IFMR/TG INTERFACE
INTERFACE CONTROL UNIT

1.0 SCOPE

This document shall describe the interface between the IFMR (IIU) and the TECHNIQUES GENERATOR. The functional as well as the detailed physical requirements shall be included in this document.

2.0 APPLICABLE DOCUMENTS

IEWS ICD 53959-NK-1400
IEWS ICD 53959-DB-1011

3.0 REQUIREMENTS

An interface shall be established between the IFMR (IIU) and the Techniques Generator to enable the transfer of VCO RF signals and RF switch control lines. The Techniques Generator also communicates with IFMR via the Parameter Encoder on the IFMR BUS, see ICD 53959-DB-1011. The IFMR../TG interface shall be organized as shown in Figure 1.

3.2 PERFORMANCE REQUIREMENTS

3.2.1 IFMR Timing

Each VCO set on process shall require less than 3 \( \mu \text{sec} \) of the IFMR measurement time. The control timing shall be as shown in Figure 2.

3.3 DATA STRUCTURE

The IFMR/TG interface, as shown in Figure 3, shall consist of:

2 VCO RF lines
3 RF switch control lines

VCO 01
VCO 02

10-1349 CONT (11/68) FILM
3.4 DESIGN REQUIREMENTS

3.4.1 Line Drivers/Line Receivers

All line drivers and line receivers shall incorporate SN75110 and SN75107A type devices respectively. The IFMR output shall be terminated on both ends with the termination network specified in Figure 4.

3.4.2 Interconnecting Transmission Lines

All interconnection cables used for this interface shall utilize twisted pair. The characteristic impedance shall be 110Ω ±5%. A termination plug shall be provided which is a matched pair (±1%) of 56 ohm resistors for each signal and its return as shown in Figure 4.

3.4.3 Interface Signal Definition

Figure 3 provides the interface signals between the IFM and the Techniques Generator. Signals VCO 00+ and VCO 00- are the signal and the return respectively.

BLANK - a logic signal generated prior to the transmission of VCO RF which inhibits RF inputs to the IFMR.

VCO - 1 - A logic signal which selects VCO1 as the RF source for IFMR frequency measurements.

VCO - 2 - A logic signal which selects VCO2 as the RF source for IFMR frequency measurements.

VCO - 1 RF - An RF signal sent to the IFMR for frequency measurement.

VCO - 2 RF - An RF signal sent to the IFMR for frequency measurement.
