

Heat Flux and Thermal Response Measurements for Designing a Propane Fuel Fast Cook Off Test Apparatus

Presented to the Insensitive Munitions and Energetic Material Symposium
Las Vegas Nevada, May 2012

Jon Yagla, David Griffiths, and John Busic

Agenda

- Background
- Description of Propane Burner at W91 Laboratory
- Instrumentation Overview
- Test Layout
- Test Results
 - Temperature Measurements
 - Heat Flux Measurements
- Summary

Background

- Increased Environmental Regulation has limited the use of Liquid Fuel Fires due to soil, ground water contamination, air quality
- Several countries have already switched to propane as an cleaner burning alternative fuel
 - Canada
 - Sweden
 - Germany
- Current joint effort with China Lake focuses on measuring heat fluxes in liquid fuel fires and in propane fires using multiple instruments
- This presentation focuses on the results of recent testing at a propane fast cook off facility in Germany.

Summary

- Extensive data on the test item thermal environment in a propane fuel fast cook off fire have been collected
- The data from each sensor type are self consistent, but there are significant differences between the data sets from the various types of sensors
- There are gradients in the temperature and heat flux as one travels from below the basket to above the basket.

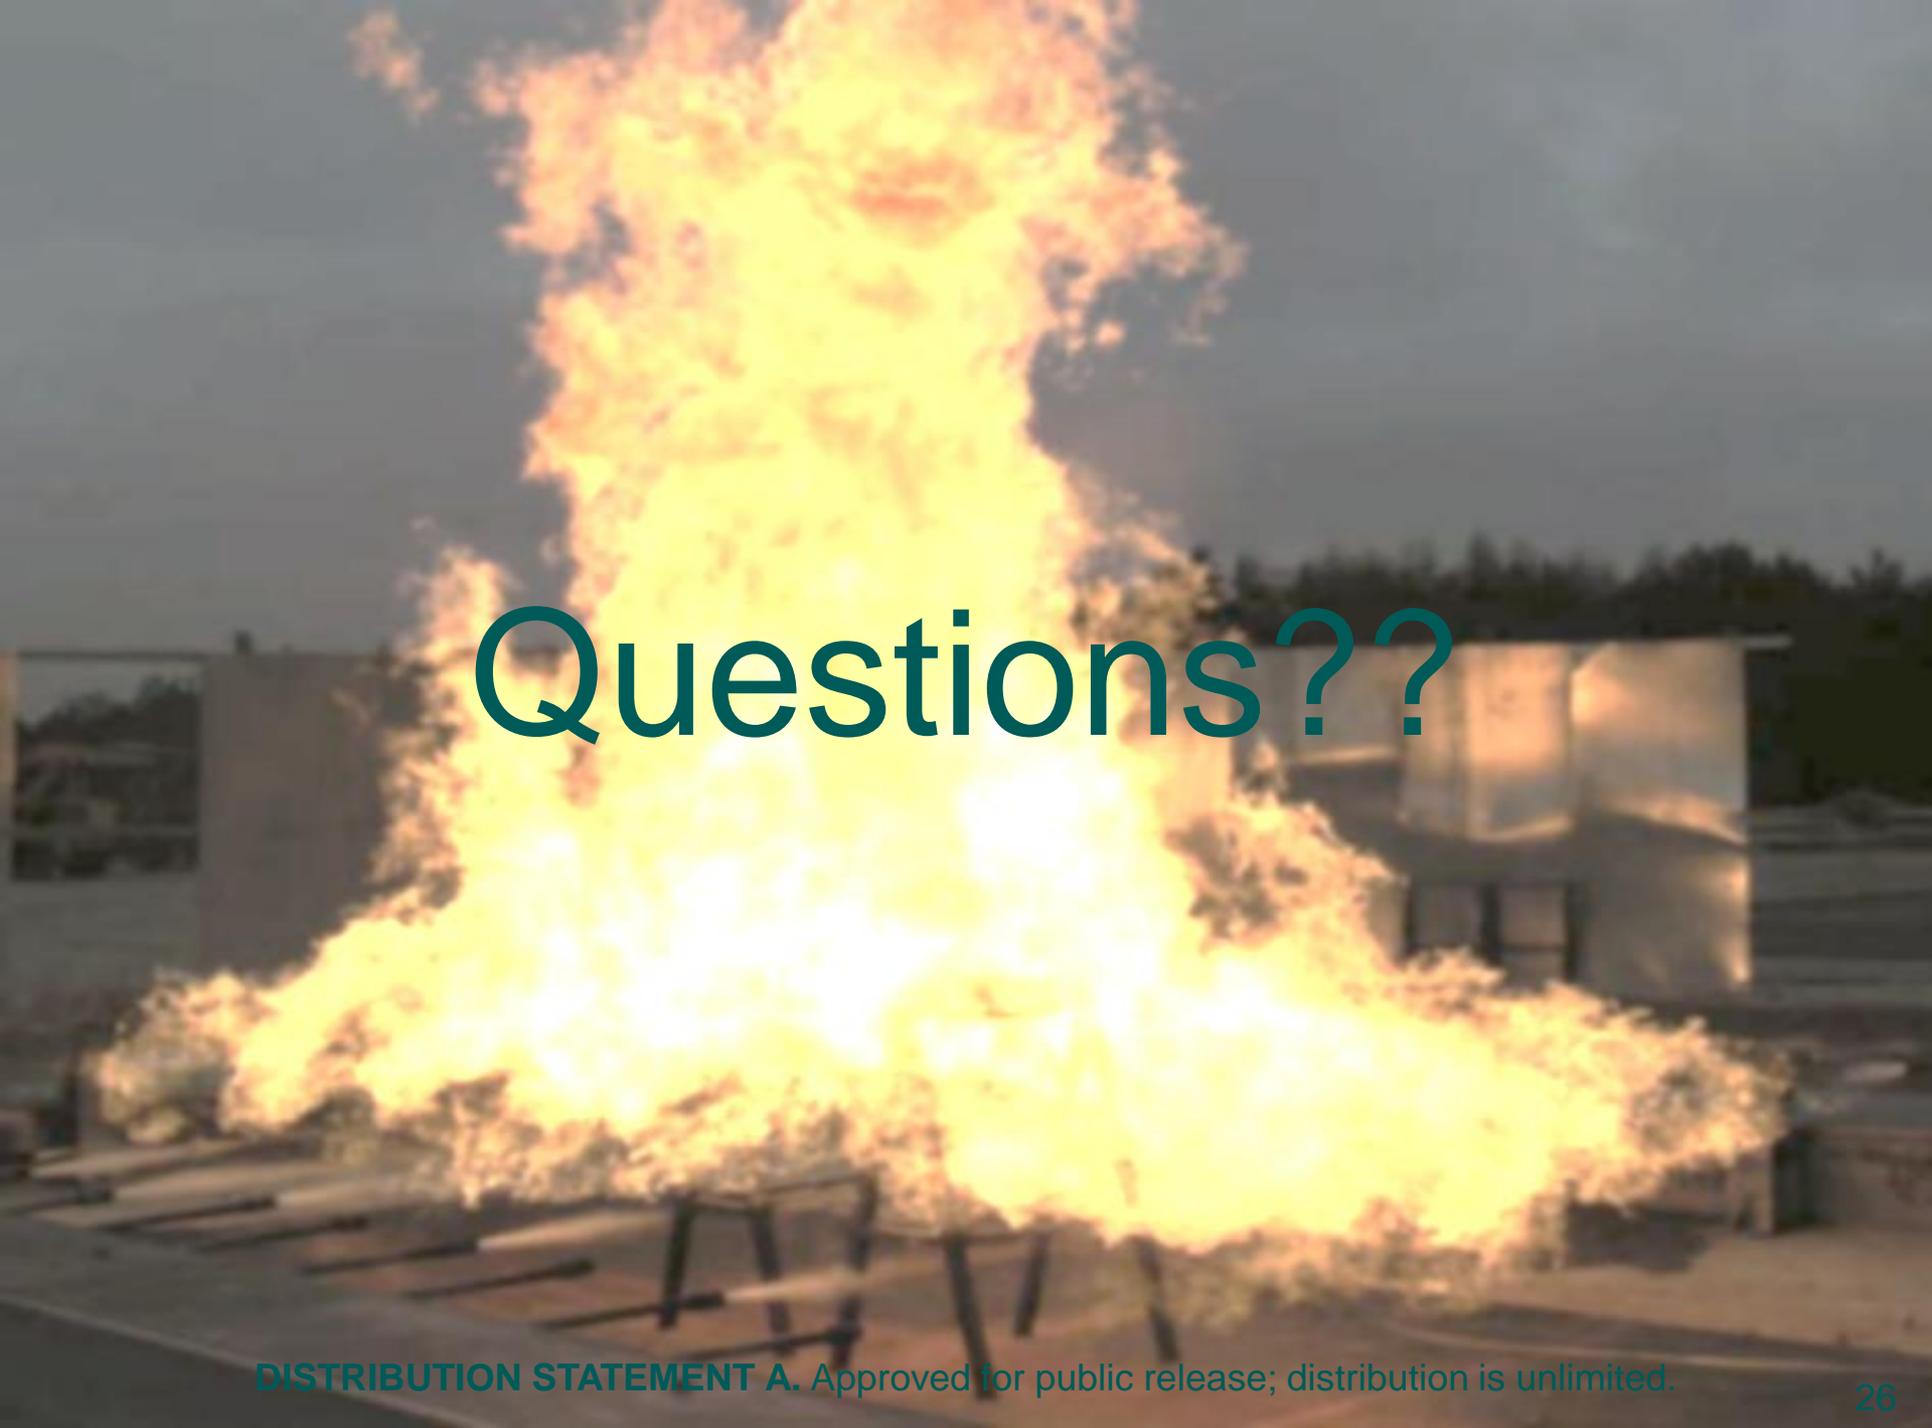

Acknowledgements

The authors gratefully acknowledge the generous support of The Technical Center for Weapons and Ammunition (WTD 91) in Meppen, Germany. In particular, Alexander Blumenberg arranged for our visit, helped set up the experiments, coordinated with German authorities, and was a gracious host. He made our visit a great success.

This project is being funded by the Department of Defense Explosive Safety Board. Our sponsor is Tom Swierk, who manages the IM & EM projects at the Naval Surface Warfare Center in Dahlgren, Virginia.

A large, intense fire is burning on a rooftop. The fire is bright yellow and orange, with a thick plume of smoke rising into the sky. In the background, there is a building with a corrugated metal roof. The scene is set during the day, with a clear sky.
