INTRODUCTION

The scientists included in this report have in common the fact that they have all been referred to in the Chinese Communist press at one time or another as "prominent" (chu-ming; 5511/0682); some have been so designated only once, while others are called prominent consistently. It is doubtful that the adjective implies any specific rank, for some of these individuals are relatively obscure, and the term seems to have been used to emphasize a particular noteworthy accomplishment; others, obviously the senior men in their fields, have never been accorded the title despite being mentioned several times in the press, and so are excluded here.

These cases are the exceptions, however, and the group as a whole represents the best-trained and most active of Communist China's scientists. The 108 persons covered in this report include 36 in the medical sciences (including pharmacology and physiology), 20 in the biological sciences, 14 in physics, 8 in engineering and metallurgy, and 10 in miscellaneous fields, such as archaeology, meteorology, astronomy, etc.

Of these, 24 have been reported to be directors or deputy directors of institutes of the Chinese Academy of Sciences, the Chinese Academy of Medical Sciences, or the Chinese Academy of Agricultural Sciences; 11 are on the departmental committees of the Chinese Academy of Sciences. There are 19 presidents or vice-presidents of colleges and universities and 6 department heads, and 13 are officers in their professional societies.

As a measure of their scholarly activity, 45 of these persons have been credited with the authorship of at least one (and sometimes more) book or article or with the presentation of papers or reports at professional conferences during 1962. They have undertaken or directed research in their various fields and have trained younger scientists as their personal assistants and proteges. Several of them traveled abroad during the year to attend scientific conferences.

Finally, the prestige of these scientists is such that the regime has used them on occasion for political and propaganda purposes. They have marched at the head of demonstrations denouncing US actions in the Cuba crisis or protested US high-altitude nuclear tests, and long articles have been devoted to their comments on the success and significance of the Soviet Vostok space flights.

Being of the older generation, none of these scientists has received any part of his training in the Soviet Union, although 76 of them have studied abroad. Of these, one has studied in Switzerland, 2 in Japan, 3 each in Austria and Belgium, 5 in France, 6 in Germany, 15 in Britain, and 54 (exactly half of them) have received all or part of their advanced education in the US.
Information on the educational background, and in most cases where no source references were made, the fields of specialization of these scientists, was taken from Chinese Communist Men of Science, CIA/CB BR 62-6, SECRET.

Further reports summarizing the activities of these and any other scientists subsequently identified as "prominent" are provided periodically as a part of the regular FDD semimonthly series, Scientific Information Report: Chinese Science.

Dear Ms. Schoen:

In February of this year, DTIC provided the CIA Declassification Center with a referral list of CIA documents held in the DTIC library. This referral was a follow on to the list of National Intelligence Surveys provided earlier in the year.

We have completed a declassification review of the “Non-NIS” referral list and include the results of that review as Enclosure 1. Of the 220 documents identified in our declassification database, only three are classified. These three are in the Release in Part category and may be released to the public once specified portions of the documents are removed. Sanitization instructions for these documents are included with Enclosure 1.

In addition to the documents addressed in Enclosure 1, 14 other documents were unable to be identified. DTIC then provided the CDC with hard copies of these documents in April 2004 for declassification review. The results of this review are provided as Enclosure 2.

We at CIA greatly appreciate your cooperation in this matter. Should you have any questions concerning this letter and for coordination of any further developments, please contact Donald Black of this office at (703) 613-1415.

Sincerely,

Sergio N. Alcivar  
Chief, CIA Declassification Center,  
Declassification Review and Referral Branch
