STABILIZATION POND OPERATION IN TROPICAL AREAS
Annual Progress Report for Period 13 December 1967 thru 31 December 1968
February 1969

Karl E. Longley, Major, MSC
Office of the Chief Surgeon, USARSO
Fort Amador, Canal Zone

Prepared for
US ARMY MEDICAL RESEARCH AND DEVELOPMENT COMMAND
Washington, DC 20315

This document has been approved for public release and sale; its distribution is unlimited.

The findings in this report are not to be construed as an official Department of the Army position unless so designated by other authorized documents.
INTRODUCTION

This is the second annual progress report on stabilization pond operation in tropical areas. The first part of the report is concerned with administration and construction, while the second part of the report presents the limited amount of data collected during 1968.

ADMINISTRATION AND CONSTRUCTION

Construction of the pilot ponds was completed in May 1968. Data collection was from 31 May to 11 July 1968. During this time it was established that the hydraulic system was inadequate for the high quantities of sewage which can be treated in a primary pond located in a tropical area. Funds were received from U.S. Army Medical R & D Command for modification of the hydraulic system. USARSO Post Engineers attempted twice unsuccessfully to let contracts for modification of the hydraulic system. After the second unsuccessful bid-letting attempt, they agreed to perform necessary modifications with inhouse labor. But, modification was not to start until the beginning of the "dry season". Actual modifications began 6 January 1969.

A biological aid hired in February 1968 and trained to perform laboratory tests was killed in a political riot in Panama City during May 1968. Consequently, a chemist was hired and began work in July 1968 learning the required laboratory techniques. The second technician working for the project began employment with this project in June 1968.

As the medical program of Atlantic-Pacific Interoceanic Canal Study Commission (A-PICSC) failed to receive substantial additional funds, the Medical Support and Research Division of that organization was disbanded and the responsible investigator transferred to US Army Southern Command. Consequently, two personnel spaces loaned to the project by A-PICSC stood in danger of being withdrawn. Therefore, permission was received from U.S. Army Medical Research and Development Command to submit a proposed contract for continuance of the project through the use of Gorgas Memorial Laboratory facilities and services. This contract, effective 1 July 1968, has proved to be highly effective and has removed a large part of the administrative burden.

DATA

Operation of the ponds was for such a short duration that reasonably stable conditions did not develop. However, some interesting data was obtained. Organic loading to one pond averaged approximately 500 lbs biochemical oxygen demand (B.O.D.) per acre-day. At this organic loading rate and an average influent B.O.D. of 214 mg/l, the following B.O.D. readings were obtained from a sampling point in the center of the pond.
B.O.D., Center of Pond No. 1

A large green algae population developed rapidly. At the loading rate described above, this population contributed to high dissolved oxygen surface values.

Typical cross-section values for certain parameters obtained at mid-day are shown in the table below:

Dissolved Oxygen, Temperature and pH,
Center of Pond No. 1, 26 June 68 - 1400 hours

</table>

Dissolved oxygen surface values as high as 16 mg/l were recorded at mid-day at other times. Future work will include investigation of the influence of the large algae populations upon the organic conversion characteristics of the stabilization pond system. It is anticipated the high populations cause an extinction of light near the surface significantly extreme to severely limit aerobic processes to a narrow region near the water surface.

Trends which may be inferred from the above values will be monitored during the upcoming full scale operations of the pilot ponds.

A conservative summary of the limited amount of data collected indicates stabilization ponds in tropical areas will operate satisfactorily at organic loadings in excess of a population equivalent of 300 capita per acre-day.

This is the second annual progress report on stabilization pond operation in tropical areas. The first part of the report is concerned with administration and construction, while the second part of the report presents the limited amount of data collected during 1968. A conservative summary of these data indicates that stabilization ponds in tropical areas will operate satisfactorily at organic loadings in excess of a population equivalent of 300 capita per acre-day.
### KEY WORDS

- Waste treatment
- Stabilization ponds
- Tropical areas
- Sewage disposal
- Sanitary engineering

### INSTRUCTIONS

1. **ORIGINATING ACTIVITY:** Enter the name and address of the contractor, subcontractor, grantee, Department of Defense activity or other organization (corporate author) issuing the report.

2a. **REPORT SECURITY CLASSIFICATION:** Enter the overall security classification of the report. Indicate whether "Restricted Data" is included. Marking is to be in accordance with appropriate security regulations.

2b. **GROUP:** Automatic downgrading is specified in DoD Directive 5200.10 and Armed Forces Industrial Manual. Enter the group number. Also, when applicable, show that optional markings have been used for Group 3 and Group 4 as authorized.

3. **REPORT TITLE:** Enter the complete report title in all capital letters. Titles in all cases should be unclassified. Report directly from the originating activity. This number must be unique to this report.

4. **AUTHOR(S):** Enter the name(s) of author(s) as shown on or in the report. Enter last name, first name, middle initial. If military, show rank and branch of service. The name of the principal author is an absolute minimum requirement.

5. **PROJECT NUMBER:** Enter the number of the contract or grant under which the report was written.

6. **REPORT DATE:** Enter the date of the report as day, month, year, or month, year. If more than one date appears on the report, use date of publication.

7a. **TOTAL NUMBER OF PAGES:** The total page count should follow normal pagination procedures, i.e., enter the number of pages containing information.

7b. **NUMBER OF REFERENCES:** Enter the total number of references cited in the report.

8a. **CONTRACT OR GRANT NUMBER:** If appropriate, enter the applicable number of the contract or grant under which the report was written.

8b, 8c, & 8d. **PROJECT NUMBER:** Enter the appropriate military department identification, such as project number, subproject number, system numbers, task number, etc.

9a. **ORIGINATOR'S REPORT NUMBER(S):** Enter the official report number by which the document will be identified and controlled by the originating activity. This number must be unique to this report.

9b. **OTHER REPORT NUMBER(S):** If the report has been assigned any other report numbers (either by the originator or by the sponsor), also enter this number(s).

10. **AVAILABILITY LIMITATION NOTICES:** Enter any limitations on further dissemination of the report, other than those imposed by security classification, using standard statements such as:

11. **SUPPLEMENTARY NOTES:** Use for additional explanatory notes.

12. **SPONSORING MILITARY ACTIVITY:** Enter the name of the departmental project office or laboratory sponsoring the research and development. Include address.

13. **ABSTRACT:** Enter an abstract giving a brief and factual summary of the document and its subject matter. Include any relevant key words.

14. **KEY WORDS:** Key words are technically meaningful terms or short phrases that characterize a report and may be used as index entries for cataloging the report. Key words must be selected so that no counts, classification is required. Identifiers such as project identification numbers, contract numbers, etc. should not be used as key words, but will be included as an indication of technical context. The assignment of key words and weights is optional.
