MARCH 1993

UNCLASSIFIED

CHANGE NR 281
(Reverse Blank)

FORWARD

1. ACP 117 CAN-US SUPP-1(K), ALLIED ROUTING INDICATOR BOOK, CANADA-UNITED STATES SUPPLEMENT NO. 1 is an UNCLASSIFIED Allied Communication Publication (ACP).
2. ACP 117 CAN-US SUPP-1(K) will be effective when directed for National or Allied use by the Implementing Agency.
3. When made effective, ACP 117 CAN-US SUPP-1(K) supersedes ACP 117 CAN-US SUPP-1(K) which will be disposed of in accordance with current organization regulations.
4. This publication contains Allied military information and is furnished for official purposes only.

MILITARY COMMUNICATIONS-ELECTRONICS BOARD
WASHINGTON, D.C. 20318-6100

Reply ZIP Code:

26 JAN 2004
CHANGE NR 281
To ACP 117 CAN-US SUPP-1(K)

**US NATIONAL LETTER OF PROMULGATION
FOR CHANGE NO. 281 TO ACP 117 CAN-US SUPP-1(K)**

1. CHANGE NO. 281 to ACP 117 CAN-US SUPP-1(K), ALLIED ROUTING INDICATOR BOOK - CANADA-UNITED STATES SUPPLEMENT NO. 1, is an UNCLASSIFIED publication developed by direction of the Chairman, and is promulgated for guidance, information, or use of the Armed Forces of the United States and other users of US military communications facilities.
2. CHANGE NO. 281 to ACP 117 CAN-US SUPP-1(K) is EFFECTIVE 26 JANUARY 2004 and confirms material promulgated by Message Corrections 822/281 thru 823/281.
3. Permission is granted to copy or make extracts from this document, as desired, without reference to The Joint Staff.
4. This document may be carried in aircraft for use therein.
5. Correspondence concerning this publication should be addressed as follows:
 - a. Service-originated correspondence will be forwarded through the normal military chair of command, marked for the attention of the appropriate Service communications chief or director, as listed below, and will not be addressed to the Joint Chiefs of Staff:
 - (1) Director of U.S. Army Network Enterprise Technology Command, US Army.
 - (2) Director, Space and Electronic Warfare (N-6), US Navy.
 - (3) Deputy Chief of Staff, Command, Control, Communications and Computers, US Air Force.

(4) Assistant Chief of Staff, Command, Control, Communications and Computers and Intelligence, US Marine Corps.

b. Defense, national, and Federal agencies, as well as other recipients of the publication, should address their correspondence to the Chairman, Military Communications-Electronics Board, 6100 Joint Staff Pentagon, Washington, DC 20318-6100.

JOHN J. REIDT
Colonel, US Army
Military Secretary

SECTION V - COLLECTIVE ROUTING INDICATORS AUTHORIZED FOR USE WITHIN THE AUTODIN	5-01
APPENDIX - ROUTING INFORMATION CHARTS	A-1
LIST OF EFFECTIVE PAGES	LEP-01

GENERAL INSTRUCTIONS

1. GENERAL. ACP 117 CAN-US SUPP-1(K), ALLIED ROUTING INDICATOR BOOK - CANADA-UNITED STATES SUPPLEMENT NUMBER 1, contains a list of routing indicators and routing information to be used on the common-user (teletype-digital) networks of the United States and Canada.

2. FORMULATION OF ROUTING INDICATORS. The routing indicators contained in this book are formulated in accordance with the routing indicator assignment plan contained in ACP 121 wherein the various letters of a routing indicator are assigned meanings as follows:

a. FIRST LETTER - The letter "R" is designated as the common first letter to distinguish world-wide routing indicators from call signs, address groups and theater routing indicators.

b. SECOND LETTER - The second letter identifies the nation, service, or international alliance to which allotted, as reflected in the Routing Indicator Delineation Table, ACP 121.

c. THIRD LETTER - The third letter normally indicates the geographical area in which a station is located or from which it is served. Within U.S. communications networks the third letter does not necessarily reflect the geographical area. Due to the shortage of routing indicators in some areas and abundance in other areas, assignments are made irrespective of geographical area, particularly for dedicated network major relay stations and dual access tributary stations (see Chart 4 on page A-9).

d. FOURTH LETTER - The fourth letter identifies major relay stations. In normal operation, major relay station routing indicators are modified by the use of suffixes prescribed in paragraph 9.

e. FIFTH, SIXTH AND SEVENTH LETTERS - These letters identify minor relay or tributary stations. In the fifth position, the letter "C" is reserved for communications purposes. Within AUTODIN, minor relay and tributary stations connected to an Automatic Switching Center will be assigned seven-letter routing indicators reflecting the letter "A" in the seventh-letter position, except as indicated in paragraph 3.

3. ROUTING INDICATOR ASSIGNMENT. Normally, routing indicators will be assigned to a communication facility actually operating a tributary station.

a. Within AUTODIN, assignment of seventh-letter derivatives by varying the seventh letter is authorized wherever traffic loads and/or extenuating circumstances justify. This includes customers served by acceptance and delivery, on-base electrical facilities, off-net relay, etc. Appropriate justification must be included when requesting such assignment.

b. Instructions governing changes in or assignment of routing indicators are contained in paragraphs 11 through 15.

4. COMPOSITION. ACP 117 CAN-US SUPP-1(K) is composed of the following:

a. SECTION I (DECODE) - Alphabetical listing of routing indicators and identification and location of operating activity. The columns in Section I contain information as follows:

(1) Column A (ROUTING INDICATORS) - List of routing indicators in alphabetical order.

(2) Column B (OPERATING ACTIVITY AND LOCATION) - Decode of the routing indicator showing the operating activity and its location and, in general, indicating its status in the communications system, such as a major or minor relay station. All listings not identified otherwise are tributary stations. Column B listings for routing indicators contained in SECTION IV will be annotated by the parenthetical note (TACTICAL). The operating activity is defined as the message address of the communications activity responsible for providing service. Routing messages by employing only Section I is NOT permitted. Routers must refer to the appropriate geographical listing in Section II to determine the appropriate routing indicator to be assigned to a message address.

b. SECTION II (ENCODE) - Alphabetical listing by geographical location, city, base, fort, or station title, followed by state, province, or country, as appropriate. Under each such heading is an alphabetical and numerical listing of the activities/formations at that location. Assigned routing indicators follow each listing. An indication that the activities/formations are served by more than one relay station or network may be shown by listing routing indicators in vertical sequence in appropriate columns. The columns of Section II contain information as follows:

(1) Column A (LOCATION - ACTIVITY/FORMATION) - The geographical location, followed in alphabetical/numerical order by activities/formations at that location. Where applicable, the term "COMMCEN", followed by appropriate identification is listed as the last entry under a location for use in routing as prescribed in paragraphs 6 and 8.

(2) Column B (ON-LINE) - The routing indicators in this column will be used to route classified messages (up to and including SECRET - except as indicated in Column E) over common-user on-line cryptographically secured channels or approved circuits to the activities listed in Column A. When a listed activity is not served directly by on-line cryptographically secure means or an approved circuit, the routing indicator represents the station responsible for off-line encryption (narrative traffic only) or delivery by other means. A blank Column B indicates that the activity listed in Column A has not established a capability for the transmission/reception of on-line encrypted traffic. Where all routing (on-line crypto, unclassified and off-line crypto) is the same, Columns C and D will indicate this condition by referring the router to the Column B entry. NOTE: Only a US routing indicator can be assigned in Column B to a US message address listed in Column A.

(3) Column C (UNCLAS) - The routing indicators listed in this column will be used to route unclassified traffic to the activities/formations listed in Column A. When the routing for unclassified traffic is the same as for on-line traffic, then the letter B will appear in this column.

4.b.(4) (Continued)

(4) Column D (OFF-LINE) - The routing indicators in this column will be used to route narrative messages which require encryption or decryption to effect delivery to the activities listed in Column A. When the off-line routing indicator is the same as the on-line routing indicator, the letter B will appear in Column D; when it is the same as the unclassified routing indicator, the letter C will appear in Column D.

(5) Column E (MODE) (Not applicable to Canadian Terminals except for Symbol T) - This column indicates the mode(s) of operation available at the terminal station. It also provides special routing instructions. The symbols appearing in Column E are defined below.

(a) Terminal stations can accept messages in either narrative and/or non-narrative style as indicated by LMF codes shown below. With the exception of LMF "RT", messages may be exchanged between "A" and "T" terminal stations, regardless of the indicated mode of operation.

A - Teletypewriter messages - 8 level ASCII

T - Teletypewriter messages - 5 level BAUDOT

C - Cards, or card images (80-character records)

(b) Certain terminal stations are designed to operate only with or into a specific native computer, or to receive traffic in only one specific format. If Hybrid service is desired, prior coordination should be effected with the parent AUTODIN switching center and with the distant terminal to insure compatibility of speed and equipment. Language and media format can be determined from Annex A, JANAP 128. The following symbols are used to identify these terminals:

A7, A9 - Magnetic tape, variable length data (LMFs BB, DD or II)
7 or 9 track operation

B7, B9 - Magnetic tape, variable length data (LMF BB)
7 or 9 track operation

C7, C9, C79 - Magnetic tape (card image) 7 and/or 9 track operation

D7, D9 - Magnetic tape, variable length data (LMF DD) 7 or 9
track operation

I7, I9 - Magnetic tape, variable length data (LMF II) 7 or 9
track operation

Example of combined symbols used in SEC II, COL E:

Symbol: CDI9 Meaning: Magnetic Tape (card image) and variable
length data (LMFs DD or II) 9 track operation

(c) The following special symbols may also appear in Column E as special routing or traffic handling instructions pertaining to the station involved. These symbols are for routing purposes only and are not to be confused with the redundant security characters used in message handling.

G - Routing Indicator appearing in Column B shall be used to route TOP SECRET and/or special handling messages (US-UK EYES ONLY) addressed to specific United Kingdom (UK) activities listed in column A or served by the listed UK COMMSEN.

N - The station whose routing indicator appears in column B has established a capability to handle messages containing the special handling designations, ATOMAL, CRYPTOSECURITY and EXCLUSIVE FOR.

P - Activity listed in Column A is served locally by a Department of State Diplomatic Telecommunications Service (DTS) part-time facility. This symbol is for use in conjunction with IMMDELREQ (ZZK) procedures.

Q - The station whose routing indicator appears in Column B has established a capability to handle messages of all classifications and all levels of Special Category (SPECAT) traffic, including Special Handling Designator (SHD) traffic. This symbol applies only to DCS relays and tributaries whose primary mission involves the processing of general purpose/common user traffic. DTS relays and tributaries may use routing indicators in Column B opposite Column E "Q" listings for the routing of messages of all classifications or limited SPECAT traffic. See also Paragraph 350.b.(3), ACP 121 US SUPP-1.

S - The station whose routing indicator appears in Column B has established a capability to handle messages of all classifications and limited Special Category (SPECAT) traffic, including Special Handling Designator (SHD) traffic. This symbol applies to DCS AUTODIN and DTS relays and tributaries whose primary mission involves the processing of general purpose/common user traffic. See also Paragraph 350.b.(3), ACP 121 US SUPP-1.

W - Indicates that the activity in Column A is served by special purpose on-line means on a controlled basis. The routing indicator in Column B is included herein for the benefit of those who have the authority to use special purpose/dedicated network facilities which have been established primarily to handle high level command message traffic of all classifications (and in some cases, SPECAT), and are governed by separate instructions. The "W" symbol may be used in conjunction with the "Q", "S" or "Y" symbols when the routing indicator in Column B performs both a common-user and dedicated network function.

X - Accepts only service messages in the teletypewriter mode. All other narrative messages, including administrative, should be routed to the collocated teletypewriter facility, if any, or in accordance with Chart 6 on page A-13.

Y - The station whose routing indicator appears in Column B has established a capability to handle messages of all classifications. This symbol applies only to AUTODIN, DTS, and specific NATO organizations and member nation relays and tributaries authorized to receive TOP SECRET /COSMIC TOP SECRET, whose primary mission involves the processing of general purpose/common user traffic.

c. SECTION III (ROUTING FOR NATO/ALLIED ACTIVITIES BY SHORT TITLE) - This section contains an alphabetical/numerical listing of NATO and Allied message addresses, which are short titles, and assigned routing indicators. Routers encountering a message address which does not contain a geographical location will determine whether the activity is listed in this section. The columns of Section III contain the same information as Section II, described in paragraph 4.b., with the exception of Column A (Short Title).

d. SECTION IV (ROUTING FOR THEATER TACTICAL ADDRESSEES) - This section contains an alphabetical/numerical listing of tactical message addresses and assigned routing indicators. The tactical message addresses and assigned routing indicators will only be employed during contingency operations, exercises, or general war. The implementation of routing will be directed by competent authority by contingency plans, exercise plans, or general war plans. It should be noted that procedural exemptions exist for traffic originated in a tactical environment. (See JANAP 128/ACP 127 US SUPP-1 for specific procedural guidance).

e. SECTION V (COLLECTIVE ROUTING INDICATORS AUTHORIZED FOR USE WITHIN THE AUTODIN) - This section lists authorized collective routing indicators and the purpose for which they are used (see paragraph 10).

f. APPENDIX - Routing Information Charts. This appendix contains the following charts:

- (1) Chart 1 - United States Navy Fleet Units - Routing Chart
- (2) Chart 2 - United States Transfer Circuits
- (3) Chart 3 - Canadian Transfer Circuits
- (4) Chart 4 - Commercial Refile - Routing Chart

5. NATIONAL SUPPLEMENTS

a. National supplements to the ACP 117-series which are to be used in conjunction with this publication are listed below.

- (1) ACP 117 CAN SUPP-2 (distributed only to Canada)
- (2) ACP 117 US SUPP-2 (distributed only to US)
- (3) ACP 117 US SUPP-4 (distributed only to US)

b. These national supplements indicate proper routing for messages addressed to military and non-military activities/formations and organizations for which routing has not been provided in this publication. ACP 117 provides routing information for allied message addresses which inter-operate with national communications networks through interchange circuitry. ACP 117 SUPP-1 provides routing information for NCSO (Naval Control of Shipping Offices), REPTOF (Reporting Officers) and MERCAST (Merchant Broadcast) message addresses. The ACP 117 NATO SUPP-1 provides routing information for NATO message addresses.

6. GENERAL ROUTING INFORMATION (For US Use Only)

a. The term "COMMCCEN" is used in this publication as a means of

minimizing the number of listings required. Any activity whose routing information is identical to the "COMMEN" entry for that location should not be listed. Listing of the term "COMMEN" at a location does not necessarily mean that a telecommunications facility is physically located at that geographical location.

(1) The term "COMMEN" indicates that the station whose routing indicator(s) appears in Columns B, C, or D serves all unlisted U.S. Government activities at the location under which listed for both narrative teletypewriter messages and data-formatted traffic. In addition, if an activity is listed in Column A with only a data pattern capability indicated in Column E, the COMMEN listing will provide narrative message service for that activity.

(2) The term "COMMEN TTY" indicates that the station whose routing indicator(s) appears in Columns B, C or D serves all unlisted U.S. Government activities at the location under which listed, for narrative teletypewriter traffic.

(3) The term "COMMEN DATA" indicates that the station whose routing indicator appears in Columns B and C serves all unlisted U.S. Government activities at the location under which listed, for data-formatted traffic.

(4) The terms outlined in paragraphs 6.a.(1), (2) and (3) above, when followed by an abbreviation signifying a U.S. Service or Agency, indicate that the COMMEN service indicated is available only to activities of that service or agency at that location.

b. Some activities within and outside CONUS operate their own communications facility. Such activities will always be individually listed in Section II, III, or IV with applicable routing indicators reflected.

c. When processing classified messages of a higher security level than that indicated for the Col B listing, and Col B and D listings are not the same, in order to utilize on-line facilities to the maximum extent possible, routing clerks will ascertain the level of on-line security clearance of the Col D listing. This is accomplished by referral to Section I to determine identity of operating activity and then referral to Section II, III, or IV - Col E to determine on-line capability. If the security level of the Col D listing (designated off-line cryptoguard) is equal to or higher than that of the message involved, the message will be transmitted on-line utilizing the Col B listing of the designated off-line cryptoguard facility. This procedure is not applicable for US classified record traffic addressed to a US message address protected by an Allied or international organization off-line cryptoguard routing indicator. The message in question must be off-line encrypted in a US system prior to transmission to the non-US routing indicator to preclude unauthorized third party viewing of US classified traffic. It should be noted that Chart 5 on page A-11 shows a geographical breakdown of cryptoguard responsibility for US Army activities at locations not listed in Section II.

d. Activities served by national and international networks, for which an interchange agreement has been concluded, have been listed in this publication, ACP 117, and ACP 117 SUPP-1. If the listings are not found in this publication, traffic will be routed by Section II, ACP 117 or ACP 117 SUPP-1. To assure acceptance and processing of all Allied routing indicators reflected in ACP 117, ACP 117 SUPP-1 and ACP 117 CAN-US SUPP-1, appropriate Allied primary/major relay routing indicators have been programmed into the DCS AUTODIN Switching Centers.

e. All traffic which cannot be routed in accordance with the above instructions will be routed as prescribed by the appropriate routing chart in the Appendix, or in the appropriate U.S. Supplement to ACP 117. A message address is considered unlisted if the geographical location is not listed, the geographical location is listed but no COMMSEN listing exists, or the geographical location is listed with a COMMSEN entry which restricts traffic protected; e.g., a single service/agency.

f. Messages for mobile commands and units of the U.S. Navy that are not listed in ACP 117 US SUPP-2 will be routed in accordance with the U.S. Navy Fleet Units-Routing Chart contained in this publication on page A-3, Chart 1. Transmission instructions will be used on multiple address (call) messages, including AIGs, unless routing indicators are used in format lines 7 and 8 to indicate delivery responsibility. Ships at sea that require delivery of commercial refile type message traffic shall follow specific procedures as formulated by their respective Type Commanders for ships requiring communications with commercial CONUS addressees (i.e., addressees not part of the Department of Defense). Ships should address the message or information via naval message to their CONUS based Type Commander or administrative chain-of-command (with passing instructions). This is not to preclude ships equipped with INMARSAT terminals from direct dialing the addressee or choosing to deliver the message by other means (mail, salts, etc.). Class E service remains unchanged.

g. Message address for (a) NATO/Allied activities addressed by short title, (b) tactical activities, (c) Emergency Relocation Sites (ERS), (d) Alternate Command Elements (ACE), (e) Alternate Headquarters (ALT HQ), and (f) mobile commands and units, normally do not contain a geographical location as part of the message address. Section III of this publication contains the appropriate routing indicators assigned to NATO/Allied activities addressed as short titles; Section IV contains the appropriate routing indicators assigned to tactical addresses; ERS, ACE, and ALT HQ are listed in ACP 117 US SUPP-4, and Mobile Commands and Units are listed in ACP 117 US SUPP-2.

h. Unclassified EFTO messages will normally be routed in accordance with paragraph 4.b.(2). Messages designated as EFTO mission will be routed in accordance with paragraph 4.b.(3). (The term "EFTO" mission traffic, is used on air traffic control messages addressed to Federal Aviation Agency (FAA activities, ARTCC, etc.) and certain ICAO stations.)

i. Messages which require routing by means of Allied routing indicators (other than routing indicators beginning with RU or RH) will be handled as follows:

(1) The addressee involved with the non-U.S. Allied routing indicator must be confirmed as a U.S. or foreign activity.

(a) If confirmed to be a U.S. activity served by another regional defense organization or foreign national network, and the message is unclassified, Transmission Release Codes (TRCs) must be used (see paragraph 6.i.(1)(b)). If the message is classified, it will be off-line encrypted in a U.S. system and routed in accordance with paragraph 4.b.(4). On-line routing principles contained in paragraph 7 apply where applicable. If the addressee holds no off-line system, the message will be handled in accordance with the service instructions directive upon the originating or cryptoguard station, as appropriate.

(b) If confirmed to be a non-U.S. activity or the address element is composed of a combination of U.S. and non-U.S. activities, the message must contain a transmission release code. The description of TRCs and their use follows:

1 The transmission release code is a two-letter element which is inserted in format lines two and four of a JANAP 128 message or format line 4 of an ACP 127 formatted message, in conjunction with the redundant security character group to indicate authorization for the transmission of any U.S. DoD message to another nation or regional defense organization. TRCs are not employed on U.S. to U.S. national traffic, except as indicated herein.

2 The TRC consists of two redundant letters which are the same as the second letter of the assigned addressee routing indicator except as noted in subparas 4c and d below.

3 The TRC will be assigned by the message originator's telecommunications facility. Assignments will be based on the relationship of the routing indicators to the regional defense organization or foreign nation activities contained in the address portion of the message.

4 TRC designators must be listed in alphabetical sequence to preclude rejection on input by the connected ASC. TRCs will be assigned in this manner.

a US Addressees Only. TRCs will not be used on U.S. DoD messages addressed only to U.S. activities. Unclassified traffic addressed to a U.S. element served by a communications facility of a regional defense organization or foreign nation must contain the TRC (based on the routing indicator) of the regional defense organization or foreign nation providing the service.

b Addressees of One Regional Defense Organization or Foreign Nation. Messages containing addressees of a single regional defense organization or foreign nation or a combination of U.S. addressees and addressees of only a single regional defense organization or foreign nation, will reflect the TRC assigned to the regional defense organization or foreign nation addressee; i.e., a message to a Canadian addressee and routing indicator would use the TRC "CC".

c Addressees of Two Regional Defense Organizations or Foreign Nations. Messages containing addressees of two regional defense organizations or foreign nations with or without U.S. addressees the TRC will reflect the second letter assigned to each of the regional defense organizations or foreign nations; i.e., the TRC "BC", would indicate a message addressed and routed to a United Kingdom and a Canadian addressee. The TRC "BX" would indicate a message addressed and routed to the United Kingdom and Italy.

d Addressees of More Than Two Regional Defense Organizations or Foreign Nations. If a message contains more than two regional defense organization or foreign national addressees, or a combination of regional defense organization or foreign nation addressees, multiple transmissions are required. As an example, a message addressed and routed to Australia, Canada and NATO would be processed as follows: The TRC "AC", "AX", or "CX" would be used on one transmission. The second transmission then would contain the TRC "AA", "CC", or "XX" as appropriate dependent on what combination was employed on the first transmission.

5 TRCs assigned for regional defense organization or foreign nation networks exchanging message traffic with the U.S. are as follows:

a A - Australia

b B - British Commonwealth (less Canada, Australia

and New Zealand).

c C - Canada

d U - United States. Used only on traffic originated by an allied/NATO terminal using JANAP 128 format.

e X - All traffic destined for the following regional defense organization or foreign nations:

- 1 Belgium
- 2 Denmark
- 3 France
- 4 Germany
- 5 Greece
- 6 Italy
- 7 Netherlands
- 8 Norway
- 9 Portugal
- 10 Turkey
- 11 Spain
- 12 NATO

f Z - New Zealand

(2) Messages containing TRCs that are addressed and routed to a NATO member nation may be released into the NATO system for subsequent delivery to the national system providing no special handling designations as CRYPTOSECURITY, ATOMAL and EXCLUSIVE are contained in the message. Messages containing such special handling designations or the statement "EYES ONLY"; e.g., US/NETHERLANDS EYES ONLY" must be off-line encrypted in accordance with paragraph 7d(1)(a) or individual service instructions prior to release into the NATO system. The term "RELEASABLE TO" is not a special handling designation. NATO commands appearing in Section II or III, with the symbol "N" in column E may receive ATOMAL, CRYPTOSECURITY and EXCLUSIVE traffic on-line without prior off-line encryption. Procedures governing this application are contained in paragraph 6.i.(3) below.

(3) Certain NATO commands appearing in Section II or III are directly connected to the AUTODIN system and permitted to send and receive traffic containing the special handling designations ATOMAL, CRYPTOSECURITY and EXCLUSIVE on-line. This capability is reflected in Section II or III, column E by the symbol "N". For example, when ATOMAL traffic is to be transmitted to a NATO station cleared for this access, the special handling designator symbol of five repeated "L's" in format line four, preceded by an oblique (/) following the security redundancy and TRC must appear on the message; i.e., "ZNY SSSXX/LLLLL". Multiple address messages of the type indicated, addressed to another NATO command or member nation, may be sent on-line to the appropriately cleared NATO addressee, but must be handled in accordance with paragraph 6.i.(2) above for the remaining addressees not permitted the access.

(4) By special agreement "TOP SECRET" US originated national message traffic addressed to activities of the United Kingdom, or other classified messages that contain the special handling designations US-UK EYES ONLY, will be sent on-line to the UK by using special routing indicator quote RBOYST unquote. This special routing indicator will be used in lieu of the normal routing indicator listed herein or those used in the current ACP 117-series for delivery of TOP SECRET and/or special handling designation messages only. Messages addressed to the UK and containing the above special handling designations must contain five repeated quote F's unquote in format line 4, preceded by an oblique (/) following the security redundancy and TRC; e.g., ZNY SSSBB/FFFFF. Messages containing the special handling designations US-UK EYES ONLY will be addressed only to US and UK activities.

(5) Special Handling Designation messages are handled by U.S. stations and addressees in the same manner as SPECAT messages. Routing indicators for stations capable of handling SPECAT messages ("Q" or "S" in Column E) will be used for on-line delivery to U.S. addressees of U.S. originated Special Handling Designation messages. If delivery cannot be effected to a station with a "Q" or "S" capability, the message will be processed in accordance with paragraph 7.d(1).

j. Originators authorized to introduce messages into the Defense Communications System may file such messages with the nearest DoD Communications Center. Commercial firms forwarding messages for transmission via the DCS must document their contract authority to use DoD communications. DoD Communications Centers will not accept messages from commercial firms when the commercial firm cannot specifically identify documented contract authority to use DoD communications, and under no circumstances will commercially originated traffic addressed to non-government addresses be accepted.

k. DCS relay and tributary stations are not authorized to make indiscriminate distribution of supplementary communications instructions including routing, addressing and communications guard information within the DCS. ASC/MAJRELSTA receiving such messages shall not disseminate this information to their tributaries but shall notify the originating station, information to jurisdictional command, that the transmission has been filed without action (ZOB) and citing this paragraph as authority.

7. RECORD TRAFFIC ON-LINE CRYPTOGRAPHIC OPERATION POLICY (For U.S. Use Only)

a. Objective. Attainment of the Joint Chiefs of Staff objective that classified and unclassified record traffic be transmitted via on-line cryptographically secured networks to the maximum extent possible can only be accomplished by strict adherence to the policies prescribed below.

b. Definitions. For the purpose of this policy, the following definitions apply.

(1) Off-line Cryptoguard Facility - A station designated in routing and other appropriate documents as having responsibility for off-line encryption and decryption of record traffic.

(2) Interchange Circuit - A circuit which provides for the interchange of traffic among elements of the Defense Communications System (DCS) operated by the military departments, elements of the DCS and non-DCS military/US Government facilities, and between non-DCS facilities.

(3) Off-line Crypto-operation - Encryption or decryption performed as a self-contained operation distinct from the transmission of the encrypted text, as by hand or by machines not electrically connected to a signal line.

(4) On-line Crypto-operation - The use of crypto-equipment that is directly connected to a signal line, making encryption and transmission or reception or decryption, or both together, a single continuous operation.

(5) On-line Cryptosystem - The associated items of on-line cryptomaterial which are used as a unit and which provide a single means of encryption and decryption.

(6) On-Line Secured Communications Network - Any combination of interconnected communications facilities equipped for on-line crypto-operation and capable of transmitting, relaying, switching, or receiving record traffic using on-line crypto-operations.

(7) Record Traffic (Communications) - That information which has been electrically transmitted and must be received by the ultimate user in

such form as to permit permanent or semi-permanent storage.

(8) Transfer Circuit - A circuit provided for the transfer of message traffic from a system operated by one nation or international alliance into a system operated by another nation or regional defense organization.

c. Security Responsibility - The secure handling of record traffic is the responsibility of the Service or command which operates the communications center, terminal, or relay/switches accepting record traffic for transmission, delivery, relay, interchange, or transfer.

d. Procedures (National):

(1) Within US military-operated communications networks classified record traffic will be transmitted over on-line cryptographically secured circuits to the communications station of the addressee. When classified record traffic cannot be transmitted on-line to the communications station of the addressee, the traffic will be transmitted on-line to the designated off-line cryptoguard facility for delivery to the addressee. When classified record traffic or other record traffic which requires protection cannot be transmitted on-line to the communications station of the addressee or to its off-line cryptoguard facility, the originating station shall be responsible for off-line encryption and the transmission of the off-line encrypted text to the addressee or the addressee's designated off-line cryptoguard. If neither an on-line nor off-line crypto-means is available, the message may be delivered via other secure means or will be referred to the originator for disposition.

(a) US classified record traffic addressed to a US activity protected for by an allied or regional defense organization communications center will be off-line encrypted in a US cryptosystem by the originating communications center or its designated off-line cryptoguard facility prior to introduction of such traffic into the allied or regional defense network.

(b) US classified record traffic addressed to a non-US activity served by an allied or regional defense organization communications center may be transmitted on-line, provided the transfer circuits, networks, and called stations are approved for the security classification and any special handling designation of the message involved. If these conditions are not met, classified messages will be off-line encrypted by the originating communications center or its designated off-line cryptoguard facility prior to transmission.

(2) If alternatively routed traffic requires subsequent off-line encryption, which may impose unacceptable loads on the receiving station, or if alternative routing may cause a security violation, such traffic will be encrypted in an off-line cryptosystem prior to being alternatively routed.

- (3) All Services and agencies responsive to the Joint Chiefs of Staff will designate, and will reflect that designation in routing and other appropriate documents, an off-line cryptoguard facility for activities which:
- (a) Do not have an on-line capability.
 - (b) Have an on-line capability of SECRET or less.
 - (c) Have an on-line capability for all classifications, less SPECAT traffic.

e. Procedures (international): See ACP 121 US SUPP-1.

8. ROUTING INFORMATION (For Canadian Use Only)

a. The term COMMSEN is used in this publication as a means of minimizing the number of listings required. Use of the term does not necessarily mean that the station(s) is/are at the location under which the COMMSEN is listed. However, it does serve all Canadian authorities authorized use of the National Defense Communications System (NDCS) (See CFCD501).

b. When no COMMSEN is listed at a geographical location, or if a geographical location is not listed, messages shall be routed in accordance with Canadian Forces Communications Command (CFCCHQ) instructions.

c. Messages which are liable to incur commercial refile charges shall not be routed into network(s) of another nation.

d. The maximum classification level permitted to be transmitted on-line without prior off-line encryption is SECRET.

e. Canadian originated messages classified TOP SECRET or bearing special handling designations COSMIC, CRYPTOSECURITY and EXCLUSIVE for and addressed to authorities served by AUTODIN may be transmitted to RCCPJCR (COMMFAC NDHQ) for forwarding over approved circuits, if a common off-line system is not held with the addressee.

f. If on-line routing is not shown in Column B of the Encode Section, messages must be off-line encrypted at source and routed in accordance with Column D.

g. If any instructions concerning an entry cannot be explained by a symbol in Column E, an explanatory expression shall be added in parenthesis following the entry in Column A.

EXAMPLES:

OTTAWA ONT CAN CAN-US SCIENCE BOARD (Col B for US use only)	RUCKMF	RCCWC	RCCWCR	T
SUSSEX NB CAN COMMFACONE SUSSES (To be activated when ordered)		RCEPOR	C	T

MONTREAL QUE CAN
 NAVAL OIC
 (Col D for Canadian
 originated traffic only)

RCCIV RCCEA T

9. SUFFIXES TO ROUTING INDICATORS. Suffixes are intended to aid the internal routing of tapes for processing purposes or localized action by a relay station or any of its supplementary sections and facilities.

a. Within the DCS Teletypewriter Network (DCSTTYNET) and the Canadian Network, the use of suffixes is prohibited in the routing of official message traffic except as indicated below. Columns B, C and D, Section II, will indicate the basic routing indicator with proper suffix when the use of a suffix is required for routing to the activity indicated in Column A.

(1) Suffixes may be added at discretion on U.S. Army routing indicators in headings of service messages. However, caution must be observed in applying them only to facilitate internal routing at the tape relay station to which routed.

(2) The arbitrary addition of any of the suffixes to U.S. Navy routing indicators is prohibited.

(3) Only the suffix "CM" may be arbitrarily added to U.S. Air Force routing indicators and this may be added only for the purpose indicated below.

(4) The meanings of authorized suffixes are as follows:

(a) C - Local delivery of refile in page form is required.

(b) CF - Section which accomplishes delivery of traffic by broadcast method.

(c) CI - Section which coordinates routing information.

(d) CM - Section which prepares tape copies for retransmission.

(e) CN - Electrical conference facility or section.

(f) CR - Crypto center.

(g) CS - Section dealing with service messages.

(h) CT - Section which accomplishes delivery of traffic by telephone.

(i) CU - Section which processes traffic for transmission to commercial carriers.

(j) CW - Section which relays traffic by radio telegraph.

(k) CX - Section which uses the tape relay method for delivery of traffic to activities served by teletypewriter exchange systems (TWX or TELEX).

b. Within the DCS AUTODIN, the authorized suffixes are as follows:

(1) CSA - Service section of an ASC.

(2) CSD - Identifies a service message automatically generated by an ASC.

(3) CS - Service section of a minor relay station connected to a non-automatic major relay station (used only in the sixth and seventh letter positions of the routing indicator).

EXAMPLES:

RUFTCSA - designates the service section in ASC RUFT

RUMDBCS - designates the service section of minor relay station RUMDB.

10. COLLECTIVE ROUTING INDICATORS. Collective routing indicators are used to effect a specified distribution of information or instructions within a communications network.

a. General.

(1) Collective routing indicators may be used in conjunction with authorized general message titles. Collective routing indicators may also be used by an individual major relay station for dissemination of information to its connected minor relay and tributary stations. Within the Canadian Network Collective routing indicators may be used, when applicable, with AIGs.

(2) ASC collective routing indicators will not be deleted as they are processed by the DCS AUTODIN; however collective routing indicators of the Canadian Network and DCS teletypewriter major relay stations will be deleted when processed.

(3) Stations receiving a message containing a collective routing indicator shall interpret the message as being addressed directly to them and for distribution as required.

(4) Stations will not reintroduce messages bearing collective routing indicators for further transmission within a network. To do so would cause duplicate transmission to many other stations and therefore is prohibited.

(5) Collective routing indicators will be used only as specifically authorized in this document.

(6) The inclusion of a non-U.S. routing indicator in the composition of a collective routing indicator is prohibited.

b. Within the DCSTTYNET, collective routing indicators may be used to represent all minor relay and tributary stations of a major relay station. Such a collective is composed of the routing indicator of the major relay station appearing in the first four positions and the letters "JJ" appearing in the fifth and sixth positions.

EXAMPLE: RUEAJJ - All minor relay and tributary stations of major

relay station RUEA.

c. Within the DCS AUTODIN, authorized collective routing indicators are used as indicated in Section V.

d. Authorized collective routing indicators may be used in conjunction with general messages when routing to 51 or more tributaries is required. Seventh letter derivative tributaries will not be counted in foregoing total if the basic routing indicator tributary is also included in the request for a collective routing indicator. If the basic routing indicator tributary is not included, then the seventh letter derivative tributary shall be counted. If more than one seventh letter derivative tributary of the same basic routing indicator appears, the count is still only one. Collective as well as single call routing indicators may appear in the same message heading. If more than one routing indicator is used in the header; e.g., collective and single call, the receiving stations will receive only the collective and/or single call routing indicator(s) for which they have a specified transmission or distribution responsibility. Within the DCS AUTODIN, requests for waivers must be approved by the USMCEB.

e. DISA is the assignment authority for collective routing indicators. Validated requests for new collective routing indicators or changes to existing collectives will be directed through command channels. Message address: GLOBAL DTH FT DETRICK MD and must include:

- (1) Assigned General Message Title
- (2) Purpose
- (3) Frequency of usage
- (4) Collective routing indicator security level
- (5) Originator: Routing Indicator/Activity/Location
- (6) AUTODIN Entry Point(s): ASC/Routing Indicator(s)
- (7) Dissemination: Routing Indicator/Location (List)
- (8) Effective date for implementation

NOTE: The general message originator must insure that each addressee included in the general message is capable of receiving traffic through the security level established in paragraph 10.e.(4). Information required under paragraph 10.e.(7) must be listed alphabetically by tributary station routing indicator. Dual-access tributary stations, if any, shall be listed separately. Non-AUTODIN tributaries cannot be included in the collective routing and therefore must be routed by the originating stations using individual routing indicators. The general message originator must coordinate use of collective routing with addressees and their serving communication centers. DISA will coordinate collective routing requirements with AUTODIN ASCs for programming purposes. Three weeks advance notice is required for programming ASCs.

f. Within the Canadian Network collective routing indicators may be used to represent all minor relay and tributary stations of a major relay station. Such collective routing indicators are composed of the routing indicators of the relay stations suffixed by the letters "JJ".

(1) RCCAJJ - All minor relay and tributary stations of major relay station RCCA and including the major relay RCCA.

(2) RCCBBJJ - All tributary stations of minor relay station RCCBB and including minor relay RCCBB.

11. ROUTING INDICATOR ASSIGNMENT AUTHORITIES (For US Use Only)

a. New tributary routing indicators are assigned as follows:

SYSTEM	ASSIGNMENT AUTHORITY
(1) AUTODIN	DISA Area Hq
(2) AUTODIN (7th letter derivative)	Military Dept
(3) Non-AUTODIN (OMTN & Special Purpose)	Military Dept
(4) New NARC	Hq DISA
(5) NARC derivatives	Military Dept

b. AUTODIN routing indicator assignments (less 7th letter derivatives) will be provided to the relay station concerned and to the command/activity responsible for operating the new tributary station.

c. A non-AUTODIN new tributary station connected to a relay operated by another Service will be provided its new routing indicator by the relay station.

d. The command/activity operating the new tributary is responsible for submitting requests for promulgation of required amendments to ACP 117-series in accordance with the provisions of paragraph 15.

e. Initial requests for routing indicators are normally included in Telecommunications Service Requests (TSR). In those cases where teletypewriter and data terminals are being consolidated and each terminal has an assigned routing indicator, the routing indicator which will result in the least number of routing changes shall be retained.

f. Routing indicators will not contain four or more redundant contiguous characters.

12. CRITERIA FOR LISTING ACTIVITIES IN SECTION II (ENCODE)

a. Activities served by a routing indicator other than the designated COMMSEN listing under the geographical location will always be listed.

b. Activities served by a designated COMMSEN at the same location will not be listed except as justified by unusual circumstances.

c. Commercial organizations normally will not be listed except as justified by unusual circumstances, e.g., commercial firms authorized AUTODIN use by contract authority.

13. CRITERIA FOR LISTING ACTIVITIES IN SECTION III (ENCODE) -

a. Only NATO/Allied activities which are addressed as short titles will be listed. NATO/Allied activities whose message addresses contain a geographical location will be listed under the appropriate location in Section II. The composition of the short title message address listed in Section III will be identical to the listing in the parent message address directory.

b. With the exception of those US elements of message address outlined in paragraph 6.g., US activities will not be addressed by short title only.

14. CRITERIA FOR LISTING ACTIVITIES IN SECTION IV (ENCODE)

a. Only activities requiring AUTODIN access outside the tactical area of operations will be listed. Emphasis will be on limiting the level of units to Army separate Brigades/Units, Divisions, DISCOMS, Corps, COSCOMS, Theater Commands, Marine Air Ground Task Force (MAGTF) and their Ground Combat Element (GCE), Air Combat Element (ACE), and Combat Service Support Element (CSSE); AN/TYC-39 traffic service positions; unless justified by the O&M Commands.

b. US agencies, services or commands requiring the listing of additional tactical units should forward requests through appropriate channels.

15. REQUESTS FOR CHANGES TO PUBLICATION

a. For Canadian Forces - Requests for new routing indicators, changes in assignment and notification when assignments are no longer required shall be directed in writing or by message through channels to National Defence Headquarters, MGEN George R Pearkes Bldg, 101 Col By Dr, Ottawa On Kia 0k2, Attention: DDCEI 4-3-3. message address: NDHQ Ottawa//DDCEI 4-3-3//, or e-mail: Pepin.JCG@Forces.Ca. After validation by DDCEI 4-3-3, such changes will be forwarded to the US Navy activity listed in 15.B.(2) For further required action

b. For U.S. Activities - Requests for changes to or queries concerning the contents of this publication shall be directed in writing or by message through channels as shown below:

(1) For U.S. Army Activities: US Army C-E Services Office, ATTN: SFIS-FAC-M, Suite 1200, 2461 Eisenhower Ave., Alexandria, VA 22331-2200. Message Address: ARMY SPECTRUM MGR-USACESO WASHINGTON DC //SAIS-IOS-M//, EMail: mcp@hqda.army.mil

(2) For U.S. Navy, Coast Guard, And Marine Corps Activities: Naval Network Space Operation Command Detachment, Nebraska Avenue Complex, 4234 Seminary Dr., Nw, Suite 19122, Washington Dc 20394-5960. Message Address: Navnetspaopscom Det Washington Dc//N6111b//, Or E-Mail: Christina.Hester@Navy.Mil
Paragraph 15.B.(3)

(3) For U.S. Air Force Activities: Submit Through Your Major

Command, Who In Turn Will Submit To Hq Usaf/Ilcs, 1030 Air Force Pentagon,
Washington, Dc 20330-1030, Message Address: Hq Usaf Washington Dc//Ilcs//, Or
E-Mail: Haymand@Af.Pentagon.Mil

(4) For Unified and Specified Commanders, Department of Defense Agencies and other U. S. Government Activities: DISA/OP31 5275 Leesburg Pike, Rm 4W0730, Falls Church VA 22041. Message Address: DISA ACP-AIG WASHINGTON DC, E-Mail: acp-aigo@ncr.disa.mil.

(5) US Agencies, Services or Commands requiring the listing of routing information for international organizations or foreign allies other than Canada in this publication, should forward requests through appropriate channels to the Joint Staff, Military Communications-Electronics Board, Room 1E833, The Pentagon, Washington, DC, 20318-6100. Message Address: USMCEB WASHINGTON DC.

c. For U.S. Activities - Since AUTODIN routing indicator assignments or changes potentially require changes in computer programming at some installations, advance promulgation is mandatory to allow for timely accomplishment of this programming effort by users of AUTODIN.

(1) This publication is updated every two weeks. Prior to receipt of the printed changes by publication holders. JAFTPUB message corrections are transmitted as determined by the effective date of requests for change/add/delete. Requests to change/add/delete entries in this publication must be forwarded in writing (or by message) to the appropriate monitoring office (See paragraph 15.b.) by Tuesday of each week to be included in the JAFTPUB and the next printed change. All requests should have a specified effective date for promulgation. Every effort should be made to select the same effective date that coincides with that of the next printed change. To qualify for effective immediately, a request must be concerned with:

- (A) Life and death situation.
- (B) Relocation or deployment.
- (C) Telecommunications support change (Guard Shift).

(2) The lead time required by paragraph 15.c.(1) may be waived in cases of emergency; a FULL justification of the emergency must accompany each such request for waiver of normal lead time. Geographical location within or immediately adjacent to an active combat area or an area of deteriorating international relations is considered adequate justification; other requests must be confirmed and will be considered on an individual basis.

(3) Approved emergency message corrections (paragraph 15.c.(2)) may be released any time as far in advance of the effective date as possible. Each such emergency message correction will carry the subject line "Emergency Msg Corr ____/____ to ACP 117 CAN-US SUPP-1." Stations affected by such emergency changes will advise their customers that all traffic to and from these stations is highly vulnerable to misrouting and other message-delay hazards until all automated equipment is updated.

(4) Subsequent to successful two way operational test of an AUTODIN tributary, and as a temporary expedient to provide partial use, subscribers are permitted to enter traffic into AUTODIN pending establishment of an effective operational date for two way traffic by JAFPUB. Establishment of an authorized AUTODIN security level for the tributary through appropriate service/agency guidelines, must first be obtained. Partial use is not available to new subscribers joining DCS common-user networks for the first time, nor to newly established dual-access tributary stations.

d. Requests for amendments will indicate capability of new listing serving as a COMMCEN under provision of paragraph 6. This is particularly true when new listing will serve other activities at the same location. Omission may result in delaying action pending verification of COMMCEN status and/or justification for multiple listings.

e. When requested changes in Section II involve communication facilities operated by other than the military department or commander requesting the change, such changes must be coordinated locally by the requester. The coordination effected and concurrence(s) obtained must be indicated in the request; otherwise, promulgation will be held in abeyance until such information is available.

f. Requests for amendments will be submitted in a standard format.

(1) Effective date for proposed amendments will always be shown.

(2) Requests must include amendments to other affected publications in the ACP 117-series; and for each publication, all sections, pages, entries and columns.

(3) Listings will be in consonance with official Service command, agency or unit designations.

(4) Corrections will be listed sequentially as they appear in the book.

(5) Action to be taken will be indicated by using the symbols: A for add, C for change, and D for delete.

(6) Where necessary to specify the column being corrected, the word, column, will be abbreviated and followed by the letter of the column affected; e.g., COL A, COL B.

(7) When corrections are to be made which will result in the listing being moved from one page to another in order to maintain alphabetical/numerical sequence, the current listing will be deleted and the corrected listing will be added on the appropriate page.

(8) Section I corrections:

(a) Deletions - Deletion of a routing indicator and its meaning will be accomplished as illustrated in the example.

EXAMPLE:

D RUFDEUA

(b) Additions - Addition of a new routing indicator will be accomplished as illustrated in the example.

EXAMPLE:

A RUFTFB1 CDR64THORDCO FISCHBACH GM

(c) Changes - Changes to the meaning of a routing indicator will be accomplished as illustrated in the example.

EXAMPLE:

C RUEDAUA NAS BRUNSWICK ME

(10) Section II Corrections:

(a) Deletions - Deletion of any entry, which includes all columns pertaining thereto will be accomplished as illustrated in the first example. Deletion of a location and all entries associated therewith will be accomplished as illustrated in the second example.

EXAMPLES:

D CHARLESTON SC COL A SIMA -ENTRY

D CHARLESTON WV -LOCATION AND ENTRIES

(b) Additions - Addition of a new location and associated activities is accomplished as illustrated in the first three examples. Addition of a new activity under existing location is accomplished as illustrated in the fourth example. Additions to Columns B through E will be treated as changes in accordance with paragraph 15.f.(10)(c).

EXAMPLES:

A CHARLESTON SD -LOCATION

A CHARLESTON SD COL A USARAMMO REP COL B RUCLXYZ
COL C B COL D RULYSDD COL E T C S

A CHARLESTON SD COL A COMMSEN USCG COL B RUCLXYZ
COL C B COL D RULYSDD COL E T C S

A CHARLESTON WV COL A DPDO COL B RUCIGMA COL C B
COL D RUEADCR COL E T

(c) Changes - Changes to Column A will be accomplished as illustrated in the first example. Changes to Columns B through E will be accomplished as illustrated in the second or third example.

EXAMPLES:

C CHARLESTON SD COL A USARAMMO REP-TO READ
USARAMMOREP

C CHARLESTON WV COL B RUVRBQA-WHEREVER
APPEARING-TO READ RUCIGMA

C CHARLESTON WV COL A TAG WV COL C B COL E A S

16. PROMULGATION OF CHANGES

a. The USMCEB, acting for the Joint Staff, will promulgate necessary changes to this publication by JAFPUB message.

b. Holders of this document should arrange for distribution of message corrections from their associated relay station or the serving communications terminal.
