MIPR NO: 93M3511

TITLE: DEVELOPMENT OF ULTRA LONG DURATION LOCAL ANESTHETIC AGENTS IN A RAT MODEL

PRINCIPAL INVESTIGATOR: Mark Kline, CPT, MC

CONTRACTING ORGANIZATION: Combat Anesthesia Research Pain Management/Anesthesia Walter Reed Army Medical Center Washington, DC 20307-5001

REPORT DATE: February 24, 1994

TYPE OF REPORT: Annual Report

PREPARED FOR: U.S. Army Medical Research and Materiel Command Fort Detrick Frederick, Maryland 21702-5012

DISTRIBUTION STATEMENT: Approved for public release; distribution unlimited

Lecithin-coated tetracaine microcrystals provide an ultra long duration local anesthetic effect without causing toxicity to surrounding tissues or nerves. Lecithin-coated bupivacaine microcrystals also appear to have an ultra long duration local anesthetic effect, although tissue toxicity remains to be evaluated.
Memorandum for LTC Dean E. Calcagni, M.D.  
Director, Combat Casualty Research Program  
USAMRDC

Subject: Annual Report for Clinical Investigation Protocol 2056A “Development of Ultra Long Duration Local Anesthetic Agents in a Rat Model” (FY 93)

1. Progress: We have previously demonstrated that lecithin-coated tetracaine microcrystals provide an ultra long duration local anesthetic effect of 44 hours in the rat tail. We have also previously demonstrated that this formulation is not toxic to skin tissues when placed intradermally. This year we were able to demonstrate that lecithin-coated tetracaine microcrystals do not cause peripheral neurotoxicity when placed directly on the sciatic nerve. In addition, initial data indicate that this formulation is not toxic to the spinal cord.

Initial trials with lecithin-coated bupivacaine microcrystals indicate that this preparation also has an ultra long duration local anesthetic effect, producing a 43 hour block in the rat tail. Clinical trials of this preparation in a human model are scheduled to begin in Jan 94.

2. Summary: Lecithin-coated tetracaine microcrystals provide an ultra long duration local anesthetic effect without causing toxicity to surrounding tissues or nerves. Lecithin-coated bupivacaine microcrystals also appear to have an ultra long duration local anesthetic effect, although tissue toxicity remains to be evaluated.
