In response to the growing need for alternative diagnostic assessments that can help diagnose instruction and training needs so that individuals can achieve basic levels of mastery, a conference was organized that brought together researchers, educators, and policy makers from diverse areas interested in new forms of assessment. The goal of the conference was to educate presenters and the audience on the strengths and limitations of diagnostic assessment.
Conference on Diagnostic Assessment

In response to the growing need for alternative diagnostic assessments that can help diagnose instruction and training needs so that individuals can achieve basic levels of mastery, a conference was organized that brought together researchers, educators, and policy makers from diverse areas interested in new forms of assessment. The goal of the conference was to educate presenters and the audience on the strengths and limitations of diagnostic assessment. A group of 18 presentations were solicited and 17 invitations were accepted. The conference kicked-off on Wednesday evening, May 5 with a reception. On Thursday morning, following a catered breakfast, the conference opened at 8:30 and adjourned that evening at 5:45. An evening dessert reception hosted by American College Testing was well attended. The conference resumed at 8:30 on Friday morning and ended at 3:45 that afternoon. The conference was attended by 59 people including people from across the United States and outside the United States.

In addition to the conference participants, the ideas shared at the conference will reach a broader audience through an edited book of the conference proceedings. A contract for publication of the book has been signed with Lawrence Erlbaum Associates. The book now has 14 chapters and two chapters may be added. Publication of the book is expected in 1994. The following is a list of titles and authors now in the book.

Title: Assessing design activity in complex CMOS circuit design
Authors: Gautam Biswas
Vanderbilt University
Susan Goldman
Vanderbilt University

Title: Student modeling in the ACT programming tutor
Authors: Albert T. Corbett
Department of Psychology
Carnegie-Mellon University
John R. Anderson
Department of Psychology
Carnegie-Mellon University
Alison T. O'Brien
Department of Psychology
Carnegie-Mellon University
Title: Using clustering methods to explore the structure of diagnostic tests
Author: James E. Corter
Teachers College
Columbia University

Title: Unified cognitive/psychometric diagnostic assessment likelihood-based classification techniques
Authors: Louis V. DiBello
University of Illinois at Urbana

William F. Stout
University of Illinois at Urbana

Louis A. Roussos
University of Illinois at Urbana

Title: A measurement model for a complex cognitive skill
Authors: Karen L. Draney
School of Education
University of California-Berkeley

Peter Pirolli
School of Education
University of California-Berkeley

Mark Wilson
Graduate School of Education
University of California-Berkeley

Title: Adapting cognitive methods to real world objectives: An application to job knowledge testing
Authors: David DuBois &
Personnel Decisions Research Institute

Valerie L. Shalin
State University of New York-Buffalo
Title: Diagnostic assessment of troubleshooting skill in an intelligent tutoring system
Authors: Drew H. Gitomer
Educational Testing Service

Linda S. Steinberg
Educational Testing Service

Robert J. Mislevy
Educational Testing Service

Title: Similarity, structure and knowledge: A representational approach to assessment
Authors: Peder J. Johnson
Department of Psychology
University of New Mexico

Timothy E. Goldsmith
Department of Psychology
University of New Mexico

Kathleen W. Teague
Department of Psychology
University of New Mexico

Title: ASPM2: Progress toward the analysis of symbolic parameter models
Authors: Thad A. Polk
Department of Psychology
University of Pennsylvania

Kurt VanLehn
Learning Research & Development Center
University of Pittsburgh

Dirk Kalp
School of Computer Science
Carnegie-Mellon University

Title: Some suggestions for alternative assessments
Author: Sandra P. Marshall
Department of Psychology
San Diego State University
Title: A Bayesian approach to cognitive assessment
Authors: Joel Martin &
Learning Research and Development Center
University of Pittsburgh

Kurt VanLehn
Learning Research & Development Center
University of Pittsburgh

Title: Probability-based inference in cognitive diagnosis
Author: Robert J. Mislevy
Educational Testing Service

Title: A cognitive diagnosis method using latent trait models: Competency space approach and its relationship with the unified cognitive/psychometric diagnosis model
Author: Fumiko Samejima
Department of Psychology
The University of Tennessee-Knoxville

Title: Architecture of knowledge structures and cognitive diagnosis: A statistical pattern classification approach
Author: Kikumi Tatsuoka
Educational Testing Service
