Background. Kohlbrat & Bunz, Radstadt, Austria, has developed the UT 2000, a universal transporting device for use by rescue services.

Description. The UT 2000 is a high quality, ultra-lightweight, multifunctional device and is capable of modification to meet most portable equipment requirements. The equipment was developed in collaboration with the Austrian Army and has been tested in desert and arctic conditions. The equipment can be used in the medical evacuation role and underslung from a helicopter.

The UT 2000 consists of two sections, each of which is a backpack capable of carrying loads limited only by the strength of the user. When coupled together, the sections form a device that can be used as a cot, sled, or stretcher.

Technical Data

- Length: .................. 940 mm (coupled 1800 mm)
- Width: .................. 440 mm
- Height: .................. 120 mm
- Weight: .................. 3.5 kg
- Load capacity: ............ 140 kg (when coupled)

For further information contact Brigadier D. J. Porter, Leharweg 8, A-6380 St. Johann/Tirol, Austria. Telephone: (0 53 52) 325 65.

ONREUR point of contact: CDR R. H. Taylor, USN, Undersea Systems Officer.
