flared approach channel to Corpus Christi turning basin.	H. Doc. 487, 83 <sup>rd</sup> Cong., 2nd Sess.
	Jul. 3, 1958	Deepen and widen LaQuinta Channel to 36 by 200 feet; enlarge LaQuinta S. turning basin to 36 by 800 by 1,000 feet; a flared entrance to channel; and widening at curves.	S. Doc. 33, 85th Cong., 1st Sess.
	Jul. 3, 1958	Deepen entrance channel to 42 feet from gulf to outer end of jetty; 40 feet in all other deep-water channels and basins except undredged northward extension to inner basin at Harbor Island and branch channel to LaQuinta; and widen Industrial Channel to 400 feet with flared entrances to Corpus Christi and Avery Point turning basins.	H. Doc. 361, 85th Cong., 2nd Sess.
	Jul. 3, 1958	Channel 40 by 200 feet extending 2.2 miles from Tule Lake turning basin to a turning basin 40 feet deep, 700 to 900 feet wide, 1,000 feet long at Viola, Texas.	H. Doc. 361, 85th Cong., 2nd Sess.
	Jul. 3, 1958	Depth of 12 feet and a width of 100 feet in locally dredged Jewel Fulton Canal from LaQuinta Channel to a turning basin 12 by 200 by 400 feet, and assumption of maintenance by United States.	H. Doc. 361, 85th Cong., 2nd Sess.
	Jul. 14, 1960 (As amended by Dec. 31, 1970)	Construction of a breakwater at entrance to harbor area at Port Aransas, and realignment of existing 12-foot by 100-foot project channel.	Sec. 107, PL-86-645
	Aug. 13, 1968	Provides for a project depth of 45 feet in the existing deep-draft channels and basins, for construction of a new deep-draft turning point, for construction of a deep draft mooring area and mooring facilities and for widening of the channels and basins at certain locations. The Act also deauthorized the undredged northward extension of Inner Basin at Harbor Island and the undredged west turnout (Wye connection) between the LaQuinta Channel and the main channel of the waterway.	S. Doc. 99, 90th Cong., 2nd Sess. <sup>1</sup>
	Oct. 22, 1976	Modified local cooperation requirements for 1968 Act. Shifted responsibility for cost of disposal areas and confinement works from sponsor to joint 75 percent Federal and 25 percent non-Federal responsibility.	Sec. 124, PL 94-587
	Sep. 15, 1994	Assume maintenance of 17-foot by 100-foot Jewel Fulton Canal, after construction by local interest.	Sec. 204, PL 99-662 as amended

**TABLE 40-B AUTHORIZING LEGISLATION**

<b>GALVESTON HARBOR AND CHANNEL, TX (continued)</b>			
	Sep. 22, 1922	Further extension of seawall at Galveston to a junction with south jetty; and repairing seawall in front of Fort Crockett reservation.	H. Doc. 693, 66th Cong., 2nd Sess.
	Jan. 21, 1927 <sup>11</sup>	Deepen Galveston Channel to 32 feet; and maintain Galveston Harbor channels to dimensions of 800 feet wide, 35 feet deep on outer bar and 34 feet deep in inner bar. <sup>10</sup>	H. Doc. 307, 69th Cong., 1st Sess.
	Aug 30, 1935	Maintain State Highway Ferry Landing Channels to dimensions of 12 by 100 feet.	River and Harbors Committee Doc. 31, 72 <sup>nd</sup> Cong. 1 <sup>st</sup> Sess.
	Aug 30, 1935	Construct 13 groins along gulf shore from 12 <sup>th</sup> to 61 <sup>st</sup> Sts. in city of Galveston at a limited cost of \$234,000 (10 Groins constructed)	H. Doc. 400, 73 <sup>rd</sup> Cong., 2 <sup>nd</sup> Sess.
	Aug. 30, 1935	Deepen Galveston Channel to 34 feet (Bolivar Roads to 43rd St.).	Rivers and Harbors Committee Doc. 61, 74th Cong., 1st Sess.
	Aug. 30, 1935	Deepen Galveston entrance channel to 36 feet.	Rivers and Harbors Committee Doc. 57, 74th Cong., 1st Sess.
	Apr. 4, 1938	Completion of project for construction of 13 groins.	PL 463, 75th Cong.
	Jun. 30, 1948	Deepen Galveston Harbor to 38 feet from gulf to a point 2 miles west of seaward end of north jetty; thence 36 feet to Bolivar Roads; revoking authority for maintenance of ferry channels; and Galveston channel to 36 feet deep from Bolivar Roads to 43rd Street.	H. Doc. 561, 80th Cong., 2nd Sess.
	May 17, 1950	Deepen outer bar channel to 38 feet from gulf to a point within jetties, thence 36 feet in authorized channels to and including upper turning basin.	H. Doc. 195, 81st Cong., 1st Sess.
	Jul. 3, 1958	Dredge to a depth of 42 feet over the authorized width of 800 feet from the Gulf of Mexico to a point 2 miles west of the seawall and of the North jetty thence at a depth of 40 feet to the junction of the Houston Ship Channel, with widths of 800 feet to Bolivar Roads, thence decreasing to 400 feet at the junction with the Houston Ship Channel.	H. Doc. 350, 85th Cong., 2nd Sess.
	Jun. 23, 1971 (House Res.) Nov. 18, 1971 (Senate Res.)	Deepen Galveston Channel to 40 feet from Bolivar to 43rd Street.	H. Doc. 121, 92 <sup>nd</sup> Cong
	Oct. 12, 1996	Provides for navigation and environmental restoration improvements. The navigation improvements consist of deepening and widening the Entrance Channel to 47 feet deep and 800 feet wide; the Houston Ship Channel to 45 feet deep and 530 feet wide; and the Galveston Channel to 45 feet deep. The environmental restoration portion consist of initial construction of marsh habitat and a colonial water bird nesting island through the beneficial use of new work dredged material, and incremental development (deferred construction) of additional marsh over the life of the navigation project through the beneficial use of maintenance materials dredged from Galveston Bay. The project is referred to as Houston-Galveston Navigation Channels.	Sec. 101 (30) PL 104-303

<b>GULF INTRACOASTAL WATERWAY (continued)</b>			
	Jul. 24, 1946	Fill a portion of shallow-draft channel adjacent to Port Isabel Turning Basin, construct a channel to connect shallow-draft channel with main channel near shoreline of Laguna Madre, and enlarge shallow-draft channel west of this connection, all to 12-foot depth and bottom width of 125 feet.	H. Doc. 627, 79th Cong., 2nd Sess.
	Jul. 24, 1946	Reroute main channel to north shore of Red Fish Bay between Aransas Bay and Corpus Christi Bay; deepen tributary channel from Port Aransas to Aransas Pass, Texas, 12 feet and extended basin at same depth.	H. Doc. 700, 79th Cong., 2nd Sess.
	May 17, 1950	Deauthorized 6 by 60 foot channel in Chocolate Bayou and reauthorized the 4 by 100-foot channel.	H. Doc. 768, 80 <sup>th</sup> Cong., 2nd Sess.
	May 17, 1950	Alternate channel across South Galveston Bay between Port Bolivar and Galveston causeway.	H. Doc. 196, 81st Cong., 1st Sess.
	May 17, 1950	"Red Fish Landing" changed to "Port Mansfield, Texas."	PL 516, 81st Cong.
	Jul. 12, 1952	Incorporate as part of Intracoastal Waterway a channel 9 by 100 feet from main channel via Seadrift to point on Guadalupe River 3 miles above Victoria, Texas, authorized by River and Harbor Act of 1945.	PL 527, 82nd Cong., 2nd Sess.
	Sep. 3, 1954 <sup>15</sup>	Small craft harbor 9 by 200 by 1,000 feet at Seadrift with an entrance channel 9 by 100 feet.	H. Doc. 478, 81st Cong., 2nd Sess.
	Sep. 3, 1954	Widen tributary channel between Port Aransas and Aransas Pass, Texas, to 125 feet; straighten and widen to 125 feet connecting channel to Conn Brown Harbor, and maintain Conn Brown Harbor at Federal expense, all to 12 feet deep.	H. Doc. 376, 83rd Cong., 2nd Sess.
	Sep. 9, 1959	Improve channels and basins comprising channel to Port Mansfield constructed in part by Federal Government and in part by local interest; constructing turnout curves at Gulf Intracoastal Waterway intersection and bend easing at entrance to turning basin; construct parallel jetties at gulf entrance; maintenance of locally dredged jetty channel 16 by 250 feet; and maintenance of small craft basin.	S. Doc. 11, 86th Cong., 1st Sess.
	Jul. 14, 1960	Entrance channel 7 feet deep by 75 feet wide from main channel to Gulf of Mexico to inside shoreline at Port Isabel, Texas, an inner channel 6 feet deep by 50 feet wide from entrance channel to East Harbor Basin, and an irregular-shaped harbor basin 6 feet deep having a surface area of about 7 acres.	Sec. 107, PL 86-645, 86th Cong.
	Jul. 14, 1960 (As amended Dec. 31, 1970)	Deepen the existing 6-foot channel at Port Isabel to 12 feet and removing the submerged bars at each end of the island to a depth of -12 feet MLT.	Sec. 107, PL 86-645
	Jul. 14, 1960 (As amended Dec. 31, 1970)	Deepening the existing channel to 12 by 125 feet, and extend southeasterly from the Gulf Intracoastal Waterway main channel in West Galveston Bay, into Offatts Bayou, a distance of 2.2 miles, and a west turnout 12 by 125 feet between the proposed Offatts Bayou Channel and the Gulf Intracoastal Waterway.	Sec. 107, PL 86-645

**GALVESTON, TX, DISTRICT**

**TABLE 40-B AUTHORIZING LEGISLATION**

See Date Section Authorizing in Text Act	Project and Work Authorized	Documents
<b>GULF INTRACOASTAL WATERWAY (continued)</b>		
Jul. 14, 1960 (As amended Dec. 31, 1970)	Deepening Aransas Pass tributary channel to 14 feet from mile 0 at Harbor Island to mile 6.1 at the city of Aransas Pass; widening to 175 feet between miles 3.5 and 4.6; and deepening Conn Brown Harbor, turning basin and connecting channel between Conn Brown Harbor and turning basin.	Sec. 107, PL 86-645
Oct. 23, 1962 <sup>16</sup>	Improve main channel 16 feet deep and 150 feet wide from Sabine River to Houston Ship Channel; with two relocations; relocate main channel in Matagorda Bay and Corpus Christi Bay; and maintaining existing Lydia Ann Channel.	H. Doc. 556, 87th Cong., 2nd Sess.
Oct. 23, 1962	Deepen and widen channel to Palacios; construct two protective breakwaters; maintain and deepen existing basins; and deepen, enlarge and maintain existing approach channel to basin No. 2.	H. Doc. 504, 87th Cong., 2 <sup>nd</sup> Sess.
Oct. 23, 1962	Eliminates requirement of local interest to construct bridge at mile 29.2 turning basin at Victoria, and maintain turning basins at Victoria and Seadrift; provide: Federal construction of vertical-lift railroad bridge at Missouri-Pacific Railroad mainline crossing, mile 29.2; construction and future maintenance of basin near Victoria, Texas, and maintenance of basin constructed by local interests at Seadrift, Texas.	H. Doc. 288, 87th Cong., 2nd Sess.
Oct. 27, 1965 <sup>17</sup>	Modify existing Federal navigation project to provide a channel extending from Gulf Intracoastal Waterway through Chocolate Bay and Chocolate Bayou to project channel mile 8.2, thence to a turning basin near channel mile 13.2 and for salt water barrier in Chocolate Bayou about 3.7 miles upstream from basin (channel mile 16.9).	H. Doc. 217, 89th Cong., 1st Sess.
Aug. 13, 1968	Entrance channel 15 feet deep and 200 feet wide at the mouth of Colorado River Channel protected by an east jetty 3,500 feet long extending to 12-foot depth and a west jetty 2,900 feet long extending to 5-foot contour; make channel 12 feet by 100 feet from gulf shore to Matagorda, including recreation facility, a turning basin 12 feet by 300 feet wide and 1,450 feet long, and a new diversion channel 250 feet wide and varying in depth from 20 to 23 feet including a closure dam across the present river channel.	S. Doc. 102, 90th Cong., 2nd Sess.
Nov. 17, 1986	Modified 1968 authorization to provide that diversion features be constructed at Federal expense and operation and maintenance be shared 75 percent Federal and 25 percent non-Federal.	Sec. 812, PL 99-662
Nov. 17, 1988	Enlarge existing Channel to Victoria from a depth of 9 feet and width of 100 feet to a depth of 12 feet and width of 125 feet.	Sec. 3, PL 100-676
Oct. 31, 1992	Provide 8 miles of erosion protection for the existing waterway in the vicinity of Sargent, Texas.	Sec. 101 (20), PL 102-580
Oct. 12, 1996	Provides for erosion protection along a 31-mile reach of the Gulf Intracoastal Waterway, which crosses the critical wintering habitat of the endangered whooping crane, including a 13.25-mile reach within the boundary of the Aransas National Wildlife Refuge. Also, provides for limited oil spill containment features and equipment to protect those areas from accidental hazardous spills.	Sec. 101 (29), PL 104-303

<b>11. HOUSTON-GALVESTON NAVIGATION CHANNELS, TX</b>			
	Oct. 12, 1996	Provides for navigation and environmental restoration improvements. The navigation improvements consist of deepening and widening the Entrance Channel to 47 feet deep and 800 feet wide; the Houston Ship Channel to 45 feet deep and 530 feet wide; and the Galveston Channel to 45 feet deep. The environmental restoration portion consist of initial construction of marsh habitat and a colonial water bird nesting island through the beneficial use of new work dredged material, and incremental development (deferred construction) of additional marsh over the life of the navigation project through the beneficial use of maintenance materials dredged from Galveston Bay.	Sec. 101 (29) PL 104-303
	Oct. 27, 2000	Provides for barge lanes immediately adjacent to either side of the Houston Ship Channel, from Bolivar roads to Morgan Point, to a depth of 12 feet.	Appendix B, PL 106-377
<b>12. HOUSTON SHIP CHANNEL, TX</b>			
	Mar. 5, 1905	Easing or cutting off sharp bends and construction of a pile dike. <sup>18</sup>	Rivers and Harbors Committee Doc. 35, 61st Cong., 2nd Sess.
	Mar. 2, 1919	A channel 30 feet deep, widen bend at Manchester and enlarge turning basin.	H. Doc. 1632, 65th Cong., 3rd Sess.
	Mar. 3, 1925	A light-draft extension of channel to mouth of White Oak Bayou. <sup>19</sup>	H. Doc. 93, 67th Cong., 1st Sess.
	Jul. 3, 1930	Widen channel through Morgan Point and to a point 4,000 feet above Baytown and widen certain bends.	H. Doc. 13, 71st Cong., 1st Sess.
	Aug. 30, 1935 <sup>11</sup>	Deepen to 32 feet in main channel and turning basin, and a 400-foot width through Galveston Bay.	Rivers and Harbors Committee Doc. 28, 72nd Cong., 1st Sess.
	Aug. 30, 1935	Deepen to 34 feet in main channel and widen from Morgan Point to turning basin	Rivers and Harbors Committee Doc. 58, 74th Cong., 1st Sess.
	Mar. 2, 1945	Branch channel 10 by 60 feet behind Brady Island.	H. Doc. 226, 76th Cong., 1st Sess.
	Mar 2, 1945	Widen channel from Morgan Point to lower end of Fidelity Island with turning points at mouth of Hunting Bayou and lower end of Brady Island.	H. Doc. 226, 76th Cong., 1st Sess.
	Mar. 2, 1945	Widen channel from lower end of Fidelity Island to Houston turning basin and dredge off-channel silting basins.	H. Doc. 737, 79th Cong., 2nd Sess.
	Jun. 30, 1948	Deepen to 36 feet from Bolivar Roads to and including main turning basin at Houston, Texas, including turning points at Hunting Bayou and Brady Island.	H. Doc. 561, 80th Cong., 2nd Sess.

<b>HOUSTON SHIP CHANNEL, TX (continued)</b>			
	Jul. 3, 1958 <sup>20</sup>	Deepen to 40 feet from Bolivar Roads to Brady Island, construct Clinton Island turning basin, a channel 8 by 125 feet at Five Mile Cut, and improve shallow-draft channel at Turkey Bend.	H. Doc. 350, 85 <sup>th</sup> Cong., 2nd Sess. <sup>1</sup>
	Jul. 14, 1960	Barbour Terminal at Morgan Point.	Sec. 107, PL 86-645
	Oct. 27, 1965H. Doc. 257, 89th Cong., 1st Sess.	Restoring existing locally dredged channel from mile 0 to 0.34 to 36 feet deep and dredging a 15-12 ft. channel from mile 0.34 to 2.81, in Greens Bayou. <sup>21</sup>	H. Doc. 257, 89th Cong., 1st Sess.
	Nov. 17, 1986	Maintenance of Greens Bayou, Barbour Terminal Channel, and Bayport Ship Channel to forty-foot depths at Federal expense.	Sec. 819, PL 99-662
	Oct. 12, 1996	Provides for navigation and environmental restoration improvements. The navigation improvements consist of deepening and widening the Entrance Channel to 47 feet deep and 800 feet wide; the Houston Ship Channel to 45 feet deep and 530 feet wide; and the Galveston Channel to 45 feet deep. The environmental restoration portion consist of initial construction of marsh habitat and a colonial water bird nesting island through the beneficial use of new work dredged material, and incremental development (deferred construction) of additional marsh over the life of the navigation project through the beneficial use of maintenance materials dredged from Galveston Bay. The project is referred to as Houston-Galveston Navigation Channels.	Sec. 101 (30) PL 104-303
<b>13.</b>	<b>MATAGORDA SHIP CHANNEL, TX</b>		
	Jun. 25, 1910	Channel to Port Lavaca, Texas 7 feet deep and 89 feet bottom width.	H. Doc. 1082, 60th Cong., 2nd Sess.
	Aug. 30, 1935	Extend 7-foot channel to shoreline of Lavaca Bay at mouth of Lynns Bayou.	Rivers and Harbors Committee Doc. 28, 74th Cong., 1st Sess.
	Aug. 26, 1937	Deepen and widen channel to present project dimensions.	Rivers and Harbors Committee Doc. 37, 75th Cong., 1st Sess.
	Mar. 2, 1945	Extend channel 6 by 100 feet from Port Lavaca via Lavaca Bay, Lavaca and Navidad Rivers to Red Bluff, a distance of 20 miles.	H. Doc. 314, 76th Cong., 1st Sess.
	Mar. 2, 1945	A harbor of refuge 9 feet deep near Port Lavaca and an approach channel 100 feet wide and equal depth.	H. Doc. 731, 79th Cong., 2nd Sess.

**TABLE 40-B AUTHORIZING LEGISLATION**

<b>See Section in Text</b>	<b>Date Authorizing Act</b>	<b>Project and Work Authorized</b>	<b>Documents</b>
		<b>MATAGORDA SHIP CHANNEL, TX (Continued)</b>	
	Jul. 3, 1958	Deepen to 12 feet and widen to 125 feet Port Lavaca Channel and approach channel to harbor of refuge; deepen to 12 feet Port Lavaca turning basin and basins at harbor of refuge.	H. Doc. 131, 84th Cong., 1st Sess.
	Jul. 3, 1958	An entrance channel 38 by 300 feet, a channel 36 by 200 feet, 22 miles long across Matagorda and Lavaca Bays to Point Comfort, Texas, a turning basin 36 feet deep and 1,000 feet square at Point Comfort, and dual jetties at entrance from gulf.	H. Doc. 388, 84th Cong., 2nd Sess.
<b>14.</b>		<b>NECHES RIVER AND TRIBUTARIES, SALT WATER BARRIER AT BEAUMONT, TX</b>	
	Oct. 22, 1976	Construct gated salt water barrier in Neches River consisting of seven 40 x 24.5 foot tainter gates; gated navigation by-pass channel with clear opening of 56 feet and depth of 16 feet; access road and levee; and auxiliary dam across canal which drains adjacent bayou.	Sec. 102, PL 94-587
<b>15.</b>		<b>SABINE-NECHES WATERWAY, TX.</b>	
	Jul. 25, 1912	Existing project dimensions of jetties, a 26-foot channel through Sabine Pass, Port Arthur Canal and Port Arthur turning basin; and a 26-foot turning basin at Port Arthur. A depth of 25-feet in Sabine-Neches Canal, Neches River to Beaumont and Sabine River to Orange, including cutoffs and widening channels.	H. Doc. 773, 61st Cong., 2nd Sess.
	Sep. 22, 1922	Deepen channels to 30 feet from gulf to Beaumont, with increased widths and an anchorage basin in Sabine Pass.	H. Doc. 975, 66th Cong., 3rd Sess.
	Sep. 22, 1922	Deepen Port Arthur east and west turning basins and approach channel to 30 feet. Take over and deepen to 30 feet channel connecting west turning basin with Taylors Bayou turning basin. For a 30-foot depth in channel from mouth of Neches River to cutoff in Sabine River near Orange.	S. Doc. 152, 67th Cong., 2nd Sess.
	Mar. 3, 1925	Removal of guard lock in Sabine-Neches Canal.	H. Doc. 234, 68th Cong., 1st Sess.
	Jan. 21, 1927	Widen Sabine Pass and jetty channel, Port Arthur Canal, and Sabine-Neches Canal. For dredging 2 passing places in Sabine-Neches Canal, easing of bends, removal and reconstructing Port Arthur field office, extending Beaumont turning basin upstream 200 feet above new city wharves, and an anchorage basin in Sabine Pass.	H. Doc 287, 69th Cong., 1st Sess.
	Aug. 30, 1935 <sup>11</sup>	A depth of 32 feet in channels from gulf to Beaumont turning basin, including all turning basins at Port Arthur.	Rivers and Harbors Committee Doc. 27, 72nd Cong., 1st Sess.
	Aug. 30, 1935 <sup>11</sup>	Deepen channels to 34 feet with increased widths from gulf to Beaumont turning basin.	Rivers and Harbors Committee Doc. 12, 74th Cong., 1st Sess.

GALVESTON, TX, DISTRICT

**TABLE 40-B AUTHORIZING LEGISLATION**

<b>SABINE-NECHES WATERWAY, TX (continued)</b>			
	Aug. 30, 1935	Construct suitable permanent protective works along Sabine Lake. Maintain Taylors Bayou turning basin.	Specified in Act.
	Aug. 26, 1937	Maintain channel from Sabine River to Orange Municipal wharf.	Rivers and Harbors Committee Doc. 3, 75th Cong., 1st Sess.
	Aug. 26, 1937	Dredging 500 feet from eastern end of Harbor Island and abandonment of channel south and west of Harbor Island.	Rivers and Harbors Committee Doc. 20, 75th Cong., 1st Sess.
	Jun. 20, 1938 <sup>22</sup>	Increased widths of channels from gulf to Beaumont turning basin and channel connecting Port Arthur west turning basin and Taylors Bayou turning basin, deepen Beaumont turning basin and Beaumont turning extension to 34 feet; and dredge a new cutoff from Smith's Bluff cutoff to McFadden Bend.	H. Doc. 581, 75th Cong., 3rd Sess.
	Oct. 17, 1940	Abandon Orange turning basin; dredge a channel 25 by 150 feet, suitably widened on bends to highway bridge, and dredge a cutoff channel opposite Orange.	S. Doc 14, 77th Cong., 1st Sess.
	Mar. 2, 1945	Extend Beaumont turning basin upstream 300 feet.	H. Doc. 685, 76th Cong., 3rd Sess.
	Mar. 2, 1945	Widen Port Arthur west turning basin to 600 feet.	S. Doc 60, 77th Cong., 1st Sess.
	Mar. 2, 1945	Dredge a channel from Beaumont turning basin to vicinity of Pennsylvania Shipyard.	S. Doc 158, 77th Cong. 2nd Sess.
	Jul. 24, 1946 <sup>23</sup>	Deepen Sabine Pass outer bar channel to 37 feet, Sabine Pass jetty channel to 36 feet at inner end, deepen to 36 feet Sabine Pass Channel, Port Arthur Canal, Port Arthur east and west turning basins, Taylors Bayou turning basin and channel from Port Arthur west turning basin to Taylors Bayou turning basin, deepen to 36 feet and widen to 400 feet Sabine-Neches Canal from Port Arthur Canal to mouth of Neches River except through Port Arthur Bridge; deepen Neches River channel from mouth to Beaumont turning basin to 36 feet widening to 350 feet from Smith's Bluff to Beaumont turning basin; deepen junction area on Neches River at Beaumont turning basin to 36 feet; and widen Sabine-Neches Canal between Neches and Sabine Rivers to 150 feet.	H. Doc. 571, 79th Cong., 2nd Sess.
	Jul. 24, 1946 <sup>24</sup>	Improve Cow Bayou, Texas, by construction of a channel 100 feet wide and 13 feet deep extending from navigation channel in Sabine River to a point 0.5 mile above county bridge at Orangefield, Texas, with a turning basin.	H. Doc. 702, 79th Cong., 2nd Sess.

**TABLE 40-B AUTHORIZING LEGISLATION**

See Section in Text	Date Authorizing Act	Project and Work Authorized	Documents
<b>SABINE-NECHES WATERWAY, TX (continued)</b>			
	Jul. 24, 1946	Improve Adams Bayou, Texas, to provide a channel 12 feet deep and 100 feet wide extending from 12-foot depth in Sabine River to first county highway bridge across bayou.	H. Doc. 626, 79th Cong., 2nd Sess.
	May 17, 1950	Deepen to 36 feet and widen to 400 feet the Sabine-Neches Canal near Port Arthur bridge; reconstruct Port Arthur Bridge and relocate Port Arthur field office.	H. Doc. 174, 81st Cong., 1st Sess.
	Sep. 3, 1954 <sup>25</sup>	Rectification of certain reaches of existing Sabine Pass Channel, Sabine-Neches Canal, and Neches River and Sabine River Channel; widen to 350 feet entrance channel to Port Arthur turning basins; widen curve at junction of Port Arthur and Sabine-Neches Canals; relocate and enlarge Sabine Pass anchorage basin to 34 by 1,500 by 3,000 feet; widen to 200 feet Sabine-Neches Canal from mouth of Neches River to mouth of Sabine River and Sabine River Channel to upper end of existing project at Orange, except for channel around Harbor Island at Orange; deepen to 30 feet Sabine River Channel from cutoff near Orange municipal slip to upper end of project, except around Harbor Island; and enlarge area at entrance to Orange municipal slip to provide a maneuvering basin.	S. Doc. 80, 83rd Cong., 2nd Sess.
	Oct. 23, 1962 <sup>26</sup>	Improve outer bar channel to 42 and 40 feet for all inland channels to Port Arthur and Beaumont; width of 500 feet in Port Arthur Canal and 400 feet in Neches River Channel to Beaumont with three turning points in Neches River; a channel, 12 by 125 feet, <b>extending in</b> Sabine River to Echo; and replace an obstructive bridge at Port Arthur, Texas. Deauthorization of uncompleted portion of channel between Port Arthur west turning basin and Taylors Bayou turning basin and enlargement of entrance channel to Port Arthur turning basins.	H. Doc. 553, 87th Cong., 2nd Sess. <sup>1</sup>
<b>16.</b>	<b>TEXAS CITY CHANNEL, TX</b>		
	Mar. 4, 1913	A channel 300 by 30 feet and construct a pile dike 28,200 feet long north to channel.	H. Doc. 1390, 62nd Cong., 3rd Sess.
	Jul. 3, 1930	A harbor 800 by 30 feet at Texas City, and construct a rubblemound dike.	H. Doc. 107, 71st Cong., 1st Sess.
	Aug. 30, 1935 <sup>11</sup>	Extension of rubblemound dike to shoreline.	Rivers and Harbors Committee Doc. 4, 73rd Cong., 1st Sess.
	Aug. 30, 1935	Deepen channel and harbor to 32 feet.	Rivers and Harbors Committee Doc. 46, 73rd Cong., 2 <sup>nd</sup> Sess.
	Aug. 30, 1935	Deepen channel and harbor to 34 feet.	Rivers and Harbors Committee Doc. 62, 74th Cong., 1st Sess.

Jun. 30, 1948	Deepen channel and harbor to 36 feet, widen channel to 400 feet and harbor to 1,000 feet and changing name of project to "TEXAS CITY CHANNEL, TEXAS."	H. Doc. 561, 80th Cong., 2nd Sess. <sup>1</sup>
Jul. 14, 1960	Deepen channel and turning basin to 40 feet and construct 16-foot Industrial Barge Canal.	H. Doc. 427, 86th Cong., 2nd Sess.
Oct. 12, 1972 Senate Res.)	Widen the existing main turning basin to 1,200 feet including relocation of the basin 85 feet to the east; providing a 40-foot deep channel in the Industrial Canal at widths of 300-400 feet, with a turning basin at the head of the canal 40 feet deep, 1,150 feet long, and 1,000 feet wide, and easing of the bend at the entrance to the canal, and deauthorization of shallow-draft Industrial Barge Canal not incorporated in the plan of improvement above.	H. Doc. 199, 92 <sup>nd</sup> Cong., 2nd Sess. (Sec. 201, PL 89-298)
Oct. 12, 1972 (House Res.)		
Nov. 17, 1986	Deepening the Texas City Turning Basin to 50 feet, enlarging the 6.7 mile long Texas City Channel to 50 feet by 600 feet; deepening the existing 800-foot wide Bolivar Roads Channel and Inner Bar Channel to 50 feet; deepening the existing 800-foot wide Outer Bar and Galveston Entrance Channels to 52 feet; extending the Galveston Entrance Channel to a 52 foot depth for 4.1 miles at a width of 800 feet and an additional reach at a width of 600 feet to the 52 foot contour in the Gulf of Mexico; and establishment of 600 acres of wetland and development of water-oriented recreational facilities on a 90-acre enlargement of the Texas City Dike.	Sec. 201, PL 99-662
<b>17.</b>	<b>TRINITY RIVER AND TRIBUTARIES, TX</b>	
Jun. 18, 1878	Dredging of a channel through the bar at the mouth of the Trinity River.	
1889	Modified to include two parallel jetties 275 feet apart, the westerly one of length 7,359 feet and the other of length 300 feet.	
Jun. 13, 1902 (As amended Mar. 3, 1905, Mar. 2, 1907, Jun. 25, 1910, Jul. 25, 1912, Mar. 4, 1913, and Jul. 27, 1916)	Improvement of the Trinity River in the interest of providing navigation from the mouth of the Trinity River to Dallas. The plan provided for the construction of 37 locks and dams, with auxiliary dredging and other open-channel work necessary to obtain a 6-foot depth for continuous navigation (excepting periods of excessive drought). Each Act also authorized the construction of certain-named locks and dams.	H. Doc. 409, 56 <sup>th</sup> Cong., 1 <sup>st</sup> Sess.
Mar. 3, 1905	Authorized the Anahuac Channel. No project dimensions were specified by the Act, so a 7- by 8-foot channel, 12,238 feet long was dredged in 1905.	Specified in Act.
Sep. 22, 1922	Abandon improvements above Liberty and terminate all improvements by lock and dam, leaving a 6-foot channel from Liberty to mouth.	H. Doc. 989 66 <sup>th</sup> Cong., 3rd Sess

**TABLE 40-B AUTHORIZING LEGISLATION**

See Section in Text	Date Authorizing Act	Project and Work Authorized	Documents
---------------------	----------------------	-----------------------------	-----------

**TRINITY RIVER AND TRIBUTARIES, TX (continued)**

	Mar. 2, 1945	Provides for a navigable channel from the Houston Ship Channel near Red Fish Bar in Galveston and Trinity Bays to the mouth of Trinity River and 9 feet deep and 150 feet wide in the river section, with a turning basin at Liberty.	H. Doc. 403, 77th Cong., 1st Sess.
	Jul. 24, 1946	Modification of the project to provide for a channel 9 feet deep and 150 feet wide from the Houston Ship Channel near Red Fish Bar in Galveston Bay extending along the east shore of Trinity Bay to the mouth of the Trinity River at Anahuac, including protective spoil embankment on the bay side of the channel in lieu of the 9 by 200-foot channel in Galveston and Trinity Bays.	H. Doc. 634, 79th Cong., 2nd Sess.
	Oct. 23, 1962	Provides for the multiple-purpose Wallisville Reservoir, including a navigation lock in the Wallisville Dam at Channel Mile 28.30 and advancement of the Channel to Liberty from one mile below Anahuac (Mile 23.2) to the Texas Gulf Sulphur Company's slip at Channel Mile 35.8, and incorporation into existing project Anahuac Channel and mouth of Trinity River projects.	H. Doc. 215, 87th Cong., 1st Sess.
	Oct. 27, 1965	Reevaluation of navigation benefits.	H. Doc. 276, 89th Cong., 1st Sess.
	Jul. 30, 1983	Modified Wallisville Reservoir by reducing the size to 5,600 acres and confining the reservoir to east side of Trinity River.	PL 98-63

**21. BUFFALO BAYOU AND TRIBUTARIES, TX**

	Jun. 20, 1938	Barker and Addicks Reservoirs, Texas.	H. Doc. 456, 75th Cong., 2nd Sess.
	Sep. 3, 1954	Clearing, straightening, enlarging and lining of Buffalo, Brays, and White Oak Bayous.	H. Doc. 250, 83rd Cong., 2nd Sess. <sup>1</sup>
	Oct. 27, 1965	Extend upper limits of White Oak Bayou upstream about 2.1 miles from BRI RR bridge to mouth of Cole Creek.	H. Doc. 169, 89th Cong., 1st Sess.
	Nov. 28, 1990	Flood damage reduction improvements and recreational development for the Houston, Texas urban area, divided into six separable elements – Brays, Greens, Hunting, Halls, Carpenters and Little White Oak Bayous. Flood control improvements consist of 75.3 miles of stream enlargement, 14 miles of stream clearing, 7 flood detention basins, 7 miles of diversion channels and environmental revegetation. Recreation features consist of 14.7 miles of trails, 502 picnic facilities, 12 group pavilions, 2 boat launching ramps, 10 restrooms, playgrounds, exercise stations and parking facilities.	Sec. 101, PL 101-640

GALVESTON, TX, DISTRICT

**TABLE 40-B AUTHORIZING LEGISLATION**

See Section in Text	Date Authorizing Act	Project and Work Authorized	Documents
<b>BUFFALO BAYOU AND TRIBUTARIES, TX (Continued)</b>			
	Oct. 12, 1996	Authorizes non-Federal interests to undertake flood control projects in the United States, subject to obtaining any permits required pursuant to Federal and State laws in advance of actual construction. For the purpose of demonstrating the potential advantages and effectiveness of non-Federal implementation of flood control projects, the Secretary shall enter into agreements pursuant to this section with non-Federal interests for development of the following Buffalo Bayou projects: Brays Bayou, Hunting Bayou, and White Oak Bayou.	Sec. 211, PL 104-303
	Oct. 12, 1996	The non-Federal interest for the Buffalo Bayou and tributaries authorized flood control projects, may be reimbursed by up to \$5,000,000 or may receive a credit of up to \$5,000,000 toward required non-Federal project cost-sharing contributions for work performed by the non-Federal interest at each of the following locations if such work is compatible with 1 or more of the following authorized projects: White Oak Bayou, Brays Bayou, Hunting Bayou, Garners Bayou (not authorized), and the Upper Reach of Greens Bayou.	Sec 350, PL 104-303
<b>23.</b>	<b>CLEAR CREEK, TX</b>		
	Aug. 13, 1968	Channel enlargement and rectification from upper end of Clear Lake at Mile 3.8 to improved channel Mile 34.8. <sup>28</sup>	H. Doc. 351, 90th Cong., 2nd Sess.
	Nov. 17, 1986	Modified local cooperation requirements of the 1968 authorization.	Sec. 1001, PL 99-662
<b>24.</b>	<b>CYPRESS CREEK, TX</b>		
	Nov. 17, 1988	Enlargement and rectification of lower 29.4 miles of Cypress Creek channel and recreational development	Sec. 3, PL 100-676
	Aug. 17, 1999	Modified the project to authorize a nonstructural flood control project.	Sec. 355(a), PL 106-53
<b>25.</b>	<b>LOWER RIO GRANDE BASIN, TX</b>		
	Nov 17, 1986	Channel improvements to provide drainage protection for the area in Hidalgo and Willacy Counties north of U.S. Highway 83, and for the area between U.S. Highway 83 and the Rio Grande in Hidalgo County; and to provide flood protection for the cities of McAllen, Edinburg, Raymondville, Edcouch, La Villa, and Lyford.	Sec 401, PL 99-662
	Aug. 17, 1999	Modified the project to authorize a nonstructural flood control project.	Sec. 355(a), PL 106-53

**TABLE 40-B AUTHORIZING LEGISLATION**

See Section in Text	Date Authorizing Act	Project and Work Authorized	Documents
<b>26.</b>		<b>SIMS BAYOU, TX</b>	
	Nov. 17, 1986	Enlargement and rectification, with appropriate erosion control measures of 19.31 miles of Sims Bayou; environmental measures and riparian habitat along entire alignment, and recreational development.	Sec. 401, PL 99-662
	Sep. 29, 1989	Amended the Water Resources and Development Act (WRDA) of 1986 authorization as project cost estimate had exceeded limit established in Section 902 of WRDA 1986.	Sec. 103, PL 101-101
<b>32.</b>		<b>NORTH PADRE ISLAND, TX</b>	
	Aug. 17, 1999	Carry out a project for ecosystem restoration and storm damage reduction at North Padre Island, Corpus Christi Bay, Texas, if it is determined that the work is technically sound and environmentally acceptable.	Sec. 556, PL 106-53

<sup>1</sup> Contains latest published maps.  
<sup>2</sup> Extension of north jetty 1,950 feet and south jetty 1,265 feet considered inactive. (1975 Deauthorization list)  
<sup>3</sup> Dredging 2,000 by 650-foot northerly extension of inner basin deauthorized.  
<sup>4</sup> Included in Public Works Administration program September 6, 1933 and February 16, 1935.  
<sup>5</sup> West leg of Wye junction with main channel deauthorized.  
<sup>6</sup> Construction of lock in diversion dam at local expense considered inactive.  
<sup>7</sup> Dredging upper 1.3 mile of channel to vicinity of Stauffer Chemical plant was deauthorized under Sec. 12 of PL 93-251. Included in Public Works Administration program September 6, 1933. (1975 Deauthorization list)  
<sup>8</sup> Dredging 43rd to 51st Streets was deauthorized under Sec. 12 of PL 93-251. (1975 Deauthorization list)  
<sup>9</sup> Deauthorized under Sec. 12 of PL 93-251. (1975 Deauthorization list)  
<sup>10</sup> Deepening 43rd to 57th Streets was deauthorized under Sec. 12 of PL 93-251. (1975 Deauthorization list)  
<sup>11</sup> Previously authorized September 6, 1933 by Public Works Administration.  
<sup>12</sup> H. Doc. 230, 76th Cong., 1st Sess. and project documents contain latest published maps.  
<sup>13</sup> Dredging upper 3.4 miles was deauthorized under Sec. 12 of PL 93-251. (1975 Deauthorization list)  
<sup>14</sup> Dredging upper 5 miles was deauthorized under Sec. 1001 of PL 99-662.  
<sup>15</sup> Inactive.  
<sup>16</sup> Portion of 16-foot by 150-foot channel from Sabine River to Houston Ship Channel is inactive. Relocation of channel in Matagorda Bay deauthorized under Sec. 12 of PL 93-251. (1986 Deauthorization list)  
<sup>17</sup> The 9 feet by 100 feet channel from Mile 8.2 to Mile 13.2 in Chocolate Bayou was deauthorized under Sec. 1001 of PL 99-662.

<sup>18</sup> Construction of pile dike was deauthorized under Sec. 12 of PL 93-251. (1975 Deauthorization list)  
<sup>19</sup> Hill Street Bridge to mouth of White Oak Bayou was deauthorized under Sec. 12 of PL 93-251. (1975 Deauthorization list)  
<sup>20</sup> Deepening channel to 40 feet from Southern Pacific Slip (mile 47) to Brady Island was deauthorized under Sec. 12 of PL 93-251. (1975 Deauthorization list)  
<sup>21</sup> The 12-foot channel from mile 1.65 to mile 2.81 deauthorized under Sec. 12 of PL 93-251. (1985 Deauthorization list)  
<sup>22</sup> Complete widening of channel between Port Arthur west turning basin and Taylors Bayou turning basin deauthorized by 1962 R&H Act.  
<sup>23</sup> Complete deepening of channel between Port Arthur west turning basin and Taylors Bayou turning basin deauthorized by 1962 R&H Act.  
<sup>24</sup> Channel extension above Cow Bayou turning basin near Orangefield was deauthorized under Sec. 12 of PL 93-251. (1975 Deauthorization list)  
<sup>25</sup> Widening to 350 feet entrance channel to Port Arthur turning basin deauthorized by 1962 R&H Act.  
<sup>26</sup> The 12-foot channel in Sabine River from Orange to Echo, Texas deauthorized under Sec. 12 of PL 93-251. (1985 Deauthorization list)  
<sup>27</sup> Jetty extension was deauthorized under Sec. 1001 of PL 99-662.  
<sup>28</sup> Portion of project upstream of Brazoria/Galveston County line, approximately mile 18.5, in inactive category.  
<sup>29</sup> Cedar Bayou, miles 3 to 11 were deauthorized under Sec. 12 of PL 93-251 and were re-authorized under Sec. 349(a)(2), PL 106-541.  
<sup>30</sup> Channel to Port Bolivar turning basin was deauthorized under Sec. 1001 of PL 99-662.

Anahuac Channel	6	100	6	100	-	5.8			

<sup>1</sup> Average.

<sup>2</sup> Includes 100-foot channel width.

<sup>3</sup> Includes 450-foot channel to Corpus Christi.

<sup>4</sup> Diameter.

<sup>5</sup> Includes 350-foot channel width.

<sup>6</sup> 300-foot width through Matagorda Peninsula.

<sup>7</sup> Deauthorized.

<sup>8</sup> Included in channel length.

<sup>9</sup> Includes 300-foot channel width.

<sup>10</sup> Channel dredged 34 feet deep by 250-200 feet wide by 9,908 feet long and basin 34 feet deep by 1,000 feet wide by 1,150 feet long by local interests.

<sup>11</sup> Not constructed.

<sup>12</sup> 9-foot by 150-foot channel completed from Houston Ship Channel to a point one mile below Anahuac, a distance of 23 miles. Upper end not connected to river channel to prevent salt intrusion into river. River channel maintained at 6 by 100-foot from mouth to Liberty, Texas.

Port Isabel Small Boat Harbor						
Entrance Channel	7	75	7	75	-	1.4
Harbor Channel	6	50	6	50	-	0.3
Boat Basin	6	Variable	6	72-501	1,308	0.2

<sup>1</sup> Includes the construction of a salt water barrier at Mile 16.9.

<sup>2</sup> Constructed 10 feet deep by 100 feet wide by local interests. East turnout channel constructed 150 feet wide.

<sup>3</sup> Constructed by local interests.

<sup>4</sup> Authorized to mile 13.2. Mile 8.2 to Mile 13.2 was deauthorized.

<sup>5</sup> Authorized to Mile 31 above mouth (channel mile 29.41). Upper 3.4 miles was deauthorized under Section 12 of PL 93-251.

<sup>6</sup> Includes a discharge channel from Matagorda, Texas, to the gulf, which was dredged by local interests in 1939. (Maintenance will be discontinued upon completion of improvements authorized by R&H Act of 1968.)

<sup>7</sup> Authorized by R&H Act of 1968. Also provides for a dam across the present discharge channel, a new 250-foot wide by 20 to 23-feet deep discharge channel into Matagorda Bay, and a 15-foot by 200-foot wide entrance channel with parallel jetties from the gulf shoreline into the Gulf of Mexico. East jetty to be 3,500 feet long and west jetty 2,900 feet long.

<sup>8</sup> Includes two protective breakwaters at entrance to turning basins.

<sup>9</sup> In the inactive category for maintenance.

<sup>10</sup> Also provides for two stone jetties at the gulf entrance about 1,000 feet apart. (North jetty constructed 2,300 feet long and south jetty constructed 2,270 feet long.)

<sup>11</sup> South turnout is 200 feet wide.

<sup>12</sup> Authorized to mile 31. Mile 25.8 to Mile 31 was deauthorized.

## **WATERWAY – TEXAS POINT NATIONAL WILDLIFE REFUGE, TX**

**Location.** The project is located on the Texas Gulf Coast at the intersection of the Gulf shoreline and the West Jetty of the Sabine-Neches Waterway. The project is within the Texas Point National Wildlife Refuge, managed by the U.S. Fish and Wildlife Service in Jefferson County, Texas.

**Existing project.** The project consist of pumping dredged material from the maintenance dredging of the Sabine Pass Channel onto the beach ridges adjacent to the West Jetty and within the Texas Point National Wildlife Refuge. Material placed in the marsh will fill subsided and eroded areas and enhance the restoration of the marsh. The material would also be available for transport into the marshes by storm-driven tidal surges. Once the material is there it would increase marsh elevations and provide nutrients for marsh plants. Any additional material will be placed in the surf zone shoreward of the ridge. This material will further stabilize the ridge and will provide increased storm protection for the marsh.

By helping to mitigate the effects of subsidence and erosion, the restored wetlands will continue to provide feeding, nesting, and nursery habitat for a variety of waterfowl, water birds, and mammals that utilize the marshes. The protected marsh will continue to contribute to the productivity for fish and shellfish by providing a feeding and nursery area.

The project was completed in January 2001. The total implementation cost was \$1,045,772, consisting of \$784,329 Federal (Corps) and \$229,254 Non-Federal cash contribution and \$32,189 Non-federal work-in-kind. The construction costs represent the incremental difference between the base navigation condition and the costs associated with constructing the marsh restoration project. There are no operation, maintenance, repair, rehabilitation, and replacement costs associated with the project.

**Local cooperation.** Fully complied with. The Texas General Land Office is the sponsor for the project. A Project Cooperation Agreement was executed August 11, 2000.

Operations during fiscal year. None

# MISSISSIPPI RIVER COMMISSION\*

The Mississippi River Commission (MRC) was created by an act of Congress on Jun. 28, 1879. The Flood Control Act of May 15, 1928, authorized the Flood Control, Mississippi River and Tributaries (MR&T) Project. The Commission consists of three officers of the Corps of Engineers, one from the former Coast and Geodetic Survey (presently the National Oceanic and Atmospheric Administration), and three civilians, two of whom must be civil engineers. All members are appointed by the President with the advice and consent of the Senate.

During the fiscal year the Commissioners were: BG Robert Crear, who assumed command as Commander, Mississippi Valley Division, and President Designee of the MRC on Jun. 23, 2004; Mr. Sam E. Angel, reappointed as member, Nov. 15, 1999; Mr. R. D. James, civil engineer, reappointed Apr. 16, 2003; Mr. William Clifford Smith, civil engineer, appointed Oct. 22, 1998; BG Bruce A. Berwick, Commander, Great Lakes and Ohio River Division, member designee; RADM Samuel P. De Bow, Jr., NOAA, member designee; BG Gregg F. Martin, Commander, Northwestern Division, member designee; and COL Albert M. Bleakley, Jr., Secretary of the Commission (non-voting position).

The MRC is charged, under direction of the Secretary of the Army and supervision of the Chief of Engineers, with prosecution of improvements for flood control of the Mississippi River and of its tributaries and outlets in its alluvial valley, so far as they are affected by Mississippi River backwater, between Head of Passes, LA (mile 0), and Cape Girardeau, MO (1,006 miles AHP-Lower Mississippi mileage terminates at mile 954 AHP), and with prosecution of improvements in the interest of navigation between Cairo, IL (954 miles AHP), and Baton Rouge, LA (234 miles AHP); and for stabilization of the lower 7 miles of the right bank of the Ohio River, to former mouth of Cache River. It also is charged with prosecution of certain flood control works on the Mississippi River and tributaries, as far as they are affected by backwater, between Cape Girardeau, MO, and Rock Island, IL (1,437 miles AHP), and with prosecution of improvements on designated tributaries and outlets below Cape Girardeau for flood control, navigation, major drainage, and related water uses. Authorized

operations of the Commission below Cape Girardeau are conducted by District Engineers of New Orleans, Vicksburg, and Memphis Districts within the areas described below, in accordance with approved directives and programs and congressional appropriations therefore.

The 370th Session was held on Nov. 22, 2005, at the Mississippi River Commission Headquarters in Vicksburg, MS. Approximately 5 people were in attendance for this meeting that was open to the public for observation but not for participation. The meeting was for the Commission's consideration of the Upper Mississippi River-Illinois Waterway System Navigation Feasibility Study.

The 371st Session was held on Dec. 16, 2005, at the Mississippi River Commission Headquarters in Vicksburg, MS. Approximately 10 people were in attendance for this meeting that was open to the public for observation but not for participation. The meeting was for the Commission's consideration of the Louisiana Coastal Area Study.

The 372<sup>nd</sup> Session was held 17-22 Apr. 2005, on board the Motor Vessel *Mississippi* en route from New Madrid, MO, to New Orleans, LA. Public meetings were held at New Madrid, MO, Tunica, MS, Vicksburg, MS, and New Orleans, LA. Approximately 175 people attended these public meetings. On Sunday, 17 Apr., the Commissioners investigated the St. Johns/New Madrid area. On Tuesday, 19 Apr. the Commissioners visited the Tunica River Park Museum to see how the nation's message is communicated and to view information and items the MRC provided for the museum use. On Wednesday, 20 Apr., the Commissioners visited the Environmental Research and Development Center located in Vicksburg, MS. They received a number of briefings (System-Wide Assessment, Louisiana Coastal Area Study, Upper Mississippi River, and Regional Sediment Management). Later that day, the Commissioners took part in a program and ceremony that recognized the 125<sup>th</sup> anniversary of the MRC. On Thursday, 21 Apr., the Commissioners were briefed by Tulane University on their Water Resources Development Masters Program, as well as on Command Response to the 2004 Hurricanes, including Hurricane Ivan, and a Hurricane Study by the New Orleans

---

\* Authorizing legislation (Tables 41-D and 41-E) is listed at the end of this chapter. All other tables are referenced in text and also appear at the end of the chapter.

District. On Friday, 21 Apr., the Commissioners inspected the Inner Harbor Navigation Canal (IHNC) and received briefings on the Mississippi River, IHNC Lock, Mississippi River Gulf Outlet, and Louisiana Coastal Area. This session was adjourned in New Orleans, LA, on Apr. 22, 2005.

The 373<sup>rd</sup> Session was held 14-19 Aug (first week) and 21-26 Aug (second week), on board the Motor Vessel *Mississippi*. The first week of the inspection trip took place on the Ohio River and began at Huntington, WV, and ended at Paducah, KY. No public meetings were held during the first week of the Session; however, public open houses of the Motor Vessel were held in Huntington, WV, Cincinnati, OH, Louisville, KY, and Paducah, KY to educate the public on the water resource engineering activities along the Mississippi watershed. On Sunday, 14 Aug., the Commissioners received briefings from the Pittsburg District Engineer and the Huntington District Engineer regarding activities and programs in their region. Also, the MRC was briefed on the Greenup Lock and Dam as the Motor Vessel approached the lock which provided a valuable view of the system being described. On Monday, 15 Aug., the Commissioners visited the National Underground Railroad Freedom Center and were provided a tour explaining historical aspects of river life along the Ohio. On Tuesday, 16 Aug., the Commissioners were briefed on the Markland Major Rehabilitation Project, a Strategic Overview of the Louisville District, Ohio River Main Stem Study System Investment Plan and Stewardship Program, Hanover College's "River Institute" Mission of River Related Studies, History of Navigation on the Ohio River, and the McAlpine Lock Addition Program. Following the briefings, the Commissioners inspected the Henry M. Shreve Gatelifter, McAlpine Lock and Dam, and the Falls of the Ohio River Interpretive Center. On Wednesday, 17 Aug., the Commissioners were briefed on Recapitalization of Flood Damage Reduction Projects and Olmstead Lock and Dam. On Thursday, 18 Aug., the Commissioners met with members of the Indiana Port Commission and Ports of Indiana staff. After a port site visit, the Commissioners were briefed by the Executive Director of the Port of Pittsburg. On Friday, 19 Aug., the Commissioners departed the Motor Vessel for a site visit, including a briefing, of Kentucky Lock and Dam. The Commissioners were briefed on Nashville District activities, Chickamauga Lock, and the Tennessee Valley Authority's activities that the MRC staff closely monitors and coordinates. Upon docking at Paducah, the Commissioners visited the River Heritage Museum.

The second week of the inspection trip was held from 21-26 Aug. 2005 en route from Cairo, IL, to

Morgan City, LA. Public meetings were held in Cairo, IL, Memphis, TN, Greenville, MS, and Morgan City, LA. Approximately 285 people attended these public meetings. On Sunday, 21 Aug., the Commissioners received an update briefing on the St. Johns/New Madrid project. On Monday, 22 Aug, a Memorandum of Understanding was signed on board the Motor Vessel between the Corps and the American Land Conservancy. The Commissioners met with members of the St. Johns/New Madrid Board. The Commissioners departed the MV for a site visit and briefing of the Graveyard Slough project in Tiptonville, TN, as well as a visit to the Caruthersville Outlet Ditches. On Tuesday, Aug. 23, the Commissioners visited the Mud Island River Park and Museum and received a tour of the museum describing the intricate to scale model of the Mississippi. Later in the day, the Commissioners departed for an inspection of the Chicot Pumping Plant in Lake Village, AR, and a site visit to the new Greenville Bridge being constructed between Lake Village, AR, and Greenville, MS. On Wednesday, 24 Aug., the Commissioners received a briefing on the new Greenville Bridge. Later that day, the Commissioners departed the Motor Vessel for a site visit of the levees showing Mississippi River Levee construction and a trip to the Tara Wildlife Reserve where they received an update briefing on the Yazoo Back Water Project. On Friday, 25 Aug, the Commissioners were present for a ground breaking ceremony for the Leon Theriot Lock Project near Morgan City, LA after the public meeting. The 373<sup>rd</sup> session was concluded in Morgan City, LA.

Records of Proceedings of all sessions of the Mississippi River Commission are on file in the office of the President.

**Additional information about the MRC:**

During the fiscal year the MRC listened to, inspected alongside, and partnered with more than 1,000 stakeholders, state representatives, non-government organization representatives and local interests.

The Mission of the MRC includes balancing the requirements of flood control, navigation and the environment by providing water resource engineering direction and policy advice to the Administration, Congress, and the Army in a drainage basin that comprises 41 percent of the U.S. and two provinces of Canada, and to lead sustainable management and development of water and related resources for the nation's benefit and the people's well-being.

The MRC's unique makeup continues to serve the nation well (Military and Civilian). The 3 engineer officers from the Army; 1 uniformed officer from NOAA; 3 Civilian members (2 must be civil engineers).

- Since August 1997, the MRC has resumed its inspection of upper Mississippi River.

- Stakeholders and the public have requested MRC involvement in several major studies and projects.

- For projects and studies that require a broad watershed approach with multiple levels of interest, the Mississippi River Commission's authorities, resources and contacts continue to prove effective.

**The MRC has provided the following:**

- A valuable connection between the public, a construction, operations and maintenance agency, and the executive branch of the U.S. Government.

- Implementation oversight of a range of water resource activities.

- An established record of expertise and accomplishment.

- A clear charter that includes the entire watershed.

- Established relationships and processes to make recommendations to the Chief of Engineers, the Administration and to inform Congress.

**New Orleans District:** Mississippi River project levees and river channel stabilization as required from Head of Passes, mile 0 to 320 AHP, construction of three salinity-control structures for fish and wildlife enhancement, two in lower Mississippi River Delta region, and one in the Mississippi-Louisiana Estuarine Area; Bonnet Carré and Morganza Floodways; maintenance and improvements of Mississippi River navigation channel from Baton Rouge, LA (mile 234 AHP), to mile 320; Baton Rouge Harbor (Devils Swamp); navigation improvement of Atchafalaya and Old Rivers from Mississippi River to Morgan City; control of Old and Atchafalaya Rivers; Atchafalaya Basin Floodways; flood control and drainage improvements in Bayou Cocodrie and tributaries, in Bayou des Glaises, and in Upper Pointe Coupee Loop area; and freshwater distribution from Atchafalaya River to Teche-Vermilion Basins.

**Vicksburg District:** Mississippi River project levees and river channel stabilization as required from upper limits of New Orleans District (mile 320 AHP) in vicinity of Black Hawk, LA, to Coahoma-Bolivar County line, MS (mile 620 AHP) on left bank, and to vicinity of mouth of White River, AR (mile 599 AHP), on right bank including south bank Arkansas River levee to vicinity of Pine Bluff, AR, and north bank levee to vicinity of Tucker on left bank of Plum Bayou, AR; bank stabilization in lower 36.1 miles of Arkansas River; maintenance and improvement of Mississippi River navigation channel between miles 320 and 599 AHP; Vicksburg and Greenville Harbors; specific fish and wildlife facilities in Tensas, Yazoo, and Big Sunflower Basins; a demonstration erosion control project in the Yazoo Basin; flood control and drainage improvements in Red River backwater area including leveed portions east and west of Black River and south of Red River; Jonesville, LA, Boeuf and Tensas Rivers, Bayou Macon Basins and tributaries, AR and LA, and Bayou Lafourche, LA; Yazoo River Basin, MS, including backwater area; Big and Little Sunflower Rivers, Deer Creek, and Steele Bayou, MS; and Grand Prairie Region and Bayou Meto Basin, AR, including provision for agricultural water supply.

**Memphis District:** Mississippi River project levees and river channel stabilization as required, from upper limits of Vicksburg District to north bank of Little River diversion channel, MO (1,003 miles AHP), a few miles below Cape Girardeau, MO, on right bank, and to Cache River diversion channel (967 miles AHP) above Cairo, IL, on left bank, including levees and revetment on right bank of Ohio River, in Mounds-Mound City area, IL; except operations above Cairo, IL, do not include channel stabilization on the Mississippi River. Maintenance and improvement of Mississippi River navigation channel between mile 599 and 954 AHP and of Memphis Harbor, TN; specific fish and wildlife facilities in St. Francis Basin; levees in White River backwater area up to vicinity of Augusta, AR, and a pumping plant near mouth of White River; levees and pumping plants at De Valls Bluff and Des Arc, AR; channel improvements in Cache River Basin, AR; channel improvements in Big Creek and tributaries, AR; improvement works in St. Francis River Basin, MO and AR, including backwater area improvements in Belle Fountain Ditch and Drainage District No. 17, AR; Castor River diversion channel, MO, and L'Anguille River, AR; Wolf River Basin, TN; Obion and Forked Deer River Basins, TN; Reelfoot Lake area, including channel improvement for Bayou du Chien and Lake No. 9, TN and KY; West Kentucky tributaries, KY; Mud Lake pumping station, TN; and pumping plants and outlet structures in the Cairo-Mounds-

Mound City area, IL. Channel improvements to Francis Bland Floodway Ditch (Eight Mile Creek), Arkansas; Whiteman's Creek Ten Mile and Fifteen Mile Bayous in West Memphis, and vicinity Arkansas; Horn Lake Creek and Tributaries, Mississippi; and Nonconnah Creek, Tennessee and Mississippi. Navigation channel and harbor improvements to Helena Harbor and vicinity, Arkansas at Mississippi River, mile 652 AHP. Channel improvements and pumping station for Helena, Phillips County, and vicinity, Arkansas and St. Johns Bayou and New Madrid Floodway, Missouri.

Field operations of the commission restricted to levee construction under Sec. 6, 1928 Flood Control Act (local interests contributing one-third of costs and furnishing rights-of-way) are conducted within the following limits by two districts reporting directly to the Commission on matters within their jurisdiction— St. Louis District: Mississippi River (Sec. 6) levees from upper limits of Memphis District to Clemens Station, MO (1,254 miles AHP), on right bank, and Hamburg Bay, IL (1,215 miles AHP), on left bank, and Illinois River from its mouth to mile 120 at Havana, IL. Rock Island District: Mississippi River (Sec. 6) levees from upper limits of St. Louis District to Rock Island, IL (1,437 miles AHP). For work accomplished see Table 42-N, page 42-50, Annual Report for 1975.

**MISSISSIPPI RIVER AND ALLUVIAL VALLEY BELOW CAPE GIRARDEAU, MO**

**Location and description.** The Mississippi River rises in Lake Itasca, MN, and flows generally southerly for 2,340 miles through the central portion of United States to empty into the Gulf of Mexico 115 miles below New Orleans. It is improved for barge navigation for 1,832 miles to Minneapolis, MN. The Mississippi River and its major tributaries, the Missouri, Ohio, St. Francis, White, Arkansas, Yazoo, and Red-Old Rivers, drain 1,245,000 square miles in all or part of 31 states between the Rocky and Appalachian Mountains and part of two Canadian provinces. Below Cape Girardeau, MO, 53 miles above Ohio River, river bottomlands widen abruptly into an alluvial valley of 35,460 square miles which was originally subjected to flood overflow. A major part of the alluvial valley has been protected from floods by levees which confine floodflows within a floodplain having an average width of 5 miles. (See map of alluvial valley of Mississippi River, scale 1:500,000.) Observations made by Mississippi River Commission to Sep. 30, 1982, show approximate all-time maximum and minimum discharges between levees as follows: Cairo to White River, 2,000,000 and 70,000 cubic feet per second; thence to Red River, 2,150,000 and 90,000 cubic feet per second; thence to

the Gulf of Mexico, 1,500,000 and 50,000 cubic feet per second in Mississippi River and 660,000 and 11,000 cubic feet per second in Atchafalaya River. As the 1927 floodflow was not con-fined between levees, maximum discharges recorded do not include entire flow of the 1927 flood, maximum of record below White River. High water and flood stages usually occur in late winter or early spring, but great floods such as that of 1937 occurred as early as January. Low water stages generally prevail from August to December. Extreme all-time high in stages recorded at representative gages (rounded to nearest foot) are 60 feet at Cairo, 49 feet at Memphis, 61 feet at Red River Landing, and 21 feet at New Orleans (Carrollton). The river is nontidal above Red River Landing where tidal amplitude rarely exceeds 0.1 foot during extreme low water.

**Previous projects.** For details see page 1944, Annual Report for 1932.

**Existing project.** The Mississippi River and Tributaries Project in the alluvial valley between Head of Passes, LA, and Cape Girardeau, MO, provides protection from floods by means of levees, floodwalls, floodways, reservoirs (in Yazoo and St. Francis Basins), bank stabilization, and channel improvements in and along the river and its tributaries and outlets insofar as affected by backwater of Mississippi River, including levee work on the main stem between Cape Girardeau and Rock Island. When completed, 23,621 square miles will be protected from the Mississippi River project flood. The project also provides for a 12- by 300-foot navigation channel between Baton Rouge, LA, and Cairo, IL; for salinity-control structures; and for channel realignment and improvement including bank stabilization and dikes to reduce flood heights, control natural tendency of river to lengthen by meandering, and protect levees from being destroyed by caving banks. Locations of major main stem Mississippi River improvements are shown in Table 41-A and those for off-main stem tributaries are shown in Table 41-B. Pertinent data on dams and lakes are shown in Table 41-C. Authorizing and incorporating legislation are shown in Tables 41-D and 41-E. Summary of presently estimated Federal cost of authorized improvements is shown in Table 41-F. Construction of the existing project began in 1928 and has continued throughout ensuing years. Through Sep. 30, 2005, physical completion of the entire project is 87.5 percent.

**Recommended modifications.** None.

**Local cooperation.** The Flood Control Act of 1928, as amended, applies. Such requirements have, in general, been complied with by local interests.

**Terminal facilities.** See Port Series No. 21, 1990, for Ports of Baton Rouge and Lake Charles, LA; Port Series No. 20, 1990, for Port of New Orleans, LA; also folio of Flood Control and Navigation Maps of Mississippi River from Cairo, IL, to the Gulf of Mexico (59th edition), 1992.

**Project cost.** Total allotted for flood control, excluding maintenance charges through Aug. 18, 1941, chargeable under authorizations to Sep. 30, 2005, was \$7,741,267,389 (See Table 41-V.) (See also Tables 41-U, 41-W, and 41-X for additional financial statements.

**Alluvial Valley Mapping**

**General.** Contoured quadrangles and general maps of the alluvial valley are available for departmental use and public distribution under prescribed regulations. Preparation, revision, and publication of quadrangle maps (scale 1:62,500) continued. Roadmap-type information brochures of principal portions of the overall project were published along with pamphlets on the subject of flood control and navigation. Maps and supplemental data sheets for active works were updated and published as required.

**Work accomplished in the Districts:**

New Orleans District— The conversion of 1:62,500 scale quadrangle maps, Mount Airy, Donaldsonville, White Castle, and Lake Chicot from manual to digital form was completed in FY 05. Approximately 1,200 flight-line miles of color infrared photography were flown along the Mississippi River and tributaries in the New Orleans District in FY 05.

Memphis District—There were no revisions to series conversion of U.S. Geological Survey in FY 2005. There were 840 miles of color aerial photography flown in FY 2005.

Vicksburg District—There were no revisions to 1:62,500 scale quadrangle maps in FY 05. There were 550 miles of color aerial photography flown and 350 miles of black and white aerial photography flown in FY 05.

**Floods**

Streamflow observations during the fiscal year follow:

Memphis District—Mississippi River crest stage of 53.2 feet at Cairo gage on January 17, 2005, and maximum discharge of 1,367,000 cubic feet per second

occurred at Hickman, KY, on January 18, 2005; a crest stage of 35.6 feet at Memphis on January 22, 2005, and a maximum discharge of 1,326,000 cubic feet per second at Memphis on January 22, 2005

Deleted: ,

Vicksburg District—The Mississippi River in the Vicksburg District – Peak stages and discharges on the Vicksburg District’s reach of the Mississippi River were as follows: Arkansas City, 39.4 feet on January 25, 2005, and maximum discharge of 1,530,000 cubic feet per second; Vicksburg, 44.4 feet on January 29, 2005, and a maximum discharge of 1,530,000 cubic feet per second; and Natchez, 51.1 feet on January 30, 2005, and maximum discharge of 1,540,000 cubic feet per second.

Deleted: 7

New Orleans District—On the Mississippi River, the Red River Landing gage recorded a maximum stage of 55.10 feet NGVD on Feb. 3, 2005, and the New Orleans gage recorded a maximum stage of 16.31 feet NGVD on Feb. 2, 2005. On the Atchafalaya River, the Simmesport gage recorded a maximum stage of 37.46 feet NGVD on Feb. 3, 2005.

**Studies and Investigations**

General investigations. Surveys and reports, authorized by laws and by Senate and House committee resolutions, were made as required. Collection and study of basic data continued.

A July 1997 resolution of the Committee on Transportation and Infrastructure of the U.S. House of Representatives authorized a study of flooding and other problems in the area west of the Atchafalaya Basin Floodway between Alexandria, Louisiana, and the Gulf of Mexico. A reconnaissance study was initiated in FY 1998 and completed in FY 1999. Initiation of a Feasibility Study was delayed until April 2003 when an FCSA was executed with Gravity Drainage District No. 1 of Rapides Parish, LA. The FCSA was amended in May 2004 to add LADOTD as a joint cost share sponsor for the feasibility study.

A May 1998 resolution of the Committee on Transportation and Infrastructure of the U.S. House of Representatives authorized a study of flooding and other problems in the area between Bayou Lafourche and the Mississippi River from Donaldsonville, Louisiana, to the Gulf of Mexico. A reconnaissance study was completed in FY 00. Feasibility study was initiated in FY 02, and continues in FY 05.

An April 1992 resolution of the Public Works and Transportation of the U.S. House of Representatives Committee authorized a study of flooding and other

problems east of the Atchafalaya Basin Floodway between Morganza, Louisiana, and the Gulf of Mexico. A feasibility study was completed in FY 2003 recommending a Federal project. The Energy and Water Development Appropriation Act of 1995 and the Water Resources Development Act of 1996 directed an expedited study of a lock the Houma Navigation Canal under the authority of the Morganza, Louisiana, and the Gulf of Mexico study. An interim feasibility study on the lock was completed in FY 1997 and was approved for preconstruction engineering and design in FY 1999. A supplement to the report was prepared in 2003 adding work-in-kind, Planning, Engineering, and Design on Houma Navigation Canal Lock and additional features continue in FY 2005. In FY 2004 the Energy and Water Development Appropriations Act authorized a portion of the project, Reach 5, Segment 1. The local sponsor has awarded three contracts of this feature as work-in-kind services.

A June 1998 resolution of the Committee on Environment and Public Works of the U.S. Senate authorized a study of the multipurpose flood control and agricultural water supply problems in the Boeuf-Tensas Basin of southeast Arkansas. A feasibility study was initiated in FY 2000.

#### Mississippi River and Tributaries Levees

**Operations and results during fiscal year.** This feature consists of construction of new, and enlargement of existing, levees to approved grade and section; construction and restoration of levee berms; and construction, repair, and maintenance of roads on levees. Work accomplished is summarized in Table 41-N and further broken down as follows:

New Orleans District—Continued construction of levees in the Main Stem System.

Vicksburg District—Continued construction of levees in the Main Stem System. See Table 41-L.

Memphis District—Continued construction of levees in the Main Stem System. See Table 41-M.

**Condition as of Sep. 30.** (See Tables 41-K, 41-L, 41-M, and 41-N.) There are 1,609.8 miles of levees authorized for the Mississippi River below Cape Girardeau, of which 1,603.0 miles are in place with 1,388 miles built to approved grade and section. The Main Stem Levee System consists of 2,215.7 miles, of which 2,208.9 miles are in place with 1,943.6 miles completed to approved grade and section. Included in this system are 85.4 miles of levees and structures along the south bank of Arkansas River miles (all completed);

59.2 along the south bank of Red River (all completed); and 449.2 miles in the Atchafalaya River Basin, with 449.2 miles in place and 395.4 miles completed to grade and section (see Table 41-N). Of the authorized 677.8 miles of berms and seepage control measures, 562.6 are complete. Graveled or hard-surfaced roads have been constructed on 2,094.8 miles of these levees.

There are an additional 1,511.0 miles of authorized tributary levees in the MR&T Project, of which 1,277.3 miles, are in place with 1,085.7 to approved grade and section. Berms have been completed on 15.3 miles and 970.1 miles of gravelled or hard-surfaced roads have been constructed on the levees.

For summary of levee work Table 41-N.

#### Mississippi River and Tributaries—Channel Improvements

**Operations and results during fiscal year.** Dredging: Mississippi River Main Stem — (See Table 41-G.) Work included dredging 9,953.8 cubic yards for maintenance of channel and harbor improvements. Minimum channel depth of 9 feet was maintained. Dredging was done with the following plant: Vicksburg District, channel maintenance was performed by government-owned dredge *Jadwin*. Memphis District channel maintenance dredging was performed by the Government-owned dustpan dredge *Hurley* and leased dustpan dredge *Pontchartrain*.

The MR&T Harbors maintained in Memphis District was Helena Harbor, Phillips County, AR, and Memphis Harbor (McKellar Lake), by leased cutterhead dredge *Pontchartrain*. MR&T Harbors maintained in Vicksburg District were Greenville Harbor and cutterhead dredge *Butcher*.

Bank revetment and dikes: (See Table 41-H, 41-I, and 41-J.) Construction of 0.81 miles of new bank revetment and 66,510 squares of concrete mattress, for maintenance, along the Mississippi River was completed by Government plant and hired labor. Also, 1.25 miles of new dikes were constructed and required maintenance was performed.

Deleted: 44,740

Due to the high water, no new bank revetment was constructed on the Atchafalaya River.

Other work performed in the interest of navigation, supplementing maintenance dredging on Mississippi River between Cairo, IL, and Baton Rouge, LA, included removal of snags, wrecks, and obstructions; issuance of bulletins by the Vicksburg District providing information on available high-water velocities at

selected locations; maintenance of bulletin boards showing daily gage readings at regular MRC gages; and contact pilot service furnishing navigation interests with latest information and advice on channel conditions and navigation interests. Cost of this work is given in Table 41-U.

**Condition as of Sep. 30.** In carrying out authorized channel improvement program between Baton Rouge and Cairo, 16 cutoffs were developed between 1933 and 1942. These, combined with chute channel development and alignment improvements, decreased channel length between these cities by about 170 miles. However, current velocities increased the attack on the banks and the river began to regain its length. As a result, the net shortening between 1933 and 1962 was 114 miles of the theoretical 170-mile cutoff.

There are now in place 1,043.95 miles of operative bank revetment and 314.75 miles of dikes on the lower Mississippi River. This amount of channel stabilization should prevent the river from regaining much more of its length due to meandering. A navigation channel 9 by 300 feet is being accomplished by revetment and dikes and maintained by dredging as required during the low-water season. Due to growing effectiveness of channel improvement program, average maintenance dredging requirements are steadily being reduced, and an increase in navigable depth is being obtained. Approximately 143.4 miles of foreshore protection have been constructed along the lower Mississippi River.

There are 88.7 miles of revetment and 5.9 miles of dikes on tributary channels as listed in Tables 41-H, 41-I, and 41-J.

**New Orleans District**

**ATCHAFALAYA BASIN, LA**

**Operations and results during fiscal year.** New work by hired labor: Real estate activities and planning for construction were continued.

Construction of levee enlargements and floodwalls continued on the east and west protection levees, and levees west of Berwick.

In FY 05, one contract was completed for levee enlargement at W85 along the West Atchafalaya Basin Protection Levee. Three levee contracts will be completed in FY 06. Three additional contract awards were awarded in FY 05 (Wax Lake Outlet East, Melville Front & Ring & Krotz Springs Front.) Slide repairs at W46 & W58 were included in the W52 contract. Four additional contracts are scheduled in FY 06.

**Maintenance by hired labor:** Operation and maintenance of Bayou Boeuf, Berwick and Bayou Sorrel Locks, the Morganza, Charenton and East & West Calumet Control Structures, condition and operational studies, and the water control management activities were continued.

Deleted: ¶

Berwick Harbor was dredged during the spring and fall. Three Rivers was dredged during the fall.

**Condition as of Sep. 30.** Construction was initiated Aug. 7, 1929, with commencement of the west protection levee from Bordelonville to Hamburg, LA. The project is 95 percent complete. The current estimated Federal cost is \$1,779,000,000 and non-Federal cost is \$11,000,000. Of the 449.2 miles of levees and floodwalls authorized for the Atchafalaya system, 398.9 miles are built to grade. See Table 41-K for status of levees.

Construction of the first 2.5 miles of the proposed 5 miles of channel was initiated in January 1958 and completed in July 1959, with 7,458,086 cubic yards excavated.

The remaining 2.5 miles were to be constructed when development of the initially constructed portion warrants expansion. Project expansion has not been necessary. Therefore, this feature was deauthorized on Nov. 2, 1979, under the provisions of Section 12, Public Law 93-251 (WRDA 74), as amended.

Major items remaining to be completed include completion of levees to grade and section, channel training works below Morgan City, modification of existing structures and construction of two freshwater distribution structures. Approximately 57.2 miles of bank stabilization have been placed as shown in Table 41-H.

**Flood Control**

**ATCHAFALAYA BASIN FLOODWAY SYSTEM, LA**

**Location.** The project lies in the lower part of the Atchafalaya Basin which is situated in south-central Louisiana. It lies in parts of Iberville, Iberia, Point Coupee, St. Martin, St. Mary and St. Landry Parishes. Further, it is limited to the part of the Atchafalaya River Basin that has been confined between protection or guide levees that are about 15 miles apart. The northern boundary, west of the Atchafalaya River, lies along the south right-of-way line for the Union Pacific Railroad near the south side of U.S. Highway 190 between the West Atchafalaya Basin Protection Levee (WABPL) and the west limits of the Town of Krotz Springs.

Deleted: scheduled i

Deleted: Two additional contracts have been awarded in FY 06 (Gordy Pumping Station Discharge lines and the E33 Levee Enlargement). Two

Deleted: (West Bayou Sale Gordy & W102)

Deleted: the remainder of

thence southerly along the west limits of the town and easterly along the south limits of the town to the Atchafalaya River; east of the Atchafalaya River it lies along the southern right-of-way line for the Union Pacific Railroad. The eastern and western boundaries lie at the floodside toes of the East Atchafalaya Basin Protection Levee (EABPL) and WABPL, respectively. The area within these limits has been calculated at about 595,000 acres.

**Existing Project.** This project was authorized by the Supplemental Appropriations Act of 1985, Public Law 99-88. The project was reauthorized and amended by Section 601 of the Water Resources Development Act of 1986, Public Law 99-662 (hereafter WRDA 1986). The Corps of Engineers, New Orleans District, completed a comprehensive feasibility study report for the ABFS in January 1982 that recommended implementation for three separable elements including land acquisition, recreation, and water management units. Funding for the acquisition of the real estate feature made available by the Energy and Water Appropriations Bill of 1988, Public Law 100-202.

To date approximately 116,802 acres in developmental control and environmental easements have been acquired, leaving a balance of approximately 230,000 acres to acquire. Acquired 47,084 acres in fee, excluding minerals, from willing sellers. The recreational portion of the ABFS is cost-shared 50/50 between the Corps and the local sponsor and OMR&R is 100% non-federal. The recreation portion includes boat landings, canoe trails, 3-state type park facilities, project visitor center, primitive campgrounds, etc. Through FY 05, preliminary planning has been initiated on four boat landings and construction is complete on one. Planning continues on Lake End Park and Visitor Center. Construction is scheduled to begin on the Buffalo Cove Pilot Water Management Unit in FY 06. The Supplemental Environmental Impact Statement for Henderson Water Management Unit, which includes the ABFS Recreation Feature, will also be initiated in FY 06.

**Local Cooperation.** Various Design Agreements and PCA's will be required between the Corps and the non-federal sponsor for project implementation.

**Condition as of Sep 30.** During FY 05, began development of letter reports for the Public Access Feature and the Environmental Protection Easement Feature.

**BAYOU COCODRIE AND TRIBUTARIES, LA**

**Operations and results during fiscal year.** Maintenance by hired labor consisted of water control management.

**Condition as of Sep. 30.** Construction was initiated in June 1946 and is 57 percent complete, based on the current estimated Federal cost of \$20,400,000 and non-Federal cost of \$323,000. See page 2031, Annual Report for 1961, for description of completed work.

Work required to complete the project consists of enlargement of 13.5 miles of upper Bayou Boeuf, channel improvement of 25.3 miles of Bayou Cocodrie, enlargement of Bayou Courtableau from Washington, LA, to the west protection levee, and additional culverts through the west protection levee at 100 percent Federal cost in lieu of the previously authorized diversion channel from Washington to the Bayou Courtableau drainage structure.

With the termination of the Eastern Rapides and South Central Avoyelles project, it has become necessary to provide an adequate outlet structure solely for the Bayou Cocodrie and Tributaries project. The economic effects of this change along with current benefits estimates have caused the benefit-cost ratio for the project to be less than unity. As a result, the project has now been classified as inactive. If economic conditions change, the project could be reactivated.

**BONNET CARRÉ SPILLWAY, LA**

**Operations and results during fiscal year.** Maintenance by hired labor: Condition and operation studies, water control management, and ordinary maintenance of the control structure and spillway continued.

**Condition as of Sep. 30.** Construction of the spillway was initiated in FY 1929. The control structure was completed in 1931, levees were completed in 1932, and utility crossings were completed in 1936. The cost of the completed work is \$14,212,200.

It was necessary to operate the structure to reduce flood stages in 1937, 1945, 1950, 1973, 1975, 1979, 1983 and 1997. The structure was operated in 1994 to transfer fresh water from the Mississippi River to Lake Pontchartrain. The structure was operated for one month from March 17-April 17, 1997, to reduce flood stages.

Deleted: .

Deleted: 42,000 acres in additional easements are being negotiated

Deleted:

Deleted:

Deleted: 20

Needle replacement began in FY 96 with the purchase of about 625 needles for \$80,000. The total replacement quantity required is approximately 7,000. An additional cable security system has been installed through needle eyes to prevent needles from dislodging during severe storms.

Restoration of the east guide levee from U.S. Hwy 61 to Lake Pontchartrain was completed in 2005.

Natural Resources and Recreation Project Master Plan was approved and implemented in 1998. Operational Management Plan is under development. A staff of three Park Rangers is now stationed at the spillway to implement the recreation and natural resource programs.

#### **OLD RIVER, LA**

**Operations and results during fiscal year.** Maintenance by hired labor consisted of operation and maintenance of the lock and control structures as required, condition and operation studies, water control management, maintenance of cleared areas, levee shaping, and engineering studies.

Natural Resources and Recreation Master Plan is under development. Operations and Maintenance Activity includes development of Old River Cooperative Visitor Center.

**Condition as of Sep. 30.** Construction began September 1955 and is complete at a Federal cost of \$292,273,000. Principal items completed are as follows: Low-sill structure, June 1959; overbank structure, October 1959; auxiliary structure, September 1986; levees and levee enlargements, October 1963; inflow and outflow channels for the low-sill structure, February 1961; inflow and outflow channels for the auxiliary structure, August 1987; navigation lock completed December 1962 and opened to navigation March 1963, at which time Old River was closed to navigation with a rock and earthfill dam; highway approaches and bridge over the lock completed March 1965. Approximately 9.4 miles of bank protection have been constructed at the inflow and outflow channels. (See Table 41-H for details of bank protection.)

#### **LOUISIANA STATE PENITENTIARY LEVEE, LOUISIANA**

**Location.** The project is located near Angola, LA, in West Feliciana Parish, approximately 40 miles northwest of Baton Rouge, LA, and borders the Louisiana State Penitentiary along the Mississippi River and State of Mississippi state line.

**Existing Project.** The project provides for improving about 12 miles of existing levees along the Mississippi River which currently afford flood protection to the penitentiary on the left descending bank below Old River. The existing levees are owned and maintained by the State of Louisiana and are substandard with regard to Federal specifications. By improving the existing levees to Federal standards, the project will reduce the risk of flooding with its attendant property damage and threat to the lives of up to 5,100 inmates and about 1,750 employees and residents (527 reside on the penitentiary grounds). Funds to initiate preconstruction, engineering and design were appropriated in FY 97 and funds to initiate construction were appropriated in FY 98.

**Local Cooperation.** The limited Reevaluation Report was approved on July 2, 1999 and formed the basis for execution of the Project Cooperation Agreement which was approved on July 30, 1999. The local Sponsor, the Louisiana Department of Public Safety and Corrections has provided cash in the amount of \$5,171,000 in addition to furnishing the lands and damages (including mitigation lands) necessary to support their share of the project cost.

**Conditions as of Sep. 30.** Construction was initiated in FY 99 with the award of three contracts in Sep. 1999. Two contracts were for the levee upstream of Camp C and the other was for replacement of the existing drainage structure. All three contracts were completed in FY 01. Also, the final contract to enlarge the levee from Camp C to the main gate was awarded in Apr. 01. The entire project was physically completed in FY 03.

#### **Salinity Control Structures**

#### **MISSISSIPPI DELTA REGION, LA**

#### **CAERNARVON FRESHWATER DIVERSION STRUCTURE, BRAITHWATE, LA**

**Location.** The Caernarvon structure is constructed in the Mississippi River Levee on the left descending bank at mile 81 AHP, just below the St. Bernard-Plaquemines Parish line.

**Existing Project.** The Caernarvon Freshwater Diversion Feature of the Miss. Delta Region Project is capable of diverting up to 8,000 cfs of River water into the Breton Sound Estuary for fish and wildlife habitat enhancement. River stages and the fresh water needs of the estuary, determined by monitoring data, establish the actual quantities to be diverted.

**Local Cooperation.** The Local Cooperation Agreement with the State of Louisiana was signed in June 1987. Cost sharing for initial construction and ongoing operations and maintenance is 75% Federal and 25% non-Federal. The project is operated and maintained by Plaquemines Parish, under the direction of the LA Department of Natural Resources.

**Condition as of Sep. 30.** Construction began in 1988 and was completed in 1991, at a Federal cost of \$19,700,000 and a non-Federal cost of \$6,500,000. Diversions have been ongoing, as needed, since August 1991. The goal of fish and wildlife habitat improvement has been met or exceeded, most notably in the areas of seed oyster availability on the public oyster grounds, a large variety and volume of recreational fishing and duck hunting.

**DAVIS POND FRESHWATER DIVERSION STRUCTURE, LA**

**Location.** The Davis Pond structure is constructed in the Mississippi River Levee on the right descending bank at mile 118 AHP, in St. Charles Parish, two miles Luling, LA.

**Existing Project.** The Davis Pond Freshwater Diversion Feature of the Miss. Delta Region Project will be capable of diverting up to 10,650 cfs of River water into the Barataria Bay Estuary for fish and wildlife habitat enhancement. Fresh water needs of the estuary, determined by monitoring data, will establish the actual quantities diverted.

**Local Cooperation.** The Project Cooperation Agreement was signed in April 1993 with the State of Louisiana. Cost sharing for initial construction and ongoing operations and maintenance is 75% Federal and 25% non-Federal. The project will be operated and maintained by St. Charles Parish, under the direction of the LA Department of Natural Resources.

**Condition as of Sep. 30.** Construction began in 1996 and was substantially completed in 2002, at an estimated Federal Cost of \$89,700,000 and a non-Federal cost of \$29,900,000 for the Construction Phase of this Feature. Diversions have been ongoing, as needed, since August 2002. Due to the short period of time since diversions began, it is not possible to evaluate the goal of fish and wildlife habitat improvement quantitatively at this time. Final second lift levee construction and ongoing monitoring under the Construction Phase of this feature will continue into 2006.

**MISSISSIPPI - LOUISIANA ESTUARINE AREAS, LA/MS**

**BONNET CARRÉ FRESHWATER DIVERSION STRUCTURE, LA**

**Location.** The Bonnet Carré structure will be constructed in the upstream end of the Bonnet Carré Spillway structure, on the left descending bank of the Mississippi River at Mile 129 AHP, in St. Charles Parish, LA.

**Existing Project.** The Bonnet Carré Project will be capable of diverting up to 30,000 cfs of River water into the Lake Pontchartrain, Lake Borgne/Biloxi Marsh Estuarine Area for fish and wildlife habitat enhancement. Fresh water needs of the estuary, determined by monitoring data, will establish actual diversion quantities.

**Condition as of Sep. 30.** Before construction can proceed, a Project Cooperation Agreement must be signed with the States of Louisiana and Mississippi. Louisiana has withdrawn their support of the project until agreement between Louisiana and Mississippi can be reached on how the project will be operated. Federal cost of the Project is estimated to be \$87,200,000. The construction, operation and maintenance of the Project will be shared as follows: Federal, 75 percent; La, 20 percent; MS, 5 percent.

**Vicksburg District**

**LOWER ARKANSAS BASIN, AR**

**Condition as of Sep. 30.** Arkansas River levees. A total of 56.2 miles of the 61.5 miles of north bank levees and all of the 85.4 miles of south bank levees have been completed to approved grade and section. These levees above mile 36.1 are protected by bank-protection works constructed as a feature of project for Arkansas River and Tributaries, AR and OK. For present status of this work, see report of Little Rock District. Below mile 36.1, needed bank protection is constructed with project maintenance funds. Little Bayou Meto gates and lifting mechanism were replaced during FY 88. Big Bayou Meto Gate operating mechanisms replaced FY 94, 95, 96.

**LOWER RED RIVER SOUTH BANK RED RIVER LEVEES, LA**

**Operations and results during fiscal year.** New work by hired labor consisted of engineering studies.

A Project Management Plan to address replacement of the Bayou Rapides Drainage Structure and Pumping Plant was approved in Aug 94. A major maintenance report was prepared and approved Sep. 95 recommending replacement of the drainage structure. Construction was completed in March 2004.

Maintenance by hired labor consisted of water control management and economic studies.

**Condition as of Sep. 30.** Construction was initiated in FY 92 and is complete. All of the 59.2 miles of levees authorized are completed to approved grade and section.

**TENSAS BASIN, AR AND LA**

**(a) Boeuf and Tensas Rivers, and Bayou Macon, AR and LA.**

**Operations and results during fiscal year.** Planning and design on project features are complete. The Lake Chicot Pumping Plant and related features are complete and in operation. No further work on the Tensas River Project (Separable Element) will be initiated due to lack of commitment from a local sponsor to cost share remaining E&D and construction. This project has been placed in the "inactive" category.

**Condition as of Sep. 30.** Channel improvement has been accomplished on 741.7 miles of project streams, providing major drainage outlets for the tributary areas. Additionally, 61.0 miles of the Tensas River has been cleared and snagged. The GDM for the Tensas River Project, above mile 61, including Mill Bayou-Bayou Vidal is complete. However, no further work will be initiated due to lack of a local sponsor.

**(b) Red River backwater area.**

**Operations and results during fiscal year.** Planning and design continued on project features. All channel work required to get flows to the Tensas Cocodrie Pumping Plant and gravity structure is complete. The gravity structure and the pumping plant are complete and are being operated and maintained by contract. One mitigation item, the construction of two water control weirs, was completed in May 1988. Contracts for three additional mitigation features are complete. Construction of the Durham Prong mitigation feature is complete. Tensas-Cocodrie, Item 4-A, levee enlargement, 6.3 miles in length, was completed in September 1988, and Item 4-B, 2.4 miles of levee enlargement, was completed in October 1990. A contract for Item 2 was awarded in January 1991 and is physically complete. These contracts will complete the levee

enlargement for all of the levee system, except 0.8 miles.

Work on the Below Red River Phase II GDM has been reclassified as inactive. Construction of the Sicily Island Area Levee project is complete.

**Condition as of Sep. 30.** Levees in Tensas-Cocodrie area are complete except for levee raising of 0.8 miles. The work comprised 93.1 miles of new levee, excluding 2.1 miles of high ground where no levees are required, and 86.9 miles of gravel road on levees. Construction of 63.4 miles of levee, Larto Lake to Jonesville levee system, has been completed. A levee grade reevaluation study for all levee systems in the Red River Backwater area was completed in Mar. 1985. The Sicily Island area project consists of 56 miles of new levee, 2 pumping plants, 11 miles of channel work, and structural mitigation features. Levee items 1C and 1D and Billy and Falcon Bayou were completed in FY 02 to complete the last items of construction.

**YAZOO BASIN, MS**

**Operations and results during fiscal year.**

**(a) Big Sunflower River, etc.** The Project is authorized by the Flood Control Acts of 1944, 1946, 1950, 1962, and 1965. Completion of Swan Lake Levees has been delayed due to soil foundation problems. The Engineering Documentation Report to evaluate two proposals presented in a Value Engineering Study was completed in 2005. The plans and specifications are underway for the channel relocation that was presented in the EDR and will be complete in Aug 06. Main Canal and Black Bayou are complete.

Deleted: is being prepared

**Mitigation for Upper Steele Projects**

Mitigation for the unavoidable environmental losses is now underway. Approximately 5,569 acres of cleared lands have been obtained in the Yazoo Basin to mitigate the environmental losses resulting from construction of the Upper Steele Bayou Projects. Most of this land has been reforested and will be managed for wetlands, and terrestrial resources. All lands acquired for mitigation are from willing sellers to offset environmental losses from this project.

**(b) Flood Control Reservoirs**

**(1) Arkabutla Lake.** (See Table 41-C.) The dam and appurtenant structures were maintained and operated. Clearing of tributary streams in the lake area was continued. Maximum pool elevation in the lake was 225.8 feet NGVD on Apr. 17, 2005, and storage in

flood control pool was 209,900 acre-feet. Peak 24-hour inflow was 17,325 cubic feet per second on Apr. 17, 2005. On Sep. 30, 2005, the pool elevation was 218.3 feet NGVD, and storage in the flood control pool was 102,300 acre-feet.

(2) **Enid Lake.** (See Table 41-C.) The dam and appurtenant structures were maintained and operated. Rehabilitation of boat channels and snagging and clearing of tributary streams in the lake area continued. Maximum pool elevation in the lake was 255.1 feet NGVD on Dec. 27, 2004, when storage in the flood control pool was 360,100 acre-feet. Peak 24-hour inflow was 15,300 cubic feet per second on Apr. 7, 2005. On Sep. 30, 2005, pool elevation was 244.3 feet NGVD and storage in the flood control pool was 188,400 acre-feet. 4,500 ac. ft. of storage in conservation pool was reallocated to municipal and industrial water supply in June 1998.

(3) **Grenada Lake.** (See Table 41-C.) Construction of remaining public-use facilities has been deferred pending development of cost-sharing agreements with local interests for construction and non-Federal operation and maintenance, consistent with projects for which recreation facilities are being constructed under the provisions of the Federal Water Project Recreational Act of 1965 (Public Law 89-72), as amended. Maximum pool elevation in the lake was 217.7 feet NGVD on Dec. 26, 2004, when storage in the flood control pool was 651,600 acre-feet. Peak 24-hour inflow was 41,600 cubic feet per second on Dec. 8, 2004. On Sep. 30, 2005, the pool elevation was 208.8 feet NGVD and storage in the flood control pool was 356,200 acre-feet.

(4) **Sardis Lake** (See Table 41-C.) The dam and appurtenant structures were maintained and operated. Clearing of tributary streams in the lake area continued. Maximum pool elevation in the lake was 264.8 feet NGVD on Dec. 28, 2004, when storage in the flood control pool was 779,800 acre-feet. Peak 24-hour inflow was 42,000 cubic feet per second on Dec. 4, 2004. On Sep. 30, 2005, the pool elevation was 252.6 feet NGVD and storage in the flood control pool was 398,800 acre-feet.

(c) **Greenwood, Yazoo City and Belzoni protection works.** Contract forces continued operation and maintenance of levees, drainage facilities, and pumping plant.

(d) **Main stem.** Contract forces continued operation and maintenance of channels, levees, and drainage facilities.

(e) **Reformulation Study.** The uncompleted portions of the Yazoo Basin construction program are being reformulated. This reformulation study includes investigations of the engineering, economic, and environmental aspects of the basin and is being accomplished in 4 phases. These studies will evaluate reasonable arrays of alternatives to the project features that remained after construction of items that were budgeted and scheduled for award in FY 90. The Upper Steele Bayou and Upper Yazoo Project reports were approved on May 25, 1993 and Jun. 21, 1994, respectively. Concerning the final 2 phases, the Yazoo Backwater Reformulation Study began in FY 93 and the Tributaries Reformulation study began in FY 95. The Backwater Study includes nonstructural, structural, and combination plans. Nonstructural features include conservation and water management easements and reforestation of cleared agricultural lands. Structural features include an array of various capacity pumping stations and a levee alternative. A draft report was released for public review in Sep 2000 with a final report scheduled in FY 06. The Yazoo Tributaries Reformulation Study is evaluating flood control requirements on nine project features. Study efforts were suspended in 2000 and are scheduled to be reinitiated in FY 07.

(f) **Delta Headwaters Project.** The Delta Headwaters Project (DHP), a joint project with the USDA NRCS was initiated by FY 85 appropriations as a continuation on streambank erosion control efforts. The purpose of the project is to demonstrate the applicability of a systems approach to the design of erosion, sedimentation, and flood control works by applying this approach to 16 demonstration watersheds in the Yazoo Basin hill area. During FY 05, work continued in the DHP toward development of the systems plans and implementation of a monitoring program. Cumulative through FY 05, the District has completed the construction of 201 low drop grade control structures, 198 miles of bank stabilization, 17 miles of channel improvement, 62 box culverts, 5 high drop grade control structures, 1,288 riser pipe grade control structures, 7 floodwater retarding structures, and 9 miles of levees.

(h) **Tributaries.** Construction:

**Levees.** Levee work associated with Pelucia Creek is complete.

(i) **Upper Yazoo Projects.** The first 12 items of channel improvement, approximately 106 miles, and nine drainage structures have been completed. This work extends from Yazoo City, Mississippi, to Money, Mississippi.

**Deleted:** A construction contract was awarded for the seismic remediation of Sardis Dam utilizing driven pre-stressed concrete piling as a result of an extensive study and evaluation of the expected performance of the dam during a major earthquake in the New Madrid earthquake zone of the central United States.

The Fort Pemberton Flood Control Structure was completed on Apr. 29, 1991.

Roebuck Lake and Fort Loring water control structures and Tchula Lake weirs were completed in FY 95.

Item 6A was awarded in Sep. 05 and Item 6B is scheduled for award in Jul. 06. Design efforts have started for Channel Item 7.

The Alligator-Catfish water control structure was completed in FY 98. This structure has been renamed the J. Tol Thomas Water Control Structure.

**Mitigation for Upper Yazoo Projects.** Mitigation for the environmental impacts is now underway. Approximately 10,919 acres of cleared, frequently flooded agricultural lands have been obtained in the Yazoo Basin area of Mississippi to mitigate the environmental losses resulting from construction of the Upper Yazoo Projects, Big Sand Creek, Pelucia Creek, and Ascalmore-Tippo Bayou construction projects. Most of this land has been reforested and will be managed for terrestrial, aquatic, wetlands, and waterfowl. A total of 17,000 acres of mitigation will be acquired from willing sellers for this project.

(j) **Yazoo Basin backwater.** The Yazoo area backwater levees are complete, including the backwater levee from the Mississippi River levee to the west levee of the lower Auxiliary Channel, the Little Sunflower River drainage structure, and the connecting channel from the Steele Bayou drainage structure to the Big Sunflower River.

The Satartia area backwater levee is complete. Rocky Bayou area levee Items 1A and 1B have been completed. Completed backwater levees will require raising to provide the degree of protection intended based on the project design flow line developed for the Mississippi River following the 1973 flood.

Four Greentree Reservoirs and pumping stations have been constructed to mitigate for the waterfowl impacts of the project.

Mitigation of the terrestrial impacts is now underway. Approximately 8,800 acres of cleared, frequently flooded, agricultural lands have been obtained in the Yazoo Backwater area of Mississippi to mitigate the terrestrial losses resulting from construction and operation of the Yazoo Area and Satartia Area levees projects. This land has been reforested and will be managed for terrestrial wildlife. An additional 3,617 acres of mitigation is being considered as part of the Yazoo Backwater Reformulation Project.

**Condition as of Sep. 30.** The first feature of Yazoo Basin project was started in 1936, and the total project is about 65 percent complete.

Deleted: ¶

**Memphis District**

**BAYOU METO BASIN, AR**

**Location.** Project is located in east central Arkansas in Lonoke, Pulaski, Prairie, Jefferson, and Arkansas Counties.

Deleted: to

**Existing Project.** The major problems are agricultural flooding, loss of environmental resources, and the depletion of the alluvial aquifer, which provides essentially all the water used for agricultural irrigation and baitfish farming and supports area wetlands. Features being evaluated include diversion of excess water from the Arkansas River with delivery through a system of new canals, existing streams, and pipelines to the water depleted areas; channel improvements and pumping station(s) to provide outlets for reduced flooding; waterfowl conservation and management measures; and other environmental restoration and enhancement features. The sponsors are the Bayou Meto Water Management District and the Arkansas Natural Resources Commission.

**Operations and results during fiscal year.** Congress added funds in FY 2005 to complete the general reevaluation report which is scheduled for completion in July 2006.

**Condition as of Sep. 30.** Local interests have formed an entity capable of providing the legal and financial assurances for project implementation and they desire the earliest possible project completion.

**CACHE BASIN, AR**

**Location.** The project is a flood control project located in the Cache River and Bayou DeView Basins in northeastern Arkansas.

**Existing Project.** The authorized plan of improvement consists of improving the channels of the Cache River and Bayou DeView to provide adequate drainage outlets and reduce the frequency, depth and duration of flooding. The work consists of clearing, cleanout, enlargement, and realignment on approximately 154 miles of the Cache River and 77 miles of Bayou DeView and the acquisition of up to 70,000 acres of land for fish and wildlife management, recreation and environmental purposes. The project has a benefit cost ratio of 4.2 to 1.0.

**Operations and results during fiscal year.** No contracts were awarded or completed during the fiscal year.

**Condition as of Sep. 30.** Project was initiated during 1972 and is 4 percent complete. Construction of the authorized project was stopped in 1978 due to environmental opposition. Reevaluation studies of the authorized plan were initiated in June 1987 to provide a more environmentally balanced plan. The reevaluation effort was terminated on Dec. 15, 1994, due to a lack of local sponsorship. On Dec. 20, 2000 the Memphis District signed a letter to transfer 6,091 acres of the acquired mitigation lands over to the U.S. Department of Interior. In May 2002, Arkansas Game and Fish Commission Signed a Licensing Agreement to manage 1,868 acres of excess mitigation lands. These lands can be applied to other Corps projects as needed.

Major floods have occurred in at least three of the last four crop seasons leading to increasing local requests to state and U.S. legislators for assistance in resolving the problems in the vicinity of Grubbs and upstream. In October 2003, the Arkansas Joint Interim Agriculture, Forestry, and Economic Development Committee approved an Interim Study Proposal to identify problems and determine appropriate solutions for floods due to the Cache River log jam in Jackson County near the town of Grubbs and to work with the Corps of Engineers on the feasibility of removing the blockage from the river. Local interests want to pursue a Section 205 project, but because it is within the authorized limits of the Cache River Basin project, congressional authorization would be required to use Section 205 authority.

In a letter dated 11 February 2004, Ducks Unlimited and Arkansas Game and Fish Commission requested that the Corps conduct a study for an environmental restoration project on the lower seven miles of Cache River.

**FLETCHER CREEK, TN**

**Location.** The Fletcher Creek basin, which has a drainage area of 32 square miles, is a tributary of the Wolf River. The basin drains from the northeast to the southwest and discharges into the Wolf River just downstream of the I-40 expressway.

**Existing Project.** This area has experienced tremendous residential and commercial growth including the Wolfchase Galleria Mall and related commercial development around the mall. Approximately 150 residents along Fletcher Creek had to be evacuated in November 2001 due to extensive flooding. The

100-year frequency flood elevation has increased two feet or more, due to widespread development in the area. This basin was studied under the Memphis Metropolitan Area reconnaissance study. The purpose of the study is to evaluate the need for improvements for flood control, ecosystem restoration, water quality, and related purposes associated with watershed management. The City of Memphis and Shelby County, Tennessee, initially indicated a financial capability to cost-share the feasibility phase of the study.

Deleted: -

Deleted:

**Operations and results during fiscal year.** Funds appropriated in FY 2005 are being used to negotiate the study scope, complete the Project Management Plan, and draft the Feasibility Cost Share Agreement.

**Condition as of Sep. 30.** The City of Memphis and Shelby County, Tennessee decided in January 2005 not to cost share the feasibility study. The study was terminated in April 2005.

**FRANCIS BLAND FLOODWAY DITCH (EIGHT MILE CREEK), ARKANSAS**

**Location.** The project is located in the City of Paragould, AR.

**Existing Project.** The existing project consists of 12.5 miles of channel improvements. Eight miles of channel enlargement will occur in the rural downstream area of Paragould. Three and a half miles of enlargement will occur in the City of Paragould along with one mile of channel riprap/stabilization. The project will provide 100 year flood protection within the City of Paragould.

**Local Cooperation.** A project Cooperation Agreement (PCA) was assigned in June 1996.

**Conditions as of Sep. 30.** The contract work on the rural eight miles of channel has been completed. Construction on the first phase of the urban section of channel enlargement was completed in November 2003.

Deleted: A preliminary restoration plan examining the potential for restoring the lower 7 miles of the river was completed and submitted to the Mississippi Valley Division for review and approval in October 2005.

**GERMANTOWN, TN**

**Location.** The study area is located in the city of Germantown, in Shelby County, Tennessee.

**Existing Project.** The study investigated possible solutions to the flooding, erosion, and water quality problems impacting three drainage basins: Miller Farms Ditch and Lateral D, tributaries to the Wolf River and Howard Road Outfall, a tributary to Nonconnah Creek.

**Operations and results during fiscal year.** The study investigated possible solutions to the flooding, erosion, and water quality problems impacting this area. Only one of the three drainage basins investigated (Lateral D) resulted in a plan that is economically feasible; however, the outputs for this plan (erosion control) are not high priority outputs and not budgetable. Therefore, the feasibility study was terminated and the report was not processed for approval. The estimated cost of the Lateral D plan is \$6.0 million and the benefit to cost ratio is 1.44.

**Condition as of Sep. 30.** The city of Germantown is seeking authority from Congress to construct not only Lateral D, but also locally developed plans for Miller Farms, Howard Road, and other drainage basins in the area, by requesting a modification to Section 219 of WRDA 1992, as amended.

**GRAND PRAIRIE REGION, AR**

**Location.** Project is primarily located in Arkansas and Prairie Counties and a small portion in Lonoke and Monroe Counties.

**Existing Project.** This project will provide for agricultural water supply, ground water protection, and fish and wildlife restoration and enhancement. The project includes a major pumping station, conveyance channels, and conservation measures for the Grand Prairie area. The sponsors are the State of Arkansas and the White River Regional Irrigation Water Distribution District.

**Operations and results during fiscal year.** FY 2004 funds were used to award a contract for the initiation of the pumping station, (1 continuing contract, estimated at \$28,000,000 total).

**Condition as of Sep. 30.** Construction on the pumping station began during the summer of FY 2005. The contract is scheduled for completion in Sep. 2007.

**HELENA AND VICINITY, AR**

**Location.** The project is located in the City of Helena, AR.

**Existing Project.** The existing project consists of 1.41 miles of earthen and concrete channel enlargement within the city limits of Helena, AR. The concrete channel was constructed primarily under streets while the earthen channel is in an undeveloped section of the city.

**Local Cooperation.** The Project Cooperation Agreement (PCA) was signed in August 1997.

**Conditions as of Sep. 30.** Construction on the concrete channel the final item of construction was completed in July 2004.

Deleted: ¶

**HORN LAKE CREEK AND TRIBUTARIES INCLUDING COW PEN CREEK, TENNESSEE AND MISSISSIPPI**

**Location.** Horn Lake Creek is located in northwest Desoto County, MS and southwest Shelby County, TN.

**Existing project.** The project was approved for construction on Nov. 17, 1986, under authority of Title IV, Section 401 of the 1986 Water Resources Development Act. The project consists of 3.5 miles of drift removal and 2.75 miles of channel clearing on Horn Lake Creek; 2.1 miles of channel clearing on Rocky Creek and 0.62 miles of channel clearing and 1.85 miles of channel enlargement on Cow Pen Creek. The project will provide 1.1-year flood frequency protection on Horn Lake and Rocky Creeks and 25-year flood frequency protection on Cow Pen Creek. The construction is complete.

**Local Cooperation.** A Local Cooperation Agreement was executed with the Horn Lake Creek Watershed Drainage District on Feb. 26, 1992.

**Condition as of Sep. 30.** The final contract for work on Cow Pen Creek was awarded in Sep. 1997 and was completed in Sep. 1998. Floodplain mapping revisions are scheduled for completion in Dec. 2005.

**HORN LAKE CREEK MODIFICATION, TENNESSEE AND MISSISSIPPI**

**Location.** Horn Lake Creek is located in northwest Desoto County, MS, and southwest Shelby County, TN.

**Existing project.** A limited reevaluation report of the project for flood control, Horn Lake Creek and Tributaries, Tennessee and Mississippi, authorized by Section 501 of the Water Resources Development Act of 2000, to determine the feasibility of modifying the project to provide urban flood protection along Horn Lake Creek.

Deleted: -----Page Break-----

Deleted: -----Column Break-----

**Local Cooperation.** A Design Agreement for a reevaluation study was executed with the Horn Lake Creek Drainage District on Oct. 5, 2001.

**Condition as of Sep. 30.** A preliminary draft report was completed but not submitted for review and approval. The study was terminated in September 2005 after the study sponsors decided not to cost share the preliminary recommended plan.

Deleted: ¶

**LOWER WHITE RIVER, AR**

**Operations and results during fiscal year.**

(a) **Augusta to Clarendon Levee.** There were no contracts awarded or completed during the fiscal year.

(b) **Clarendon Levee.** There were no contracts awarded or completed during the fiscal year.

(c) **White River Backwater.** There were no contracts awarded or completed during the fiscal year.

**Condition as of Sep. 30.**

(a) **Augusta to Clarendon Levee.** Project was initiated during 1946 and is 39 percent complete. There were no contracts awarded or completed this fiscal year.

(b) **Clarendon Levee.** There were no contracts awarded this year.

(c) **White River Backwater.** Hired Labor slide repairs on the White River Backwater Levee completed.

**MISSISSIPPI RIVER LEVEES**

**Operations and results during fiscal year.** Minor maintenance on levees is performed by the local interests and major maintenance is performed as required for slide repairs, road rehabilitation, and other similar work by the U.S. Army Corps of Engineers.

**Mississippi River Levees Construction.** Hillhouse, MS relief wells P-2 awarded 17 June 2004 is 50% completed. St. Johns – New Madrid box culverts and levee closure awarded 4 August 2004 has not started. Caruthersville, MO outlet ditches awarded 27 August 2004 is completed. Pecan Pt., AR relief wells awarded 27 August 2004 is completed. Austin, MS relief wells awarded 14 July 2003 is completed. New Madrid, MO riverfront improvements awarded 2 August 2002 is completed. Mounds Creek, IL culverts awarded 3 September 2004 is 83% completed. Nash, MO Relief Wells P-2 awarded 26 April 2005 is 16% completed. Fritz Landing, TN Culvert awarded 31 August 2005 has not started. Trotters, MS berm P-1 awarded 21 September 2005 is 12% completed.

**Mississippi River Levees Maintenance.** Continue Culvert Rehabilitation – Mounds Creek, IL; Continue Culvert Replacement – New Madrid, MO Culvert 1/10+00; Continue Culvert Replacement – Hwy. 21/ Graveyard Slough at Tiptonville, TN; Initiate and complete floodwall renovations, Cairo, IL; Initiate and complete Levee Scour Repairs, Ohio Levee, Cairo, IL.

**Channel Improvement. Channel Improvement.** Stone Dike Construction at Randolph, TN, awarded July 2005, 50% complete as of 30 September 2005. Stone Dike Construction at Moore Island, MO / Below Williams, KY, awarded June 2005, 18% complete as of 30 September 2005. Stone dike Construction at Island 47, MS, awarded April 2005, completed June 2005. Stone dike Construction at Oldtown, AR, awarded March 2005, completed May 2005.

Deleted: ¶

**NONCONNAH CREEK, MS AND TN**

**Location.** The project is located in southern Shelby County and provides flood protection for approximately half of the city of Memphis, TN.

**Existing Project.** The project is made up of five separable elements, flood control, environmental preservation, recreation and conditionally authorized extensions to the flood control and recreation elements. The flood control element is under construction and consists of 18.2 miles of channel enlargement, grade stabilization, and vegetative cleanout. The environmental element consists of a 33-acre nature area. The recreation element consists of 8.8 miles of biking/hiking trails. WRDA 2000 conditionally authorized extending the flood control element upstream about five miles and the recreational element from 8.8 to 27 miles, if the Secretary finds the work justified.

**Local Cooperation.** The project sponsor for the authorized project is the City of Memphis, TN and the Project Cooperation Agreement (PCA) was signed on 23 July 1990. The PCA covers only the flood control features of the project. Amendment of the PCA is required to incorporate the Environmental & Recreation features of the project. The project sponsor for the conditionally authorized extensions is Shelby County, TN. A Design Agreement was signed on 16 January 2002

**Operations and results during fiscal year.** Item 1, Phase 2, Riverport Road Scour Repair contract was completed in August 2005.

**Condition as of Sep. 30.** Project of the authorized 18.2 miles of flood control improvements (exclusive of the bridge/utility protection sites) is 7% completed. Item 1, Phase 2 is 100% complete. FY 2005 funds were used to complete Item 1, Phase 2. A General Reevaluation Study for the flood control and recreation extensions was completed in 2004. The study produced no viable flood control option and recreation in the extension area.

Deleted: has been percent

**ST. FRANCIS BASIN, AR AND MO****Operations and results during fiscal year.****Construction**

Contracts for Fifteen Mile Bayou, Item 1 bridge relocations at U.S. Highway 79, awarded May 2003 and County Road at mile 13.8, awarded August 2003 are 99% and 85% complete respectively. A contract for channel enlargement on Fifteen Mile Bayou, Item 1 was awarded in May 2005 and is 13% complete. A contract for construction of Steele Bypass weir near Steele, MO, was awarded in April 2005 and completed in June 2005.

**Condition as of Sep. 30.** Project initiated 1937. Project is 88% complete.

**Maintenance**

Continue Scour Repairs at Bridges – Madison to Marianna, AR; Continue DD #17 Fuel Tank Replacement, AR; Complete Channel Cleanout – Ditch 1 Lower, MO; Complete Scour Repairs – Mingo Ditch at County Road (CR) 691, MO; Initiate Channel Clearing – 15 Mile Bayou Below Greasy Corner, AR; Initiate Channel Cleanout – Ditch 10, Trumann, AR; Initiate Channel Cleanout – Monterey-Princedale, AR; Initiate and Complete Levee Slope Stabilization – Mile 121, Haleside Levee, AR.

**ST. JOHNS BAYOU AND NEW MADRID FLOODWAY**

**Location.** This flood control project is located in the bootheel of MO. It covers two drainage basins adjacent to the Mississippi River: the St. Johns Bayou Basin (450 sq mi) and the New Madrid Floodway (180 sq mi).

**Existing Project.** The First Phase of the authorized project includes 24 miles of channel improvements, pumping stations, all seasonal ponding easements, and appropriate mitigation features. The First Phase project has a benefit-cost ratio of 1.2 to one, with average annual benefits of \$4,567,000 (Final RSEIS, June 2002, p. B-41). St. John Levee and Drainage District is the cost-sharing sponsor. The current estimated cost for programmed work is \$45,300,000 Federal and \$14,900,000 non-Federal.

**Condition as of Sep. 30.** Remaining construction work on the First Phase includes approximately 19.7 miles of channel improvements and two pumping

stations. Water Quality Certification was issued for the project in Jun 2003. A contract was awarded for the New Madrid pumping station in Sep 2004. Construction was not initiated due to a Complaint filed in Federal Court in Sep. 2004 which resulted in the production of an amended environmental NEPA document. This document is scheduled to result in a new Record of Decision in spring 2006.

Deleted:

**WEST KENTUCKY TRIBUTARIES, KY**

**Location.** The project is a flood control project located on the Obion Creek in Southwest Kentucky.

**Existing Project.** The drainage basin is 324 square miles of rural area. The approved plan of improvement consists of 42 miles of channel enlargement, the placement of excavated material embankment along 8.2 miles of the north bank below the valley mouth, and acquisition of 6,000 acres of mitigation land. The project has a benefit cost ratio of 1.4 to 1 with average annual benefits totaling \$1,576,000. Project is currently inactive due to lack of local support; however, in the spring of 1996, locals have formally requested assistance in developing an environmentally sensitive plan of improvement. A preliminary time and cost estimate for a general reevaluation have been prepared.

**Operations and results during fiscal year.** No contract awarded or completed during fiscal year.

**Condition as of Sep. 30.** Project was initiated during 1978 and is 4 percent complete.

**WEST TENNESSEE TRIBUTARIES, TN**

**Location.** The project is a flood control project located along the Obion and Forked Deer Rivers and tributaries in west Tennessee, in Weakley, Madison, Gibson, Obion, Dyer, Crockett, Lauderdale and Haywood Counties.

**Existing Project.** The project consists of 225 miles of channel improvements on the Obion and Forked Deer Rivers and construction of 7.6 miles of levees to provide adequate drainage outlets and reduce flooding; 174 water control structures, 216 erosion control structures, 37 miles of water management connector channels to restore bottomland hardwoods and fisheries; and the acquisition of 32,000 acres of mitigation lands.

Only 93 miles of the authorized channel improvements have been completed and 13,527 acres of the mitigation lands purchased.

**Local Cooperation.** The project sponsor is the state of Tennessee acting through the West Tennessee River Basin Authority (WTRBA).

**Operations and results during fiscal year.**

(a) **Forked Deer River and principal tributaries, TN.** Forked Deer River channel improvement is 14 percent complete.

(b) **Obion River and principal tributaries, TN.** Obion Rivers channel improvement is 68 percent complete.

(c) **Riprap Protection at four sites Dyer, Crockett, Haywood, and Lauderdale** awarded Aug. 29, 1996, is complete.

Riprap protection at 3 sites Dyer, Crockett, and Lauderdale counties, awarded on Aug. 10, 1998, and was completed Aug. 18, 1999. Shutdown plan control structures at 3 sites, Dyer and Lauderdale counties awarded on Aug. 3, 1998, was completed Sep. 1999.

**Condition as of Sep. 30.** WTRBA requested that the Corps undertake a reevaluation of a demonstration project along the Obion River System to alleviate unresolved water resource problems in the West Tennessee area. FY 2005 funds in the amount of \$93,000 were used to coordinate with local interests and complete the Project Management Plan (PMP). The PMP was completed on 29 June 2005. West Tennessee Tributaries Project is 60 percent complete.

**WOLF RIVER, MEMPHIS, TN**

**Location.** The Wolf River is located in Hardeman, Fayette, and Shelby Counties, TN, and Tippah, Marshall, and Benton Counties, MS.

**Existing Project.** The authorized project consists of six main channel weirs and eighteen tributary weirs for grade stabilization, two cutoff prevention weirs on the main channel, trails, and wildlife corridors in Shelby County, and three boat ramps (two in Shelby County and one in Fayette County.) Estimated annual benefits include over 2,144 annual habitat unit values and \$414,000 in recreational benefits. The project sponsors are Shelby County, Tennessee and the Chickasaw Basin Authority.

**Operations and results during fiscal year.** Funds added by Congress in FY 2005 are being used to continue construction on the first construction contract consisting of three stabilization weirs, one cutoff prevention weirs and associated access roads; and to design the second item of construction consisting of one weir, bridge protection, and associated access roads.

**Condition as of Sep. 30.** Construction continued on the first item of work. The second item of work was advertised. Award of the second item is scheduled for Jan 06.

1. Grenada, Enid, Sardis, and Arkabutla Lakes are in Yazoo River Basin, MS; Wappapello Lake is in St. Francis River Basin, MO.

**TABLE 41-D AUTHORIZING LEGISLATION**

Act or Authorization	Work Authorized	Document
May 15, 1928	Flood protection in alluvial valley of Mississippi River, revetment and contraction works and dredging to provide least channel depth of 9 feet and width of 300 feet below Cairo.	H. Doc. 90, 70th Cong., 1st sess.
Jun. 19, 1930	Provided for allotment of the balance of emergency rescue funds to reimburse levee districts and others for expenditures in flood-control works during the 1927 and subsequent floods.	Public Law 395, 71st Cong., 2d sess.
Feb. 15, 1933	Provided for ownership of lands in Bonnet Carré Spillway and Floodway with proviso for granting rights-of-way, easements, and permits, in said lands.	Public Law 351, 72d Cong.
Apr. 23, 1934	Authorized payment for purchase of, or to reimburse states and local levee districts for the cost of, levee rights-of-way for flood-control work in the Mississippi Valley, and for other purposes.	Public Law 171, 73d Cong.
Aug. 30, 1935	Improvement of Wolf and Nonconnah Rivers, TN (Nonconnah Creek is correct title). Improvement of Wolf River (Memphis Harbor), TN.	R&H Comm. Doc. 26, 72d Cong., 1st sess. R&H Comm. Doc. 45, 74th Cong., 1st sess.
Jun. 15, 1936	Modification of the 1928 Act to provide for: Construction of a backwater levee at mouth of White River, AR.  Construction of Eudora floodway in lieu of Boeuf floodway; flood control, Yazoo River; construction of Morganza floodway; and an outlet to the Gulf of Mexico west of Berwick, LA, including a 6-year program for the improvement and regularization of the Mississippi River between Arkansas and Red Rivers, and Atchafalaya River; and construction of roads on levees and drainage adjustments incident to floodway levees.	Unpublished report dated Apr. 2, 1925. H. Comm. on Flood Control, Doc. 1, 74th Cong., 1st sess.
Aug. 28, 1937	Provided for construction of floodwalls, levees, and revetments along Wolf River and Nonconnah Creek for protection of Memphis, TN. Modify the Yazoo River project to substitute a combined reservoir floodway and levee plan.	Unpublished report on record in OCE.
Jun. 28, 1938	Construction of Mounds to Mound City levee and control works along Cache River, IL.  Modification of previous act pertaining to floodways and outlets and lands therein; including program for the improvement and regularization of the Mississippi River, between Cairo and Arkansas River, extension of levee road system; strengthening of levees.	H. Comm. on Flood Control, Doc. 1, 75th Cong., 1st sess. H. Comm. on Flood Control, Doc. 1, 75th Cong., 1st sess.
Aug. 18, 1941	Enlarge main line levees to offset abandonment of floodways between Arkansas and Red Rivers, flood-control works in backwater areas of Yazoo and Red Rivers, and in Bayous Rapides, Beouf, and Cocodrie, LA.	H. Doc. 359, 77th Cong., 1st sess.

**TABLE 41-D AUTHORIZING LEGISLATION (Continued)**

Act or Authorization	Work Authorized	Document
Apr. 29, 1970 <sup>3</sup>	Modification of Yazoo Headwater Project to include drainage structure and channel improvement on Rocky Bayou, MS.	Unpublished MRC report dated Mar. 6, 1970.
Jun. 4, 1970 <sup>3</sup>	Provide for enlargement of Bayou Latenache from Pointe Coupee drainage structure to Alabama Bayou, LA.	Unpublished MRC report dated Sep. 22, 1969.
Dec. 31, 1970	Modify and expand project to include flood protection within the area of eastern Rapides and south-central Avoyelles Parishes, LA, that are drained by Bayou des Glaises diversion channel and Lake Long, and their tributaries. Modify the project for West Kentucky tributaries (Obion Creek), KY, to provide for all relocations, at Federal expense, of all transmission lines required by the project.	S. Doc. 91-113, 2d sess.  Public Law 91-611.
Senate and House Public Works Resolutions adopted Dec. 17 and 15, 1970, respectively. <sup>4</sup>	Report on Western Tennessee Tributaries, TN and KY, authorized: a. Modification of Reelfoot Lake feature to provide channel improvements on Bayou du Chien and Lake No. 9 in KY and TN. b. Modification of Mississippi levee feature to include a pumping station near Mud Lake floodgate and adjacent channel improvements. Modification of Big Sunflower Basin feature to provide additional improvements in Steele Bayou Basin, MS.	H. Doc. 91-414, 2d sess.   S. Doc. 91-74, 2d sess.
River Basin Monetary Act of Dec. 23, 1971	Continue prosecution of project for the comprehensive development of the basin, \$97 million.  Modification of Tiptonville-Obion River levee feature to relieve local interests of all responsibility except that of providing maintenance.	Sec. 1, Public Law 92-222.  Sec. 7, Public Law 92-222.
Jan. 19, 1973 <sup>2</sup>	Modification of the Mississippi levee feature to provide additional drainage facilities in Long Lake area, vicinity of Helena, AR.	Unpublished Memphis District's MRC report dated Oct. 4, 1972.
TITLE I Water Resources Development Act of 1974.	Projects recommended by four completed reports were authorized for accomplishment of Phase I design memorandum of advance engineering and design on: a. Greenville Harbor, Greenville, MS. b. East bank of Mississippi River, Warren to Wilkinson Counties, MS (Natchez area). c. East bank of Mississippi River, Warren to Wilkinson Counties, MS (Vicksburg-Yazoo area). d. Bushley Bayou Area of Red River Backwater Area, LA. Modification of West Tennessee tributaries feature (Obion and Forked Deer Rivers), TN, to acquire lands for fish and wildlife, recreation, and environmental purposes.	Sec. 1, Public Law 93-251, Mar. 7, 1974.  S. Doc. 93-38, 1st sess. H. Doc. 93-148, 1st sess.  H. Doc. 93-148, 1st sess.  H. Doc. 93-157, 1st sess. Sec. 3, Public Law 93-251.

Act or Authorization	Work Authorized	Document
TITLE II Public Works for Water and Power Development and Energy Research Appropriation Act, 1977.	Continue prosecution of project for flood control, rescue work, repair, restoration, and control of bank erosion, \$231,497,000.	Public Law 94-355, Jul. 12, 1976.
Water Resources Development Act of 1976.	<p>Sec. 101(a) authorized accomplishment of Phase I - Advanced Engineering and Design Memoranda-On:</p> <ul style="list-style-type: none"> <li>a. St. Johns Bayou and New Madrid Floodway, MO, project: Report of OCE - Sep. 26,1975.</li> <li>b. Nonconnah Creek, TN and MS, project: Report of OCE - Jun. 23, 1976, and as an independent part of the project: Improvements for flood control and allied purposes on Horn Lake Creek and tributaries, including Cowpen Creek, TN and MS.</li> </ul> <p>Modification of West Tennessee Tributaries feature (Obion and Forked Deer Rivers), TN, to:</p> <ul style="list-style-type: none"> <li>a. (Sec. 102) - Provide project for flood control for Harris Fork Creek, TN and KY: (H.D. 94-221) except that highway bridge relocations and alterations shall be at Federal expense.</li> <li>b. (Sec. 183) - Provide for construction of a levee and appurtenant works from mouth of Obion diversion channel to vicinity Highway 88 and thence to vicinity of Porter Gap, TN.</li> </ul>	Public Law 94-587, Oct. 22, 1976.
TITLE II Public Works for Water and Power Development and Energy Research Appropriation Act, 1978.	Continue prosecution of project for flood control, rescue work, repair, restoration, and control of bank erosion, \$253,081,000.	Public Law 95-96 Aug. 7, 1977.
Dec. 9, 1977, 5th Ind. on VXD May 31, 1977, Letter Report. <sup>2</sup>	Modification of the Tensas Basin Project, Red River Backwater Area, to include a drainage structure and appurtenant channel works in the Six Mile Bayou area of Concordia Parish, LA.	Unpublished Vicksburg District report dated May 31, 1977, on Cynthia and Six Mile Bayous, LA.
Jun. 28, 1980	The establishment of the Tensas River National Wildlife Refuge for the preservation and development of environmental resources and in lieu of mitigation acquisitions which otherwise would be required for certain water resources projects, within designated limits, in the basins of the Tensas, Boeuf, and Red Rivers in the State of Louisiana.	Public Law 96-285, Jun. 28, 1980.

**TABLE 41-D AUTHORIZING LEGISLATION  
(Continued)**

Act or Authorization	Work Authorized	Document
Energy and Water Development Appropriation Act. 1981	For expenses necessary for prosecuting work of flood control projects, rescue work, repair, restoration or maintenance of flood control projects threatened or destroyed by flood, \$232,519,000: Provided, That not less than \$250,000 be available for control of bank erosion of streams in the Yazoo Basin, including the foothill area. Provided further, That funds for the Tensas Basin Red River Backwater Area, be used for flood control, etc., for Sicily Island and Below Red River including pumping stations.	Public Law 96-367, Oct. 1, 1980.
Supplemental Appropriations Bill for FY Ending Sep. 30, 1985 (PL 99-88), and the Water Resources Development Act of 1986 (PL 99-662)	Authorizes and directs the Secretary of the Army acting through the Chief of Engineers to proceed with planning, design, engineering, and construction of 41 water resources projects, including Atchafalaya Basin Floodway System. For the Atchafalaya Basin Floodway Systems project, cost-sharing is only required for the recreation feature of the project. The flood control and environmental features are Federal costs.	FY 1985 Supplemental Appropriations Bill (PL 99-88), and Water Resources Development Act of 1986 (PL 99-662).
Water Resources Development Act, 1986	<p>Sec. 104(a), Authorization of Projects - Authorization of Construction:                      Incorporation of the project for flood control, Louisiana State Penitentiary levee, Mississippi River, LA: Report of the Chief of Engineers, dated Dec. 10, 1982, at a total cost of \$23,400,000, with an estimated first Federal cost of \$17,600,000 and an estimated first non-Federal cost of \$5,800,000. No acquisition of land for or actual construction of the project may commence until appropriate non-Federal interests shall agree to undertake measures to minimize the loss of fish and wildlife habitat lands in the project area. The work is unscheduled.</p> <ol style="list-style-type: none"> <li>a. Bushley Bayou, LA. Water Resources Development Act of 1986 authorized the project for flood control, Bushley Bayou, LA.</li> <li>b. Eight Mile Creek, Paragould, AR. Project entails channel improvement along the creek with miniparks and hiking/ biking trails.</li> <li>c. Helena and Vicinity, AR. The Helena Basin is an urban basin containing approximately 3,500 acres which frequently and severely floods the city of Helena. A pumping station and sump with channel enlargement and a gated culvert was recommended.</li> <li>d. West Memphis and Vicinity, AR. Channel improvements along Ten Mile Bayou and Fifteen Mile Bayou for a total of 23.86 miles, with limited revegetation of right-of-way to maintain environmental stability.</li> <li>e. St. Johns Bayou and New Madrid Floodway, MO. Flood control for urban and rural land.</li> </ol>	Public Law 99-662, Nov. 17, 1986.

**TABLE 41-D AUTHORIZING LEGISLATION (Continued)**

Act or Authorization	Work Authorized	Document
Energy and water Development Appropriation Act, 1994	f. Nonconnah Creek and Johns Creek, TN and MS. Channel enlargement, recreation features with channel construction and environmental enhancement.	
	g. Horn Lake Creek and Tributaries, TN and MS. This is an urban flood control project located in extreme northwest Mississippi and southwest Tennessee. The plan of improvement consists of 3.5 miles of selective drift removal on lower Horn Lake Creek and 2.6 miles of vegetative clearing on Horn Lake Creek, 2.1 miles on Rocky Creek and 0.6 miles of vegetative clearing and 1.8 miles of channel enlargement on Cow Pen Creek. Hike/bike trails are included along Rocky Creek and Cow Pen Creek.	
	h. Atchafalaya Basin Floodway System, La. Not mentioned, but this Act authorized basic cost sharing principles for the project. In particular establishes that the fish and wildlife enhancement feature of the project is of national significance, and therefore, a 100 percent Federal cost.	
	i. Lower Atchafalaya Basin Reevaluation Study. Authority to, within available funds, investigate conditions at Wax Lake Outlet, Bayou Black, and other features, and recommend any modification desirable for flood protection navigation, and environmental program.	
	Sec. 601(a) Authorization of Projects. Authorization of Construction:	
	a. Yazoo Backwater Area, MS. Authorized the project for mitigation of fish and wildlife losses at the Yazoo Backwater Project, MS. The project shall include acquisition of 40,000 acres for mitigation of project-induced fish and wildlife losses.	
	b. Greenville Harbor, MS. Authorized the project for navigation, Greenville Harbor, MS, as contained in the reports of Chief of Engineers, Nov. 15, 1977 and Feb. 2, 1982, at a total cost of \$43,700,000 with an estimated first Federal cost of \$28,000,000 and an estimated non-Federal first cost of \$15,700,000.	
	c. Vicksburg Harbor, MS. Authorized the project for navigation, Vicksburg Harbor, as contained in the report of the Chief of Engineers, Aug. 13, 1979, at a total estimated first Federal cost of \$55,900,000 and an estimated non-Federal first cost of \$23,300,000.	
	d. Helena Harbor, Phillips County, AR. The recommended plan consists of dredging a navigation channel to provide access to 685 acres of landfill; construction of an overlook park; implementing landscaping and erosion control measures; and mitigation fish and wildlife losses. The project is scheduled to be constructed in two phases.	

**TABLE 41-D AUTHORIZING LEGISLATION  
(Continued)**

Act or Authorization	Work Authorized	Document
	<p>e. White River Navigation to Batesville, AR. The plan of improvement recommended in the Feasibility Report provides for construction and maintenance to provide a 200-foot wide, 9-foot deep channel available 95 percent of the time from mile 10 (Arkansas Post Canal) to mile 254, two scenic overlooks, a primitive camping area, and acquisition of about 1,865 acres of woodlands for mitigation. However, section 52 of the Water Resources Development Act of 1988 deauthorized this project.</p> <p>f. Obion Creek, KY. To prevent headwater flooding along tributary streams and backwater flooding of alluvial lands.</p> <p>g. Memphis Harbor, Memphis, TN. This is a navigation project in the vicinity of Memphis, TN, which would consist of dredging and maintaining a 4.9 mile long, 500-foot minimum width, 9-foot deep general navigation channel with additional dredging as required and strategic placement of dredged material to create and provide navigation access to 1,000 acres to be developed as a waterfront industrial complex.</p> <p>Sec. 806. Reelfoot Lake, KY. This project is modified to provide that the Federal share of the cost of operating the pumping plant feature of such project shall be 50 percent.</p> <p>Sec. 836. Mud Lake, Western Tennessee Tributaries. This project is modified to provide that the requirements of local cooperation shall be (1) 50 percent of the value of the lands, easements, and rights-of-way, (2) to hold and save the United States free from damages due to the construction works, and (3) to maintain and operate all the works after completion.</p>	
Jun. 4, 1987	Modification of Mississippi Delta Region project to construct salinity control structure at Davis Pond (mile 118) rather than at Myrtle Grove (mile 59).	Unpublished New Orleans District report, Nov. 1, 1984.
Water Resources Development Act, 1988	<p>Sec. 3(a), Project Authorizations - Authorization of Construction:</p> <p>a. Mississippi-Louisiana Estuarine Area, MS and LA. Authorized the project for environmental enhancement, as contained in the report of Chief of Engineers, dated May 19, 1986, at a total cost of \$59,300,000.</p>	Public Law 100-676 Nov. 17, 1988
Water Resources Development Act, 1988	<p>Section 4(b) West Memphis and Vicinity, AR. Modified the project by allowing that non-Federal cooperation may be provided by levee districts, drainage districts, or any unit of a state, county, or local government.</p>	Public Law 100-676, Nov. 17, 1988

**TABLE 41-D AUTHORIZING LEGISLATION  
(Continued)**

Act or Authorization	Work Authorized	Document
Energy and Water Development Appropriation Bill, 1990	West Memphis and Vicinity, AR. Directed the Corps to develop the most cost-effective flood control plan for the City of West Memphis without regard to frequency of flooding, drainage area, and the amount of runoff.	Public Law 101-83, Jul. 25, 1989
Energy and Water Development Appropriation Bill, 1990	Bayou Rapides Drainage Structure and Pumping Plant Directed the Secretary of the Army to incorporate existing flood control features for the Bayou Rapides Drainage Structure and Pumping Plant into the Lower Red River, South Bank Levees portion of the MR&T Project.	Public Law 101-514, Nov. 5, 1990
Supplemental Appropriations Bill for FY Ending Sep. 30, 1985 (PL 99-83), and the Water Resources Development Act of 1986 (PL 99-662)	Atchafalaya Basin Floodway System, LA. Authorizes and directs the Secretary of the Army acting through the Chief of Engineers to proceed with planning, design, engineering, and construction of 41 water resources projects, including Atchafalaya Basin Floodway System. For the Atchafalaya Basin Floodway Systems project, cost-sharing is only required for the recreation feature of the project. The flood control and environmental features are Federal costs. This act authorized basic cost sharing principles for the project. In particular, establishes that the fish and wildlife enhancement feature of this project is of national significance and therefore a 100% federal cost.	FY 1985 Supplemental Appropriations Bill (PL 99-88), and Water Resources Development Act of 1986 (PL 99-662).
Water Resources Development Act, 1992	Whiteman's Creek, Arkansas. Directed the Secretary of the Army to implement flood control improvement, which essentially consist of 6.1 miles of channel enlargement along streams within the city limits of Jonesboro, Arkansas.	Public Law 102-580 Oct. 31, 1992
Water Resources Development Act, 1992	New Madrid Harbor, Missouri Directed the Secretary of the Army to assume responsibility for maintenance of the New Madrid County Harbor constructed by non-Federal interests before that date of the enactment of this Act in lieu of maintaining the existing Federal channel.	Public Law 102-580 Oct. 31, 1992
Water Resources Development Act, 1996	Grand Prairie and Bayou Basin, Arkansas The project for flood control, Grand Prairie Region and Bayou Meto Basin, Arkansas, authorized by section 204 of the Flood Control Act of 1950 (64 Stat. 174) and deauthorized pursuant to section 1001(b) of the Water Resources Development Act of 1986 (33 U.S.C. 579a(b)), is authorized to be carried out ground water protection and conservation, agricultural water supply, and waterfowl management if the Secretary determines that the change in the scope of the project is technically sound, environmentally acceptable, and economic, as applicable.	Public Law 104-303 Oct. 12, 1996

**TABLE 41-D AUTHORIZING LEGISLATION  
(Continued)**

Act or Authorization	Work Authorized	Document
Water Resources Development Act, 1996	White River, Arkansas The project for navigation, White river Navigation to Batesville, Arkansas, authorized by section 601(a) of the Water Resources Development Act of 1986 (100 Stat 4139) and deauthorized by section 52(b) of the Water Resources Development Act of 1988 (102 Stat. 4044), is authorized to be carried out by the Secretary.	Public Law 104-303 Oct 12, 1996
Water Resources Development Act, 1999	Memphis Harbor, Memphis, Tennessee Authorized to be carried out by the Secretary, if the Secretary determines that the project is technically sound, environmentally acceptable, and economically justified, as appropriate.	Public Law 106-53 Aug. 17, 1999
Water Resources Development	Tunica Lake Weir, Mississippi The Secretary shall conduct a study to determine the feasibility of constructing an outlet weir at Tunica Lake, Tunica county, Mississippi, and Lee County, Arkansas, for the purpose of stabilizing water levels in the lake. In carrying out the study, the Secretary shall include as part of the economic analysis the benefits derived from recreation uses at Tunica Lake and economic benefits associated with restoration of fish and wildlife habitat.	Public Law 106-53
Water Resources Development Acts, 1986, 1990 and 1999	Louisiana State Penitentiary Levee, Mississippi River, Louisiana Authorizes and directs the Secretary of the Army, acting through the Chief of Engineers to proceed with planning, design, engineering, and construction of improvements of 12 miles of existing levee along the Mississippi River which provides flood protection to the Louisiana State Penitentiary at Angola, LA. This act authorizes basic cost sharing principles, and establishes that the cost sharing will be shared on a 75%/25% basis with the state of Louisiana for this project. Authorizes the Secretary of the Army to consider credit for work performed by an non-Federal sponsor since project authorization.	Public Law 99-662 Nov. 17, 1986 Public Law 101-646 Nov. 28, 1990  Public Law 106-53 Aug. 17, 1999
Omnibus Consolidated and Emergency Appropriations For Fiscal Year 2001	Ten and Fifteen Mile Bayous, St. Francis River Basin, Arkansas Modified Section 204 of the Flood Control Act of 1950 to expand the boundaries of the project to include Ten- and Fifteen-Mile Bayous near West Memphis, Arkansas. Notwithstanding section 103(f) of the Water Resources Development Act of 1986, the flood control work at Ten- and Fifteen-Mile Bayous shall not be considered separable elements of the project.	House Report 4577 Dec 15, 2000

1. Incorporated into Mississippi River and tributaries project as shown in Table 41-E.
2. Date minor modification for blocked drainage was approved under delegated authority of the President, Mississippi River Commission, and in accordance with Sec. 10(p) of the 1946 Flood Control Act (Public Law 79-526).
3. Date minor modification was approved under discretionary authority of Chief of Engineers contained in May 15, 1928, Flood Control Act, as amended.
4. Projects approved under the provisions of Sec. 201 of Flood Control Act of Oct. 27, 1965.

<b>Act of Incorporation</b>	<b>Public Law No.</b>	<b>Authorizing Act</b>	<b>Description</b>	<b>For Last Full Report See Annual Report for</b>
Jul. 24, 1946	79-526	Jun. 22, 1936	Tiptonville-Obion levee and drainage improvements, TN	1941, p. 943
Jul. 24, 1946	79-526	Jun. 22, 1936	Bayou des Glaises diversion ditch, LA	1946, p. 1029
Jul. 24, 1946	79-526	Jun. 22, 1936	From North Little Rock, AR, to Gillett, AR, on north bank of Arkansas River (portion below Plum Bayou)	1946, p. 1053
Jul. 24, 1946	79-526	Aug. 18, 1941	White River levees, Augusta to Clarendon and De Valls Bluff, AR	1946, p. 1083
Jul. 24, 1946	79-526	Dec. 22, 1944	Boeuf and Tensas Rivers and Bayou Macon, LA	1945, p. 982
Jul. 24, 1946	79-526	Dec. 22, 1944	Big Sunflower River, etc.	1946, p. 1061
Jun. 30, 1948	80-858	Jul. 24, 1946	Devils Swamp barge channel at Baton Rouge, LA (Baton Rouge Harbor)	1948, p. 1059
May 17, 1950	81-516	Jun. 22, 1936	Jonesville, LA	1953, p. 773
May 17, 1950	81-516	Jul. 24, 1946	Lake Pontchartrain-Jefferson Parish, LA	1953, p. 737

**TABLE 41-F SUMMARY OF PRESENTLY ESTIMATED  
FEDERAL FIRST COST OF  
AUTHORIZED IMPROVEMENTS**

Project Title	Estimated Cost <sup>1</sup> Fiscal Year 2005
Completed features <sup>2</sup>	\$ 339,236,000
Mississippi River levees	2,076,000,000
Mud Lake Pumping Station, TN	5,270,000 <sup>3</sup>
Sec. 6 levees, 1928 Flood Control Act	4,000,000 <sup>3</sup>
Channel improvement	3,995,000,000
Atchafalaya Basin, LA	1,779,000,000
Atchafalaya Basin Floodway System, LA	202,000,000
Bayou Cocardrie and Tributaries, LA	20,400,000 <sup>3</sup>
Old River, LA	332,620,000
Lower Red River—South Bank Red River levees, LA	18,813,000 <sup>3</sup>
Eastern Rapides and South-Central Avoyelles Parishes, LA	50,000,000 <sup>3</sup>
Mississippi Delta Region, LA	109,850,000
Tensas Basin, AR and LA	447,631,000
Lower Arkansas River, AR	29,676,000 <sup>3</sup>
Grand Prairie Region, AR	208,000,000
Yazoo Basin, MS	2,384,636,000
Lower White River, AR (All except Big Creek & Tribs.)	16,802,000 <sup>3</sup>
Lower White River, AR (Big Creek & Tribs.)	55,900,000 <sup>3</sup>
Cache River Basin, AR	155,000,000
St. Francis Basin, AR and MO	459,650,000
Francis Bland Floodway Ditch (Eight Mile Creek), AR	15,370,000 <sup>3</sup>
L'Anguille River, AR	15,100,000 <sup>3</sup>
West Tennessee Tributaries, TN	169,600,000
Harris Fork Creek, TN and KY	14,300,000 <sup>3</sup>
Reelfoot Lake-Lake No. 9, TN and KY	(10,700,000) <sup>3</sup>
Reelfoot Lake, TN and KY (Completed)	440,000
Reelfoot Lake-Lake No. 9, TN and KY	10,260,000 <sup>3</sup>
West Kentucky Tributaries, KY	26,100,000 <sup>3</sup>
Sardis Dam (Dam Safety Assurance), MS	29,200,000
St. Johns Bayou and New Madrid Floodway, MO	69,900,000 <sup>4</sup>
Nonconnah Creek, TN and MS	27,890,000 <sup>4</sup>
Horn Lake Creek and Tributaries, TN and MS	11,285,000 <sup>4</sup>
Greenville Harbor, MS	32,400,000 <sup>4</sup>
Memphis Harbor (Ensley Berm), TN	23,100,000 <sup>4</sup>
Helena Harbor, Phillips County, AR	32,156,000 <sup>4</sup>
Helena, AR, and Vicinity	10,300,000 <sup>3,4</sup>
West Memphis, AR, and Vicinity	11,600,000 <sup>4,6</sup>
Louisiana State Penitentiary Levee, LA	18,800,000 <sup>4,7</sup>
Hickman Bluff, KY	17,495,000 <sup>3</sup>
Whiteman's Creek, AR	3,300,000
Reelfoot Lake, TN and KY (Ecosystem Restoration)	21,500,000 <sup>3,8</sup>

**TABLE 41-F**                      **SUMMARY OF PRESENTLY ESTIMATED**

Project Title	Estimated Cost <sup>1</sup> Fiscal Year 2005
Mississippi — Louisiana Estuarine Areas, MS and LA	84,340,000 <sup>5</sup>
Bayou Meto, AR	376,000,000
Lower White River:	(14,177,000)
Clarendon Levee, AR	1,576,000
Augusta to Clarendon, AR	12,601,000
Wolf River, TN	8,397,000
Morganza, LA, to Gulf of Mexico	<u>467,000,000</u>
<b>TOTAL</b>	<b>\$14,172,329,000</b>

Deleted: 788

Deleted: 493

1. Inflation projected through the construction period. Harbors; Lake Pontchartrain; Wolf River; completed roads.
2. Includes Bonnet Carré, Morganza, and New Madrid Floodways; Memphis, Greenville, and Vicksburg on main stem levees; channel construction works; Atchafalaya River and Basin; Wax Lake Outlet; Charenton Canal; Bayou des Glaisses diversion channel, Boeuf Basin levees; Grant's Canal; De Valls Bluff, Jonesville, and Des Arc protection works; Baton Rouge Harbor; and miscellaneous features; Teche-Vermilion Basins, LA; Tensas National Wildlife Refuge, LA.
3. Incremental (not projected through the construction period).
4. Authorized by Water Resources Development Act of 1986, Public Law 99-662, Nov. 17, 1986.
5. Authorized by Water Resources Development Act of 1988, Public Law 100-676, Nov. 18, 1988.
6. Locals built their own project.
7. Authorized by Water Resources Development Act of 1999, Public Law 106-53, Aug. 17, 1999.
8. Authorized by Water Resource Development Act of 1999, Public Law 106-53, Aug. 17, 1999 and Report of the Chief of Engineers, Dec. 23, 1999.
9. Reauthorized by Water Resources Development Act of 1999, Public Law 106-53, Aug. 17, 1999.
10. Authorized by Water Resources Development Act of 2000, Public Law 106-541, Dec. 11, 2000.

**TABLE 41-G MISSISSIPPI RIVER MAIN STEM CHANNEL IMPROVEMENTS**

District	Location		Operations in 1,000 Cubic Yards Fiscal Year 2005		
	Mileage Above Head of Passes		Channel Construction	Maintenance	Total
New Orleans

1. Landside seepage berms only.
2. Levee that has adequate freeboard based on the refined 1973 MR&T project flood flow line for the Mississippi River. Levees with more than 2 feet of freeboard are considered adequate.
3. Subject to change as planning progresses. Does not include existing berms which need restudy.
4. Includes 1.4 miles of concrete floodwall and 0.3 mile of levee on Vicksburg city front.
5. Includes 5.3 miles for Gillett new levee.
6. Relief wells used in place of berms.
7. Changed to correct previous error.

Cost	2,955,166	2,416,581	259,512	3,702,654	21,859,538	

1. Appropriations were as follows:

Appropriations chargeable against Flood Control Act authorizations:		
Flood Control, MR&T except for emergencies (excludes Maintenance allotments Aug. 18, 1941, through Sep. 30, 2005):		
Net total allotted for works under Mississippi River Commission:	7,730,565,916	
Eight-Year Program Funds, Construction General:	10,281,695	
Surveys under Sec. 10, Flood Control Act of 1928 (not under MRC):	4,995,215	
Transferred to revolving fund:	24,944,460	
Impounded savings:	1,593,097	7,772,380,383
Flood control emergencies:		
Net total allotted:	14,885,922	
Impounded savings:	14,378	14,900,300
Additional funds not chargeable against Flood Control Act authorizations:		
Appropriations for Flood Control, MR&T, except for flood control emergencies:		
General investigations:	163,404,640	
Maintenance allotments Aug. 18, 1941, through Sep. 30, 2001	4,175,624,903	4,339,029,543
Appropriations in addition to appropriations for Flood Control, MR&T (itemized in footnote (1), pp 2068-69, Annual Report for 1953):	32,068,909	
Budgetary and OCE Reserves:		
Grand total:		<u>12,158,379,139</u>

**TABLE 41-W COST AND FINANCIAL STATEMENT

# **U.S. ARMY ENGINEER RESEARCH AND DEVELOPMENT CENTER**

## **BACKGROUND**

The research and development laboratories of the U.S. Army Corps of Engineers have served the Corps, the Army, and the Nation with technical accomplishments in a variety of engineering and scientific fields for more than 75 years. From beginnings in 1929 as a small hydraulics laboratory established to assist in developing a comprehensive plan for flood control of the Mississippi River to the 1999 establishment of the Engineer Research and Development Center (ERDC) consolidating the research and development efforts of the laboratories under the leadership of a single center, Corps' laboratories have been solving civil engineering and environmental quality challenges. ERDC is headquartered in Vicksburg, MS, and offers a centrally managed center of seven laboratories that is the largest and most diverse civil engineering and environmental sciences research and development organization in the world.

During FY05, ERDC had 1736 full-time permanent employees of whom 1036 are highly trained engineers and scientists. The full-time permanent professional staff encompassed 283 Ph.D.'s and 431 Masters' degrees.

ERDC executed a Civil Works program totaling \$138 million. Of this total, \$65 million was executed in direct-allotted programs, with \$32 million in R&D programs and \$33 million in technical support programs. The remaining \$73 million was executed in support of USACE District and Division offices.

## **LABORATORIES**

The diverse civil engineering and environmental quality research and development center consists of seven centrally-managed laboratories located at Alexandria, VA; Champaign-Urbana, IL; Hanover, NH; and Vicksburg, MS. With world-renowned expertise and facilities, each laboratory adds a unique perspective and set of capabilities to the overall ERDC team.

### **Coastal and Hydraulics Laboratory**

The Coastal and Hydraulics Laboratory (CHL), Vicksburg, MS, is the Nation's center for engineering and scientific research and development in the coastal, hydraulic, and hydrologic engineering and sciences. It conducts research and supports the Corps of Engineers in conducting its navigation, flood and coastal storm damage reduction, environmental restoration, and military engineering missions. CHL is comprised of nationally and internationally recognized experts that perform research and site-specific investigations in the fields of rip-rap design; navigation engineering; pump station design; fisheries engineering; sediment transport; estuarine engineering; dredging; hydrodynamics; groundwater, watershed, and surface water modeling; coastal storm and flood damage protection; harbor design and modification; coastal and hydraulic structures; physical processes associated with water resources; environmental problems; military logistics-over-the-shore; wave climatology; and hydroinformatics.

### **Cold Regions Research and Engineering Laboratory**

The Cold Regions Research and Engineering Laboratory (CRREL), Hanover, NH, maintains the finest research and engineering staff and facilities in the world for the study of cold regions science and technology. CRREL is recognized for its internationally known experts in the field of ice jam flooding and ice-hydraulics; ice control at locks, dams and other navigation channels; snowmelt modeling & simulation; and other areas ranging from geotechnical aspects of frozen ground to new admixtures for placing concrete in the winter. CRREL's specialized research facilities include a complex of cold rooms, an Ice Engineering Facility housing three special-purpose research areas; a large low-temperature towing tank, a refrigerated flume for modeling rivers, and a large hydraulic-model room. CRREL is also home to the U.S. Army Corps of Engineers Center of Expertise for Civil Works Remote Sensing/Geographic Information Systems.

### **Construction Engineering Research Laboratory**

The Construction Engineering Research Laboratory, Champaign, IL, provides construction research to address the entire spectrum of issues within military construction. This research is in support of sustainable military installations and encompasses construction, operations, and maintenance as well as environmental and safety concerns. These technologies have universal application and are of value in the Civil Works arena as well. Civil Works efforts are in the areas of corrosion control, high performance protective coatings (including over-coating of lead-based paint), management tools for Operation and Maintenance optimization, and environmental sustainment.

### **Environmental Laboratory**

ERDC's Environmental Laboratory, Vicksburg, MS, is an international leader in environmental quality and environmental restoration research. Solving problems in these two areas has involved the Environmental Laboratory in evaluating and mitigating the consequences of water resources development, navigation, and dredging on the environment; regulating and restoring wetlands and inland and oceanic water quality; stewardship of natural resources; and managing cleanup of contaminated groundwater sediments and soils.

The Lab provides natural-resource-management technologies to guide Corps stewardship at projects; improved techniques for stream and riparian restoration; research to accelerate growth of desirable, non-problem vegetation; guidance on using biological control agents to manage nuisance aquatic plants; risk-based contaminated sediment and soil toxicological assessment protocols; guidance to Districts on controlling zebra mussel infestations using anti-foulant coatings (paints, thermal metal sprays, etc.), guidance on upland disposal testing and assessment for dredged material, and continuous backwash filter systems for intakes that supply irrigation systems, water supply, and other low-flow requirements.

### **Geotechnical and Structures Laboratory**

The Geotechnical and Structures Laboratory (GSL), Vicksburg, MS, conducts research in soil and rock mechanics, earthquake engineering and geophysics, tunneling and trenchless technology, engineering geology and seismology, vehicle mobility and trafficability, unexploded ordnance detection, and pavement technology. The Laboratory

also determines the response of structures to weapons effects and other loadings, investigates methods for making concrete and other materials more durable and economical, studies the application of explosives technology to military and civilian engineering, and investigates the behavior of earth/structure systems subjected to blast loading and projectile penetration. The Lab is a world leader in research on effects of earthquakes on embankment dams and the evaluation, maintenance, and rehabilitation of mass concrete, steel and reinforced structures.

### **Information Technology Laboratory**

The Information Technology Laboratory (ITL), Vicksburg, MS, advances, applies, and delivers information technologies (IT) that address a wide range of engineering, scientific, and management challenges.

ITL manages one of the four High Performance Computing Major Shared Resource Centers formed under the auspices of the DoD High Performance Computing Modernization Program; and the Computer Aided Design and Drafting/Geographic Information Systems (CADD/GIS) Technology Center for Facilities, Infrastructure, and Environment, a multi-agency vehicle to coordinate CADD/GIS activities within DoD and with other government agencies. ITL is highly recognized for its expertise in the areas of Facilities Management technologies required by Army Civil Works projects; computer-aided interdisciplinary engineering and analysis; computer science applications; scientific visualization (including virtual reality); support to R&D and application efforts requiring sensors, graphic arts and publishing; and collaborative technologies.

### **Topographic Engineering Center**

The Topographic Engineering Center (TEC), Alexandria, VA, provides new topographic capabilities in geospatial science to the Corps of Engineers to ensure superior implementation of the nation's civil and environmental initiatives through research, development, and application of remote sensing, geographic information, global positioning, topographic, hydrographic and information technologies. TEC scientists and engineers continue to develop faster, more accurate, and cost-effective ways to use new remote sensing technologies to describe, characterize, and analyze the surface of the earth. Remote sensing technologies form an essential part of a new national approach to infrastructure engineering and environmental stewardship.

## ARMY CIVIL WORKS R&D PROGRAMS

The Army Civil Works Research and Development program is formulated to directly support the established Business Lines of the Civil Works Program including: flood and coastal storm damage reduction, inland and coastal navigation, environment (including natural resources, compliance, mitigation, and restoration), water supply, hydropower, recreation, emergency management, and regulatory. The Civil Works R&D needs and requirements are identified based on the current Civil Works Program Strategic Plan, Corps divisions and district input, and the existing WRDA authorities. The R&D effort is a problem-solving process by which the Corps systematically examines new ideas, approaches, and techniques and develops field-ready products to reduce costs, speed the time, and improve quality of its planning, design, construction, operations and maintenance activities in an environmentally sustainable manner.

Results of this R&D effort are directly incorporated into practice within the Civil Works Program through revisions or additions to Engineer Regulations, Engineer Manuals, Technical Guidance Manuals, Engineer Technical Letters, or Guide Specifications. Numerous other means of technology transfer are also used such as training courses, workshops, and other professional contacts. The Corps Civil Works R&D Program provides essential Product Lines with field ready end products and a high return on investment for the Corps and the Nation.

In order to most effectively use the limited R&D resources and to avoid unnecessary duplication of research effort, the Civil Works R&D Program maintains external technical exchange and technology transfer efforts with other Federal and major water resource agencies, International Boundary Water Commission, International Joint Commission, the Navy, and state and local governments.

Components of the R&D program include support to the major business lines of the Corps of Engineers. While most of the R&D program is funded through General Investigations, there are several R&D efforts funded through the Operations and Maintenance and the Construction General appropriations.

Under the General Investigations (GI) R&D program, the primary business lines supported by

R&D include Navigation, Flood and Coastal Storm Damage Reduction, and Environmental Restoration. Additional research serves to cut across and support all business lines. In particular, the System Wide Water Resources, Infrastructure, Geospatial, and Decision Support technology development serve multiple business needs.

### GI R&D: Navigation Research Area

The Corps provides inland and coastal navigation critical to the national economy and defense. Additionally, Corps projects provide 25% of the Nation's hydropower. Navigation research, which includes hydropower, delivers tools and guidance essential for improved reliability, increased efficiency and sustainable increased capacity of this complex aging transportation/power network. The research framework integrates water dynamics, infrastructure mechanics, advanced materials, power physics, economics, innovative construction, coastal and riverine processes, automated control and monitoring, remote sensing, operations research, stochastic processes and emerging technologies to create effective solutions in perspective with the multiple demands, requirements and constraints of real world commodity transport and power production problems. Research efforts target navigation channels, locks, jetties, breakwaters, dams and power plants to optimize among life-cycle and reliability trade-offs, assure defensible economic assessment, and provide better investment decision tools for predicting performance and deterioration with time, and scheduling and prioritizing maintenance and repairs balanced with the consequences of delays. FY 2005 accomplishments include:

- Improved coastal navigation structure design with completed upgrade of near-shore wave models
- Reduced probability of dam failure by identifying innovative technologies to detect scour next to navigation dams
- Increased dam safety by updating technical guidance for seismic stability of concrete gravity dams
- Made concrete navigation structure design more cost effective through updated design guidance
- Contributed to better management of economic and engineering risk in inland and deep draft systems through development of more accurate simulation modeling

- Reduced unscheduled lock closures with completed framework for evaluation of service and repairs on steel components of lock gates

#### **GI R&D: Flood and Coastal Storm Damage Reduction Research Area**

As part of its “Flood and Coastal Storm Damage Reduction” mission, the Corps of Engineers is responsible for more than 600 dams, operates over 400 major lakes and reservoirs, maintains 8,500 miles of levees, and has over 100 coastal storm-damage reduction and related projects. Flooding that occurs in the United States costs about \$4 billion annually. Despite all efforts, annual damages in the flood plain continue to rise due to continued urban development. In addition, the 2000 census showed that more than 50% of the US population lives within 50 miles of a coast and is vulnerable to dangerous coastal storms and costly flooding. Consequently, over the past several years, Federal shore protection expenditures increased to more than \$100,000,000 per year to protect the public and related economic investments

The Corps manages existing water resources projects around the country to maintain a flood-protection infrastructure for the public’s welfare. Simultaneously, the Corps balances requirements for hydropower, water supply, environmental stewardship, and recreation. As enabling technologies are developed, the Corps must upgrade and improve water resource projects; the Corps must have the most advanced capability to assess the risk of alternative operational scenarios; and the Corps is expected to apply robust, reliable, and comprehensive capabilities to assess the economic and environmental effects of alternative plans for projects and to select the most balanced and sustainable solutions. R&D delivers efficient and effective capabilities to plan, design, construct, operate, maintain, and upgrade water resources projects in all climates and settings, from warm to ice-affected, and from inland to coastal. Capabilities to prevent loss of life, minimize property damage, and reduce the life-cycle costs of projects are critical. The capabilities include advanced processes and design models, economic models and decision support software, infrastructure condition and risk assessment tools, infrastructure design guidance, innovative operation and maintenance technologies, flood-alert instrumentation and expedient emergency response capabilities, and the capability to take advantage of new real-time data sources (e.g. precipitation radar)

to accurately forecast real-time flow and stages. FY 2005 accomplishments include:

- Integrated Hydrologic Engineering Center (HEC) tools by releasing the beta version of the Water Analysis Tool (HEC-WAT), making hydrologic and hydraulic modeling seamless for project planning studies.
- Provided comprehensive technical input and guidance for the National Teams performing Corps-wide Dam Safety Portfolio Risk Assessment and continued development of tools for risk-based analysis.
- Improved the Corps Water Management System (CWMS) for real time river flow/stage forecasting by Corps Districts which improves project operations and emergency management response.
- Developed new engineering and design guidance to improve channel stabilization measures, riverbed grade control structures, and streambank protection, and for ice-affected rivers.
- Improved the Corps’ collaborative planning process and capability in multiple purpose formulation and planning through the release guidance and support tools.
- Developed risk-based estimation tools for piping & seepage through dams, embankment breaching, and gate operation performance to ensure life-safety under extreme loads.
- Validated the use of numerical simulations for the development of ice-control structures design procedures, and conducted physical experiments on non-floodplain ice-control structures alternative designs.

#### **GI R&D: Environmental Restoration Research Area**

Ecosystem Restoration is a growing focus of the Corps Civil Works program, ranging from large-scale projects such as the Everglades to smaller localized ecosystem restoration projects. In addition, the Corps carries out environmental and natural resource management and restoration activities on more than 11 million acres of land and water resources. The goal of this R&D is to provide Corps field personnel with cost-effective/innovative technologies for project planning, design, engineering, operation, and regulatory activities. Product lines include: Environmental Impact Assessment, Ecosystem Restoration and

Environmental Stewardship and Management. Environmental studies related to Cross-cutting R&D (i.e., Geospatial, Economics, and Risk) are also addressed. Products are concise, how-to guidance documents that provide rapid/low-cost technologies and methods for high priority field needs. This technology is critical to the success of the Corps' Continuing Authorities Program (CAP) as well as larger GI-funded projects. FY 2005 accomplishments include:

- Developed techniques, tools and algorithms for impact assessment of Corps' water resource projects
- Developed guidelines for the planning and removal of dam projects
- Developed ecosystem restoration technologies based on a broad suite of ecosystem processes and functions
- Initiated development of a suite of tools for improved natural resource inventories on Corps land and waters
- Initiated modifications to a regionally-specific approach for prioritizing potential wetlands restoration sites
- Provided U.S. regional hydrogeomorphic guidebooks for depressional, and riverine wetlands in Arkansas and California.

**GI R&D: System-Wide Water Resources**

The goal of the System-Wide Water Resources research area is to support all business lines of the Corps of Engineers and its partners by providing the capabilities to balance human development activities with the natural system in a sustainable manner through regional management and restoration of the Nation's water resources over broad temporal and spatial scales.

The capabilities provided herein include science-based water resource management methodologies, implementation guidance, computational frameworks and technologies, and decision support. These capabilities are being built from sound scientific principles reflecting an improved understanding of inter-relationships among key system attributes such as hydrology, geomorphology, chemistry, ecology, and socioeconomic. Capabilities are being served via a seamless, integrated architecture allowing projects to be considered at multiple-scales during project planning, design, construction, operation and maintenance.

FY 2005 accomplishments include:

- Improved watershed models for more comprehensive studies in complex urban and rural landscapes.
- Developed hydrologic toolset for defensible model-parameter estimation, solution sensitivity analysis, and stochastic simulation.
- Developed guidelines for parameter selection for more efficient partially saturated flow simulations over large time-space scales.
- Improved computational hydraulic routines in models to support sediment and nutrient transport.
- Advanced reservoir water optimization tools for balancing multiple stakeholder objectives.
- Improved computational hydraulic routines in coastal models to support sediment transport.
- Sediment transport included in watershed models . Modular algorithm design for interagency use.
- Sediment erosion, transport, and deposition capabilities added to single and multi-dimensional river models . Modular algorithm design used for interagency collaboration.
- Released sediment impact analysis model (SIAM) for watershed stream networks. Rapid analysis of impacts of project alternatives on watersheds is possible.
- Released test-version of new-concept model for coastal shoreline evolution along with advanced Regional Morphology Analysis Package to support it.
- Developed nutrient transport and fate algorithms for watershed and riverine assessment and prediction models
- Compiled tiered ecological assessment tool catalogue with user-friendly access.
- Developed planning level ecological response tools for conceptual models, geospatial watershed assessments, and Total Minimum Daily Load analysis.
- Developed ecological response algorithms that are sensitive to physical, chemical, and biological phenomena over multiple spatial and temporal scales.
- Demonstrated floodplain habitat assessment methodologies in an arid region and initiated assessment methodologies in an eastern region.

- Initiated ecological modeling in complex river systems using trophic-level and agent-based models.
- Developed common data format and procedures for linking selected hydrodynamic codes to selected index, geospatial, and water quality models.
- Integrated statistical methods with Geographic Information Systems to perform regional analysis for watersheds necessary for water resources-related risk estimation.
- Developed a standard approach to the development of graphical user interfaces to support user-friendly interaction with multi-dimensional models.
- Initiated linkages among the riverine, estuarine and coastal hydrodynamic models to broaden the spatial scope to material transport.
- Initiated innovative and emerging measurement and monitoring technologies using hyperspectral imagery and isotopes.
- Developed initial integrated computational and information framework that provides a corporate and standardized structure for efficient utilization of water resource assessment technologies.
- Developed a web-based decision support prototype for system-wide alternatives analysis.

### Other R&D Programs

#### O&M R&D: Aquatic Nuisance Species Research

The Aquatic Nuisance Species Research Program is an expansion of the Zebra Mussel Research Program. Funded under the Operations and Maintenance appropriation, this expanded program addresses all invasive aquatic animal species. Invasive species in general cost the public over \$137 billion annually. Zebra mussels alone cost the public over \$1B annually. It is estimated that over 100 nuisance species are introduced into U.S. waters annually which can impact facility operations and threaten valued natural resources. The Corps is responsible for the construction, operation, and maintenance of navigable waters and the resources associated with them. Methods of prevention and more effective, inexpensive methods of control of invasive species must be developed to prevent

impacts to public facilities and protect valuable natural resources.

Prevention methodology focusing on dispersal barrier technology will be investigated. The development of strategies to apply control methods involves engineering design, operations, and maintenance of facilities and structures. Control strategies are being developed for navigation structures; hydropower and other utilities; vessels and dredges; and water treatment, irrigation, and other water control structures. Methods to reduce invasive species impacts to threatened and endangered species and restore natural habitat will be investigated. Due to the introduction of the Northern Snakehead Fish and West Nile Virus the Corps has experienced a significant increase in the number of field assistance requests at our operating projects. Numerous dredged material disposal areas in the Atlantic, Gulf coast and Great Lakes region have mosquito abatement programs. Due to the introduction of the West Nile Virus local communities want greater assurances that mosquito populations at our disposal sites are controlled to the maximum extent practicable. Following introduction of the Northern Snakehead Fish a number of Corps reservoir projects have had to take interdiction measures to prevent their introduction.

Accomplishments in FY 2005 include:

- Evaluated new methods for the prediction, prevention and control of the red tide.
- Provided guidance on the application of risk assessment and decision analysis to Aquatic Nuisance Species (ANS).
- Evaluated the growth, reproduction, and movement of Asian carp in the Upper Mississippi River.
- Identified potential new chemical compounds to control harmful algal blooms.
- Initiated the application of life stage sensitivity analysis to chemical control strategies for ANS.
- Developed ANS assessment technologies to provide: early detection, threat level, monitoring strategies, management protocols, and exclusion protocols.
- Developed internet/computer-based information system containing ANS species profiles for quick access by Corps resource managers.
- Provided guidance on freshwater ANS impacts, management costs and benefits at Corps' projects.

- Provided regional guidance on potential ANS species in marine and estuarine environments on Corps projects.
- Provided case histories for a retrospective analysis of past zebra mussel management technologies.

**O&M R&D: Coastal Inlets Research Program**

Records demonstrate that the Corps will expend an estimated \$8 to \$10 billion over the next 25 years at the more than 150 tidal inlets with existing Federal navigation projects to maintain, modify, and create navigation channels and structures, and to mitigate damages to adjacent beaches. In addition, the national “2020” plan for deeper and wider channels to accommodate the next class of vessels brings great uncertainty in prediction of maintenance requirements. Political, engineering, and demographic factors may increase costs. The public perception, right or wrong, that Federal activities at inlets cause adverse response at adjacent beaches may require additional, expensive mitigation. Public sensitivity to current maintenance practices, where dredged material is placed in offshore disposal areas, may result in requirements for more nearshore placements of maintenance materials to benefit adjacent beaches. Inlets are the primary conduits for the transport of environmental constituents between bays and the open ocean, and the Corps may be constrained from performing present activities unless it can make accurate predictions of inlet response, and thus environmental response, to such activities.

The Coastal Inlets Research Program is a fixed-length program to increase Corps capabilities to cost-effectively design and maintain the more than 150 inlet projects that comprise the bulk of coastal operations and maintenance (O&M) expenditures. Because of their complex nature, the behavior of inlets is poorly understood. This has resulted in the Corps spending more of its O&M budget than necessary to maintain inlet projects. The Coastal Inlets Research Program will study functional aspects of inlets such as their short- and long-term behavior and their response to waves, tides, currents, and man-made changes, given their geologic makeup. As inlet behavior becomes better understood, sophisticated tools for management of inlets for navigation projects, such as models and empirical relationships, will become available. These new tools will lead to more efficient, cost effective designs that will reduce O&M requirements and, consequently, costs.

Accomplishments in FY 2005 include:

- Completed R&D and held a tech-transfer workshop (47 attendees) for the Morphology Steering Module in the Surface Modeling System interface, allowing automated coupling of tidal circulation, wave models, and sediment transport. The Morphology Steering Module plays a central role for integrated modeling for field use to calculate tidal circulation, waves (with wave-current interaction), and sediment transport at high resolution. This modeling system allows assessment of jetty modifications, channel infilling, and channel alignment for reduction of dredging and improved navigation safety. Successful evaluations were conducted at Shinnecock Inlet, NY; Grays Harbor, WA; Willapa Bay, WA; Ocean City Inlet, MD; Mouth of Colorado River, TX, and the Matagorda Ship Channel, TX.
- Developed new sediment transport formulas that cover, in continuous fashion, rivers, inlets, nearshore, and offshore zone. Began introducing these formulas into CIRP’s three-dimensional model of channel hydrodynamics and sediment infilling.
- Extended the Reservoir Model for calculating volume change of inlet features such as ebb shoals and flood shoals, and validated the model at East Pass, FL; Ocean City Inlet, MD; and Shinnecock Inlet, NY. This technology allowed predictions to be made in support of Corps navigation projects that previously were beyond capability, accounting for the long-term (order of 100 years) evolution of inlets. Collaborated with the Regional Sediment Management Program in incorporating the Reservoir Model in its coastal modeling technology.
- Developed circulation models for all of the Great Lakes to validate CIRP technology for calculating wind-forced seiching. Collaborated with the Buffalo, Chicago, and Detroit Districts to validate the modeling system for the Great Lakes.
- Developed and verified a numerical model to predict scour for regions characterized by local flow curvature, flow separation, entrainment, and flow interaction with inlet structures. Applied to Matagorda Ship Channel, TX; Ventura Harbor, CA; and

Shinnecock Inlet, NY. Model was released to public through the worldwide web.

- Updated web-based tutorial and handbook on coastal inlets called "Inlets Online" that addresses needs from the professional engineering and science level to college and high school education.
- Developed a neural-network based data-gap filling utility with predictive capability in support of field measurement and long-term simulations of water level and current. Extended the neural network to regional level in an example at Long Island, NY, inlets.
- Supported Corps Districts in addressing concerns on national applicability at specific inlets. These included implementation of a new jetty termination concept at Grays Harbor, WA; sand management prediction at Shinnecock Inlet, NY, for which periodic mining of the flood shoal was demonstrated to be a competitive and favorable alternative for the total inlet sediment system; Ocean City Inlet, MD, involving channel deepening, jetty rehabilitation, and sand bypassing to Assateague Island (National Park Service); and modification of deposition basin design with weir jetty at Mouth of Colorado River, TX.

### **O&M R&D: Dredging Operations and Environmental Research (DOER) Program**

The DOER Program is an integral and highly beneficial component of the Corps navigation dredging and environmental protection missions. Dredging and disposal must be accomplished within a climate of increased dredging workload, fewer placement sites, environmental constraints, and decreasing fiscal and manpower resources. Balancing environmental protection with critical economic needs while accomplishing dredging activities is a major challenge. The program has validated innovative technologies for high profile contaminants and developed risk based assessments that will significantly reduce testing costs at virtually all harbors. Methods for reclamation and reuse of contaminated sediments from upland disposal areas for beneficial purposes as well as increased capacity are key components of the program that will result in tremendous savings.

Major focus areas of DOER include innovative technologies research, environmental resource

protection, dredged material management, and risk research. Accomplishments in FY 2005 include:

- **Innovative Technologies:** Identified, demonstrated, and evaluated emerging dredging, placement and other technologies such as: Punaise Demo, specialized dredges for contaminated sediment removal, confined disposal facility reclamation, Silent Inspector for cutter suction and dustpan dredges, Dredging Operations Decision Support System and, fluid mud quantification establish navigable depth.
- **Environmental Resource Protection:** Developed effective engineering and construction alternatives to protect environmental resources while allowing dredging operations to proceed in an economically feasible manner. Emphasis was placed on the endangered river sturgeon and salmonid protection, habitat protection from sedimentation and blasting, measures to reduce need for environmental windows.
- **Dredged Material Management:** Developed and validated numerical models, software tools for environmentally and cost effective operations and to address regulatory, habit and beneficial uses of dredged material. Special emphasis was placed on Geographic Information System based dredged material management, dredging and placement site dispersion models, contaminant exposure models for confined disposal areas, and beneficial uses testing, evaluation and database guidance.
- **Risk:** Developed quantitative methods and tools to support risk analysis of the environmental and economic benefits/cost associated with the full range of dredged material management options. Emphasis was placed on; trophic transfer of sediment contaminants, validation of chronic/sublethal bioassays, risk based screening for confined disposal facility contaminant pathways, improved effectiveness of aquatic capping, and treatment technologies for contaminated sediments.

### **Other Programs**

Within the GI, O&M, and CG appropriations, the ERDC conducts technical support efforts that include

activities such as demonstrations, mapping, data collection and technology transfer.

### **Coastal Field Data Collection**

The Coastal Field Data Collection (CFDC) Program is nationwide program designed to measure, analyze and assemble information required to accomplish the Corps mission in Coastal navigation and storm damage reduction. It is designed to collect non-project-specific data, i.e. regional data that is necessary for many projects. The Corps' contributes through this program to the Nation's Integrated Ocean Observing System. Major program activities are described below.

Field Wave Gauging and the Wave Information Study provide critical data essential to cost-effective design of Corps' projects.

The Southern California Beach Processes Study (SCBPS) is providing beach processes information specific to West Coast conditions. This information is important for any shore protection, navigation or environmental restoration project in coastal California. This program uses state-of-the-art techniques to examine coastal change and waves along a 100km stretch of southern California that includes 16 Corps projects.

The Pacific Island Land-Ocean Typhoon (PILOT) program is the first major effort to capture wave and water level conditions in the Pacific Basin during typhoons and hurricanes. The Surge Wave Island Modeling System program takes PILOT results and creates a wave and water level prediction system for the Pacific Islands similar to what other models are able to do for the Atlantic and Gulf of Mexico coasts.

The Integrated Ocean Observing System (IOOS) offers great benefits to the Corps. District level participation is not possible due to their funding constraints, so participation in IOOS through the CFDC program makes Corps participation possible.

### **FY2005 ACCOMPLISHMENTS**

- Continued data collection activities at the Corps Field Research Facility, at the Scripps Institution of Oceanography, at 18 National Data Buoy Center deepwater meteorological buoys.
- Completed deepwater wave hindcast for the Pacific Ocean, the first step in providing a 20-yr consistent coastal wave climate data for the Pacific Islands; and put wave hindcast data online for all coasts (except the Great Lakes).
- Completed third year of cross-reef monitoring in Guam and first year in HI. Unique data collected which document wave dissipation over the reef, critical to inundation prediction.
- Under the Southern California Beach Processes Study, provided unprecedented temporal and regional coverage of beach changes which show previously undocumented alongshore variation that is not predicted with existing coastal sediment/evolution models.

### **Remote Sensing/Geographic Information System (GIS) Center**

The Remote Sensing/GIS Center is the Corps' Center of Expertise for Civil Works Remote Sensing and GIS technologies, providing mission essential support. The Center provides cost-effective support through technology transfer and applications development for Corps mission responsibilities in all business practice areas: navigation, flood and coastal storm damage reduction, hydropower, regulatory, environment, emergency management, recreation, and water supply. Continuing interaction with other researchers and practitioners throughout the Corps, government, the private sector, and academia assures that state-of-the-art and state-of-the-practice knowledge of evolving trends that are important are available for the Corps and that duplication of effort is avoided.

The Center develops approaches for the integration of data from the disparate sources necessary for regional sediment management, basin studies, water control, land and water resource management, support to emergency management, and compliance with the attendant environmental regulations and related policies. The Center maintains cognizance of state-of-the-art sensors, data collection, analysis, and storage systems, commercial software, and bridging software that integrates these and operational technologies into the Corps divisions, districts, and other agencies' activities. Technology is transferred through PROSPECT training program in remote sensing and GIS, workshops and conferences, and Corps publications including Engineering Letters, Circulars, and Manuals.

Accomplishments in FY 2005 include:

- As the Center of Expertise, served as key resource and technology point of contact for the Corps of Engineers for Civil Works remote sensing and GIS.
- Provided guidance and technical support to the Corps' Geospatial Community of Practice (COP) and provided leadership to the remote sensing, hydrology and hydraulics, and emergency sub-COPs.
- Technology transfer through training courses, briefings, technical papers, technical demonstrations, pilot programs, and conferences.
- Initiated development of new PROSPECT course in Image Processing.
- Assisted with review of GIS performance during disasters.
- Provided leadership and technical support to strategic and enterprise USACE geospatial initiatives: Informatics Program Management Team; Common Delivery Format team member; Science and Engineering Technology Tools Program Management Team; Readiness XXI Technology Transfer Program Management Team; Geospatial Operations and Maintenance Business Interlink (gORM) team member; and Hydrology and Hydraulics modeling software development and support team member.
- Participated in the development the Missouri River Program.
- Provided technical support to Corps District offices for the development of implementation plans for Geospatial data management including development of enterprise geospatial data approaches.

**Automated Information Systems Support - Tri-Service Computer Aided Design Drafting/Geographic Information Systems (CADD/GIS) Technology Center**

This effort provides technical support to engineers and scientists utilizing CADD, GIS, and facility management technologies in the planning, design, construction, operation and maintenance of Corps projects. The Center includes participation by the Army, Navy, Air Force to reduce duplication of effort between the three services in the management of CADD/GIS technology for facilities and environmental engineering. In addition the Defense

Logistics Agency, the General Services Administration, USGS, FBI, Smithsonian Institution, National Capital Planning Commission, U.S. Marine Corps, U.S. Coast Guard, National Institute of Building Sciences, NIMA, EPA, and NASA have joined the center. As a result, this Center is a multi-agency vehicle to set standards, coordinate CADD/GIS systems uses, promote system integration, support centralized acquisition, and provide assistance for the installation, training, operation, and maintenance of CADD/GIS systems within the DoD facilities and environmental communities, including the Corps districts. All Corps districts that use CADD and GIS in mapping, planning, real estate, design, construction, operations, maintenance, and homeland defense and readiness benefit from the Center's efforts. Accomplishments in FY 2005 include:

- Release 3.0 of the A/E/C CADD Standard (both document and software tools) was released on CD-ROM and via the web. This released was distributed by several software vendors as part of their application (e.g. ProSoft). Software updates to implementation applications were incorporated in the new release. The A/E/C CADD Standards content was revised to make it compatible with Version 3.0 of the National CADD Standard. Requirements for Building Information Model Standards were developed and incorporated in Release 3.0. Ten on-site implementation training classes were taught across DoD to support user implementations. A web based training course was also developed and made available free of charge to DoD users.
- The GIS Spatial Data Standard for Facilities, Infrastructure, and Environment (SDSFIE) Release 2.5 was completed. The SDSFIE included continued development of the GIS data standards for Watersheds, Levees, General Civil Works, Master Planning, Critical Infrastructure, Homeland Security, and Real Estate activities. These activities provide a common data format for the development of GIS on civil works projects, thereby cutting costs and allowing sharing of data sets among government agencies and the private sector. Homeland Security data sets and symbology sets were enhanced in support of USGS and NGA to analyze data more quickly and facilitate data sharing and upward reporting. Electronic tools were developed and enhanced to facilitate the construction of GIS datasets for various GIS

vendor products. Eleven training courses were taught across DoD to support users in the use of GIS data standards. Standards Workgroup Assistance Teams were sent to selected sites to assist the users with implementations.

**Dredging Operations Technical Support (DOTS) Program**

Maintenance of the nation’s navigation projects requires compliance with numerous complex environmental statutes and Presidential Executive Orders. The Dredging Operations Technical Support (DOTS) Program fosters the “one-door-to-the-Corps” concept by providing comprehensive and interdisciplinary technology transfer, technology application, and training essential to all stakeholders involved in Corps navigational dredging projects. DOTS is managed within a centralized program to maximize cost effectiveness and expeditiously implement National policies, laws, and complex technical requirements on a consistent basis. The DOTS Program focuses on application of state-of-the-art technology and research results to field problems. Emerging environmental concerns as well as advances in scientific technology often cause uncertainty in administration of the Corps’ navigational dredging program. The DOTS program’s technology transfer function provides access to an extensive, up-to-date, consistent technology base and facilitates rapid, proactive responses to technical issues as they emerge. This fosters networking and solutions to common problems confronting the navigation dredging community. Short-term work efforts to address generic Corps-wide technical problems encountered during maintenance of navigable waterways and infrastructure are major features of the DOTS Program. Technology transfer and demonstration of new and emerging techniques with potentially high returns on investment for management of Corps navigation maintenance projects are also important DOTS activities. By disseminating knowledge of new research and development efforts to field offices constrained by staff reductions, the DOTS Program will continue to perform a critical technology transfer role in support of all O&M navigation projects.

Accomplishments in FY 2005 include:

- Numerous technical responses to questions raised by from Federal and state agencies and private concerns dealing with implementation of the inland and ocean

- testing manuals, management of confined disposal facilities, protection of sea turtles, and a host of other diverse issues.
- As mandated by the 1972 London Convention, the DOTS program reports ocean dumping activities to the EPA and the International Maritime Organization.
- The program has conducted sediment management seminars since 1991 that have been attended by over 4,800 personnel from Corps districts, federal, state, and local agencies, industry, and environmental protection groups. In 2005 a critical need for training was identified for Corps personnel engaged in navigation projects that involve implementation of the Endangered Species Act, and plans are underway for filling that need in 2006.
- The program also continued to provide specific guidance for the assessment and protection of threatened and endangered species associated with navigation projects. A joint Corps/EPA task force made significant progress toward formulation of a combined, generic ocean and inland disposal implementation manual. This effort fosters consistency in dredged material testing and management between the Clean Water and Marine Protection, Research and Sanctuaries Acts. This type of coordination is promoted through DOTS support of the Center for Contaminated Sediments.
- Expansion, maintenance and updating of several web-based databases provided enhanced access to important sources of information, such as the Environmental Residue and Effects Database (ERED), which continued to be critical for successful implementation of the CE/EPA ocean and inland testing manuals for dredged material disposal. New databases that extend accessibility to related resources, including upland plant toxicology, and tools for risk assessment applications are continually being updated.

**Inland Waterway Navigation Charts**

This effort provides Corps’ Electronic Navigational Chart data for all inland waterways and other federal navigation channels maintained by the Corps to be used by commercial Electronic Chart Systems , which, when combined with the existing Differential Global Positioning System , will improve the safety and efficiency of marine navigation in both

inland and coastal waterways of the United States. On inland waterways, the Corps will collect more accurate survey and mapping data than is currently on its paper charts, and produce Inland Electronic Navigation Charts in accordance with navigation users and vendors. When combined with the commercial chart systems, the Charts will greatly improve the safety and efficiency of navigation. This will allow safe navigation through bridge openings during fog and other bad weather conditions as well as during heavy traffic situations, and provide an accurate display for other systems such as radar and Automatic Identification Systems. The Corps will use the S-57 international data format, which is consistent with electronic chart products produced by the National Oceanic and Atmospheric Administration (NOAA), and the chart products produced by the two agencies will be coordinated for compatibility in adjoining areas. The Corps will also coordinate with the U.S. Coast Guard for aids to navigation information and collaboration rules for chart carriage by waterway users. In coastal and Great Lakes areas, the Corps will produce standardized channel conditions chart products that will provide consistent and reliable information to NOAA for chart updates, in accordance with Water Resources Development Act of 2000, Section 558. Similar channel chart products will be provided to navigation users, and these coastal and Great Lakes channel condition chart products will also follow the S-57 format. Such ENC development and publication activities are in accordance with National Transportation Safety Board recommendations to the Corps, and subsequent commitments made by the Chief of Engineers.

Accomplishments in FY 2005 include:

- New chart development – 1,601 river miles:
- Began or continued development of chart coverage for the Illinois, Cumberland, Lower Tennessee, and Arkansas Rivers; Chart revisions and updates – 2,600 river miles
- Published updated chart cells for the Mississippi, Ohio, Red, and Atchafalaya Rivers.
- Compiled most of the coastal channel Framework.

### **Monitoring of Completed Navigation Projects**

The Corps operates and maintains more than 800 navigation projects encompassing more than 25,000

miles of waterways. The purpose of this monitoring program is to identify the best navigation project practices and use them to improve all navigation projects' performance. Optimizing projects' performance requires that they be monitored, evaluated against preconstruction projections and present needs, and the lessons learned translated into proactive management guidance for Corps Districts. Information gained from monitoring navigation projects, including changes in sediment transport, water levels, currents, waves, flushing, river flows and other hydraulic phenomena with associated environmental impacts, will be used to verify design expectations, determine benefits, and identify operational and maintenance efficiencies. Information collected from monitored navigation projects can improve projects' performance and optimize opportunities for environmental enhancement. Information collected and analyzed on a national basis documents successful designs, disseminates lessons learned on projects with problems, and provides upgraded field guidance that will help reduce life-cycle costs on a national scale.

Selective and intensive monitoring of Civil Works navigation projects is executed to acquire information to improve project purpose attainment, design procedures, construction methods, and operation and maintenance (O&M) techniques. Both shallow- and deep-draft navigation projects located in rivers, reservoirs, lakes, estuaries, and the coastal zone are included in this program. Projects that will potentially provide maximum life-cycle cost savings are identified and those that best address high-priority cost savings are selected for monitoring and evaluation. Monitoring plans are developed jointly by Corps Districts and the US Army Engineer Research and Development Center. They consist of either a comprehensive detailed survey to verify post-construction conditions on a one-time basis or a repetitive collection of field data. The intensive data are analyzed and the results compared to the pre-construction predictions to verify or upgrade existing design guidance for minimizing O&M cost and assuring project benefits. The analyses include structural, topographic, bathymetric, and hydrodynamic responses and intercomparisons of projects when applicable.

Coordination between the Corps and other Federal, state, and local agencies is essential for proper accomplishment of this program. In addition to satisfying Corps' requirements, the data are made available through publications and will be of value to local, State, and other Federal agencies tasked with the development and implementation of regional

coastal and inland navigation management policies. Results are communicated to member agencies of the Marine Transportation System committees.

Accomplishments in FY 2005 include:

- Published a technical report regarding findings and conclusions of periodic inspections of the Crescent City Harbor, CA, breakwater.
- A periodic inspection of the Cleveland Harbor, OH, east breakwater was completed.
- A technical report providing results of monitoring hydrodynamic, sedimentation, structural, environmental, and geotechnical conditions at Tedious Creek Harbor, MD, was published.
- A technical report providing results of monitoring coastal hydrodynamics, sediment transport, and structural conditions at Aguadilla Bay Harbor, Puerto Rico, was published.
- A technical report was published on monitoring of riverine hydrodynamics and sediment transport processes for minimizing dredging at the upper Mississippi River training structures of Pool 13. Additional critical sites were selected for monitoring in this river region.
- A technical report regarding technology for reducing rubble-mound stone degradation and failure on Great Lakes harbors breakwaters and jetties was published.
- Monitoring of other navigation projects continued, including bendway weirs at the Greenville River Bridge reach of the Mississippi River to determine their navigation, sedimentation, and structural effectiveness. Ship motion data obtained for vessels in existing and improved reaches of the Houston Ship Channel continued to be analyzed and used to validate/enhance ship-to-ship interaction in simulation models.
- Monitoring continued regarding “pocket wave absorbers” used in the Great Lakes to reduce wave action in vertical, parallel-wall harbor entrances and mooring areas.
- Coastal and Hydraulic Engineering Technical Notes were published for each work unit in the MCNP program, thus providing interim results of the monitoring efforts. All monitored projects were previously nominated by Corps field offices for inclusion in this MCNP research program.

### **Regional Sediment Management Demonstration Program**

The Demonstration Program goals are to link the management of authorized Corps projects with one another, particularly across District/Division boundaries, and to leverage data collection and shoreline management activities with other Federal agencies and State and local governments within the limits of a regional watershed system (including uplands, rivers, estuaries and bays, and the coast). The purpose is to demonstrate short and long term cost-savings and increased economic and environmental benefits of maintaining sediments within their regional system, and of using sediments to sustain a balanced environment.

Accomplishments in FY 2005 include:

- New York District compiled sediment-needs assessment for dredging and placement activities by all levels of government and private concerns to define where sediment is currently being moved, and on where and by whom sediment will be needed in the future.
- Characterized the physical and biologic habitats of the Lower Snake River Watershed, to be used in the long-term Programmatic Sediment Management Plan.
- Developed of a Wrightsville Beach to Carolina Beach and Inlet Management Plan (Wilmington District) that will result in a sediment budget for the region.
- Completed a detailed evaluation of fifty existing projects where dredged sediment was used beneficially. The evaluations characterized ecosystem and life-cycle benefits that accrue from effectively managing dredge material placement.

### **Water Operations Technical Support (WOTS)**

Maintaining the environmental and water management conditions at 562 reservoirs (5,500,000 surface acres), 237 navigation locks, 926 harbors, 75 hydropower projects, and 25,000 miles of inland and coastal waterways impacted by the operation of Corps projects requires compliance with numerous statutes and state standards. Providing the technology and knowledge base necessary to address the general non-project specific environmental and

water management needs of project operations can best be accomplished through a comprehensive centralized program that will maximize cost effectiveness, and ensure broad dissemination and implementation of technology and information.

Accomplishments in FY 2005 include:

- The program annually publishes and distributes numerous copies of manuals, bulletins, notes, and reports. WOTS annually conducts specialty workshops, training personnel on the latest environmental and water quality management techniques.
- The WOTS program successfully responded to 50 direct technical assistance requests from 26 Corps Districts, conducted 3 technology demonstration efforts to verify management strategies and techniques, conducted 6 training workshops on environmental and water quality management techniques, and prepared 7 technical publications for distribution to the field.
- A continual endeavor of the WOTS program is coordination with water quality and environmental elements of other Federal agencies such as the Environmental Protection Agency, Tennessee Valley Authority, Bureau of Reclamation, Fish and Wildlife Service, U.S. Geological Survey, and the Bonneville Power Administration. These efforts have involved watershed management activities, problems related to the introduction and spread of aquatic invasive species, environmental impacts of hydropower facilities, and impacts of water releases in tailwater areas on fisheries.

### **Scientific and Technical Information Centers**

Five information analysis centers located at the ERDC provide the major interface between the Corps of Engineers and the public and private sectors to gather and disseminate information as required by PL 99-802, Federal Technology Transfer Act of 1986. The function of each center is to acquire, examine, evaluate, summarize, and disseminate newly published scientific and technical information generated within the Corp of Engineers and other activities in the U.S. and abroad.

The Coastal Engineering Information Analysis Center focuses on wave data and predictions, shore processes, inlet dynamics, navigation channels and structures, harbors, and coastal construction. The Cold Regions Engineering Information Analysis Center focuses on ice engineering, meteorology, climatology, geophysics, geology, remote sensing, and environmental engineering. The Concrete Technology Information Analysis Center focuses on cements, concrete, aggregates, concrete construction, concrete repair and rehabilitation technology. The Hydraulic Engineering Information Analysis Center focuses on hydraulic, hydrologic, water resources, and sedimentation of streams, rivers, waterways, reservoirs and natural impoundments; estuaries, inland and coastal groundwater; fishery systems; and hydraulic structures of all types. The Soil Mechanics Information Analysis Center focuses on embankment and foundation engineering, earthquake engineering, engineering geology, and rock mechanics.

The information centers critically evaluate and summarize the technical validity and merits of published and unpublished research and technical publications on design, construction, or other technology utilization. User communities have been well established and distribution lists for technology transfer are continuously updated. Electronic media including the World Wide Web are used where appropriate. The effectiveness of activities and services is evaluated on a continuing basis, and technology transfer products and methodology are revised when appropriate.

### **CUSTOMER SUPPORT**

Increasingly, ERDC expertise and products developed in R&D programs are being requested to solve challenges in critical areas of concern. Following are a few examples of the many projects the ERDC conducts for its many customers.

**Direct Technical Support to Corps of Engineer Districts in the areas of Wetlands and Watershed assessment.** ERDC scientists receive reimbursable support to provide technical assistance on wetland delineation and watershed management directly to various Corps of Engineers Districts. Examples of this include the following projects performed cooperatively with the St. Paul, Buffalo and San Francisco Districts. In the Minneapolis-St. Paul area the COE District was confronted with difficult questions involving wetland delineation in an area of historic hydrologic modification. ERDC wetland

soil specialists and hydrologic modelers teamed to evaluate the area and provide sound technical advice on soil permeability, the impact of ditching on hydrology and wetland identification. Buffalo District has named an ERDC scientist as a virtual team member and “technical lead” in their effort to develop a comprehensive watershed management plan for the Onondaga Lake watershed near Syracuse, New York. In another watershed management project, ERDC is developing a watershed assessment tool which utilizes a knowledge-based development system, a decision support system, and GIS to organize and apply the most current geomorphological and ecological principles to watershed assessment. This project is being supported by the San Francisco and their cooperators in the Russian River Basin.

**Invasive Plant Control (NH).** The submersed invasive plant, variable milfoil is rapidly infesting water bodies in New Hampshire, degrading water quality, fish and wildlife habitat, recreational opportunities, and property values. Through an intergovernmental cooperative agreement with the state, the US Army Engineer Research and Development Center is developing specific strategies for aquatic herbicide use that incorporates target and non-target plant phenology, water quality, and dose and timing of treatments. Results from this effort will provide guidance for selective, optimal, and cost-effective control of variable milfoil in New Hampshire and the New England region.

**Inner Harbor Navigational Canal (IHNC) Lock Replacement and Coastal Marsh Restoration (LA).** The IHNC project was undertaken so that the IHNC lock can be replaced with a larger, modern lock. The current lock, completed in 1923, is too small to accommodate existing traffic, causing traffic delays. Construction of the IHNC lock will require dredging of 3 million CY of sediment; however, this sediment is contaminated due to industrial activity. Dredged material from the project will be placed in the Mississippi River, a confined disposal facility, or be used beneficially for construction backfill and marsh restoration. This ongoing project is currently under litigation. The US Army Engineer Research and Development Center (ERDC) is providing direct support to the US Army Engineer District, New Orleans, for litigation expertise, risk-based contaminant evaluations, and environmental engineering. Specific activities being performed by ERDC include sampling plan development, aquatic toxicity assessment, terrestrial bioaccumulation studies, fate and transport modeling, and risk-based

modeling and assessment. Dredged material that is categorized as posing no unacceptable adverse impacts on humans and ecological systems will be used for marsh/coastal restoration.

**Fish Passage for Snake and Columbia River Dams.** Corps of Engineers dams on the Snake and Columbia Rivers can injure or kill outmigrating juvenile salmon (migrants) as they migrate from their natal streams to adult habitat in the ocean. Large, complex bypass systems are typically employed to divert migrants away from powerhouse turbine intakes during this migration and pass them safely to downstream areas. However, to be effective, bypass systems must create approach and interior hydraulic conditions that attract migrants and cause them to avoid all other possible dam exits. Researchers decoded the “traffic rules” used by migrants to navigate complex flow fields using advanced, integrated engineering-biological modeling methods developed at the US Army Engineer Research and Development Center. This understanding was then implemented in a “plug and play” tool – the Numerical Fish Surrogate (NFS) - to evaluate the performance of alternative bypass systems during project design instead of during post-project monitoring. The NFS will shorten project cycle time with attendant economic benefits and reduce impact on this valuable living resource.

**The Regional Internet Bank Information Tracking System (RIBITS)** The COE Regulatory District Offices manage multi-agency Mitigation Bank Review Teams (MBRTs) tasked with the formulation of District guidance for prospective mitigation bankers and potential bank users. Representative agencies include the Environmental Protection Agency, the Natural Resource Conservation Service, the National Marine Fisheries Service, the U.S. Fish and Wildlife Service, and various key state agencies. The Regional Internet Bank Information Tracking System (RIBITS) was developed by the ERDC to manage Mobile District’s mitigation banks, support the District’s MBRT, and serve as a source of technology transfer for prospective mitigation bank developers and customers owning impact sites. RIBITS allows the District to track the status of mitigation banks, monitor credits and debits incurred by permitting actions, view compliance reports, and automatically email requests for information and upcoming deadlines from a single Internet-based interface. RIBITS was designed as an underlying SQL database that stores information on existing mitigation banks,

users, habitats, watersheds, credit ledgers, and ecological progress. The Website is partitioned into public and restricted access components. The public access component provides information on mitigation concepts, bank establishment guidance, assessment tools, habitat classification, and highlights existing mitigation banks. The restricted access component of RIBITS allows individual mitigation bank managers to monitor their bank's credit ledger and ecological progress and provides access to supporting documentation (i.e. banking instruments, monitoring reports, etc). The MBRT and the District's Regulatory Branch can track each bank's credit ledger, monitor ecological progress, schedule site visits, and summarize available and sold credits across the District.

# INSTITUTE FOR WATER RESOURCES

## BACKGROUND

The U.S. Army Institute for Water Resources (IWR) is a field operating activity under the staff supervision of the Director for Civil Works, Headquarters, U.S. Army Corps of Engineers (HQUSACE). The Institute is the USACE center of expertise for integrated water resources management (IWRM), focusing on planning analysis and hydrologic engineering, and on the collection, management and dissemination of civil works and navigation information, including the Nation's waterborne commerce data.

The Subcommittees on Public Works, House and Senate Appropriations Committees, authorized the establishment of IWR in 1969 to facilitate the adaptation of the Civil Works Program to future needs by providing the USACE with the capability for developing forward-looking analysis and state-of-the-art methodologies. The Institute's mission is to support the Civil Works Directorate and the USACE MSC's and District offices by providing: (a) analysis of emerging water resources trends and issues; (b) state-of-the-art planning & hydrologic engineering methods, models and training; and, (c) national data management and results-oriented program and project information.

## IWR CENTERS

IWR has offices at three locations, each of which is a designated USACE center of expertise (DX): the National Capital Region (NCR) office in the Casey Building at the Humphreys Engineer Center, Alexandria, Virginia; the Hydrologic Engineering Center (HEC) in Davis, California; and the Waterborne Commerce Statistics Center (WCSC), which is part of the NCR's Navigation Data Center (NDC), in New Orleans, Louisiana.

**National Capital Region Office:** The IWR NCR office is the Corps DX for the development of planning methods and analytical tools. IWR fulfills this mission through a synergy of water resources planning and socio-economic expertise that blends practice with research, policy development and information. IWR planners, economists, social scientists, civil engineers and specialists in the physical sciences lead civil works strategic, planning and technology transfer initiatives; conduct national and focused policy development

studies; develop a broad range of partnering and investment decision-support techniques, methods and models for IWRM and navigation system applications; provide national and international interface with the water resources community at-large; and partner with the HQUSACE, Corps field offices and laboratories in solving complex technical water resources planning and evaluation problems. In particular, the Institute provides a critical mass of socio-economic expertise within the Corps, and serves as the residence for the Corps Chief Economist position which provides leadership of the Economics Community of Practice (CoP).

**Hydrologic Engineering Center (HEC):** The primary goal of HEC from its creation in 1965 is to support the Nation in its water resources management responsibilities by increasing the Corps technical capability in hydrologic engineering and water resources planning and management. An additional goal is to provide leadership in improving the state-of-the-art in hydrologic engineering and analytical methods for water resources planning. By means of programs in research, training, planning analysis, and technical assistance, efforts are made to be aware of the problems and needs of the Corps and the Nation. A commitment is also made to keep abreast of the latest developments throughout the water resources engineering profession, and to make use of this information in a manner best suited to the needs of the USACE. HEC increases the effectiveness of the Corps and the profession by bridging the gap between the academic community, practicing hydrologic engineers, and planning professionals. HEC incorporates state-of-the-art procedures and techniques into manuals and comprehensive computer programs. The procedures are made available to the Corps, United States and international professionals through an effective technology transfer system of technical assistance, publications, video tapes, and training. Technical specialty areas addressed by HEC include: Precipitation-runoff processes, reservoir systems analysis, hydrologic probability and risk analysis, river hydraulics and sediment transport, groundwater hydrology, water quality, and analytical aspects of water resources planning. Application areas include: Flood damage reduction, water control management, hydroelectric power, navigation, erosion control, water supply, watershed studies, and ecosystems restoration.

## REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS FOR FY 2005

**Navigation Data Center:** NDC is the Corps DX for the management of information on infrastructure, utilization and performance of U.S. waterways and port and harbor channels. Because of the integrated nature of water resources, NDC also directly supports a range of related CW business areas, including: hydropower, recreation, environmental compliance, natural resources, regulatory, emergency preparedness and readiness; along with other Federal, state, local agencies; plus the private sector. The primary operational arm of NDC is Waterborne Commerce Statistics Center (WCSC), which provides one-stop capability for national navigation information systems. NDC also provides integrated business information in support of Corps decision making to include financial, output, and performance measurements.

### FY 2005 SUMMARY

FY 05 was a remarkably productive year for the Institute during one of the most challenging periods in its 36-year history. During FY05 IWR executed a Civil Works Program of \$29 million with 154 in-house employees, primarily in professional disciplines with most possessing advanced degrees. IWR's in-house staff was supplemented by other experts detailed from USACE field offices and laboratories; Intergovernmental Personal Act (IPA) visiting scholars from universities and policy think tanks; and the private sector.

FY05 proved especially rewarding as it represented the first full year of operations under the Institute's "new" internal organizational structure in alignment with USACE 2012. Under this concept with the IWR management paradigm is based on a matrix team approach in-lieu-of a traditional function-based, stove-piped organization. IWR's new structure was approved in July 2004 upon issue of its updated Organization and Functions Statement, Engineering Regulation (ER) 10-1-23.

IWR's key accomplishments in FY05 include its technical role in supporting the USACE-wide implementation of the Civil Works Strategic Plan (IWR had previously led the completion of the plan in FY04); the continued publishing of new research products on maritime transportation economics flowing from the Navigation Economic Technologies (NETS) Research Program; the completion of all technical studies in support of the Lake Ontario and St. Lawrence River Project for the International Joint Commission (IJC); fielding new versions of HEC's flagship NexGen software products; issuing new versions of the Corps

Water Management System (CWMS) and the Civil Works Program's Operations and Maintenance Business Information Link (OMBIL), including significant progress on the deployment of OMBIL's Regulatory program module (ORM); initiating (pre-Katrina) a national flood risk initiative aimed at addressing residual flood risk at areas protected by levees; continuing progress building federal interagency partnerships with the Department of Interior (Bureau of Reclamation and U.S. Geological Survey), Department of Energy ( Oak Ridge National Laboratories and Sandia National Laboratories), Department of Agriculture (Economic Research Service and the Natural Resources Conservation Service), and the Federal Emergency Management Agency; and executing a wide number of technical assistance projects, including a growing number of significant technical activities in the international arena such as for the U.S. Agency for International Development (USAID) in support of the Iraqi Ministry of Water Resources.

As FY05 came to a close, the Institute was in the formative stages of initiating an unprecedented array of technical initiatives involving both IWR NCR and HEC in support of the USACE response to/and the post-event analysis of Hurricanes Katrina and Wilma. At the same time, IWR was proceeding through its own disaster recovery and mission reconstitution process for the Waterborne Commerce Statistics Center (WCSC) which is co-located at the New Orleans District (CEMVN) and was likewise victimized by Hurricane Katrina. All of WCSC's 39 people (and 15 resident contractor staff) safely evacuated from greater New Orleans the weekend prior to the landing of Hurricane Katrina; however, approximately half of the WCSC staff ultimately suffered devastating personal losses to their homes and property.

The accomplishments of IWR during FY05 are described in accord with its major focus areas.

### STRATEGIC THINKING

**Future Directions:** The major activities included supporting implementation of the Fiscal Year 2004-09 Civil Works Strategic Plan published in FY 2004, participating in development of the next strategic plan through research and scenario development, and developing policy responses to new challenges, including the need for unified flood risk management. The release of the CW Strategic Plan in 2004 represented the culmination of a multi-year effort aimed at establishing a new direction for the Civil Works

## INSTITUTE FOR WATER RESOURCES

Program based on the contemporary “watershed” planning approach of Integrated Water Resources Management (IWRM). The plan’s five strategic goals are firmly grounded in the “systems” perspective of IWRM and are fully aligned with the principle of environmental sustainability.

**Emerging Issues:** Although the Institute anticipated questions about the adequacy of the Nation’s flood and storm damage protection infrastructure, the urgency of responding to Hurricane Katrina reoriented IWR’s FY05 policy development program. Just prior to Hurricane Katrina the Institute prepared five issue papers regarding the nation’s preparedness for floods and hurricanes and held a provocation session on flood risk for Corps Senior leaders. Subsequently, IWR scoped a unified flood risk management policy paper based on lessons from Katrina and ongoing case studies of California flood management.

After Katrina struck, the Chief of Engineers demanded answers to questions about the performance of the New Orleans Hurricane Protection System. To answer these questions, the USACE established the Interagency Performance Evaluation Task Force (IPET). IWR was designated co-lead of the consequences assessment and interior flood control (IFC) sub-teams. The former team was charged with measuring the economic, human health, social, and environmental consequences of Katrina, while the IFC team undertook an in-depth evaluation of New Orleans interior flood systems. In addition to IPET, the HQUSACE anticipated that there would be questions about the decisions that lead to the design and construction of New Orleans Hurricane Protection System. In response to this challenge, IWR organized a Hurricane Protection Decision Chronology (HPDC) team that will report findings after IPET activities are completed in 2006.

**Post Katrina Studies:** The planning for what became the Interagency Performance Evaluation Task Force (IPET) was initiated at the end of FY05 following the devastating effects of hurricane Katrina. IWR staff participated in developing the plan of study for IPET helping to organize the overall study within a risk analysis framework. Additionally, IWR provided logistics and support for the IPET study development task force. IPET work was started at the beginning of FY06. The IPET study is comprised ten interrelated tasks involving over 150 experts from USACE, other Federal agencies, local agencies, academics and contractors.

In FY05, IWR developed the plan of study, formed the study team and initiated what became the Hurricane Protection Decision Chronology (HPDC) study and team. HPDC was established at the direction of HQUSACE. It is acting as a complement to IPET by assembling and documenting the chronological record of planning, economic, policy, legislative, institutional, and financial decisions that influenced the design, scale, configuration, and condition of the greater New Orleans hurricane protection system. The team is composed of external experts on water resources policy and planning, non-Federal flood and storm water protection, and in-house staff under the overall direction of IWR.

**USACE Chief Economist:** Dr. David Moser of IWR is the USACE Chief Economist and leader of the Economics Sub-Community of Practice (Cop). FY05 activities included the organization of senior economists group which includes senior economists from each MSC’s, HQUSACE and IWR. This group held two meeting during FY05 with the primary goal of improving economic analysis capability within USACE. To that end, the senior economists group developed a subject matter expert database of all economists in USACE which includes assessment of the experience and expertise of each economist for each economic activities conducted by USACE. Additionally a listing of core competencies by project purpose was developed providing the major activities and skills necessary to complete those activities. The group is working on developing a “gap” analysis to identify needed skills and capabilities. Work proceeded on the update of water resources planning National Economic Development (NED) Manuals (a NED Overview Manual and updated guidelines on flood damage reduction and deep draft navigation). Activities also included the design of a career path template for Corps economists, and the scoping of future work on defining competence standards and training programs. The USACE Chief Economist participated in selection boards for senior economists throughout the Corps, and in the conduct of Independent Technical Reviews (ITRs) on the economics component of a complex navigation project. The USACE Chief Economist was involved in issues relating to NED evaluation of externalities and value of time saved.

**National Shoreline Management Study:** The National Shoreline Management Study (NSMS) is a collaborative, interagency effort to determine the extent and cause of shoreline erosion along the coasts of the U.S. The NSMS is also assessing the national level economic and environmental impacts of such erosion, and is examining the appropriate Federal and non-

## REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS FOR FY 2005

Federal roles and policies in shore protection activities. The five study workgroups are co-chaired by a mix of Corps and other Federal agency representatives. From a technical and policy standpoint, the NSMS is also assessing the use of subsystems approaches to management sediment holistically (Regional Sediment Management or RSM) in close coordination with related USACE and other intergovernmental activities, including the RSM demonstration projects being conducted by Corps districts and the ongoing coastal research of the Coastal-Hydraulics Laboratory (CHL). In FY 2005, the Shore Processes Work Group commenced development of a conceptual study, using the Gulf Coast that will describe the general level of detail and type of data available to be used by the other Work Groups to examine the economic and environmental implications of shore erosion and accretion.

**Policy Development:** The Institute conducted a range of policy development studies in 2005. The Nature of Policy Studies and Water Supply Database 2005 Update were initiated. Examples of completed studies include: Water Supply Database 2004 Survey; the Survey & Analysis of Criticisms of Corps Planning Guidance (the Principles and Guidelines) & Links to Planning Studies (the P&G); and a Regulatory Impact Analysis for Proposed Compensatory Mitigation Rule; and Achieving Environmental Sustainability. The Institute also conducted a Civil Works “provocation” session with the HQUSACE outgoing and incoming leadership on selected water resources issues and future challenges, including an in-depth discussion of the implications to the future CW Program.

### COLLABORATION AND PARTNERING

**Environmental Advisory Board:** The Institute assumed a lead technical role in supporting the Chief’s Environmental Advisory Board (EAB, a Federal Advisory Group) beginning in FY04. In this role the Institute leads a team of specialists drawn from throughout the Corps in partnership with ERDC to advise and assist the EAB as it reviews the Corps Civil Works missions, roles and business processes. Technical support in 2005 focused on seven themes, which the Chief requested EAB review and provide recommendations: (1) the adequacy of legislative authorities for Corps ecosystem restoration; (2) the Corps application of adaptive management principles in ecosystem restoration; (3) creating an environment for improving the Corps Outreach and Partnering; (4) improving the Corps Regulatory Program; (5) alternative frameworks for determining environmental benefits, (6) methods for measuring environmental

restoration project performance, and (7) the success of peer review processes implemented by the Corps.

**Inland Waterways Users Board:** The Institute continued its support of the Inland Waterways Users Board (IWUB) in FY05, including the analysis of and reporting on the financial status and capability of the Inland Waterway Trust Fund (IWTF) at meetings of the Board, and the administration of three IWUB meetings including No. 47 on December 7th, 2004, in St. Louis MO, No. 48 on February 24<sup>th</sup>, 2005, in Washington, DC, and No 49 on July 27<sup>th</sup>, 2005, in St. Paul, MN.

**National Outreach:** IWR’s FY05 technical interface activities included collaborations with a wide range of national research, professional, industry and non-governmental organizations, including: National Research Council’s Water Science and Technology Board, the Transportation Research Board, and the Marine Board; the American Society of Civil Engineers (ASCE) Environmental and Water Resources Institute (EWRI) and Coasts, Oceans, Ports and Rivers Institute (COPRI); the American Water Resources Association (AWRA); and the American Association of Port Authorities (AAPA), to name just a few.

IWR also had a very active role supporting the AWRA in the Second National Water Resources Policy Dialogue, February 14-15, 2005, which provided a forum for participants from all levels of government, as well as public and private organizations, to discuss critical water resources challenges facing the nation.

**The Nature Conservancy Sustainable Rivers Project:** Launched in July 2002, the Sustainable Rivers Project (SRP) is a nation-wide partnership between the U.S. Army Corps of Engineers and The Nature Conservancy to improve the integrity and life of rivers by changing the operations of Corps dams. The SRP is working towards this goal through a combination of partnered activities, including demonstration projects, training, software development, and a staff exchange that assigned an engineer from the Corps’ Hydrologic Engineering Center to Sustainable Rivers through an IPA (Intergovernmental Personnel Act). The exchange was signed as a one year agreement and later extended for a second year, which concluded in February 2006. It was instrumental in promoting the partnership, providing direct support to project sites (especially for the Savannah, Green, West, Ashuelot, and Bill Williams Rivers), and initiating a joint software development project and a joint training program, which has now graduated students from nearly 90% of Corps Districts. Many lessons learned from the direct project support have now been

## INSTITUTE FOR WATER RESOURCES

incorporated as material in the joint training courses. After conclusion of the personnel agreement, HEC has stayed active in Sustainable Rivers and the broader Corps-Conservancy partnership and is looking for ways to continue and build on these efforts in the future.

**Flood Risk Management Initiative:** Collaboration with FEMA, other Federal agencies, state and local governments, and important associations like NAFSMA and ASFPM is critical to the development of a sound national flood risk management strategy. Minimizing institutional barriers to efficient and effective water resources planning, decision making, and management, is defined by the Civil Works Strategic Plan as one of the five challenges affecting the nation water resources. To effectively address this challenge, institutional barriers must be broken down both between and within individual agencies. Flood risk management in the U.S. today presents a stark example of a water resource issue where minimization of institutional barriers through collaboration is essential to ensuring the safety of our citizens. The Institute of Water Resources has been instrumental in developing collaborative partnerships to improve the management of flood risks across the nation.

The basic framework for collaborative partnerships in flood risk management has been created through the Levee Policy Committee of the FEMA Map Modernization Program, the quarterly FEMA-Corps-NAFSMA-ASFPM Senior Leaders meetings on flood risk management, previously long-standing relationships between the Corps and NAFSMA through the Corps Flood Damage Reduction Program and, to a lesser extent, Memorandums of Understanding with FEMA, the Bureau of Reclamation, USGS and NRCS.

Over the last two years the Institute has provided intellectual leadership of both the Levee Policy Committee and the FEMA-Corps-NAFSMA-ASFPM senior leader meetings. The Levee Policy committee includes representatives from all Federal water resource agencies as well as state agencies and organizations such as NAFSMA, ASFPM and insurance companies with an establish goal of articulating levee policy for the FEMA Map Modernization Program. Similar to the Levee Policy Committee, the FEMA-Corps-NAFSMA-ASFPM senior leader meetings were initiated in August 2005 to discuss flood risk coordination issues, again, primarily related to the Map Modernization program.

In order to improve partnering at the state and regional level, the Institute worked in cooperation with the Federal Emergency Management Agency to establish an initiative called "Silver Jackets". The concept focuses on USACE and FEMA partnering with State

agencies as lead facilitators in establishing an interagency team with each state. The purpose of these teams is to work collaboratively with the State and appropriate stakeholders in developing and implementing solutions to natural hazards by combining available agency resources, which include funding, programs, and technical expertise. Each team's membership and goals will be geared toward that particular state.

An interagency team, the Silver Jackets, was implemented in a pilot state – the State of Ohio. Core team members include USACE, FEMA, USGS, NRCS, HUD, EDA, NWS, Ohio Division of Natural Resources (ODNR), Ohio Emergency Management Agency (OEMA), and Ohio EPA. The State of Ohio, hesitant at first, now fully supports the team - demonstrated most recently by the State submitting this team as a program that should be supported by local congressional interests. An additional team has recently been established in the State of California. Nineteen different Federal and state agencies attended the initial meeting conducted in July 2005, demonstrating the interest and support of this concept.

**IWR Visiting Scholar Programs:** FY05 marked the fourth year for the Institute's Maass-White Visiting Scholar program, established in 2001 in recognition of the contributions of, and the Institute's intellectual alignment with, two of the founders of modern water resources analytical theory – Professors Arthur Maass, Harvard University and Gilbert White, the University of Chicago. FY 2005 also was the second year for two other designated visiting scholar positions: one in partnership with the Universities Council on Water Resources (UCOWR), and HEC's Roy Beard Visiting Scholar program – named after the founding director of HEC. Each of these programs seek to bring the foremost water resources experts from academia, private industry, and other agencies and laboratories to residence at IWR or HEC for periods of six months to one year. Visiting scholars are expected to help infuse new energy and ideas to the IWR program, while the practical work environment at IWR/HEC provides a stimulating context for mutual exploration of potential advances in hydrologic engineering and planning analysis.

IWR's Maass-White Scholars have included Dr. Daniel (Pete) Loucks, Cornell University (2001-2002), Dr. Peter Rogers, Harvard University (2002-2003) and Dr. Leonard Shabman, Resources for the Future, (2003-2005), while the inaugural UCOWR Fellow was Dr. Bruce Hooper, Southern Illinois University (2004-2005), who worked on performance indicators for successful watershed-based organizations. HEC's first

## REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS FOR FY 2005

Roy Beard visiting scholar was Mr. Tony Thomas, founder and president of Mobile Boundary Hydraulics, followed by Dr. Jerry Stedinger, Cornell University (2005).

In FY05, IWR had other visiting scholars, including former U.S. Army Brigadier General Dr. Gerald Galloway, now a University of Maryland professor. Still a visiting scholar at IWR, Dr. Galloway is presently very active in the post-Katrina water resources policy discussion on the national scene.

### WATER RESOURCES METHODS AND MODELS

**Planning Models Improvement Program:** In 2004 HQUSACE Director of Civil Works approved the recommendations of the Planning Model Improvement Program (PMIP) Task Force, which was co-directed by IWR. Key HQUSACE commitments included publishing guidance in 2005 that prescribes a corporate business process and policy for the development, certification, training and on-going support for planning models, with the certification process based on internal and external peer support and review, and with the responsibility for establishing priorities and managing the certification process residing with the planning centers of Expertise, in coordination with the findings of Strategic Engineering and Technology (SET) Initiative. This policy ultimately manifested in 2005 as Engineering Circular (EC) 1105-2-407. Also key to PMIP recommendations was the coincidence with the peer review protocols being used as part of the NETS research program for navigation analysis models. In FY 05, IWR with input from other Corps laboratories and the Planning Centers of Expertise developed protocols for model certification, which includes the processes and criteria to be used for certifying planning models. The protocols are being tested on three planning models and the results will be used to finalize and publish the protocols for certification. The tests are led by IWR with the participation of the Planning Centers of Expertise.

**Navigation Economic Technologies Research:** For more than a century the U.S. Army Corps of Engineers has played a key role in maintaining a robust national economy by ensuring that farmers, manufacturers and businesses can easily transport goods up and down our nation's rivers and out to sea via coastal ports. The Navigation Economic Technologies (NETS) Research Program supports the navigation mission by developing state-of-the-art, credible, independently verified economic models, tools and techniques to be used by USACE field planners in informing investment decision-making at all levels of the agency.

To ensure that our nation's navigation system remains as efficient, effective and affordable as possible, the NETS research is aimed at developing a standardized and transparent knowledge base and associated suite of economic evaluation tools for addressing these issues. Key focus areas include: analyzing shipper behavior and responses, particularly decisions to switch to non-water modes of transportation, and assessing global market conditions, including the impact of international competition and commodity flows.

The NETS research program has two primary focal points: expansion of the body of knowledge regarding the economics underlying use of waterways and harbors, and creation of an economic decision-support toolbox of practical planning models, methods and techniques that can be applied to a variety of situations. The knowledge and tools developed by the NETS research program are based on: reviews of economic transportation and market theory; current best practices both within and outside of the Corps; data needs and availability; and peer recommendations.

In FY05, NETS research continued development of a series of practical tools and techniques for use by Corps navigation planners across the country. The centerpiece of these was a suite of simulation models that include:

- The Global Grain forecasting model. This effort demonstrates a spatial equilibrium forecasting technique that can be used in a variety of settings. As developed, it focuses on the global grain trade with a specific emphasis on Mississippi river grain flows. This model is being modified to respond to independent peer review comments.
- The Mid-America Grain study, conducted in FY04, estimated the shipper response curve for the shippers who use the Upper Mississippi. These findings have been incorporated into a new annual model. This "Survey Model" is designed to respond to the criticisms made by the Nation Academy of Science to the structure and inputs of previous models. The Survey Model is being prepared for certification by the PCX for inland navigation.
- The survey techniques and shipper response econometric techniques that were developed for the Mid-America study where sharpened and applied to shippers utilizing the Columbia

## INSTITUTE FOR WATER RESOURCES

River. This is the second demonstration of the ability to estimate shipper response.

- The Oak Ridge National Laboratory has started work on the Regional Routing Model. This traffic routing model will identify annual quantities of commodities from various origins and routes used to satisfy forecasted demand at each destination.
- Significant advances were made to two microscopic event models. The beta version of the HarborSym model was release, and DDPCX-sponsored training has been delivered. The model, training material and user's guide are all available on the NETS web sit. The Navigation System Simulation (NaSS) model reached its first milestone with the publication of the draft design document. This document is being revised to respond to independent peer review comments.
- Model communications have been enhanced with the development of animation and visualization tools. For the inland waterways, the Inland Navigation Animation Module (INAM) will allow for the visualization of LPMS data and, in the future, Navigation System Simulation analysis. The HarborSym Animation Model (HSAM) animates HarborSym analysis. These features greatly facilitate model calibration and communications.
- Work has begun to incorporate NETS research findings into legacy models. In conjunction with the Oak Ridge National Laboratory, NETS is working to incorporate "shipper response" into the Ohio River Navigation Investment Model (ORNIM). This effort will remove from the model the need for perfectly inelastic demand curves. In a related effort, NETS is working with the PCX for inland navigation to conduct surveys to estimate the shape of the shipper response curves on the Ohio River. These inputs will be needed for the modified version of ORNIM.

Looking forward to 2006, NETS is transitioning from research to practice. However, many areas of research remain. The HarborSym channel-widening model is now being used in field study, while the NETS team extends its functionality to include channel-deepening analysis. We will conduct shipper response surveys on the Ohio, and again on the Upper Mississippi, while incorporating shipper response into

the Survey Model for use by the Upper Mississippi study team. The NETS team will further develop the spatial equilibrium-forecasting tool, while the Upper Mississippi study team adopts the Global Grain application for study use. Continued development of the Regional Routing Model and the Navigation System Simulation Model will produce prototypes in FY06. The NETS team continues to focus on outreach and communications with the NETS web site, NETS Newsletter and participation at conferences around the world.

**Cost Effectiveness and Incremental Cost Analysis:** The Institute deployed an updated version of IWR-PLAN (Version 3.33), which is a water resources investment decision-support tool that performs cost-effectiveness and incremental cost (CE/IC) analyses associated with the formulation and evaluation of planning alternatives which produce non-monetary or a combination of monetary and non-monetary outputs. Developed in partnership with the Social Sciences Institute and the Department of Interior's Natural Resources Conservation Service (NRCS), IWR-PLAN was originally designed to assist with the development and comparison of alternatives plans for ecosystem restoration and watershed planning studies. However, the program can now be applied to a wide variety of integrated water resources planning and management (IWRM) problems by helping identify which plans are the best financial investments by displaying and comparing the effects of each plan on a range of decision variables.

**Transportation Systems:** IWR's Transportation Systems program supports Corps districts and HQUSACE in accomplishing navigation project planning and valuation responsibilities through the provision of uniform, consistent maritime transportation data on the operation and replacement of commercial waterborne vessels and comprehensive statistics on the composition of the world deep draft fleet and world trade and cargo flow forecasts. Accomplishments for FY 05 include, updated vessel fuel costs; world trade and commodity flow forecasts; update and distribution of materials from various subscriptions; update of the Inland Waterway Review, including cargo trends and lock and dam operations and investments throughout the inland navigation system, and updated barge, rail and truck alternative transportation modal models.

**Flood Damage Data:** The Institute's Flood Damage Data program provides a centralized, consistent and cost-effective database of depth damage data for use by all USACE district planners. The Program's main objective is to conduct and consolidate actual flood damage surveys following flood events for both coastal

## REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS FOR FY 2005

and riverine events. Accomplishments in FY05 included the design, testing and release of updated OMB approved questionnaires for the field conduct of flood damage surveys, the development of generic business depth damage relationships, and the collection of data and development of a model for estimating damages to roads.

**National Economic Development Manuals:** In FY05, IWR continued the development of revised National Economic Development Manuals for flood damage reduction, deep draft navigation and storm damage prevention (coastal). The manuals provide a description of procedures and tools for use in the economic evaluation of water resources projects and are an invaluable tool for Corps economists and planners. A draft of the flood damage reduction manual was completed in FY 05 and is under review by field planners. A main component of this effort is the publication of the manuals as web-based tools. The development of a prototype of the web-based manual was initiated in FY 05.

**System-Wide Water Resources Research:** FY 2005 was marked by a major joint effort of IWR, led by HEC, with the Engineer Research and Development Center (ERDC) laboratories in shaping the new System Wide research and development program, a program focused on expanding the view of research activities to the 'System Wide' perspective, reflecting a concerted effort by USACE to better work consistent with concepts of sustainable development in a watershed context. The effort has thus far been most successful, portending the development of new and exciting products for field office use in the coming years. It should be noted that most of the IWR software and new methods development is funded from this and other USACE civil works research programs.

**NexGen Software:** HEC-HMS version 3.0 was released in early 2006. This release constitutes a major update to HMS. There are many new features as well as a completely new user interface that provides newly designed functionality. Besides replacing the proprietary user interface, new technical features include automated frequency curve development, the addition of snowmelt capability, and incorporation of interior flooding simulation capability. The companion GIS utility package (HEC-GeoHMS) is being updated and new features added to prepare for a parallel release with the new HMS version. This utility provides substantial capability to effectively use national terrain data sets to rapidly develop HEC-HMS models.

At the end of fiscal year FY04, final touches were being put on HEC-RAS (Version 3.1.3) for release in May 2005. Work on adding sediment transport began in FY05 and a release with sediment capabilities is slated for FY06. The companion GIS utility package (HEC-GeoRAS) has also undergone improvements and was released simultaneously with HEC-RAS Version 3.1.3.

The major flood damage and risk analysis software package, HEC-FDA, continues to be improved, with progress made in nonstructural measures and GIS capabilities into the risk analysis program HEC-FDA. The projected release schedule for the new version is late in fiscal year 2006.

The new features added to the reservoir simulation program HEC-ResSim were substantially completed in FY04. These features included system hydropower and pump-back storage operations, period-average flow requirements, conditional (if-then-else) rule evaluation, scripted state variables and rules, and user-defined reports... In FY05, the new and existing features were extensively tested and refined. Because outstanding issues—including uncontrolled spillway overflow and long-interval (daily) operation—have yet to be resolved, the projected release schedule for the new version has been delayed to the 4th quarter of fiscal year 2006.

Under development for several years, a new program coined HEC-EFM (ecosystem functions model) is emerging as a valuable link between traditional flow-based watershed analysis and ecosystem response. A release is planned in FY 2005.

Another new initiative begun in FY 2004 and carrying through FY 2005 has been coined HEC-WAT, Watershed Analysis Tool. This software will be the integration environment for HEC models, and later program packages developed by others. The HEC models of RAS, HMS, ResSim, FDA, and EFM are to be seamlessly linked in the WAT system. WAT is scheduled for a beta release and on-site workshop at HEC in summer 2006.

### INTEGRATED CIVIL WORKS SYSTEMS

**OMBIL:** NDC's production databases provide water resources facility inventories, outputs, and activities that are integrated into a centralized performance management information system – the Operations and Maintenance Business Information Link (OMBIL). OMBIL encompasses the Civil Works businesses of navigation, hydropower, recreation,

## INSTITUTE FOR WATER RESOURCES

environmental compliance, environmental stewardship and regulatory. These data are combined and internally distributed through OMBIL decision support system to support a variety of Corps management initiatives, as well as federal and public data requirements.

In support of the Civil Works business performance measurements, NDC extracts expenditure data from CEFMS and combines it with the different business output data to generate efficiency and effectiveness measurements. These measurements are for both internal use in the Corps <https://ombil.usace.army.mil> and submission to higher authority including the Office of Management and Budget (OMB). Also, NDC data supports and is a source for the Corps "Value to the Nation" and the federal government's recreation access site "rec.gov".

The navigation data has been integrated with CorpsMap that provides an intranet web-based GIS interface. This web site includes many of the Corps other data layers such as Digital Project Notebook, Inventory of Dams, Bridge Inventory Database, Division and District Boundaries and Real Estate Holdings plus many standard layers such as state, county, congressional district, zip codes and etc.

All of NDC's publicly available navigation and water transportation data is available via a single gateway at [www.iwr.usace.army.mil/ndc](http://www.iwr.usace.army.mil/ndc) or on its annual CD-ROM. The site also provides links to other Corps, Federal and public sites related to the navigation business. NDC continues to strive to provide single site portals related to various management views for accessing all data and information

**CWMS:** The project to modernize the Water Control Data System (WCDS) software began in FY 1997. Renamed CWMS or Corps Water Management System, and formally identified as an Army AIS, CWMS was fielded in its first operational state in 2002/2003. Since that time, the system has been updated at roughly annual intervals at the thirty plus USACE offices with water control management responsibilities. CWMS supports field-level decision-making within the Corps water management mission. It embodies data acquisition, validation, transformation and management; forecasting, simulation and decision support analysis; and information dissemination. Improvements to the system continue via a field-prioritized betterments program. The current fielded version of CWMS (v 1.4) was released in January 2006. Improvements over the preceding version include the addition of snow-melt modeling, several new features in HEC-ResSim, the capability of storing, retrieving,

and editing rating table information, upgraded data stream processing, new security features, and visualization scaling. The management and funding structure provides for a modest field-directed betterments program that will be ongoing throughout the life cycle of CWMS. Currently, version 2.0 is under development with a planned release near the end of 2006. Version 2.0 will include important revisions to the basic database structures, allowing users within water control more direct access to their data and enabling them to make more effective use of the features inherent in the commercial Oracle database at the center of CWMS. Information about CWMS and other HEC software is available on the HEC Web site: <http://www.hec.usace.army.mil/cwms/>.

### WATER RESOURCES TRAINING AND EDUCATION

**PROSPECT Program and Specialty Workshops:** IWR continued the USACE PROSPECT training program rebound by presenting twenty-six week-long courses (seventeen led by the IWR NCR and nine by HEC). HEC had two field workshops in FY05 (totally two weeks of training). The courses covered a wide range of civil works water resources topics: Public Involvement and Teaming in Planning; Public Involvement – Communications; Regulatory for New Regulators; Regulatory - Procedural Issues; Regulatory - Decision-Making; Regulatory Executive Seminar; Eco-system Restoration Planning/Evaluation; Economic Analysis; and a full menu of hydrologic engineering and planning analysis topics including courses on, HEC-HMS, GIS applications, watershed/river and wetlands restoration courses, and advanced courses in unsteady flow with HMS–RAS and HMS applications. Attendance averaged about 25 students per course.

The specialty workshops focused on HEC software such as HEC-FDA specifically for economists, engineers, and planners from the NRCS and, HEC-HMS; the use of navigation data and information systems; IWR PLAN and cost effectiveness and incremental cost analysis (CEICA).

**Planning Excellence Program:** Throughout FY 05 IWR provided managerial and technical support to the Civil Works Planning Community-of-Practice in the execution of the Planning Excellence Program. This included the management of the Planning Associates Program and the conduct of the two-week "Washington-Experience" orientation for the FY05 class. The goal of the Program is to develop planning leaders who can manage complex planning studies that lead to quality decision documents and who will

## REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS FOR FY 2005

provide water resources technical and professional leadership in the future. IWR, in coordination with HQUSACE, is responsible for the implementation of the Program including the selection of candidates, development and delivery of training sessions, financial management and logistical support. IWR also provided support to the local delivery of selected Planning Core Curriculum Courses by the Corps MSC's. These eight courses provide the basic, full performance training needed by entry level planners across the USACE as the means to accelerate their progress to the journeyman stage of their career development.

Further progress was made on the development of distance learning components of the Advanced Degree Program in Integrated Water Resources Management (formerly titled the Master's Degree Program in Water Resources Planning and Management), which is offered at five Universities, Johns Hopkins, Southern Illinois University, the University of Florida, Harvard University, and the University of Arizona. IWR also provided support to the local delivery of selected Planning Core Curriculum Courses by the Corps MSC's. These eight courses provided the basic, full performance training needed by entry level planners across the USACE as the means to accelerate their progress to the journeyman stage of their career development.

### REIMBURSEABLE TECHNICAL ASSISTANCE

Reimbursable project work was undertaken for Corps field offices as well as HQUSACE Civil Works Planning, Engineering, Operations-Regulatory, and Office of Homeland Security; the HQUSACE Office of Interagency and International Activities; the Corps Engineering Research and Development Center - Coastal and Hydraulics and Environmental Labs; the Federal Emergency Management Agency; the International Joint Commission; the National Oceanic and Atmospheric Administration (National Weather Service), the Department of Interior (USGS), and other Federal agencies, along with approved Thomas Amendment Agreement technical support to the Lower Colorado River Authority, Texas, and the Tampa Bay Water Authority, Florida. Other projects for IWR's USACE clients included navigation systems economic evaluation, technical advice and guidance on plan formulation, incremental cost and cost effectiveness (IC/CE) analysis, risk analysis, watershed and reservoir system modeling, water quality, river hydraulics, wetlands hydrology, water control management, regional statistical analysis, flood damage analysis, flood warning response systems, GIS applications in

hydrology and hydraulics, groundwater modeling and water supply in support of interagency investigations.

Among the most notable reimbursable projects included the completion of the five-year, \$20 million Lake Ontario and St. Lawrence River Study for the International Joint Commission (IJC), which demonstrated the practical application of contemporary IWRM planning concepts and modeling techniques; the completion of Phase 1 modeling of the Tigris-Euphrates Rivers basin, and subsequent extension of the watershed model which included the reconstruction of historical data and completion of the draft Integrated Marsh Restoration Program (IMRP) report; and partnering with (1) USACE ERDC on the provision of capacity building training for staff of the Iraq Ministry of Water Resources, and (2) with the U.S. Geological Survey in providing stream gage installation and training to the Ministry of Water Resources in Iraq.

### CIVIL WORKS PROGRAM AND PROJECT INFORMATION

IWR provides a full range of information on key Civil Works activities including international, national and Corps-wide data and information. National water resources database concept development, design, implementation, operation, and maintenance activities are provided through a combination of in-house and private sector systems analysts, statisticians and engineers/scientists who work in close coordination with Corps users.

**Navigation Data Center:** The Navigation Data Center (NDC) is the central manager of navigation data for the Nation, and NDC provided information directly supports the Corps \$1.8 billion annual navigation program in addition to all other CW programs. NDC is responsible for national level executive oversight and management responsibilities such as the development of both federal and Corps policy and guidance involving Engineering Regulations and the Code of Federal Regulations and their enforcement. The Office of Management and Budget, acting on legislative mandates, recognizes USACE, acting through NDC, as the Federal collection agent for waterborne commerce, vessel activities and waterway infrastructure data and statistics.

NDC accomplishes its objectives of supplying timely and accurate data through the following activities: 1) Assessing user requirements; 2) developing, designing, and operating and maintaining systems to collect, process, and store data and information; 3) developing and disseminating data,

## INSTITUTE FOR WATER RESOURCES

information and statistics products; 4) training of providers and users; 5) maintaining technological and content interoperability and currency.

As a national statistical center, NDC coordinates extensively with other federal statistical agencies and federal data users, and represents the U.S. Government with foreign governments in the development of data and information standards and protocols; and in the negotiation of data exchanges. Within the Corps NDC actively participates in corporate information integration and coordination and plays a lead role in developing, coordinating and disseminating water resources information for performance measurement and management purposes, and in assisting in the development of strategic communication with both internal communities of practice and external water resources interests, stakeholders and communities. Key information and data provided in FY04 include:

### **Waterborne Commerce and Vessel Statistics:**

Under the authority of the River & Harbors Act of 1922, as amended, and codified in 33 U.S.C. 555 the Corps is to collect, process, distribute, and archive commercial vessel trip and cargo data. These data and statistics are used to analyze the feasibility of new water transportation projects and activities; to set priorities for new investment and rehabilitation; and for management of the operations and maintenance of existing projects.

Under Federal law, vessel-operating companies must report domestic waterborne commercial vessel movements directly to the Corps. The types of vessels include: dry cargo ships and tankers, barges (loaded and empty), towboats (with or without barges in tow), tugboats, crew boats and supply boats to offshore locations, and newly constructed vessels from the shipyards to the point of delivery. Vessels remaining idle during the monthly reporting period are also reported.

U.S. Foreign waterborne import, export, and in-transit cargo and vessel movement data are provided to the Corps by the U. S. Customs Service, the Bureau of the Census, and the Port Import Export Reporting Service.

Movement data acquired by the Waterborne Commerce Statistic Center of NDC is primarily for the use of the Corps and other governmental agencies. In 2004 these data were incorporated into the Corps budget preparation process and provide the navigation project outputs and performance measures used to rank and justify operation and maintenance funding requests.

Summary statistics, which do not disclose movements of individual companies, are also released to private companies and to the general public.

The Waterborne Commerce Statistics Center's standard publication, *Waterborne Commerce of the United States*, is issued in five parts (Atlantic Coast, Mississippi Valley and Gulf Coast, Great Lakes, Pacific Coast, and a National Summary). Also available is *The Public Domain Database* that contains aggregated origin to destination information of foreign and domestic waterborne cargo movements.

*Transportation Lines of the United States* in three volumes contains a national summary of U.S. vessels, listings of domestic vessel operators, plus details their equipment and references their service areas.

**Navigation Infrastructure Inventory:** This information supports the Corps Federal Central Collection Agency responsibility for documenting the nation's commercial port infrastructure served by Federal channels. In 2005 data for the Virginia ports of Hampton Roads and the James and York Rivers; the ports of southwest and western Alaska; the ports on the Illinois waterway; the port of St Louis, MO and the Upper Mississippi; the ports of Memphis, TN, Helena, AR, Natchez, Vicksburg, Greenville, MS and ports on the Lower Mississippi were updated in the central database. Data for over 9,280 individual docks are available in published reports and on the Internet in summary form and as data files. These data are updated and posted as each port area is re-surveyed and verified as current. A new initiative to survey, for the first time, the ports of Southern Louisiana (west of New Orleans and east of Lake Charles, LA) was begun. The data are used to identify industry served by the federal channels and is part of the budget process prioritization of projects. The Coast Guard is also a prime user of the information in the execution of their homeland security mission.

Another initiative is the establishment of a central database of all Corps navigation projects (Navigation Project Profile) with the critical attributes required for the budget process prioritization process. This information is used in the Operations and Maintenance Business Information System (OMBIL) to more fully describe all aspects of a project

**Lock Performance and Characteristics:** The lock performance database provides the Corps access to individual lock near real-time information as well as summary and performance statistics. A national data warehouse was fully deployed in FY 2005 and provides

## REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS FOR FY 2005

all Corps users direct access to current and historical data and summaries. The data are used by the Corps and other agencies such as the Coast Guard and the TVA in the execution of their missions. Lock characteristics, the physical descriptions of all the Corps owned/operated locks, are available on the web to all users. The lock databases are feeder systems to the Operations and Maintenance Business Information System (OMBIL) decision support system.

**Dredging Statistics:** This web-based ORACLE database is successful in supplying information on all USACE performed and contracted dredging to the Corps, industry and private users. Data entry and report generation is accomplished via the Corps Intranet and enables all Corps members access to the information in the central system. The data are used to generate the Small Business Report for dredging contracts. Biweekly reports are posted on the public web site to inform the industry and public of Corps and contracted dredging activities. Standard reports and summaries plus custom queries and reports are quickly generated to meet Corps and user needs. The use of the information by Corps and industry has resulted in improved bidding competition and a more efficient utilization of dredging equipment. The dredging database is a feeder system to the Operations and Maintenance Business Information Link (OMBIL) decision support system.

All of NDC's publicly available navigation and water transportation data is available via a single gateway at [www.iwr.usace.army.mil/ndc](http://www.iwr.usace.army.mil/ndc) or on its annual CD-ROM. The site also provides links to other Corps, Federal and public sites related to the navigation business. NDC continues to strive to provide single site portals related to various management views for accessing all data and information. Most data are available in both hard copy and electronic form.

**Water Supply:** IWR partnered with Corps MSC's and district offices in FY05 to initiate a study to update the 2004 water supply database (published as IWR Report 05-PS-1). The 2004 database showed there were 134 Corps multipurpose projects that included 9.86 million acre-feet of municipal and industrial (M&I) water supply with a repayment value of \$1.477 million. The Corps has 295 water supply agreements that cover all but about 8% of these costs. The 134 reservoirs are located in 25 states plus Puerto Rico and in 23 of the Corps' 38 districts.

IWR also continued act as the Headquarters' Water Supply Business Program Manager. In this role, the water supply portion of the FY 07 budget was developed through the use of new water supply work

category codes. The Presidents' FY 07 budget included \$2.83 million for the water supply program, up from \$2.0 million in FY '06. As the Water Supply Program Manager, IWR also initiated a water supply data call to develop the joint-use costs associated with multiple purpose water supply projects and participated in the HQUSACE "O&M Joint Cost Project Delivery Team."

### INTERNATIONAL WATER RESOURCES

**Lake Ontario and St. Lawrence River Study:** The International Lake Ontario-St. Lawrence River Study continued to be conducted by the International Joint Commission (IJC) to assess and evaluate the Commission's *Order of Approval* used to regulate outflows from Lake Ontario through the St. Lawrence River. This five-year, \$20 million study is evaluating the impacts of changing water levels on shoreline communities, domestic and industrial water users, commercial navigation, hydropower production, the environment and recreational boating and tourism, along with forecasted effects of climate change. The study is being conducted in full partnership with Canada, and is utilizing a transparent planning process pioneered by IWR and known as "Shared Vision Planning". The open citizen and public participation process is being guided by a volunteer Public Interest Advisory Group (PIAG) appointed by the IJC, while the study team is composed of a broad assembly of multi-disciplinary technical experts on nine technical working groups and led by co-director's from Canada and the U.S. The U.S. co-director is Dr. Eugene Stakhiv of IWR.

During FY05 a series of alternative plans continued to be developed and refined. State-of-the-art models that assessed impacts on erosion, ecological processes, recreational boating, and navigation were developed and presented to basin interests in the U.S. and Canada. Feedback continued to be received on the range of alternative plans which were narrowed during this period to a smaller subset of candidate plans. These were then further coordinated with the public as the Study Board continues towards the approval of its report to the Commissioners in 2006.

**World Water Council:** The CECW Deputy Director for Civil Works represents the USACE on the World Water Council (WWC), with IWR providing technical support and representation on the Council's Institutions and Governance Committee. FY05 activities included the continued planning for the 4<sup>th</sup> World Water Forum (WWF) which will be held in Mexico City in March 2006, and the development and coordination of USG input into the construct of the 4<sup>th</sup>

## INSTITUTE FOR WATER RESOURCES

WWF agenda, consistent with Department of State guidance on international water initiatives and USG policy, such as the Millennium Declaration Goals. IWR deployed a water resources manager to Mexico City in February 2005 to represent the USG in its on-site planning for the 4<sup>th</sup> WWF.

**USACE – UNESCO IHE Partnership:** IWR is the USACE technical agent for administering the Memorandum of Understanding (MOU) between the USACE and UNESCO - Institute of Water Education (IHE). The most significant activity in FY05 was the continued training of 18 month in-residence Master's Degree water specialists from the Iraqi Ministries of Water Resources and Public Works at the IHE-Delft, Netherlands.

**UNESCO – IHP:** The IWR director was part of the United States Government (USG) delegation attending the 16<sup>th</sup> Session of the UNESCO International Hydrologic Programme (IHP) Intergovernmental Council in Paris, France, 20-25 September 2004. This delegation represented the USG as part of the process of re-establishing of the U.S. IHP National Committee, which formally began in 2005 in conjunction with the formation of the U.S National Commission upon the USG reentry into UNESCO.

**USACE - Dutch Rijkswaterstaat Memorandum of Agreement:** The Dutch Rijkswaterstaat (RWS) and the USACE) signed a Memorandum of Agreement (MOA) in May 2004. The scope of that agreement encompasses collaboration in research, development, testing, and evaluation potentially leading to new and/or improved capabilities between the two countries. IWR has the technical lead in the implementation of MOA activities. Upon the signing of the MOA, a strategy was developed to focus the technical exchange along practical lines that were mutually beneficial to the missions of both organizations. Accordingly, six specialty (cluster) areas were formed with co-leaders from both countries identified to lead each specialty area:

- Flood control and flood protection
- Coastal zone management
- River basin management
- Shipping and transport
- Dredging
- Infrastructure management

Several technical exchanges took place in FY05 in both the US and The Netherlands, along with a follow-up visit to the U.S. where the USACE hosted a visit by the RWS Director-General, with joint events in both

Washington, D.C. and New Orleans, Louisiana. Following Hurricane Katrina activities associated with the MOA were primarily re-directed to focus on flood protection measures, coastal zone development and US-Dutch approaches to risk assessment. Several directed exchanges are planned for FY06.

**International Technical/Reimbursable Projects:** FY 2005 continued to yield major growth in technical assistance projects undertaken in cooperation with non-Corps, non-Federal organizations. This includes work in Iraq and Afghanistan for USAID and its contractors, and local government agencies. Projects for these varieties of clients and settings include watershed and reservoir system modeling, water quality, river hydraulics, wetlands hydrology, water control management, regional statistical analysis, GIS applications in hydrology and hydraulics and groundwater modeling.

### INTERNATIONAL NAVIGATION ASSOCIATION (PIANC)

PIANC is an organization consisting of approximately 40 national members. From its headquarters in Brussels, Belgium, it acts as a clearinghouse of technology and experiences relating to ocean and inland navigation improvements which are exchanged among engineers, scientists, port operators, and marina and vessel owners, to name a few. Its objective is to advance, on a worldwide basis, the sustainable development of all kinds of navigation through the exchange of technical information on port and waterway development. The objective of the Association is met by holding International Congresses and by publishing technical bulletins and special reports. Special reports are published describing the results of the work of international research teams, or working groups, composed of those national members interested in the particular subject under study. The organization also serves as an excellent source of identifying individual and corporate expertise throughout the world on PIANC-related subjects. Personal interchange of ideas and information also is promulgated by members attending the International Congresses held once every four years, and technical working group meetings held several times each year.

The business affairs of the Association are managed by the Annual General Assembly (AGA). It is composed of delegates who represent each member government. The number of delegates is determined by the size of the national membership, but may not exceed 11 per country.

## REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS FOR FY 2005

The United States (U.S.), which has been a member of PIANC since 1902, provides an annual appropriation for the support and maintenance of the organization. This includes an annual subvention to PIANC International and payment of a portion of the travel expenses of officially appointed national delegates (Commissioners) of the United States to meetings of the AGA and Congresses. Total annual appropriation for the U.S. Section, PIANC is currently \$45,000, including the annual subvention of approximately \$15,000.

The U.S. Section is administered by law, under the auspices of the Department of the Army (Corps of Engineers). It is located in the Institute for Water Resources (IWR), Casey Building, Humphreys Engineer Center. The U.S. Section is composed of both individual and corporate members who pay membership dues. Membership of the U.S. Section on September 30, 2004, totaled 263, consisting of 216 individual members, 46 corporate members and 1 student member.

**United States National Commission:** The United States National Commission constitutes the governing body of the National Section. In 2004 the ex-officio officers of the U.S. National Commission were: Chairman, John P. Woodley, Jr., Assistant Secretary of the Army (CW); President, MG Don T. Riley, Director of Civil Works; and Secretary, Mr. Ronald R. Conner an employee of IWR.

In 2004, U. S. National Commissioners were: Mr. Robert D. Nichol, President, Moffatt and Nichol Engineers; Mr. Kurt J. Nagle, President, American Association of Port Authorities; Mr. Charles C. Calhoun, Jr., Vice President representing the Central Region and consultant; Dr. Robert H. Randall, Texas A&M University; Mr. Joseph H. Pyne, President, Kirby Corporation; Ms. Doris J. Bautch, Director, Great Lakes Region, Maritime Administration, U.S. Department of Transportation; Mr. Shiv Batra, Vice President representing the Western Region and President, INCA Engineers, Inc.; and Mr. Thomas H. Wakeman, III, Vice President representing the Eastern Region and General Manager, Waterways Development Division, Port Commerce Department, Port Authority of New York and New Jersey.

Mr. John P. Woodley, Jr., Assistant Secretary of the Army (Civil Works) continued to serve as Chairman, U.S. Section PIANC... Major General Don T. Riley continued to serve as President of the U.S. Section. Mr. Bruce Lambert replaced Mr. Ron Conner as Secretary of the U.S. Section during the summer of 2005.

**PIANC Activities:** In February of 2005, Mr. John P. Woodley, Jr. made a presentation to the American Association of Port Authorities Latin American Executives Meeting in Miami, Florida. This activity was part of the Inter-American Initiative being led by the U.S. Section PIANC. The U.S. Section, jointly with the AAPA, developed a survey on dredging and technical port needs that was distributed to AAPA's Latin American and Caribbean members.

In May of 2005, the U.S. Section hosted the PIANC International Annual General Assembly in Charleston, S.C. The U.S. Delegation composed of Mr. Woodley, MG Don T. Riley, Mr. Ronald Conner, Mr. Shiv Batra, Ms. Doris Bautch, Mr. Charles Calhoun, Mr. Kurt Nagle, Mr. Harry Cook, Mr. Robert Nichol, Mr. Tom Wakeman, and Mr. Thorndike Saville attended the Annual General Assembly in Fukuoka, Japan. Dr. Robert Engler and Dr. Sandra Knight also attended. The major resolution was entitled "PIANC for the Americas", which supports the U.S. Section Latin American Initiatives. The U.S. Section also hosted a technical meeting, with a morning session on Latin American port issues, and an afternoon section on various research topics in the U.S. The U.S. Section also signed a Memorandum of Understanding of the AAPA, to work jointly on technical assistance with Latin American regions.

The U.S. Section PIANC (International Navigation Association) held its Annual Meeting October 20, 2004 in Baltimore, Maryland. A morning business meeting was followed by an afternoon seminar on Container-on-Barge Transport: Implications for Navigation Infrastructure. The U.S. Section Commissioners also held a meeting during this event.

Other major efforts that began in 2005 are the development of a new strategic plan for the U.S. Section of PIANC, a Memorandum of Understanding with the Organization of American States, Inter-American Committee on Ports, and .

The second U.S. Section PIANC Scholarship was awarded to Mr. Nicholas Zager, a top junior Ocean Engineering student at Texas A & M University.

The U.S. winner of the 2005 DePaepe-Willems Award was Mrs. Shana Heisey of the Institute for Water Resources, U.S. Army Corps of Engineers.

**Representatives to Committees and Commissions:** The principal business of PIANC is the

## INSTITUTE FOR WATER RESOURCES

sponsorship of technical working groups. The U.S. Section is represented by Principal and Co-Principal Members of the Commissions managing the activities of the technical working groups. The representatives were:

**Environmental Commission** – Mr. Edmond Russo, U.S. Army Corps of Engineers, New Orleans District (U.S. Principal Representative), and Dr. Robert Engler, Engineer Research and Development Center (Chairman of the Environmental Commission).

**Inland Navigation Commission** – Mr. Shiv Batra, President of INCA Engineers, Inc. (U.S. Principal Representative) and Dr. Sandra K. Knight, P.E., USACE, Engineer Research and Development Center (Chairman of the Inland Navigation Commission).

**Maritime Navigation Commission** – Mr. E. Dan Allen, Moffatt & Nichol.

**Recreational Navigation Commission** -- Mr. Richard B. Dornhelm, Moffatt & Nichol; Co-Principal, Jack C. Cox, TetraTechFW.

### **New Technical Working Groups:**

In 2005, nine new Working Groups were formed. The groups are listed below along with the name of the Principal U.S. Representative.

**InCom 29** Innovations in Navigation Lock Design  
David Schaaf, USACE, LRL and Dale Miller, INCA Engineers

**InCom 30** Inventory of Inspection and Repair Techniques of Navigation Structures (Steel, Concrete, Masonry and Timber) both Underwater and In-the-Dry  
Ron Heffron, Moffatt & Nichol

**InCom 31** Organization and Management of river ports,  
Mr. Jim McCarville, Port of Pittsburgh

**MarCom 49** Horizontal and Vertical Dimensions of Fairways  
Michael J. Briggs, USACE, ERDC

**MarCom 50** General principles for the design of maritime structures  
Bill Papis, HPA

**MarCom 51** Water injection dredging  
Timothy L. Welp, USACE, Research & Development Ctr.

**MarCom 52** Criteria for the (Un-)Loading of Container Ships  
Dan Allen, Moffatt & Nichol Engineers

**MarCom 53** Design and construction of maritime structures in tsunami prone areas  
John R. Headland, Moffatt & Nichol Engineers, Michael J. Briggs, USACE, ERDC

**EnviCom 15** Environmental Aspects of Dredging and Port Construction Around Coral Reefs and Cold Water Hard Bottom Benthic Communities  
Penny L. Cutt, USACE, Jacksonville District

### **Working Group Reports Published in 2005:**

**InCom 21** Economic aspects of waterways

**MarCom 44**, Accelerated Low Water Corrosion (+ cd-rom)

**MarCom 36** Catalogue of Prefabricated Elements (+ cd-rom)

**MarCom 34** Recommandations relatives aux normes parasismiques pour les structures portuaires

**RecCom 10** Systèmes d'amarrage pour la navigation de plaisance

**EnviCom 08** Biological Assessment Guidance for Dredged Material

**EnviCom 02** Bird Management in Ports and Waterways

### **Active Working Groups and the names of the U. S. Representatives:**

**InCom WG 23, Technical and Economic Problems of Channel Icing.**  
Mr. Claude Strauser, USACE District, St. Louis.

**InCom WG 25, Maintenance and Renovation of Navigation Infrastructure.**  
Dr. James McDonald, USACE-ERDC (retired) was the U.S. representative and chaired the committee. Mr. James Blanchar, USACE-MVR (retired) served as corresponding member.

**InCom WG 26, Design of Control Structures Used on Navigable Waterways: Controllable Weirs and Gates.**

**REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS FOR FY 2005**

Mr. Dale Miller, INCA Engineers and Dr. Richard Stockstill, USACE-ERDC

**InCom WG 27, Guidelines for Environmental Impacts of Vessels.**

Dr. Thomas Keevin, USACE-St. Louis District

**MarCom WG 36, Catalogue of Precast Elements.**

Dr. Billy L. Edge, Texas- A&M University

**MarCom WG 39, Monitoring of Breakwaters.**

Mr. James D. Prehn, RLS, Special Data Survey

**MarCom WG 42, Life Cycle Management of Port Structures – Implementation Manual.**

Dr. Valery M. Buslov, Hans-Padron Associates

**MarCom WG 43, Minimizing Harbor Siltation.**

Dr. John Headland, Moffatt & Nichol

**MarCom WG 44, Accelerated Low Water Corrosion.**

Dr. Ashok Kumar, USACE-ERDC

**MarCom WG 45, Post Earthquake Actions for the Restoration of Port Structures.**

Dr. Stephen Dickenson, Oregon State University

**MarCom WG 46, Maritime Freight Transshipment.**

Ms. Doris Bautch, Maritime Administration, U.S. Department of Transportation

**MarCom 47, Criteria for the Selection of Breakwater Types and their Optimum Damage Risk Level.**

Dr. Jeffrey A. Melby, USACE ERDC

**MarCom WG 48, Guidelines for Port Constructions, related to Bowthrusters.**

Mr. Marcel Hermans of the Port of Portland and Mr. Gary Greene, Gary Greene Engineers.

**RecCom WG 14, Access to Sport and Recreation Boating for Persons with Disabilities.**

Mr. Daniel Natchez, Daniel S. Natchez and Associates, Inc

**RecCom WG 15, The Use of Alternative Materials in Marina Construction.**

Mr. Terrence Browne, Collins Engineering

**RecCom WG 16, Protecting Water Quality in Marinas,**

Mr. Jack Cox , TetraTechFW and Mr. David Dykstra, Moffatt & Nichol

**RecCom WG 17, Guidelines for Marina Design,**

Mr. Dennis Kissman, Marina Mgt. Services, Inc.

**EnviCom WG 9, Environmental Impacts of Polar Marine Activities.**

## INTERNATIONAL BOUNDARY WATERS BOARDS

In order to carry out United States obligations under international agreements, the Office of the Chief of Engineers and several Corps divisions and districts with jurisdiction over areas bordering Canada have representation on numerous international boards, committees, and other groups. The majority of these boards were established by the International Joint Commission (IJC) as empowered in accordance with the provisions of the Boundary Waters Treaty of 1909 between the United States and Great Britain (for Canada). IJC boards fall into two broad categories: boards of control, which are more or less permanent and supervise compliance over an IJC order; and engineering, technical, or study boards, which are usually dissolved after completing and reporting on an investigation assignment.

In addition to boards created by the Commission, other international boards and committees are created by treaties or other arrangement in matters concerned with the water resources of joint interest, and the members report directly to the Governments or establishing agency. International boundary waters boards and committees having Corps of Engineers memberships during the fiscal year are listed in Table 45-1. For an explanation of the

constitution of the various boards and committees, see the annual reports, Volume II for fiscal years 1977 and 1980.

In recent years the IJC has adopted an ecosystem approach for its Boards with a view toward amalgamating a number of its Boards, where it makes sense to do so, as a first step in the development of international watershed Boards. This approach stemmed from the Commission's recommendations in its 1997 report to the governments of the United States and Canada. This report was provided at the request of governments for a proposal on how the IJC might best assist them to meet the environmental challenges of the 21<sup>st</sup> century. Subsequently, governments asked the Commission, in a reference dated November 19, 1998, to further define the framework for operation of international watershed boards as recommended by the IJC in its 1997 report. The IJC provided governments with status reports in December 2000 and June 2005 on the matter and several of its boards have been amalgamated since 1998.

**Comprehensive Study on Regulating Water Levels on Lake Ontario and in the St. Lawrence River**

Deleted: FY2001

In FY2001, the International Joint Commission formed the Lake Ontario - St. Lawrence River Study Board to undertake a comprehensive five-year study to assess and evaluate the current criteria used for regulating water levels on Lake Ontario and in the St. Lawrence River. The Study Board engaged by the IJC is a bi-national group of diverse experts from government, academia, native communities, and interest groups representing the geographical, scientific and community concerns of the Lake Ontario - St. Lawrence River system. The U.S. Director of the Study is from IWR. The Corps of Engineers leads 5 of the 9 Technical Work Groups, and participates on 2 others.

Deleted: Protection of the Waters of the Great Lakes Under the February 10, 1999, Reference

Deleted: ¶

Deleted: Section Break (Continuous)

The Mission of the Study is to consider, develop, evaluate and recommend updates and changes to the 1956 criteria for Lake Ontario-St. Lawrence River water levels and flow regulation, taking into account how water level fluctuations affect all interests and changing conditions in the system including climate change, all within the terms of the Boundary Waters Treaty. The Study Board is completing its studies to provide the IJC with the information it needs to evaluate options for regulating levels and flows in the Lake Ontario-St. Lawrence River system in order to benefit affected interests and the system as a whole. These studies include:

a. Reviewing the operation of the structures controlling the levels and flows of the Lake Ontario-St. Lawrence River system in the light of the impacts of those operations on affected interests, including the environment;

Deleted: ¶

Deleted: reviewing

b. Assessing whether changes to the Order of Approval or regulation plan are warranted to meet contemporary and emerging needs, interests and preferences for managing the system in a sustainable manner; and

Deleted: ¶

Deleted: assessing

c. Evaluating any options identified to improve the operating rules and criteria governing the system.

Deleted: ¶

Deleted: evaluating

Deleted: ¶

The Study Board will provide, by the end of 2005, three candidate regulation plans for the IJC's consideration. The Study Board will hold a series of public meetings in the summer of 2005 to obtain public input on the candidate plans prior to submitting them to the IJC.

**Upper Great Lakes Plan of Study**

The IJC has decided to revise its plan for an Upper Great Lakes Study. The original Upper Great Lakes Plan of Study was submitted to the U.S. and Canadian governments in 2002. Its purpose was to provide a plan to review IJC Orders for Lake Superior outflow regulation and consequently water level impacts on affected interests in the upper Great Lakes system from Lake Superior downstream through Lake Erie.

While this original intent of the Study has not changed, two more recent events that might impact the study will be added to the study plan. The first issue is that of possible ongoing physical changes in the upper St. Clair River, which could impact water level changes on the upstream lake (Michigan-Huron) and downstream lakes (St. Clair and Erie). The second issue is that the Lake Ontario - St. Lawrence River Study is nearing completion. This may provide many lessons learned to help streamline the Upper Lakes Study.

The IJC recently appointed an Upper Lakes Plan of Study Revision Team. The U.S. Team Leader is the Detroit District Commander. A draft revised Plan of Study will be completed in August 2005. Public meetings will be held in September 2005. Following public consultation the final Plan of Study will be submitted to the IJC in October 2005. Any actual implementation of the Plan of Study would not be initiated until funds are appropriated by the Governments of the United States and Canada.

## 1. Regulatory Activities

**Authorities.** The following authorities charge the Corps of Engineers with the regulation of various construction related activities in U. S. waters and wetlands: Sections 9 and 10 of the Rivers and Harbors Act of 1899 (structures in waterways and the alteration of waterways); Section 103 of the Marine, Protection, Research, and Sanctuaries Act of 1972 (Ocean Dumping); and Section 404 of the Clean Water Act (discharge of dredged or fill material).

**Work Completed.** During FY 2005, the Corps reviewed and authorized more than 95,000 permit activities, 88 percent of which were approved within 60 days. Approximately 8,000 projects were issued individual permits, and the remaining 87,000 activities were reviewed and approved under regional or nationwide general permits. General permits are issued to the public at large and define types of minor activities with no more than minimal adverse effects on the aquatic environment, which do not usually require the extensive review necessary for projects authorized by individual permits. Use of general permits provides significant relief to the regulated public by avoiding red tape for small projects with minimal environmental impacts. The Corps denied approximately 300 permits during FY 2005, since most projects which might otherwise have been denied a permit were either modified or conditioned to meet Corps requirements, scaled down to qualify for approval under general permits, or withdrawn. About 4,300 permit applications were either withdrawn or canceled. Under the regulatory program, the Corps made over 100,000 jurisdiction determinations in FY 2005, many of which were made in response to requests from landowners who were not applying for permits

The Corps investigated approximately 5,500 alleged illegal activities, most of which were violations of Section 404 of the Clean Water Act. Under the permit program in FY 2005,

the Corps authorized the filling of approximately 20,500 acres of wetlands but required the restoration, enhancement, or creation of more than 50,000 wetland acres.

As required by section 314 of the National Defense Authorization Act for Fiscal Year 2004 (P.L. 108-136), the Corps, in cooperation with EPA, has drafted regulations establishing performance standards and criteria for compensatory mitigation required for Department of the Army permits. The regulations will apply equivalent standards, to the extent practicable, for compensatory mitigation done by permittees and mitigation banks. The proposed rule was issued in March 2006 and should be finalized by December of 2006.

**2. National Emergency Preparedness Activities**

**Authority.** Executive Orders 10480 and 12656 and the Federal Emergency Management Agency (FEMA) under the Robert T. Stafford Disaster Relief and Emergency Assistance Act, 42 USC 5121 et seq. are the basis of the Federal Response Plan. The cited executive directives assign significant responsibilities for such preparation (planning, training, research and testing) to the Corps. This includes responsibility for development of comprehensive national level preparedness plans and guidance for response to all regional/national emergencies, whether caused by natural phenomena or acts of man, plans for response(s) to acts of terrorism, and the local preparedness necessary to support Corps continuity of operations. The Corps provides engineering and construction support to state and local governments in response to catastrophic natural/technological disasters. Rapid response to disasters of a regional/national magnitude requires that extensive pre-emergency planning and preparedness activities be conducted to assure the availability of a work force capable of shifting from routine missions to crisis operations and the organizational command and control structure(s) necessary to provide a coordinated and comprehensive response in the critical early stages of a catastrophic disaster.

**Status.** During FY 2005, the Corps of Engineers continued its effort to improve the command's readiness posture and its ability to respond to various national/regional catastrophic disasters to include terrorists' attacks. Emphasis has been on those activities to prepare for catastrophic natural and technological disasters requiring major Federal support of state and local governments overwhelmed by a disaster event, and for national level emergency water planning. The primary focus during FY 2005 continued to provide support to two major national level civil planning areas: (a) support to the nation's ability to mobilize national assets to meet national/regional level emergencies and (b) support to continuity of government and continuity of operations during national emergencies. Lessons learned from past hurricanes, floods, earthquakes, and events of September 11, 2001 as well as more recent events such as the fifteen hurricanes during the 2005 hurricane season, especially hurricanes Katrina and Rita, indicate that improvements in response to catastrophic disasters are still required. In this regard, the Corps continues to emphasize a program that uses the deliberate planning process to develop scenario specific catastrophic disaster plans. This will result in more detailed planning and should provide for a more comprehensive response to national/regional catastrophic disasters to include terrorist attacks. More extensive coordination with

Deleted: 7

Federal, state and local entities will be incorporated into plan development. In this regard, following FEMA's program focus, USACE continues to play a key role in national security planning such as supporting Homeland Security strategic planning efforts, development of the National Capitol Region Response Plan and other plans as the New Madrid Earthquake, the South Florida Hurricane, the Southern California Earthquake, the New Orleans Hurricane and other contingencies with national implications. Additional efforts focus on continuing to strengthen COOP readiness. Exercises, involving federal, state and local officials, contribute to a more timely and effective execution of Corps responsibilities during disasters that have national impacts. Major efforts have been made since September 11 for continued inter-jurisdictional collaboration in planning, training, and exercising to improve preparedness for a terrorist event in the NCR. A regional response to a WMD incident requires intense intergovernmental and inter-jurisdictional collaboration and cooperation, as was evidenced by the response at the Pentagon 9/11 incident. Continuing to capitalize on existing planning efforts and forums, and taking advantage of the current atmosphere of urgency regarding emergency preparedness will advance preparedness among all levels of government to improve response and ensure the health and safety of citizens, workers, and visitors in the metropolitan Washington region. The U.S. Army Corps of Engineers (USACE) and the Federal Emergency Management Agency (FEMA) co-sponsored the 2005 Senior Leaders' Seminar

(SLS) on 15-16 June 2005 in Washington, DC. The 2005 SLS represented an important step in the evolution of the seminar series. It was predicated upon the use of the National Response Plan (NRP) and the National Incident Management System (NIMS) as well as the FEMA Hurricane Concept of Operations (CONOP) and USACE support to the NRP. The SLS provided a walk through of hurricane operations, testing both ESF #3 Remedial Action Program results and proposed integrated operations concepts, resulting in the development of a unified operational plan for the 2005 Hurricane Season, as agreed upon by the states, regions and Divisions. The SLS brought together federal, state, and local government organizations for candid, solution-focused discussion about intergovernmental prevention, preparedness, response and recovery for simultaneous natural disasters. The scenario was intended to provide a means for review of the changes in federal, state, and local doctrine, policy, and procedures resulting from the Remedial Action Plan and impacts to the 2005 CONOP. While the scope of this workshop focused on response, it also covered the proposed sequence for requisition and tracking of commodities, materials, and personnel resources surrounding any event from the federal, state, and local perspectives. Participants were asked to address topics such as contingency plans, agency authorities, and interagency coordination to successfully meet both the short and long term needs resulting from a hurricane. For National Emergency Preparedness fiscal year obligations and expenditures, see Table C.

Deleted: 4

**Deleted:** used a tabletop exercise format to bring together Federal, State, local and private sector partners for candid, solution-focused discussion about infrastructure related issues from a terrorist incident, looking at both infrastructure protection and recovery. The SLS provided an excellent opportunity for the incident management community at all levels of government and in the private sector to gather to ensure our operations are efficient, effective, and complementary. The seminar also allowed USACE, FEMA and their partner agencies to further build a corrective action program to track the resolution of issues raised at the seminars and in disaster after action critiques. The SLS convened senior policy and operational personnel from selected federal, state and local government agencies and private sector organizations who reviewed and discussed the immediate impacts of recent Department of Homeland Security initiatives on the national response system; discussed current plans and strategies for resolving recovery issues identified in past senior leadership seminars, including disaster housing, contaminated debris management, and infrastructure restoration; and examined the new operational relationships and protocols established by the NRP, particularly in emergency support function areas of Infrastructure, Mass Care, Housing and Human Services and Economic Stabilization, Community Recovery and Mitigation and the Catastrophic Incident Response Annex, to successfully coordinate recovery. ¶

**Deleted:** A HQUSACE Table-Top Exercise (TTEX) was held on 4 May 2004 in Washington, DC. The format of the TTEX was revised from previous events in that it was not executed as a scenario driven tabletop exercise, but rather as a "HQUSACE Round Table" discussion with a general theme of "Readiness in the USACE 2012 Environment." The primary goal of the HQTTEX was to provide a facilitated forum in which senior HQUSACE staff principals and MSC representatives could work together to ensure continued readiness to respond to any contingency by reviewing preparedness/response roles and expectations; identifying, through focused discussions, critical issues or shortfalls associated with the ongoing implementation of the USACE 2012 organization and new management tools while supporting the Global War on Terrorism and the Initial National Response Plan (INRP). Main topics included USACE 2012, Readiness... [10]

On January 9, 2001 the U.S. Supreme Court invalidated a Corps permit denial by the Chicago District for the filling of isolated waters associated with a landfill by the Solid Waste Agency of Northern Cook County (SWANCC). The Court determined that the Corps long established protocol of asserting section 404 jurisdiction based on use of waters by migratory birds was not supported by the Clean Water Act. This called into question other Section 404 jurisdictional criteria. The Corps and EPA published an Advanced Notice of Proposed Rule Making (ANPRM) on SWANCC jurisdictional issues in January, FY 2003. Subsequent review of the public comments to the ANPRM resulted in the decision not to conduct a rule-making and concentrate on improving consistency issues with regard to jurisdictional determinations nationwide.

rule will also establish standards for the review, approval, and operation of mitigation banks. The statutory deadline for promulgating the final rule is November 24, 2005.

This includes responsibility for development of comprehensive national level

~~preparedness plans and guidance for response to all regional/national emergencies, whether caused by natural phenomena or acts of man, plans for response(s) to acts of terrorism, and the local preparedness necessary to support Corps continuity of operations. The Corps provides engineering and construction support to state and local governments in response to catastrophic natural/technological disasters. Rapid response to disasters of a regional/national magnitude requires that extensive pre-emergency planning and preparedness activities be conducted to assure the availability of a work~~

force capable of shifting from routine missions to crisis operations and the organizational command and control structure(s) necessary to provide a coordinated and comprehensive response in the critical early stages of a catastrophic disaster.

**Status.** During FY

**Page 3: [5] Deleted s0cwmkb37/20/2005 12:43:00 PM**

2004, the Corps of Engineers continued its effort to improve the command's readiness posture and its ability to respond to various national/regional catastrophic disasters to include terrorists attacks. Emphasis has been on those activities to prepare for catastrophic natural and technological disasters requiring major Federal support of state and local governments overwhelmed by a disaster event, and for national level emergency water planning. The primary focus during FY

**Page 3: [6] Deleted s0cwmkb37/20/2005 12:43:00 PM**

2004 was to provide support to two major national level civil planning areas: (a) support to the nation's ability to mobilize national assets to meet national/regional level emergencies and (b) support to continuity of government and continuity of operations during national emergencies. Lessons learned from past hurricanes, floods, earthquakes, and events of September 11, 2001 as well as more recent events such as Hurricane Isabel, the National Capitol Region workshop, the Alaskan Hurricane CPX and the evolving New Madrid earthquake scenario, clearly indicate that the current system does not adequately provide for a response to catastrophic disasters that is sufficiently timely or comprehensive. In this regard, the Corps has initiated a program that uses the deliberate planning process to develop scenario specific catastrophic disaster plans. This will result in more detailed planning and should provide for a more comprehensive response to national/regional catastrophic disasters to include terrorist attacks. More extensive coordination with Federal, state and local entities will be incorporated into plan development. In this regard, following FEMA's program focus, USACE continues to play a key role in national security planning such as supporting Homeland Security strategic planning efforts, development of the National Capitol Region Response Plan and other plans as the New Madrid Earthquake, the South Florida Hurricane, the Southern California Earthquake, the New Orleans Hurricane and other contingencies with national implications. Additional efforts focus on continuing to strengthen COOP readiness. Exercises, involving federal, state and local officials, contribute to a more timely and effective execution of Corps responsibilities during disasters that have national impacts. In November

**Page 3: [7] Deleted s0cwmkb37/20/2005 12:43:00 PM**

2004, a U.S. Army Corps of Engineers Regional Response Workshop was held in Anchorage Alaska. This workshop served to validate the Anchorage Earthquake Catastrophic Disaster Response Plan (CDRP), serve as a means of addressing the unique requirements of a CDRP occurring in an extremely harsh environment, and to set the stage and planning for a related Command Post Exercise (CPX). A North Atlantic Division Weapons of Mass Destruction Regional Readiness Workshop was conducted in the Washington DC area in April

**Page 3: [8] Deleted s0cwmkb37/20/2005 12:43:00 PM**

2004. This workshop served to provide an understanding of U.S. Army Corps of Engineers (USACE) roles and responsibilities under the Federal Response Plan, particularly by examining the evolving USACE and ESF #3 role in relation to the department of Homeland Security and the National Capitol Region Weapons of Mass Destruction Incident Contingency Plan. Major efforts have been made since September 11 for continued inter-jurisdictional collaboration in planning, training, and exercising to improve preparedness for a terrorist event in the NCR. A regional response to a WMD incident requires intense intergovernmental and inter-jurisdictional collaboration and cooperation, as was evidenced by the response at the Pentagon 9/11 incident. Continuing to capitalize on existing planning efforts and forums, and taking advantage of the current atmosphere of urgency regarding emergency preparedness will advance preparedness among all levels of government to improve response and ensure the health and safety of citizens, workers, and visitors in the metropolitan Washington region. A HQUSACE Table-Top Exercise (TTEX) was held on 6 May

**Page 3: [9] Deleted s0cwmkb37/20/2005 12:43:00 PM**

2004 in Washington, DC. The TTEX explored the ramifications of a multi-strike terrorism event while a hurricane was impacting the east coast, particularly the National Capital Region. Portions of Virginia, Maryland, and New Jersey were impacted by high winds and flooding before the storm moved back out into the Atlantic. During the TTEX, besides the hurricane response, USACE staff also had to work around depleted resources from the ongoing War in Iraq, while also responding to terrorists events in California and Virginia. Participants examined decisions made by Federal, state, and local agencies throughout the course of the disaster. Scenario briefings described the progress of events, as well as Federal, state, and local activities that would be underway. Special topic briefings were presented to educate participants and clarify new concepts. The exercise involved response, recovery, and

preparedness efforts surrounding a multi-disaster event from the Federal, state, local, and regional perspectives. Also discussion involved contingency planning, resource availability, and interagency coordination to successfully meet short and long term needs resulting from the disaster. Recurring themes were COOP, including plans and alternate headquarters responsibilities, staffing shortfalls, and resources. Senior leaders were required to conceptualize operations under which the priorities, capabilities, and needs of all partners and customers

in a disaster operation are synchronized over the operational continuum. While the HQTTEX scenario opened the door on a large number of topics, the focus of the exercise was the plan of action for the Federal Response Plan's (FRP) Emergency Support Function (ESF) #3 – Public Works and Engineering, for which USACE is designated the operating agent for Department of Defense (DOD). For National Emergency Preparedness fiscal year obligations and expenditures, see Table C.

A HQUSACE Table-Top Exercise (TTEX) was held on 4 May 2004 in Washington, DC. The format of the TTEX was revised from previous events in that it was not executed as a scenario driven tabletop exercise, but rather as a "HQUSACE Round Table" discussion with a general theme of "Readiness in the USACE 2012 Environment." The primary goal of the HQTTEX was to provide a facilitated forum in which senior HQUSACE staff principals and MSC representatives could work together to ensure continued readiness to respond to any contingency by reviewing preparedness/response roles and expectations; identifying, through focused discussions, critical issues or shortfalls associated with the ongoing implementation of the USACE 2012 organization and new management tools while supporting the Global War on Terrorism and the Initial National Response Plan (INRP). Main topics included USACE 2012, Readiness XXI, New Initiatives e.g., National Response Plan (NRP)/National Incident Management System (NIMS), Catastrophic Incident Response Plan (CIRP), Port Readiness, and USACE Continuity of Operations (COOP).

## CIVIL EMERGENCY MANAGEMENT ACTIVITIES

**Authority.** Public Law 84-99 (33 U.S.C. 701n) (69 Stat. 186) provides the authority for the U. S. Army Corps of Engineers to provide a full spectrum of emergency management/disaster assistance activities using the Flood Control and Coastal Emergencies (FCCE) appropriation. Under PL 84-99, the Chief of Engineers, acting for the Secretary of the Army, is authorized to undertake activities including disaster preparedness for all natural disasters, Advance Measures (preventive measures when faced with an imminent threat of unusual flooding), emergency operations (Flood Response and Post Flood Response), rehabilitation of flood control works damaged by flood or coastal storm, protection or repair of federally authorized shore protective works threatened or damaged by coastal storm, and provision of emergency water due to drought or contaminated water source. Under The Robert T. Stafford Disaster Relief and Emergency Assistance Act (42 U.S.C. 5121 et seq.) (88 Stat. 143) (The Stafford Act), the Federal Emergency Management Agency (FEMA) may direct USACE to use its resources to provide assistance in the event of a major disaster or emergency declaration by the President. Under The Stafford Act and its implementing National Response Plan, USACE has a standing mission to provide assistance in the area of Public Works and Engineering, Emergency Support Function #3, for response to a major disaster or catastrophic event.

**Activities.** Overall, the Civil Emergency Management Program ensures timely, effective, and efficient disaster preparedness, response, recovery, and mitigation projects and services on a nationwide basis to reduce loss of life and property damage under DOD, USACE, FEMA, and other agencies' authorities. Major disaster preparedness activities included: the review and updating of disaster preparedness and response plans to ensure viability; training personnel to ensure their capability to respond to disasters; procurement and pre-positioning of critical equipment and supplies which would likely not be available during initial stages of a response; periodic exercises to test and evaluate plans, personnel and training; and the inspection of Federal and non-Federal flood control projects to ensure their viability to provide flood protection.

For each specific event, as needed, Headquarters augments its staff and the staffs of the impacted division/district(s) to manage the event, addressing areas such as resource allocations (dollars and people), funding emergency contracts, purchasing needed materials, providing technical and direct assistance, the logistics of moving people and materials, and coordinating with tribal/Federal/state/local agencies involved in the event. These augmentation activities include overtime for Headquarters, funding of field staff, emergency contracts, travel to the event area, purchasing materials and supplies, increased staffing to include providing Remote Sensing/ Geographic Information System (RS/GIS) services.

**Significant Events.** In Fiscal Year 2005, the U.S. Army Corps of Engineers (USACE) provided approximately \$2.4 billion in direct expenditures under Flood Control and Coastal Emergency authorities and provided over \$4.4 billion in reimbursable support to FEMA.

All districts and divisions played direct or supporting roles in USACE disaster response in FY2005. The 2005 disaster season was highlighted by the three successive major hurricanes to hit states in the Gulf Coast. Texas, Louisiana, Mississippi, Alabama and Florida were all affected by Hurricanes Katrina, Rita and Wilma.

At the beginning of FY05 USACE provided both 84-99 and Stafford Act support to communities in West Virginia affected by annual flooding.

Drought assistance was provided to the Cheyenne River Sioux Tribe to construct a temporary water intake on the Missouri River.

Technical assistance was provided by the Cold Regions Research Engineering Laboratory to several areas in New England suffering from ice jam flooding.

ESF#3 Team Leaders mobilized for several National Security Special Events. No incidents occurred, but the mobilizations were used for training purposes.

**REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY  
2005**

The Hurricane Season began early with Hurricane Dennis making landfall on the west coast of Florida, it wasn't a major event, but was the start of a very long and destructive season. In late August, Hurricane Katrina came ashore on the coast of Louisiana and Mississippi, causing catastrophic damage on the coast and in the city of New Orleans, where the flood protection system failed. This proved to be the largest Natural Disaster in US history. One month later Hurricane Rita hit Louisiana and Texas, causing significant damage to the coast line. Finally Hurricane Wilma, which at one point was the strongest Hurricane ever measured made landfall on the west coast of Florida and caused significant damage through to the east coast. The season stretched the entire corps resources and energy. Over 8000 Corps employees were deployed from their home station to assist in response and recovery operations. In total the Corps provided 193,000 temporary roofs, 103 million liters of water, 232 million pounds of ice, and 900 large generators. In addition, the Corps removed 50 million cubic yards of debris, un-watered the city of New Orleans, installed over 1000 temporary public facilities units, and managed the building and home safety mission that assessed the structural integrity of over 150,000 structures. At the end of FY 05 several thousand Corps employees remained deployed in Florida, Louisiana, Texas and Mississippi and many of the recovery missions were still on-going.

Hurricanes Katrina, Wilma and Ophelia caused significant damage to the flood protection and hurricane protection projects in the gulf coast and south Atlantic states. Hurricane Katrina caused extensive damages to hurricane shore protection and flood control projects in Louisiana, Mississippi and Alabama totaling over \$2.1 billion dollars. Damages to the storm protection system in the New Orleans area included major breaches to significant sections of levee and floodwalls on the Lake Pontchartrain and Vicinity and New Orleans to Venice Projects that required major repairs prior to the beginning of hurricane season 2006. In September 2005 MVD established Task Force Guardian to plan, direct and complete major

repairs to the protection system prior to 1 June 2006. Task Force Guardian is managing approximately \$800 million of repairs and improvements to the Lake Pontchartrain and New Orleans to Venice Projects. Hurricane Katrina also caused significant damages to approximately 19 projects in Mississippi and Alabama. The total cost of repairs to these projects was estimated at approximately \$43 million. Damages to projects caused by hurricanes Ophelia and Wilma in the states of Florida, North Carolina and South Carolina were estimated at approximately \$40 million.

Yuba River, CA	2003		Undetermined	Local Protection

**APPENDIX B**  
**Flood Control Projects Under Construction**  
**During Fiscal Year 2005**

- <sup>1</sup> Construction of further channel improvement was halted in 1987 due to the denial of water quality certification.
- <sup>2</sup> Project was in useful operation before Corps started working on it. Work consists primarily of improvements to existing channels, levees, pumping stations and other flood control structures.
- <sup>3</sup> Environmental and Recreational separable elements unprogrammed.
- <sup>4</sup> Levee enlargement remains to be accomplished for 0.8 miles.
- <sup>5</sup> Awaiting financial completion. Requires a correction in the financial management system.
- <sup>6</sup> Landscaping remains to be accomplished.
- <sup>7</sup> This completion schedule is for the Grand Prairie Region separable element only.
- <sup>8</sup> O & M Funded.

**APPENDIX D**  
**Navigation Projects Under Construction During Fiscal Year 2005**

Project	Fiscal Year Started	Placed in Useful Operation	Fiscal Year Completed or Scheduled for Completion	Nature of Project
Agat Small Boat Harbor, Guam (Sec 107)	1987	1989	1989	Dredging and breakwater
AIWW Replacement of Federal Hwy Bridges in NC	1974	1986 <sup>1</sup>	2006	Replacement of existing bridges
Aquadilla Harbor, PR (Sec 107)	1993		1995	Breakwater
Arthur Kill Channel, Howland Hook, Terminal, NY & NJ	2001			Deep draft channel-widening and deepening to 41ft.
Ashtabula Harbor, OH	2003		2003 <sup>6</sup>	Dredging
Baltimore Harbor Anchorages and Channels, MD	2002	2003	2003	Deepen and Widen Anchorages
Black Rock Channel, NY	2003		2005 <sup>6</sup>	Rehabilitate Upper West Wing Wall and dewater lock.
Brunswick Harbor, GA	2002		Indefinite	Deepen to 36 feet.
Buffalo Harbor, NY	2004		2004 <sup>6</sup>	Dredged approximately 153,000 cubic yards.
Burns Harbor, IN	1995	1999	1999	Breakwater Rehabilitation
Calabash Creek, SC (Sec 107)	2000	2001	2001	Channel Deepening
Chain of Rocks Canal, IL	1999	1953	2009	Deficiency Correction
Canaveral Harbor Deepening, FL	1993		1994	Navigation Channels
Canaveral Harbor, FL	1994		2044	Jetty extension and sand tightening
Cape Cod Canal, MA	2000	2003	2006	Major Rehabilitation of Railroad Bridge
Chain of Rocks Canal, IL	1999	1953	2007	Deficiency Correction
Channel to Newport News, VA (1965 Mod.)	1967	1968	Indefinite	Deferred anchorage construction
Channel to Newport News, VA (1986 Mod.)	1987	1989	Indefinite	Dredge 50 ft. Channel. Deepen to 55 feet
Channel to Victoria, TX	1993	2002	2007	Enlarging and deepening channel to 12 foot depth
Charleston Harbor (Deeping/Widening), SC	1998	2001	2008	Deepen Entrance Channel to 47 feet and inner channels to 45 feet depth.
Chicago Harbor (Lock), IL	1995	1997	1997	Lock Bulkhead Fabrication
Chicago Harbor (Lock), IL	1996	1997	1997	Construct Slots to Dewater Lock Gate Bays

**APPENDIX D**  
**Navigation Projects Under Construction During Fiscal Year 2005**

Project	Fiscal Year Started	Placed in Useful Operation	Fiscal Year Completed or Scheduled for Completion	Nature of Project
Chickamauga Lock and Dam, TN	2004		2011	Construct 110-foot by 600-foot replacement lock.
Chignik Harbor, AK	2001		2004	Breakwater
Cleveland Harbor, OH	2005		2005 <sup>6</sup>	Dredged approximately 189,127 cubic yards from the Federal Channel.
Cleveland Harbor, OH	2004		2006 <sup>6</sup>	Construction on the East Pierhead.
Coan River, VA	1993		2004	Channel Dredging /Jetty Construction
Columbia River Channel Improvements, OR & WA	2004		2010	Deepen channel and environmental restoration
Conneaut Harbor, OH	2004		2004 <sup>6</sup>	Dredged approximately 109,514 cubic yards from the Federal channel
Cook Inlet Navigation Improvement, AK	1998		2001	Channel Dredging
Cooley Canal, OH	2004		2004 <sup>6</sup>	Dredged approximately 7,500 cubic yards from the Federal channel
Crescent City Harbor, CA	1998		2000	Deepen Channel
Delaware River Main Channel & Deepening, NJ, PA, & DE	1999		2010	Deepen Channel
Dunkirk Harbor, NY	2004		2004 <sup>6</sup>	Dredged approximately 13,018 cubic yards from the Federal channel
Emsworth Dam Rehab	2004		2011	Major Rehab of Back Channel Gates and Main Channel erosion protection
Erie Harbor, NY	2003		2003 <sup>6</sup>	North Pier Safety Ladders
Fairport Harbor, OH	2005		2005 <sup>6</sup>	Dredged approximately 90,000 cubic yards from the Federal Channel.
Fort Pierce Harbor, FL	1995		1996	Enlarge entrance channel
Grays Landing Lock & Dam (Lock & Dam 7) Monongahela River, PA	1986	1996	2005	Construct new lock & dam to replace existing lock & dam 7
Great Sodus Bay Harbor, NY	2004		2004 <sup>6</sup>	Dredged approximately 42,497 cubic yards from the Federal channel.

**APPENDIX D**  
**Navigation Projects Under Construction During Fiscal Year 2005**

Project	Fiscal Year Started	Placed in Useful Operation	Fiscal Year Completed or Scheduled for Completion	Nature of Project
Gulfport Harbor, MS	1991	1994	2006	Deepen Channel
Hempstead Harbor, NY	1992		1995	Removal of derelect barges
Houston-Galveston Navigation Channels, TX	1998		2009	Deepen and Widen Houston Ship Channel and Galveston Harbor and Channel; 45' depth in Houston Ship Channel completion-2005
Humboldt Harbor and Bay Deepening, CA	1997		2000	Deepening and Widen Channel
Huron Harbor, OH	2005		2005 <sup>6</sup>	Dredged approximately 65,000 cubic yards from the Federal Channel.
Illinois Waterway Four Locks	1993		1996	Major rehabilitation of locks and dams
Indiana Harbor Confined Disposal Facility, IN	2002		2034	Confined Disposal Facility (CDF) construction.
Inner Harbor Navigation Canal Lock	1999		Undetermined	Lock Replacement
Jacksonville Harbor, FL	1999		2006	Dredging material disposal facilities
John T. Myers Locks and Dam, IN & KY	2004		Indefinite	Lock Replacement
Kahului Light Draft Harbor, Maui, HI	2004		2006	Breakwater and Navigation Channel
Kake Harbor, AK	1997		2000	Breakwater and Navigation Channel
Kaumalapau Harbor, Lanai, HI	2004		2007	Breakwater and Navigation Channel
Kawaihae Small Boat Harbor, Hawaii, HI	1996	1998	1998	Breakwater
Kentucky Lock Addition, KY	1998		2012	Lock Addition (1200 feet)
Kill Van Kull-Newark Bay, NJ and NY (Stage I)	1986		1995	Deep draft channel-widening and deepening to 40 ft.
Kill Van Kull-Newark Bay, NJ and NY (Stage II)	1999		2004	Deep draft channel-widening and deepening to 45 ft.
Laupahoehoe Harbor, Hawaii, HI	1988	1988	1988	Breakwater
Little Sodus Bay Harbor, NY	2005		2005 <sup>6</sup>	Dredged approximately 12,000 cubic yards from the Federal Channel.
Lock and Dams 2, 3 and 4, Monongahela, PA and WV	1992		2019	Major rehabilitation of locks and dams,

**APPENDIX D**  
**Navigation Projects Under Construction During Fiscal Year 2005**

Project	Fiscal Year Started	Placed in Useful Operation	Fiscal Year Completed or Scheduled for Completion	Nature of Project
Lock and Dam 3, MN	1998		2008	removal of Lock and Dam 3
Lock and Dams 3, 5A, 6,7,8 and 9, MN, WI and IA	1989		2004	Major rehabilitation/embankments
Lock and Dam 14, IL	1996	2001	2002	Major rehabilitation of electrical/mechanical systems
Lock and Dam 24, MO	1996	1940	2008	Major rehabilitation of lock and dam
Lock and Dam 25, MO	1994	1939	2002	Major rehabilitation of lock and dam
Lorain Harbor, OH	2003		2005 <sup>6</sup>	West Pier Repair
Los Angeles Harbor, CA	1996		2006	Channel Deepening
McAlpine Lock and Dam	1996		2008	Lock Replacement (1200 feet)
McClellan-Kerr Arkansas River Navigation System, AR	1963	1970	2012	Locks and dams
Manatee Harbor, FL	1995		2006	Enlarge turning basin, construct wideners, mitigation
Marmet Locks & Dam, Kanawha River, WV	1998		2009	Construction of new lock
Melvin Price Lock and Dam, IL and MO	1974	1990	2009	Replacement
Miami Harbor Channel, FL	1993		2006	Navigation Channels & Turning Basin
Mississippi River between Ohio and Missouri Rivers IL and MO	1910		2014	Regulating Works
Mississippi River, Locks 17, 21, & 22, IL and MO	2005		2006	New Lock Checkposts
Mississippi River, Lock II, IA	2005		2007	Lock Rehabilitation
Mississippi River, Lock 19, Stage II, IA	2004		2006	Lock Rehabilitation
Mississippi River, Ship Channel, Gulf to Mt. Morris Lake, NY	2002		2003 <sup>6</sup>	Road Repair
Baton Rouge, LA	1987	1987 <sup>2</sup>	Indefinite <sup>3</sup>	Dredging 55-foot channel
Montgomery Point Lock and Dam, AR	1997	2005	2006	Lock and Dam
Morehead City Harbor, N.C. (CAP Sec 933)	2004	2004	2007 <sup>7</sup>	Beneficial used of dredged material
Mouth of Colorado River, TX (Gulf Intracoastal Waterway)	1984	1994	1995	Breakwaters, dredging, and recreation
Mt. Morris Lake, NY	2005		2005 <sup>6</sup>	Debris Removal

**APPENDIX D**  
**Navigation Projects Under Construction During Fiscal Year 2005**

Project	Fiscal Year Started	Placed in Useful Operation	Fiscal Year Completed or Scheduled for Completion	Nature of Project
Nawiliwili Harbor, Kauai, HI	1985	1987	1987	Breakwater repair
Neches River Saltwater Barrier	2000		2005	Construction of a tainter-gated saltwater barrier structure, sector-gated navigation bypass channel, access road and levee
New York Harbor and Adjacent Channels, Port Jersey Channel, NJ	1998		2008	Deepening channel to 45 ft. providing a turning basin and bulkheading.
New York and New Jersey Harbors, NY and NJ	2002		Indefinite	Deep draft channel to 52 ft.
New York Harbor Collection and Removal of drift, NY & NJ	1976	Incremental	Indefinite	Removal of drift sources.
Nome Harbor, AK	2003		2007	Breakwater, Navigation Channel, and sediment management scheme
Norfolk Harbor Channel, VA (1965 Mod.)	1966	Incremental	Indefinite	Removal of drift sources
Norfolk Harbor Channel, VA (1986 Mod.)	1987	1989	Indefinite	Dredge channel to 50 feet
Oak Orchard, NY	2004		2004 <sup>6</sup>	Dredged approximately 11,000 cubic yards from the Federal channel
Oakland Harbor, CA	1987		Indefinite	Channel deepening and widening turning basin
Olmsted Locks and Dam, IL & KY	1992		2013	Navigation
Oswego Harbor, NY	2004		2004 <sup>6</sup>	Dredged approximately 23,294 cubic yards from the Federal channel
Ouachita and Black River, AR and LA	1964	1984	Indefinite	Replacement of six locks and dams, channel deepening to 9 feet and realignment
Palm Valley Bridge, FL	1998	2002	2002	Bridge Replacement
Pascagoula Harbor, MS	1994		2004	Channel dredging and construction of a new turning basin
Point Marion, Lock & Dam 8, Monongahela River, PA	1986	1994	2002	Replaces existing 56x360' lock chamber with new 84'x720' chamber
Port of Florence, AL	1994	1995	1995	Channel Dredging

**APPENDIX D**  
**Navigation Projects Under Construction During Fiscal Year 2005**

Project	Fiscal Year Started	Placed in Useful Operation	Fiscal Year Completed or Scheduled for Completion	Nature of Project
Port of Long Beach (Deepening), CA	1998		Indefinite	Channel Deepening
Red River WW, Mississippi River to Shreveport, LA	1974	1984 <sup>4</sup>	Indefinite <sup>5</sup>	Lock and dam construction. Channel improvement and realignment
Rhodes Point, MD	2004		2006	Channel Realignment
Richmond Harbor, CA	1985		2000	Channel deepening and turning basin
Robert C. Byrd Locks and Dam, Ohio River	1985	1992	2008	Replacement of existing locks and major rehabilitation of the dam
Rochester Harbor, NY	2004		2004 <sup>6</sup>	Dredged approximately 109,318 cubic yards from the Federal channel
Rockhold Creek, MD	2004		2006	New breakwater and modification of an existing breakwater
Rocky River, OH	2004		2004 <sup>6</sup>	Dredged approximately 18,000 cubic yards from the Federal channel
Rudee Inlet, VA	1990	1991	1991	Dredge 7 foot channel
Sacramento River Deep Water Ship Channel, CA	1986		Undetermined	Deep draft channel, widening and deepening
Salem River, NJ	1995	1996	1996	Channel deepening
San Diego Harbor (Deepening), CA, Sec 107	2004		2005	Channel deepening
Sandusky Harbor, OH	2005		2005 <sup>6</sup>	Dredged approximately 119,607 cubic yards from the Federal Channel
San Francisco Bay to Stockton, CA (John F. Baldwin and Stockton Ship Channels)	1971		Being Determined	Deep draft channel, widening, deepening and dredging
San Juan Harbor, PR	1998		2003	Deepening & widening for channel
Santa Barbara Harbor, CA	1991		Indefinite	Acquire Dredge
Santa Monica Breakwater, CA	1998		Indefinite	Repair Breakwater
Savannah Harbor Deepening, GA	1993		1994	Channel deepening
Seward Harbor, AK	2004		2006	Expand harbor eastward
Shallow Creek Spur Channel, MD	1999	2000	2003	Spur Channel
Shinnecock Inlet, NY	1990		1995	Dredging and repair of Jetties

**APPENDIX D**  
**Navigation Projects Under Construction During Fiscal Year 2005**

Project	Fiscal Year Started	Placed in Useful Operation	Fiscal Year Completed or Scheduled for Completion	Nature of Project
Sonoma Baylands Wetlands Demonstration Project, CA	1993		1997	Restoration of Tidal Wetlands on a 348 acre site
St. George Channel Extension, AK	1994		1996	Dredging
St. Lucie Inlet, FL	2001		Indefinite	Impoundment basin and jetty elements
St. Paul Harbor Improvements, AK	1999		2005	Breakwater Improvements and Dredging
Taconite Harbor, MN	2000	2002	2002	Harbor of refuge construction
Tampa Harbor, FL (Main Channel)	1976	1987	1987	Dredging
Tampa Harbor (Ybor Channel), FL	1999	2001	2001	Enlarge turning basin
Taylor Point Cut, LA (107)	1999	1999	1999	Navigation cut from Charenton LK to Grand Isle
Tenn River, Port of Florence	1994		1995	Channel Improvements
Toledo Harbor, OH	2005		2005 <sup>6</sup>	Island 18 reutilization.
Toledo Harbor, OH	2005		2005 <sup>6</sup>	Dredged approximately 265,952 cubic yards from the Maumee River; dredged approximately 360,838 cubic yards from the Maumee Bay.
Toussaint River, OH	2004		2004 <sup>6</sup>	Dredged approximately 23,989 cubic yards from the Federal channel
Vermilion Harbor, OH	2004		2004 <sup>6</sup>	Dredged approximately 32,200 cubic yards from the Federal channel
West Harbor, OH	2004		2004 <sup>6</sup>	Dredged approximately 48,000 cubic yards from the Federal channel
Wilmington Harbor, NC	1999	2004	Unscheduled	Dredging to Deepen
Winfield Locks and Dam, Kanawha River, WV	1990	1997	2008	Construction of new lock
Wrangell Harbor, AK	2003		2005	Breakwater

## **APPENDIX D**

### **Navigation Projects Under Construction During Fiscal Year 2005**

<sup>1</sup> Walter B. Jones, Joseph P. Knapp, Core Creek, and Gene A. Potter Memorial Bridge and Fairfield Bridge are operational. Fairfield bridge is being closed out.

<sup>2</sup> Phase I, forty-five foot channel to New Orleans, LA. Forty-five foot channel to Mile 181 (Donaldsonville, LA) placed in useful operation in 1988. Phase II, forty-five foot channel from mile 181 to Baton Rouge placed in useful operation in 1994.

<sup>3</sup> Awaiting further PCA's to go deeper than 45 feet.

<sup>4</sup> Lock and Dam No. 1 placed in useful operation in 1984. Lock and Dam No. 2 in 1987. Lock and Dam No. 3 in 1992. Lock and Dam No. 4 and 5 in 1994.

<sup>5</sup> Schedule for completion of entire project is indefinite. However, the project opened to 9-foot navigation on 31 December 1994.

<sup>6</sup> O&M funded.

<sup>7</sup> Placement of maintenance dredge material from the Morehead City Harbor, N.C. navigation project along Bogue Bank beaches of Salter Path, Indian Beach, and Pine Knoll Shores. CAP section 933 project.

D - Debris Control  
F - Flood Control  
I - Irrigation  
N - Navigation

P - Power  
R - Public Recreation Annual Attendance exceeding 5,000  
S - Water Supply  
W - Fish & Wildlife (Federal Or State)

<sup>1</sup> Total of all storage functions, including inactive and dead storage to normal full pool

<sup>2</sup> G: gravel; R: rock; C: concrete; E: earth

<sup>3</sup> All six units have successfully generated power; however, repairs and modifications have been required on all units. Units 2, 3, 4, 5 and 6 fully repaired and operational. Repairs to remaining unit No. 1 will be completed in FY 99.

<sup>4</sup> Being operated for the Department of Interior by the Bureau of Reclamation

<sup>5</sup> Being operated by the Alaska Power Administration

<sup>6</sup> Formerly Clarks Hill Lake

<sup>7</sup> Units 5 and 6 were deauthorized in 1990.

**APPENDIX F**
